1–12. Anterior extremities of 12 ribs of left side. 13, 13. Internal surface. 14, 14. External surface. 15. Head of 1st rib. 16. Head of 2d rib. 17. Head of 3d rib. 18, 18. Heads of ribs from 4th to 9th. 19. Head of 10th rib. 20, 20. Heads of 11th and 12th ribs. 21, 21. Necks of ribs. 22. Tubercle of 1st rib. 23. Articular facet of tubercle of 2d rib. 24, 24. Articular facets of tubercles of ribs from 3d to 9th. 25. Articular facet for tubercle of 10th rib. 26, 26. Angles of ribs.

vertebræ united by the head of the rib. Externally to the tubercle is a rough mark called the *angle,* at which point the rib is directed abruptly ventrad. The ventral portion is more compressed and is continuous with the costal cartilage. The ribs successively increase in length from the first to the eighth and then decrease to the last. They number twelve pairs, forming a series of narrow arches on each side of the trunk extending from the thoracic vertebræ to the sternum. The seven superior or *sternal ribs* are attached to both the spine and the sternum. The remaining five are called *asternal ribs.* Three of these are attached dorsally to the spine, and ventrally by costal cartilages to the cartilages of adjacent ribs. The two last are free at their anterior extremities, and are called *free ribs.* 2. A primary or principal vein of a leaf.

Ribbail's Bandage. See *Bandage.*

Ribes, Ganglion of. See *Ganglia, Table of.*

Ribesin (*ri-be'-zin*) [*ribesium,* currant]. The juice of the black currant (*Ribes nigrum*), used for staining microscopic sections.

Ribgrass (*rib'-gras*). See *Plantago, Plantain.*

Riblet (*rib'-let*) [ME., *rib*, rib]. Any pleurapophysis not developed into a rib and not destined to be so developed; a costal process of a vertebra.

Rice (*ris*). See *Oryza*. **R.-seed Bodies**, peculiar small, white bodies resembling grains of rice, found in the so-called ganglia occurring on tendons. **R.-water Evacuations.** See *Oryza*.

Richard's Styptic Collodion. A solution of tannin in collodion.

Richardson's Bellows. An instrument for injecting vapors into the middle ear. **R.'s Mixture.** See *Anesthetic*. **R.'s Neutral Blue Fluid**, a fluid for injecting tissues. Dissolve 0.648 gm. of ferrous sulphate in 15 c.c. of glycerin; and 2.07 gms. of potassium ferrocyanid in a liter of water, to which 15 c.c. of glycerin have been added. Mix the two solutions gradually; then add 30 c.c. of alcohol and 120 c.c. of water. **R.'s Test.** See *Death, Signs of*.

Richet's Bandage. See *Bandage*.

Richter's Collyrium. A mixture of rose-water and the white of egg beaten to a froth. **R.'s Hernia**, *Parietal Enterocele, Partial Enterocele, Littré's Hernia*. Strangulated enterocele in which only part of the circumference of the gut is constricted. See *Diseases, Table of*.

Ricin (*ri'-sin*) [*ricinus*, a genus of the *euphorbiaceæ*]. The toxalbumin of the castor-oil bean; a vegetable albuminoid employed in the study of immunity. A dose of $\frac{1}{10}$ gr. by the skin, or $\frac{9}{10}$ gr. by the stomach is toxic. It induces multiple hemorrhages of the intestines and stomach, and appears to break down the blood-corpuscles. Unof.

Ricinelaidic (*ris-in-el-a-id'-ik*) [*ricinus*, castor-oil]. Derived from castor-oil. **R. Acid**, an acid derived from and isomeric with ricinoleic acid.

Ricinic (*ris-in'-ik*) [*ricinus*, castor-oil]. Pertaining to or having the properties of castor-beans or castor-oil. Also applied to an acid derived from castor-oil. See *Ricinus*.

Ricinine (*ri'-sin-in*) [*ricinus*, castor-oil]. A crystalline substance obtained from castor-oil.

Ricinoleic Acid (*ri-sin-o-le'-ik*). See *Acid*.

Ricinus (*ris'-in-us*) [L.]. A genus of apetalous euphorbiaceous plants. **R. communis**, the only species is the well-known castor-oil plant, indigenous in America and Asia. The height is from 4 to 14 feet; the leaves are alternate, peltate, palmately seven-lobed or nine-lobed; the flowers are monecious and apetalous. The fruit is a grooved, rather triangular tricoccous capsule, generally spinescent, with a single oval or elliptic seed enclosed in each cell. The embryo has foliaceous, heart-shaped cotyledons, is straight, white, and imbedded in an oily albumin, having a bland and slightly acrid taste. The seeds are chiefly used in the manufacture of *oleum ricini*, castor-oil. They are first crushed and freed from their coverings, then kiln-dried and subjected to powerful pressure. The oil is heated with water to remove albuminous matters. The yield is 38 to 45 per cent., by cold pressure 25 to 30 per cent. The oil prepared by the latter method requires no further purification. It is viscid, nearly transparent, pale greenish-yellow or almost colorless. The specific gravity varies between .950 and .960. The oil is partly soluble in petroleum benzine, but is more soluble in absolute alcohol, ether, and glacial acetic acid in all proportions. When fresh, it has a neutral reaction to test-paper, and is composed of several fats. The solid fatty acid is related to palmitic acid, the liquid one is ricinoleic acid. The acrid principle to which its purgative properties are due has not been isolated. Tuson claimed, in 1864, to have discovered an alkaloid, *ricinin*. The oil is used medicinally to overcome constipation or to cure diarrhea due to the presence of irritating substances. The dose for an adult is from half an ounce to an ounce. **R., Olei, Mist.** (B.P.), castor-oil, oil of lemon, oil of cloves, potash, syrup, orange-flower water. Dose ʒss–ij.

Rickets (*rik'-ets*) [*ῥάχις*, spine]. The common name for *Rachitis;* it is a constitutional disease of childhood, characterized by increased cell-growth of the bones, with deficiency of earthy matter, resulting in deformities, and with abnormal changes in the spleen and liver. See *Rachitis*.

Rickety (*rik'-et-e*) [*ῥάχις*, spine]. Affected with, or distorted by, rickets. **R. Rosary**, the beaded condition of the ribs in rickets. See *Rachitis*.

Rictal (*rik'-tal*) [*ringi*, to gape]. Pertaining or relating to rictus.

Rictus (*rik'-tus*) [L., from *ringi*, to gape]. A fissure or cleft; a gaping, as of the mouth; the gape of a bird. See *Risus sardonicus*. **R. lupinus**, cleft palate.

Rider (*ri'-der*) [ME., *ridere*, a rider]. One who rides, especially one who rides on horseback. **R.s Bone**, an osseous formation in the adductor muscle of the leg, from long-continued pressure of the leg against the saddle. See *Exercise-bones*. **R.s Bursa**, an enlarged bursa, produced in the same way as the riders' bone. **R. Garbage-furnace**, a form of furnace with two chambers, the foremost of which is the combustion-chamber in which the garbage to be destroyed is placed, and the rear one the receiving-tank.

Ridge (*rij*) [ME., *rigge*, the back of a man or beast]. An extended elevation or crest. **Rs., Bicipital**, the borders of the bicipital groove of the humerus. **Rs. Condylar**, the ridges ascending from the condyles of the humerus. **Rs., Dorsal.** See *Rs., Medullary*. **R. Genital**, the germ-ridge in front of and internal to the Wolffian body, from which the internal reproductive organs are developed. **R., Gluteal**, the anterior intertrochanteric line. **R., Interosseous** (*of the fibula*), the ridge on the fibula which gives attachment to the interosseous membrane. **R., Intervertebral**, a crest on the vertebral end of a rib dividing the articular surface into two portions. **R., Lambdoidal**, the lambdoid crest. **Rs., Lateral** (*of the blastoderm*), two ridges on the posterior end of the embryonic shield that coalesce and close the primitive groove. **R., Maxillary**, dental crest; a ridge of vascular fibrous tissue along the alveolar processes of the maxillary bones of the fetus. **Rs., Medullary**, the laminæ dorsales, or longitudinal elevations of the epiblast which coalesce and close in the medullary or neural tube. **R., Mylo-hyoid**, the ridge on the inner surface of the inferior maxilla for the attachment of the mylo-hyoid muscle. **R., Neural**, neural crest; the ridge of epiblastic cells on the superior margin of the medullary groove, from which the dorsal nerves of the embryo are developed. **Rs., Occipital**, the superior and inferior curved lines of the occipital bone. **Rs., Palatine**, one longitudinal and several transverse corrugations of the mucosa of the hard palate. **R. Parietal**, the ridge on the parietal bone; a continuation of the temporal ridge. **Rs., Pectoral**, the bicipital ridges of the humerus. **R., Pterotic**, a ridge on the upper and external portion of the auditory capsule. **R., Pterygoid**, the infra-temporal crest, a ridge on the external surface of the greater wing of the sphenoid bone. **Rs. of the Skin**, the delicate ridges of the skin which intersect at various angles, and correspond to the rows of papillæ of the corium. **R. Superciliary**, the arched ridge of the frontal bone

corresponding to the eyebrow. **Rs., Supracondyloid.** See *Rs., Condylar.* **R., Temporal,** the ridge extending from the external angular process of the frontal bone upward and backward across the frontal and parietal bones, curving downward, and terminating in the posterior root of the zygomatic process. **R., Wolffian,** germ-epithelium. See *R., Genital.*

Ridge's Food. A farinaceous food for infants. Its composition is: Water, 9.23; fat, 0.63; grape-sugar, 2.40; cane-sugar, 2.20; starch, 77.96; soluble carbohydrates, 5.19; albuminoids, 9.24; ash, 0.60.

Ridgel (*rij'-el*) [origin uncertain]. A male animal having one testicle removed or wanting.

Ridgeling (*rij'-ling*). See *Ridgel.*

Ridgil (*rij'-il*). See *Ridgel.*

Riding of Bones. In surgery, the displacement of the fractured ends of bones which are forced past each other by muscular contraction, instead of remaining end to end.

Riding-hag. Incubus; nightmare.

Riegel's Syndrome. Respiratory disturbance simulating asthma, combined with tachycardia. **R.'s Test-meal,** a test-meal consisting of 400 grams broth, 50 grams scraped beef, 60 grams white bread.

Riga's Disease. See *Aphthæ, Cachectic,* and *Diseases, Table of.*

Riggs' Disease. See *Diseases, Table of.*

Right (*rit*) [ME., *right,* right]. Belonging to or located upon that side which, with mammals contains less of the heart and is on the east when the face is toward the north; dextral. **R.-brained,** having the speech-center in the right instead of the left hemisphere. **R. Hand.** See *Dexter.* **R.-handed,** using the right hand with more freedom and effect than the left. **R.-handedness,** the condition of being right-handed.

Rigiditas (*rij-id'-it-as*) [L.] Stiffness; rigidity. **R. articulorum,** spurious ankylosis.

Rigidity (*rij-id'-it-e*) [*rigidus,* stiff]. Stiffness; inflexibility; immobility; tonic contraction of muscles. **R., Anatomic** (*of the cervix uteri*), rigidity in which the cervix, though neither edematous nor tender, is not wholly effaced in labor, but retains its length and dilates only to a certain extent, beyond which the contractions of the uterus are without effect. **R., Cadaveric,** rigor mortis. **R., Cerebellar,** rigidity of the spinal muscles, due to tumor of the middle lobe of the cerebellum. The head is drawn backward, the spine curved, and the arms and legs made rigid (H. Jackson). **R., Hemiplegic,** spastic rigidity of the paralyzed limbs in hemiplegia. **R., Muscular.** See *Thomsen's Disease.* **R., Pathologic** (*of the cervix uteri*), rigidity due to organic disease or cicatricial contraction. **R., Post-mortem,** rigor mortis. **R., Spasmodic** (*of the cervix uteri*), rigidity due to spasmodic contraction of the cervix.

Rigor (*ri'-gor*) [*rigor,* cold]. Coldness, stiffness, or rigidity. In the plural, chills, shivering. **R. cadaverosus.** See *R. mortis.* **R. maxillæ inferioris,** trismus. **R. mortis:** 1. The muscular rigidity that occurs a short time after death, due to chemic changes resulting in the production of myosin. 2. The rigor due to changes occurring in a muscle that has lost its irritability, in which its acidity is increased and its electric currents are absent. **R. nervorum, R. nervosus.** See *Tetanus.*

Rima (*ri'-mah*) [*rima,* crack, cleft: *pl., Rimæ*]. In biology: 1. A chink, cleft, or fissure. 2. The chief part of the great transverse fissure of the brain. It is a line of interruption of the nervous parietes of the paracele, beginning at the dorsal end of the porta, and extending to near the tip of the medicorun. **R. ad infundibulum,** the anterior aperture of the third ventricle of the brain. **R., Anterior,** the calamus scriptorius (Monro). **Rimæ cæcæ hepatis,** the hepatic fissures lodging the branches of the portal vein. **R. cerebri transversa,** the transverse fissure of the cerebrum. **R. clunium,** the cleft of the nates. **Rimæ cutis,** the normal furrows of the skin. **R. glottidis,** the cleft between the true vocal bands; the glottis. **R. glutæa.** See *R. clunium.* **R. helicis,** an anomalous cleft in the inferior anterior portion of the helix. **R. labiorum.** See *R. oris.* **R. laryngis.** See *R. glottidis.* **R. oris,** the line formed by the junction of the lips. **R. palpebrarum,** the palpebral fissure. **R. pudendi,** the fissure between the labia majora. **R. pudendi connivens,** the fissure between the labia majora when they completely conceal the nymphæ. **R. transversa cerebelli,** the sulcus between the peduncles of the cerebellum. **R. ventriculi laryngis,** the aperture of the ventricle of the larynx. **R. vocalis.** See *R. glottidis.* **R. vulvæ.** See *R. pudendi.*

Rimiform (*ri'-mif-orm*) [*rima,* a chink; *forma,* form]. In biology, possessing a longitudinal chink or furrow.

Rimose (*ri'-mōs*) [*rimosus,* full of chinks]. In biology, full of crevices or furrows.

Rimous (*ri'-mus*) [*rima,* a cleft]. Having cracks, clefts, or fissures.

Rimula (*rim'-u-lah*) [L., dim. of *rima,* a crack: *pl., Rimulæ*]. A fissure; applied especially to the ventral mesal fissure of the spinal cord; an interfoliar cleft of the cerebellum.

Rimule (*rim'-ūl*) [*rimula,* dim. of *rima,* a cleft]. Any minute cleft, crack, or fissure.

Rinar (*ri'-nar*). Limatura; filings.

Rind (*rind*) [ME., *rind,* crust]. In biology, an outer coat, skin, or integument. Cortex.

Rinderpest (*rin'-der-pest*) [Ger., "cattle-pest"]. An acute infectious disease of cattle, appearing occasionally among sheep, and communicable to other ruminants. It is called also *cattle-plague.* Cf. *Bacillus septicæmiæ hæmorrhagicæ,* under *Bacteria, Synonymatic Table of.*

Rindfleisch's Granule-cells. Eosinophile leukocytes with granulations.

Ring [ME., *ring,* ring]. A circular opening or aperture; the structure surrounding a circular opening. See *Annulus.* **Rs., Abbe's,** rings of catgut used in the establishment of an artificial communication between one part of the bowel and another, or between the bowel and the stomach. **R., Abdominal,** the internal or external abdominal ring. **R., Annual,** one of the successive circles of wood produced yearly in exogenous trunks. **R., Antimonial,** a ring produced when volatilized antimony impinges on a glass surface. **Rs., Apposition.** See *Rs., Abbe's.* **R., Arsenical,** a ring produced when fumes of arsenic impinge on a glass surface. **R., Bandl's,** an annular muscular thickening of the uterus during labor between the contractile portion of the organ and the relaxed attenuated portion below; the true os uteri internum of Bandl. **R.-bone,** a bony callus or exostosis, the result of inflammation on one or both pastern-bones of a horse. It may extend to the interphalangeal joints and cause immobility and lameness. **R.-canal:** (*a*) the circumesophageal canal of the water-vascular system of *Echinoderms;* (*b*) the annular enterocele of *Cœlenterates.* **R., Contraction.** See *R., Bandl's.* **R., Crural.** See *R., Femoral.* **R., Femoral,** the abdominal opening of the femoral canal. **Rs., Fibrous** (*of the Heart*), the fibrous bands surrounding the arterial and auriculo-ventricular orifices of the heart, and to which the muscular fibers are attached. **R.-finger,** the fourth digit or third finger. **R.-infiltration** (*of the Cornea*), an infiltration of cells, circular in shape, in the

laminæ of the cornea, sometimes following perforating septic wounds of the cornea. **R., Inguinal.** See *R., Abdominal.* **R., Löwe's,** a bright violet ring seen on looking through a solution of chromic chlorid. **R., Marsh's.** See *R., Arsenical.* **R., Maxwell's,** a faintly defined halo around the fovea when the eye rests on a homogeneous blue surface. **R., Müller's,** a muscular ring observed in an advanced stage of gestation, situated where the canal of the cervix joins the cavity of the body of the uterus. **R.-muscle of Müller.** See *Muscles, Table of.* **R., Omphalic.** See *R., Umbilical.* **R.-scotoma.** See *Scotoma.* **R., Spermatorrhea,** a metallic ring furnished with sharp points, to be worn during sleep to prevent seminal emissions. **R., Tracheal,** a tracheal cartilage. **R., Tympanic,** an osseous ring forming part of the temporal bone at the time of birth, and which develops into the tympanic plate. **R., Umbilical,** the ray-like aperture of the abdominal wall by which the umbilical cord communicates with the fetal system, and through which, in extra-uterine life, the urachus and the remains of the umbilical vessels pass to the umbilicus. **R.-worm,** a general term for vegetable parasitic diseases of the skin characterized by circinate lesions. **R.-worm of the Beard,** sycosis parasitica. **R.-worm of the Body,** tinea circinata. **R.-worm, Burmese,** a cutaneous affection occurring in Burmah, resembling, and probably identical with, the form of tinea circinata called eczema marginatum. **R.-worm, Chinese,** ringworm due to *Tinea imbricata.* **R.-worm, Honeycomb,** favus. **R.-worm of the scalp,** tinea tonsurans. **R.-worm of the Thighs and Genitalia,** eczema marginatum. **R.-worm, Tokelan,** ring-worm due to *Tinea imbricata.*

Ringed (*ringd*) [ME., *ring*, ring]. In biology, marked with rings. **R. Hair,** a very rare form of canities, in which the hairs are white or colored in rings or bands.

Ringent (*rin'-jent*) [*ringi*, gape, open-mouthed]. In biology, irregularly gaping; applied to a bilabiate corolla when the throat is wide open or gaping; opposite of *personate.*

Rinmann's Green. See *Pigments, Conspectus of.*

Rinne's Test. This consists in applying a vibrating tuning-fork with moderate pressure first over the mastoid process, leaving it there until the patient seems no longer to hear the sound, and then as quickly as possible bringing it immediately in front of the external meatus, avoiding all contact with the head or ear. If the patient then is able to hear the sound of the tuning-fork once more, it indicates that the conduction through the air is better than through the bone, and *vice versa.*

Rinolite (*ri'-no-lit*). See *Rhinolith.*

Riolan, Bouquet of. See *Bouquet.* **R., Meso-colic Arch of,** the arch of mesentery attached to the transverse meso-colon. **R.'s Muscle.** See *Muscles, Table of.* **R.'s Nosegay.** See *Nosegay* and *Bouquet.*

Ripa (*ri'-pah*) [*ripa*, a bank]. The line formed by the reflection of the endyma upon any plexus or tela of the brain.

Riparial, Riparious (*ri-pa'-re-al, ri-pa'-re-us*) [*ripa*, the bank of a stream or body of water]. Living on or associated with, or pertaining to the shore.

Ripault Sign. See *Death.*

Ripe (*rīp*) [ME., *ripe*, ripe]. Mature.

Ripening (*rip'-en-ing*) [ME., *ripe*, ripe]. Becoming mature. **R. of Cataract.** See *Cataract.* **R. of Cream,** the allowing of cream to sour before churning, whereby a larger amount of butter is obtained. The process is attended with a multiplication of bacteria, the proper temperature for ripening being that at which the bacteria best multiply. It is attended with the production of lactic acid and various decomposition-processes.

Risidontrophy (*riz-id-on'-tro-fe*) [*ῥίζα*, a root]. The operation of drilling the root of a tooth.

Rising (*ri'-zing*) [ME., *risen*, to rise]. A popular term for an inflammatory swelling. **R. of the Lights,** a popular term for pleurisy and for croup.

Risipola lombarda (*riz-ip-o'-lah lom-bar'-dah*). Synonym of *Pellagra.*

Risorius (*ri-zo'-re-us*) [*ridere*, to laugh]. The upper portion of the *Platysma myoides.* It controls certain motions of the lips and adjacent parts in laughing. See *Muscles, Table of.*

Ristorum (*ris-to'-rum*) [L.]. A nutritive preparation of egg-yolk.

Risus (*ri'-zus*) [L.]. A grin or laugh. **R. sardonicus,** an involuntary sardonic or convulsive grin or drawing down of the angles of the mouth in certain spasmodic or tetanic conditions.

Ritgen's Method. A method of manual delivery of the fetal head. It consists in lifting the head upward and forward through the vulva, between the pains, by pressure made with the tips of the fingers upon the perineum behind the anus close to the extremity of the coccyx.

Ritter's Disease. See *Dermatitis exfoliativa neonatorum* and *Diseases, Table of.* **R.'s Law of Contraction,** "a nerve is stimulated both at the moment of the occurrence and that of the disappearance of electrotonus: (1) When the current is *closed*, the stimulation occurs only at the *kathode, i.e.*, at the moment when the kathelectrotonus takes place; (2) when the current is *opened*, stimulation occurs only at the *anode, i. e.*, at the moment when the anelectrotonus disappears." (Landois and Stirling.) **R.'s Opening Tetanus.** See *Tetanus.* **R.'s Tetanus,** a temporary tetanic state caused by sending a constant current of electricity to a nerve and then suddenly interrupting it. **R.-Valli Law,** "If a nerve be separated from its center, or if the center die, the excitability of the nerve is at first *increased;* the excitability then *falls* until it disappears entirely. This process takes place more rapidly in the central than in the peripheral part of the nerve, so that the peripheral end of a nerve separated from its center remains excitable for a longer time than the central end." (Landois and Stirling.) See *Law.*

Rivallie's Paste. A caustic made by adding concentrated nitric acid to lint.

Riverius, Salt of. An old name for normal potassium citrate.

Rivini, or Rivinus, Canal of. See *R., Ducts of.* **R. Ducts of,** the excretory ducts of the sublingual gland. **R., Foramen of,** an opening in the tympanum of doubtful existence. **R., Glands of,** the sublingual glands. **R., Notch of,** a notch in the osseous tympanic ring, filled by Shrapnell's Membrane. **R., Segment of,** an opening in the upper and anterior part of the *annulus tympanicus.*

Rivolta's Disease. Synonym of *Actinomycosis.*

Rivose (*ri'-vōz*) [*rivus*, a stream, channel, groove]. In biology, marked with furrows that are sinuate rather than parallel.

Rivulose (*riv'-u-lōz*) [*rivulus*, a small stream]. In biology, marked with small sinuate lines.

Rivus (*ri'-vus*) [L., "a stream: *pl.*, *Rivi*]. Any one of the smaller conduits of the subarachnoidean space. **R. lacrymalis.** See *Palpebra.*

Riziform (*riz'-if-orm*). Having an appearance resembling grains of rice.

Rizzoli-Esmarch Operation. An operation for the relief of ankylosis of the lower jaw, consisting in making a section of the ramus. See *Operations, Table of.*

Roads, Animal. See *Zoöcurrent.*

Roaring (*rōr'-ing*) [ME., *roren*, to roar]. A disease of horses that causes them to make a singular noise in breathing under exertion. The disease is due to paralysis and wasting of certain laryngeal muscles, usually of the left side, resulting in a narrowing of the glottis.

Roasting (*rōst'-ing*) [ME., *rosten*, to roast]. The application of heat to a degree less than that of carbonization, as the roasting of coffee; torrefaction.

Rob, Robb [Arab.]. A confection made of fruit-juice, especially of that of the mulberry.

Roberts' Macula. See *Macula.* **R. Pelvis,** the ankylosed transversely contracted pelvis. See *Pelvis.* **R. Reagent,** to five volumes of filtered saturated solution of magnesium sulphate add one volume of strong nitric acid; it is used to obviate the objections to nitric acid in Heller's test. Proceed as in Heller's test. **R. Test.** See *Tests, Table of.*

Robertson's Pupil. See *Pupil.*

Robin's Fluid. A fluid used in the microscopic study of the blood. It consists of distilled water containing one per cent. of chlorid of sodium, and one-half of one per cent. of bichlorid of mercury.

Robin's Gelatin Vehicle. A warm, flowing mass for injecting tissues. One part of gelatin is soaked in seven, eight, nine, or ten parts of water, according to the consistency of the mass desired, and when soft is melted on a water-bath. This vehicle is then combined with any of the coloring-matters employed in injecting tissues in the proportion of one part color to three parts vehicle. Filter through flannel before injecting. **R.'s Rye.** See *Hair-cap Moss.*

Robinia (*ro-bin'-e-ah*) [after *Jean Robin*, the royal gardener at Paris (1550-1629)]. A genus of leguminous shrubs indigenous in North America. **R. amara,** of China, is used as a stomachic tonic. **R. pseudacacia,** the locust tree of North America. Various parts of it are used by eclectic physicians. The bark is said to be emetic and cathartic, the flowers antispasmodic. Cases of poisoning from chewing the root are recorded in which the symptoms resembled those of belladonna-intoxication.

Robinin (*ro'-bin-in*) [after *Robin*, a French gardener], $C_{25}H_{30}O_{16}$. A glucosid obtained from the fresh flowers of the locust-tree.

Robinson's Ointment. An ointment used in treating eczema of the beard. It consists of diachylon and zinc-oxid ointments, each ℥ss; ammoniated-mercury ointment, ℥iij; bismuth subnitrate, ℥iss. **R.'s Patent Barley,** a farinaceous food for infants. Its composition is: water, 10.10; fat, 0.97; grape-sugar, 3.08; cane-sugar, 0.90; starch, 77.76; soluble carbohydrates, 4.11; albuminoids, 5.13; gum, cellulose, etc., 1.93; ash, 1.93.

Robiquet's Paste. A caustic paste consisting of equal parts of zinc chlorid and flour with gutta-percha. It is firm and tenacious.

Robor (*ro'-bor*) [L.]. Strength.

Roborant (*ro'-bo-rant*) [*robur*, an oak; also strength]. Tonic. Strengthening.

Robur (*ro'-bur*). See *Robor.*

Roburite (*ro'-bu-rit*) [*robur*, strength]. An explosive composed of dinitrobenzene, chloronitrobenzene, and ammonium nitrate. Its fumes, when inhaled by miners, cause headache, vertigo, vomiting, etc.

Robust (*ro-bust'*) [*robustus*; *robus, robur*, an oak-tree]. Strong; vigorous.

Roccella, Rocella (*rok-sel'-ah, ro-sel'-ah*). A genus of lichens. **R. tinctoria,** litmus-plant, archil; a species growing in the Canary Islands, Africa, and Europe. It yields litmus.

Roccellic (*rok-sel'-ik*). Related to or derived from *Roccella.* **R. Acid,** $C_{17}H_{32}O_4$, a dibasic acid obtained from *Roccella tinctoria* and *Lecanora tartarea.*

Roccellin (*rok-sel'-in*). A dye consisting of the sodium salt of β-naphthalazonaphthalinsulphonic acid. See *Orseillin.*

Roche's Embrocation. An embrocation containing amber-oil.

Rochelle Salt (*ro-shel'-sawlt*). See *Potassium.*

Rock (*rok*) [ME., *rocke*, rock]. A mass of stone. **R.-candy.** See *Saccharum.* **R.-fever.** See *Mediterranean Fever.* **R.-oil.** See *Petroleum.* **R.-rose.** See *Helianthemum.* **R.-tripe.** See *Gyrophora.* **R.-weed.** See *Fucus.*

Rockdale System. See *Sewage, Disposal of.*

Rocky Mountain Fever. A form of typhoid fever occurring at high altitudes; mountain fever.

Rod [ME., *rod*, rod]. 1. One of numerous slender rod-like or bacillary structures, as in the retina. 2. A shoot or slender stem of any woody plant. **Rs., Acoustic.** See *Rs. of Corti.* **Rs., Auditory.** See *Rs. of Corti.* **R.-bacterium,** any member of the genus bacillus. **Rs. of Corti.** See *Corti.* **R.-epithelium,** the striated cells lining certain structures, as the ducts of the salivary glands and the convoluted portions of the uriniferous tubules of the kidney. **Rs. of Heidenhain,** the rod-like cells of the renal tubules. See *Rs., Intracellular.* **Rs., Intracellular,** the fibrillæ of rod-like cells. **Rs. of Kœnig.** See *Kœnig.* **Rs., Muscle:** 1. sarcous elements of the contractile disc of a muscle-fiber. 2. The rod-shaped elements forming the non-contractile part of a muscle-fiber (Schäfer). **Rs. of the Retina,** cylindric bodies found in the layer of rods and cones of the retina.

ROD-EPITHELIUM FROM THE URINIFEROUS TUBULES.
1. On the flat with interlocking processes. 2. On edge, showing rodded character of outer portion. (*From Stirling.*)

Rodent (*ro'-dent*) [*rodere*, to gnaw]. Eating; gnawing. **R. Cancer.** See *R. Ulcer.* **R. Ulcer,** Jacob's ulcer; cancroid ulcer; ulcus excedens; noli me tangere; a carcinomatous ulceration of the skin, generally held to be a form of epithelioma, occurring usually in the eyelid or the side of the nose, and frequently persisting for years before developing malignancy.

Rodostrophone (*ro-dos'-tro-fōn*). An instrument for transmitting articular sounds from the skull of one person directly to that of another.

Rodrigues' Aneurysm. See *Aneurysm* and *Diseases, Table of.*

Rœderer's Obliquity. See *Obliquity.*

Rokitansky's Disease. Acute yellow atrophy of the liver. See *Diseases, Table of.* **R.'s Theory,** a theory of inflammation in which it is supposed that the first step in the inflammatory process is a sweating out of a fluid from the blood-vessels, and that in this fluid cells are formed.

Rolando, Arciform Fibers of. White fibers curving around the lower border of the olivary body and around the sides of the medulla. **R., Column of.** See *Column.* **R., Fissure of.** See *Fissures, Table of.* **R., Funicle of.** See *Funiculus.* **R., Nucleus of.** See *Nucleus.* **R., Tubercle of.** See *Tubercle.*

Rolle, Plane of. See *Plane.*

Roller (*ro'-ler*) [ME., *rolle*, a roll]. A long strip of cloth varying from one to six inches or more in width, made, for convenience, into a cylindric roll.

Rollet, Delomorphous Cells of. See *Delomorphous.*

Roman Ocher. Same as *Ocher.* **R. Theory,** of Marchiafava and Celli, as to the nature of the crescentic forms of the parasites found in the blood of malarial patients. According to this theory, the crescents are sterile forms and do not reproduce new bodies. Mannaberg's theory considers them as conjugation-forms, or syzygies. See *Syzygies.* **R. White.** Same as *White Lead.*

Romberg's Sign or Symptom. The increased incoordination of movement in tabes caused by placing the feet in juxtaposition and closing the eyes. It is also called the *Brach-Romberg Symptom.* See *Signs and Symptoms, Table of.*

Romershausen's Eye-water. A wash frequently employed in chronic ophthalmic catarrh. It is a mixture of fennel water and tincture of fennel.

Röntgen Rays. See *X-Rays.*

Root [ME., *roote*, root]. The place of origin of a nerve; the proximal and cutaneous end of a hair; the intra-alveolar portion of a tooth. The base of an organ. See *Radix.* In biology, the descending axis of a plant, originating in the radicle of the embryo. It fixes the plant in the soil and absorbs nutrition. It differs from a stem in producing no buds or branches. **Rs., Aërial or Adventitious,** those springing from the stem above ground for climbing or bracing purposes, *e.g.*, ivy, corn. **R., Anterior** (*of the auditory nerve*), the root of the auditory nerve arising from the large-celled auditory nucleus. **R., Anterior** (*of the zygoma*), a ridge passing from the temporal portion of the zygoma to the squamous portion of the temporal bone. **R., Antero-lateral** (*of the optic tract*), that strand of fibers arising from the optic thalamus and passing through the geniculate body. **R., Ascending** (*of the auditory nerve*), those fibers of the auditory nerve which arise from the median line of the oblongata (Roller). **R., Ascending** (*of the fifth nerve*), those fibers of the sensory root of the fifth nerve which have their origin in a group of cells in the gelatinous substance of the medulla. **R., Brazil,** an old name for *Ipecac.* **R.-cap,** a mass of tissue that covers like a helmet the growing-point of every root. **R., Deep** (*of the auditory nerve*). See *R., Anterior* (*of the auditory nerve*). **R., Descending** (*of the fifth nerve*), those fibers of the motor root of the fifth nerve having their origin in the gray substance of the aqueduct of Sylvius. **R., External** (*of the olfactory nerve*), those fibers of the olfactory nerve which have their origin in the insula. **R.-fillings,** fillings of different materials inserted into the pulp-canals of the teeth. **R.-form,** applied to that form of an insect, if it has two forms, which it assumes when infesting roots, as in *Phylloxera vastatrix*, the grape-vine pest. **R., Gray** (*of the olfactory nerve*). See *R., Middle* (*of the olfactory nerve*). **R.-hairs,** slender filaments growing from the epidermis of the younger roots which increase the power of absorption. **R., Inferior Auditory,** the posterior of the two roots which unite to form the auditory nerve. **R.-leaf.** Same as *radicle leaf;* apparently springing from the root, but really from a short stem. **R.-louse.** See *Phylloxera* and *Schizoneura.* **R.-neck** (Collet), the point of union between the root and the stem of a plant, or where the radicle and the plumule of the embryo unite. **R.-parasite,** a plant parasitic upon the root of another. **R.-pressure,** in biology, a force exerted in plants by which the water absorbed from the soil by the roots in greater quantity than required drives the sap up the stem. **R.-sheath,** the thick layer of tissue covering the radicle of grasses, etc., and which is ruptured on germination; it is called also *Coleorhiza.* **R.-sheath** (*of hair*), the epithelium of the hair-follicle. **R.-stock,** in biology, (1) a rhizome; (2) a cormus or rhizocaulus. **R.-symptoms** (of Gowers), in compression of the spinal cord. The functions of the nerve-roots are interfered with at the level of the morbid process. A second class of coexistent symptoms are denominated by Gowers as *Cord-symptoms*, and consist in interference with the function of the cord itself. **R.-trimmer,** an instrument for shaping and reducing the roots of natural teeth in crown and bridge work. **R.-zone,** a name given to the columns of Burdach in the spinal cord.

Rootlet [Dan., *rod*, a root]. A little root.

Roquefort Cheese. See *Cheese.*

Rorulent (*ro'-ru-lent*) [*rorulentus*, full of dew]. In biology, covered with a powdery bloom.

Rosa (*ro'-zah*) [L., *gen.*, *rosæ*]. A genus of the family *rosaceæ*, the rose. **R. Acidum, Infus.** (B. P.) Dose ʒj–ij. **R., Aqua,** pale rose 40, water 200 parts, mixed and distilled. **R., Aq., Ung.,** cold cream; oil of almond 50, spermaceti, white wax ää 10, rose-water 30 parts. A useful emollient. **R. Caninæ Confectio** (B. P.) Dose ʒj–ij. **R. canina,** the dog-rose, a European plant four to eight feet high. **Rosæ caninæ, Fructus.** Hips. These are the enlarged calyx-tubes, not the fruit. They have a sweet, acidulous, rather astringent taste, and are inodorous. For medicinal use, the fleshy calyx-tube is employed, the akenes being removed. The pulp contains malic and citric acids. **Confectio rosæ caninæ,** prepared from hips **R. centifolia,** pale rose; hundred-leaved rose, probably a native of Western Asia, but cultivated in all countries. The petals alone are used, and are roundish obovate, pink in color, having a delicious odor, due to a volatile oil, and a sweetish, rather bitter and astringent taste. The chief constituents are tannin, fat, resin, sugar, mucilage, a bitter principle, malates, tannates, phosphates, and a coloring-matter. The petals are used in the distillation of *Aqua rosæ*, and dried in preparing *Syrupus sarsaparillæ comp.* **R., Confectio,** red rose 8, sugar 64, honey 12, rose-water 16 parts. A basis for pills. **R., Damascena.** See *Attar of Rose.* **R., Ext., Fld.** Dose ♏v–ʒij. **R. gallica,** red rose; rose rouge. A native of Southern Europe and the Levant, but extensively cultivated. The buds are collected, the petals cut off near the base and rapidly dried. The chemic constituents are nearly identical with those of pale rose. **Confectio rosæ,** red rose 8 parts, sugar 64, honey 12, rose-water 16 parts. Used as a basis for pills. **Infus. rosæ acidum,** dried red rose petals broken up ½ troy-ounce, diluted sulphuric acid 1 fluidram, boiling distilled water 10 fluid ounces. Infuse in a covered vessel for half an hour and strain. **Extr. rosæ fluid.,** red rose in No. 30 powder 100 gm., glycerin 10 gm., dilute alcohol to make 100 c.c. Pack the mixture in a percolator, and add enough of the menstruum to saturate the powder and leave a stratum above. Used in gargles and mouth-washes. **Syrupus rosæ,** made from the fluid extract. **Mel rosæ,** honey of rose. Red rose in No. 140 powder 8 parts, clarified honey 92 parts, dilute alcohol, a sufficient quantity to make 200 parts. **R. solis** ("Rose of the sun"), a cordial or *liqueur*, flavored with cassia bark and orange-flower. Cf. *Rosoglio.*

Rosacea (*ro-za'-se-ah*). See *Acne rosacea.*

Rosaceous (*ro-za'-she-us*) [*rosa*, a rose]. Rose-like; rose-red. In biology, a term descriptive of flowers that have five spreading, clawless, or short-clawed petals, as the flowers of the apple, rose, etc.

Rosanilin (*ro-zan'-il-in*) [*rosa*, rose; *anilin*], $C_{20}H_{21}N_3O$. A derivative of anilin. It crystallizes from alcohol and hot water in colorless needles or plates. It reddens on exposure, and when heated suffers decomposition. Its salts are employed as dyes. **R.-blue**; *Triphenyl rosanilin, Spirit-blue.* An anilin-blue derived from coal-tar, used for dyeing, and soluble in spirit (alcohol). It is prepared by heating rosanilin with an excess of anilin and some benzoic acid. It gives a very pure blue to silks. See *Pigments, Conspectus of.* **R.-violet.** See *Pigments, Conspectus of.*

Rosary (*ro'-zar-e*) [*rosa*, a rose]. A rope suspended from the ceiling of a room, and strung with blocks a foot or eighteen inches apart. It is used in gymnastic training. In biology, applied to the string of eggs of certain batrachians (*Alytes obstetricans*). **R., Rachitic.** See *Rachitis.*

Rose (*rōz*) [*rosa*, a rose]. 1. A flower of a plant of the genus *Rosa*. 2. A synonym in Scotland for *Erysipelas*. 3. A tetronerythrin pigment around the eyes of certain birds. **R. des Alpes.** Same as *Daphnin.* **R.-anilin.** See *Azalein.* **R., Bengale.** See *Pigments, Conspectus of.* **R.-catarrh.** See *Hay-fever.* **R.-cold.** See *Hay-fever.* **R.-fever,** a condition resembling hay-fever, in which the emanations from the rose are the exciting cause. **R.-lake.** See *Pigments, Conspectus of.* **R.-madder.** See *Pigments, Conspectus of.* **R.-pink,** a chromatic crimson-pink color. **R.-pearl.** See *Celluloid.* **R.-rash.** See *Erythema* and *Roseola.* **R.-ringed,** having a collar of rose-red feathers. **R.-sickness.** See *Pelade, Pellagra.* **R.-vinegar,** an infusion of rose-leaves in vinegar. It is used as a local application in headache. **R.-water,** water tinctured with oil of roses by distillation. **R.-wood,** the wood of several varieties of tropical plants, notably the *Dalbergia.*

Rosein (*ro'-se-in*). See *Fuchsin* and *Magenta.*

Rosellin (*ro-zel'-in*). See *Pigments, Conspectus of.*

Rosemary (*rōz'-ma-re*). See *Rosmarinus.*

Rosen's Liniment. A liniment composed of oil of nutmeg, spirit of juniper, and oil of cloves.

Rosenbach's Bacilli. See *Bacteria, Synonymatic Table of.* **R.'s Sign.** Absence of movement of the abdominal muscles in inflammatory intestinal disease. See *Signs and Symptoms, Table of.*

Rosenmüller, Accessory Gland of. See *Gland of Rosenmüller.* **R., Body of.** See *Parovarium.* **R.'s Fossa.** See *Fossa.* **R.'s Glands.** See *Gland.* **R.'s Organ,** the parovarium, *q. v.*

Rosenstrehl's Green. Same as *Manganese Green.*

Rosenthal, Canal of. See *Canal.* **R.'s Hyperacid Vomiting.** See *Rossbach's Disease.* **R.'s Paste,** a paste used in treating sycosis. It consists of tannic acid, 75 grains; precipitated sulphur, 2½ drams; powdered starch and zinc oxid, each 1½ drams; vaselin, 1½ ounces. M. S. To be used at night. **R.'s Test,** a test for commencing vertebral disease, made by pressing one pole of a faradic battery in contact with the front of the body, and passing the other pole along the spine. If disease exists, pain will be felt.

Roseola (*ro-ze'-o-lah*) [*roseus*, rosy]. Rose-rash, or erythema. The name is also given to other diseases, such as Rubella, or German measles. See *Erythema.* **R. æstivalis.** See *Erythema roseola.* **R. annulata.** See *Erythema roseola.* **R. autumnalis.** See *Erythema roseola.* **R., Balsamic.** See *Erythema.* **R. cholerica,** an eruption which often appears upon the ninth day of an attack of cholera. **R., Circinal,** a form with ring-shaped eruptions. **R. circinata.** Synonym of *Pityriasis rosea.* **R., Epidemic.** See *Rötheln,* also *Rubeola.* **R. febrilis,** a name given to the *Erythema roseola* occurring in malaria. **R., Herpetic, R., Miliary,** a form attended with the formation of vesicles. **R. infantilis.** See *Erythema roseola.* **R., Rheumatic,** the reddish eruption that appears in rheumatism. **R., Secondary, R., Symptomatic,** roseola occurring as a secondary symptom of other disorder. **R., Syphilitic,** *Syphilitic Exanthem; Erythematous Syphilid; Macular Syphilid;* the earliest of the skin-manifestations of syphilis. It arises usually six or seven weeks from the first appearance of the initial lesion. It is a diffuse mottling or marbling of the skin in spots the size of the finger-tip, or smaller, with ill-defined and irregular borders. The color at first is a bright rose-pink, disappearing on pressure, but it soon becomes purplish or yellow. Favorite seats are the front of the trunk, flank, back, and flexor surfaces of limbs. It lasts from one to four weeks. **R. typhosa,** the typhoid rash. **R. vaccina,** an erythematous eruption appearing from the third to the eighteenth day after vaccination, analogous to that seen sometimes at the onset of variola. The eruption consists of red maculæ, at times reaching the size of the palm, commencing usually upon the arms, and thence spreading at times all over the body.

Roseolar (*ro-ze'-o-lar*) [*roseus*, rosy]. Pertaining to or exhibiting roseola.

Roseoloid (*ro-ze'-o-loid*). Same as *Roseolous.*

Roseolous (*ro-ze'-o-lus*) [*roseus*, rosy]. Having the character of roseola.

Roseous (*ro'-ze-us*) [*roseus*, rosy]. Rose-colored.

Roser's Method. The dependent position of the head in operations on the respiratory passages, to prevent blood flowing into the trachea. **R.'s Line.** See *Line.* **R.'s Position.** See *Position.* **R.'s Theory of Inflammation.** See under *Theory.*

Roser-Nélaton Line. A synonym of *Nélaton's Line.* See *Lines, Table of.*

Roset, Rosette (*ro-zet'*). See *Karyokinesis.*

Rosewood-oil. "A pale-yellow, viscid, volatile oil, having an odor resembling that of sandal-wood or rosewood, and obtained by distillation with water from a kind of rosewood" (Cent. Dict.).

Rosin (*roz'-in*) [a variation of *resin*]. See *Resina,* and *Colophony Resin.* **R.-grease.** See *R.-oil.* **R.-oil,** a violet-blue fluorescent liquid, varying in specific gravity from .98 to 1.1, obtained by dry distillation from colophony resin. It is largely used as a lubricant, especially for machinery and wagon-wheels. It is used in the condition of "rosin-grease" (made by stirring rosin-oil with milk of lime), and largely as a substitute for linseed-oil in the manufacture of printers' ink. **R.-plant.** Same as *R.-weed.* **R.-soap,** a soap made of rosin and soda or potash. **R.-weed,** Compass Plant. The plant *Silphium laciniatum* secretes an oleo-resin commonly used as a chewing-gum. Tonic, alterative, and emetic. Dose of fld. ext. ʒss–j. Unof.

Rosinol (*roz'-in-ol'*). See *Retinol.*

Rosmal (*roz'-mal*). A commercial name for liquid storax.

Rosmarinus (*roz-ma-ri'-nus*) [*ros*, dew; *marinus*, marine: *gen., Rosmarini*]. Rosemary. The leaves of *R. officinalis.* Its properties are due to a volatile oil and a resinous principle. It is somewhat useful as an external stimulant in liniments and lotions. **R., Oleum,** the volatile oil. Dose ♏j–v. **R., Spiritus.** (B. P.) Dose ♏j–v.

Rosoglio or Rosolio (*ro-sōl'-yo*) [Ital.]. 1. A kind of red wine. 2. A cordial highly popular in the Mediterranean region. The plant called sundew (*Drosera*) is believed to be used in making some brands of this liqueur.

Rosolene (*roz'-o-lēn*) [*rosin*, a variation of *resin*; *oleum*, oil]. The oily distillate of colophony.

Rosolic (*ro-zol'-ik*) [ME., *rose*, rose]. Relating to rosanilin. **R. Acid.** See *Acid* and *Aurin*. **R. Blue.** Same as *Azulin*.

Rossalia, Rossania (*ros-a'-le-ah, ros-a'-ne-ah*). Synonym of *Scarlatina*.

Rossbach's Disease. See *Diseases, Table of*.

Rostel (*ros'-tel*) [*rostellum*, a little beak]. Same as *Rostellum*.

Rostellar (*ros-tel'-ar*) [*rostellum*, a little beak]. Pertaining to a rostellum.

Rostellate (*ros-tel'-āt*) [*rostellum*, a little beak]. Having a small rostrum.

Rostelliform (*ros-tel'-if-orm*) [*rostellum*, a rostellum; *forma*, form]. Having the form of a rostel.

Rostellum (*ros-tel'-um*) [dim. of *rostrum*, a beak: *pl.*, *Rostella*]. In biology: (*a*) A little beak; the hook-bearing or spine-bearing portion of the head of certain worms; (*b*) A peculiar viscid modification of the upper stigma of the three confluent styles in many orchids, which holds the retinaculum or disc to which the pollen-masses are attached.

Rostral (*ros'-tral*) [*rostrum*, beak]. 1. Pertaining to or resembling a rostrum. 2. See *Cephalic*.

Rostrate (*ros'-trāt*) [*rostrum*, a beak]. In biology, furnished with a beak, or a beak-like process or extension.

Rostriferous (*ros-trif'-er-us*) [*rostrum*, beak; *ferre*, to bear]. Having a beak or rostrum.

Rostriform (*ros'-trif-orm*) [*rostrum*, beak; *forma*, form]. Shaped like a rostrum.

Rostroid (*ros'-troid*). Same as *Rostriform*.

Rostrular (*ros'-tru-lar*) [*rostrulum*, a small beak]. Pertaining to a rostrulum.

Rostrulate (*ros'-tru-lāt*) [*rostrulum*, a small beak]. In biology, provided with a rostrulum.

Rostrulum (*ros'-tru-lum*) [dim. of *rostrum*, a beak, snout: *pl.*, *Rostrula*]. In biology, a term for the peculiar mouth-parts of fleas.

Rostrum (*ros'-trum*) [L., the beak (of a bird): *pl.*, *Rostrums* or *Rostra*]. A projection or ridge, as the rostrum of the sphenoid or of the corpus callosum. The ventral continuation of the genu of the callosum. In biology, a beak or snout or proboscis; a beak-like structure.

Rosula (*roz'-u-lah*) [dim. of *rosa*, a rose]. A roset.

Rosular (*roz'-u-lar*). Same as *Rosulate*.

Rosulate (*roz'-u-lāt*) [*rosa*, a rose]. In biology, having the leaves arranged in the form of a roset.

Rosy (*ro'-ze*) [ME., *rose*, rose]. Blushing; like a rose. **R.-colored**, having a rosy color. **R.-drop**, acne rosacea; grog-blossoms; brandy-face. See *Rosacea*.

Rot [ME., *rot*, rot]. To suffer putrefactive fermentation. In biology: (*a*) Loosely applied to various processes of organic disintegration, dissolution, decomposition, or decay; (*b*) A disease of sheep due to the fluke, *Fasciola hepatica*; also called *water-rot, fluke-rot, bane, pourriture, cachexie aqueuse, Egelseuche, Leberkrankheit, Fäule*. **R., Dry**, a form of decomposition of wood-tissue due to chemic or fungoid change. **R., Potato.** See *Mildew*.

Rotate (*ro'-tāt*) [*rotare*, to revolve]. Wheel-shape. In dentistry, the term implies the turning of a tooth on its axis. **R.-plane**, in biology, wheel-shaped and flat.

Rotating (*ro-ta'-ting*) [*rotare*, to revolve]. Revolving. **R. Devices**, appliances, either single or double, for correcting torsion of single-rooted teeth.

Rotation (*ro-ta'-shun*) [*rotare*, to rotate]. 1. Turning with a circular motion. That movement in a joint by which the bone rotates on its own axis, as in the atlas and axis, also the hip-joint and the shoulder-joint. 2. A Swedish rotatory movement, by which the different joints are brought into motion within their natural limits. The aim is to lengthen and shorten the veins, so as to produce a sucking of their contents, thus stimulating the circulation and assisting the heart in its action. **R. of Protoplasm**, applied to the movement of the whole mass of protoplasm in a cell revolving on its own axis and carrying with it the grains and granules contained in it. Cf. *Cyclosis*. **R.-stage of Labor**, one of the stages of labor, consisting in a rotatory movement of the fetal head or other presenting part, whereby it is accommodated to the birth-canal. It may be internal, occurring before the birth of the presenting part, or external, occurring afterward.

Rotator (*ro-ta'-tor*) [*rotare*, to turn]. Any mechanical device that produces rotation. Also, the name of several muscles that turn the parts to which they are attached.

Roth, Bacillus of. See *Bacteria, Synonymatic Table of*.

Rothein (*ro'-te-in*). Same as *Phenyl-brown*.

Rötheln (*rāt'-eln*). See *Rubeola*.

Rotiferous (*ro-tif'-er-us*) [*rota*, a wheel; *ferre*, to bear]. In biology, having a wheel.

Rotiform (*ro'-tif-orm*) [*rota*, a wheel; *forma*, form]. Shaped like a wheel; rotate.

Rotten (*rot'-n*) [ME., *roten*, rotten]. The state resulting from natural decomposition.

Rotterin (*rot'-er-in*) [after *Rotter*, of Munich]. A soluble, non-toxic antiseptic introduced by Rotter, of Munich.

Rottlera (*rot-le'-rah*). See *Kamala*.

Rotula (*rot'-u-lah*) [L., dim. of *rota*, wheel: *pl.*, *Rotulæ*]. Any small, circular body. The patella or knee-cap. In biology, a radial piece in the oral skeleton of certain echinoderms.

Rotulad (*rot'-u-lad*) [*rotula*, a little wheel]. Toward the rotular aspect.

Rotular (*rot'-u-lar*) [*rotula*, a little wheel]. Of or pertaining to the rotula, or to the patella, *e. g.*, the patellar aspect of a limb; opposed to *popliteal*.

Rotulen (*rot'-u-len*) [*rotula*, a little wheel]. Belonging to the rotula in itself.

Rotuliform (*rot'-u-lif-orm*) [*rotula*, a little wheel; *forma*, a form]. Shaped like a rotula.

Rotund (*ro-tund'*) [*rota*, a wheel]. In biology, having a rounded outline.

Rotundate (*ro-tun'-dāt*) [*rotundus*, round]. Rounded off.

Rotundifolious (*ro-tun-dif-o'-le-us*) [*rotundus*, round; *folium*, leaf]. In biology, having round leaves.

Roubain Blue. Same as *Coupier's Blue*.

Roucou (*roo'-koo*). Same as *Annotto*. See *Pigments, Conspectus of*.

Rouge (*roozh*) [Fr.]. A dye made from the safflower, *Carthamus tinctorius*, used as a cosmetic. Also, any cosmetic for producing a flush of the skin. Also, the form of ferric oxid known as crocus martis and colcothar, used for polishing glass. **R., Végétal.** Same as *Carthamin*.

Rouge's Operation. See *Operations, Table of*.

Rouget, Bacillus of. See *Bacteria, Synonymatic Table*.

Roulet, Roulette (*roo-let'*) [Fr., a "roller"]. A roller, or light wheel, used in some forms of massage, and in the application of labile currents of electricity.

Round [ME., *round*, round]. In anatomy, applied to various parts having a nearly circular section. **R. Foramen**, a foramen of the sphenoid bone transmitting the second or superior maxillary branch of the fifth pair of nerves. **R.-headed**, having a round head

R. Ligaments of the Uterus, a name given to two cords originating in the superior lateral parts of the uterus and terminating in the areolar tissue of the groins and labia. **R.-shouldered,** having the shoulders drooped. **R. Ulcer,** a name given to simple ulcer of the stomach. **R. Window of the Ear.** See *Fenestra rotunda*. **R.-worm,** ascaris lumbricoides. See *Thread-worms*.

oundel (*rown'-del*) [ME., *roundel,* anything round and flat]. The bone button removed by the trephine.

ounder (*rown'-der*). See *Rounding*.

ounding (*rown'-ding*) [ME., *round,* round]. A term given to that propensity manifested by certain hypochondriac individuals to run the round of all the free dispensaries in a vicinity. Such patients are termed "*rounders*."

oup (*roop*). A contagious disease of poultry, characterized by offensive breath, discharge from the nostrils, and swollen face and eyes. It is probably tuberculous in nature, and is very commonly fatal.

ousseau's Laudanum. See *Laudanum*.

oussel's Treatment. See *Treatment, Methods of*.

oussillon (*roo-se-yon(g)'*) [Fr.]. A sweet red wine, used as a substitute for port. It contains from 11 to 16 per cent. of alcohol.

oussin's Fluid. A fluid used in the microscopy of the blood. It consists of glycerin three parts, sulphuric acid one part, with water sufficient to reduce the specific gravity to 1.028.

oyal (*roi'-al*) [ME., *roial,* royal]. Pertaining to a king; kingly. **R. Blue.** See *Pigments, Conspectus of*. **R. Fern.** See *Buckhorn Fern*. **R. Green.** Same as *Schweinfurth Green*. **R. Suture,** a form of suture used in the treatment of hernia. See *Suture*.

ubber (*rub'-er*) [origin uncertain]. Caoutchouc; india-rubber. **R.-dam, or Coffer-dam, Barnum's,** consists of a small piece of sheet-rubber, or rubber cloth, about six inches wide and from six to ten inches long, used for preventing the saliva and breath from interfering with the operation of filling teeth. It is secured by ligatures and clamps. **R.-dam Clamps,** flexible steel clamps to prevent the rubber-dam from being forced off the tooth by movements of the lips and tongue, and also useful in forcing the rubber higher up on the tooth, and pressing it aside to facilitate access to the cavity. See *Clamp*. **R.-dam Holder,** consists of an elastic ribbon, attached to two oval plates, upon which spring catches are adjusted to hold the rubber. **R.-dam Punch,** an instrument used for perforating the rubber-dam for the reception of the teeth. **R.-dam Weights,** small weights of metal intended to be suspended from the free ends or borders of the dam, to keep it out of the way of the operator. **R., Hard.** See *Vulcanite*. **R., India,** or **R., Indian,** *Caoutchouc, q.v.* Also, see *Vulcanite Base*.

ubbers (*rub'-ers*). See *Scab*.

ubbing (*rub'-ing*). One of the methods of carrying out massage. See *Massage*.

ubedo (*ru-be'-do*) [*ruber,* red]. Any diffused redness of the skin; blushing.

ubefacient (*ru-be-fa'-se-ent*) [*ruber,* red; *facere,* to make]. 1. Causing redness of the skin. 2. A medicine or agent that by irritation of the ends of the nerve-filaments of the skin causes distention of the capillaries and reddening of the skin.

ubefaction (*ru-be-fak'-shun*) [*rubefacere,* to make red]. Redness of the skin produced by a rubefacient.

ubella (*ru-bel'-ah*) [dim. of *ruber,* red]. A synonym of *Rubeola, q.v., Rötheln,* or *German Measles*. This term is also vaguely applied to other somewhat similar affections attended with slight eruptions.

Ruben's Madder. See *Pigments, Conspectus of*.

Rubeola (*ru-be'-o-lah*) [*rubeus,* red]. *Rötheln; Rubella,* or *German Measles; French Measles;* an acute, specific, exanthematous, contagious disease of childhood, characterized by enlargement of the superficial lymphatic glands, especially those of the neck, by catarrhal symptoms, and by an eruption appearing first upon the face and scalp, and consisting of small rose-colored spots. It is followed by a slight, branny desquamation. The period of incubation is usually eleven or twelve days. The term *rubeola* was formerly used synonymously with measles. See *Exanthemata, Table of*. **R. confluens.** See *Scarlet Fever*. **R. maligna.** Synonym of *Black Measles*. **R. nigra, R. scorbutica,** black measles. **R. notha,** an anomalous form of measles, with a papular eruption, the papulæ not being arranged in crescentic clusters, being less obvious, and not appearing at all, or showing themselves but imperfectly, on the limbs. The patches are of dusky hue, and there is no distinct sore-throat, but considerable constitutional disturbance. **R. scarlatinosa.** See *Scarlatina*. **R. vulgaris.** See *Measles*.

Rubeolar (*ru-be'-o-lar*) [*rubeus,* red]. Of the nature of or pertaining to rubeola.

Rubeoloid (*ru-be'-o-loid*) [*rubeus,* red; *εἶδος,* like]. Resembling rubeola.

Rubescence (*ru-bes'-ens*) [*rubescere,* to become red]. Blushing; redness of countenance or complexion.

Rubescent (*ru-bes'-ent*) [*rubere,* to be red]. Blushing; becoming red.

Rubiacin (*ru-bi'-as-in*). See *Pigments, Conspectus of*.

Rubicund (*ru'-bik-und*) [*rubicundus,* very red]. Ruddy; inclined to redness.

Rubidin (*ru'-bid-in*). See *Orseillin*.

Rubidium (*ru-bid'-e-um*) [*rubidus,* red]. Rb = 85.3; quantivalence 1. One of the rare alkaline metals, resembling potassium in physical and chemic properties. See *Elements, Table of*. **R.-alum,** an alum much resembling potash-alum, but less soluble in water. In Europe alum prepared from the mineral, bepidolite, sometimes contains a considerable proportion of rubidium-alum. Unof. **R.-ammonium Bromid,** $RbBr(NH_4Br)_4$, a double salt of rubidium, introduced as a substitute for potassium bromid. It is a white, crystalline powder, having a cooling, saline taste, and is readily soluble in water. It is used as a hypnotic and sedative, with special recommendation in the treatment of epilepsy. Dose 1 to 2 drams, in divided doses, best given in mixture with syrups flavored with lemon or orange. It has not been adopted generally, although endorsed by good authorities, and it is comparatively little known. **R. Bromid,** a serviceable but expensive substitute for potassium bromid. Unof. **R. Chlorid,** unof., lowers the pulse-rate and raises the arterial tension. Dose gr. ij–v.

Rubiginose (*ru-bij'-in-ōz*) [*rubiginosus,* rusty]. Brownred.

Rubiginous (*rū-bij'-in-us*) [*rubiginosus*]. Rust-colored.

Rubigo (*ru-bi'-go*). See *Rust*.

Rubijervin (*ru-bij-er'-vin*) [*rubeus,* red; *jerva,* green hellebore root], $C_{26}H_{43}NO_2$. An alkaloid of *Veratrum album*.

Rubin. Same as *Fuchsin*.

Rubini's Tincture of Camphor. See *Camphor*.

Rubor (*ru'-bor*). [L.] The redness or discoloration due to inflammation.

Rubores (*ru-bor'-ēz*). Synonym of *Scarlatina*.

Rubreserin (*ru-bres'-er-in*). A product of the decomposition of physostigmin.

Rubricose (*ru'-brik-ōz*) [*rubricosus*, full of red earth]. In biology, marked with red.

Rubula (*ru'-bu-lah*). See *Frambœsia.*

Rubus (*ru'-bus*) [L., *gen.*, *Rubi*]. Blackberry. The bark of several species of *Rubus.* It contains about 10 per cent. of tannic acid, to which its properties are mainly due. It is useful in the summer complaints of children. Dose gr. xv–xxx. **R. chamæmorus,** the cloud-berry. It is used in Russia as a diuretic and sudorific, the berries, leaves, and flowers being employed in infusion or extract. Unof. **R., Ext., Fld.** Dose ♏x–℥j. **R. idæus,** Raspberry, the fruit of several species of rubus. It contains various fruit-acids, flavors, etc. It is used as a flavor for syrups. **R. id., Syr.,** contains the clarified juice of the fruit with sugar q. s. **R., Syr.,** fld. ext. rubus 25, syrup 75 parts. Dose ℥j–℥j. **R., Syr., Aromat.,** unof., contains the root-bark with cloves, cinnamon, nutmeg, etc. Each fluid-ounce contains gr. xxx of the drug.

Ructamen (*ruk-ta'-men*) [L., *pl.*, *Ructamina*]. A ructation.

Ructation (*ruk-ta'-shun*) [*ructatio*]. An eructation or belching of wind.

Ructus (*ruk'-tus*) [L.]. A belching of wind from the stomach. **R. hystericus,** hysteric belching, the gas escaping with a loud, sobbing, gurgling noise.

Rudbeckia (*rud-bek'-e-ah*) [after Olaus *Rudbeck*, a Swedish botanist]. A genus of composite-flowered plants, chiefly North American; cone-flowers. **R. laciniata,** and **R. purpurea,** are diuretic and alterative. See *Thimbleweed.* Unof.

Ruddy (*rud'-e*) [ME., *ruddy*, ruddy]. Of a red color, reddish.

Ruderal (*ru'-der-al*) [*rudus*, rubbish, stones broken small and mixed with lime]. In biology, growing among rubbish.

Rudiment (*ru'-dim-ent*) [*rudimentum*, a beginning]. In biology, a part or organ in a primary stage, or aborted or remaining as a functionless trace of something once important to the organism. Cf. *Anlage,* and *Proton.*

Rudimentary (*ru-dim-en'-ta-re*) [*rudimentum*, a rudiment]. In an undeveloped or unfinished state. **R. Organ,** one whose development was arrested before reaching a state of normal growth.

Rue (*ru*). See *Ruta.*

Rufescent (*ru-fes'-ent*). Developing a reddish-brown color. Rufous.

Ruficarmin (*ru-fik-ar'-min*) [*rufus*, red; *carmin*]. A bright-red substance obtained by heating carmin and water. See *Pigments, Conspectus of.*

Ruficoccin (*ru-fik-ok'-sin*). A brick-red animal coloring-matter obtained from carmic acid by heating with concentrated H_2SO_4 to 120° C. (248° F.). It is soluble in alcohol with a yellow fluorescence. See *Pigments, Conspectus of.*

Rufigallic Acid (*ru-fig-al'-ik*). See *Acid.*

Rufous (*ru'-fus*) [*rufus*, red]. Reddish-brown.

Ruga (*ru'-gah*) [L., a wrinkle: *pl.*, *Rugæ*]. 1. A wrinkle, furrow, crease, or ridge, as, *e. g.*, in the mucosa of the stomach, vagina, etc. 2. A fold of pia on the ental surface of the piarachnoid.

Rugine (*ru'-gin*, or *ru'-zhēn*) [Fr.]. A surgeon's rasp, or scraper.

Rugitus (*ru-gi'-tus*). See *Bombus.*

Rugose (*ru'-gōz*) [*ruga*, a wrinkle]. Applied to a surface that is rough or wrinkled.

Rugosity (*ru-gos'-it-e*) [*rugositas*, the state of being wrinkled]. A condition of being in folds, or wrinkles. Roughness.

Rugous (*ru'-gus*). Same as *Rugose.*

Ruhmkorff Coil. See *Coil.*

Rule (*rūl*) [ME., *rule*, rule]. A formula or general proposition. **R., Goodell's.** See *Law, Goodell's.* **R. of Ready Practice.** See *Law, Goodell's.*

Rum [abbreviation of *rumbullion*]. A spirit obtained in the West Indies and the U. S. from the molasses of the sugar-cane by fermentation and distillation. When new, it is white and transparent, and has, when freshly distilled, an unpleasant odor, due to oils contained. These are removed by treatment with charcoal and lime. Cf. *Bay-rum.* **R.-blossom,** a pimple on the nose caused by excessive drinking; rum-bud; acne rosacea. **R.-bud.** See *R.-blossom.*

Rumbling (*rum'-bling*). See *Borborygmus.*

Rumen (*ru'-men*) [*rumen*, the throat, or gullet]. In biology, (*a*) the first compartment of the complicated stomach of a ruminant, also called the *paunch, plain tripe,* and *farding-bag* (see *Farding-bag*); (*b*) the cud of a ruminant.

Rumex (*ru'-meks*) [L., *gen.*, *Rumicis*]. Yellow Dock. The root of *R. crispus* and other species of *R.* Its properties are due to tannin, calcium oxalate, and chrysophanic acid. It is astringent and tonic and is useful in combination with the iodids. Dose gr. xv–℥j. **R., Decoct.,** contains ℥j of the dried root to Oj of water. Dose ℥j-ij. **R., Fld. Ext.** Dose ♏xv–℥j.

Rumicin (*ru'-mis-in*). Synonym of *Acid, Chrysophanic.*

Rumin (*ru'-min*) [*rumex*, sorrel]. A precipitate from a tincture of the root of Yellow Dock, *Rumex crispus;* resolvent, anti-scorbutic, mildly astringent, and laxative. Dose 3 grains. Unof.

Ruminant (*ru'-min-ant*) [*ruminare*, to chew the cud]. In biology, chewing the cud; specifically applied to one of the best defined and most closely united of any of the groups of *Mammalia* (the *Pecora* or *Cotylophora*), the complicated stomach of which is characteristic, consisting of four well-defined compartments known as (1) the *rumen,* or *paunch;* (2) the *reticulum,* or *honey-comb bag;* (3) the *psalterium,* or *manyplies;* (4) the *abomasum,* or *reed.*

Ruminate (*ru'-min-āt*) [*ruminare*, to chew the cud]. In biology, (*a*) to chew the cud; (*b*) applied to the albumin of certain seeds, when channeled or perforated with holes through which the inner coat penetrates, as in the nutmeg.

Ruminatio (*ru-min-a'-she-o*). See *Rumination.*

Rumination (*ru-min-a'-shun*) [*ruminare*, to chew the cud]. 1. *Merycismus;* a remarkable and rare condition in which patients regurgitate and chew the cud, like ruminants. It occurs in neurasthenic or hysteric persons, epileptics, and idiots. It may be hereditary. Certain persons have the power of returning food from the stomach to the mouth at will. 2. In biology, the return of ingesta—the cud—to the mouth from the paunch, and its remastication. Among certain of the lower animals this function is normal.

Rump [ME., *rumpe*, rump]. The end of the backbone; the buttocks, or nates. **R.-bone,** the sacrum.

Run [ME., *rinnen*, to run]. In pathology, to discharge pus or purulent matter from a diseased part. **R.-around.** See *Paronychia.*

Runcinate (*run'-sin-āt*) [*runcina*, a plane]. In biology, a modification of a pinnatifid leaf, in which the points of the large central lobes are reflected, *e. g.*, in the dandelion.

Runge's Method. A method of dressing the umbilical cord. The stump is powdered with a mixture of boric acid and starch, one part to three.

Runner (*run'-er*) [AS., *ryne*, course, path]. In biology, (*a*) a stem or branch, like that of the strawberry, that creeps along the ground, rooting at intervals; (*b*) a cursorial animal.

unning (*run'-ing*) [ME., *rinnen*, to run]. Moving quickly. **R. Amuck.** See *Amuck*. **R. Scall.** Synonym of *Eczema*.

unt [E. dialect.]. A dwarf.

upestrine (*ru-pes'-trin*) [*rupes*, a rock]. In biology, living or growing upon or among rocks.

upia (*ru'-pe-ah*) [*ῥύπος*, filth]. A term used to denote a variety of pustular syphiloderm characterized by the formation of large, dirty-brown, stratified, conic crusts, like limpet shells. **R. escharotica.** See *Dermatitis gangrenosa infantum*.

upial (*ru'-pe-al*) [*ῥύπος*, filth]. Resembling rupia.

upophobia (*ru-po-fo'-be-ah*) [*ῥύπος*, filth; *φόβος*, fear]. Insane dread of filth. See *Mysophobia*.

uptorium (*rup-to'-re-um*) [*ruptio*, a breaking]. An apparatus for the breaking of continuity.

upture (*rup'-tūr*) [*ruptura; rhexis; rumpere*, to break]. Breakage or laceration of the walls or continuity of an organ, especially of a viscus. Also, the popular name for hernia.

uptured (*rup'-tūrd*) [*ruptura; rumpere*, to break]. Burst; affected with hernia.

usconi, Anus of. See *Protostoma*.

uscus (*rus'-kus*) [*ruscum*, butchers' broom]. A genus of monocotyledonous plants. **R. aculeatus**, the butchers' broom or knee-holly of Europe. The rhizome is diuretic. **R. hypophyllum** and **R. hypoglossum** have similar qualities. Unof.

usma (*rus'-mah*). See *Rhusma*.

ussel and West's Method. See *Urea*.

ussian (*rush'-an*) [Russ., *Rossuja*, Russia]. Pertaining to Russia. **R. Bath.** See *Bath*. **R. Disease.** Synonym of *Influenza*. **R. Glue.** See *Glue*. **R. Pest.** Synonym of *Influenza*. **Russo-Polish Fever.** Synonym of *Typhus Fever*.

ussow's Potash-alcohol. An alcoholic solution of potassium hydrate employed in vegetable histology as a solvent of suberin and other substances incrusting the cell-wall.

ust [ME., *rust*, rust]. 1. The oxids, hydrates, and carbonates collecting on the surfaces of metals exposed to moist air. 2. In biology, a disease common on cereals, causing masses of rust-like dust to break out from the tissues of the plant. It is caused by fungi of the class *Uredineæ*. **R., Apple, R., Quince,** *Roestelia aurantiaca*, Pk.; *R. transformans*, Ell.; *Æcidium piratum*, S. **R., Bean, R., Pea,** *Uredo appendiculata*. **R., Beet,** *Uromyces betæ*, Kühn. **R., Blackberry,** and **R., Raspberry,** *Æcidium* (*Cæoma*) *nitens*, S. **R. of Carnation-pinks,** *Uromyces caryophyllinus*. **R., Celery,** *Puccinia bullata*. **R., Clover,** *Uromyces trifolii*, Abb. **R., Corn,** *Puccinium sorghi*, S. *P. maydis*, Berenger. **R., Elder,** *Æcidium sambuci*, Schw. **R. Flax.,** *Melampsora lini*, Desm. **R., Hollyhock,** *Puccinia malva cearum*, Mont. **R., Oat, R., Wheat,** *Puccinia graminis*, P.; *P. coronata; Puccinia rubigo vera*, D. C. **R., Peach, R., Plum, R., Cherry,** *Puccinia pruni spinosæ*, P. **R., Pear,** *Gymnosporangium nidus avis*, Thaxter; *Æcidium cancellatum*, Gmel. **R., Rose,** *Phragmidium subcorticum*. **R., Strawberry,** *Ramularia fragariæ*, Pk. **R., Sugar-cane,** *Uromyces Kühnii*. 3. The "brusone," "white blast," or "water weevil," (*Lissorhoptrus simplex*, Say), a coleopterous enemy of the rice-plant.

Rust's Disease. See *Malum*. **R.'s Disinfectant,** a mixture of camphor and myrrh, each seven parts, powdered charcoal and styrax, each 30 parts, and oil of turpentine sufficient to make an ointment.

Rusty (*rus'-te*) [ME., *rust*, rust]. Of the nature or appearance of rust. **R. Expectoration,** the common name for the usual form of expectoration in croupous pneumonia, due to the presence of a small amount of blood in the sputa.

Ruta (*ru'-tah*) [L., *gen. rutæ*]. Rue. The leaves of *R. graveolens*, which furnish oil of rue by distillation. **R., Oleum** is irritant, rubefacient, and vesicatory. Internally, it is an efficient emmenagogue. Dose ♏j–v, in mucilage.

Ruthenic, Ruthenious (*ru-then'-ik, ru-thēn'-e-us*) [*Ruthenia*, a province of Russia]. Containing ruthenium as a radicle.

Ruthenium (*ru-the'-ne-um*) [*Ruthenia*, a province of Russia]. A rare metal of the platinum group. Symbol. Ru; atomic weight, 103.5. Little is known of its medicinal properties. See *Elements, Table of*.

Rutherford's Solution. A decalcifying and hardening solution for tissue-specimens: chromic acid 1 grm., water 200 c.c.; then add 2 c.c. nitric acid.

Rutic (*ru'-tik*) [*ruta*, rue]. Obtained from rue.

Rutidosis (*ru-tid-o'-sis*) [*ρυτίδωσις*; *ρυτίς*, a wrinkle]. A contraction or puckering of the cornea that precedes death.

Rutin (*ru'-tin*) [*ruta*, rue]. A crystalline neutral substance obtained from the leaves of rue.

Rutting (*rut'-ing*) [ME., *rut*, rut]. The stage of sexual excitement in female animals coincident with the rupture of ovisacs.

Rutulin (*rut'-u-lin*). A substance obtained from salicin and sulphuric acid.

Rutyl (*ru'-til*). Synonym of *Cupryl*.

Ruysch, Membrane of. See *Membrane*.

Ruyschiana (*ru-she-an'-ah*). See *Membrane*.

Rye (*rī*) [ME., *rye*, rye]. The popular name of the grain *Secale cereale*, one of the *Graminaceæ*. **R.-asthma,** a form of hay-fever occurring at the time of the flowering of rye. **R., Ergot of.** See *Ergot*. **R., Spurred.** Same as *Ergot*.

Rypia (*rip'-e-ah*). See *Rupia*.

S

S. The chemic symbol of sulphur. **Letter of "S" Curve, of Pleurisy;** the upper line of dulness of a pleural effusion is said to be curved like the letter "S." **S. romanum,** the sigmoid flexure of the colon. σ, the symbol of one-thousandth of a second. A microsecond.

Sabadilla (*sab-ad-il'-ah*). See *Cebadilla.*

Sabadillin (*sab-ad-il'-in*) [*cevadilla*], $C_{29}H_{25}N_2O_5$. A colorless, crystalline alkaloid obtained from cevadilla-seed.

Sabal (*sa'-bal*). See *Saw Palmetto.*

Sabalol (*sa'-bal-ol*). A substance prepared from the active principles of the Saw Palmetto (*Serenoa serrulata*).

Sabatier's Suture. See *Suture.*

Sabatrin (*sab'-at-rin*) [*cevadilla*], $C_{51}H_{86}N_2O_{17}$. An alkaloid found in cevadilla-seed.

Sabbatia (*sab-a'-she-ah*) [after Liberatus *Sabbati*, an Italian botanist]. The herb *S. campestris*, of value in the sick headache of indigestion. Dose of the fld. ext. ♏xv–℥j. Unof. **S. angularis** is a good bitter tonic and appetizer. Other plants of this genus have similar properties, especially *S. chloroides*. They have the medicinal virtues of the gentians, to which they are nearly related. **S. eliotti** is known as quinin-flower. **S. paniculata** is used for the same purposes as *S. angularis.*

Sabina (*sa-bi'-nah*) [L., gen., *sabinæ*]. Savine. The tops of *Juniperus S.*; its properties are mainly due to a volatile oil which resembles turpentine, but is more irritant. In large doses it produces violent purging and vomiting. It is used as an emmenagogue. Externally, it is useful to prolong the discharge from blisters and to stimulate ulcers to cicatrization. **S., Ceratum,** fld. ext. savine 25, resin cerate 90 parts. **S., Fld. Ext.** Dose ♏v–xv. **S., Ol.,** the volatile oil. Dose ♏j–v. **S., Tinct.** (B. P.) Dose ♏xx–℥j.

Sabulose (*sab'-u-lōz*) [*sabulum*, sand]. In biology, growing in sand.

Sabulosity (*sab-u-los'-it-e*) [*sabulum*, sand]. Sandiness; grittiness.

Sabulous (*sab'-u-lus*) [*sabulum*, sand]. Gritty; sandy. Growing in sandy or gravelly places. Pertaining to the sandy deposit sometimes found in urine. Also, to the gritty matter called *brain-sand*, found in the pineal gland and in psammoma. See *Acervulus.*

Saburra (*sab-ur'-ah*) [coarse sand]. Foulness of the stomach, or of the tongue or teeth; sordes.

Saburral (*sab-ur'-al*) [*saburra*, coarse sand]. Pertaining to or affected with saburra.

Saburration (*sab-ur-a'-shun*) [*saburra*, coarse sand]. The use of the sand-bath; ammotherapy, or arenation. In biology, the act of rolling in the sand, as practised by poultry.

Sac (*sak*) [*saccus*, a bag]. The bag-like bulging or covering of a natural cavity, hernia, cyst, or tumor. **S., Air,** the air-cells of the lung. **S., Allantoid.** Synonym of *Allantois.* **S., Amniotic,** the amnion. **Ss., Auditory,** the rudimentary organs of hearing of the embryo of certain vertebrates. **S., Dental.** See *Dental Sac.* **S., Embryonic,** the sac-like stage of the embryo, which it presents early in its development, just after the abdominal plates have closed. **S., Fetal.** See *S., Gestation.* **S., Gestation,** the sac enclosing the embryo in ectopic pregnancy. **S., Hernial,** the peritoneal covering of a hernia. **S., Lacrymal,** the dilated upper portion of the lacrymal duct. **Ss., Latex,** milk-sacs, spaces containing the latex of plants. **S., Omental,** the sac formed between the ascending and descending portions of the great omentum. **S., Peritoneal,** the cavity formed by the peritoneal serous membrane. **S., Pleural,** the cavity formed by the pleura. **S., Vitelline,** the sac enclosing the vitellus or yolk in the embryo. **S., Yolk.** See *Umbilical Vesicle.*

Sacatra (*sak'-a-trah*). A person of seven-eighths black and one-eighth white blood.

Saccade (*sak-ahd'*) [F., *saccade*, pull, draw]. The involuntary jerk of deglutition.

Saccaneurysma (*sak-an-u-riz'-mah*) [σάκκος, bag; εὐρύνειν, to dilate]. A sacculated aneurysm.

Saccate, or Saccated (*sak'-āt, sak'-a-ted*) [*saccus*, sac or pouch]. Sac-shaped or contained in a membranous envelop. Encysted; pouched; furnished with a sac.

Saccharate (*sak'-ar-āt*) [*saccharum*, sugar]. 1. Having or containing sugar. 2. A compound of saccharic acid and a base. 3. A compound of cane-sugar with a base. **S. of Iron** (*Ferrum oxydatum saccharatum solubile*, Ger. Ph.). A compound of cane-sugar and iron, important as an antidote for arsenic. **S. of Lead,** a salt of saccharic acid and lead, used in forming the nitro-saccharate of lead, which has been vaunted as a safe and effective solvent of urinary calculus. **S. of Lime,** a compound of cane-sugar with lime. A syrup charged with it has been recommended as a cure for chronic rheumatism. A solution of this compound is a good antidote in carbolic-acid poisoning.

Saccharated (*sak'-ar-a-ted*) [σάκχαρον, sugar]. Containing sugar. **S. Carbonate of Iron,** a greenish-gray powder containing sulphate of iron. **S. Iodid of Iron,** iodid of iron with milk-sugar. **S. Pepsin,** milk-sugar with pepsin from the stomach of the hog. **S. Tar,** a mixture of tar (4 parts) and sugar (1 parts), a soluble medium for medicinal administration.

Saccharephidrosis (*sak-ar-ef-id-ro'-sis*) [σάκχαρον, sugar; ἐφιδρωσις, ephidrosis]. A form of hyperidrosis characterized by the excretion of sugar in sweat.

Saccharic (*sak-ar'-ik*) [σάκχαρον, sugar]. Pertaining to or obtained from sugar. **S. Acid.** See *Acid.*

Saccharid (*sak'-ar-id*) [σάκχαρον, sugar]. A compound of a base with sugar. A sucrate. See *Caseon Saccharid.*

Sacchariferous (*sak-ar-if'-er-us*) [σάκχαρον, sugar; *ferre*, to carry]. Containing sugar.

Saccharification (*sak-ar-if-ik-a'-shun*) [σάκχαρον, sugar; *facere*, to make]. Sugar-forming. The act of converting into sugar.

Saccharimeter (*sak-ar-im'-et-er*). See *Saccharometer.*

Saccharimetry (*sak-ar-im'-et-re*) [σάκχαρον, sugar; μέτρον, measure]. The operation or art of ascertaining the amount or proportion of sugar in solution in any liquid.

Saccharin (*sak'-ar-in*) [σάκχαρον, sugar]. $C_6H_4{<}^{CO}_{SO_2}{>}NH$. 1. A benzol-sulphonicimid derived from coal-tar, occurring as six-sided, colorless tablets, melting at 224° C. It is 280 times sweeter than cane-sugar. It is used as a substitute for sugar in diabetes and is recommended for use in the treatment of obesity and gout. It is also antiseptic, and has been found useful in erysipelas, septic fever, and gonorrhœa. Dose, gr. ¾. See *Glusidum.* 2. $C_6H_{10}O_5$. The anhydrid of monobasic saccharic acid. It is soluble in 18 parts of water, forms large crystals, having a bit

ter and salty taste, melts at 160° C., is dextrorotatory and non-fermentable.

ccharine (*sak'-ar-in*) [σάκχαρον, sugar]. Having the nature of or containing sugar. An old term for oxalic acid.

ccharinin (*sak-ar'-in-in*). Synonym of *Saccharin* (1st def.).

ccharobiose (*sak-ar-o'-be-ōz*) [σάκχαρον, sugar]. Synonym of *Saccharose*. The name has been given on account of the property possessed by saccharose of giving rise, when hydrated, to two carbohydrated molecules. $C_{12}H_{22}O_{11} + H_{20} = 2C_6H_{12}O_6$.

ccharocolloid (*sak-ar-o-kol'-oid*) [σάκχαρον, sugar; κόλλα, glue; εἶδος, like]. Any member of that group of carbohydrates to which starch, pectin, and gum belong, which are amorphous, crystallize with difficulty, and diffuse through animal membranes very slowly.

ccharogalactorrhea (*sak-ar-o-gal-ak-tor-e'-ah*) [σάκχαρον, sugar; γάλα, milk; ῥοία, a flow]. The excretion of an excess of sugar with the milk.

ccharogen (*sak'-ar-o-jen*) [σάκχαρον, sugar; γεννᾶν, to produce]. A material found in milk, and convertible into lactose. A glucosid.

ccharoid (*sak'-ar-oid*) [σάκχαρον, sugar; εἶδος, like]. Resembling loaf-sugar.

ccharometer (*sak-ar-om'-et-er*) [σάκχαρον, sugar; μέτρον, measure]. An apparatus for determining the amount of sugar in solutions, either in the form of a hydrometer which indicates the strength in sugar by the specific gravity of the solution; or of a polarimeter, which indicates the strength in sugar by the number of degrees of rotation of the plane of polarization. **S., Fermentation,** an instrument for collecting and estimating the percentage of carbon dioxid evolved in the fermentation of saccharine urine.

Saccharomyces (*sak-ar-o-mi'-sēz*) [σάκχαρον, sugar; μύκης, fungus: *pl.*, *Saccharomycetes*]. A genus of unicellular vegetable organisms, of which the yeast-plant is a common example. **S. albicans,** the same (Rees) as the *Oïdium albicans* of Robin; the fungus of thrush. **S. apiculatus,** a fungus-ferment found upon gooseberries, etc. **S. capillitii,** a form found on the human scalp and supposed to cause *Pityriasis capitis*. **S. cerevisiæ,** the ferment of beer-yeast. **S. conglomeratus,** found in grape-must when fermentation is nearly over. **S. coprogenus,** a form observed in human feces. **S. ellipsoideus,** the common ferment of wine. **S. exiguus,** found in the last stages of the fermentation of beer. **S. glutinis,** a species forming a rose-colored coating on gelatin or potatoes. **S. gutulatus,** occurs in the digestive tract of various animals. **S. mesentericus,** destroys fruit acids. **S. minor,** according to Engel, the fungus of bakers' yeast. **S. mycoderma** (Grawitz), same as *S. albicans*. **S. pasteurianus,** a form closely allied to *S. ellipsoideus*. **S. psoriasis,** occurs in the human scalp, around the hairs. **S. reessi,** probably a variety of *S. ellipsoideus*. **S. sphæricus,** found on fermenting tomatoes. **S. tyricola,** found in fermenting cheese. It resembles *S. minor*. See *Bacteria, Synonymatic Table of*.

Saccharon (*sak'-ar-on*) [σάκχαρον, sugar], $C_6H_8O_6$. The lactone of saccharonic acid.

Saccharonic Acid (*sak-ar-on'-ik*). See *Acid*.

Saccharorrhea (*sak-ar-or-e'-ah*) [σάκχαρον, sugar; ῥοία, flow]. The secretion of saccharine fluid. **S. cutanea.** See *Sacharephidrosis*. **S. lactea.** See *Saccharogalactorrhea*. **S. pulmonalis,** the exudation of sweetish sputa. **S. urinosa.** See *Diabetes mellitus*.

Saccharose (*sak'-ar-ōz*) [σάκχαρον, sugar], $C_{12}H_{22}O_{11}$. *Cane-sugar:* it occurs in the juice of many plants, chiefly in sugar-cane, in some varieties of maple, and in beet roots (10–20 per cent.). The syrupy mother liquid from the sugar is called molasses. Saccharose crystallizes in large monoclinic prisms, of a sp. gr. 1.606. Its aqueous solution is levorotatory. Cane-sugar melts at 160°; at 190–200° it changes into a brown non-crystallizable mass called *caramel*, used in coloring liquids. It is not directly fermentable and does not reduce alkaline copper-solutions. The ordinary pure sugar of commerce. See *Carbohydrates, Table of*.

Saccharous (*sak'-ar-us*). Same as *Saccharine*.

Saccharum (*sak-ar'-um*) [σάκχαρον, sugar; *gen.*, *saccharī*], $C_{12}H_{22}O_{11}$. Cane-sugar. The soluble crystalline substance occurring naturally in the juice of the sugar-cane, *S. officinarum;* maize, *Zea mays;* the sugar-beet, *Beta vulgaris*, and the sugar-maple, *Acer saccharinum*. In pharmacy, in the form of syrups, it is used mainly as a vehicle, and in a solid state as a protective coating for pills and troches. See, also, *Glucose*, *Lactose*, and *Levulose*. **S. album,** white or pure crystallized sugar. **S. canadense,** Maple-sugar, obtained from *Acer saccharinum*. **S. candidum,** Rock-candy. **S. lactis,** Sugar of Milk. **S. purificatum,** pure white sugar.

Saccharure (*sak'-ar-ūr*) [σάκχαρον, sugar]. A preparation obtained by saturating sugar with a tincture, then drying, and pulverizing.

Saccholactic Acid (*sak-o-lak'-tik*). Synonym of *Acid, Mucic*.

Sacciferous (*sak-sif'-er-us*) [*saccus*, sack; *ferre*, to bear]. In biology, having a sac; saccate.

Sacciform (*sak'-sif-orm*) [*saccus*, a pouch; *forma*, form]. Resembling a sac; saccate. **S. Disease of the Anus,** distention and inflammation of the pouches of the rectum.

Saccular (*sak'-u-lar*) [*saccus*, sac]. Sac-shaped. **S. Aneurysm,** a saccular dilatation of an artery, communicating with the latter by a narrow neck.

Sacculate (*sak'-u-lāt*) [*saccus*, a bag]. Having small, sac-like projections.

Sacculated (*sak'-u-la-ted*) [*saccus*, sac]. Encysted. Divided into little sacs.

Sacculation (*sak-u-la'-shun*) [*saccus*, sac]. A sac-like formation; a sac, or set of sacs; as the *sacculation* of the colon, or of the uterus in rare cases.

Saccule, Sacculus (*sak'-ūl, sak'-u-lus*) [dim. *saccus*, sac]. A small sac. **S. communis, oblongus,** or **semiovalis,** the utricle. **S. laryngis,** the laryngeal pouch between the superior vocal bands and the inner surface of the thyroid cartilage. **S. mucosus,** the bursa of the rectus femoris muscle. **S. of the Vestibule,** the smaller of two vestibular sacs of the membranous labyrinth of the ear.

Saccus (*sak'-us*). Synonym of *Sac*. **S. vitellinus.** See *Sac, Vitelline*.

Sacer (*sa'-ser*) [L.]. Sacred. **S. ignis,** erysipelas. **S. morbus,** epilepsy.

Sachet (*sash-a'*) [*saccus*, a sac]. A small bag of perfumed or medicated substances. **S. resolutif** [Fr.], a sachet of equal parts of sal ammoniac, iron sulphate, and calcium sulphate.

Sachse's Solution and Test. A solution for testing for sugar in the urine. It consists of 18 grams of red iodid of mercury, 25 grams of potassium iodid, and 80 grams of potassium hydrate in water, diluted to one liter.

Sachs's Theory of Inflammation. See *Theory*.

Sack (*sak*) [*siccus*, dry]. An old name for dry Spanish and Canary wine; sherry. Synonym of *Sac*.

Sacrad (*sa'-krad*) [*sacrum*, the sacrum]. Toward the sacral aspect.

Sacral (*sa'-kral*) [*sacrum*, sacrum]. Pertaining to the sacrum. **S. Bone.** See *Sacrum*. **S. Canal.** See *Canal*. **S. Cornua.** See *Cornu*. **S. Flexure, the**

curve of the rectum in front of the sacrum. **S. Foramen.** See *Foramen.* **S. Groove.** See *Groove.* **S. Index,** the sacral breadth multiplied by 100, and divided by the sacral length. **S. Nerves.** See *Nerves.* **S. Plexus.** See *Plexus.*

Sacralgia (*sa-kral'-je-ah*) [*sacrum*, sacrum; ἄλγος, pain]. Pain in the sacrum; hieralgia.

Sacrarthrocace (*sak-rar-throk'-as-e*). See *Sacro-iliac Disease.*

Sacred (*sa'-kred*) [ME., *sacren*, to render holy]. Hallowed; holy. **S. Bark.** See *Cascara Sagrada.* **S. Malady.** Synonym of *Epilepsy.*

Sacren (*sa'-kren*) [*sacrum*, sacrum]. Belonging to the sacrum in itself.

Sacrifical (*sa-krif'-ik-al*) [*sacrificare*, to sacrifice]. Employed in sacrifice. **S. Operation,** an operation in which some organ (as an ovary), is sacrificed or destroyed for the general good of the patient.

Sacriplex (*sa'-krip-leks*) [*sacrum*, sacrum; *plexus*, plexus]. The sacral plexus of nerves.

Sacriplexal (*sa-krip-leks'-al*) [*sacrum*, sacrum; *plexus*, plexus]. Pertaining to the sacriplex.

Sacro- (*sa'-kro-*) [*sacrum*, sacrum]. A prefix denoting connection with or relation to the sacrum.

Sacro-caudal (*sa-kro-kaw'-dal*) [*sacrum*, sacrum; *cauda*, tail]. In biology, pertaining to the sacrum and the tail.

Sacrococcygeal (*sa'-kro-kok-sij'-e-al*) [*sacrum*, sacrum; κόκκυξ, coccyx]. Pertaining jointly to the sacrum and the coccyx.

Sacrocostal (*sa-kro-kos'-tal*) [*sacrum*, sacrum; *costa*, rib]. Connected with the sacrum and having the character of a rib.

Sacro-cotyloid (*sa-kro-kot'-il-oid*) [*sacrum*, sacrum; κοτυληδών, cotyledon; εἶδος, like]. Pertaining to the sacrum and the acetabulum.

Sacro-coxalgia (*sa-kro-koks-al'-je-ah*). See *Sacro-iliac Disease.*

Sacro-coxitis (*sa-kro-koks-i'-tis*). See *Sacro-iliac Disease.*

Sacro-iliac (*sa-kro-il'-e-ak*) [*sacrum*, sacrum; *ilium*, ilium]. Pertaining to the sacrum and the ilium. **S. Disease,** *sacro-coxitis; sacrarthrocace; sacro-coxalgia;* an inflammation of the sacro-iliac joint, characterized by pain and tenderness, with swelling over the line of the sacro-iliac junction. The limb on the diseased side is usually extended, elongated from downward displacement of the os innominatum, wasted, and sometimes edematous. The hip is deformed. Suppuration may occur at a late period of the disease. The affection occurs in early life, and is probably tuberculous in nature.

Sacro-ischiatic (*sa-kro-is-ke-at'-ik*) [*sacrum*, sacrum; ἰσχίον, ischium]. Pertaining both to the sacrum and the ischium.

Sacrolumbal (*sa-kro-lum'-bal*) [*sacrum*, sacrum; *lumbus*, loin]. Sacrolumbar; pertaining to both the sacrum and the loins.

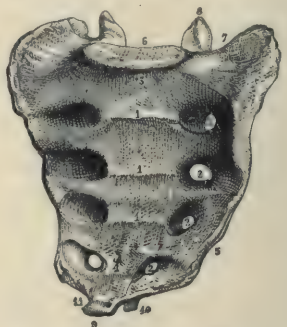
Sacrolumbalis (*sa-kro-lum-ba'-lis*). See *Muscles, Table of.*

Sacrolumbar (*sa-kro-lum'-bar*) [*sacrum*, sacrum; *lumbus*, loin]. Pertaining conjointly to the sacrum and the loins. **S. Angle,** the angle formed by the articulation of the sacrum and the last lumbar vertebra.

Sacro-median (*sa-kro-me'-de-an*) [*sacrum*, sacrum; *medius*, middle]. Running along the median line of the sacrum.

Sacro-pubic (*sa-kro-pu'-bik*) [*sacrum*, sacrum; *pubes*, pubis]. Pertaining to the sacrum and the os pubis.

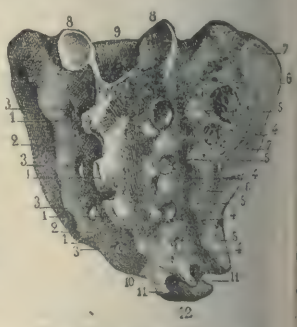
Sacro-rectal (*sa-kro-rek'-tal*) [*sacrum*, sacrum; *rectum*, rectum]. Pertaining to both sacrum and rectum.



Sacro-sciatic (*sa-kro-si-at'-ik*). Synonym of *Sacro-ischiatic.* **S. Foramen.** See *Foramen.* **S. Notches.** See *Ischiatic.*

Sacro-spinal (*sa-kro-spi'-nal*) [*sacrum*, sacrum; *spina*, spine]. Pertaining to the sacrum and the spine.

Sacrospinalis (*sa-kro-spi-na'-lis*) [*sacrum*, sacrum; *spina*, spine]. The erector spinæ muscle.



Sacro-vertebral (*sa-kro-ver'-te-bral*) [*sacrum*, sacrum; *vertebra*, vertebra]. Pertaining conjointly to the sacrum and the vertebræ.

Sacrum (*sa'-krum*) [*sacer*, sacred]. A curved, triangular bone composed of five united bones, which are really vertebræ, situated between the last lumbar vertebra above, the coccyx below, and the two ilia on either side, and forming the posterior boundary of the pelvis. **S., Ala of.** See *Ala.*

SACRUM, ANTERIOR ASPECT.

1, 1, 1, 1. Bodies of sacral vertebræ, with transverse lines of union. 2, 2, 2, 2. Anterior sacral foramina. 3. Base. 4. Auricular surface of lateral aspect. 5. Its inferior portion. 6. Articular surface of base. 7. Notch for formation of last lumbar intervertebral foramen. 8. Superior articular process of first sacral vertebra. 9. Apex of sacrum. 10. Cornu. 11. Notch for transmission of sacral nerve.

SACRUM, POSTERIOR ASPECT

1, 1, 1, 1. Spinous processes of sacral vertebræ. 2, 2. Sacral groove. 3, 3, 3, 3. Posterior sacral foramina. 4, 4, 4, 4. Articular processes, united. 5, 5, 5, 5. Transverse processes. 6, 6. Cribriform fossa. 7, 7. Auricular surface. 8, 8. Superior articular processes of first sacral vertebra. 9. Superior orifice of sacral canal. 10. Groove representing inferior orifice. 11, 11. Cornua. 12. Apex.

Saddle (*sad'-l*) [ME., *sadel*, saddle]. A contrivance secured on the back of a horse or other animal to serve as a seat for a rider. **S.-bags,** a pair of leather cases, formerly, and still locally, carried by physicians upon the saddle, and containing their medicines and instruments. **S.-joint,** an articulation concave in one direction and convex in the opposite. **S.-nose,** one of which the bridge is deep or wanting. A nose in which there has been a collapse of the bridge from necrosis of the nasal bones.

Sadism, Sadismus (*sa'-dizm, sa-diz'-mus*) [from the Marquis de *Sade*, author of obscene books]. Sexual perversion which leads to rape, with circumstances of great violence and inhuman cruelty.

Sadist (*sa'-dist*) [from the Marquis de *Sade*]. One affected with sadism, *q. v.*

Saemisch's Ulcer. An acute serpiginous, or creeping, ulcer of purulent keratitis. It is due to local infection. Infectious ulcer of the cornea. See *Diseases, Table of.*

Sæpimentum (*se-pe-men'-tum*) [*sæpire*, to fence]. The tissue enclosing the three umbilical vessels. 2. Pons varolii.

Sæptometer (*sep-tom'-et-er*). See *Septometer.*

Sæptum (*sep'-tum*). See *Septum.*

Safflower (*saf'-low-er*). See *Carthamus.* **S. Carmin.** Same as *Carthamin.*

Saffranin (*saf'-ran-in*). See *Pigments, Conspectus of.*

Saffrol (*saf'-rōl*). See *Safrol.*

Saffron (*saf'-ron*) [ME., *saffron*, saffron]. See *Crocus.* **S., American.** See *Carthamus.* **S., Meadow.** See *Colchicum.* **S. Substitute.** Same as *Victoria Yellow.* **S.-tea.** See *Carthamus.* **S.-yellow.** Same as *Martius's Yellow.* See *Pigments, Conspectus of.*

Safranin (*saf'-ran-in*) [Fr., *safran*, saffron], $C_{18}H_{18}N_4$. A coal-tar color used in dyeing and staining, obtained by oxidizing a mixture of amido-azotoluene and toluidin. It gives yellowish-red shades on wool, silk, and cotton, and is fairly fast to light. It is used in histology to stain karyokinetic figures. Physiologically, it is very poisonous, producing death, if in sufficient dose, by respiratory paralysis. The *safranins* are diamido-derivatives of hypothetic phenylphenazonium. They are produced upon oxidizing a mixture of an indoamin and a primary amin. They are strong bases. See *Pigments, Conspectus of.*

Safraninophile or Saphranophile (*saf-ran-in'-o-fil, saf-ran'-o-fil*) [Fr., *safran*, saffron; $\phi\iota\lambda\epsilon\iota\nu$, to love]. In bacteriology, or histology, applied to microbes or histologic elements that show a peculiar affinity for safranin. Cf. *Eosinophile.*

Safrene (*saf'-rēn*) [Fr., *safran*, saffron], $C_{10}H_{16}$. A hydrocarbon obtained from sassafras.

Safrol (*saf'-rol*) [Fr., *safran*, saffron; *oleum*, oil], $C_{10}H_{10}O_2$. The stearoptene of the oil of sassafras. When the oil is chilled, it separates as a white crystalline mass, melting at + 8° C. It is used in headache, neuralgia, and subacute rheumatism. Its dose is ɱx–xx. It is also employed for perfuming soaps.

Safrosin (*saf'-ro-sin*) [Fr., *safran*, saffron], $C_{20}H_8Br(NO_2)_2O_5$. A coloring-matter used in the arts for dyeing silk or wool scarlet. It occurs chiefly as a sodium salt. See *Pigments, Conspectus of.*

Safrosin (*saf'-ro-sin*). Same as *Daphnin.*

Sagapenum (*sag-ap-e'-num*) [$\sigma\alpha\gamma\acute{\alpha}\pi\eta\nu o\nu$]. A fetid gum-resin, believed to be the concrete juice of *Ferula persica.* It has the general properties of asafetida, but is now little used. Unof.

Sage (*sāj*) [ME., *sage*, sage]. See *Salvia.* **S., Mountain.** See *Sierra salvia.* **S.-brush.** See *Serra salvia;* also *Eurotia.*

Sage-femme (*sahzh-fam'*) [Fr., literally a wise woman]. A midwife.

Sagitta (*saj-it'-ah*) [*sagitta*, an arrow, a bolt]. In biology, (*a*) the sagittal suture; (*b*) an otolith in the ear of a fish.

Sagittal (*saj'-it-al*) [*sagitta*, an arrow]. Pertaining to the antero-posterior median plane of the body, the meson, or to planes parallel with it. **S. Furrow,** a channel extending along the median line of the inner surface of the vault of the cranium. **S. Nucleus,** that of the oculo-motor nerve. **S. Plane,** the median plane of the body. **S. Section.** See *Section.* **S. Sinus,** the longitudinal sinus. **S. Suture,** the suture uniting the parietal bones.

Sagittate (*saj'-it-āt*) [*sagitta*, an arrow]. In biology, shaped like the head of an arrow, with the basal lobes pointing downward when applied to leaves.

Sagittocyst (*saj'-it-o-sist*) [*sagitta*, an arrow; *cystus*, a bag, a pouch]. In biology, applied to certain glandular cutaneous cells in turbellarian worms; they contain the so-called *rods* or *rhabdites;* also called rod-cells or rhabdite-cells.

Sago (*sa'-go*) [Malay, *sāgu*, sago]. The starchy fecula obtained from the pith of *Sagus lævis* and several species of palms and cycads. It is an excellent food for invalids when completely softened by long boiling. **S. Spleen,** a spleen presenting on section the appearance of sago-grains, as a result of amyloid degeneration. The apparent grains represent the degenerated Malpighian bodies. **S.-grain,** a vesicular granulation of the eyelid, seen in granular ophthalmia.

Sailors' Colic. See *Colic.*

Saint Agatha's Disease. Mammitis. **S. Aignon's Disease,** tinea or favus. **S. Andrew's Cross,** the herb or shrub *Ascyrum crux andreæ* of N. America, a discutient remedy. Unof. **S. Anthony's Dance.** Synonym of *Chorea.* **S. Anthony's Fire.** See *Erysipelas.* **S. Apollonia's Disease,** toothache. **S. Avertin's Disease,** epilepsy. **S. Avidius' Disease,** deafness. **S. Blasius' Disease,** quinsy. **S. Clair's Disease,** ophthalmia, or sore eyes. **S. Dymphna's Disease,** insanity. **S. Erasmus' Disease,** colic. **S. Fiacre's Disease,** hemorrhoids, or condylomata. **S. Francis' Fire,** erysipelas. **S. Germain Tea,** the *species laxantes* (N. F.); a mixture of elder flowers, senna, fennel, anise, and potassium bitartrate; a useful aperient. **S. Gervasius' Disease,** rheumatism. **S. Giles' Disease,** carcinoma or leprosy. **S. Guy's Dance.** Synonym of *Chorea.* **S. Helena Tea,** a plant of the island of St. Helena, *Beatsonia portulacifolia,* a local substitute for tea. Unof. **S. Hilaire (Geoffroy), Angle of.** See *Angle.* **S. Hubert's Disease,** hydrophobia. **S. Ignatius' Bean.** See *Ignatia.* **S. Jacob's Oil.** See *Aconitum.* **S. Job's Disease,** syphilis. **S. John Long's Liniment.** See *Linimentum.* **S. John's Dance.** Synonym of *Chorea.* **S. John's Evil.** See *Epilepsy.* **S. John's Wort.** See *Hypericum* and *Johnswort.* **S. Kilda Cold;** *Strangers' Cold;* a form of influenza in the Hebrides, supposed to be due to the presence of strangers on the arrival of a ship. **S. Lazarus' Disease,** leprosy. **S. Main's Disease,** the itch. **S. Martin's Evil,** drunkenness. **S. Mary's Thistle.** See *Carduus.* **S. Mathurin's Disease,** insanity, idiocy or epilepsy. **S. Modestus' Dance.** Synonym of *Chorea.* **S. Robert's Herb,** the *Geranium robertianum.* **S. Valentine's Disease,** epilepsy. **S. Vitus' Dance.** Synonym of *Chorea.* **S. With's Dance.** Synonym of *Chorea.* **S. Zachary's Disease,** dumbness.

Saké (*sah'-ke*) [Jap.]. Japanese rice-beer or other alcoholic beverage.

Sakitlakar (*sak-it-lak'-ar*). Synonym of *Palmus.*

Sal [*sal*, salt]. Salt; a term applied to various crystalline substances. **S. aëratus,** potassic bicarbonate. **S. alembroth.** See *Alembroth*, and *Listerian Method.* **S. ammoniac.** See *Ammonium.* **S. carolinum,** Carlsbad salts. **S. communis,** common salt. See *Sodium.* **S. cornus cervi,** hartshorn; same as *Ammonia.* See *Ammonium.* **S. de duobus,** potassic sulphate. **S. epsom,** magnesium sulphate. See *Magnesium.* **S. glauberi,** sodium sulphate. See *Sodium.* **S. kissingense,** Kissengen salts. **S. mirabile,** sodium sulphate. **S. polychrest, S. polychrestum,** potassic sulphas cum sulphure. **S. seignetti,** potassium and sodium tartrate. **S.-soda.** Crystallized sodium carbonate. **S. vichyanum,** Vichy salt. **S. volatilis,** a name applied to various preparations of ammonium carbonate used as smelling-salts.

Salaam Convulsion. See *Eclampsia nutans,* and *Spasmus nutans.*

Salabreda (*sal-ab-re'-dah*). Brittle gum, *q. v.*

Salacetol (*sal-as'-et-ōl*) [*salix*, willow; *acetum*, vinegar]. The salicylic acid ester of acetone-alcohol. It is proposed as a substitute for sodium salicylate and salol. It has been recommended as an intestinal and

genito-urinary antiseptic, and for the treatment of acute or chronic rheumatism. Dose, 30–45 grains.

Salacious (*sa-la′-se-us*) [*salax*, lustful]. Lustful.

Salacity (*sa-las′-it-e*) [*salax*, lustful]. Lustful or venereal desire.

Salad Oil (*sal′-ad oil*). See *Oleum Olivæ*.

Salamandrin (*sal-am-an′-drin*). See *Leukomains, Table of.*

Salap (*sal′-ap*). Synonym of *Salep.*

Salbromalid (*sal-bro′-mal-id*). See *Antinervin.*

Salempien (*sal-em′-pe-en*). See *Serempion.*

Salep (*sal′-ep*) [Ar., *sahleb, salep*]. A drug chiefly used in India and the Levant, consisting of the dried bulbs of various species of *Orchis, q. v.* A mucilaginous and nutritious drink is made of it, which is considered to be an analeptic, aphrodisiac, and nervine. Unof.

Saleratus (*sal-er-a′-tus*) [*sal, aërratus*, aërated salt]. Properly, sal-aëratus. Potassium bicarbonate; also, sodium bicarbonate.

Salicin (*sal′-is-in*) [*salix*, willow], $C_{13}H_{18}O_7$. The glucosid of saligenin; it occurs in the bark and leaves of willows and some poplars. It forms shining crystals, that dissolve easily in hot water and alcohol, and melt at 198° C. Its taste is bitter. It possesses tonic properties, and is used as a substitute for salicylic acid in the treatment of rheumatism.

Salicinum (*sal-is-i′-num*). Official name of *Salicin.*

Salicol (*sal′-ik-ol*). Synonym of *Carbolic Acid.*

Salicyl (*sal′-is-il*) [*salix*, willow], $C_7H_5O_2$. The hypothetic radicle of salicylic acid. **S. Orange, S. Yellow.** See *Pigments, Conspectus of.*

Salicylage (*sal′-is-il-aj*) [*salix*, willow]. Preservation of articles of diet by the use of salicylic acid.

Salicylamid (*sal-is-il′-am-id*) [*salix*, willow; *amid*], $C_6H_4(OH)CONH_2$. A tasteless compound produced by treating methyl salicylate with an alcoholic solution of ammonia. It is used like salicylic acid.

Salicylate (*sal-is′-il-āt*) [*salix*, willow]. Any salt of salicylic acid. The salicylates of ammonium, atropin, bismuth, caffein, cinchonidin, lithium, methyl, physostigmin, quinin, and sodium, etc., have been employed in medicine, especially in rheumatic affections.

Salicylic (*sal-is-il′-ik*) [*salix*, willow]. Containing salicyl or pertaining to it. Derived from the willow. **S. Acid.** See *Acid, Salicylic*, and *Salix.* **S. Acid Colors.** See *Pigments, Conspectus of.* **S. Aldehyd.** See *Aldehyd.*

Salicylism (*sal′-is-il-izm*) [*salix*, willow]. A toxic condition, produced by the injudicious or excessive use of salicylic acid or its salts.

Salicyluric Acid (*sal-is-il-u′-rik*) [*salix*, willow; *οὖρον*, urine]. An acid found in the urine after the administration of salicylic acid. It is a compound of the latter with glycol.

Salifiable (*sal-if-i′-a-bl*) [*sal*, salt; *fieri*, to become]. Forming a salt by union with an acid.

Saligenin (*sal-ij′-en-in*) [*salix*, willow; *γεννᾶν*, to produce], $C_7H_8O_2$. A substance formed by the action of sodium amalgam upon salicylic aldehyd or in the decomposition of salicin with dilute acids or ferments. It consists of pearly tables, soluble in hot water, alcohol and ether, and melting at 82° C.

Salimeter (*sal-im′-et-er*) [*sal*, salt; *μέτρον*, measure]. An hydrometer for ascertaining the strength of saline solutions.

Salinaphtol (*sal-in-af′-tol*). See *Betol.*

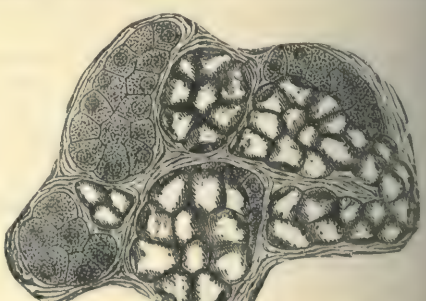
Saline (*sa′-lēn* or *sa′-līn*) [*sal*, salt]. Salty. In biology, growing in a salt-marsh or by the sea-shore. **S. Solution**, a 0.6 per cent. solution of sodium chlorid.

Salines (*sa′-lēns*) [*sal*, salt]. Salts of the alkalies or of magnesium, used as hydragogue cathartics. Magnesium sulphate and citrate, sodium sulphate and Rochelle salts are examples.

Salinometer (*sal-in-om′-et-er*). Synonym of *Salimeter.*

Salipyrin (*sal-ip-i′-rin*) [*salix*, willow; *πῦρ*, fire], $C_{11}H_{12}N_2O.C_7H_6O_3$. A white powder, the salicylate of antipyrin, consisting of 57.7 parts of salicylic acid, and 42.3 parts of antipyrin. It is readily soluble in water and has been recommended as an analgesic and antipyretic in doses of gr. xv–xxx.

Salirrhetin (*sal-ir-ret′-in*) [*salix*, willow; *ῥητίνη*, resin], $C_{14}H_{14}O_3$. An amorphous, resinous powder, produced by treating saligenin with acids.

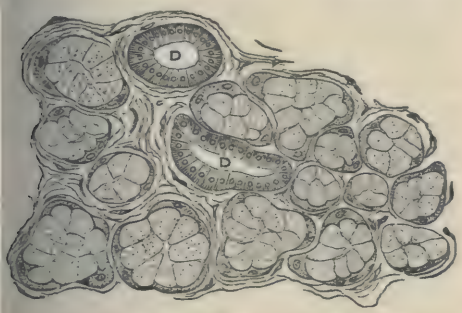


Salisbury Method. A method of treating obesity. It consists in restricting the diet absolutely for a time to large quantities of rump-steak, cod-fish and hot water. It is thought by the advocates of this method that an excess of albuminates favors the reduction of obesity by promoting the oxidation and combustion of the excess of deposited fat.

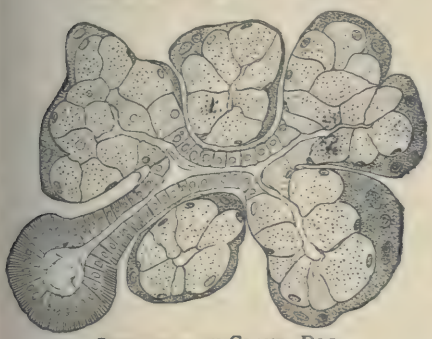
Saliva (*sa-li′-va*) [L.]. The mixed secretion of the parotid, submaxillary, and sublingual glands, and the small mucous glands of the mouth. Physiologically, three kinds of secretion may be distinguished: a serous from the parotid, a mucous from the mucous glands, and a mixed secretion from the submaxillary and the sublingual. Mixed saliva is opalescent, tasteless, alkaline and has a specific gravity of 1004–1009. The daily quantity secreted is approximately 1500 c. c. (Bidder and Schmidt.) Saliva contains serum-albumin, globulin, mucin, urea, an amylolytic ferment called ptyalin, and a proteolytic and a lipolytic ferment; also, salts, among which is potassium sulphocyanid, derived especially from the parotid gland. Among formed elements are epithelial cells, salivary corpuscles and bacteria. The functions of saliva are physical and chemic. Its physical functions are to moisten the food and lubricate the bolus, to dissolve certain substances, and to facilitate tasting and aid in deglutition and articulation. Its chemic action depends upon its ferments, the most important of which is ptyalin. This converts starch into dextrin and sugar. The proteolytic and lipolytic ferments are not important. It is possible that any other fermentation save the amylolytic is due to bacteria. **S., Chorda**, that produced by stimulation of the chorda tympani nerve. **S., Ganglionic**, that produced by irritating the submaxillary glands.

Salival (*sa-li′-val*) [*saliva*, spittle]. Same as *Salivary.*

Salivant (*sal′-iv-ant*) [*saliva*, saliva]. Stimulating the secretion of saliva.



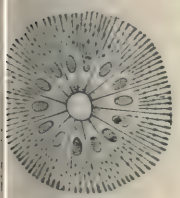
Salivary (*sal′-iv-a-re*) [*saliva*, saliva]. Pertaining to saliva or to its secretion. **S. Calculus**, *Odontolith; odontia incrustans; tartar of the teeth*, an



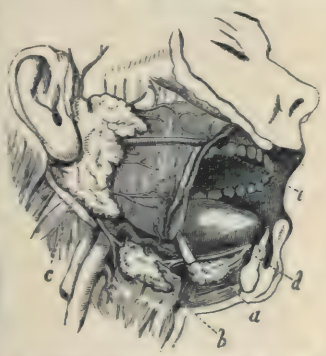
HUMAN SUBMAXILLARY GLAND.

On the right are groups of mucous, and on the left, groups of serous alveoli. × 300. (*From Stirling.*)

earthy concretion found upon the teeth and in the mouths of the salivary ducts. **S. Corpuscles,** pale,



Small Lobule of Submaxillary Gland.
D. Duct of the Lobule. (*From Stirling.*)



Submaxillary Gland, Dog.
owing duct communicating with an alveolus by a narrow ductule. The alveoli containing mucous cells and dense demilunes. × 300. (*From Stirling.*)

spheric, nucleated bodies found in the saliva. **S. Diastase.** Same as *Ptyalin*. **S. Digestion,** the conversion of starches into dextrin and sugar by the action of saliva. **S. Fistula,** an abnormal opening communicating with a salivary

Transverse Section of a Salivary Duct.
Showing only the "rodded" epithelium lining it. × 300. (*From Stirling.*)

A Dissection of the Side of the Face, showing the Salivary Glands.
a. Sublingual gland. *b.* Submaxillary gland with its ducts opening on the floor of the mouth beneath the tongue at *d*. *c.* Parotid gland and its duct, which opens on the inner side of the cheek.

duct. **S. Glands,** the glands, six in number, situated on each side of the mouth, which secrete the saliva. See *Parotid*, *Submaxillary*, and *Sublingual*.

Salivate (*sal'-iv-āt*) [*salivare*, to spit out]. To purge by the salivary glands. To bring about an undue discharge of saliva.

Salivatio (*sal-iv-a'-she-o*) [L.]. Salivation. **S. mercurialis.** Synonym of *Stomatitis, Mercurial.*

Salivation (*sal-iv-a'-shun*) [*saliva*, saliva]. An excessive secretion of saliva. It may be produced by certain poisons, by such drugs as mercury and pilocarpin, or by nervous disturbances.

Salivin (*sal'-iv-in*). Same as *Ptyalin.*

Salivous (*sa-li'-vus*) [*saliva*, spittle]. Of or pertaining to saliva.

Salix (*sa'-liks*) [L.]. The bark of the common white willow, *S. alba*. Its properties are due to a constituent, salicin, $C_{13}H_{18}O_7$, which is tonic and antiseptic. It is useful as an antipyretic in rheumatic fever. Dose of the glucosid gr. x–℥ij. **Lithium Salicylate,** $2LiC_7H_5O_3.H_2O$. Dose gr. v–℥j. **Sodium Salicylate,** $2NaC_7H_5O_3.H_2O$, properties like those of the acid, though less irritant. Dose gr. v–℥j. **Salicylic Acid,** $HC_7H_5O_3$, a derivative of Salix, a powerful antipyretic in rheumatic fever, and locally in eczema and indolent ulcers; and also an antiseptic. Dose gr. v–xxx. **Ung. acid. salicyl.** (B. P.) Used in chronic deep-seated skin diseases.

Salkowski-Ludwig Method. A method for the estimation of uric acid in solution. When an ammoniacal solution of nitrate of silver is added to a solution of uric acid, to which a mixture of magnesium chlorid and ammonium chlorid has been previously added, the uric acid is precipitated as a magnesio-silver salt. This is collected, washed, and decomposed by sodium or potassium sulphid, whereupon the uric acid passes again into solution as a urate of the alkali. On the addition of an excess of HCl to this solution the urate is decomposed, uric acid separates out and is collected and weighed.

Salkowski's Mixture. See *Camerer's Method.*

Sallow (*sal'-o*) [ME., *salow*, sallow]. Having a yellowish color, as the complexion or skin.

Salmon-disease. A disease of salmon and other fishes, due to the fungus, *Saprolegnia ferox*. **S.-louse.** *Caligus piscinus*, a crustacean parasitic upon the salmon and other fishes. **S.-patch.** See *Keratitis, Interstitial.*

Salocoll (*sal'-o-kol*) [*salix*, willow]. A chemic combination of phenocoll and salicylic acid; in other words, the salicylate of phenocoll. It is a white powder; odorless and tasteless; only slightly soluble in cold water. Salocoll is said to be a reliable antipyretic, anti-neuralgic, and anti-rheumatic, combining the favorable actions of its constituents, and as a rule, free from the by-effects common to the new antipyretics. The dose is from 15 to 30 grains, in powder or in capsules, to be repeated three or four times per day.

Salol (*sal'-ol*) [*salix*, willow], $C_{13}H_{10}O_3$. *Salicylic Phenol Ester;* or *Phenyl Salicylate.* A white, odorless, crystalline substance, melting at 43° C. It is used as an intestinal antiseptic, and as a substitute for salicylic acid, being less irritating to the stomach. Dose gr. ij–xv. It is decomposed in the intestines into salicylic acid and phenol. On this account it has been employed to test the motor power of the stomach. A few grains are given in capsule and the urine tested at intervals for the decomposition-products of salicylic acid.

Saloop (*sa-loop'*) [see *Salep*]. A drink prepared from salep; also from sassafras bark and herbs. It is regarded as a cure for drunkenness. Unof.

Salophen (*sal'-o-fen*) [*salix*, willow],

$$C_6H_4\begin{cases}OH\\COO.C_6H_4.N\end{cases}\begin{matrix}\\H\\<\end{matrix}\begin{matrix}\\\\CO.CH_3C_{15}H_{13}NO_4.\end{matrix}$$

A derivative of salicylic acid, of value in acute articular rheumatism. Dose gr. lx–xc daily. Unof.

Salphonic Test for Proteids. See *Tests, Table of.*

Salpingectomy (*sal-pin-jek'-to-me*) [σάλπιγξ, tube; ἐκτομή, excision]. Excision of an oviduct.

Salpingemphraxis (*sal-pin-jem-fraks'-is*) [σάλπιγξ, tube; ἔμφραξις, obstruction]. Closure of the Eustachian tube.

Salpinges (*sal-pin'-jēz*). Plural of *Salpinx.*

Salpingian, or **Salpingic** (*sal-pin'-je-an, sal-pin'-jik*) [σάλπιγξ, tube]. Pertaining to a Eustachian or Fallopian tube.

Salpingitic (*sal-ping-jit'-ik*) [σάλπιγξ, tube; ιτις, inflammation]. Pertaining to, or affected with, salpingitis.

Salpingitis (*sal-ping-ji'-tis*) [σάλπιγξ, tube; ιτις, inflammation]. Inflammation of the Eustachian tube, or of the Fallopian tube.

Salpingocyesis (*sal-ping-go-si-e'-sis*) [σάλπιγξ, tube; κύησις, pregnancy]. Tubal pregnancy.

Salpingo-mallearis, Salpingo-malleus (*sal-ping-go-mal-e-a'-ris, sal-ping-go-mal'-e-us*). The tensor tympani muscle. See *Muscles, Table of.*

Salpingo-nasal (*sal-ping-go-na'-zal*) [σάλπιγξ, tube; *nasus*, nose]. Pertaining to the Eustachian tube and the nose.

Salpingo-oöphorectomy (*sal-ping-go-o-o-for-ek'-to-me*) [σάλπιγξ, tube; ᾠόν, egg; φορός, bearing; ἐκτομή, excision]. Excision of an oviduct and an ovary.

Salpingo-oöphoritis (*sal-ping-go-o-o-for-i'-tis*) [σάλπιγξ, tube; ᾠόν, egg; φορός, bearing; ιτις, inflammation]. Inflammation of an oviduct and an ovary.

Salpingo-palatal (*sal-ping-go-pal'-at-al*) [σάλπιγξ, tube; *palatum*, palate]. Pertaining to the Eustachian tube and the palate. **S. Fold,** a fold of mucosa covering the levator palati muscle.

Salpingo-pharyngeal (*sal-ping-go-far-in'-je-al*) [σάλπιγξ, tube; φάρυγξ, pharynx]. Pertaining to both the Eustachian tube and the pharynx.

Salpingo-pharyngeus (*sal-ping-go-far-in-je'-us*) [σάλπιγξ, tube; φάρυγξ, pharynx]. A muscular bundle passing from the Eustachian tube downward to the constrictors of the pharynx.

Salpingorrhaphy (*sal-ping-gor'-a-fe*) [σάλπιγξ, tube; ῥαφή, suture]. Suture of the Fallopian tube.

Salpingo-staphylinus (*sal-ping-go-staf-il-i'-nus*) [σάλπιγξ, tube; σταφυλή, uvula]. The abductor muscle of the Eustachian tube. **S. internus.** Synonym of *Levator palati.* See *Muscles, Table of.*

Salpingostenochoria (*sal-ping-go-ste-no-ko'-re-ah*) [σάλπιγξ, tube; στενός, narrow; χώρα, space]. Stenosis or stricture of the Eustachian tube.

Salpingostomy (*sal-ping-gos'-to-me*) [σάλπιγξ, tube; στόμα, mouth]. Establishment of a fistula of a Fallopian tube.

Salpingotomy (*sal-ping-got'-o-me*) [σάλπιγξ, tube; τομή, a cutting]. The surgical division or excision of a Fallopian tube.

Salpingysterocyesis (*sal-ping-gis-ter-o-si-e'-sis*) [σάλπιγξ, tube; ὑστέρα, womb; κύησις, gestation]. Interstitial pregnancy.

Salpinx (*sal'-pinks*) [σάλπιγξ, tube]. A tube, especially the Eustachian or the Fallopian tube.

Salsilago (*sal-sil-a'-go*) [*sal*, salt]. Salty liquid.

Salsuginose (*sal-su'-jin-ōz*) [*salsugo*, saltness]. In biology, growing in brackish soil, or in situations liable to an overflow of salt water.

Salt [*sal*, salt]. A common name for sodium chlorid. See *Sodium.* In chemistry, a substance produced by the union of a base or radicle acting as such with an acid. See also *Sal.* **S., Acid,** a salt formed from a dibasic or polybasic acid in which only a portion of the replaceable hydrogen atoms has been replaced by the base. This salt, therefore, has acid properties. **S., Bakers',** sodium bicarbonate. **S., Basic,** a compound formed by the union of a normal salt with a basic oxid or hydroxid. **S., Bay,** sodium chlorid; also the sea-salt obtained by the evaporation of sea-water by solar heat. **S., Bitter,** magnesium sulphate. **S.-cake,** crude sodium sulphate obtained in the manufacture of sodium carbonate by what is known as Leblanc's process. **S., Cheltenham,** a mixture, in equal proportions, of magnesium sulphate, sodium sulphate, and sodium chlorid, or of similar salts. **S., Common,** sodium chlorid. **S., Diuretic,** potassium acetate. **S., Double,** one in which the hydrogen atoms of an acid are replaced by two metals. **S., Epsom,** magnesium sulphate. **S.-flour,** finely crystalline potassium nitrate. **S. Frog,** a frog from whose vascular system all blood has been artificially removed and replaced by normal salt-solution. Also known as *Cohnheim's Frog.* **S., Glaser's Polychrest,** potassium sulphate. **S., Glauber's,** sodium sulphate. **S., Halogen, S., Haloid,** any salt of the halogen elements, bromin, chlorin, fluorin, iodin. **S., Hornberg's Sedative,** boric acid. **S., Lémery's,** potassium sulphate. **S., Marine Epsom,** magnesium chlorid. **S., Martial Sea,** iron chlorid. **S., Microcosmic,** $NaHNH_4PO_4.4H_2O$, a reagent in blowpipe analysis. **S., Monsel's,** subsulphate of iron, used chiefly in solution as a styptic. **S., Neutral,** one formed by the replacement of all of the hydrogen atoms of an acid by a base or a radicle. **S., Normal.** Synonym of *S., Neutral.* **S., Oxy-, S., Oxygen,** a salt of an oxy-acid, *i. e.*, one containing oxygen. **S., Purgative.** Synonym of *S., Epsom.* **S. Rheum,** a form of chronic eczema. **S. of Riverius,** neutral potassium citrate. **S., Rochelle,** sodium and potassium tartrate. **S., Rock,** native sodium chlorid, occurring in crystalline masses; also the large crystals of sodium chlorid obtained in its manufacture from sea-water. **S., Schlippe's,** sodium sulphantimoniate. **S., Sea,** the sodium chlorid obtained by the evaporation of sea-water. It is not perfectly pure. **S., Sedative,** boric acid. **S., Seidlitz,** magnesium sulphate. **S. of Seignette,** sodium and potassium tartrate. **S., Smelling,** any pungent, irritant salt which when inhaled usually acts reflexly as a respiratory or circulatory stimulant. Ammonium carbonate is generally used. **S.-solution,** a solution of sodium chlorid in distilled water. One containing from 0.6 to 0.75 per cent. of sodium chlorid is known as a *normal* or *physiologic salt-solution,* and on account of its non-irritating character is much used in physiologic experiments on living tissues. In medicine, it has been employed to restore to the system the fluids lost by severe hemorrhage or profuse diarrheal discharges. Infusions of salt-solution are made either into the subcutaneous tissues or into a vein; sometimes also into the rectum. **S., Table,** sodium chlorid. **S., Wall,** calcium nitrate. The name has been given to it because it is found on the walls of stables and similar places over which urine flows. **S.-wort.** See *Glasswort.*

Saltation (*sal-ta'-shun*) [*saltare*, to dance]. The dancing or leaping sometimes noticed in chorea.

Saltatorial (*sal-tat-o'-re-al*) [*saltare*, to dance, to leap]. Applied to such animals as progress by leaping.

Saltatoric (*sal-tat-or'-ik*) [*saltare*, to dance]. Pertaining to dancing or leaping. **S. Cramp or Spasm,** a clonic spasm which sometimes attacks a patient when he attempts to stand, causing him to leap or jump. It is rare and transient, and is quite distinct from the condition known as palmus. See *Palmus.*

Saltatory (*sal-tat-or'-e*). Synonym of *Saltatoric.* **S. Theory of Evolution,** in biology, that form of the doctrine of evolution which holds that the evolution of

species is frequently marked by abrupt variations. Cf. *Nanism*.

Salter, Incremental Lines of. Lines due to want of uniformity in the calcification of the outer zone of dentine. See *Lines, Table of*. **S.'s Swing,** a movable suspension-cradle for a fractured leg.

Saltpeter (*sawlt-pe'-ter*) [*sal*, salt; πετρα, rock]. Native potassium nitrate. See *Potassium*. **S., Chile,** sodium nitrate. **S., Lead,** lead nitrate. **S., Lime,** calcium nitrate. **S., Lye,** the liquor obtained by treating saltpeter with water.

Salts (*sawlts*) [*sal*, salt]. A popular name for Epsom salt, or magnesium sulphate. See also *Glauber's Salt, Rochelle Salt*, etc. under *Salt*.

Saltus (*sal'-tus*) [L.]. 1. A leap. 2. Vulva.

Salubrious (*sa-lu'-bre-us*) [*salus*, health]. Healthful; applied especially to telluric and atmospheric conditions.

Salubrity (*sa-lu'-brit-e*) [*salubritas*, healthfulness]. The state or character of being wholesome.

Salufer (*sal'-u-fer*) [*salus*, health; *ferre*, to bring]. Sodium silico-fluorid, recommended as an antiseptic and deodorant. Unof.

Salumin (*sal'-u-min*) [*salix*, willow; *aluminum*]. Aluminum salicylate. It is employed in the treatment of diseases of the nose and throat.

Salutary (*sal'-u-ta-re*) [*salus*, health]. Promotive of health.

Salutiferous (*sal-u-tif'-er-us*) [*salutifer*, health-bringing; *ferre*, to bear]. Medicinal; health-bearing.

Salvatella (*sal-vat-el'-ah*) or **Vena salvatella** [*salvatus*, from *salvare*, to save]. The vein on the back of the little finger. See *Vein*.

Salve (*sahv*) [ME., *salve*, salve]. Ointment. **S.-bug,** a sailor's name for various parasitic crustaceans or "fish-lice," one of which, *Caligus curtus*, lives upon the common cod-fish. These crustaceans are made into salves by mariners. Unof. **S., Deshler's,** compound resin cerate.

Salver-shaped (*sal'-ver-shāpt*) [*salva*, a plate]. In biology, applied to corollas having a slender tube, spreading suddenly into a flat limb, as a phlox.

Salvia (*sal'-ve-ah*) [L.]. Sage. The leaves of *S. officinalis*, common garden sage. Its properties are due to tannin, a resin and a volatile oil. It is tonic, stimulant, and astringent.

Salviol (*sal'-ve-ol*) [*salvia*, sage; *oleum*, oil], $C_{10}H_{16}O$. A liquid substance obtained from oil of sage.

Salvioli, Micrococcus of. See *Bacteria, Synonymatic Table of*.

Samadera or **Samandura** (*sam-ad-e'-rah* or *sa-man'-du-rah*). [E. Ind.] A genus of old-world trees of the simarubaceous type. **S. indica** produces a bitter, febrifugal bark. Unof.

Samara (*sa-mar'-ah* or *sam'-ar-ah*) [*samara*, also *samera*, the fruit of the elm]. In biology, an indehiscent dry fruit provided with a wing-like appendage, as the fruits of the ash and elm.

Samariform (*sam-ar'-if-orm*) [*samara*, the seed of an elm; *forma*, form]. In biology, having the form of a samara.

Samaritan (*sa-mar'-it-an*) [Σαμαρείτης, a Samaritan]. 1. A benevolent person, or benefactor of the helpless. 2. Devoted to charitable work or to the service of the helpless, as a *S. Hospital*. **S.'s Balsam,** a mixture of wine and oil, formerly used in treating wounds. **S. Schools,** schools established for the instruction of the general public in the means of giving prompt succor to the wounded and injured before the arrival of the physician. In England these schools are known as ambulance-classes.

Samaritanism (*sa-mar'-it-an-izm*) [Σαμαρείτης, a Samaritan]. Active philanthropy; devotion to the relief of suffering.

Samarium (*sam-a'-re-um*) [L.]. A metallic element belonging to the didymium group. Symbol Sm; atomic weight 150.

Samaroid (*sam'-ar-oid*). Same as *Samariform*.

Sambucus (*sam-bu'-kus*) [L., *gen.*, *Sambuci*]. Elder. The flowers of *S. canadensis* and *S. nigra* (B. P.); stimulant and diaphoretic. The inner bark of *Sambucus* is cathartic. Dose gr. xxx–℥j in hot infusion. **S. Aqua** (B. P.) Dose ℥j–ij.

Sampsuchine (*samp'-su-kin*) [σάμψυχος, marjoram]. An old name for marjoram.

Samshu (*sam'-shu*) [Chinese]. An alcoholic drink distilled in China from rice or millet, or both.

Samuel's Theory of Inflammation. See *Theory*.

Sanable (*san'-a-bl*) [*sanare*, to heal]. Curable.

Sanation (*san-a'-shun*) [*sanare*, to heal]. The process of healing; cure.

Sanative (*san'-at-iv*) [*sanare*, to heal]. Promoting health.

Sanatol (*san'-at-ol*). The trade name of a disinfectant said to consist of sulphuric acid, esters of phenol, and its homologues.

Sanatorium (*san-at-o'-re-um*) [*sanare*, to heal]. An establishment for the treatment of the sick; especially a private hospital. See *Sanitarium*.

Sanatory (*san'-at-or-e*) [*sanare*, to heal]. Curative.

Sand [ME., *sand*, sand]. Fine, rounded, polished grains of silicic oxid. **S.-bath,** a vessel containing dry sea-sand in which a substance requiring a slowly-rising and uniform temperature may be heated. See *Bath*; also, *Ammotherapy, Saburration, Psammism*. **S., Brain.** See *Acervulus*. **S.-crack,** a crack or fissure in the hoof of a horse, extending from the coronet toward the sole, and due to a diseased condition of the horn-secreting membrane. **S.-flea.** See *Chigoe*. **S.-lobster.** See *Buckle-shell*.

Sandalwood (*san'-dal-wud*). See *Santalum album*.

Sandarac (*san'-dar-ak*) [σανδαράκη]. A white, transparent resin, produced by *Callitris quadrivalvis*, a tree of North Africa, and by other species. It is now seldom used in medicine. **S., German,** the resin of the common juniper.

Sane (*sān*) [*sanus*, whole]. 1. Mentally sound; of a sound mind. 2. Healthy, free from disease.

Saneness (*sān'-nes*). Same as *Sanity*.

Sanford's Mixture. See *Anesthetic*.

Sangaree (*sang-ga-re'*) [Sp., *sangría*]. A sweetened and flavored drink, consisting essentially of diluted wine or porter.

Sänger's Operation. See *Operations, Table of*.

Sang-mêlé (*sang-ma-la'*). See *Mulatto*.

Sangrado (*sang-gra'-do*) [*sanguis*, bloody]. A term sometimes applied to a physician who employs bloodletting extensively. From Le Sage's novel of "Gil Blas," in which a Doctor Sangrado treats all diseases by blood-letting.

Sanguicolous (*sang-gwik'-o-lus*) [*sanguis*, blood; *colere*, to inhabit]. Living in the blood, as a parasite.

Sanguiferous (*san-gwif'-er-us*) [*sanguis*, blood; *ferre*, to carry]. Carrying, or conveying, blood.

Sanguification (*sang-gwif-ik-a'-shun*) [*sanguis*, blood; *facere*, to make]. The formation of blood; hematogenesis. Conversion into blood, as of the elements absorbed from the intestines.

Sanguifluous (*sang-gwif'-lu-us*) [*sanguis*, blood; *fluere*, to flow]. Running with blood.

Sanguigenous (*sang-gwij'-en-us*) [*sanguis*, blood; γινης, producing]. Producing blood.

Sanguinaria (*sang-gwin-a'-re-ah*) [*sanguis*, blood]. Blood-root. The rhizome of *S. canadensis*. Its

properties are due to an alkaloid, sanguinarin, $C_{17}H_{15}NO_4$. In large doses it causes vomiting and purging. Toxic doses cause convulsions, and then paralysis; death results from failure of respiration. It is used as an expectorant in chronic bronchitis. **S., Acetum,** vinegar of sanguinaria; sanguinaria 10, dil. acetic acid 90. Dose ♏x–xxx; as an emetic ʒij–ʒss. **S., Ext., Fld.** Dose ♏j–v as an expectorant, ♏x–lx as an emetic. **S., Tinct.,** 15 per cent. strong. Dose ♏v–ʒj as an expectorant, ʒj–iij as an emetic. **Sanguinarin,** the alkaloid, unof. Dose gr. $\frac{1}{12}$–$\frac{1}{8}$; as an emetic gr. ½–j. **Sanguinarin Nitrate.** Unof. Expectorant. Dose gr. $\frac{1}{10}$–$\frac{1}{4}$.

Sanguinarin (*sang-gwin'-ar-in*) [*sanguis*, blood]. 1. The alkaloid of sanguinaria. 2. The precipitate from a tincture of the root of *Sanguinaria canadensis;* emetic, stimulant, diuretic, emmenagogue, antiseptic, errhine, antiperiodic, etc. Dose 1 to 3 grains. Unof.

Sanguine (*sang'-gwin*) [*sanguis*, bloody]. 1. Bloody. 2. Hopeful. **S. Temperament,** a hopeful, active, energetic disposition.

Sanguineous (*sang-gwin'-e-us*) [*sanguis*, blood]. Pertaining to the blood. Bloody; blood-red. **S. Cyst,** a cyst containing blood-stained fluid.

Sanguinicolous (*sang-gwin-ik'-o-lus*). Same as *Sanguicolous.*

Sanguinification (*sang-gwin-if-ik-a'-shun*). See *Sanguification.*

Sanguinity (*sang-gwin'-it-e*) [*sanguis*, blood]. The quality of likeness or dissimilarity between parents, a certain degree of the latter being most favorable for the production of well-organized offspring. "Parents who are more similar (**Consanguine**), or more dissimilar (**Exsanguine**), will probably have inferior offspring" (Mercier).

Sanguinivorous (*sang-gwin-iv'-or-us*) [*sanguis*, blood; *vorare*, to devour]. Same as *Sanguivorous.*

Sanguinol (*sang'-gwin-ol*) [*sanguis*, blood; *oleum*, oil]. A hematinic constituted of the iron combinations found in plants and animals. It consists of evaporated blood and hemoglobin in liquid form, and is free from the intermediate products of the degeneration of albuminous bodies. It consists of natural blood-salts 46 parts, oxyhemoglobin 10 parts, and peptonized muscle-albumin 44 parts.

Sanguinolent (*sang-gwin'-o-lent*) [*sanguis*, blood]. Having the appearance of blood; tinged with blood.

Sanguinous (*sang'-gwin-us*). Same as *Sanguinary.*

Sanguis (*sang'-gwis*) [L.]. Blood.

Sanguisuction (*sang-gwis-uk'-shun*) [*sanguis*, blood; *suctus*, p.p. of *sugere*, suck]. The abstraction of blood by suction, as by a leech or other parasite.

Sanguisuga (*sang-gwi-su'-gah*) [*sanguis*, blood; *sugere*, to suck]. A blood-sucker. A leech. **S. medicinalis** or **officinalis,** a leech.

Sanguisugent (*sang-gwis-u'-jent*) [*sanguis*, blood; *sugere*, to suck]. Bloodsucking.

Sanguivorous (*sang-gwiv'-or-us*) [*sanguis*, blood; *vorare*, to devour]. Feeding on blood, as a leech.

Sanicle (*san'-ik-l*) [*sanicŭlum*, sanicle]. Any plant of the genus *Sanicula.* **S. europœa,** of the old world, and **S. marilandica,** of America, are considered to be antispasmodic, diaphoretic, and stimulant. Unof.

Sanies (*sa'-ne-ēz*) [L.]. The thin, fetid, greenish, sero-purulent fluid discharged from ulcers, wounds, and fistulas.

Sanious (*sa'-ne-us*) [*sanies*]. Pertaining to or resembling sanies. **S. Pus.** See *Pus.*

Sanitarian (*san-it-a'-re-an*) [*sanitas*, health]. One skilled in sanitary science.

Sanitarium (*san-it-a'-re-um*) [*sanitas*, health]. A health-station. A place or institution where the conditions are such as especially to promote health and vigor. The word is often incorrectly employed for sanatorium, which is a hospital or place for curing those who are sick. A sanitarium may be used as a sanatorium but it is not necessarily the same thing.

Sanitary (*san'-it-a-re*) [*sanitas*, health]. Pertaining to health, or preventing disease; not, as often used, pertaining to the cure of disease. **S. Science,** the science which includes a consideration of all that can be done for the prevention of disease and the promotion of the public health.

Sanitas (*san'-it-as*) [L.]. Health. Also a proprietary antiseptic solution, containing hydrogen dioxid, camphor, and camphoric acid.

Sanitation (*san-it-a'-shun*) [*sanitas*, health]. The application or enforcement of sanitary rules or laws.

Sanity (*san'-it-e*) [*sanitas; sanus*, sound]. Soundness of mind.

Sansom's Inhaler. See *Anesthetic.*

Sanson-Purkinje's Images. See *Purkinje-Sanson.*

Santalin (*san'-tal-in*) [*santalum*, sandalwood], $C_{15}H_{14}O_3$. 1. The coloring-matter of red sandalwood, obtained by evaporating the alcoholic infusion to dryness. It is a red resin, fusible at 212° F., and is very soluble in acetic acid as well as in alcohol, essential oils, and alkaline lyes. See *Pigments, Conspectus of.* 2. $C_{14}H_{12}O_4$. The active principle of *Red Saunders.* It crystallizes in minute red prisms soluble in alcohol and ether.

Santalum (*san'-tal-um*) [L.]. *Pterocarpi lignum* (B. P.) White Sandalwood. The wood of a species of *S. album* and *S. citrinum*, or yellow sandalwood. It yields oil of santal, an astringent oil, useful in chronic bronchitis and gonorrhea. It is often adulterated with oil of cedar. Dose of the volatile oil ♏x–xxx, in emulsion or capsule; of the fld. ext., unof. alcoholic, ʒj–iij. **S. rubrum,** Red Saunders, the wood of *Pterocarpus santolinus*, imparts a brilliant-red color to ether and alcohol.

Santonic Acid (*san-ton'-ik*) [σαντονικόν, wormwood] $C_{15}H_{20}O_4$. An acid obtained by treating santonin with alkalies.

Santonica (*san-ton'-ik-ah*) [σαντονικόν, wormwood] Levant Wormseed. The flower-heads of *Artemisia maritima*, the properties of which are due to a crystalline principle, santonin, $C_{15}H_{18}O_3$. The flower-heads yield about 2 per cent. of santonin, which is a very efficient anthelmintic against the round-worm, *Ascaris lumbricoides.* In large doses it produces yellow vision and gives a yellow color to the urine. In toxic dose it causes headache, vertigo, sometimes convulsions, and death by respiratory paralysis. **Santonini, Troch.** (B. P.) Each contains gr. ss of the active principle. Dose ij–x. **Sodii santoninas,** $2NaC_{15}H_{19}O_4 7H_2O$ colorless rhombic crystals. Dose gr. ij–x. This preparation is much less effective as a vermifuge than santonin, and is also much more poisonous. **Sodii sant. Troch.,** each contains gr. j of the preceding. Dose ij–x.

Santonin, Santoninum (*san'-to-nin, san-to-ni'-num*) [*santoninum, gen., Santonini;* (U. S. P.)], $C_{15}H_{18}O_3$. The active principle of wormseed; it crystallizes in shining prisms, and melts at 170° C. It is odorless, insoluble in cold water, and an active poison. It is one of the most efficacous vermifuges for round worms. Dose gr. ¼ to gr. ij. See *Santonica.*

Santoninate (*san-ton'-in-āt*) [σαντονικόν, wormwood] Any salt of santoninic acid. See *Santonica.*

Santoninic Acid (*san-to-nin'-ik*). See *Acid.*

Santorini, Canal of. See *Canal.* **S., Cartilages of** See *Cartilage.* **S., Duct of.** See *Duct.* **S., Fis**

sure of. See *Fissures, Table of.* **S.'s Muscles.** See *Muscles, Table of.* **S.'s Tubercles,** the cornicula aryngis.

ap [*sapa*, must, new wine boiled]. The nutritive fluid which circulates by endosmosis in plants. **S.-cavity,** in biology, one of the sacs in the leaves of plants, filled with sap. **S.-green.** Same as *Bladder-green.* **S.-wood.** See *Alburnum.*

aphena (*sa-fe'-nah*) [σαφηνής, manifest: *pl.*, *Saphenæ*]. A name given two large veins of the leg—the internal or long, and the external, or short saphena.

aphenal (*sa-fe'-nal*). Same as *Saphenous.*

apheno-tibial (*sa-fe'-no-tib'-e-al*) [σαφηνής, manifest; *tibia*, tibia]. Pertaining to the tibial and the saphenous veins. **S. Vein,** a vein that runs from the long saphenous to one of the tibial veins.

aphenous (*sa-fe'-nus*) [σαφηνής, manifest]. Pertaining to the saphena veins. **S. Nerves.** See *Nerves, Table of.* **S. Opening,** an opening in the fascia lata at the upper part of the thigh anteriorly, the external terminus of the femoral canal, where a complete femoral hernia emerges and becomes subcutaneous. **S. Veins.** See *Saphena.*

apid (*sap'-id*) [*sapere*, to taste]. Capable of being tasted.

apientia (*sa-pe-en'-she-ah*) [L.]. Wisdom. **Sapientiæ dentes,** the posterior or third molar teeth.

apo (*sa'-po*) [L., *gen.*, *Saponis*]. (**Sapo duris,** B. P.) 1. Soap. 2. Of the U. S. Ph., castile soap, one made from olive-oil by treating it with sodium hydroxid. **S. alba,** olive-oil soap, castile soap. **S. animalis,** curd soap. Unof. Prepared from animal fat and soda. **S. calcis,** lime soap. See *Linimentum calcis.* **S. durus,** hard soap, made with olive-oil and soda. **S. emplastrum,** soap-plaster, has soap 10, lead-plaster 90 parts. **S. fuscus,** brown soap. **S. fuscum, emplast.** (B. P.), curd soap, yellow wax, olive-oil, oxid of lead, vinegar. **S., Liniment.,** soap 7, camphor 45, oil of rosemary 1, alcohol 75, water q.s. **S. medicatus,** made from almond-oil and soda. **S. mollis.** Unof. Made from olive-oil and potash. **S. mollis,** Lin., tincture of green soap. **S. plumbi oxidi,** lead-soap. See *Lead-plaster.* **S. viridis (S. mollis,** B.P.), green soap, soft, and usually *brown* in color. **S. viridis, Tinct.,** green soap 65, oil of lavender 2, alcohol q. s. ad 100 parts. Similar to opodeldoc.

apo-carbol (*sap'-o-kar'-bol*) [*sapo*, soap]. A tar-oil-soap solution. A disinfectant of unknown composition and uncertain activity.

aponaceous (*sap-o-na'-se-us*) [*sapo*, soap]. Having the nature of soap.

aponaria (*sap-o-na'-re-ah*). See *Soapwort.*

aponic Acid (*sap-on'-ik*). Synonym of *Sapogenin.*

aponification (*sap-on-if-ik-a'-shun*) [*sapo*, soap; *facere*, to make]. 1. Conversion into soap. 2. The process of decomposing a neutral fat into glycerin and a fatty acid by the action of an alkali, which combines with the fatty acid, forming a soap. **S. Equivalent,** a term used to indicate the number of grams of an oil saponified by one equivalent in grams of an alkali. **S., Fermentation,** saponification brought about by the action of a ferment.

aponiment (*sap-on'-im-ent*) [*sapo*, soap]. A term denoting a medicinal compound of soap.

aponin (*sap'-o-nin*) [*sapo*, soap], $C_{32}H_{54}O_{18}$. A glucosid contained in the roots of *Saponaria officinalis* and other plants; a white, amorphous powder, provoking sneezing, and in aqueous solution forming a strong lather. Dose gr. $\frac{1}{10}$–$\frac{1}{3}$.

aporific (*sap-o-rif'-ik*) [*sapor*, savor; *facere*, to make]. Producing taste, flavor, or relish.

Saporous (*sap'-o-rus*) [*sapor*, savor]. Having flavor or taste.

Sapotoxin (*sap-o-toks'-in*) [*sapo*, soap; τοξικόν, poison], $C_{17}H_{30}O_{10}$. An active protoplasmic poison obtained from saponin. It is a glucosid.

Sappey's Accessory Portal System. Numerous small vessels formed around the liver and gall-bladder, in the suspensory ligament, and in the gastro-epiploic omentum, in cases of hepatic cirrhosis. It is for the purpose of compensatory circulation.

Sapphism, or **Sapphismus** (*saf'-izm*, *saf-iz'-mus*) [from Σαπφώ, *Sappho*, a Greek poetess]. Tribadism. The unnatural passion of one woman for another.

Sapremia (*sap-re'-me-ah*) [σαπρός, putrid; αἷμα, blood]. A febrile condition due to introduction into the blood of the products of putrefaction.

Sapremic (*sap-re'-mik*) [σαπρός, putrid; αἷμα, blood]. Affected with, of the nature of, or pertaining to, sapremia.

Saprin (*sap'-rin*) [σαπρός, rotten]. A non-poisonous ptomain, the product of bacterial decomposition of flesh.

Saprodontia (*sap-ro-don'-she-ah*) [σαπρός, rotten, carious; ὀδούς, tooth]. Caries or rottenness of the teeth.

Saprogenic (*sap-ro-jen'-ik*) [σαπρός, rotten; γεννᾶν, to beget]. Causing putrefaction; caused by putrefaction.

Saprogenous (*sap-roj'-en-us*) [σαπρός, rotten; γεννᾶν, to beget]. Arising in decaying matter.

Saprol (*sap'-rol*) [σαπρός, putrid]. A mixture of crude cresols, to which considerable quantities of pyridin are attached, with carbohydrates. It is probably derived in the process of refining petroleum, and is used for coarse disinfection.

Saprophilous (*sap-roff'-il-us*) [σαπρός, rotten; φιλεῖν, to love]. Infesting decaying matter.

Saprophyte (*sap'-ro-fit*) [σαπρός, putrid; φυτόν, a plant]. In biology, a chlorophylless plant which derives its sustenance from decaying organic matters.

Saprophytic (*sap-ro-fit'-ik*) [σαπρός, rotten; φυτόν, plant]. In biology, growing on or in decaying organic matter.

Saprophytism (*sap'-ro-fi-tizm*) [σαπρός, rotten; φυτόν, plant]. The quality of being saprophytic.

Sapropyra (*sap-ro-pi'-rah*) [σαπρός, putrid; πῦρ, fire]. 1. Malignant typhus, or putrid fever. 2. Any fever due to putrid infection.

Saprostomous (*sap-ros'-to-mus*) [σαπρός, putrid; στόμα, mouth]. Having a fetid breath.

Saprotyphus (*sap-ro-ti'-fus*) [σαπρός, putrid; τῦφος, stupor]. Malignant or putrid typhoid fever.

Saraca indica (*sar'-ak-a in'-dik-ah*) [L.]. Asak; Jasundi. The bark is reputed as an astringent uterine sedative, useful in menorrhagia. Dose of the fld. ext. ℥xv–℥j. Unof.

Sarapus (*sar'-ap-us*) [σαίρειν, to sweep; πούς, foot]. A flat-footed person.

Sarcepiplocele (*sar-sep-ip'-lo-sēl*) [σάρξ, flesh; ἐπίπλοον, omentum; κήλη, tumor]. An omental hernia with sarcocele, or with great thickening of the omentum.

Sarchydrocele (*sar-ki'-dro-sēl*). Synonym of *Hydrosarcocele.*

Sarcin (*sar'-sin*) [σάρξ, flesh], $C_5H_4N_4O$. *Hypoxanthin*, a constant attendant of xanthin in the animal organism. It crystallizes in needles, not very soluble in water, but dissolved by alkalies and acids.

Sarcina (*sar-si'-nah*) [L., a bundle]. A genus of *Schizomycetes*, or bacteria, having spheric or ovoid cells dividing in three directions, thus producing cubic masses of greater or less size. See *Bacteria, Synonymatic Table of.*

Sarcinic (*sar-sin'-ik*) [*σάρκινος*, of flesh]. Pertaining to or caused by sarcinæ.

Sarcitis (*sar-si'-tis*) [*σάρξ*, flesh; *ιτις*, inflammation]. Inflammation of fleshy tissue; especially inflammation of muscle.

Sarco- (*sar'-ko-*) [*σάρξ*, flesh]. A prefix to denote connection with or relation to flesh.

Sarco-adenoma (*sar'-ko-ad-en-o'-mah*) [*σάρξ*, flesh; *αδήν*, gland; *ὄμα*, tumor]. A fleshy glandular tumor.

Sarcobasis (*sar-kob'-as-is*) [*σάρξ*, flesh; *βάσις*, a step, foot]. See *Carcerule*.

Sarcoblast (*sar'-ko-blast*) [*σάρξ*, flesh; *βλαστός*, germ]. In biology, a protoplasmic germinal mass.

Sarcoblastic (*sar-ko-blas'-tik*) [*σάρξ*, blast; *βλαστὸς*, sprout]. Of the nature of a sarcoblast.

Sarcocarp (*sar'-ko-karp*) [*σάρξ*, flesh; *καρπός*, fruit]. In biology, a fleshy, succulent mesocarp.

Sarcocele (*sar'-ko-sēl*) [*σάρξ*, flesh; *κήλη*, a tumor]. A solid or fleshy tumor of the testicle. **S. of the Egyptians,** elephantiasis of the scrotum. **S., Malignant,** any malignant tumor of the testicle.

Sarcocol, Sarcocolla (*sar'-ko-kol, sar-ko-kol'-ah*) [*σάρξ*, flesh; *κόλλα*, glue: named from its vulnerary power]. 1. A gum-like drug, much used in India and Arabia, supposed to be the product of some species of *Astragalus*. 2. An African resin with purgative qualities, the product of various plants of the genera *Penæa* and *Sarcocolla*. It is acrid and nauseous. Unof.

Sarcocollin (*sar-ko-kol'-in*) [*σάρξ*, flesh; *κόλλα*, glue], $C_{22}H_{19}O_{10}$. A brownish, sweetish substance obtained from sarcocolla.

Sarcocoptes (*sar-kok-op'-tēz*) [*σάρξ*, flesh; *κόπτειν*, to cut]. A preferable term for sarcoptes.

Sarcocystidia (*sar-ko-sis-tid'-e-ah*) [*σαρξ*, flesh; *κύστις*, cyst]. A sub-class of the sporozoa. **Sarcocystis miescheri** is a parasite found in pork and beef; it is very common, but it is not known to be injurious to butchers' meat. See also *Parasites* (*Animal*), *Table of*.

Sarcode (*sar'-kōd*) [*σαρκώδης*, flesh-like]. In biology, a term applied by Dujardin to the protoplasm of cells. Cf. *Protoplasm*.

Sarcoderm (*sar'-ko-derm*) [*σάρξ*, flesh; *δέρμα*, skin]. In biology, a fleshy layer in the coat of certain seeds.

Sarcodic (*sar-kod'-ik*) [*σάρξ*, flesh; *εἶδος*, like]. Of the nature of sarcode.

Sarcodous (*sar'-ko-dus*). Synonym of *Sarcodic*.

Sarcodyctium (*sar-ko-dik'-te-um*) [*σάρξ*, flesh]. In biology, a protoplasmic network on the surface of the calymma of certain *Radiolaria*. Cf. *Sarcomatrix*.

Sarcoëpiplocele (*sar-ko-e-pip'-lo-sēl*). Synonym of *Sarcepiplocele*.

Sarcogenic (*sar-ko-jen'-ik*) [*σάρξ*, flesh; *γεννᾶν*, to beget]. Producing flesh or muscle.

Sarcoglia (*sar-kog'-le-ah*) [*σάρξ*, flesh; *γλία*, glue]. Sarcoplasm; a protoplasmic substance containing the granules and nuclei composing the eminence of Doyère, or the point of entrance of a motor nerve into muscular fiber.

Sarcohydrocele (*sar-ko-hi'-dro-sēl*) [*σάρξ*, flesh; *ὕδωρ*, water; *κήλη*, tumor]. A sarcocele complicated with hydrocele of the tunica vaginalis.

Sarcoid (*sar'-koid*) [*σάρξ*, flesh; *εἶδος*, shape]. Resembling or having the nature of flesh.

Sarcolactic Acid (*sar-ko-lak'-tik*). See *Acid*.

Sarcolemma (*sar-ko-lem'-ah*) [*σάρξ*, flesh; *λέμμα*, husk: *pl.*, *Sarcolemmata*]. The membrane that envelops a muscle-fiber.

Sarcolemmic, Sarcolemmous (*sar-ko-lem'-ik, sar-ko-lem'-us*) [*σάρξ*, flesh; *λέμμα*, covering]. Pertaining to or of the nature of sarcolemma.

Sarcolobe (*sar'-ko-lōb*) [*σάρξ*, flesh; *λοβός*, a lobe]. In biology, a fleshy cotyledon.

Sarcologic (*sar-ko-loj'-ik*) [*σάρξ*, flesh; *λόγος*, science]. Pertaining to sarcology.

Sarcologist (*sar-kol'-o-jist*) [*σάρξ*, flesh; *λόγος*, science]. One versed in sarcology.

Sarcology (*sar-kol'-o-je*) [*σάρξ*, flesh; *λόγος*, science]. (*a*) The doctrine that each part nourishes a part, as held by the ancients, and revived in modern organotherapy. (*b*) That part of anatomy treating of the soft tissues.

Sarcolyte (*sar'-ko-līt*) [*σάρξ*, flesh; *λύειν*, to dissolve]. A cell which is actively concerned in effecting the retrograde metamorphosis of soft tissues.

Sarcoma (*sar-ko'-mah*) [*σάρξ*, flesh; *ὄμα*, tumor: *pl.*, *Sarcomata*]. A connective-tissue tumor in which the cells so predominate in number, and often also in size, that the intercellular substance becomes a secondary element. It may also be defined as a tumor made up of embryonal connective tissue. Sarcomata are malignant tumors, the small-celled forms and those of soft consistency excelling in this respect. They appear, as a rule, at an earlier age than carcinoma. The problem of their causation is not solved: in many instances it is possible to trace a history of injury. It is probable, however, that the trauma merely acts as a predisposing cause. To the naked eye sarcomata appear, as the etymology of the word indicates, flesh-like. Microscopically, the picture varies with the variety of tumor, and whether it is a round-cell, a spindle-cell, or a giant-cell sarcoma, or one of the other derivative forms. Sarcomata are well supplied with blood, which, however, is not contained in true vessels, but in spaces lined by endothelium. They are often combined with other new-growths, especially with the so-called mixed tumors and with certain congenital neoplasms, as the rhabdomyoma. The most frequent seats of sarcoma are the connective-tissue of the skin, periosteum, intermuscular septa, tendons, subserous connective-tissue, and the eye. The following are the chief varieties: **S., Alveolar,** one in which alveolar spaces are filled with sarcoma-cells. The walls of these spaces are formed by embryonal tissue. The growth resembles carcinoma. **S., Angio-,** one in which the vessel-walls have been converted into sarcomatous tissue. **S., Angio-lithic.** Synonym of *Psammoma*. **S., Chloromatous,** a round-celled sarcoma found in the periosteum of the skull. It has a greenish color. **S., Cylindromatous,** a sarcoma traversed by cylinders of myxomatous tissue. If the myxomatous degeneration affects the walls of the blood-vessels, the tumor is termed *Angio-sarcoma myxomatodes*. **S., Encephaloid,** a soft, rapidly growing sarcoma, usually of the round-cell variety. **S., Endotheliomatous,** a sarcoma formed by the multiplication of the endothelial cells of lymphatic spaces. **S., Fascicular, S., Fasciculated.** Synonyms of *S., Spindle-celled*. **S., Gelatinous.** Synonym of *S., Myxo-*. **S., Giant-celled** one containing giant-cells as a prominent feature. It is comparatively benign. **S., Lympho-,** a round-celled sarcoma in which the cells are held in a reticulum. **S., Medullary.** Synonym of *S., Encephaloid*. **S., Melano-, S., Melanotic,** a sarcoma, usually spindle-celled, in which the cells contain a pigment, melanin. It is a very malignant tumor, occurring most often in the eye, with a tendency to metastasis to the liver, intestinal tract, skin, etc. **S., Mixed-celled.** Synonym of *S., Polymorphous*. **S., Myeloid.** Synonym of *S., Giant-celled*. **S., Myxo-,** one which a part has undergone myxomatous degeneration. **S., Nest-celled.** Synonym of *Psammoma*. **S., Net-celled.** Synonym of *S., Myxo*. **S., Ossifying, S.**

)steo-, S., Osteoid, one which has a tendency to the rmation of bony tissue. **S., Pigmented.** Synonym *S., Melanotic.* **S., Plexiform,** an angio-sarcoma resenting an intricate interlacing of vessels covered y sarcomatous tissue. **S., Polymorphous,** one con- ining several varieties of cells, as in the *S., Giant- ‹lled.* **S., Pulpy.** Synonym of *S., Encephaloid.* ., **Round-celled,** one made up of round cells. There re two varieties, the *small* round-celled and the *large* ound-celled sarcoma. The latter contains spindle- ells and sometimes giant cells, but the dominant feat- re is large round-cells. **S., Spindle-celled,** one ade up of spindle-cells. Also known as a *Recurrent ibroid.*

S·comatosis (*sar-ko-mat-o'-sis*) [σάρξ, flesh; ὄμα, umor]. The formation of multiple sarcomatous rowths. **S. generalis.** Synonym of *Granuloma ungoides.*

S·comatous (*sar-ko'-mat-us*) [σάρξ, flesh; ὄμα, umor]. Like or having the nature of sarcoma.

S·comatrix (*sar-ko-ma'-trik*) [σάρκωμα, a fleshy ex- rescence; μήτηρ, mother]. A protoplasmic layer on ie exterior of the capsular membrane in certain *Radio- ria.* Cf. *Sarcodyctium.*

S·come (*sar'-kōm*). Same as *Sarcoma.*

S·comere (*sar'-ko-mēr*) [σάρξ, flesh; μερός, a part]. n biology, one of the segments into which a sarco- tyle or muscle-fibril appears to be divided by transverse epta. A sarcous element.

S·comoscheocele (*sar-ko-mos'-ke-o-sēl*) [σάρξ, flesh; σχεον, scrotum; κήλη, tumor]. A fleshy scrotal umor.

S·comphalocele, Sarcomphalon (*sar-kom-fal'-o-sēl, ar-kom'-fal-on*) [σάρξ, flesh; ὀμφαλός, navel; κήλη, umor]. A fleshy tumor at the umbilicus.

S·copeptone (*sar-ko-pep'-tōn*) [σάρξ, flesh; πεπτειν, o digest]. A trade name for certain proprietary redigested meat-extracts.

S·cophaga (*sar-koff'-a-gah*). Synonym of *Sarcophila.*

S·cophagal (*sar-koff'-ag-al*). Same as *Sarcophagous.*

S·cophagous (*sar-koff'-ag-us*) [σάρξ, flesh; φαγεῖν, to at]. Flesh-eating.

S·cophagus (*sar-koff'-ag-us*) [σάρξ, flesh; φαγεῖν, to at]. Coffin; tomb.

S·cophagy (*sar-koff'-aj-e*) [σάρξ, flesh; φαγεῖν, to at]. The habit of eating flesh.

S·cophila (*sar-koff'-il-ah*) [σάρξ, flesh; φιλεῖν, to ove]. See *Parasites, Table of.*

S·cophilous (*sar-koff'-il-us*) [σάρξ, flesh; φιλεῖν, to ove]. Fond of flesh as food; sarcophagous.

S·cophyia (*sar-ko-fi'-e-ah*) [σαρκοφυειν, to produce lesh]. Sarcoma; also fungous granulations.

S·cophyma (*sar-ko-fi'-mah*) [σάρξ, flesh; φῦμα, a umor]. A fleshy tumor.

S·cophyte (*sar'-ko-fīt*). Synonym of *Bioplast.*

S·coplasm, Sarcoplasma (*sar'-ko-plazm, sar-ko- laz'-mah*) [σάρξ, flesh; πλάσσειν, to mold]. The yaline or finely granular interfibrillar material of nuscle-tissue.

S·coplast (*sar'-ko-plast*) [σάρξ, flesh; πλάσσειν, to orm]. 1. A cell that develops into a muscular fiber. 2. Same as *Sarcolyte.*

S·copoietic (*sar-ko-poi-et'-ik*) [σαρξ, flesh; ποιεῖν, to nake]. Producing flesh or muscle.

S·copsylla (*sar-kop-sil'-ah*) [σάρξ, flesh; ψύλλᾱ, flea]. A genus of siphonapterous or aphanipterous insects. See *Parasites* (*Animal*), *Table of.*

S·copterygium (*sar-ko-ter-ij'-e-um*). Synonym of *Pterygium carnosum.*

S·coptes (*sar-kop'-tēz*) [σάρξ, flesh; κόπτειν, to cut]. A genus of acarids, including the itch-mite. See *Parasites, Table of.* **S. scabiei.** See *Scabies.*

Sarcoptic (*sar-kop'-tik*) [σάρξ, flesh; κόπτειν, to cut]. Due to or caused by sarcoptes.

Sarcoptid (*sar-kop'-tid*) [σάρξ, flesh; κόπτειν, to cut]. Any acaridan, or mite, of the family *Sarcoptidæ;* to which the genus *Sarcoptes* belongs.

Sarcoseptum (*sar-ko-sep'-tum*) [σάρξ, flesh; *septum*, a partition: *pl.*, *Sarcosepta*]. In biology, an ordinary septum of a *Cnidarian*, lying between two *sklerosepta.*

Sarcosin (*sar'-ko-sin*) [σάρξ, flesh], $C_3H_7NO_2$. *Methyl-glycocoll;* a substance produced when creatin and caffeïn are heated with baryta; it crystallizes in rhombic prisms that dissolve readily in water, but with difficulty in alcohol. It melts at from 210° to 220° C.

Sarcosis (*sar-ko'-sis*) [σάρξ, flesh]. 1. The condition of one affected with sarcoma; sarcomatosis. 2. The formation of flesh or muscle-tissue.

Sarcosperm (*sar'-ko-sperm*) [σάρξ, flesh; σπέρμα, seed]. Same as *Sarcoderm.*

Sarcosporidia (*sar-ko-spo'-rid-e-ah*) [σαρξ, flesh; σπόρα, seed]. Utriculiform psorosperms frequently found in the muscles of cattle, sheep, swine, and other mammals. Cf. *Miescher's Tubes, Rainey's Tubes, Sarcocystis miescheri*, under *Parasites* (*Animal*), *Table of.*

Sarcostosis (*sar-ko-sto'-sis*) [σάρξ, flesh; ὀστέον, bone]. Bone-formation in muscular tissues.

Sarcostroma (*sar-ko-stro'-mah*) [σάρξ, flesh; στρῶμα, a covering]. A thick, fleshy, false membrane.

Sarcostyle (*sar'-ko-stīl*) [σάρξ, flesh; στῦλος, a pillar]. In biology: (*a*) One of the fine longitudinal elements running from end to end in a striated muscle-fiber; a muscle-fibril; a muscle-column. (*b*) The name given by Hincks to the sarcode mass contained in the chitinous (*sarcotheca*) lasso-cell of a *Cnidarian.*

Sarcotheca (*sar-ko-thē'-kah*) [σάρξ, flesh; θήκη, a sheath: *pl.*, *Sarcothecæ*]. In biology, the name applied by Hincks to the chitinous cups of a thread-cell or lasso-cell of the *Cnidaria.*

Sarco-therapeutics (*sar'-ko-ther-ap-u'-tiks*) [σάρξ, flesh; θεραπεία, treatment]. The treatment of disease by means of animal extracts or substances. See *Organotherapy.*

Sarcothlasia, Sarcothlasis (*sar-koth-la'-ze-ah, sar-koth'-las-is*) [σάρξ, flesh; θλάσις, a crushing]. Contusion of the soft tissues.

Sarcothlasma (*sar-koth-laz'-mah*). Synonym of *Sarcothlasis.*

Sarcotic (*sar-kot'-ik*) [σάρξ, flesh]. Producing flesh. Also, pertaining to sarcosis.

Sarcotome (*sar'-ko-tōm*) [σάρξ, flesh; τομή, a cutting]. A surgical instrument for the division of soft tissues.

Sarcous (*sar'-kus*) [σάρξ, flesh]. Fleshy. Pertaining to muscles. **S. Elements,** the dark prisms of the ultimate fibrillæ of striped muscle-fibers, formerly regarded by Bowman as the units of muscular tissue. A sarcoma.

Sardiasis, Sardoniasis (*sar-di'-as-is, sar-do-ni'-as-is*). Synonym of *Risus sardonicus.*

Sardonic (*sar-don'-ik*) [Σαρδώ, Sardinia]. Resembling the grimace produced by eating a certain Sardinian plant. See *Risus sardonicus.*

Sarkin (*sar'-kin*). See *Sarcin* and *Hypoxanthin.*

Sarment (*sar'-ment*) [*sarmentum*, twigs, light branches]. In biology, a long, slender stolon or branch.

Sarothrum (*sa-ro'-thrum*) [σάρον, a broom: *pl. Sarothra*]. In biology, the comb-like or brush-like hairs of the corbiculum or pollen-basket of a bee.

Sarracenia (*sar-a-se'-ne-ah*) [after Dr. *Sarrazin*, of Quebec]. A genus of American insectivorous plants, *e.g.*, side-saddle flower, or pitcher-plant, remarkable for their trumpet-shaped leaves. **S. purpurea, S. flava,** and **S. variolaris** are said to afford roots serviceable in dyspepsia and gout. **S. purpurea,** and **S.**

violaris have been vaunted as a cure for smallpox. They are diuretic, diaphoretic, and stimulant. Dose of the fld. ext. gtt. xxv. See also, *Trumpet-plant.*

Sarracenin (*sar-a-se'-nin*) [after Dr. *Sarrazin*, of Quebec]. A substance, perhaps an alkaloid, found in *Sarracenia purpurea.*

Sarrazin (*sar'-az-in*). Same as *Buckwheat.*

Sarsa (*sar'-sah*). Same as *Sarsaparilla.*

Sarsaparilla (*sar-sap-ar-il'-ah*) [origin obscure]. **Sarsæ Radix** (B. P.) The root of *Smilax officinalis*, and several other species of the *Smilax* family, native to tropical America. It contains an essential oil and several extractive principles, and is diuretic, tonic and alterative. It has mild alterative properties and is a good vehicle for potassium iodid. It is used somewhat in tertiary syphilis, scrofula and similar diseases. **S., Comp., Fld. Ext.**, sarsaparilla 75, licorice root 12, sassafras bark 10, mezereum 3, glycerin 10, water and alcohol q. s. ad 100 parts. Dose ʒss–j. **S., Comp., Syr.**, fld. ext. sarsaparilla 20, fld. ext. glycyrrhiza 1.5, fld. ext. senna 1.5, sugar 65, oil of sassafras, oil of anise, and oil of gaultheria, each 1 c.c., water q. s. Dose. ʒj–ʒss. **S., Decoct.** (B. P.) Dose ʒij–x. **S., Decoctum, Comp.**, sarsaparilla 10, sassafras, guaiac wood, licorice root āā 2, mezereum 1, water ad 100 parts. Dose ʒj–iv. **S., Ext., Liq.** (B. P.) Dose ʒss–iv. **S., Fld. Ext.** Dose ʒss–j. **S., Hood's,** a proprietary nostrum composed of comp. ext. sarsap., taraxacum, podophyllum and juniper in about the proportion of their dosage. **S., Indian.** See *Hemidesmus.* **S., Syr.**, unof., consists of a mixture of the oils of gaultheria and sassafras with syrup *ad lib.* Used as a flavoring for soda water.

Sartian Disease. An endemic rheumatic affection of the tropics, characterized by red indurated spots that finally ulcerate.

Sarticrureus (*sar-tik-ru-re'-us*) [*sartor*, a tailor; *crus*, crureus]. The sartorius muscle.

Sartorius (*sar-to'-re-us*) [*sartor*, tailor]. See *Muscle.*

Sassa Gum. A gum resembling tragacanth; the product of *Albizzia fastigiata*, an African tree.

Sassafras (*sas'-a-fras*) [Sp., *sasafras*, sassafras]. The root-bark of *S. officinalis.* Its properties are due to a volatile oil. **S., Australian.** See *Atherosperma moschata.* It is aromatic and stimulant diaphoretic. **S., Infus.**, unof., "sassafras tea." Dose *ad libitum.* See *Salvop.* **S., Medulla**, the pith of the sassafras stem, useful with 98 per cent. water as a demulcent drink; used also as a collyrium. **S. Oil**, the volatile oil. Dose ♏j–v. A constituent of sarsaparilla syrup.

Sassaparilla (*sas-ap-ar-il'-ah*). Synonym of *Sarsaparilla.*

Sassolin (*sas'-o-lin*) [It., *Sasso*, a town near Florence]. A native boric acid. See *Boron.*

Sassy Bark (*sas'-e bark*). See *Casca.*

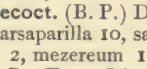
Satanophobia (*sa-tan-o-fo'-be-ah*) [Σατᾶν, Satan; φόβος, fear]. Morbid fear of the devil.

Satellite (*sat'-el-it*) [*satelles*, an attendant]. In anatomy, the vein accompanying an artery.

Satiety (*sa-ti'-e-te*) [*satis*, enough]. Fulness beyond desire.

Satin White. See *Pigments, Conspectus of.*

Satterthwaite's Method. See *Artificial Respiration.*



Saturable (*sat'-u-ra-bl*) [*saturabilis*, saturable]. Capable of saturation.

Saturant (*sat'-u-rant*) [*saturare*, to saturate]. Saturating.

Saturate (*sat'-u-rāt*) [*saturare*, to saturate]. Filling to excess.

Saturated (*sat'-u-ra-ted*) [*saturare*, to fill full]. 1. A qualification applied to compounds constituted according to the general formula $C\ X_{2n+2}$ (in which X represents the valences directly joined to C). Such compounds are known as paraffins. 2. Of a liquid, containing in solution all of a substance that it can dissolve. 3. Of solids, completely permeated with fluid. **S. Solution.** See *Saturated*, 2d definition.

Saturation (*sat-u-ra'-shun*) [*saturare*, to satisfy]. 1. A term used to denote that a fluid holds as much of a soluble substance as it can dissolve. 2. Also a term denoting that an atom, molecule, or radicle has combined with all the atoms, molecules, or radicles it can hold. The complete satisfaction or neutralization of valency in any molecule, so that further combination can occur only by increasing the valency of some atoms, or releasing some atom or molecule from the compound. Thus, carbon, is saturated with 4 monad or 2 dyad atoms,

as H–C–H, or O = C = O. **S. of the Atmosphere,** that condition in which any reduction of temperature will be followed by a precipitation of the aqueous vapor mingled with the atmosphere. **S.-point,** the temperature at which the atmosphere contains as much moisture as it can possibly hold, in the form of vapor.

Satureia (*sat-u-re'-e-ah*). See *Summer Savory.*

Saturn Cinnabar. Same as *Minium.*

Saturnine (*sat'-er-nin*) [*Saturnus*, a Roman deity; the alchemic symbol of lead]. 1. Pertaining to lead or produced by lead. 2. Of gloomy nature. **S. Amaurosis.** See *Saturnism.* **S. Arthralgia.** See *Saturnism.* **S. Cerebritis.** See *Encephalitis* and *S. Encephalopathy.* **S. Colic.** See *Colic.* **S. Encephalitis,** inflammation of the brain, arising from lead-poisoning. **S. Encephalopathy,** a sudden outburst of grave cerebral symptoms: convulsions, coma, delirium, headache, sometimes amaurosis. It is often fatal, but at the autopsy, the brain usually shows no lesions. **S. Paralysis,** paralysis from lead-poisoning. **S. Poisoning,** lead-poisoning. **S. Red.** Same as *Minium.*

Saturnism or **Saturnismus** (*sat'-er-nizm, sat-er-niz'-mus*) [*Saturnus*, a Roman deity; the alchemic term for lead]. Lead-poisoning; plumbism. A chronic form of poisoning due to the more or less prolonged ingestion of small quantities of lead. It is most common in those whose occupation exposes them to contact with salts of the metal, such as painters, glaziers, workers in white-lead works, etc. Drinking-water and foods may also convey the poison to the system; so may cosmetics impregnated with lead; indeed, the sources of poisoning are manifold and often very curious. The forms of chronic lead-poisoning may be grouped as follows: 1. *Lead-colic*, the most frequent. The pain is centered about the umbilicus, the abdomen retracted, constipation obstinate, the pulse corded. 2. *Lead-palsy*, wrist-drop or drop-wrist. This is a paralysis of the extensor muscles of both forearms; it may be associated with sensory disturbances. Paralysis of the ocular and the laryngeal muscles has also been observed. 3. *Saturnine encephalopathy*, q. v. 4. *Saturnine arthralgia.* A painful affection of the joints, especially the knee, rarely the others. Objective signs are usually absent. The disease may resemble chronic gout. 5. *Chronic contracted kidney.* 6. *Amblyopia* due to atrophy of the optic nerve. The general symptoms of lead-poisoning are a marked anemia and cachexia, and a blue line at the edge of the gums.

Satyriasis (*sat-ir-i'-as-is*) [σάτυρος, a satyr]. 1. Excessive venereal desire. 2. Leprosy.

Satyromania (*sat-ir-o-ma'-ne-ah*). Same as *Satyriasis.*

Satyromaniac (*sat-ir-o-ma'-ne-ak*) [σάτυρος, satyr; μανία, madness]. One who is affected with satyriasis

saunders (*sahn'-derz*). See *Santalum rubrum.*
sauriasis (*saw-ri'-a-sis*). Same as *Ichthyosis.*
auriderma (*saw-rid-er'-mah*) [σαῦρα, lizard; δέρμα, skin]. Ichthyosis.
sauriosis (*saw-ri-o'-sis*). See *Ichthyosis sauroderma.*
sauroderma (*saw-ro-der'-mah*). See *Sauriderma.*
saurognathism (*saw-rog'-na-thizm*) [σαῦρα, lizard; γνάθος, jaw]. In biology, having a lizard-like jaw; with the halves of the vomer distinct, as in certain birds.
saururus (*saw-ru'-rus*) [σαῦρος, lizard; οὐρά, tail]. A genus of apetalous plants. **S. cernuus,** lizard-tail, or breast-weed. A N. American water-plant; the root, bruised or boiled, is discutient and emollient, and is said to relieve pleurodynia. Unof.
sausage (*saw'-sāj*) [ME., *saucige*, sausage]. An article of food consisting mainly of minced meat with seasoning. **S.-poison.** See *Allantotoxicon.* **S.-poisoning.** See *Botulismus* and *Allantiasis.*
sauterne (*so-tern'*) [*Sauterne*, a place in France]. A certain white wine.
savanna (*sa-van'-ah*) [Sp., *sávana*, a sheet]. A treeless plain. **S.-flower,** yellow nightshade. The leaves of *Urechites suberecta*, a highly poisonous West Indian plant. It resembles aconite in action. Its properties are not fully known. Unof.
savelieff's Method. See *Sputum, Methods of Examination.*
savigny's Tubules. The very fine branched and ampullated tubules ramifying over the wall of the intestine in nearly all the *Tunicata*, functioning as a pancreas.
savine (*sav'-in*). See *Sabina.*
saviotti's Canals. Fine passages between the secreting cells of the pancreas. They are now believed to be formed artificially.
savor (*sa'-vor*) [*savor*, taste]. The taste or odor of a substance.
savory (*sa'-vo-re*) [*savor*, odor, or flavor]. Having a pleasant odor or flavor. See *Summer Savory.*
savory and Moore's Food. A Liebig's food for infants. Its composition is: Water, 8.34; fat, 0.40; grape-sugar, 20.41; cane-sugar, 9.08; starch, 36.36; soluble carbohydrates, 44.83; albuminoids, 9.63; cellulose, gum, etc., 0.44; ash, 0.89.
saw [ME., *sawe*, saw]. An instrument for cutting bone. It consists of a thin blade with sharp teeth on one edge. **S., Amputating,** one especially devised for amputations. **S.-box.** See *Macrotome.* **S., Butcher's,** one which allows the blade to be fixed at any angle. **S., Chain,** one in which the teeth are set in links movable upon each other. The saw is moved by pulling alternately upon one and the other handle. **S., Crown.** See *Trephine.* **S.-dust,** small particles of wood, produced by sawing. Saw-dust was formerly used in surgery, in preparing pads for fractured bones, and as a dressing for wounds. **S., Hemp,** a cord slipped over the part to be excised, and drawn back and forth till it cuts through the tissue; it is of service in embryotomy and in amputations of deep-seated parts. **S., Hey's,** a rigid disc with saw-teeth and handle, for enlarging an opening. **S. Palmetto,** the fruit of *Serenoa serrulata*, sedative, nutritive and tonic. Dose of the fld. ext. ʒss–ij. Unof. **S., Skull,** the trephine. **S.-wort.** See *Pigments, Conspectus of.*
sawing (*saw'-ing*). See *Sciage.*
sawyer's Cramp. See *Cramp.*
saxatile (*saks'-at-il*) [*saxum*, a rock]. In biology, growing upon or among rocks.
saxifrage (*saks'-if-rāj*) [*saxum*, a rock; *frangere*, to break]. Any plant of the genus *Saxifraga*, including many species of herbs, to some of which doubtful medicinal properties are ascribed.
Saxigenous (*saks-ij'-en-us*) [*saxum*, rock; γενής, produced]. In biology, growing on rocks.
Saxolinum (*saks-o-li'-num*) [*saxum*, rock; *oleum*, oil]. Synonym of *Petrolatum.*
Saxony Blue. Same as *Indigo Blue.* **S. Green.** Same as *Rinmann's Green.*
Sayre's Apparatus, S.'s Jacket. A jacket of plaster-of-Paris molded to support the spine in certain diseases of the vertebral column. **S.'s Method.** See *Treatment, Methods of.* **S.'s Shoe,** the high shoe used in hip-joint disease. **S.'s Sign** or **Test.** See *Signs and Symptoms, Table of.*
Scab (*skab*) [*scabere*, to scratch]. 1. The crust formed by the desiccation of the secretions of an ulcer or wound. 2. In biology: (*a*) *Psoroptic scabies* of domestic animals, also called, *Shab*, *Ray*, *Rubbers*, *Räude*, *Krätze*, *Schabe*, *Grind* (Ger.); *Rogne*, *Tac*, *Gall épizoötique* (Fr.); *Rogna*, *Scabbia* (Ital.); *Sarna* (Sp.); *Tschesotka* (Rus.); *Rüh* (Hung.); *Skab* (Dan.); *Scabb*, (Swed.); *Maracane* (Guayana); *Carracha* (Peru); a dermatosis due to the presence of *Psoroptes communis*, var. *equi*, *bovis*, *ovis*, *capræ*, *cuniculi*. See under *Parasites* (*Animal*), *Table of.* (*b*) A diseased condition of plants produced by a parasitic fungus, and characterized by a scabby appearance; *e.g.*, **Apple-scab,** *Fusicladium dendriticum*, Fuckel. **Pear-scab,** *Fusicladium pyrinum*, Fuckel. **Potato-scab,** *Oöspora scabies*, *Spongospora solani*, *Fusarium diplosporum*, C. E. **Wheat-scab,** *Fusarium culmorum.* **Orange-scab,** *Cladosporium herbarum*, Pk., *Fusarium sarcochroum*, Sacc. **S.-weavers.** Synonym of *Scabies.*
Scabbed (*skabd'*) [*scabere*, to scratch]. Mangy, affected with scabies.
Scabby (*skab'-e*). Same as *Scabbed.*
Scaberulous (*ska-ber'-u-lus*) [*scaber*, rough]. In biology, slightly roughened.
Scabies (*ska'-be-ēz*) [*scabere*, to scratch]. *Itch;* a parasitic skin-disease, caused by an animal parasite, the *Sarcoptes scabiei*, var. *hominis*, or itch-mite. See *Parasites* (*Animal*), *Table of.* The acarus, burrowing in the epidermis, irritates the skin, causing various inflammatory lesions, such as papules, vesicles, and pustules, accompanied by intense itching. The scratching resorted to to relieve this itching produces the long scratch-marks so commonly seen in itch. The insect shows a marked predilection for certain localities, as between the fingers, the flexor surface of the wrists, the axillæ, and the buttocks. **S. norwegica.** See *Itch*, *Norway*, and *Sarcoptes scabiei*, var. *lupi*, under *Parasites* (*Animal*), *Table of.*
Scabiola (*ska-bi'-o-lah*). Synonym of *Scabies.*
Scabiophobia (*ska-be-o-fo'-be-ah*) [*scabies*, itch; φόβος, fear]. Morbid or insane fear of scabies.
Scabious (*ska'-be-us*) [*scabiosus*, rough, scabby]. 1. Scabby or scaly. 2. As a noun, any plant of the genus *Scabiosa;* popularly regarded as useful in skin-diseases and gout, and as vulneraries. Unof.
Scabrate (*ska'-brāt*). Same as *Scabrous.*
Scabrid (*ska'-brid*) [*scaber*, rough]. In biology, slightly rough.
Scabrities (*ska-brit'-e-ēz*) [*scaber*, rough]. Roughness; scabbiness. **S. unguium,** abnormal thickening of the finger nails.
Scabrous (*ska'-brus*) [*scaber*, rough]. In biology, rough or harsh to the touch, with points or hairs. Applied to leaves, etc.
Scala (*ska'-lah*) [L.]. A stair-case or ladder. **S., Collateral.** Synonym of *Canal, Cochlear.* **S. of Löwenberg.** Synonym of *Canal, Cochlear.* **S. media,** the space between the membrane of Reissner and the basilar membrane; containing the essential peripheral

organs of hearing. **S., Posterior Cochleal.** Synonym of *S. tympani.* **S., Superior Cochlear.** *S. vestibuli.* **S. tympani,** the canal lying below the osseous lamina and the basilar membrane of the internal ear. **S. vestibuli,** the canal bounded by the osseous lamina and the membrane of Reissner. See *Ear.*

Scalariform (*ska-lar'-if-orm*) [*scalaria,* a ladder; *forma,* form]. In biology, shaped like a ladder. Applied to ducts or vessels on which the markings are so placed as to resemble the rounds and spaces of a ladder.

Scald (*skawld*) [ME., *scalden,* to scald]. 1. The burn caused by hot liquids or vapors. 2. A scabby skin-disease, especially of the scalp. **S.-head.** See *Favus.*

Scale (*skāl*) [ME., *scale,* a scale]. Of fishes, any one of the small semi-opaque laminæ of modified epidermis covering the surface of the body. 2. An exfoliated shell of bone. 3. The semi-opaque laminæ of horny epidermis occurring upon the skin in various skin-diseases. See *Squama.* **Ss., Hair,** the imbricated plate-like cells forming the cortical portion of a hair.

Scale [*scala,* ladder]. A series of marks placed at regular distances from each other and used as standards in measuring. **S., Centigrade, S., Fahrenheit, S., Reaumur.** See *Thermometer.*

Scalene (*ska'-lēn*) [σκαληνός, uneven]. Of a figure having unequal sides.

Scalenus (*ska-le'-nus*). See *Muscles, Table of.*

Scaler (*ska'-ler*) [ME., *scale,* scale]. In dentistry, an instrument for removing the tartar from the teeth.

Scalesiasis (*ska-le-si'-as-is*). Synonym of *Measles.*

Scaling (*ska'-ling*) [ME., *scale,* scale]. Desquamating; producing scales. **S. the Teeth,** an old name for the operation, in dentistry, which consists in the removal of salivary calculus, commonly called tartar, from the teeth. See *Salivary Calculus.*

Scall (*skawl*) [ME., *skalle,* a scab]. Favus, impetigo, psoriasis, eczema, or other skin-disease. [Old.] **S., Dry,** psoriasis, scabies. **S., Moist,** eczema.

Scalled (*skawld*) [ME., *skalle,* a scab]. Affected with scall.

Scalma (*skal'-mah*) [OHG., *scalmo,* pestilence]. A contagious and infectious febrile disease of the horse, with local lesions of the bronchi, trachea, and larynx, which produce cough. It is further characterized by great irritability of temper. It is rarely fatal, except from complications.

Scalp (*skalp*) [ME., *scalp,* the top of the head]. The integumentary covering of the cranium. **S., Hairy,** that portion of the scalp usually covered by hair.

Scalpel (*skal-pel'*) [*scalpellum,* a little knife]. A small knife, having a blade somewhat wider than a bistoury, the cutting edge being convex.

Scalpellum (*skal-pel'-um*) [L., a surgical knife]. In biology, one of the lancet-like organs of the promuscis of certain insects (*Hemiptera*).

Scalper (*skal'-per*) [L.]. See *Scalprum.*

Scalping (*skal'-ping*). See *Gerdy's Operation* in *Table of Operations.*

Scalpriform (*skal'-prif-orm*) [*scalprum,* a knife, chisel; *forma,* form]. In biology, chisel-shaped; applied to the incisor teeth of rodents and some other mammals.

Scalprum (*skal'-prum*) [*scalpere,* to scrape]. A toothed raspatory used in trephining and in removing carious bone.

Scaly (*ska'-le*) [ME., *scale,* scale]. Covered with or having scales. **S. Tetter.** See *Psoriasis.*

Scammonin (*skam'-o-nin*) [σκαμμωνία, scammony], $C_{34}H_{56}O_{16}$. A glucosid found in scammony. It may be identical with jalapin.

Scammonium, Scammoneum, Scammony (*skam-o'-ne-um, skam'-o-ne*) [σκαμμωνία, scammony: *gen. Scammonii*]. A purgative gum-resin, the dried juice of the root of *Convolvulus scammonia,* a South-western Asiatic plant. It is generally given in combination with other drugs. Its properties are due to an active principle, jalapin. A drastic cathartic. Dose gr. v–x. **S., Confectio** (B. P.) Dose gr. x–xx. **S., Mist.** (B. P.) Dose ʒss–ij. **S., Pil., Comp.** (B. P.) Dose gr. v. **S., Pulv., Comp.** (B. P.), contains scammony, ginger, and jalap. Dose gr. x–xx. **S., Resina.** Dose gr. iij–viij.

Scandent (*skan'-dent*) [*scandere,* climb]. In biology, climbing. Applied to stems that climb by means of organs modified for the purpose.

Scandium (*skan'-de-um*) [*Scandia,* Scandinavia]. A metal belonging to the aluminum group. Symbol Sc; atomic weight 44. See *Elements, Table of.*

Scanning (*skan'-ing*) [*scandere,* to climb]. A peculiar, slow, and measured form of speech, met with in various nervous affections, chiefly in multiple sclerosis.

Scansorius (*skan-so'-re-us*). See *Muscles, Table of.*

Scape (*skāp*) [σκᾶπος, a shaft, a staff]. In biology, a leafless, radical peduncle.

Scapel (*skap'-el*) [*scapellus,* dim. of *scapus,* scape]. In biology, the neck or caulicle of the germinating embryo.

Scapha (*ska'-fah*) [σκάφη, trough]. A trough.

Scaphidium (*ska-fid'-e-um*) [σκαφιδιον, a small tub or skiff]. In biology, the receptacle of the spores in certain algæ.

Scaphion (*skaf'-e-on*) [σκάφιον, dim. of σκάφη, a trough]. Synonym of *Cranium.*

Scaphium (*ska'-fe-um*) [σκάφιον, a bowl, a basin: *pl., Scaphia*]. In biology: (*a*) the carina or keel of a papilionaceous flower; (*b*) an unpaired appendage of lepidopterous insects.

Scaphocephalic (*skaf-o-sef-al'-ik*). See *Scaphocephalous.*

Scaphocephalism (*skaf-o-sef'-al-izm*). See *Scaphocephaly.*

Scaphocephalous (*skaf-o-sef'-al-us*) [σκάφη, a skiff; κεφαλή, head]. Characterized by a boat-shaped appearance of the cranium, arising from ossification of the sagittal suture in infancy.

Scaphocephalus (*skaf-o-sef'-al-us*) [σκάφη, a skiff; κεφαλή, head]. A boat-shaped appearance of the cranium, due to a premature union of the sagittal suture, or abnormal development.

Scaphocephaly (*skaf-o-sef'-al-e*) [σκάφη, boat; κεφαλή, head]. The condition of having a boat-shaped skull

Scaphocerite (*ska-fos'-er-īt*) [σκάφος, a bowl; κέρας, a horn]. In biology, the scale-like appendage of the second pair of antennæ of a crustacean.

Scaphocuboid (*skaf-o-ku'-boid*) [σκάφη, boat; κύβος, cube; εἶδος, like]. Pertaining to the scaphoid and cuboid bones.

Scaphognathite (*ska-fog'-na-thīt*) [σκάφος, a bowl, boat; γνάθος, jaw]. In biology, the scale-like appendage of the second maxilla of a crustacean.

Scaphoid (*skaf'-oid*) [σκάφη, boat; εἶδος, like]. Boat-shaped. **S. Abdomen,** the sunken appearance of the belly, seen in meningitis and in great emaciation from wasting diseases. **S. Bone,** a name given to a boat-shaped bone of the tarsus and also to one of the carpus **S. Fossa.** See *Fossa.*

Scaphoideum (*ska-foi'-de-um*) [L.]. The scaphoid bone of the wrist or ankle.

Scaphoido-cuneiform Amputation. See *Chopart's Amputation* and *Forbes's Amputation,* in *Operations Table of.*

Scapholunar (*skaf-o-lu'-nar*) [σκάφη, boat; *luna,* moon]. Pertaining to the scaphoid and semilunar bones.

Scaphula (*skaf'-u-lah*) [σκάφη, boat]. The fossa navicularis.

Scapiform (*ska'-pif-orm*) [*scapus*, a stalk; *forma*, form]. In biology, scape-like.

Scapula (*skap'-u-lah*) [L.]. The large, flat, triangular bone forming the back of the shoulder and belonging

SCAPULA. POSTERO-EXTERNAL ASPECT. 1. Supraspinous fossa. 2. Infra-spinous fossa. 3. Superior or coracoid border. 4. Coracoid or suprascapular notch. 5. Axillary or external border. 6. Anterior angle and glenoid cavity. 7. Inferior angle. 8. Rough impression for long head of triceps. 9. Internal or spinal or vertebral border. 10. Spine. 11. Smooth surface over which trapezius muscle glides. 12. Acromion. 13. Base of spine. 14. Coracoid process.

to the shoulder-girdle. The shoulder-blade. See *Bones, Table of.*

Scapulacromial (*skap-u-lak-ro'-me-al*) [*scapula*, shoulder-blade; ἀκρώμιον, acromion]. Pertaining to the acromion process of the scapula.

Scapulalgia (*skap-u-lal'-je-ah*) [*scapula*, the shoulder-blade; ἄλγος, pain]. Pain in the neighborhood of the shoulder-blade.

Scapular (*skap'-u-lar*) [*scapula*, the shoulder-blade]. Pertaining to the shoulder-blade. **S. Arch,** the pectoral arch or shoulder-girth. **S. Line,** a vertical line drawn on the back through the inferior angle of the scapula. **S. Point,** a tender point developed in neuralgia of the brachial plexus and situated at the inferior angle of the scapula. **S. Reflex.** See *Reflexes, Table of.* **S. Region,** the region in and about the scapula. In biology, a well-defined longitudinal area of feathers lying along the back and over the shoulder-blade of a bird (*regio scapularis*).

Scapulary (*skap'-u-la-re*) [*scapula*, scapula]. A shoulder-bandage.

Scapulated (*skap'-u-la-ted*) [*scapulæ*, the shoulder-blades]. In biology, having the feathers of the scapular region well marked, as in *Corvus scapulatus*, the scapulated crow.

Scapulen (*skap'-u-len*) [*scapula*, the shoulder-blade]. Belonging to the scapula in itself.

Scapulet, Scapulette (*skap'-u-let*) [*scapula*, the shoulder]. In biology, one of the leaf-like appendages of the manubrium of certain *Cnidaria.*

Scapulo- (*skap'-u-lo-*) [*scapula*, scapula]. A prefix denoting relation to the shoulder or scapula.

Scapulo-clavicular (*skap'-u-lo-kla-vik'-u-lar*) [*scapula*, scapula; *clavis*, key]. Pertaining to the scapula and the clavicle.

Scapulo-coracoid (*skap'-u-lo-ko'-rak-oid*) [*scapula*, scapula; κόραξ, raven; εἶδος, like]. Pertaining to the scapula and the coracoid process.

Scapulodynia (*skap-u-lo-din'-e-ah*). Synonym of *Scapulalgia.*

Scapulo-humeral (*skap'-u-lo-hu'-mer-al*) [*scapula*, scapula; *humerus*, humerus]. Pertaining to the scapula and the humerus. **S. amputation,** removal of the arm at the shoulder-joint.

Scapulo-radial (*skap'-u-lo-ra'-de-al*) [*scapula*, scapula; *radius*, ray]. Pertaining to both scapula and radius.

Scapulo-ulnar (*skap'-u-lo-ul'-nar*) [*scapula*, scapula; *ulna*, ulna]. Pertaining to both scapula and ulna.

Scapulo-vertebral (*skap'-u-lo-ver'-te-bral*) [*scapula*, scapula; *vertebra*, vertebra]. Pertaining to the scapula and the spine.

Scapus (*ska'-pus*) [*scapus*, a shaft, stem: *pl.*, *Scapi*]. In biology, the scape of a flower, a feather, or an antenna. **S. penis,** the body of the penis. **S. pili,** the hair-shaft.

Scar (*skar*) [σχάρα, scab, scar]. 1. See *Cicatrix.* 2. In biology, the mark left on the stem when the leaf falls away, or on the seed when it separates from the funiculus.

Scardamygmus (*skar-dam-ig'-mus*) [σκαρδαμυγμός]. Winking.

Scarenzio's Treatment. The treatment of syphilis by the hypodermatic injection of calomel. **S.'s Method.** See *Treatment, Methods of.*

Scarfskin (*skarf'-skin*) [Sw., *skarf*, a scarf; ME., *skin*, skin]. The epidermis or cuticle.

Scarification (*skar-if-ik-a'-shun*) [*scarificare*, to scarify]. The operation of making numerous small, superficial incisions or punctures, for giving vent to serum or blood or gases.

Scarificator (*skar'-if-ik-a-tor*) [*scarificare*, to scarify]. An instrument used in scarification. It consists of a number of small lancets, operated by a spring, so that a number of slight incisions are made synchronously.

Scarious or **Scariose** (*ska'-re-us, ska'-re-ōz*) [*scaria*, a thorny shrub]. Dry, thin, and membranous. Applied to parts of flowers, etc.

Scarlatina (*skar-lat-e'-nah*) [*scarlatinus*, scarlet]. See *Scarlet Fever.* **S. anginosa, S. cynanchica,** scarlet fever with angina. **S. gastrica,** scarlet fever complicated with gastro-enteritis. **S. gravior,** malignant scarlet fever. **S. hæmorrhagica,** scarlet fever, or more usually septic fever with hemorrhagic spots. **S. lævis,** mild scarlet fever. **S. latens,** scarlet fever without eruption. **S. maligna,** malignant scarlet fever. **S. papulosa,** scarlet fever in which there are prominent papules, due to involvement of the hair-follicles. **S. pruriginosa.** Synonym of *Urticaria.* **S. puerperalis.** See *Scarlet Fever, Puerperal.* **S. pustulosa,** scarlet fever with a pustular eruption. **S. rheumatica.** Synonym of *Dengue.* **S. septica,** a grave form of scarlet fever characterized by symptoms of septic intoxication. **S. simplex,** mild scarlet fever. **S. sine angina,** scarlet fever without throat-symptoms. **S. sine eruptione, S. sine exanthemate,** scarlet fever without the rash. **S. traumatica,** the eruption similar to that of scarlet fever, accompanied by febrile symptoms, which sometimes follows wounds or surgical operations. **S. typhosa,** malignant scarlet fever, with grave nervous symptoms. **S. urticata,** urticaria.

Scarlatinal (*skar-lat'-in-al, skar-lat-e'-nal*) [*scarlatinus*, scarlet]. Pertaining to scarlatina. **S. Angina,** the throat-affection produced by scarlet fever. **S. Nephritis,** the acute catarrhal nephritis that arises in the course of or during the convalescence from scarlet fever. **S. Tongue,** the "strawberry" tongue of scarlet fever.

Scarlatiniform (*skar-lat-in'-if-orm*). Synonym of *Scarlatinoid.*

Scarlatinoid (*skar-lat'-in-oid*) [*scarlatinus*, scarlet; εἶδος, like]. Resembling scarlatina.

Scarlatinous (*skar-lat'-in-us*) [*scarlatinus*, scarlet]. Having the nature of or pertaining to scarlatina.

Scarlet (*skar'-let*) [σκαρλάτον, scarlet]. A highly chromatic and brilliant-red color. **S.-faced,** having a

very red face. **S. Fever,** an acute, specific, epidemic, contagious disease, characterized by a scarlet flush spreading progressively from the face over the body, ending on about the seventh day in desquamation of the cuticle. The fever is not high in the simple cases, but may rise to a very high point in the graver cases. The tongue is the characteristic "strawberry tongue," with prominent papillæ, and there is a red, swollen, and inflamed condition of the tonsils, uvula, and soft palate, upon which a soft, white film may be deposited. Acute nephritis and suppurative otitis are frequent complications or sequelæ. In a small proportion of the cases the patient will undergo a relapse, and pass through a second attack of the disease of varying severity. One attack of the disease protects against a second attack, but not quite to the same extent as in measles. The disease is most frequent in children near the age of five years, and after this period the liability to contract the disease diminishes rapidly. See *Exanthemata, Table of.* **S. Ocher.** Same as *Ocher.*

Scarpa's Aplatissement. A form of ligature used by Scarpa for the purpose of arresting the circulation temporarily by mechanical pressure without lacerating the tissues of the vessel. **S.'s Fascia,** the deep layer of the superficial abdominal fascia. **S., Foramen of.** See *Foramina, Table of.* **S.'s Ganglion.** See *Ganglia, Table of.* **S.'s Hiatus,** the helicotrema, or opening between the scala vestibuli and the scala tympani. **S.'s Ligature.** See *Ligature.* **S.'s Liquor,** the endolymph. **S.'s Nerve.** See *Nerves, Table of.* **S.'s Shoe,** a shoe for club-foot. **S.'s Triangle.** See *Triangle.*

Scatacratia (*skat-ak-ra'-she-ah*). See *Scoracratia.*

Scatalogia (*skat-al-o'-je-ah*) [σκῶρ, σκατός, dung; ἀλογία, senselessness]. Insanity characterized by great filthiness.

Scatol (*ska'-tol*). See *Skatol.*

Scatologia, Scatology (*skat-o-lo'-je-ah, skat-ol'-o-je*) [σκῶρ, σκατός, dung; λόγος, learning]. The science or study of excreta.

Scatologic (*skat-ol-oj'-ik*) [σκῶρ, σκατός, dung; λόγος, science]. Pertaining to scatologia.

Scatomancy (*skat'-o-man-se*). Same as *Scatoscopy.*

Scatophagia (*skat-o-fa'-je-ah*) [σκῶρ, σκατός, dung; φαγεῖν, to eat]. Same as *Coprophagia.*

Scatoscopy (*ska-tos'-ko-pe*) [σκῶρ, σκατός, dung; σκοπεῖν, to inspect]. Inspection of the excreta.

Scattered (*skat'-erd*) [ME., *scateren*, to scatter]. In biology, few, or without regularity of arrangement.

Scatula (*skat'-u-lah*) [L., a parallepiped: *pl.*, *Scatulæ*]. An oblong flat box for powders or pills.

Scavenger (*skav'-en-jer*) [ME., *scavager*, scavenger]. One who cleans; specifically one who cleans the streets, etc., of a city. **S.-cells,** a name applied to certain lymph-cells of the brain. In general paralysis and chronic alcoholism they are said to become highly developed, but have individually only a brief existence, their growth and decay leading to a degradation of the tissue. **S.-service,** collectively, those employed to clean the streets of a city by scraping or sweeping together and carrying off the filth or other waste products.

Scavenging (*skav'-en-jing*) [ME., *scavager*, a scavenger]. Removal of the waste products, as the cleansing of out-houses, sewers, etc.

Scelalgia (*se-lal'-je-ah*) [σκέλος, leg; ἄλγος, pain]. Pain in a leg. **S. puerperarum.** Synonym of *Phlegmasia alba dolens.*

Sceleteuma (*sel-et-u'-mah*) [σκέλλειν, to dry up]. Synonym of *Mummification.*

Skeleton (*sel'-et-on*). Synonym of *Skeleton.*

Scelocambosis (*se-lo-kam-bo'-sis*) [σκέλος, leg; κάμπτειν, to bend]. Curvature of a leg or of the legs; genu varum.

Scelodesmus (*se-lo-dez'-mus*) [σκέλος, leg; δεσμός, band]. 1. A bandage for the knee. 2. Gout in the knee.

Scelodidymus (*se-lo-did'-im-us*). Synonym of *Ischiopagus.*

Scelometer (*se-lom'-et-er*) [σκέδος, leg; μέτρον, measure]. An instrument for measuring the lower limbs in fractures or dislocations.

Sceloncia, Sceloncus (*se-lon'-se-ah, se-lon'-kus*) [σκέλος, leg; ὄγκος, tumor]. Swelling of the leg; phlegmasia alba dolens.

Scelotyrbe (*sel-o-ter'-be*) [σκέλος, leg; τύρβη, vacillation]. Weakness, or indecision in stepping, often due to a palsied condition. **S. pituitosa.** Synonym of *Enteritis, Pseudo-membranous.*

Scempsis (*semp'-sis*). Synonym of *Decubitus.*

Scenotheoria (*sen-o-the-o'-re-ah*) [σκῆνος, tent; θεωρία, theory]. The cell-doctrine.

Scent (*sent*) [ME., *senten*, to smell]. An effluvium from any body capable of affecting the olfactory sense; odor, fragrance. **S.-bag.** Same as *S.-organ.* **S.-gland,** an odoriferous gland, or one secreting an odoriferous substance. **S.-organ.** See *Osmeterium.* **S.-pore,** the orifice of a scent-gland. **S.-vesicle,** a vesicle containing odoriferous matter.

Schacher's Ganglion. The ophthalmic ganglion. See *Ganglia, Table of.*

Schachowa, Spiral Tubule of. The spiral portion of a uriniferous tubule.

Schadonophan (*ska-don'-o-fan*) [σχάδών, the larva of some insects; φαίνειν, to appear]. In biology, the name applied by Henking to a larval stage of certain acaridans.

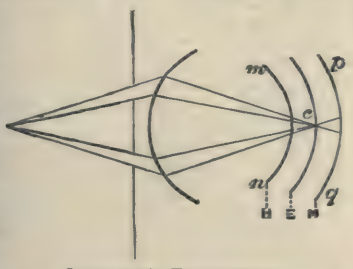
Schæfer's Dumb-bells. Dark, dumb-bell shaped structures, imbedded in a light intermediate substance, and which, according to Schæfer, constitute the basis of striated muscular tissue.

Schaller's Method. A method of preparing carminic acid. The aqueous extract of cochineal is precipitated with plumbic acetate acidulated with acetic acid; the precipitate is decomposed with hydrogen sulphid, and filtered. The filtrate is evaporated to dryness on a water-bath, and the residue dissolved in absolute alcohol; this solution is allowed to evaporate, when the crystals of carminic acid separate. They are washed with cold water to remove impurities, the water dissolving only the carminic acid.

Schallphotismen (*shahl-fo-tiz'-men*). See *Audition colorée.*

Scharling and Pettenkofer, Method of. A method of investigating the changes in the air brought about by respiration. The animal is placed in a chamber through which atmospheric air is passed, and the change in the composition in the air after passing through the chamber is determined.

Schatz's Method. A method of performing external version in face-presentation. See *Treatment, Methods of.*



Schede's Method. See *Treatment, Methods of.*

Scheelate (*shel'-āt*). Synonym of *Tungstate.*

Scheele's Green. The arsenite of copper. See *Copper* and *Rinmann's Green.*

Scheelization (*she-liz-a'-shun*) [after *Scheele*, a chemist]. A method of improving wines, that consists in the addition of glycerin to the finished wine, so as to improve the sweet taste without injuring its keeping qualities. The limits of the addition of glycerin lie between one and three liters to the hectoliter of wine.

heiner's Experiment or Test. A method of illustrating refraction and accommodation of the eye by two pin-holes in a card placed at a less distance apart than the diameter of the pupil. If the eye is emmetropic, or if an accurate accommodation

SCHEINER'S EXPERIMENT.

the two sets of rays passing through the pin-holes unite at *c* and form a single image. In a myopic eye the focus of the rays is at *p*, *q*, and in an hyperopic eye at *m*, *n*, and the object appears double. The same doubling of the image occurs when accommodating for a point beyond or nearer than the object.

hema (*ske'-mah*) [σχῆμα, form]. 1. A simple design to illustrate a complex mechanism. 2. An outline of a subject.

hematic (*ske-mat'-ik*) [σχῆμα, form]. Pertaining to or of the nature of a schema. **S. Eye,** one showing the proportions of a normal or typical eye.

heroma (*ske-ro'-mah*) [σχερός, dry]. Xerophthalmia.

heurlen's Bacillus. A bacillus thought to be specially connected with carcinoma, but not peculiar to it. See *Bacteria, Synonymatic Table of.*

hias (*ski'-as*). Synonym of *Ischias.*

hidacedon, Schidacedum (*skid-as-e'-don, skid-as-e'-dum*) [σχιδακίζειν, to splinter]. A longitudinal fracture of a bone.

hiefferdecker's Fluid. A fluid for dissociating nerve-tissues. It consists of methyl alcohol 5 c.c., glycerin 50 c.c., distilled water 100 c.c. Allow the tissues to remain in this for several days. It is specially useful for staining the retina and the central nervous system. It is best prepared fresh.

hiff's Test. See *Tests, Table of.*

himper's Theory. See *Theory.*

hindalamus, Schindalmus (*skin-dal'-am-us, skin-dal'-mus*]. Synonym of *Schidacedon.*

hindylesis (*skin-dil-e'-sis*) [σχινδύλησις, a cleavage]. Articulation by the reception of a plate of one bone into a fissure of another; a variety of synarthrosis.

hindyletic (*skin-dil-et'-ik*) [σχινδύλησις, cleavage]. Pertaining to, or of the nature of, schindylesis.

hinus (*ski'-nus*). See *Pepper Tree.*

hirrus (*skir'-us*). Synonym of *Scirrhus.*

histaceous (*skis-ta'-se-us*) [σχιζειν, to cleave]. In biology, slate-gray; bluish-gray.

histo- (*skis'-to-*) [σχιστός, cloven]. A prefix denoting a fissure or cleaving.

histocelia, Schistocœlia (*skis-to-se'-le-ah*) [σχιστός, cloven; κοιλία, cavity]. Abdominal fissure.

histocelus, Schistocœlus (*skis-to-se'-lus*) [σκιστός, cloven; κοιλία, cavity]. A monster exhibiting schistocelia.

histocephalus (*skis-to-sef'-al-us*) [σχιστός, cleft; κεφαλή, head]. A monster with a fissure of the skull.

histocormus (*skis-to-kor'-mus*) [σχιστός, cleft; κορμός, trunk]. A monstrosity having a cleft thorax, neck, or abdominal wall.

histocystis (*skis-to-sis'-tis*) [σχιστός, cleft; κύστις, bladder]. Fissure of the bladder.

histoglossia (*skis-to-glos'-e-ah*) [σχιστός, cleft; γλῶσσα, tongue]. Cleft tongue.

histomelia (*skis-to-me'-le-ah*) [σχιστός, cloven; μέλος, limb]. The condition of schistomelus.

Schistomelus (*skis-tom'-el-us*) [σχιστός, cleft; μέλος, limb]. A monstrosity with a cleft lower extremity.

Schistoprosopus (*skis-to-pro-so'-pus*) [σχιστός, cleft; πρόσωπον, face]. A monster with "Cleft-face." A cavity in the middle of the face due to a failure of development of the first branchial arch and the fronto-nasal plate.

Schistorrhachis (*skis-tor'-a-kis*) [σχιστός, cleft; ῥάχις, spine]. A condition of fissured spine, the canal containing two channels. Also, spina bifida.

Schistosomia (*skis-to-so'-me-ah*) [σχιστός, cloven; σῶμα, body]. The condition of a schistosomus.

Schistosomus (*skis-to-so'-mus*) [σχιστος, cleft; σῶμα, a body. A variety of single autositic monsters of the species celosoma in which there is a lateral or median eventration extending the whole length of the abdomen, with the lower extremities absent or very imperfect.

Schistosternia (*skis-to-ster'-ne-ah*) [σχιστός, cloven; στέρνον, sternum]. Sternal fissure. Synonym of *Schistothorax.*

Schistothorax (*skis-to-tho'-raks*) [σχιστός, cleft; θώραξ, chest]. Fissure of the sternum or chest.

Schistotrachelus (*skis-to-tra'-kel-us*) [σχιστός, cleft; τράχηλος, neck]. Fissured neck or cervix.

Schizoblepharia (*skiz-o-blef-a'-re-ah*) [σχίζειν, to split; βλέφαρον, eyelid]. Fissure of the eyelid.

Schizocarp (*skiz'-o-karp*) [σχίζειν, cleave, split; καρπός, a fruit]. In biology, a pericarp that dehisces into two or more one-seeded indehiscent mericarps.

Schizocarpic (*skiz-o-kar'-pik*) [σχίζειν, to cleave; καρπός, fruit]. Resembling a schizocarp.

Schizocarpous (*skiz-o-kar'-pus*]. Same as *Schizocarpic.*

Schizocele, Schizocœle (*skiz'-o-sēl*) [σχίζειν, cleave, split; κοιλία, a cavity]. In biology, a type of body-cavity distinguished by its being formed by a simple splitting of the mesoderm. Cf. *Enterocele, Epicele.*

Schizodinic (*skiz-o-din'-ik*) [σχιζειν, cleave, split; ὠδίς, travail]. In biology, the bringing forth of genital products by rupture, as in certain molluscs. Cf. *Idiodinic, Porodinic.*

Schizogenesis (*skiz-o-jen'-es-is*) [σχίζειν, cleave, split; γένεσις, production]. In biology, reproduction by fission.

Schizogenetic (*skiz-o-jen-et'-ik*) [σχίζειν, split, cleave; γενής, produced]. Same as *Schizogenic.*

Schizogenic (*skiz-o-jen'-ik*)[σχιζειν, split, cleave; γενής, produced]. In biology, formed by the separation of parts, as certain cavities or intercellular spaces. Cf. *Lysigenous, Protogenic, Hysterogenic.*

Schizogenous (*skiz-oj'-en-us*). Same as *Schizogenic.*

Schizognathism (*skiz-og'-na-thizm*) [σχίζειν, to cleave; γνάθος, jaw]. Cleavage of the jaw.

Schizognathous (*skiz-og'-na-thus*) [σχίζειν, cleave, split; γναθος, jaw]. In biology, applied to such birds as have the maxillo-palatine bones separated.

Schizogony (*skiz-og'-o-ne*) [σχίζειν, to cleave, split; γονία, generation]. Same as *Schizogenesis.*

Schizomycetes (*skiz-o-mi-se'-tēz*) [σχίζειν, cleave, split; μύκης, *pl.* μύκητες, a fungus]. In biology, an order of *Fungi;* the so-called *Fission-fungi* or *Bacteria, q. v.*

Schizomycosis (*skiz-o-mi-ko'-sis*) [σχίζειν, to split; μύκης, fungus]. A disease due to schizomycetes.

Schizoneura (*skiz-o-nu'-rah*) [σχίζειν, to cleave; νεῦρον, nerve]. A genus of plant-lice. **S. lanigera,** the root-louse of the apple.

Schizopelmous (*skiz-o-pel'-mus*) [σχίζειν, to cleave, split; πέλμα, the sole of the foot]. Same as *Monopelmous.*

Schizophyta (*skiz-o-fi'-tah*) [σχίζειν, to split; φυτόν, plant]. Dried but viable schizomycetes.

Schizorhinal (*skiz-o-ri'-nal*) [σχίζειν, cleave, split; ῥίς, nose]. In biology, applied to birds in which the posterior margin of the osseous nares has a distinctly slit-like, triangular form, instead of being simply concave. In most of these forms the line joining the posterior extremities of the nostrils passes behind instead of in front of the ends of the nasal processes of the præmaxillæ. Cf. *Holorhinal.*

Schizothecal (*skiz-o-the'-kal*) [σχίζειν, cleave, split; θήκη, case]. In biology, applied to such birds as have the tarsal envelop (*podotheca*) scaled or reticulated, as distinguished from *holothecal.*

Schizothorax (*skiz-o-tho'-raks*). Synonym of *Schistothorax.*

Schizotrichia (*skiz-o-trik'-e-ah*) [σχίζειν, to split; θρίξ, hair]. Splitting of the hair.

Schlemm, Canal of. A flattened annular channel within the sclera and close to the corneal juncture. It is also called *the circular venous sinus*, and is the outlet whereby the aqueous humor finds its way into the general circulation. **S., Ligament of.** See *Ligament.*

Schleich Anesthesia, or Infiltration-Anesthesia. Local insensibility induced by the injection into the subcutaneous tissues of dilute solutions of sodium chlorid, morphin, and cocain. Tropacocain in 1 per cent. solution has also been employed. **S. Method** (general anesthesia), the administration of small doses of a mixture of chloroform 45 parts, petroleum ether 15 parts, sulphuric ether 180 parts.

Schmiedel's Ganglion. The inferior carotid ganglion.

Schmerzfreude (*schmärtz'-froy'-de*) [Ger., *Painjoy*]. A rare symptom of hysteria, in which pain or normally painful operations seem to the patient pleasant.

Schmidt, Arrow-markings of. Certain lines occasionally seen upon the axis-cylinders of nerves and supposed to be masses of protoplasm by some and connective tissue by others. **S., Incisures of,** minute fissures in the medullary sheaths of nerves, separating the segments of Lautermann. **S.'s Nodes.** See *Node.* **S.'s Test.** See *Birth.*

Schneiderian Membrane. The pituitary membrane. The nasal mucosa.

Schnitzer Green. Same as *Mittler's Green.*

Scholeciasis (*sko-le-si'-as-is*). A term proposed by Hope (1840) for the diseased condition caused by the presence of the larvæ of lepidopterous insects.

Scholl's Method. A method of percussion by which the diffusion of sound along the ribs is prevented. Three fingers are pressed toward the chest, and the second phalanx of the third finger is used for percussion.

Schöller's Method. A method of inducing premature labor. It consists in inserting a tampon of charpie into the vagina, and allowing it to remain until the pains commence.

Schönlein's Disease. *Peliosis rheumatica;* a peculiar affection characterized by multiple arthritis, and an eruption which varies greatly in character, and is sometimes purpuric, but more commonly associated with urticaria or with erythema exsudativum.

Schott Method. A system of gymnastic exercises and mineral baths employed in heart disease and chronic rheumatism.

Schräger's Lines. A coarse striation, concentric with the outline of the pulp-cavity, produced by the dentinal tubules in cross-section. See *Lines, Table of.*

Schreiner's Base. See *Spermin.*

Schröder's Method. See *Artificial Respiration.*

Schroth's Cure. A painful form of treatment of pleural effusion, consisting in an entire abstinence from drinking for some days, though fluid is allowed at intervals during the existence of the effusion.

Schrötter's Catheters. See *Catheter.*

Schultze, Cells of. See *Cell, Olfactory.* **S.'s Fold,** a falciform fold of the amnion extending from the insertion of the cord in the placenta to the remains of the umbilical vesicle. **S.'s Granules** or **Granule-masses,** minute particles in the blood, produced by the breaking up of the blood-platelets; also called granules of Max Schultze. **S.'s Macerating Fluid,** a fluid employed to dissolve cutin and to dissociate plant-cells. It consists of potassium chlorate 3 grains, nitric acid 2 drams. Keep the sections in this, cold, for a fortnight. After careful washing in alcohol the preparations may be placed on the slide in glycerin, and the cells easily separated with needles, in consequence of the solution of the middle lamellæ. **S.'s Method.** See *Artificial Respiration.* **S.'s Reagent,** a solution for use in laboratories. It is prepared as follows: Iodin is dissolved to saturation in a solution of zinc chlorid, sp. gr. 1.8, to which 6 parts of potassium iodid have been added. Cross and Bevan recommend the following: Zinc is dissolved to saturation in HCl, and the solution evaporated to sp. gr. 2.0; to 90 parts of this solution are added 6 parts of potassium iodid dissolved in 10 parts of water, and in this solution iodin is finally dissolved to saturation.

Schuster's Treatment. See *Treatment, Methods of.*

Schwalbe's Convolution. See *Convolutions, Table of.* **S., Fissures of.** See *Fissures, Table of.* **S.'s Method.** See *Treatment, Methods of.*

Schwann, Sheath of. The neurilemma of a nerve-fiber, a delicate, connective-tissue membrane, investing the white substance. See *Neurilemma.* **S.'s Theory of Inflammation.** Same as *Rokitansky's Theory.* See *Theory.* **S., White Matter** or **Substance of,** a coat of myelin deposited within the neurilemma, and surrounding the axis-cylinder of a medullated nerve-fiber. It contains *cerebrin* and *lecithin* and some fatty matter, is semi-fluid, homogeneous, bright, and refractive. The medullary sheath. Cf. *Myelin.*

Schweigger-Seidel's Acid Carmin. See *Stains, Table of.*

Schweinerothlauf (*shwi-neh-rôt'-lowf*) [Ger.]; *Rouget du porc* [Fr.]. *Hog-erysipelas.* An infectious disease of hogs, characterized by fever and the appearance, on neck, chest, and belly, of reddish or brownish spots. Intestinal hemorrhages are sometimes present. One half of the animals affected die. The lesions consist in a hemorrhagic infiltration of the intestinal mucosa, swelling and ulceration of the follicles, tumefaction of the mesenteric glands, and petechiæ of the serous membranes. The blood and organs contain a bacillus which is considered the cause of the disease. See *Bacillus erysipelatos suis*, Koch, under *Bacteria, Synonymatic Table of.*

Schweinfurth Blue, S. Green. See *Pigments, Conspectus of.*

Schweininger Cure. See *Treatment, Methods of.*

Schweizer's Reagent. A solution of hydrated cupric oxid in ammonia, for use in chemic and physiologic laboratories. This reagent is prepared as follows: Oxyhydrate of copper is carefully precipitated from the sulphate by a dilute solution of ammonia; the clear green precipitate, separated and washed, is added while still moist to strong ammonia, in which, on slightly warming, it is dissolved. Upon cooling, crystals of sub-sulphate of copper and ammonia fall to the bottom. The filtered liquid contains only the ammoniacal cupric oxid in solution. It must be kept in bottles of dark glass, or in the dark. It can also be prepared by digesting copper turnings in an open bottle with liquor ammonii of the Pharmacopeia. As it is very easily decomposed by light, it is perhaps best

prepared fresh when required. This reagent has the power of dissolving pure cellulose. It is fit for use only so long as it rapidly dissolves cotton-wool. (Strasburger.) This reagent possesses its chief interest from the fact that it is the only liquid known in which cellulose appears to dissolve without essential change in composition. It has a limited application in the discrimination of the fibers used in the arts.

Schwelle (*shwel'-eh*)[Ger., "threshold"]. The threshold, or *limen*, of any sensation; nerve-excitation which just fails of producing a sensation.

Schwendener's Theory. See *Schwendenerism.*

Schwendenerism (*shwen'-den-er-izm*) [*Schwendener*, a German botanist, born 1829]. A theory suggested by De Bary, but avowed by Schwendener, that lichens consist of fungi parasitic upon algæ.

Schwimmer's Ointment. An ointment for application to smallpox pustules to prevent pitting. It consists of carbolic acid 15 grains, olive-oil one dram, prepared chalk sufficient to make half an ounce. This is applied on pieces of clean soft linen.

Sciage (*se-ahzh'*) [Fr., "sawing"]. A to-and-fro sawing movement in massage, practised with the ulnar border, or with the dorsum of the hand.

Sciatic (*si-at'-ik*) [*ἰσχίον*, ischium]. Pertaining to the ischium. **S. Nerve.** See *Nerve.* **S. Notch.** See *Notch.* **S. Spine,** a triangular eminence on the dorsal border of the body of the ischium. **Sciatic Scoliosis.** See *Scoliosis.*

Sciatica (*si-at'-ik-ah*) [*Sciaticus*, pertaining to the ischium]. Pain in the course of the sciatic nerve. This may be confined to the proximal half of the thigh, or follow out the entire course of the nerve and its branches. The pain is constant and gnawing, subject to exacerbations, and occurs most commonly in adults of middle age.

Science (*si'-ens*)[*scire*, to know]. Systematized knowledge of the order of nature. "Science is that knowledge which enables us to demonstrate, so far as our limited faculties permit, that the appearances which we recognize in the world around us are dependent in definite ways on certain properties of matter; science is that knowledge which enables or tends to enable us to assign to its true place in the series of events constituting the universe, any and every thing which we can perceive." (E. Ray Lankester.) **S., Christian,** a method of treating disease upon principles similar to those upon which faith-cure rests.

Scientific (*si-en-tif'-ik*) [*scientia*, knowledge; *facere*, to make]. Relating to science. That which is based upon science.

Scientist (*si'-en-tist*) [*scientia*, science]. A savant; one versed in science.

Scieropia (*si-er-o'-pe-ah*) [*σκιερός*, shady; *ὤψ*, eye]. Defective vision in which all objects appear dark.

Scilla (*sil'-ah*) [L., *gen.*, *Scillæ*]. Squill. The bulb of *S. maritima* or Urginea maritima, found near the Mediterranean Sea. Its properties are due to a glucoside, scillitoxin, and several other principles. It acts like digitalis upon the circulation. In large doses it causes vomiting and purging. It is diuretic and expectorant. In cases of nephritis it should be used with caution, as it may prove irritant to the kidneys. Dose gr. j–iv. **S., Acetum,** "vinegar of squill," 10 per cent. in strength. Dose ♏x–℥j. **S., Fld. Ext.** Dose ♏j–v. **S., Oxymel** (B. P.). Dose ℥ss–j. **S., Pil., Comp.** (B. P.) Dose gr. v–x. **S., Syr.,** has of vinegar of squill, 45, sugar 80, water q. s.. Dose ℥ss–ij. **S., Syr., Comp.,** fld. ext. squill and fld. ext. senega, each 80, tartar emetic 2, precipitated calcium phosphate 10, sugar 750, water q. s. Dose ♏v–℥j, for children as an emetic; ♏x–xxx, for adults as an expectorant. Commonly known as Coxe's Hive Mixture. **S., Tinct.,** 15 per cent. Dose ♏v–xxx.

Scillin (*sil'-in*) [*σκίλλα*, squill]. An inactive substance obtained from squills.

Scillipikrin (*sil-ip-ik'-rin*) [*σκίλλα*, squill; *πικρος*, bitter]. A yellowish-white, amorphous, hygroscopic powder obtained from squills.

Scillitin (*sil-it'-in*) [*σκίλλα*, squill]. A white or yellowish resinous substance, the bitter principle of squill.

Scillitoxin (*sil-it-oks'-in*) [*σκίλλα*, squill; *τοξικον*, poison]. An amorphous light-brown, bitter, active principle of *scilla.* It is soluble in alcohol, insoluble in ether and water, and a cardiac poison somewhat resembling digitalis.

Scillocephalous (*sil-o-sef'-al-us*) [*σκίλλα*, squill; *κεφαλή*, head]. Affected with scillocephalus.

Scillocephalus (*sil-o-sef'-al-us*) [*σκίλλα*, squill; *κεφαλή*, head]. 1. Congenital deformity of the head, in which it is small and conically pointed, or squill-shaped. 2. A person with a squill-shaped head, usually an idiot.

Scillopicrin (*sil-o-pik'-rin*). See *Scillipicrin.*

Scillotoxin (*sil-o-toks'-in*). See *Scillitoxin.*

Scinde Boil. See *Delhi Boil.*

Scintiliation (*sin-til-a'-shun*) [*scintillare*, to sparkle]. An emission of sparks. Also a subjective visual sensation as of sparks.

Scion (*si'-on*) [ME., OF., *sion*, a shoot, twig]. A twig or young shoot.

Sciopticon (*si-op'-tik-on*) [*σκιά*, a shade; *ὀπτικός*, pertaining to sight]. A form of magic lantern.

Scirrhencanthis (*skir-en-kan'-this*) [*σκιῤῥός*, hard; *ἐν*, in; *κάνθος*, canthus]. Scirrhus of the lacrymal gland.

Scirrhoblepharoncus (*skir-o-blef-ar-ong'-kus*) [*σκιῤῥός*, hard; *βλέφαρον*, eyelid; *ὄγκος*, tumor]. A hard tumor of the eyelid.

Scirrhocele (*skir'-o-sēl*) [*σκιῤῥός*, hard; *κήλη*, tumor]. Scirrhous tumor of the testicle.

Scirrhoid (*skir'-oid*) [*σκιῤῥός*, hard; *εἶδος*, like]. Resembling a scirrhus.

Scirrhoma (*skir-o'-mah*) [*σκιῤῥός*, hard; *ὄμα*, tumor]. Scirrhous tumor. **S. caminariorum,** chimney-sweeps' carcinoma.

Scirrhophthalmia (*skir-off-thal'-me-ah*) [*σκιῤῥός*, hard; *ὀφθαλμός*, eye]. Scirrhus of the eyeball.

Scirrhosarca (*skir-o-sar'-kah*) [*σκιῤῥός*, hard; *σάρξ*, flesh]. The hardening of the flesh of new-born infants; sclerema of infants.

Scirrhosis (*skir-o'-sis*) [*σκιῤῥός*, hard]. The formation of a scirrhous carcinoma.

Scirrhous (*skir'-us*) [*σκιῤῥός*, hard]. Pertaining to, or of the nature of, scirrhus or hard carcinoma. **S. Carcinoma.** See *Scirrhus.*

Scirrhus, or **Scirrus** (*skir'-us* or *sir'-us*) [*σκιῤῥος*, an induration]. A scirrhous or hard carcinoma.

Scission (*sizh'-un*) [*scindere*, to cut]. A cutting or splitting of anything; fission.

Scissiparity (*sis-ip-ar'-it-e*) [*scissus*, p.p. of *scindere*, cut, divide; *parere*, to bring forth]. In biology, generation by fission; schizogenesis.

Scissor-leg (*siz'-or-leg*). Same as *Cross-leg.*

Scissors (*siz'-ors*) [*scindere*, to cut]. An instrument with crossed, closing blades for cutting. The blades may be straight, angular, or curved. **S., Artery,** a scissors, one blade of which is probe-pointed, for introduction into a duct or canal. **S., Canalicular,** delicate scissors, one blade of which is probe-pointed, used in slitting the lacrymal canal. **S., Cannula,** scissors for slitting any canal or tube longitudinally. **S., Craniotomy,** a strong S-shaped instrument used in craniotomy for perforating the skull and cutting away portions of bone. **S., Iris,** one having flat blades which

are bent in such a manner that they may be applied to the eyeball. Also, scissors used in iridectomy. S., Perforator. See *S., Craniotomy.* **S., Skin-grafting,** an instrument consisting of a forceps and a scissors, the former for seizing a small piece of skin, and the latter for cutting it off. **S., Uvula,** one designed for removal of the uvula. **S., de Wecker's,** a peculiar modification of iris-scissors.

Scissura (*siz-u'-rah*) [*scindere*, to cut]. A fissure, rent, or cleavage. **S. longitudinalis,** the longitudinal fissure of the brain.

Sclera (*skle'-rah*) [σκληρός, hard]. The sclerotic coat of the eye; the firm, tough, white, outer membrane of the eyeball, continuous with the sheath of the optic nerve behind and with the cornea in front. **S. testis,** the tunica albuginea of the testis.

Scleral (*skle'-ral*) [σκληρός, hard]. Pertaining to the sclera. **S. Extraction.** See *Extraction.*

Scleratitis (*skle-rat-i'-tis*). Same as *Sclerotitis.*

Sclerectasia (*skle-rek-ta'-ze-ah*) [σκληρός, hard; ἔκτασις, extension]. Staphyloma of the sclera. **S. posterioris,** posterior staphyloma.

Sclerectasis (*skle-rek'-tas-is*). See *Sclerectasia.*

Sclerectomy (*skle-rek'-to-me*) [σκληρός, hard; ἐκτομή, excision]. 1. Excision of a portion of the sclera. 2. The excision of the sclerosed and ankylosed conductors of sound in chronic catarrhal otitis media.

Sclerema (*skle-re'-mah*) [σκληρός, hard]. Sclerosis, or hardening, especially of the skin. **S. adultorum,** a synonym of *Scleroderma.* **S. neonatorum,** *Scleroderma neonatorum; Induratio telæ cellulosæ;* a disease found only in premature infants; it is characterized by a hardening of the skin, beginning in the legs, and spreading, usually sparing breasts and belly. Jaundice or a hemorrhagic condition may be present; the temperature is very low, 95°, and the condition is apt to end fatally. The pathology of the disease is not positively known. By some the disease is believed to consist in a solidification of the subcutaneous fat, which in infants contains more palmitic and stearic acids than in the adult, and relatively less oleic acid.

Sclerencephalia (*skle-ren-sef-a'-le-ah*) [σκληρός, hard; ἐγκέφαλος, brain]. Sclerosis of brain-tissue.

Sclerenchyma (*skle-reng'-kim-ah*) [σκληρός, hard; ἔγχυμα, an infusion]. In biology, hard bast, or bast-fibers. Used by some in a more extended sense, to include all lignified fibrous cells or cell-derivatives.

Sclerenchymatous (*skle-reng-kim'-at-us*) [σκληρός, hard; ἔγχυμα, an infusion]. Having the character of sclerenchyma.

Sclerenchyme (*skle-reng'-kīm*). Same as *Sclerenchyma.*

Sclererythrin (*skle-rer'-ith-rin*) [σκληρός, hard; ἐρυθρος, red]. A red substance obtained from ergot.

Scleriasis (*skle-ri'-as-is*) [σκληρός, hard]. Induration; sclerema; scleroderma.

Scleriritomy (*skle-rir-it'-o-me*) [σκληρός, hard, sclera; τομή, a cutting]. Incision of the conjunctiva, sclera, and iris, followed by excision of a piece of the iris and anterior capsule, in staphyloma of the cornea and secondary glaucoma.

Sclerite (*skle'-rīt*) [σκληρός, rough]. In biology, a separate or definite element in the exoskeleton of an arthropod.

Scleritic (*skle-rit'-ik*) [σκληρός, hard]. Sclerous.

Scleritis (*skle-ri'-tis*). See *Sclerotitis.*

Sclero- (*skle'-ro-*) [σκληρός, hard]. A prefix denoting hardness or induration, or connection with the sclera.

Sclerobase (*skle'-ro-bās*) [σκληρός, hard; βάσις, base]. In biology, the cornified or calcified axial connective tissue of an actinozoan zoanthodeme. The hard endoskeletal portion of a colony of coral polyps, as the precious red coral.

Sclerobasic (*skle-ro-ba'-zik*) [σκληρός, hard; βάσις, base]. Pertaining to a sclerobase.

Scleroblast (*skle'-ro-blast*) [σκληρός, hard; βλαστός, a germ]. In biology, a spicule-cell in sponges.

Scleroblastic (*skle-ro-blas'-tik*) [σκληρός, hard; βλαστός, germ]. Forming sclerous tissue.

Sclerobronchiorrhoncus (*skle-ro-brong-ke-or-ong'-kus*) [σκληρός, hard; βρόγχος, bronchus; ῥέγκειν, to snore]. A dry bronchial rhonchus.

Sclero-cataracta (*skle-ro-kat-ar-ak'-tah*) [σκληρός, hard; καταράκτης, cataract]. A hard cataract.

Sclero-choroiditis (*skle-ro-ko-roid-i'-tis*) [σκληρός, hard; χοριοειδής, choroid; ιτις, inflammation]. Conjoined inflammation of the choroid and the sclerotic coat of the eye.

Sclero-conjunctival (*skle-ro-kon-jungk-ti'-val*) [σκληρός, hard; *conjunctiva*, conjunctiva]. Pertaining conjointly to the sclerotic coat of the eye and the conjunctiva.

Sclero-corneal (*skle-ro-kor'-ne-al*) [σκληρός, hard; *corneus*, horny]. Pertaining conjointly to the sclerotic coat and the cornea of the eye.

Sclerocrissorrhonchus (*skle-ro-kris-or-rong'-kus*) [σκληρός, hard; κνισσᾶν, to crackle; ῥέγκειν, to snore]. A dry crackling râle.

Sclerocrystallin (*skle-ro-kris'-tal-lin*) [σκληρός, hard; κρύσταλλος, clear ice], $C_7H_7O_8 + H_2O$. A colorless substance derived from ergot.

Sclerodactylia, Sclerodactyly (*skle-ro-dak-til'-e-ah, skle-ro-dak'-til-e*) [σκληρός, hard; δάκτυλος, finger]. A dystrophy, thus far met with in women only, and characterized by a symmetric involvement of the fingers, which become deformed, shortened, and atrophied. The skin thickens and becomes of a waxy color, and occasionally is pigmented.

Scleroderm (*skle'-ro-derm*) [σκληρός, hard; δέρμα, skin]. In biology, the calcareous skeleton of a madrepore coral.

Scleroderma (*skle-ro-der'-mah*) [σκληρός, hard; δέρμα, skin]. *Sclerodermia; sclerema; scleriasis; hide-bound skin; dermato-sclerosis; hide-bound disease.* A rare affection of the skin, characterized in general by infiltration of its substance, followed by shrinking or contraction and impairment of the secreting apparatus, resulting in a characteristic stiffness and hardening of the integument, occurring in diffuse and symmetric forms, and spreading more or less rapidly over the surface of the body, involving especially the scalp, face, neck, chest, and upper limbs. Itching may or may not be present. The etiology is obscure, but the disease is evidently of nervous origin. **S., Circumscribed.** See *Morphea.* **S. diffusa,** a form confined to a particular area. **S. localis,** morphea; circumscribed scleroderma. **S. neonatorum.** See *Sclerema neonatorum.*

Sclerodermatous (*skle-ro-der'-mat-us*) [σκληρός, hard; δέρμα, skin]. Having a hard outer covering.

Sclerodermia (*skle-ro-der'-me-ah*). See *Scleroderma.*

Sclerodermic (*skle-ro-der'-mik*). Same as *Sclerodermatous.*

Sclerodermite (*skle-ro-der'-mīt*) [σκληρός, hard; δέρμα, skin]. In biology, a calcareous or chitinous exoskeletal element or sclerite of an arthropod.

Sclerodermitic (*skle-ro-der-mit'-ik*) [σκληρός, hard; δέρμα, skin; ιτις, inflammation]. Of the nature of or affected with sclerodermitis.

Sclerodermitis (*skle-ro-der-mi'-tis*) [σκληρός, hard; δέρμα, skin; ιτις, inflammation]. An inflammatory skin-affection, with induration of the structures of the skin.

Sclerodermous (*skle-ro-der'-mus*). Same as *Scleroderматous.*

Sclerogen (*skle'-ro-jen*) [σκληρός, hard; γενής, producing]. In biology, a name for the hard matter deposited in sclerotic or stone-cells.

Sclerogenous (*skle-roj'-en-us*) [σκληρός, hard, rough; γενής, producing]. In biology, producing hard, calcareous, silicious, or chitinous tissue. **S. Method,** a method of treating tuberculous joint-disease, by interstitial injections of zinc chlorid.

Sclerohymenitis (*skle-ro-hi-men-i'-tis*). Synonym of *Sclerotitis.*

Sclerohystera (*skle-ro-his'-ter-ah*). Synonym of *Sclerovstera.*

Scleroid (*skle'-roid*) [σκληρός, hard; εἶδος, form]. In biology, hard or bony in texture.

Sclero-iodin (*skle-ro-i'-o-din*) [σκληρός, hard; ἰώδης, violet]. A brownish coloring-matter found in ergot.

Sclero-iritis (*skle-ro-i-ri'-tis*) [σκληρός, hard; ἶρις, iris; ῖτις, inflammation]. Inflammation of the sclera and the iris.

Sclero-keratitis (*skle-ro-ker-at-i'-tis*) [σκληρός, hard; κέρας, horn; ῖτις, inflammation]. Inflammation of the sclera and the cornea.

Scleroma (*skle-ro'-mah*) [σκληρός, hard]. Abnormal hardness or induration of a part. A neoplasm that forms in the nose and larynx particularly, and which is characterized by its density. A bacillus has been found which is believed to be the cause of the condition. **S. adultorum.** Synonym of *Scleroderma.*

Scleromeninx (*skle-ro-me'-ninks*) [σκληρός, hard; μήνιγξ, membrane]. The dura mater.

Scleromucin (*skle-ro-mu'-sin*) [σκληρός, hard; *mucus*, mucus]. A gummy substance obtained from ergot, and said to be one of its active principles.

Scleronyxis (*skle-ro-niks'-is*) [σκληρός, hard; νύξις, a pricking]. Puncture of the sclerotic.

Scleroöphoritis (*skle-ro-o-for-i'-tis*) [σκληρός, hard; ᾠόν, egg; φορός, bearing; ῖτις, inflammation]. Sclerosis of the ovary.

Scleropathia (*skle-ro-pa'-the-ah*). See *Sclerosis.*

Sclerophthalmia (*skle-roff-thal'-me-ah*) [σκληρός, hard; ὀφθαλμός, eye]. Xerophthalmia.

Sclerophthalmus (*skle-roff-thal'-mus*) [σκληρός, hard; ὀφθαλμός, eye]. Staphyloma of the sclera.

Sclerorrhonchus (*skle-ror-rong'-kus*). See *Sclerobronchorrhonchus.*

Sclerosal (*skle-ro'-zal*) [σκληρός, hard]. Of the nature of sclerosis.

Sclerosarcoma (*skle-ro-sar-ko'-mah*) [σκληρός, hard; σάρξ, flesh; ὄμα, tumor]. A hard, fleshy tumor, especially of the gums.

Sclerose (*skle'-rōz*) [σκληρός, hard]. To affect with sclerosis; to become affected with sclerosis.

Sclérose en plaques (*skla-rōz' on plak*). Synonym of *Sclerosis, Multiple.*

Sclerosed (*skle'-rōzd*) [σκληρός, hard]. Affected with sclerosis; rendered abnormally hard. **S. Arteries,** arteries whose coats are thickened.

Sclerosis (*skle-ro'-sis*) [σκληρός, hard]. 1. A process which consists essentially in an overgrowth of the connective tissue of an organ. The term is applied chiefly to the nervous system and the arteries. 2. In biology, the hardening of a plant cell-wall by the formation of lignin; the induration of a normally soft tissue. **S., Amyotrophic Lateral,** a combination of chronic anterior poliomyelitis with lateral sclerosis. The symptoms are in the main wasting of the muscles and a spastic condition of the limbs, with exaggeration of the reflexes. The disease is prone to end fatally by involvement of the medulla oblongata. **S., Annular,** a chronic myelitis, in which the sclerosis extends about the cord like a ring. **S., Arterio-.** See *Endarteritis.* **S., Atrophic,** sclerosis with atrophy. **S., Cerebro-spinal.** See *Charcot's Disease.* **S. Combined,** simultaneous sclerosis of the posterior and the lateral columns of the spinal cord. **S., corii.** Synonym of *Scleroderma.* **S. dermatis.** Synonym of *Scleroderma.* **S., Diffuse,** when the sclerosis extends through a large part of the brain and cord. **S., Disseminated.** See *Charcot's Disease.* **S., Focal,** one confined to a particular region of the brain or cord. **S., General,** a connective-tissue hyperplasia affecting an entire organ. **S., Initial,** the syphilitic chancre. **S., Insular.** See *Charcot's Disease.* **S., Lateral.** See *Charcot's Disease.* **S., Lobar,** sclerosis of a lobe of the brain. **S. of the Lung.** Synonym of *Pneumonia, Interstitial.* **S., Miliary,** small sclerotic patches such as have been observed in the spinal cord in some cases of pernicious anemia. **S., Multilocular.** See *Sclerosis, Disseminated.* **S., Multiple.** See *Charcot's Disease.* **S. ossium.** Synonym of *Osteitis, Condensing.* **S., Posterior Spinal,** locomotor ataxia; *tabes dorsalis, q. v.* **S., Postero-lateral.** See *Friedreich's Ataxia.* **S., Progressive Muscular.** Synonym of *Pseudohypertrophic Muscular Paralysis.* **S., Renal.** Synonym of *Nephritis, Interstitial.* **S., Syphilitic Arterio-,** the arterial sclerosis due to syphilis. It affects chiefly the intima, but also the adventitia. It occurs as a diffuse form, as in the brain; also in distinctly localized lesions, as in the chancre.

Scleroskeletal (*skle-ro-skel'-et-al*) [σκληρός, hard; σκελετόν, a dry body]. Pertaining to a sclero-skeleton.

Scleroskeleton (*skle-ro-skel'-et-on*) [σκληρός, hard; σκελετόν, a dry body]. In biology, skeletal parts or ossifications other than the bones of the main endo-skeleton, as sesamoid bones, ossified tendons, marsupial bones, etc.

Sclerostenosis (*skle-ro-ste-no'-sis*) [σκληρός, hard; στένωσις, constriction]. 1. Sclerosis with constriction. 2. Also, synonym of *Scleroderma.*

Sclerosteous (*skle-ros'-te-us*) [σκληρός, hard; ὀστέον, bone]. A bony formation resulting from osseous deposit in a tendon.

Sclerostoma (*skle-ros'-to-mah*) [σκληρός, hard; στόμα, mouth]. A genus of nematoid worms. See *Parasites* (*Animal*), *Table of.*

Sclerotal (*skle-ro'-tal*) [σκληρός, hard]. In biology, one of a circlet of bones about the eyeball of certain birds; an eye-bone.

Sclerote (*skle'-rōt*). Same as *Sclerotium.*

Sclerothrix (*skle'-ro-thriks*) [σκληρός, hard; θρίξ, hair]. Abnormal hardness of the hair.

Scleroth's Cure. The treatment of pleuritic effusions by diet, *i. e.*, the withdrawal of fluids for the purpose of causing absorption of the effusion.

Sclerotic (*skle-rot'-ik*) [σκληρός, hard]. 1. Hard, indurated; pertaining to the outer coat of the eye. 2. Related to or derived from ergot. **S. Arteritis.** See *Arterio-sclerosis* and *Endarteritis.* **S. Coat.** See *Sclerotica.* **S. Endocarditis,** a hyperplasia of the fibrillar layer of the endocardium. It may be a regenerative process following infarcts, abscesses, or wounds of the heart which implicate the endocardium; it may be a termination of acute endocarditis; it may (and this is the commonest form) be a chronic inflammation from the beginning, occurring as a part of a general vascular sclerosis. The last form affects especially the valves, and leads either to insufficiency or to obstruction of the valvular orifice. In the early stages it presents itself as a slight thickening; this increases in extent; the new tissue undergoes fatty degeneration (atheroma); eventually calcareous matter and, occasionally, cholesterin are deposited. **S. Myocarditis,** a

hyperplasia of the connective tissue of the myocardium. It may be a reparative process following wounds, infarcts, or abscess of the heart-wall, or it may be a diffuse chronic process, the heart participating in a general vascular sclerosis. **S. Parenchyma,** in biology, hardened parenchyma, as the grit-cells of pears.

Sclerotica (*skle-rot'-ik-ah*) [σκληρός, hard]. The sclera or sclerotic coat of the eye; the firm, tough, white, outer membrane of the eyeball, continuous with the sheath of the optic nerve behind and with the cornea in front.

Scleroticectomy (*skle-rot-ik-ek'-to-me*) [σκληρός, hard; ἐκτομη, excision]. The removal of a part of the sclera.

Scleroticitis (*skle-rot-ik-i'-tis*). Synonym of *Sclerotitis*.

Sclerotico-choroiditis (*skle-rot'-ik-o-ko-roi-di'-tis*). Synonym of *Sclero-choroiditis*.

Scleroticonyxis (*skle-rot'-ik-o-niks'-is*). See *Sclero-nyxis*.

Scleroticotomy (*skle-rot-ik-ot'-o-me*) [σκληρός, hard; τομή, a cutting]. Incision of the sclerotic.

Sclerotinic (*skle-ro-tin'-ik*). Same as *Sclerotic*, second definition. **S. Acid.** See *Acid, Sclerotinic*.

Sclerotis (*skle-ro'-tis*) [σκληρός, hard]. The ergot of rye, *q. v.*

Sclerotitic (*skle-ro-tit'-ik*) [σκληρός, hard; ιτις, inflammation]. Affected with sclerotitis.

Sclerotitis (*skle-ro-ti'-tis*) [σκληρός, hard, sclera; ιτις, inflammation]. Inflammation of the sclerotica.

Sclerotium (*skle-ro'-she-um*) [σκληρός, hard: *pl.*, *Sclerotia*]. In biology: (*a*) a thick mass of hyphæ felted together, constituting a resting-stage in the development of some fungi, and acting as a store of reserve material; (*b*) the hypnocyst of mycetozoa.

Sclerotized (*skle'-ro-tīzed*). Same as *Sclerosed*.

Sclerotome (*skle'-ro-tōm*) [σκληρός, hard; τέμνειν, to cut]. 1. A knife used in sclerotomy. 2. In biology, a hard tissue separating successive myotomes in certain of the lower vertebrates.

Sclerotomia (*skle-ro-to'-me-ah*) [σκληρός, hard; τομή, a cutting]. The excision of a portion of the sclera for the purpose of forming an artificial pupil.

Sclerotomy (*skle-rot'-o-me*) [σκληρός, hard; τέμνειν, to cut]. The operation of incising the sclera, and also the choroid and retina. **S., Anterior,** the making of an incision through the sclera anterior to the ciliary body and most of the iris, and entering the anterior chamber; it is done in glaucoma. **S., Posterior,** sclerotomy done by an incision through the sclera behind the ciliary body, and entering the vitreous chamber.

Sclerotonyxis (*skle-ro-to-niks'-is*) [σκληρός, hard; νύξις, a pricking]. An operation for cataract formerly practised, in which a broad needle was introduced into the sclera, behind the ciliary region, passed between the iris and the lens, and the latter depressed into the vitreous.

Sclerotrichia (*skle-ro-trik'-e-ah*) [σκληρός, dry; θρίξ, hair]. A harsh and dry state of the hair.

Sclerous (*skle'-rus*) [σκληρός, hard]. Hard; indurated.

Scleroxanthin (*skle-ro-zan'-thin*) [σκληρός, hard; ξάνθος, yellow]. A crystalline substance derived from *Ergot*.

Sclerymen (*skle-ri'-men*). See *Sclera*.

Sclerymenitis (*skle-ri-men-i'-tis*). See *Sclerotitis*.

Sclerysma, Sclerysmus (*skle-riz'-mah, skle-riz'-mus*). See *Sclerosis*.

Sclerystera (*skle-ris'-ter-ah*) [σκληρός, hard; υστερα, womb]. Induration in malignant disease of the uterus.

Scobiform (*sko'-bif-orm*) [*scobis*, saw-dust, filings; *forma*, form]. In biology, resembling saw-dust.

Scoleciasis, Scolecicis (*sko-les-i'-as-is, sko-les-is'-is*). See *Helminthiasis*, also *Scholeciasis*.

Scoleciform (*sko-les'-if-orm*) [σκώληξ, a worm; *forma*, form]. Having the form or character of a scolex.

Scolecite (*sko'-les-īt*) [σκώληξ, a worm]. In biology, a name given by Tulasne to the vermiform carpogonium of the fungus *Ascobolus*. It is a branch of the mycelium, consisting of a row of short cells. Woronin's "vermiform body."

Scolecoid (*sko'-le-koid*) [σκωληκοειδής, worm-like]. Vermiform.

Scolecology (*sko-le-kol'-o-je*). See *Helminthology*.

Scolecophagous (*sko-le-kof'-ag-us*) [σκώληξ, worm; φαγεῖν, to eat]. In biology, worm-eating.

Scolesis (*sko-le'-sis*). See *Scoliosis*.

Scolex (*sko'-leks*) [σκώληξ, a worm]. In biology, the knot-like head of a cestode worm, which by budding gives rise to the proglottides of the chain. See *Tænia*.

Scolices (*sko-le'-sēz*). Plural of *Scolex*, *q. v.*

Scolioma (*sko-le-o'-mah*) [σκολίωμα]. Curvature of the spine. See *Scoliosis*.

Scoliometer, Scoliosometer (*sko-le-om'-et-er, sko-le-o-som'-et-er*) [σκολιός, bent; μέτρον, measure]. An instrument for measuring the extent of a scoliosis.

Scolioneirosis (*sko-le-o-ni-ro'-sis*) [σκολιός, bent; ὄνειρος, a dream]. Oppressive, disagreeable dreaming.

Scolio-rachitic (*sko-le-o-rak-it'-ik*) [σκολιός, bent; ῥάχις, spine; ιτις, inflammation]. Spinal deformity as a result of rickets.

Scoliosis (*sko-le-o'-sis*) [σκολιός, curved]. Any morbid distortion or curvature of the spine, especially a lateral curvature. **S., Cicatricial,** scoliosis due to cicatricial contraction, such as occurs after costal necrosis. **S., Empyematic,** that due to empyema. **S., Habit,** scoliosis as a result of faulty posture. **S., Inflammatory,** scoliosis due to caries of the vertebræ. **S., Myopathic,** a form due to paresis of the muscles of the spine. **S., Osteopathic,** spinal curvature caused by disease of the vertebræ. **S., Paralytic,** the same as *S., Myopathic*. **S., Rachitic,** spinal curvature due to rachitis. **S., Rheumatic,** temporary scoliosis caused by rheumatism of the muscles of the spine. **S., Sciatic,** scoliosis in sciatica with the convexity toward the affected side. Frequently there is compensatory curvature higher up, and the leg is slightly flexed and supported on the toe. **S., Static,** scoliosis as a result of inequality in the length of the lower limbs.

Scoliosometer (*sko-le-os-om'-e-ter*) [σκολιός, curved; μέτρον, measure]. An instrument for measuring the amount of deformity in scoliosis.

Scoliotic (*sko-le-ot'-ik*) [σκολιός, curved]. Pertaining to or marked by scoliosis.

Scolopophore (*sko-lo'-po-for*) [σκόλοψ, anything pointed, a rod, stake; φέρειν, bear]. In biology, the long, slender, stretched tube which conceals the terminal rod of the peripheral auditory nerve-fiber in certain arthropods. When grouped they form the peculiar *chordotonal organs*, *q. v.*

Scolopsia (*sko-lop'-se-ah*) [σκόλοψ, anything pointed] A suture between two bones having reciprocal movement.

Scolymus (*skol'-im-us*) [σκόλυμος]. A genus of the *Compositæ*. **S. hispanicus,** golden thistle, Spanish oyster-plant; the root was formerly used as a diuretic. **S. maculatus,** spotted golden thistle of the Mediterranean regions.

Scoop (*skūp*) [ME., *scope*, a scoop]. In surgery, an instrument resembling a spoon, for the extraction of foreign bodies from the softer tissues or from passages or cavities. **S., Ear,** an instrument having a slender handle and a small, shallow bowl, used in removing epidermal scales or cerumen from the external audi-

tory canal. **S.-extraction,** an operation for cataract in which the lens is removed by means of a lens-scoop, or spoon, passed behind and lifted out with the lens. **S., Leroy d'Étiolle's,** a scoop resembling a lithotrite in shape, and used in removing urethral calculi. **S., Lithotomy,** an instrument used to remove calculi in the operation of lithotomy. **S., Placental,** a scoop or curet furnished with a long handle, and used to detach adherent portions of the placenta. **S., Schaffer's Throat,** an instrument for the throat, made so that it can be introduced closed, and then opened by means of a rod sliding within a hollow stem.

Scoopers' Pneumonia. The chronic form of pneumonia occurring in grain-scoopers from exposure to cold and dust.

Scopa (*sko'-pah*) [*scopa*, twigs, shoots, a broom]. See *Sarothrum.*

Scoparin (*sko'-par-in*) [*scopa*, a broom]. A diuretic principle obtained from scoparius. See *Scoparius.*

Scoparius (*sko-pa'-re-us*) [*scopa*, a broom: *gen.*, *Scoparii*]. Broom. The tops of the common broom-plant, *Cytisus scoparius.* Its properties are due to a neutral principle, scoparin, $C_{21}H_{22}O_{10}$, and an alkaloid, sparteïn. It is diuretic and laxative; in large doses cathartic and emetic. It is a favorite remedy in cardiac dropsy and kidney-complaints. Dose of an ʒj to Oj decoction, ʒj; of scoparin, gr. v–x; of the fluid extract gtt. xxx. **S., Decoct.** (B. P.) Dose ʒj–iij. **S., Succus** (B. P.) Dose ʒj–ij.

-scope (*skōp*) [σκοπεῖν, to examine]. A suffix, signifying to see or examine; usually forming a part of the name of some instrument.

Scopoleïn, or Scopolin (*sko-po'-le-in, sko'-po-lin*) [after *Scopoli*, an Austrian naturalist]. An alkaloid extractive of *Scopolia japonica.* It is a powerful mydriatic, whose effects are more rapid and more lasting than those of atropin, and are neutralized by those of eserin. It is recommended in keratitis and corneal ulcers. Unof. It is said by some to be a natural mixture of hyoscin, hyoscyamin, and atropin.

Scopoletin (*sko-pol'-et-in*) [after *Scopoli*, an Austrian naturalist], $C_{10}H_8O_4$. A fluorescent, crystalline substance obtained from the root of *Scopolia japonica* and *Scopolia atropoides.*

Scopolia (*sko-po'-le-ah*) [after *Scopoli*, an Austrian naturalist]. A genus of the *Hyoscyameæ.* **S. Atropoides.** See *S. carniolica.* **S. carniolica,** the rhizome of a European solanaceous plant, of use as an efficient anhydrotic, checking sweating without producing dryness of the mouth or dilatation of the pupil. Also a local anesthetic. Dose of the fluid extract, ♏j–iij. Unof. **S. japonica,** of Asia, has in general the properties of belladonna, for which it is substituted in Japanese practice. See *Scopolein.*

Scoptula (*skop'-tu-lah*) See *Scopula.*

Scopula (*skop'-u-lah*) [dim. of *scopa*, a broom]. See *Sarothrum.*

Scopulate (*skop'-u-lāt*) [*scopula*, a little broom]. In biology, broom-shaped.

Scopuliform (*skop'-u-lif-orm*). Same as *Scopulate.*

Scoracratia (*sko-rak-ra'-she-ah*) [σκῶρ, feces; ἀκρατία, want of control]. Involuntary evacuation of the bowels.

Scorax (*sko'-raks*). A gum obtained from the olive-tree.

Scorbutic (*skor-bu'-tik*) [*scorbutus*, scurvy]. Pertaining to, affected with, or of the nature of scorbutus. **S. Cancer.** Synonym for *Cancrum oris.*

Scorbutus (*skor-bu'-tus*) [L.]. See *Scurvy.* **S. alpinus.** See *Pellagra.* **S. nauticus.** See *Scurvy.*

Scordein (*skor'-de-in*) [σκόρδιον, a garlicky plant]. An aromatic substance of a yellow color found in *Teucrium scordium.*

Scordinema (*skor-din-e'-mah*). See *Pandiculation.*

Scordium (*skor'-de-um*) [σκόρδιον, a garlicky plant]. The *Teucrium scordium.* **Aqua scordii,** a mixture of one part of scordium and three parts of water, reduced one-fourth by distillation. **Aqua scordii composita,** a preparation containing 11 parts each of scordium, Cretan dittany, spikenard, and the roots of Virginia snakeroot, sweet flag, and angelica, 4 parts each of opium and saffron, 6 each of cinnamon, cardamom, and cloves, and 360 of brandy. **Extractum scordii,** a preparation made by infusing 1 part of scordium in 4 parts of boiling water, pouring off the infusion, repeating the process with a like volume of water, mixing the two infusions, and evaporating. **Syrupus scordii,** a preparation made by digesting 32 parts of scordium in 1000 of aqua scordii, and adding to the filtered liquid twice its weight of sugar. **Tinctura scordii,** a filtered infusion of 1 part of scordium in 4 parts of alcohol.

Scorodolasarum (*skor-o-do-las'-ar-um*). See *Asafetida.*

Scorpioid (*skor'-pe-oid*) [σκορπίος, a scorpion; εἶδος, form]. In biology, curved like the tail of a scorpion. Applied to certain cymes, like those of the forget-me-not and heliotrope.

Scorteum (*skor'-te-um*). Synonym of *Scrotum.*

Scorzonera (*skor-zo-ne'-rah*) [It., "black bark"]. A genus of composite plants of many (Old World) species. **S. hispanica, S. deliciosa, S. tuberosa,** and other species are cultivated for their esculent roots, which also are called scorzonera. **S. humilis** is diaphoretic and stimulant. Unof.

Scotasma (*sko-taz'-mah*). See *Scotoma.*

Scotasmus (*sko-taz'-mus*) [σκότος, darkness]. Dimness of vision. See *Coligo.*

Scotch (*skoch*) [a contraction of *Scottish*]. Pertaining to Scotland. **S. Fiddle,** the itch. **S. Method.** See *Anesthetic.* **S. Pine,** Pinus sylvestris.

Scotodia (*sko-to'-de-ah*). See *Amblyopia.*

Scotodinia (*sko-to-din'-e-ah*) [σκότος, darkness; δῖνος, a whirl]. Giddiness, with the appearance of black spots before the eyes.

Scotograph (*sko'-to-graf*) [σκότος, darkness; γράφειν, to write]. An instrument for aiding the blind to write.

Scotoma (*sko-to'-mah*) [σκότωμα; σκοτόειν, to darken: *pl.*, *Scotomata*]. A fixed spot or space in the field of vision corresponding to some abnormality in the retina or optic centers of the brain. **S., Absolute,** a scotoma in which perception of light is entirely absent. **S., Central,** a scotoma limited to the region of the macula lutea, or its immediate vicinity. **S., Color,** color-blindness limited to a part of the visual field, and which may exist without interruption of the field for white light. **S., Flittering,** a scotoma with serrated margins extending peripherally and producing a large defect in the visual field. **S., Negative,** a defect due to the destruction of the retinal center, and which is not noticeable to the patient. **S., Positive,** a scotoma perceptible to the patient as a dark spot before his eyes. **S., Relative,** a scotoma within which perception of light is only partially impaired. **S., Ring,** zones of scotoma surrounding the center of the visual field. **S., Scintillating.** See *S., Flittering.*

Scotome (*sko'-tōm*) [σκοτός, darkness]. A scotoma.

Scotometer (*sko-tom'-et-er*) [σκοτός, darkness; μέτρον, measure]. An instrument for detecting, locating, and measuring scotomata.

Scotomy (*skot'-o-me*) [σκοτός, darkness]. Imperfect vision, with giddiness.

Scotopsia (*sko-top'-se-ah*). See *Myiodesopsia.*

Scotos (*sko'-tos*). See *Scotodinia.*

Scotoscopia (*sko-to-sko'-pe-ah*) [σκοτός, darkness; σκοπεῖν, to inspect]. See *Retinoscopy.*

Scott-Battam's Method. See *Treatment, Methods of.*

Scott's Dressing. "A method of treating fungous arthritis consisting in rubbing on compound mercury ointment and then applying pitch-plaster spread on leather."

Scour (*skowr*) [ME., *scouren*, to scour]. Diarrhea, as in cattle.

Scourge (*skerj*) [ME., *scourge*, scourge]. 1. Any severe epidemic disease of a fatal character. 2. To strike the skin with light withes or with knotted cords in order to produce counter-irritation.

Scourging (*skerj'-ing*) [ME., *scourge*, scourge]. A beating or flagellation. **S. Mania,** a religious mania of the 13th and 14th centuries characterized by the self-flagellation of the persons affected.

Scouring (*skowr'-ing*) [ME., *scouren*, to scour]. Purging; also, diarrhea. **S. Rush,** the stalks of *Equisetum hyemale*. Diuretic and astringent. Dose of fld. ext. ℥xx–℥j. Unof. See *Equisetum.*

Scrape (*skrāp*) [ME., *scrapien*, to scrape]. Galipot; a white viscid resin obtained from fir-trees; an inferior sort of turpentine.

Scraper (*skra'-per*) [ME., *scrapien*, to scrape]. An instrument used to produce an abrasion. **S., Tongue,** an instrument used to remove accumulations of exfoliated epithelium and other foreign material from the tongue.

Scrat (*skrat*) [ME., *scrat*, a monster]. An hermaphrodite.

Scratched (*skracht*) [ME., *scrat*]. Excoriated. **S. Skin,** a group of lesions directly and indirectly due to the constant irritation of the nails, and, as a whole, a symptom of prurigo, urticaria, scabies, and other pruritic diseases.

Scratches (*skrach'-es*) [from ME., *scrat*]. 1. Excoriations produced by the nails in scratching. 2. Grease; an eczematous inflammation of the feet of the horse. **S., Ohio,** prairie itch.

Screable (*skre'-a-bl*) [*screare*, to hawk]. That which may be spit out.

Screaming Fits. See *Convulsions, Infantile.*

Screation (*skre-a'-shun*) [*screare*, to hawk]. The act of spitting.

Screatus (*skre-a'-tus*) [L., a "hawking."]. 1. Excretion. 2. Agnew's term for a singular neurosis of the nasal passages, characterized by paroxysms of short, noisy inspirations or snortings, "as though an effort were being made to draw into the pharynx some worrying secretion from the back of the nose." The paroxysms last for two or three minutes, are frequent in occurrence, and are utterly independent of the patient's volition. The patient is exhausted and becomes emaciated from the excessive wear. The condition is often due to some local irritation, and is, as a rule, amenable to treatment.

Screw (*skru*) [Dan., *skrue*, a screw]. A cylindric rod on the surface of which is a projecting fillet or thread, passing spirally around at a constant angle to its axis. This fits into a hollow cylinder with its surface spirally grooved to correspond with the thread on the screw, which moves within it backward and forward in the direction of its length. **S.-driver Teeth,** peculiar teeth occurring in the subjects of hereditary syphilis. **S.-hook,** an instrument devised by Elsberg for the removal of foreign bodies from the ear. **S., Micrometer,** a screw with a very slight pitch for the measurement of very minute spaces and motions, as in the fine adjustment of microscopes. **S., Oral,** a screw of hard rubber or bone for insertion between the teeth to separate the jaws. **S., Pancoast's,** a screw for drilling the fragments in ununited fracture.

Scriptulus (*skrip'-tu-lus*). See *Scruple.*

Scriveners' Cramp, or **Palsy.** See *Paralysis, Writers'.*

Scrobe (*skrōb*) [*scrobis*, a ditch, a trench]. In biology, a groove for the reception of the basal joint of the antenna, occurring at the side of the rostrum in certain beetles. **S., Mandibular,** a groove in the side of the mandible in certain insects.

Scrobicula (*skro-bik'-u-lah*) [L.]. In biology, a smooth space surrounding a tubercle on the test of a sea-urchin.

Scrobicular (*skro-bik'-u-lar*) [*scrobiculus*, a little ditch]. Pertaining to scrobiculæ.

Scrobiculate (*skro-bik'-u-lāt*) [*scrobiculus*, a little ditch or trench]. In biology, pitted or grooved. Possessing minute or shallow depressions.

Scrobiculus (*skro-bik'-u-lus*) [L.]. A small pit or furrow. **S. cordis.** See *Anticardium.* **S. variolæ,** a scar made by a small-pox pustule.

Scrofula (*skrof'-u-lah*) [dim. of *scrofa*, a sow]. Tuberculous adenitis. A morbid condition, usually constitutional, and frequently hereditary, characterized by glandular tumors, having a tendency to suppuration, and leaving indolent ulcers very stubborn to treatment. It is now generally accepted as a manifestation of tuberculosis. The term is gradually falling into disuse. **S., Benign,** a condition characterized by inflammation, not endangering life, as lupus erythematosus. **S., Fixed Primitive,** a condition in which the symptoms presented at the onset of the disease are maintained to its close. **S. fugax.** See *S., Fugitive.* **S., Fugitive,** suppurative cervical adenitis with eczema capitis (Cullen). **S., Ganglionic,** scrofulous adenitis. **S., Malignant,** lymphadenoma. **S. mesenterica,** tabes mesenterica. **S. moluccana.** See *Yaws.* **S., Mucous,** an old term for a supposed scrofula of the mucous membranes. **S., Phagedenic,** of Bazin, a scrofula with a marked tendency to phagedenic ulceration. **S., Primitive,** a term formerly applied to scrofula in its early stage. **S., Pulmonary,** pulmonary tuberculosis. **S., Quaternary,** visceral tuberculosis. **S., Senile,** a condition occurring in advanced age, and characterized by strumous ulcers, which are apt to develop into rodent ulcer or epithelioma. **S., Visceral,** the same as *quaternary scrofula.*

Scrofulelcosis (*skrof-u-lel-ko'-sis*) [*scrofulæ*, scrofula; ἕλκωσις, ulceration]. Scrofulous ulceration.

Scrofulide (*skrof'-u-lid*) [*scrofulæ*, scrofula]. See *Scrofuloderma.* **S. boutonneuse bénigne,** of Bazin, prurigo. **S.s malignes,** of Bazin, lupus erythematosus and lupus vulgaris. **S. tuberculeuse,** lupus vulgaris.

Scrofulism (*skrof'-u-lizm*) [*scrofulæ*, scrofula]. The scrofulous diathesis or condition.

Scrofuloderm (*skrof'-u-lo-derm*) [*scrofulæ*, scrofula; δέρμα, skin]. See *Scrofuloderma.* **S., Large Pustular,** ecthyma scrofulosum. **S., Small Pustular.** See *Lichen scrofulosus.*

Scrofuloderma (*skrof-u-lo-der'-mah*) [*scrofulæ*, scrofula; δέρμα, the skin]. A term applied to the various forms of suppurating dermatitis. The lesions most commonly occur in the skin of the face and neck, over caseating and softening lymphatic glands. **S. gummatosum.** See *S. tuberculosum.* **S. papulosum.** See *Lichen scrofulosus.* **S. squamosum,** a furfuraceous exfoliation of the epidermis occurring in scrofulous subjects. **S. tuberculosum,** a condition characterized by cellular infiltrations, forming nodes and having a tendency to ulcerate. The lesions begin as hard, rounded, subcutaneous nodules, freely movable

beneath the skin. Later the skin is implicated, becomes adherent and violaceous, and the tumors soften, with obvious fluctuation (*S. gummatosum*). They may then be absorbed or evacuated spontaneously, in which case they cicatrize slowly or form spreading ulcers with thin, red, undermined edges, uneven bases, and pale, pus-covered, unhealthy granulations, sometimes associated with numerous deep sinuses (*S. ulcerosum*). **S. ulcerosum,** granuloma fungoides. See *S. tuberculosum.* **S. verrucosum,** tuberculosis verrucosa cutis (Riehl and Paltauf); lupus verrucosus and verruca necrogenica (Unna).

Scrofulome (*skrof'-u-lōm*) [*scrofulæ*, scrofula; *ὄμα*, tumor]. A tumor of a supposed scrofulous nature or origin.

Scrofulonychia (*skrof-u-lo-nik'-e-ah*) [*scrofulæ*, scrofula; *ὄνυξ*, nail]. Onychia maligna.

Scrofulophyma (*skrof-u-lo-fi'-mah*) [*scrofulæ*, scrofula; *φυμα*, growth]. Scrofuloderma tuberculosum. **S. diffusum,** elephantiasis scrofulosa.

Scrofulosis (*skrof-u-lo'-sis*) [*scrofulæ*, scrofula; *νόσος*, disease]. A scrofulous condition, disease, or diathesis. **S. erethica.** Scrofulosis with a tendency to suppurative adenitis. **S. torpidus,** scrofulosis, as it is manifested by the puffy face with thick nose and lips, slender limbs, and prominent abdomen, and also other characteristic features of the facies scrofulosus.

Scrofulous (*skrof'-u-lus*) [*scrofulæ*, scrofula]. Having the nature of scrofula. Affected with scrofula. **S. pneumonia,** secondary inflammatory processes in the lungs occurring in pulmonary scrofula. **S. teeth,** teeth similar in some respects to those of syphilis, but distinguished by a muddy-white color; they are large, rough, and irregular; their lingual surfaces are indented; the arch is broad, and the teeth regular in arrangement.

Scrofulousness (*skrof'-u-lus-nes*) [*scrofulæ*, scrofula]. The scrofulous character or condition.

Scroll (*skrōl*) [ME., *scrolle*, scroll]. A roll of paper, or anything folded so as to resemble a roll. **Ss., Olfactory,** the turbinate bones.

Scrophula (*skrof'-u-lah*). See *Scrofula.*

Scrophularia (*skrof-u-la'-re-ah*) [*scrofulæ*, scrofula]. A genus of flowering plants called figworts; the type of the important order of *Scrophulariaceæ.* There are some 120 species. **S. nodosa,** of Europe and North America, has been much used in the treatment of scrofula, piles, and ulcers. Unof. **S. officinalis, S. vulgaris.** See *S. nodosa.*

Scrophulelcosis. See *Scrofulelcosis.*

Scrophulophyma. See *Scrofulophyma.*

Scrotal (*skrō'-tal*) [*scrotum*, scrotum]. Pertaining to the scrotum. **S. Hernia,** protrusion of the gut through the external ring and into the scrotum; oscheocele.

Scrotiform (*skrō'-tif-orm*) [*scrotum*, scrotum; *forma*, form]. In biology, shaped like a purse or pouch with two compartments, as the pod of shepherd's purse (*Capsella*).

Scrotitis (*skro-ti'-tis*) [*scrotum*, scrotum; *ιτις*, inflammation]. Inflammation of the scrotum.

Scrotocele (*skrō'-to-sēl*) [*scrotum*, scrotum; *κήλη*, tumor]. Same as *Scrotal Hernia.*

Scrotum (*skrō'-tum*) [L.]. The pouch containing the testicles, consisting of a thin, brownish skin marked by numerous rugæ, and beneath which are the dartos, the spermatic fascia, the cremasteric fascia, the infundibuliform fascia, and the parietal tunica vaginalis. **S. cordis,** the pericardium. **S. lapillosum,** multiple calcareous atheroma of the scrotum.

Scrubgrass (*skrub'-gras*). See *Scouring Rush.*

Scruff (*skruf*) [origin obscure]. A popular name for the nape, or back of the neck.

Scruple (*skru'-pl*) [*scrupulum*, a scruple]. In Apothecaries' weight, 20 grains. Represented by the sign ℈.

Scrupulosity (*skru-pu-los'-it-e*) [*scrupulosus*, exact]. An over-precision, or morbid conscientiousness as to one's thoughts, words, and deeds. It is somewhat common among insane persons of a certain type.

Scull (*skul*). See *Skull.* **S.-cap.** See *Skull* and *Scutellaria.*

Scultetus, Bandage of. See *Bandage.*

Scurf (*skerf*) [ME., *scurf*, scurf]. The bran-like exfoliation of the epidermis, especially from the scalp. It is popularly known as "dandruff" or "dandriff." **S.-skin,** the epidermis.

Scurvy (*sker'-ve*) [ME., *scurvy*]. A disease observed both on land and at sea among persons who have been deprived of wholesome diet for any length of time; it is characterized by spongy gums, extravasations of blood, livid, indurated patches of skin, hemorrhages from the mucosa, fetor of the breath, and painful contractions of the muscles. It is aggravated by want of cleanliness and by a diet of fat, salt meat. It soon disappears under a vegetable diet, vegetable acids, etc. **S. of the Alps.** See *Pellagra.* **S., Button,** a disease which prevailed among the peasantry of Ireland, in 1814. It was described as an eruption of "convex tubercles, varying from the size of a split pea to that of a shilling," having "an appearance somewhat like the surface of a raspberry," and exuding "a white, tenacious matter which formed thin, yellow crusts" (Carmichael). **S.-grass,** plants of the genus *Cochlearia;* spoonwort. Common scurvy-grass, *Cochlearia officinalis,* is stimulant, diuretic, and antiscorbutic. It is administered in an infusion made of one part of the herb in 12 parts of water, evaporated one-half by heating. Dose ʒij. **S., Land,** scurvy affecting landsmen. See *Purpura hæmorrhagica.* **S., Norwegian.** See *Radesyge.* **S. Rickets,** a form of scurvy associated with rickets occurring in young infants improperly fed. It appears especially in those cases in which there is a lack of fresh milk in the diet.

Scutate (*sku'-tāt*) [*scutum*, a shield]. In biology, shaped like a buckler.

Scute (*skūt*) [*scutum*, a shield]. In biology, a scale or plate, a *scutum*, *q. v.*

Scutellar (*sku-tel'-ar*) [*scutellum*, a little shield]. Of or pertaining to a scutellum.

Scutellaria (*sku-tel-a'-re-ah*) [*scutellum*, a little shield]. A genus of labiate plants. Skull-cap, the leaves and twigs of *S. lateriflora*, have reputed properties as a tonic nervine, in tremors, chorea, hysteria, etc. Dose of the fld. ext. ʒss–ij. **S. galericulata** is considered astringent and febrifuge, as is also **S. integrifolia.** All unof.

Scutellarin (*sku-tel-a'-rin*) [*scutellum*, a little shield]. A precipitate from a tincture of *Scutellaria lateriflora;* nervine, tonic, diuretic, and antispasmodic. Dose gr. j–ij. Unof.

Scutellate (*sku'-tel-āt*) [*scutellum*, a little shield]. In biology: (*a*) provided with scutella or transverse scales, as the feet of certain birds; (*b*) plate-shaped.

Scutelliform (*sku-tel'-if-orm*) [*scutellum*, a little shield; *forma*, form]. Scutellate.

Scutelligerous (*sku-tel-ij'-er-us*) [*scutellum*, a little shield; *gerere*, to carry]. In biology, provided with a scutellum.

Scutelliplantar (*sku-tel-ip-lan'-tar*) [*scutellum*, a little shield; *planta*, the sole of the foot]. In biology, applied to certain birds in which the planta or back of the tarsus is provided with transverse scales.

Scutellum (*sku-tel'-um*) [dim. of *scutum*, a shield: *pl.*, *Scutella*]. 1. *Scutulum;* the characteristic "plate" of *Tinea favosa*. It shows a typical central depression with raised edges (cupped), is usually marked with concentric lines, and may be as large as a split pea. It is whitish or pale-yellow in the center, vivid-yellow at the periphery. 2. In biology: (*a*) (1) In lichens a sessile shield-shaped apothecium; (2) in *Gramineæ*, the cotyledon that envelops the embryo and is modified to absorb the reserve materials and convey the nutriment to the embryo; (*b*) (1) one of the sclerites composing the tergum of an insect; (2) one of the plates of the tarsus of certain birds.

Scutia (*scu'-te-ah*) [*scutum*, a shield]. A genus of the *Rhamneæ*. A shrub growing in Asia; the leaves, made into an ointment, are used as an oxytocic in India.

Scutiform (*sku'-tif-orm*) [*scutum*, a shield]. Shield-shaped. **S. Leaf**, the first-formed leaf or cotyledon in *Salvinia*, so named from its peculiar shape.

Scutigerous (*sku-tij'-er-us*) [*scutum*, shield; *gerere*, to carry]. In biology, provided with a scute.

Scutiped (*sku'-tip-ed*) [*scutum*, a shield; *pes*, foot]. In biology, a bird with scaled tarsi.

Scuto-auricularis (*sku-to-aw-rik-u-la'-ris*) [*scutum*, shield; *auricula*, ear]. A muscle attached to the scutiform cartilage of the ear.

Scutulatio (*sku-tu-la'-she-o*) [*scutum*, a shield]. A cutaneous disease of new-born infants. See *Ichthyosis congenita* and *Ichthyosis sebacea*.

Scutulum (*sku'-tu-lum*). See *Scutellum*.

Scutum (*sku'-tum*) [*scutum*, a long shield: *pl.*, *Scuta*]. 1. An exoskeletal scale or plate. 2. The thyroid cartilage. **S. cordis**, the sternum. **S. genu**, the patella. **S. pectoris**, the thorax. **S. thoracis**, the sternum. **S. tympanicum**, the semilunar plate of bone separating the attic of the tympanum from the outer mastoid cells.

Scybala (*sib'-al-ah*). Plural of *Scybalum*, *q. v.*

Scybalous (*sib'-al-us*) [σκύβαλον, fecal matter]. Of the nature of a scybalum.

Scybalum (*sib'-al-um*) [σκύβαλον, fecal matter]. Abnormally hard fecal matter that has aggregated into lumps.

Scyllite (*sil'-īt*) [σκύβαλον, fecal matter], $C_6H_{12}O_6$. A glucose obtained from the intestines, kidney, liver, etc., of the hag-fish, skate, and shark.

Scyphistoma (*si-fis'-to-mah*) or **Scyphostoma**, (*si-fos'-to-mah*) [σκύφος, a cup; στόμα, mouth: *pl.*, *Scyphistomata*, *Scyphostomata*]. In biology, the hydra-tube stage in the development of *Medusæ*. It arises from the *scyphula*, and gives rise to the free-swimming medusa by the tearing away of the larger portion of the body. The remaining stem can, however, become regenerated into a complete attached medusa (monodisc strobila); or the stem of the scyphistoma may become regenerated into a new scyphistoma before the first medusa has detached itself; and when this regenerative process continues without the medusæ at once fully detaching themselves we have a polydisc strobila, a temporary animal stock. The whole process is called *strobilation*, *q. v.*

Scyphula (*sif'-u-lah*) [*scyphulus*, dim. of *scyphus*, a cup]. In biology, a stage in the development of the acraspede *Medusæ*, in which the primitive larva resembles an attached coral-like animal. It later develops into an attached young *Medusa*, the *Scyphistoma*, *q. v.*

Scyphus (*si'-fus*) [σκύφος, a drinking-cup]. A cup, or structure having the shape of a cup. **S. auditorius**, **S. cochleæ**, **S. vieussenii**, the infundibulum of the cochlea. **S. lapideus in oculo**, a cup-shaped concretion in the eye, probably identical with what is known as ossification of the choroid.

Scyros (*si'-ros*.) Synonym of *Callosity*.

Scytalis (*sit'-al-is*) [σκυτάλη, a staff]. A phalanx of the fingers.

Scythian Disease (*sith'-e-an dis-ēz'*). Atrophy of the male generative organs, with consequent loss of physical power, masculinity, etc. It is an attendant or result of sexual perversion, its victims adopting the dress and manners of women. It prevails locally in the Caucasus (as in the time of Herodotus), and is common as far eastward as Alaska.

Scythrospasmus (*si-thro-spaz'-mus*) [σκυθρός, angry; σπασμός, spasm]. A heavy or fatigued expression, regarded as an evil symptom in grave disease.

Scytitis (*si-ti'-tis*) [σκῦτος, skin; ιτις, inflammation]. Inflammation of the skin; dermatitis.

Scytoblastema (*si-to-blas-te'-mah*) [σκῦτος, skin; βλάστημα, germ]. The primitive or embryonic stage of the development of the skin.

Scytoblastesis (*si-to-blas-te'-sis*) [σκῦτος, skin; βλάστημα, germ]. The condition and progress of scytoblastema.

Scytomorphosis (*si-to-mor-fo'-sis*) [σκῦτος, skin; μόρφωσις, shaping]. An abnormal development of the skin.

Scytonemin (*si-to-ne'-min*) [σκῦτος, skin, hide; νῆμα a thread]. A deep yellow or brown pigment coloring the filament-sheath in many of the *Scytonemacea*. See *Pigments*, *Conspectus of*.

Sea (*se*) [ME., *see*, sea]. The ocean. **S.-moss.** See *Carragheen*. **S.-sickness**, the nausea and vomiting affecting persons at sea, or those who are subjected to any undulatory motion like that of a vessel. **S.-tangle**, the stem of *Laminaria digitata*, a marine plant. The dried stem, introduced into a moist canal or hollow organ, swells and dilates the cavity. See *Tent*. **S.-water bath.** See *Bath*. **S.-weed**, any marine plant of the order *Algæ*. **S.-weed bath**, a bath in sea water charged with an infusion of some medicinal sea weed. **S.-wrack.** See *Fucus vesiculosus*.

Seal (*sēl*) [ME., *seel*, seal]. A body of water, or other material, placed in the trap of a house-drain for the purpose of preventing the ingress of sewer air.

Sealing (*sē'-ling*) [ME., *seelen*, to seal]. The exclusion of air from a wound during the process of healing. **S.-wax**, a product manufactured from shellac, to which have been added Venice turpentine to make it more fusible and less brittle, and some mineral coloring matter, usually vermilion. For black sealing-wax the best ivory-black is used; for golden-color wax, "mosaic gold" (stannic sulphid); for green wax, powdered verdigris, and for the commoner varieties earthy materials.

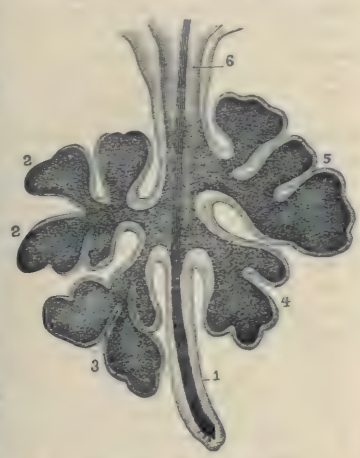
Seam (*sēm*). See *Suture* and *Raphe*.

Searcher (*serch'-er*) [ME., *serchen*, to search]. An instrument used for the detection of stone in the bladder.

Searching (*serch'-ing*) [ME., *serchen*, to search]. Probing; sounding. The operation of exploring the bladder by means of a metallic sound, for the purpose of detecting the presence or absence of calculi. **Ocular.** See *Ocular*.

Seamstress's Cramp. See *Cramp*.

Seaside Grape. West Indian kino, from *Coccoloba uvifera*.



Seasoning (*sē'-zn-ing*) [Fr., *saisonner*, to have a good flavor]. Adding a higher relish to food; acclimating. **S. Fever**, the febrile symptoms occurring during the process of acclimatization

Seat (*sēt*) [ME., *sete*, seat]. Breech; nates. **S.-bon**

the ischium. **S.-worm**, thread-worm. See *Oxyuris*, under *Parasites* (*Animal*), *Table of*.

Seb (*seb*). Gold of the alchemists; also alum.

Sebaceous (*se-ba'-shus*) [*sebum*, suet, fat]. Pertaining to fat or suet, and especially to the sebaceous glands of the corium of the skin. **S. Cyst**, **wen**, atheroma, steatoma; a cystic tumor varying in size from a millet-seed to an orange, situated in the skin or subcutaneous tissue. It occurs most frequently on the scalp, face, back, and scrotum, and may be single or multiple. **S. Flux.** See *Seborrhea*.

LARGE SEBACEOUS GLAND.
1. Hair in its follicle. 2, 3, 4, 5. Lobules of the gland. 6. Excretory duct traversed by the hair.

Sebacic (*se-ba'-sik*) [*sebum*, fat]. Pertaining to or derived from sebum. **S. Acid**,

$$C_{10}H_{18}O_4 = C_8H_{16}{<}\begin{matrix}COOH\\COOH,\end{matrix}$$

a dibasic acid obtained by dry distillation of oleic acid and by the action of sodium hydroxid on castor-oil.

Sebacin (*se-ba'-sin*) [*sebum*, fat]. 1. A hydrocarbon obtained by distilling calcium sebate with an excess of calcium carbonate. 2. An unctuous substance found in the fruit of *Myristica sebifera*.

Sebadilla (*seb-ad-il'-ah*). See *Cevadilla*.

Sebastomania (*se-bas-to-ma'-ne-ah*) [σεβαστός, revered; μανία, madness]. Religious insanity.

Sebate (*se'-bāt*) [*sebum*, fat]. A salt of sebacic acid.

Sebel. See *Pannus oculi*.

Sebesten (*se-bes'-ten*) [Ar. *sebestān*, the fruit sebesten]. A tree of Asia, *Cordia myxa* L.; also, *C. obliqua*; also their edible fruits, called sebesten plums. The latter, dried, have been much used for their demulcent qualities. Unof.

Sebic (*se'-bik*). See *Sebacic*.

Sebiferous (*se-bif'-er-us*) [*sebum*, fat; *ferre*, to bear]. Same as *Sebiparous*.

Sebiparous (*se-bip'-ar-us*) [*sebum*, fat; *parere*, to produce]. Forming or producing sweat.

Sebolith (*seb'-o-lith*) [*sebum*, fat; λίθος, stone]. A calculus, or hard concretion, in a sebaceous gland.

Seborrhagia (*seb-or-a'-je-ah*). See *Seborrhea*.

Seborrhea, Seborrhœa (*seb-or-e'-ah*) [*sebum*, suet; ῥοία, a flow]. *Sebaceous flux; stearrhea; seborrhagia; steatorrhea;* a disorder of the secretory organs of the skin, in which there is an alteration and increase of sebaceous secretion, and, according to some, an involvement of the sweat-coils, as well as of the sebaceous glands. It is characterized by the formation of an oily, waxy, or scaly accumulation on the surface. **S. adiposa.** See *S. oleosa*. **S. amianthacea, S. capillitii, S. capitis,** seborrhea of the scalp. See *S. sicca* and *Alopecia furfuracea*. **S. cerea,** the waxy form of *S. sicca*. It is the vernix caseosa of the new-born. It occurs at almost any age after birth, and includes the accumulation of smegma beneath the prepuce. At puberty and onward it is seen most commonly on the scalp, where it forms dirty-looking, yellowish or greenish-brown, or even black, plates or crusts of fat and epithelium. It leads to atrophy of the hair. **S. congestiva,** *lupus erythematosus* of Hebra; it is the early stage of lupus erythematosus. **S. corporis, S. papulosa** seu **lichenoides,** a papular, ringed, serpiginous eruption, confined to the trunk, and characterized by slight scaliness and marked greasiness, and frequently associated with *S. capitis*. It is popularly known as "flannel rash." Its synonyms are: *Lichen circinatus, L. circumscriptus, L. annulatus serpiginosus, L. gyratus.* **S. crustosa.** See *S. sicca*. **S. dermatitis.** See *S. corporis, S. eczema, S. eczemiformis, S. psoriasiformis*, the various forms resembling ordinary dermatitis, and comprised under the general term, *S. dermatitis*. **S. eczema** of Unna. See *S. dermatitis*. **S. eczematoid,** seborrhea associated with active inflammation of the scalp. The margin of the affected area is well defined, and there is abundant formation of flaky, fatty scales. This acute condition is due to some depressing influence, mental or physical. **S. faciei,** a common sequel of variola and other exanthemata, and often associated with rosacea. It affects chiefly the forehead, superciliary regions, and sides of the nose and cheeks. The scales are often greenish or blackish. **S. fluida.** See *S. oleosa*. **S. furfuracea** seu **pityriasiformis,** the scaly form of *S. sicca*. It constitutes the condition known as scurf or dandruff, and is the *alopecia pityrodes* of Pincus. **S. genitalium,** the accumulation of smegma beneath the prepuce, about the clitoris, and between the labia and the nymphæ. **S. lichenoides.** See *S. corporis*. **S. localis,** circumscribed seborrhea, as when it occurs on the face only. **S. nasi,** seborrhea attended with the formation of yellow crusts on the tip of the nose (*S. flavescens*). **S. nigra, S. nigricans,** seborrhea with the formation of dark-colored crusts, the coloration being usually from dirt. See *Chromidrosis*. **S. oleosa,** a variety in which there is an excess of oily secretion on the surface. The face has a greasy appearance and feel; the complexion is generally thick and muddy-looking. It occurs usually in young adults. **S. papulosa.** See *S. corporis*. **S. psoriasiformis,** one of the least common forms of seborrhea, consisting of well-defined bright-red patches, with scanty, scaly, and fatty crusts. The individual patches may coalesce and cover a considerable area. The eruption is chiefly met with in the axilla and on the trunk. **S. sicca,** the commonest form of the disease, characterized by fine greasy or branny scales; the underlying skin is pale and leaden. There are no subjective symptoms. It is one of the chief causes of premature baldness. **S. squamosa** (seu **sicca**) **neonatorum,** *ichthyosis congenita;* regarded by Hebra as a general seborrhea. The entire surface of the body is covered with fatty, thick, epidermic plates, firmly adherent to the skin, and broken by deep rhagades extending down into the corium. Owing to the stiffness and contraction of the skin, the eyes cannot be completely opened or closed, the lips are retracted, the nose and ears are atrophied, and the toes contracted and cramped. If not born dead, the subject soon succumbs from starvation and depression of temperature. **S. syphilitica,** *S. capitis* when associated with syphilitic lesions of the scalp. **S. tabescentium,** a form of *S. furfuracea*, occurring in diabetes and chronic wasting diseases. **S. universalis,** *Pityriasis tabescentium;* a variety occurring only at the end of wasting dis-

eases, as diabetes mellitus. It consists in a universal, branny desquamation, especially over the trunk and extremities.

Sebum (*se'-bum*) [L.]. The secretion of the sebaceous glands. See also *Sevum*. **S. palpebrale,** Lema: the dried glandular secretion of the eyelids. **S. præputiale, S. præputii,** smegma præputii.

Sec (*sek*) [Fr.]. Dry; said of bloodless surgical operations.

Secale (*sek-a'-le*) [L.]. Rye. **S. cereale,** common rye; rye-flour furnishes a nutritious bread. Alone or mixed with bran it is used as an absorbent and emollient application, and as a mush it is said to be laxative. *Carbonized Rye* is used in tooth-powders. **S. cornutum.** See *Ergot*. **S. farina,** rye-meal.

Secalin (*sek'-al-in*). See *Trimethylamin*.

Secamone (*sek-am-o'-ne*) [L.]. A genus of the *Secamoneæ*. **S. emetica,** a shrub of India; the root contains an acrid, emetic principle.

Secernment, Secerning (*se-sern'-ment, se-sern'-ing*) [*secernere*, to separate]. Secreting; applied to the function of a gland or a follicle.

Secessio, Secessus (*se-sesh'-e-o, se-ses'-us*). Defecation.

Secohm (*sek'-ōm*) [*secundus*, following; *ohm*]. A unit of electric self-induction.

Second (*sek'-und*) [*secundus*, next]. Next after the first. **S. Intention.** See *Healing*. **S.-sight.** See *Clairvoyance*.

Secondaries (*sek'-un-da-rēz*) [*secundus*, second]. A name sometimes applied to the secondary symptoms of syphilis, in contradistinction from the primaries.

Secondary (*sek'-un-da-re*) [*secundarius*]. 1. Following, succeeding to a first. Subordinate in order of time or development; an induced or faradic electric current. 2. In chemistry, a hydrocarbon having a substituted radicle attached to a carbon atom which is attached to two other carbon atoms. **S. Amputation,** consecutive amputation, or amputation done after the subsidence of inflammatory symptoms. **S. Cataract.** See *Cataract*. **S. Dentine,** dentine formed at a later period than the rest of the dentine; when the pulp, for example, is converted into solid material and no pulp-cavity remains the material so formed is called "secondary dentine." **S. Hemorrhage.** See *Hemorrhage, Consecutive*. **S. Syphilis.** See *Syphilis*. **S. Tertiary,** those diatomic alcohols in which one molecule of hydroxyl is attached to a carbon atom which is attached to two other carbon atoms, and the other molecule of hydroxyl is attached to a carbon atom itself connected with three other carbon atoms.

Secreta (*se-kre'-tah*) [*secernere*, to separate]. The substances secreted by a gland, follicle, or other organ; products of secretion.

Secreting (*se-kre'-ting*) [*secernere*, to separate]. Effecting secretion]. **S. Fringes,** synovial fringes.

Secretion (*se-kre'-shun*) [*secretio: pl., Secretiones*]. The natural function of certain organs of the body, mainly the glands and follicles. It consists in the separation and elaboration of fluid or semi-fluid substances differing according to the organ in which they are secreted. Also, the substance secreted. **S., Antilytic,** the saliva secreted by a submaxillary gland with intact nerves, as distinguished from that which flows from a gland which has had its nerves divided (Langley). **S., Menstrual,** menstrual blood. **S., Paralytic,** the abnormal discharge from a gland after section of its motor nerve. **S., Sebaceous,** sebum. **S., Internal,** the secretion of an organ that is not excreted or discharged, as, *e. g.*, glycogen.

Secretitious (*se-kre-tish'-us*) [*secretio*, a secretion]. Of the nature of a secretion.

Secretodermatosis (*se-kre-to-der-mat-o'-sis*) [*secretio*, a secretion; *δέρμα*, skin; *νόσος*, disease]. An affection of the secretory apparatus of the skin.

Secreto-motor (*se-kre'-to-mo'-tor*) [*secretio*, a secretion; *motor*, a mover]. Applied to nerves intermediating the function of secretion.

Secretory (*se'-kre-tor-e*) [*secernere*, to separate]. Performing secretion; applied to those glands or organs that form or produce secretions. **S. Fibers,** centrifugal nerve-fibers exciting secretion.

Secretum (*se-kre'-tum*). See *Secretion*.

Sectio (*sek'-she-o*) [L.]. Section. **S. abdominis.** See *Laparotomy* and *Celiotomy*. **S. agrippina,** Cesarean section. **S. alta,** high or supra-pubic section in lithotomy. **S. alta subpubica,** transverse section beneath the pubic arch in lithotomy. **S. anatomica,** a dissection. **S. bilateralis,** bilateral cystotomy. **S. cadaveris,** an autopsy. **S. cæsarea,** Cesarean section. **S. corneæ,** keratotomy. **S. fistularum,** section of the tissues between the two openings of a complete anal fistula. **S. frænuli præputii,** division of the preputial frenum for the relief of penile curvature and premature seminal emissions. **S. franconiana,** suprapubic cystotomy. **S. hypogastrica,** suprapubic cystotomy. **S. lateralis,** lateral cystotomy. **S. lecatiana,** lithotomy done partly by incision and partly by dilatation (Le Cat). **S. legalis,** a post-mortem examination made by order or consent of the law. **S. mediana,** median lithotomy. **S. musculorum,** myotomy. **S. nervorum,** neurotomy. **S. postrolandica,** a transection of the brain at the posterior margin of the postcentral gyrus. **S. prærolandica,** a transverse section of the brain at the anterior margin of the precentral gyrus. **S. rectovesicalis,** rectal cystotomy. **S. renalis,** nephrotomy. **S. rolandica,** a transverse section of the cerebrum passing through the fissure of Rolando. **S. tendinum,** tenotomy. **S. urethralis,** urethrotomy. **S. vaginalis,** elytrotomy. **S. vaginovesicalis,** colpocystotomy. **S. ventralis,** suprapubic cystotomy. **S. vesicæ felleæ,** cholecystotomy. **S. vesicalis,** cystotomy.

Section (*sek'-shun*) [*secare*, to cut]. Division by cutting; also, the condition made thereby; dissection; post-mortem examination; a cut or thin slice made for histologic or anatomic study. **S., Abdominal.** See *Celiotomy*. **S., Cesarean.** See *Cesarean Operation*. **S., Frontal,** a longisection serving to divide the body into equal or unequal dorsal and ventral parts. It is, therefore, approximately parallel with the dorsal and ventral aspect of the body. See also *Sagittal* and *Transection;* also *Position and Direction, Table of Intrinsic Terms*. **S., Longitudinal.** See *Longisection* and *S., Frontal*. **S., Optic,** the appearance resulting from microscopic examination of transparent or nearly transparent objects, when some plane below the upper surface of the object is in focus. **S., Sagittal,** a longisection parallel with the sagittal suture, and hence with the meson or median plane of the body, and serving to divide the body into equal or unequal right and left parts. See also *Medisection, Frontal*, and *Transection;* also *Position and Direction, Table of Intrinsic Terms*. **Ss., Segmentation.** See *Segmentation*. **Ss., Serial,** the arrangement, consecutively, of microscopic sections in the order in which they are cut. **S., Sigaultian.** See *Symphysiotomy*. **S., Transverse.** See *Transection*.

Sector (*sek'-tor*) [*secare*, to cut]. An area of a circle included between two radii and an arc. **Ss., Craniometric,** sectors in circles having the punctum alare vomeris as a center. The *frontal sector* is that bounded by a radius to the punctum naso-frontale, and one which, if prolonged, would pass through the punctum

bregmatis; the *maxillary sector* is that bounded by a radius to the punctum naso-frontale and one passing through the punctum spinæ nasalis posterioris; the *medullary sector* is that included between a radius to the punctum foraminis magni anterius and one passing through the punctum foraminis magni posterius; the *nasal sector* is that bounded by a radius to the punctum spinæ nasalis anterioris and one which, if prolonged, would pass through the punctum naso-frontale; the *occipital sector* is included between a radius to the punctum occipitale and one to the punctum protuberantiæ occipitalis; the *palatine sector* is contained between a radius to the punctum spinæ nasalis posterioris and one passing through the punctum præmaxillare; the *parietal sector* is included between a radius to the punctum bregmatis and one passing through the punctum occipitalis; the *premaxillary sector* is that bounded by a radius to the punctum præmaxillare and one to the punctum spinæ nasalis anterioris; the *sector for the cavum naso-pharyngeum* is contained between a radius terminated by the punctum foraminis magni anterius and one to the punctum spinæ nasalis posterioris (Lissauer).

Sectorial (*sek-to'-re-al*) [*sextor*, a sector]. Carnassial.

Secund (*sek'-und*) [*secundus*, following]. In biology, arranged on one side of a stem or axis.

Secundina (*se-kun'-de-nah*) [L.]. Something following. **S. cerebri**, the pia mater.

Secundine or **Secundines** (*se-kun'-din*) [*secundinæ*]. In biology: (*a*) the "after-birth," or that which remains in the uterus after the expulsion of the fetus. It includes the placenta, part of the umbilicus, and the membranes of the ovum; (*b*) the inner coat of an ovule; also called the *mesosperm*.

Secundum artem (*se-kun'-dum ar'-tem*) [L., "according to art"]. In the approved, professional, or official manner (used in writing prescriptions, as a direction to the apothecary).

Securiform (*se-ku'-rif-orm*) [*securis*, an ax; *forma*, form]. In biology, ax-shaped.

Secus (*se'-kus*) [L.]. Sex.

Sedan Black. See *Pigments, Conspectus of.*

Sedans (*se'-danz*) [L.: *pl.*, *Sedantia*]. Sedative; a sedative medicine. See *Liquor sedans.*

Sedation (*se-da'-shun*) [*sedatio*]. A condition of quiet and tranquillity, especially when following excessive functional activity.

Sedative (*sed'-at-iv*) [*sedare*, to soothe]. 1. Soothing or tranquilizing. 2. An agent that exerts a soothing effect by lowering functional activity. **S. Salt**, boric acid.

Sedentaria (*sed-en-ta'-re-ah*) [L.]. Plural of *Sedentarius*, sedentary. **S. ossa**, the ischia and os coccygis, the bones on which the body rests while in a sitting posture.

Sedentary (*sed'-en-ta-re*) [*sedentarius; sedere*, to sit]. Occupied in sitting; sitting at one's work. Pertaining to the habit of sitting.

Sedes (*se'-dēz*) [L.]. Anus; stools. **S. cruentæ**, bloody stools. **S. lactescentes**, celiac flux. **S. procidua**, prolapse of the anus.

Sedigitate, Sedigitated (*se-dij'-it-āt, se-dij'-it-a-ted*) [*sedigitus; sex*, six; *digitus*, digit]. Having six fingers on a hand, or six toes on a foot.

Sedilia (*se-dil'-e-ah*) [*sedile*, a seat]. The nates.

Sediment (*sed'-im-ent*) [*sedimentum: pl.*, *Sedimenta*]. That which settles to the bottom of a liquid. **S., Urinary**, the solid constituents of urine, organic and inorganic, which are deposited on standing. See *Urinary.*

Sedimentation (*sed-im-en-ta'-shun*) [*sedimentum*, sediment]. The process of producing rapid deposition of the sediment of urine or sewage by means of centrifugal or other apparatus.

Sedlitz (*sed'-litz*). See *Seidlitz.*

Sedum (*se'-dum*) [L., houseleek]. A genus of crassulaceous plants. Stonecrop, wall-pepper, creeping Jack, gold-dust. **S. acre**, a moss-like creeping plant indigenous to Europe, and naturalized in some places in North America. The expressed juice is emetic, purgative, and also capable of vesication. It was formerly used as a remedy for scrofula, and administered internally in decoction, while externally the bruised fresh plant was applied. Unof. **S. telephium**, Live-for-ever, a species of salad indigenous to Europe, and introduced in the United States. The root and herb were formerly official as *radix et herba telephii.*

Sée's Treatment. See *Treatment, Methods of.*

See-saw Eczema, a form of eczema alternating with some other disease.

Seed (*sēd*) [AS., *sæd*, seed, sowing]. (*a*) A fertilized ovule or ovum, as the egg of the silkworm-moth. ["Naked seeds meant to all botanists up to the time of A. L. de Jussieu and J. Gärtner (1788) dry indehiscent fruits," Sachs]; (*b*) seminal fluid; sperm or milt; (*c*) offspring, as young oysters. **S.-coat**, in biology, the testa or exterior coat of the seed. Cf. *Primine*, *Secundine.* **S.-lac.** See *Lac.*

Seedy-toe (*se'-de-to*) [Fr., *fourmilière*]. The English common name for an affection of the hoof of *Equidæ.* More frequent in the ass and mule than in the horse. It is held to be due to the fungus, *Achorion keratophagus*, *q. v.* (Ercolani.)

Seegen's Dietetic Regimen. A regimen for diabetics, consisting of meats of all kinds, eggs, corn, vegetables, cheese, and gluten bread.

Seemann and Hehner's Method. A method of estimating the amount of acids in the stomach. It consists in neutralizing the gastric contents by titrating with NaOH, evaporating to dryness, and carefully incinerating. The ash is extracted with water, and the alkali present in the extract is estimated by titrating with an acid; the difference between the amount of alkali added and the amount of alkali found gives the amount which must have combined with HCl, the lactic and volatile acids being decomposed during incineration.

Seessel's Pocket or **Pouch.** See *Pouch.*

Segestor (*se-jes'-tor*) [*se*, self; *gerere*, to carry]. A proprietary embalming fluid, introduced into the vessels of the cadaver by a syringe; so called because it has the alleged property of finding its way to all parts of the dead organism.

Segment (*seg'-ment*) [*segmentum; secare*, to cut]. 1. A small piece cut from the periphery of anything. 2. A natural division, resulting from segmentation; one of a series of homologous parts, as a myotome; the part of a limb between two consecutive joints. A subdivision, ring, lobe, somite, or metamere of any cleft or articulated body. **S. of Bandl.** See *Bandl's Ring.* **S., Interannular**, the portion of a nerve included between two consecutive nodes of Ranvier. **S., Intermediate** (*of a cilium*), the isotropous, delicately striated portion of a cilium between the cilium proper and its pedicle. **S., Lower** (*of the uterus*), all that portion of the uterus situated below the ring of Bandl. **Ss., Medullary**, the incisures of Schmidt and Lautermann, or oblique markings in the medullary sheath of a nerve-fiber. **S., Primitive**, Minot's word for a primitive division of the vertebrate celom. The *protovertebra*, *mesoblastic somite*, *mesomere*, *metamere*, *Ursegment*, *Urwirbel*, of authors. **S., Pubic** (*of the pelvic floor*); this "consists of what extends from the symphysis pubis to the anterior vaginal wall, inclusive of the latter, and is chiefly made up of bladder." (D. B. Hart.)

S., Rivinian (*of the tympanic ring*), that portion of the temporal bone between the two points of attachment of its tympanic portion to its squamous portion. **S., Sacral** (*of the pelvic floor*), that portion which "extends from the sacrum to the posterior vaginal wall." (D. B. Hart.) **S., Schmidt-Lautermann's,** the elongated pieces making up the medullary substance of nerve-fibers, several pieces being included within each internode.

Segmental (*seg-men'-tal*) [*segmentum*, a segment]. Pertaining to, or of the nature of, a segment; made up of segments. **S. Duct,** the duct of the pronephros, *q.v.* **S. Organs.** See *Nephridia.* **S. Sense-organs,** a series of organs formed by the temporary or permanent union of the sensory ganglia; the ear, eye, and nose possibly belong to this class; the *branchial sense-organs* of Beard, and the *ganglionic sense-organs* of Minot.

Segmentation (*seg-men-ta'-shun*) [*segmentum*, a piece cut off]. In biology, the process of cleavage or division. In embryology, the term is restricted by usage "to the production of cells up to the period of development when the two primitive germ-layers are clearly differentiated and the first trace of organs is beginning to appear." (Minot.) Merogenesis. **S.-cavity,** the central space in the blastula stage of the segmentation of an ovum. **S.-cells,** homogeneous indifferent cells formed by the repeated division of the fecundated egg-cell, and which compose first of all the solid mulberry germ. (Hæckel.) **S., Centro-lecithal,** a form of segmentation in which the spheres enclose a central nutritive yolk. **S., Complete,** holoblastic segmentation. **S., Direct,** amitosis, or direct cell-division. **S., Discoidal,** a form of segmentation in which the germinal disc alone is involved. **S., Duplicative,** segmentation peculiar to the gonococcus, marked by an interval between the two segments. **S., Free,** cleavage of zymoplasts. **S., Germ,** segmentation of the impregnated ovum, or of the first embryonic segmentation-sphere, or blastosphere. **S., Holoblastic,** segmentation in which all the contents of the ovum undergo cleavage. **S., Incomplete, S., Meroblastic,** segmentation in which only a portion of the contents of the ovum, the formative yolk, undergoes cleavage, the other portion, or food-yolk, being a reserve store of food for the developing embryo. **S., Metameric,** division of the embryo into metameres. **S.-nucleus.** See under *Nucleus.* **S., Partial.** See *S., Incomplete.* **S., Protovertebral,** division of the mesoblast on each side of the notochord into somites, or protovertebræ. **S., Regular,** segmentation in which the spheres are equal in size and symmetrically arranged. **S.-sphere,** one of the cells of an ovum during the early stages of segmentation. See *Blastosphere* and *Morula.* **S., Total.** See *S., Holoblastic.* **S., Unequal,** a variety of segmentation, in which, after cleavage of the ovum into four equal segments, the spheres of one pole are smaller and more numerous than those of the other.

Segmentellum (*seg-men-tel'-um*) [*segmentum*, a segment]. A blastula.

Segnitia, Segnities (*seg-nish'-e-ah, seg-nish'-e-ēz*) [L.]. Torpor; sluggishness, as of the bowels; languor.

Segond, Angles of. See *Angle.*

Segregate (*seg'-re-gāt*) [*segregare; se*, by one's self; *grex*, a flock]. To separate or set apart; separated from each other. **S. Fecundity.** See *Homogamy.*

Seguin's Signal-symptom. The warning of the beginning of the epileptic attack, consisting in affection of the muscle or muscles habitually first involved in the epileptic convulsion.

Seiage (*sa'-ahzh*) [Fr.]. In *massage*, a pressing with a to-and-fro movement, similar to the action of a saw. It is practised with the ulnar border of the hand, or the palmar side of the hand.

Seidlitz Powder (*sed'-litz*). Pulvis effervescens compositus. See *Potassium.*

Seignette Salt. Potassium and sodium tartrate, $KNaC_4H_4O_6 + 4H_2O$. It crystallizes in large prisms with hemihedral faces. See *Rochelle Salt.*

Seiler's Treatment. See *Treatment, Methods of.*

Seirospore (*si'-ro-spōr*) [σειρά, garment; σπορά, seed]. In biology, a special organ of non-sexual propagation occurring in some genera of *Algæ* (*Ceramiaceæ*).

Seizure (*sēz'-ūr*) [ME., *seisen*, to seize]. The sudden onset of a disease or an attack. In surgery, the grasping of a part to be operated upon.

Sejugous (*se-ju'-gus*) [*sex*, six; *jugum*, a yoke]. In biology, having six pairs of leaflets.

Sel [L.]. Salt. **S. alembroth,** a solution of mercuric chlorid and ammonium chlorid, each gr. x, in distilled water, Oj (Imperial). **S. amarum, S. amer,** magnesium sulphate. **S. ammonia, S. ammoniac, S. ammoniacum,** ammonium chlorid. **S. ammoniac martial,** ammonio-chlorid of iron. **S. ammoniacal nitreux,** ammonium nitrate. **S. de Chrestien,** gold and sodium chlorid. **S. commune, S. culinare,** sodium chlorid. **S. digestif,** potassium chlorid. **S. digestif de Vichy,** sodium bicarbonate. **S. d'Epsom,** magnesium sulphate. **S. de Figuier.** See *S. de Chrestien.* **S. de Glauber,** sodium sulphate. **S. de Perse,** sodium borate. **S. de saturne,** lead acetate. **S. secret de Glauber,** ammonium sulphate. **S. de Seidlitz,** magnesium sulphate. **S. de Seignette,** potassium and sodium tartrate. **S. de soude,** sodium carbonate. **S. végétale,** potassium tartrate.

Selection (*se-lek'-shun*) [*selectus*, p.p. of *seligere*, to choose]. In biology, the process of choosing from a number. **S., Artificial,** the artificial choice, definitely planned, of such forms of animals or plants as will by differentiation develop and reproduce given or desired characteristics. **S., Natural,** "the preservation of favorable individual differences and variations and the destruction of those which are injurious" (Darwin "*Survival of the fittest*"). **S., Physiologic,** "the selection of those varieties, the individuals of which are fertile among themselves, but sterile or less fertile with other varieties and with the parent stock. This has been called *segregate fecundity* by Gulick, and *homogamy* by Romanes" (De Varigny). **S., Sexual,** the selection by females, among varying and competing males, of the strongest or most attractive.

Selene (*se-lē'-ne*) [σελήνη, moon]. The white spot sometimes occurring on the finger-nails. Cf. *Lunula.*

Seleniasis (*sel-en-i'-as-is*) [σελήνη, moon]. Lunacy; epilepsy; somnambulism.

Seleniasmus (*sel-en-i-az'-mus*). See *Seleniasis.*

Selenic (*se-len'-ik*) [σελήνη, the moon]. A compound containing selenium combined directly with three atoms of oxygen. **S. Acid,** H_2SeO_4, a dibasic acid, resembling sulphuric acid in its properties.

Selenid (*sel'-en-id*) [σελήνη, the moon]. A compound containing selenium.

Selenion (*se-lēn'-e-on*). See *Selenium.*

Selenite (*sel'-en-it*) [σελήνη, moon]. 1. A salt of selenous acid. 2. A translucent form of calcium sulphate.

Selenium (*se-lē'-ne-um*) [σελήνη, moon]. Se = 79.4; usually bivalent, sometimes quadrivalent or hexavalent. A rare element, resembling sulphur in its properties. See *Elements, Table of.*

Selenodont (*sel-en'-o-dont*) [σελήνη, the moon; ὀδούς, tooth]. In biology, applied to such animals as have molar teeth with crescentic ridges on the crowns.

Selenoplegia (*sel-en-o-ple'-je-ah*) [σελήνη, moon; πλῆγή, stroke]. A kind of apoplexy said to be caused by exposure to the moon's rays.

Selenoplexia (*sel-en-o-pleks'-e-ah*). See *Selenoplegia.*

Selenotropic (*sel-en-o-trop'-ik*) [σελήνη, the moon; τρέπειν, to turn]. In biology, turning toward the moon; applied to growing parts of plants which are influenced in their direction of growth by the influence of the moon.

Self [ME., *self*, self]. Same; identical; own; personal. **S.-abuse.** See *Masturbation.* **S.-differentiation,** the theory that cells control themselves; that is to say, the fate of the cells is determined by forces situated within them, and not by external influences; a conception first propounded by His, and later demonstrated by Roux, Pflüger, Born, Weismann, and others. **S.-digestion.** See *Autodigestion.* **S.-fertilization,** in biology, fertilization of a flower by its own pollen. **S.-heal,** *Prunella vulgaris;* heal-all; a perennial herb growing in North America, Europe, and Asia. **S.-incasement,** a condition in which the small intestine is inclosed, as in a pouch, between the layers of the mesentery (J. S. Thatcher). **S.-infection,** the spread of infectious material from a circumscribed area to others or to the entire organism. **S.-inflation,** a process suggested by H. R. Silvester, by which a person in danger of drowning is to render himself buoyant. After having made a puncture in the mucous membrane of the mouth, at the reflection of the cheek from the lower jaw, air is to be forced into the subcutaneous tissue of the neck by vigorous blowing efforts, with the mouth and nose closed. **S.-limited,** a term applied to certain diseases, which even without treatment run a definite course within a given time. **S.-pollution.** See *Self-abuse.* **S.-repositor, Pneumatic,** a curved and bulbous glass tube used at bed-time for the reposition of the displaced uterus, the instrument being used by the patient, and operated by air-pressure. **S.-suggestion.** See *Autosuggestion.* **S.-suspension,** suspension of the body for the purpose of stretching or making extension on the vertebral column. See *Suspension.* **S.-s., Axillo-cephalic,** suspension by the axillæ and the head. **S.-s., Cephalic,** suspension by the head.

Selinum (*se-li'-num*) [σέλινον, a kind of parsley]. 1. *Carum petroselinum* of the ancients. 2. A genus of perennial herbs belonging to the *Umbelliferæ.*

Sella (*sel'-ah*) [L.]. A seat; a part having a shape like a seat or saddle. **S. turcica** (Turkish saddle), the pituitary fossa of the sphenoid bone, lodging the pituitary body.

Sellanders, Sellenders (*sel'-an-derz, sel'-en-derz*) [origin obscure]. A kind of eczema occurring on the tarsus of the horse. See *Mallenders.*

Selliform (*sel'-if-orm*) [*sella*, a saddle; *forma*, form]. In biology, saddle-shaped.

Selters, Seltzer (*sel'-terz, selts'-er*) [German]. 1. A place in Hesse-Nassau, Prussia, where there are gaseous springs containing chiefly carbonates and sulphates. 2. An abbreviated name for seltzer water, an acid-soda mineral water; the term is also applied to artificial seltzer water.

Selza Water. See *Seltzer.*

Sematic (*se-mat'-ik*) [σῆμα, a sign, mark, token]. In biology, applied to colors in mimicry, used as signals or warnings for repelling enemies by the indication of some unpleasant or dangerous quality. Cf. *Aposematic, Episematic, Allosematic.*

Semeiography (*se-me-og'-rā-fe*) [σημεῖον, sign; γράφειν, to write]. A descriptive treatise on the symptoms of disease.

Semeiology (*se-me-ol'-o-je*) [σημεῖον, sign; λόγος, discourse]. Same as *Symptomatology.*

Semeiosis (*se-me-o'-sis*) [σημεῖον, sign]. The study of symptoms as indications of disease.

Semeiotic (*se-me-ot'-ik*) [σημεῖον, sign]. Pertaining to semeiotics, or to symptoms.

Semeiotics (*se-me-ot'-iks*) [σημεῖον, sign]. The science of symptomatology.

Semelincident (*sem-el-in'-sid-ent*) [*semel*, once; *incidere*, to happen]. Happening only once; a qualification applied to certain diseases which, as a rule, occur but once in the same individual, as, *e. g.*, smallpox.

Semen (*se'-men*) [*serere*, to sow: *gen.*, *seminis*]. The fecundating fluid of the male, chiefly secreted by the testicles, composed of the liquor seminis, the seminal granules, and spermatozoa. For testing for semen in medico-legal examinations, see *Lassaigne's Test*, in *Tests, Table of.* **S. contra,** worm-seed. See *Santonica.* **S. multiplex.** Same as *Sporiderm.*

Semester (*se-mes'-ter*) [*semestris*, half yearly; *sex*, six; *mensis*, month]. A period of six months.

Semi- (*sem'-e-*) [*semi*, one-half]. A prefix to denote the half of anything.

Semiacid (*sem-e-as'-id*) [*semi*, half; *acidum*, acid]. Half acid.

Semiadherent (*sem-e-ad-he'-rent*) [*semi*, half; *adhærere*, to adhere]. In biology, having the lower half adherent, as a seed.

Semiaquatic (*sem-e-a-kwat'-ik*) [*semi*, half; *aqua*, water]. In biology, growing, or living close to the water, and having the capacity for existence either within it or out of it.

Semiarticulate (*sem-e-ar-tik'-u-lāt*) [*semi*, half; *articulus*, a joint]. Loose-jointed.

Semibulb (*sem'-e-bulb*) [*semibulbus*, half bulb]. Either half of the bulbus vestibuli of the corpus spongiosum of the clitoris.

Semicartilaginous (*sem-ik-ar-til-aj'-in-us*) [*semi*, half; *cartilago*, gristle]. Gristly; partially cartilaginous.

Semi-castration (*sem-e-kas-trā'-shun*) [*semi*, half; *castrare*, to cut]. The removal of one testicle.

Semicaudate (*sem-ik-aw'-dāt*) [*semi*, half; *cauda*, tail]. In biology, having a rudimentary tail.

Semicell (*sem'-is-el*) [*semi*, half; *cella*, a small room]. In biology, one of the halves into which a cell is nearly divided by constriction in the middle, as in *Desmidiaceæ.* Called also *half-cell.*

Semicephalus (*sem-is-ef'-al-us*). See *Anencephalus.*

Semicircular (*sem-e-sir'-ku-lar*) [*semi*, half; *circulus*, a circle]. Having the form of a half-circle. **S. Canals.** See *Canal.*

Semicircumference (*sem-e-sir-kum'-fer-ens*) [*semi*, half; *circumfere*, to carry around]. Half the circumference of a circle.

Semiconscious (*sem-ik-on'-shus*) [*semi*, half; *conscius*, knowing]. Half-conscious; partially conscious.

Semicordate (*sem-e-kor'-dāt*) [*semi*, half; *cor*, a heart]. Having the form of a lateral half of a heart.

Semicorneous (*sem-ik-or'-ne-us*) [*semi*, half; *corneus*, horny]. Partly horny.

Semicostiferous (*sem-ik-os-tif'-er-us*) [*semi*, half; *costa*, rib; *ferre*, to bear]. Having a costal demifacet.

Semicretin (*sem-e-kre'-tin*) [*semi*, half; *cretin*]. A person having a form of cretinism in which the rudiments of language have been developed. Intellection reaches only to the most ordinary bodily wants.

Semicupium (*sem-e-ku'-pe-um*) [*semi*, half; *cupa*, tub]. A half-bath, hip-bath, or sitz-bath.

Semiflexion (*sem-e-flek'-shun*) [*semi*, half; *flexion*, a flexion]. A posture half-way between flexion and extension.

Semi-floret (*sem-if-lo'-ret*) [*semi*, half; *flos*, flower]. In biology, a ligulate floret in *Compositæ*.

Semi-flosculous, Semi-flosculose (*sem-if-los'-ku-lus, sem-if-los'-ku-lōz*) [*semi*, half; *flosculus*, a little flower]. In biology, having all the florets ligulate in a head of *Compositæ*.

Semi-globose (*sem-e-glo'-bōz*) [*semi*, half; *globus*, a ball]. Hemispheric.

Semilunar (*sem-e-lu'-nar*) [*semi*, half; *luna*, moon]. Resembling a half-moon in shape. **S. Bone,** one of the carpal bones. **S. Cartilages,** two interarticulating cartilages of the knee. **S. Fold,** the conjunctival folding at the inner canthus. **S. Ganglia.** See *Ganglia*. **S. Notch,** a notch in the scapula through which the supra-scapular nerve passes. **S. Space of Traube,** that portion of the left inferior anterior thoracic region corresponding to the tympanitic resonance of the stomach. **S. Valves.** See *Valves*.

Semiluxation (*sem-e-luks-a'-shun*) [*semi*, half; *luxus*, a luxation]. Subluxation.

Semimembranosus (*sem-e-mem-bra-no'-sus*). See *Muscles, Table of.*

Semimembranous (*sem-e-mem'-bra-nus*) [*semi*, half; *membranosus*, like a membrane]. Formed partly of membrane.

Semi-metal (*sem-e-met'-al*). See *Metalloid.*

Semi-molecule (*sem-e-mol'-e-kūl*) [*semi*, half; *molecule*]. A radicle having in composition one-half the molecules it had in the free state.

Semi-mute (*sem'-e-mūt*) [*semi*, half; *mute*]. A person whose speech is imperfect by reason of impairment of the hearing. One who has lost his hearing by accident or disease after having acquired the use of articulate speech. Semi-mutes differ from deaf-mutes in having the ability to express themselves orally, and in their natural mode of thought, which is in words and not in gestures.

Semina (*sem'-in-ah*). Plural of *Semen*, *q. v.*

Seminal (*sem'-in-al*) [*semen*, seed]. Pertaining to the semen. **S. Cells.** See *Cell.* **S. Granules.** See *Granules.* **S. Tubes.** See *Tube.* **S. Vesicles.** See *Vesiculæ seminales.*

Semination (*sem-in-a'-shun*) [*seminatio*, a sowing]. The intromission of semen into the uterus. In biology, the production of seeds; also their dissemination.

Seminervosus (*sem-in-er-vo'-sus*). See *Semitendinosus.*

Seminiferous (*sem-in-if'-er-us*) [*semen*, seed; *ferre*, to carry]. Carrying semen. • **S. Scale,** in botany, the scale bearing the ovules in *Coniferæ*. **S. Tubules,** the small, convoluted canaliculi of the testicles. (See illustration in adjacent column).

Seminific (*sem-in-if'-ik*) [*semen*, semen; *facere*, to make]. Producing semen.

Seminulum (*sem-in'-u-lum*) [dim. of *semen*, seed]. A little seed; a spore.

Seminuria (*sem-in-u'-re-ah*) [*semen*, seed; *οὖρον*, urine]. The presence of semen in the urine.

Semiology (*se-me-ol'-o-je*). See *Semeiology.*

Semiotic (*se-me-ot' ik*). See *Semeiotic.*

Semiovate (*sem-e-o'-vāt*) [*semi*, half; *ovum*, ovum]. Having the form of a lateral half of the longitudinal section of an egg. The qualification may be applied to either flat or solid bodies.

Semioxidized (*sem-e-oks'-id-izd*) [*semi*, half; *ὀξὺς*, sharp]. Containing half the amount of oxygen for complete oxidization.

Semipalmate (*sem-e-pal'-māt*) [*semi*, half; *palma*, palm]. Having the toes or fingers half-webbed.

Semiplegia (*sem-ip-le'-je-ah*). See *Hemiplegia.*

Semiplume (*sem'-ip-lūm*) [*semi*, half; *pluma*, a small, soft feather]. In biology, a feather having a pennaceous rhachis and a plumulaceous web.

Semipronation (*sem-ip-ro-na'-shun*) [*semi*, half; *pronatus*, prone]. The assumption of a semiprone, or partly prone position; an attitude of semisupination.

Semiprone (*sem'-ip-rōn*) [*semi*, half; *pronus*, bent]. Half prone. **S. Posture.** See *Postures, Table of.*

Semiptosis (*sem-ip-to'-sis*) [*semi*, half; *πτωσις*, a falling]. Partial ptosis.

Semipupa (*sem-ip-u'-pah*) [*semi*, half; *pupa*, pupa: *pl.*, *Semipupæ*]. Same as *Pseudopupa* or *Propupa.*

Semisideratio (*sem-is-id-er-a'-she-o*). Synonym of *Hemiplegia.*

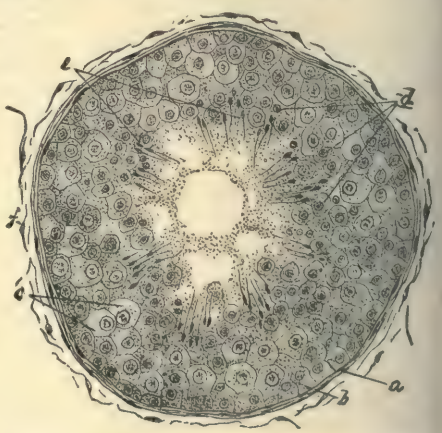
Semispeculum (*sem-is-pek'-u-lum*) [*semi*, half; *speculum*, a mirror]. An instrument for inspecting the bladder in lithotomy.

Semispinalis (*sem-is-pi-na'-lis*). See *Muscles, Table of.*

Semissis (*sem-is'-is*) [L.]. One-half.

Semisulcus (*sem-is-ul'-kus*) [*semi*, half; *sulcus*, a sulcus]. A name of various grooves, forming sinuses in the cranial bones.

Semisupination (*sem-is-u-pin-a'-shun*) [*semi*, half; *supinare*, to bend backward]. The assumption of a position half-way between supination and pronation.



Semita (*sem'-it-ah*) [*semita*, a narrow way, a path: *pl.*, *Semitæ*]. In biology, an ambulacra-like area bearing clubbed spines, in spatangoid sea-urchins.

Semitendinosus (*sem-it-en-din-o'-sus*). See *Muscles, Table of.*

Semitendinous (*sem-it-en'-din-us*) [*semi*, half; *tendo*, a tendon]. Partially tendinous.

Semitertian (*sem-it-er'-shan*) [*semi*, half; *tertius*, third]. Partly tertian and partly quotidian (applied to intermittent fevers).

Semolina (*sem-o- le'-nah*). See *Semolino.*

TRANSVERSE SECTION OF SEMINIFEROUS TUBULE FROM HUMAN TESTICLE.

a. Membrana propria. *b*. Zone of parietal cells. *c*. Mother cells undergoing division. *d*. Daughter-cells, or spermatoblasts. *e*. Partially-developed spermatozoa. *f*. Surrounding inter-tubular connective tissue. (*After Piersol.*)

Semolino (*sem-o-le'-no*) [It.]. A kind of coarse flour or grits prepared from hard wheat.

Semper's Method. A method of making dry preparations for exhibition or class-room purposes. It is especially adapted for the preservation and exhibition of dissections. The animal, *e. g.*, a mouse, is dissected so as to show the desired organs. It is then hardened by chromic acid; after hardening, it is removed and thoroughly washed in water. It is then

transferred from one to another of a series of alcohols, until it reaches 96 per cent. to 98 per cent., the object being to remove all the water. From the strong alcohol it is transferred to spirit of turpentine, where it remains until thoroughly impregnated, after which it is simply dried in the air, when it will be found to have a soft kid-like texture, not easily broken. The various organs can now be painted suitable colors and the preparation labeled for use.

Sempervirent (*sem-per-vi'-rent*) [*semper*, always; *virere*, to be green]. Evergreen.

Senary (*sen'-ar-e*) [*senarius*, consisting of six each]. In sixes.

Seneca Snake-root. See *Senega*. **S. Oil**, Petroleum (so-called because found near Lake Seneca).

Senecin (*sen'-es-in*) [*senecio*, groundsel]. A precipitate from a tincture of *Senecio gracilis;* diaphoretic, emmenagogue, febrifuge, pectoral, tonic. Dose 1 to 3 grains.

Senecio (*se-ne'-se-o*) [*senex*, an old man]. Groundsel, a genus of composite-flowered plants, said to contain 960 species, many of them medicinal. **S. aureus.** See *Life-root*. **S. gracilis**, a slender species, generally regarded as a variety of *S. aureus*. **S. jacobæa**, ragwort, or ragweed, tonic and astringent.

Senectus (*se-nek'-tus*) [*senex*, old]. Old age.

Senega (*sen'-e-ga*) [L.; *gen.*, *Senegæ*]. The root of *Polygala senega* (called also *Seneca* snake-root), with properties due to a glucosid, senegin (or polygalin), $C_{32}H_{54}O_{18}$. It is expectorant and diuretic; in large doses a gastro-intestinal irritant, and is useful in bronchitis, asthenic pneumonia, asthma, etc. **S., Abstractum.** Dose gr. v–x. Unof. **S., Ext., Fld.** Dose ♏x–xx. **S., Infus.** (B. P.) Dose ʒj–ij. **S., Syr.**, contains fld. ext. senega 200, ammonia-water 5, sugar 700, water q. s. Dose ʒj–ij. **S., Tinct.** (B. P.) Dose ʒj–ij.

Senegal-root (*sen'-e-gal-rūt*). The root of *Cocculus bakis*.

Senegin (*sen'-e-gin*) [*senega*, senega]. An amorphous glucosid obtained from *Senega*. It is soluble in water, making a frothy solution, and is sternutatory. It contains *sapogenin* and sugar.

Senescence (*se-nes'-ens*) [*senex*, old]. The condition or time of growing old. Senility.

Senile (*se'-nil*) [*senilis*, old]. Pertaining to or having the nature of old age. **Arcus senilis.** See *Arcus*. **S. Chorea.** See *Paralysis agitans*. **S. Gangrene.** See *Gangrene*.

Senility (*se-nil'-it-e*) [*senex*, old]. The weakness and decrepitude characteristic of old age.

Senn's Bone-plates. [After Nicholas *Senn*, surgeon.] Plates of decalcified bone used in intestinal anastomosis. **S.'s Test**, the introduction of hydrogen-gas into the bowel through the rectum, for the detection and localization of an abnormal opening.

Senna (*sen'-ah*) [Ar., *sena*, senna]. The leaflets of *Cassia acutifolia* and *C. angustifolia*. Senna contains a complex glucosid, cathartic acid ($C_{189}H_{192}N_2SO_{82}$), and other extractives. It is an excellent cathartic for children and infants. **S., American.** See *Cassia marilandica*. **S., Confectio**, senna 10, oil of coriander 5, cassia fistula 16, tamarind 10, prune 7, fig 12, sugar 55, water q. s. Dose ʒj–ij. Known as "Tamar Indien" and "Tropical Fruit Laxative." **S., Ext., Fld.** Dose ʒj. **S., Infus.**, (B. P.) Dose ʒj–ij. **S., Infus., Comp.**, "black draught," senna 6, manna, magnesium sulphate āā 12, fennel 2, water 100 parts. Dose ʒj–iij. **S., Mist., Comp.** (B. P.) Dose ʒj–ij. **S., Syr.**, senna 250, oil of coriander 5, alcohol 150, sugar 700, water q. s. Dose ʒss–ij. **S., Tinct.** (B. P.) Dose ʒj–iv.

Sennacrol (*sen'-ak-rol*) [Ar., *sena*, senna; *acris*, sharp]. A bitter principle obtained from senna.

Sennapicrin (*sen-ap-ik'-rin*) [Ar., *sena*, senna; πικρος, bitter]. An insoluble bitter principle obtained from senna.

Sennine (*sen'-in*) [after Nicholas *Senn*, surgeon]. A proprietary preparation described as a chemically pure product of boric acid and phenol. It is a fine, white powder, odorless, slightly astringent, and of sweetish taste. It is antiseptic, antizymotic, bactericidal, deodorant, and disinfectant.

Senocular (*sen-ok'-u-lar*) [*sex*, six; *oculus*, an eye]. In biology, having six eyes.

Sensation (*sen-sa'-shun*) [*sensatio; sentire*, to feel]. The cognizance or perception of an impression coming from an external source by means of the peripheral organs of sensation.

Sense (*sens*) [*sensus; sentire*, to feel]. The faculty of the nervous system whereby impressions of the external world are received by the mind. **Organs of the Senses** are those of touch, taste, smell, hearing, and sight. **S.-body**, a peripheral sense-organ. **S.-capsule**, the hollow cup-like receptacle of a peripheral sense-organ. **S.-club.** See *Rhopalium*. **S.-epithelium**, a tract of epithelium having some specialized function of sensation. **S.-filament**, the thread-like peripheral termination of a sensory nerve-fiber. **S.-organ**, the peripheral termination of a sensory nerve. **S.-scale.** See *Squama rhopalaris*. **S.-seta**, the bristle-like termination of a peripheral sensory nerve-fiber. **S.-shock**, a condition observed in hysteric women and overworked men, and occurring at the moment of waking from sleep. A sensation like an aura rises from the feet or hands, and, passing upward to the head, disappears in the sense of a blow or shock, or of a bursting in the head. It is of no serious significance. **S.-sinus**, one of the *antrarhopalaria;* a hollow containing a compound sense-organ, or *rhopalia*, *q. v.*

Sensibility (*sen-sib-il'-it-e*) [*sensibilitas*]. The capability of receiving and transmitting impressions, and of being conscious of them. **S., Organic**, the capability of transmitting and receiving impressions without being conscious of them (Bichat). **S., Range of.** See *Fechner's Law*. **S., Transference or Externalization of.** See *Sensitivization*.

Sensible (*sen'-sib-l*) [*sensibilis*]. Perceptible by the senses; capable of receiving an impression through the senses. Endowed with the sense of feeling.

Sensiferous (*sen-sif'-er-us*) [*sensus*, sense; *ferre*, to bear]. Conveying a sensation, or sense-impression.

Sensigenous (*sen-sij'-en-us*) [*sensus*, sense; *gignere*, to produce]. In biology, giving rise to a sensory impulse.

Sensitive (*sen'-sit-iv*) [*sensitivus*]. Capable of feeling; reacting to stimulus. **S. Dentine**, a hypersensitive condition of the dental structure of the teeth, due to distal irritation of the tubular fibrils.

Sensitiveness (*sen'-sit-iv-nes*) [*sentire*, to perceive]. In biology, responsive to external stimulus or irritation.

Sensitivity (*sen-sit-iv'-it-e*) [*sensitivus*, sensitive]. Acuteness of the perception, or discrimination of sensations; capacity of receiving sense-impressions.

Sensitivization (*sen-sit-iv-iz-a'-shun*) [*sensitivus*, sensitive]. A phenomenon, real or supposed, occurring during hypnotic sleep, in which by action upon objects or strata of the atmosphere these are seemingly endowed with power to affect the patient as if he himself were acted upon. This condition is called also *Externalization of Sensation*, *Transference of Sensibility*, etc.

Sensorial (*sen-so'-re-al*) [*sensorium*, the organ of sensation]. Pertaining to the sensorium or to sensory impressions.

Sensori-digestive (*sen'-so-re-di-jes'-tiv*) [*sensorius*, sensory; *digestivus*, digestive]. Pertaining to or concerned in sensation and digestion.

Sensori-motor (*sen'-so-re-mo'-tor*) [*sensus*, feeling; *motor*, mover]. Concerned in the phenomena of feeling and muscular contraction; both sensory and motor. **S. Centers,** sensory centers which are also motor, or are intimately associated with the motor centers.

Sensorium (*sen-so'-re-um*) [L.]. The common center of sensations. More especially that part of the brain that is the seat of sensation, in distinction from the centers of thought and motion. The mechanism of sensation considered *in toto*.

Sensori-volitional (*sen'-so-riv-o-lish'-un-al*) [*sensus*, sense; *volitio*, willing]. Pertaining to or concerned in sensation and volition.

Sensory (*sen'-so-re*) [*sentire*, to feel]. Pertaining to or conveying sense or sensation; having the quality of sensation. **S. Aphasia.** See *Aphasia*. **S. Nerves,** those that convey sensations or impressions from the periphery to their proper centers, being afferent in function, in distinction from motor nerves, which are efferent. Also, the nerves of the special senses. **S. Nerve-fiber,** a centripetal nerve-fiber conveying sensory impulses. The fibers of this kind may be: (1) **General,** conveying to the nerve-centers in the brain impulses of an indeterminate or general character; or (2) **Special,** conveying to the nerve-centers in the brain impulses that cause visual, auditory, gustatory, olfactory, tactile, or thermal sensations.

Sensualism (*sen'-su-al-izm*) [*sensus*, sense]. The condition or character of one who is controlled by the animal passions.

Sensus (*sen'-sus*) [L.]. Sense; feeling. **S. communis,** the state of the consciousness or sense of normal sensations at any one time. See *Cenesthesia*.

Sentient (*sen'-she-ent*) [*sentire*, *sentiens*, to feel]. Having sensation; conscious of feeling.

Sentisection (*sen-tis-ek'-shun*) [*sentire*, to feel; *sectio*, section]. Painful vivisection; vivisection of an animal not under the influence of anesthetics.

Sepal (*sep'-al*) [*sepalum*, sepal]. 1. One of the leaflets or divisions of the calyx of a flower. 2. In the anatomy of the lower animals, certain thin, leaf-like organs are also called *sepals*.

Sepalody (*sep'-al-o-de*) [*sepal*, fr. *separ*, different, separate]. Reversion of petals into sepals.

Separating and Closing. Certain concentric Swedish movements intended to develop the chest and other parts of the body.

Separator (*sep'-ar-a-tor*). An instrument for separating the teeth.

Separatorium (*sep-ar-a-to'-re-um*) [*separare*, to separate]. In pharmacy, a strainer. In surgery, an instrument for separating the pericranium from the skull.

Sepia (*se'-pe-ah*) [σηπία, the cuttle-fish]. 1. The ink or black secretion of the common cuttle-fish; used as a pigment. 2. See *Sepiost*.

Sepicolous (*sep-ik'-o-lus*) [*sepes*, a hedge; *colere*, to inhabit]. In biology, growing in hedge-rows.

Sepiost (*se'-pe-ost*) [σήπια, the cuttle-fish; ὀστέον, bone]. In biology, the endoskeleton of the cuttle-fish (*Sepia*); cuttle-fish bone, sepium, is sometimes prescribed as an antacid and used in dentifrices.

Sepium (*se'-pe-um*) [σήπιον, the bone of the cuttle-fish]. Same as *Sepiost*.

Sepometer (*se-pom'-et-er*) [σήπειν, to putrefy; μέτρον, measure]. An apparatus for detecting organic impurities in the air.

Sepsin (*sep'-sin*) [σήπειν, to make rotten]. A poisonous, nitrogenous, crystallizable substance obtained by Bergmann and Schmiedeberg (1868) from the yeast of putrefying beer. See *Ptomains, Table of*.

Sepsis (*sep'-sis*) [σῆψις]. A toxic or putrefactive condition. Infection by pathogenic germs. Decay.

Septa (*sep'-tah*). Plural of *Septum*.

Septal (*sep'-tal*) [*septum*, septum]. Pertaining to a septum. **S. Gland.** See under *Gland*.

Septan (*sep'-tan*) [*septem*, seven]. Recurring on the seventh day. A malarial fever in which the paroxysms occur every seventh day.

Septate (*sep'-tāt*) [*septum*, a fence]. Possessing septa or partitions.

Septemia, Septæmia (*sep-te'-me-ah*). See *Septicemia*.

Septenate (*sep'-ten-āt*) [*septeni*, seven apiece]. In biology, having seven parts or the parts in sevens.

Septic (*sep'-tik*) [σηπτικός; σήπειν, to putrefy]. Relating to putrefaction. **S. Infection,** infection with pathogenic microörganisms. **S. Intoxication,** absorption of septic matter. **S. Pestilence.** Synonym of the *Plague*, *q. v.*

Septicemia, Septicæmia (*sep-tis-e'-me-ah*) [σηπτός, putrid; αἷμα, blood]. A condition induced by the absorption of septic products. *Pyemia* is septicemia plus the formation of secondary or embolic abscesses. **S., Phlebitic.** See *Pyemia*.

Septicemic or **Septicæmic** (*sep-tis-e'-mik*) [σηπτός, putrid; αἷμα, blood]. Of the nature of, affected with, or pertaining to, septicemia.

Septicidal (*sep-tis-i'-dal*) [*septum*, a fence; *cædere*, cut]. In biology, applied to that form of capsular dehiscence in which the opening takes place along the line of junction of the carpels. Cf. *Loculicidal*.

Septicin (*sep'-tis-in*) [σηπτός, putrid]. A ptomain resembling quinin and obtained from decaying flesh. See *Ptomains, Table of*.

Septicity (*sep-tis'-it-e*) [σηπτός, putrid]. Septic quality.

Septico-pyemia (*sep-tik-o-pi-e'-me ah*) [σηπτός, putrid; πυον, pus; αἷμα, blood]. The condition of combined septicemia and pyemia; septic and purulent infection. **S., Spontaneous,** Leube's term for a form of pyemia which comes on without obvious cause, or is perhaps preceded by a fall or a slight skin-wound, and is attended with pain and tenderness in joints and muscles, ecchymosis of the conjunctiva, vesicles in the skin containing blood, high temperature, swelling of the spleen, albuminous urine, delirium, cramps, involuntary discharges and coma. It is called *cryptogenetic septicemia* by Jürgensen.

Septiferous (*sep-tif'-er-us*) [*septum*, a fence; *ferre*, to bear]. In biology, having a septum. Same as *Septate*.

Septifolious (*sep-tif-o'-le-us*) [*septem*, seven; *folium*, a leaf]. In biology, having seven leaves.

Septiform (*sep'-tif-orm*) [*septum*, an inclosure; *forma*, form]. Having the form or function of a septum.

Septifragal (*sep-tif'-ra-gal*) [*septum*, an inclosure; *frangere*, to break]. In biology, applied to that form of capsular dehiscence in which the opening takes place lengthwise along the middle of each carpel.

Septile (*sep'-til*) [*septum*, an inclosure]. In biology, pertaining to septa.

Septin (*sep'-tin*) [σηπτός, putrid]. A poisonous substance developed as the ultimate product of putrid fermentation of organic matter. According to Richardson, a contagious principle derived from any animal secretion.

Septivalent (*sep - tiv' - al - ent*) [*septem*, seven; *valens*, *valere*, to be worth]. Having an atomicity of seven.

Septochemia (*sep-to-ke'-me-ah*) [σῆψις, sepsis; χημεία, chemistry]. Septic action.

Septodiarrhea (*sep-to-di-ar-e'-ah*) [σήψις, sepsis; *diarrhea*]. Septic diarrhea.

Septodysenteria (*sep-to-dis-en-ter'-e-ah*) [σήψις, sepsis; *dysentery*]. Septic dysentery.

Septometer (*sep-tom'-et-er*) [*septum*, septum, or σηπτός, putrid; μετρον, measure]. 1. An instrument for determining the thickness of the nasal septum. 2. An apparatus for determining organic impurities in the air.

Septon (*sep'-ton*) [σῆψις, sepsis]. A hypothetic ferment supposed to cause a contagious disease.

Septonasal (*sep-to-na'-zal*) [*septum*, septum; *nasus*, nose]. Pertaining to the nasal septum.

Septo-pneuma (*sep-to-nu'-mah*) [σηπτός, putrid; πνεῦμα, air]. A microörganism said to have been found in cemetery-air, and to cause typhoid symptoms in the living.

Septopyra (*sep-to-pi'-rah*). Synonym of *Septicemia*.

Septulate (*sep'-tu-lāt*) [*septulum*, a little partition]. In biology: 1. Having a small septum or septa; 2. Having imperfect or false septa.

Septulum (*sep'-tu-lum*) [L.: *pl.*, *Septula*]. A small septum.

Septum (*sep'-tum*) [*sepire*, to hem in: *pl.*, *Septa*]. A lamina or division-wall of bone, cartilage, or membrane; a partition, as the membrane or wall which separates adjacent loculi in an ovary. **S. auricularum**, the septum between the two auricles of the heart. **S. cerebelli**, the falcula. **S. cerebri**, the falx. **S. cordis**, the wall between the two sides of the heart. **S. crurale**, the layer of areolar tissue closing the femoral ring. **S. linguæ**, the vertical mesal partition of the tongue, which divides the muscular tissue into two halves. **S. lucidum**, that between the lateral ventricles of the brain. **S. of the Nose**, that between the two nasal fossæ. **S., Pectiniform**, that between the lateral portions of the corpora cavernosa of the penis. **S., Recto-vaginal**, the tissue forming the partition between the rectum and the vagina. **S. scroti**, the septum dividing the scrotum into two cavities for the two testes. **S., Subarachnoid**. See *Space, Subarachnoid*. **S. of the Tongue**, a vertical layer of fibrous tissue extending the entire length and depth of the middle line of the tongue. **S. transversum**, the diaphragm, and also the tentorium cerebelli. **S. ventriculorum**, the septum between the two ventricles of the heart.

Septuplet (*sep'-tu-plet*) [*septem*, seven]. One of seven offspring born from a single gestation.

Sepulture (*sep'-ul-tūr*) [*sepultura; sepelire*, to entomb]. The disposal of the dead by burial.

Sequel (*se'-kwel*). See *Sequela*.

Sequela (*se-kwel'-ah*) [L.: *pl.*, *Sequelæ*, that which follows]. The consequence or abnormal condition following an injury or the abatement of a disease; any diseased or abnormal condition that follows an attack of disease or an injury.

Sequence (*se'-kwens*) [*sequentia*]. 1. The order of occurrence, as of symptoms. 2. A sequela.

Sequential (*se-kwen'-shal*) [*sequentia*]. Occurring as a sequence, as sequential insanity.

Sequestral (*se-kwes'-tral*) [*sequestrum*, sequestrum]. Pertaining to, or of the nature of, a sequestrum.

Sequestration (*se-kwes-tra'-shun*) [*sequestratio*, a sequestration]. 1. The formation of a sequestrum. 2. The isolation or seclusion of lunatics or of persons suffering from contagious disease.

Sequestrectomy (*se-kwes-trek'-to-me*) [*sequestrum*, sequestrum; ἐκτομή, excision]. Excision of a sequestrum.

Sequestrotomy (*se-kwes-trot'-o-me*) [*sequestrum*, sequestrum; τομή, section]. A cutting operation for the removal of a sequestrum.

Sequestrum (*se-kwes'-trum*) [*sequestrare*, to separate. *pl.*, *Sequestra*]. A detached or dead piece of bone within a cavity, abscess, or wound. **S., Primary**, that entirely detached and demanding removal. **S., Secondary**, one that is partially detached, and that unless very loose may be pushed into place. **S., Tertiary**, cracked or partially detached and remaining firmly in place.

Seralbumin (*sēr-al'-bu-min*) [*serum*, serum; *albumen*, albumin]. Serum-albumin; the albumin found in the blood, in distinction from that of the egg, *ovalbumin*.

Serempion (*se-rem'-pe-on*) [W. Ind.]. A form of epidemic measles encountered in the West Indies, and causing great mortality, especially among children.

Serene-drop (*se-rēn'-drop*). See *Gutta serena*.

Serial (*se'-re-al*) [*series*, a succession]. Following in regular order; occurring in rows. **S. Sections**, anatomic or microscopic sections made in consecutive order. **S. Symmetry**, in biology, the resemblance of metameres, as distinguished from bilateral symmetry, the resemblance of parameres, or radial symmetry, the resemblance of actinomeres.

Seriate (*se'-re-āt*) [*seriare*, to arrange in a series]. In biology, to arrange in a series or connected sequence.

Sericeous (*se-ris'-e-us*) [σηρικός, silken]. With a pubescence of very fine, silky hair.

Sericeps (*ser'-is-eps*) [σηρικός, silken; *forceps*, forceps]. A device made of loops of ribbon, used in place of the forceps in making traction upon the fetal head.

Sericin (*ser'-is-in*) [σηρικός, silken]. Silk gelatin.

Sericission (*ser-is-ish'-un*) [σηρικός, silken; *scindere*, to cut]. The cutting of tissues by means of a thread.

Sericterium (*ser-ik-te'-ri-um*) [σηρικός, silken: *pl.*, *Sericteria*]. In biology, the spinning-gland, or silk-gland, of an insect.

Sericulture (*ser'-ik-ul-chur*) [σηρικός, silken; *cultura*, culture]. The rearing of silk-worms for their silk.

Sericum (*ser'-ik-um*) [σηρικός, silken]. Silk (*q. v.*). Sericum was formerly much prescribed as a cordial, tonic, nervine, and as a restorative of the memory, reason, and reproductive power. It was an ingredient of various electuaries.

Series (*se'-re-ēz*) [L.]. A succession or chain of similar parts, or activities. **S. dentium**, a row of teeth. **S., Numbering Parts in**, the rule almost universally followed is to commence with the part at the proximal, or at the cephalic aspect, *e. g.*, the most cephalic vertebra (atlas) is number one. The shoulder-girdle is the proximal segment of the pectoral limb.

Serifluxus (*se-rif-luks'-us*) [*serum*, serum; *fluxus*, flow: *pl.*, *serifluxus*]. Any serous or watery discharge, or a disease characterized by such a discharge.

Serin (*ser'-in*), $CH_2(OH).CH(NH_2).CO_2H$. *Amidoglycerol*, obtained by boiling serecin with dilute sulphuric acid, H_2SO_4. It forms hard crystals, soluble in water, but insoluble in alcohol and ether.

Seringos (*ser-in'-gōs*). A form of suppurative dysentery, peculiar to South Africa.

Serious (*sē'-re-us*) [*serius*, grave]. Applied to such morbid conditions or symptoms as indicate a grave prognosis.

Sero- (*se'-ro-*) [*serum*, serum]. A prefix denoting connection with or relation to serum. **S.-cystic**, containing cysts filled with serum. **S.-fibrinous**, constituted of both serum and fibrin. **S.-gelatinous**, having the nature of both serum and gelatin. **S.-purulent**, pertaining to or being of the nature of a combination of serum and pus. **S.-pus**, a fluid which consists of serum and pus. **S.-sanguineous**, having

the nature of both serum and blood. **S.-synovial,** having the characters of both serum and synovia.

Serodermatosis (*se-ro-der-mat-o′-sis*) [*serum*, serum; δέρμα, skin; νόσος, disease]. A skin-disease characterized by serous effusion into the tissues of the skin.

Serodermitis (*se-ro-der-mi′-tis*) [*serum*, serum; δέρμα, skin; ιτις, inflammation]. An inflammatory skin-affection attended with serous effusion.

Sero-lactescent (*se-ro-lak-tes′-ent*) [*serum*, serum; *lactis*, milk]. Having the characters of both serum and milk. The secretion of Montgomery's glands is said to be serolactescent.

Serolin (*ser′-o-lin*) [*serum*, serum; *oleum*, oil]. A fatty constituent of blood occurring in small amount, and the nature of which is undetermined.

Sero-mucous (*se-ro-mu′-kus*) [*serum*, serum; *mucus*, mucus]. Having the nature of or containing both serum and mucus.

Serophthisis (*se-roff′-this-is*) [*serum*, serum; φθίσις, a wasting]. An insufficient proportion of serum in the blood. **S., Endemic Pernicious.** Synonym of *Beriberi*.

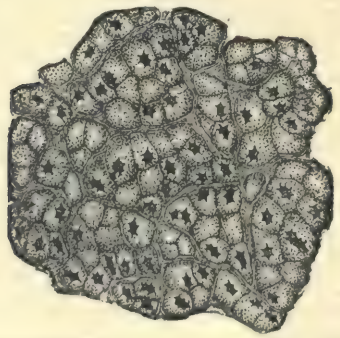
Sero-pneumothorax (*se-ro-nu-mo-thō′-raks*) [*serum*, serum; πνευμα, air; θώραξ, thorax]. Pleurisy with serous effusion, associated with pneumothorax.

Serosa (*se-ro′-sah*) [*serum*, serum]. The delicate membrane of connective tissue, lining closed cavities of the body. A serous membrane.

Sero-serous (*se-ro-se′-rus*) [*serum*, serum]. Pertaining jointly to two or more serous membranes.

Serosity (*se-ros′-it-e*) [*serum*, serum]. The quality of being serous; a serous fluid not the true secretion of serous membranes.

Sero-sublimate Gauze (*se-ro-sub′-lim-āt gawz*). See *Listerian Method*.



Sero-synovitis (*se-ro-si-no-vi′-tis*) [*serum*, serum; *synovitis*]. A synovitis accompanied or marked by an increase of the synovial fluid of the joint.

Sero-therapy (*se-ro-ther′-ap-e*) [*serum*, serum; θεραπεῖα, therapy]. The whey-cure. See, also, *Serum-therapy*.

Serotina (*ser-o-ti′-nah*). The portion of the decidua that eventually becomes the site of the placenta. See *Decidua serotina*.

Serotinous (*ser-ot′-in-us*) [*serotinus*, late]. In biology, coming late, or comparatively late in the season.

Serous (*se′-rus*) [*serum*, serum]. Pertaining to, characterized by, or of the nature of serum. **S. Gland,** a

RESTING SEROUS GLAND, RABBIT. (*From Stirling.*)

gland secreting serum. See *Salivary Gland*. **S. Membrane.** See *Membrane*.

Serpens (*ser′-penz*) [L.]. Serpentine, sinuous; creeping. **S., Ulcus,** a fistulous ulcer; a sinuous ulcer of the cornea.

Serpentaria (*ser-pen-ta′-re-ah*) [L.]. Virginia Snake-root. The roots of *Aristolochia serpentaria*, and *A. reticulata*. Its properties are due to a volatile oil, a camphor-resin, and a bitter extractive. It is a stimulant, tonic, and diaphoretic, promoting appetite and digestion. It is used mainly as a vehicle for other medicines. **S., Ext., Fld.** Dose ♏x–xxx. **S., Infus.** (B. P.) Dose ʒj–ij. **S., Tinct.,** 10 per cent. in strength. Dose ʒss–ij.

Serpentine (*ser′-pen-tēn*) [*serpens*, serpent]. Sinuous. Having a snake-like form or movement.

Serpent-poison (*ser′-pent-poi′-zn*). See *Echidnin*.

Serpiginous (*ser-pij′-in-us*) [*serpigo*, ringworm]. Resembling serpigo. Also, applied to such skin diseases as move or creep progressively from one part to another. **S. Ulcer,** one that changes its seat, or seems to creep from one part to another.

Serpigo (*ser-pi′-go*) [L.]. Ringworm. See *Tinea*.

Serra (*ser′-ah*) [L., a saw]. In biology, a saw or saw-like structure. **S. salvia,** mountain sage, an herb of the U. S., introduced as a substitute for quinin in the treatment of periodic fevers. Also of service in rheumatism, scarlet fever, and diphtheria. Dose of the fluid extract ʒj–ij. Unof.

Serrate (*ser′-āt*) [*serra*, a saw]. Provided with sharp teeth or projections directed forward like the teeth of a hand-saw.

Serratiform (*ser-at′-if-orm*) [*serra*, a saw; *forma*, a form]. Same as serrated.

Serration (*ser-a′-shun*) [*serra*, a saw]. In biology, the state or condition of being serrate. A tooth of a serrate border; a set of serrate processes.

Serratus (*ser-a′-tus*). See *Muscles, Table of*.

Serre-fine (*sār-fēn′*) [Fr.]. A small suture used in accurate apposition of the lips of a wound.

Serre-nœud [Fr.]. An instrument used in ligation.

Serres, Angle of. See *Angle*. **S., Glands of.** See *Gland*.

Serriped (*ser′-ip-ed*) [*serra*, a saw; *pes*, foot]. In biology, having serrated feet, as certain insects.

Serrula (*ser′-u-lah*) [dim. of *serra*, a saw: *pl.*, *Serrulæ*]. In biology, one of the paired appendages placed on either side of the copula of the Mud fish (*Amia*) and covered by the operculum.

Serrulate (*ser′-u-lāt*) [*serrula*, dim. of *serra*, a saw]. Minutely notched or serrated.

Sertoli's Cells. The cells in the testicles which give origin to the spermatoblasts. **S.'s column,** the long column or supporting cell holding the spermatozoa together and formed by the breakdown of a mass of daughter-cells in the seminiferous tubules; identical with Merkel's *Stützzellen*, La Vallette's *Spermatogonien*, and Swaen and Masquelin's *Cellules folliculaires*.

Serum (*se′-rum*). The yellowish fluid separating from the blood after the coagulation of the fibrin. See *Blood*. **S.-albumin,** a native albumin or proteid constituent of the human body, especially of the blood, differing from egg-albumin in several respects. It is changeable into syntonin or acid-albumin by dilute hydrochloric acid, and by dilute alkalies into alkali-albuminate. **S.-globulin.** See *Paraglobulin*. **S. lactis,** whey. **S.-lutein,** the pigment contained in the serum from the blood of most animals. Serum-lutein is bleached by the action of light. **S.-therapy:** 1. The treatment of disease (as tetanus) by injections of sterilized blood-serum from immune animals. 2. See *Whey-cure*.

Serumuria (*se-rum-u′-re-ah*). See *Albuminuria*.

Sesame (*ses′-am-e*). See *Sesamum*. **S., Oleum,** Benné Oil, a fixed oil expressed from the seeds of *Sesamum indicum*, or Benné plant. It resembles olive-oil in composition and properties and is employed mainly as a hair-oil.

Sesamoid (*ses'-am-oid*) [*σήσαμον*, a grain; *εἶδος*, form]. Resembling a grain. **S. Bones**, small bones (cartilaginous in early life) developed in tendons submitted to much pressure.

Sesamoiditis (*ses-am-oi-di'-tis*) [*σήσαμον*, a grain; *εἶδος*, like; *ιτις*, inflammation]. Inflammatory disease of the sesamoid bones of the fetlock of the horse.

Sesamum (*ses'-am-um*) [*σήσαμον*; *gen.*, *Sesami*]. A genus of old-world plants, chiefly African. **S. orientale** (or **S. indicum**) is widely cultivated for the oil of its seeds; called also *benné*, *til*, etc. See *Sesami*, *Oleum*.

Sesqui- (*ses'-kwe-*) [L., one and one-half]. A prefix denoting one and one-half.

Sesquialter (*ses-kwe-al'-ter*) [*sesqui*, one-half more; *alter*, another]. In biology, a large spot with a smaller one in the center; a sesquiocellus.

Sesquibasic (*ses-kwe-ba'-sik*) [*sesqui-*, one-half more; *βασις*, base]. Applied to salts formed from a tribasic acid by the replacement of three atoms of hydrogen by two of a basic element or radicle.

Sesquiocellus (*ses-kwe-o-sel'-us*) [*sesqui*, one-half more; *ocellus*, a little eye: *pl.*, *Sesquiocelli*]. In biology, a large spot with a smaller one in the center of it; a sesquialter.

Sesquioxid (*ses-kwe-oks'-id*) [*sesqui-*, one-half more; *ὀξις*, acid]. A compound of oxygen and another element, containing three parts of oxygen to two of the other element. **S. of Iron**, ferric oxid, a salt of iron having the composition Fe_2O_3.

Sesquisalt (*ses'-kwe-sawlt*) [*sesqui-*; ME., *salt*, salt]. A salt which contains one and one-half times as much of a given radicle as a protosalt.

Sessile (*ses'-il*) [*sessilis*, *sedere*, to sit]. Attached by a broad base; not pedunculated; *e. g.*, a *sessile* tumor. In biology, not stalked; inserted directly on the axis, as when a leaf-blade is attached directly to a stem. **S.-eyed**, in biology, having eyes without stalks.

Seta (*se'-tah*) [*seta*, a bristle: *pl.*, *Setæ*]. In biology, a stiff, stout, bristle-like appendage; a chæta, vibrissa.

Setaceous (*se-ta'-se-us*) [*seta*, a hair, a bristle]. In biology, bristly, bristling, bristle-shaped.

Setaceum (*se-ta'-se-um*). See *Seton*.

Setiform (*se'-tif-orm*) [*seta*, a bristle; *forma*, form]. Bristle-like in shape.

Setigerous, or Setiferous (*se-tij'-er-us*, *se-tif'-er-us*) [*seta*, bristle; *gerere* or *ferre*, to bear]. In biology, bearing bristles or stiff hairs.

Setiparous (*se-tip'-ar-us*) [*seta*, a bristle; *parere*, to bear]. In biology, producing bristles or setæ, *e. g.*, certain glands.

Setireme (*se'-tir-ēm*) [*seta*, a bristle; *remus*, an oar]. In biology, applied to the leg of an aquatic insect or other animal when beset with setæ.

Seton (*se'-ton*) [*seta*, a bristle]. 1. A thread, or skein drawn through a fold of the skin, so as to maintain an issue. 2. A sinus kept from healing by the introduction and drawing through it of a thread. **S.-needle**, a needle used in passing a seton through the skin.

Setschenow's Inhibitory Center. A hypothetic cerebral mechanism for the inhibition of reflex movements. It is supposed to be located in the corpora quadrigemina and the oblongata.

Setula (*set'-u-lah*) [dim. of *seta*, a bristle: *pl.*, *Setulæ*]. A diminutive bristle.

Seven (*sev'-n*) [ME., *seven*, seven]. A numeral. **S.-bark**, the plant *Hydrangea arborescens*. See *Hydrangea*. See also *Nine-bark*. **S.-day Fever.** Synonym of *Relapsing Fever*. **S.-days' Disease.** Synonym of *Trismus*.

Sevum (*se'-vum*) [L.: *gen.*, *Sevi*]. Suet. The adipose tissue or fat from the abdomen of the sheep, strained and clarified. It is soluble in benzine and ether, and consists mainly of stearin, with a small percentage of palmitin and olein. It is used in the preparation of ointments and liniments.

Sewage (*su'-āj*) [ME., *sewer*, a canal]. The heterogeneous substances constituting the excreta and waste matter of domestic economy and the contents of drains. It consists mainly of putrescent animal and vegetable tissues, fecal matter, and urine—the latter in a state of ammoniacal fermentation—mixed with water or dissolved in it. In the process of fermentation, marsh-gas, ammonia, hydrogen sulphid, and other gases are freely given off, and as these are more or less soluble in water, an ordinary water-trap only partially prevents their passage. In addition, the constituents of the solution are such as to form an excellent culture-fluid for numerous pathogenic microbes, especially those constituting the contagium of cholera, typhoid fever, and similar diseases. **S.-farming**, use of sewage as a manure. **S.-fungus.** See *Beggiatoa alba* under *Bacteria*, *Synonymatic Table of*.

Sewer (*su'-er*) [ME., *sewer*, a canal]. A canal for the removal of sewage. **S.-air Throat**, acute tonsillitis. **S.-gas**, the mixture of air, vapors, and gases, which emanates from sewers. It varies greatly in respect to its pathogenic qualities. **S.-g. Pneumonia.** See *Pneumonia*.

Sewerage (*su'-er-āj*) [ME., *sewer*, a canal]. The collection and removal of sewage.

Sewing Spasm. See *Spasm*.

Sex- (*seks*) [L.]. A numeral used as a prefix, meaning six.

Sex (*seks*) [*sexus*, also *secus*, sex]. In biology, the state or condition of being either male or female. See *Law*, *Kofacker-Sadler's*.

Sexdigital, Sexdigitate (*seks-dij'-it-al*, *seks-dij'-it-āt*) [*sex*, six; *digitus*, a finger]. Having six fingers or six toes.

Sexdigitism (*seks-dij'-it-izm*) [*sex*, six; *digitus*, finger]. The condition of having six digits on a hand or foot.

Sexiferous (*seks-if'-er-us*) [*sex*, six; *ferre*, to bear]. Having sexual organs.

Sextan (*seks'-tan*) [*sex*, six]. A malarial fever in which the paroxysms occur every sixth day.

Sextuplet (*seks-tūp'-let*) [*sex*, six]. One of six offspring from a single gestation.

Sexual (*seks'-u-al*) [*sexus*, sex]. Pertaining to sex. **S. Bondage**, the dependence of one person upon another of the opposite sex that is abnormal but not perverse. **S. Diseases**, diseases of the sexual organs. **S. Intercourse**, copulation. **S. Inversion**, a variety of sexual perversion in which there is an abnormal liking for a person of the same, instead of for one of the opposite sex. **S. Metamorphosis**, a variety of sexual perversion in which the individual has the tastes and feelings and assumes the dress and habits of the opposite sex. **S. Selection.** See *Evolution*.

Sexualia (*seks-u-a'-le-ah*). See *Gonades*.

Sexuality (*seks-u-al'-it-e*) [*sexus*, sex]. The collective differences which in an individual make one male or female.

Sexually (*seks'-u-al-e*) [*sexus*, sex]. In a sexual manner.

Sexvalent (*seks-va'-lent*) [*sex*, six; *valere*, to be worth]. Having an atomicity of six.

Shab (*shab*). See *Scab*.

Shackle (*shak'-l*) [ME., *schakkyl*, shackle]. Something that hinders or confines. **S.-joint**, a variety of articulation formed by passing a bony ring of one part through a perforation of another part. It is seen in the exoskeleton of some fishes. **S.-vein**, a vein of the horse, probably the median antebrachial, from which blood was formerly abstracted.

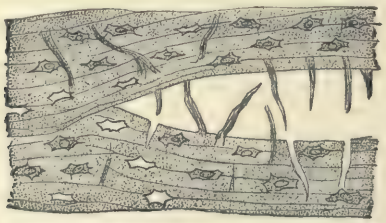
Shadow (*shad′-o*) [ME., *schadowe*, shadow]. A phantom-cell, or skeletonized blood-cell, formed by the removal of the hemoglobin from a red corpuscle. **S.-test.** See *Retinoscopy*.

Shaft [ME., *shaft*, shaft]. The trunk of any columnar mass, especially the diaphysis of a long bone.

Shakes (*shāks*) [ME., *shaken*, to shake]. A popular designation for *Ague*.

Shaking (*sha′-king*) [ME., *shaken*, to shake]. A passive Swedish movement used in the treatment of nervous affections. **S. Cure**, the treatment of disease by a shaking or vibratory movement, advocated by Charcot in paralysis agitans, by means of a vibrating arm-chair. **S. Palsy.** See *Paralysis agitans*.

Shale (*shāl*) [G., *schale*, a scale]. Clay with a fissile structure. **S. Naphtha.** See *Photogene*. **S. Oil.** See *Benzine*.



Shampoo (*sham-poo′*) [Hind., *tshampna*, shampoo]. 1. Synonym of *Massage*. 2. To lather, rub, or wash the head.

Shampooing (*sham-poo′-ing*) [shampoo]. The performance of massage with the application of a liniment or other medicinal substance, and also in connection with the Turkish bath.

Shank [ME., *shanke*, the bone of the leg]. The leg from the knee to the ankle; the tibia or shin-bone.

Shark [κάρχαρος, jagged]. One of a large group of sea-fishes constituting the order, *Squalidæ*. **S.-oil**, an oil prepared from the livers of various species of shark. It is the lightest of the fixed oils, the specific gravity ranging from .865 to .876. It is used in the adulteration of cod-liver oil and for tanning.

Sharpey's Perforating Fibers. Transverse or perpendicular periosteal fibers, most numerous in the superficial lamellæ of spongy bones; they are also present

SHARPEY'S PERFORATING FIBERS. (*From Stirling.*)

in the interstitial lamellæ of other bones, transfixing the lamellæ. Kölliker recognized a smaller, soft, uncalcified, and a larger, partly calcified, variety.

Shavegrass (*shāv′-gras*). See *Scouring Rush*.

Shaven-beard Appearance. A peculiar appearance of the enlarged intestinal glands in typhoid fever. They are dark-red or reddish-gray in color, and marked with fine white striations.

Shearing (*sher′-ing*) [ME., *sheren*, to clip]. 1. The overlapping of the cranial bones of the fetus during its passage through the pelvis. 2. In biology, the result of attrition of the incisorial region of the lower jaw against the front of the upper jaw in aged persons who have lost their teeth. Shearing takes place in proportion as the upper jaw at its anterior arc is beaked, and when present the articular surface of the condyloid process is invariably at the anterior part. (Harrison Allen.)

Shears (*shērz*) [ME., *sheres*, shears]. A large pair of scissors. **S., Bandage.** Strong shears for cutting bandages, usually bent at an angle.

Sheath (*shēth*) [ME., *shethe*, sheath]. An envelop; a covering. In anatomy, applied to the coverings of arteries, muscles, nerves, fascia, etc. **S., Arachnoidean**, a delicate partition lying between the *pial sheath* and the *dural sheath* of the optic nerve. **S., Axis-cylinder.** See *Huxley's Layer*. **S., Capillary**, or **S., Circumvascular**, a wide lymphatic tube surrounding some of the smallest blood-vessels. **S., Cellular.** See *Epineurium*. **S., Cortical**, the bast-bundles. **S., Dentinal**, the structure lining the dentinal canals. **S., Dural**, a strong fibrous membrane forming the external investment of the optic nerve. See *Dura*. **S., Femoral.** See *Femoral*. **S., Fibril**, a sheath formed of connective-tissue fibrils and surrounding individual nerve-fibers. **S. of Henle**, an attenuated extension of the perineurium investing the fibers composing funiculi of a nerve-trunk; it consists of a delicate fibrous envelop lined with endothelial plates, which in some cases alone represent the entire sheath. **S., Huxley's.** See *Huxley's Layer*. **S., Lamellar.** See *Perineurium*. **S., Leaf.** See *Vagina*. **S. of Mauthner**, a protoplasmic investing membrane beneath the neurilemma and the nodes of Ranvier, passing inward to separate the myelin from the axis-cylinder. **S., Medullary**, the myelin-sheath surrounding the axis-cylinder. **S., Myelin.** *Medullary Sheath* and *Neurilemma*. **S., Nerve.** See *Perineurium*. **S., Neumann's.** See *S., Dentinal*. **S., Perivascular.** See *S., Capillary*. **S., Pial**, the extension of the pia which closely invests the surface of the optic nerve. See *Pia*. **S., Primitive.** See *Neurilemma*. **S., Root.** See *Root-sheath*. **S. of Schwann.** See *Neurilemma*. **S., Synovial**, a synovial membrane which lines the cavity attached to a bone and through which a tendon glides. **S., Tangential**, the fibro-cellular sheath surrounding the carotids.

Shed [ME., *sheden*, to shed]. To throw off.

Shedding (*shed′-ing*) [ME., *sheden*, to shed]. Throwing off. **S. Teeth**, the teeth of the first dentition; the term is also applied to the loss of the first or temporary set of teeth.

Sheep (*shēp*) [ME., *sheep*, sheep]. A ruminant mammal of the family *Bovidæ* and genus *Ovis*. **S.-bug.** See *Argas tholozani* in *Parasites* (*Animal*), *Table of*. **S.-cough.** See *Hoose*. Also *Strongylus filaria*, Rudolphi, under *Parasites* (*Animal*), *Table of*. **S. Gad-fly.** See *Oestrus ovis*, L., under *Parasites* (*Animal*), *Table of*. **S.-laurel.** See *Kalmia*. **S.-louse.** See *Trichodectis sphærocephalus*, Nitzsch, in *Parasites* (*Animal*), *Table of*. **S.-pest**, the sheep-tick. **S.-pox**, a contagious pustular disease of sheep similar to cow-pox. See *Ovination*. **S.-sorrel**, the leaves of common sorrel, *Rumex acetosella*. Their acidity is due to potassium oxalate and tartrate. They are refrigerant and diuretic, and are useful as an antiscorbutic. Dose of the infusion *ad lib.*, of the fld. ext. ʒj–ij. Unof. **S.-tick.** See *Melophagus ovinus*, under *Parasites* (*Animal*), *Table of*. **S.s' Wool**, a fine grade of Bahama and Florida sponge. **S.s'-wool Fat.** See *Suint* and *Lanolin*.

Sheet (*shēt*) [ME., *shete*, sheet]. A large piece of linen or cotton used as bed-clothing. **S.-bath.** See *Bath*. **S., Draw**, a sheet so folded as to be placed, or removed, from beneath the patient with the least inconvenience.

Sheffield Grinders' Rot. Synonym of *Pneumonokoniosis*.

Shell (*shel*) [AS., *scel*; D., *schel*, shell]. In biology: 1. A hard, bony, calcareous, chitinous or silicious outer covering; a scale, husk, test, lorica, carapace, elytron. 2. A thin or hollow structure, as the outer ear. **S.-follicle**, the integumentary sac containing the primitive shell of a mollusc. **S.-gland**, (*a*) the

shell-secreting gland of a mollusc; (*b*) a coiled tubular gland lying in the shell-fold or in the cephalothoracic carapace, opening near the posterior maxillæ of a crustacean; it is widely distributed among *Entomostraca*. It acts as a renal organ. **S., Hearing,** a small concave plate used to concentrate the sound-waves in the ear.

Shellac (*shel'-ak*). See *Lac.* **S. Cement.** See *Cement.*

Shells (*shelz*) [ME., *schelle*, shell]. Tinted spectacles, for protection of the eyes. Coquilles.

Shepherd's Purse. The *Capsella bursa pastoris*. A common herb possessing tonic and stimulant and active diuretic properties. Dose of the fluid extract ♏xv–℥j. Unof.

Sheringham Valve. See *Ventilation.*

Sherry Wine (*sher'-e*). See *Vinum xericum.*

Sherwood Oil. See *Petroleum Ether.*

Shield (*sheld'*) [ME., *sheeld*, shield]. 1. A protective structure or apparatus. 2. In biology, a protective plate, scute, lorica, or carapace. **S., Nipple,** a protective covering for sore nipples. **S.-shaped,** same as *Scutate* or *Peltate.* **S., Sims',** an instrument used in the application of wire sutures.

Shifting-type, Foerster's. See *Foerster's.*

Shima-mushi (*shi-mah-mush'-e*) [Jap.]. A Japanese febrile disease supposed to be due to the bite of an insect.

Shin [ME., *shinne*, shin]. The anterior margin of the tibia or fore-part of the leg. **S.-bone,** the tibia.

Shingles (*shing'-gles*). A name for *herpes zoster.*

Ship Fever. Synonym of *Typhus Fever, q. v.*

Shiver (*shiv'-er*) [ME., *chiveren*, to shiver]. A tremor or shaking of the body. It may arise from a sense of coldness, but it is often concomitant with or symptomatic of fevers, especially those of an infectious nature.

Shock (*shok*) [ME., *schok*, a shock]. The depression or grave effect produced by severe injuries, operations, or strong emotion. A relaxation or abolition of the sustaining and controlling influence which the nervous system exercises over the vital organic functions of the body. It is the result of a profound impression made on the cerebro-spinal axis, either directly through the agency of an afferent nerve, or through the circulatory medium. **S., Deferred,** that curious condition in which the manifestations of shock, due not to severe bodily injury but to purely mental causes, develop after the lapse of some time from the occurrence. This variety of shock may be even more profound than that produced by bodily injury. **S., Discharging,** a shock produced by a discharge of electricity. **S., Electric,** the physiologic effect produced upon an organism by the opening or closing of an electric circuit in which it is included. **S., Epigastric,** the result of a blow upon the epigastrium. **S., Erethismic,** a form of shock attended with symptoms of excitement. **S., Fetal,** the sensation produced by movements of the fetus in utero. **S., Railway,** the mental impression produced by a railway accident. **S., Secondary,** or **Insidious,** a second attack occurring after the first. **S., Sexual,** shock caused by rape or coitus. **S., Torpid,** shock in which marked depression is a prominent symptom. **S., Traumatic,** shock due to traumatism.

Shoddy (*shod'-e*) [E. dial]. A material made from fragments of cast-off woolen clothing torn into fibers and re-spun into yarn. It is looser in texture than *mungo*, which is made from remains of finer fragments, such as old dress-coats, tailors' clippings, etc. **S. Fever** or **Disease,** a febrile condition caused by the inhalation of the dust arising in making "shoddy" yarns and fabrics. It is characterized by feverishness, headache, nausea, dryness of the mouth, dyspnea, cough, and expectoration. See *Fever.*

Shoe (*shu*) [ME., *shoo*, shoe]. A covering for the foot, **S., Club-foot,** a shoe provided with braces for the correction of talipes. **S.-salesmen's Disease,** one of the occupation-neuroses, characterized by a paradoxic paralysis of muscles (anterior tibial) that are placed in extreme relaxation by the movements which caused and intensified the paralysis. It is produced by sitting on the heels while engaged in fitting shoes, the feet being sharply flexed on the legs and the legs on the thigh. Degenerative changes take place in the muscles or nerve-endings. **S., Sayre's.** See *Sayre.* **S.-and-stocking Position.** See *Position.* **S.-boil,** in farriery, an enlargement at the point of the elbow, the result of pressure of the heels upon the spot. It is also called *capped elbow.*

Shone's System. See *Sewage, Disposal of.*

Short [ME., *short*, short]. Neither long nor tall. **S. Breath.** Synonym of *Dyspnea.* **S. Circuit,** a circuit in which an electric current encounters an abnormally small resistance. **S.-sight.** See *Myopia.*

Shortening (*short'-en-ing*) [ME., *short*, short]. The process of making short.

Shot [ME., *shot*, a shot]. A projectile, especially a ball or bullet; anything thrown forth. **S.-gun Prescription,** one with many ingredients, written with the expectation that some one may prove curative. **S.-gun Quarantine,** the extemporized and unauthorized establishment of a *cordon* against a place suspected of being the seat of an epidemic of a communicable disease. **S.-silk.** See *Retina.*

Shoulder (*shōl'-der*) [ME., *scholdre*, shoulder]. The popular designation for the scapulo-clavicular articulation and adjacent parts. **S.-blade,** the scapula. **S.-girdle.** See *Girdle.*

Show (*sho*) [ME., *schewe*, a show]. A sanguino-serous discharge from the birth-canal prior to labor; the first appearance of a menstrual flow.

Shower (*shau'-er*) [ME., *shour*, shower]. A light fall of rain. **S.-bath.** See *Bath.* **S.-bath, Electric.** See *Electric Shower-bath.*

Shrapnell's Membrane, the membrana flaccida; the skin-layer of the membrana tympani, with the mucosa of the attic. See *Membrane.*

Shreds [ME., *shrede*, a shred]. Patches of filmy material passed with the fecal discharges in some cases of enteritis and diarrhea. They may be composed of false membrane, of actual sloughs from the intestinal mucosa, or of flakes of hardened mucus.

Shrivel (*shriv'-l*) [origin obscure]. To shrink in bulk and become wrinkled.

Shriveled (*shriv'-ld*) [origin obscure]. Contracted into wrinkles; corrugated.

Shrub (*shrub*) [AS., *scrob*, a shrub]. 1. A low, branching, woody plant; a bush. 2. [Arab., *sharab*]. A drink, or cordial made of fruit-juice, often with the addition of rum; as currant, or raspberry shrub.

Shudder (*shud'-er*) [ME., *schuderen*, to shudder]. A convulsive but momentary tremor, caused usually by fright, disgust, or nervous shock.

Shunt [ME., *schunt*]. In electricity, a conductor of low resistance, joining two points in an electric current, and completing a path through which the current will pass.

Shurly-Gibbes Treatment. See *Treatment, Methods of.*

Shuttle Pulse (*shut'-l*). See *Corrigan's Pulse.*

Siagon (*si'-ag-on*) [σιαγών, a little jaw]. In biology, the mandible of a crustacean.

Siagonagra (*si-ag-on-a'-grah*) [σιαγών, jaw-bone; ἄγρα, seizure]. Gouty pain in the maxilla.

Siagonantritis (*si-ag-on-an-tri′-tis*) [σιαγών, the jaw-bone; ἀντρον, antrum]. Inflammation within the antrum of Highmore.

Siagonopod (*si-ag-on′-o-pod*) [σιαγών, a little jaw; πους, foot]. In biology, the maxilla of a crustacean.

Sialaden (*si-al′-ad-en*) [σίαλον, saliva; ἀδήν, a gland]. A salivary gland.

Sialadenitis (*si-al-ad-en-i′-tis*) [σίαλον, saliva; ἀδήν, gland; ιτις, inflammation]. Inflammation of a salivary gland.

Sialadenoncus (*si-al-ad-en-ong′-kus*) [σίαλον, saliva; ἀδήν, gland; ὄγκος, a tumor]. A tumor of a salivary gland.

Sialagogue (*si-al′-ag-og*). See *Ptyalagogue.*

Sialaporia (*si-al-ap-o′-re-ah*) [σίαλον, spittle]. Deficiency in the amount of saliva.

Sialin (*si′-al-in*). Same as *Ptyalin.*

Sialism, Sialismus (*si′-al-izm, si-al-iz′-mus*). See *Ptyalism.*

Sialisterium (*si-al-is-te′-re-um*) [σιαλιστήριον, a bridle-bit: *pl.*, *Sialisteria*]. In biology, one of the salivary glands of an insect.

Sialocinetic (*si-al-o-sin-et′-ik*) [σίαλον, spittle; κινεσις, motion]. Stimulating the flow of saliva.

Sialodes (*si-al-o′-dez*) [σίαλον, saliva; εἰδος, like]. Like saliva.

Sialodochitis (*si-al-o-dō-ki′-tis*) [σίαλον, spittle; δοχή, receptacle; ιτις, inflammation]. Inflammation of the salivary ducts. **S. fibrinosa,** inflammation of a salivary duct obstructed by a fibrinous exudate.

Sialodochium (*si-al-o-do′-ke-um*) [σίαλον, saliva; δοχεῖον, receptacle]. A salivary duct.

Sialogogic (*si-al-o-goj′-ik*) [σίαλον, spittle; ἀγωγός, leading]. 1. A sialogogue. 2. Promoting a flow of saliva.

Sialogogue (*si-al′-o-gog*) [σίαλον, spittle; ἀγωγός, leading]. A ptyalogogue; a drug producing a flow of saliva.

Sialoid (*si′-al-oid*) [σίαλον, spittle; εἰδος, like]. Pertaining to, or like saliva.

Sialolith, Sialolithus (*si′-al-o-lith, si-al-o-lith′-us*) [σίαλον, spittle; λίθος, stone]. A salivary calculus.

Sialo-lithiasis (*si-al-o-lith-i′-as-is*) [σίαλον, spittle; λίθος, stone]. The presence of salivary calculi.

Sialoncus (*si-al-ong′-kus*) [σίαλον, spittle; ὄγκος, a tumor]. A tumor under the tongue, arising from the obstruction of the duct of a salivary gland by calculus or other cause.

Sialorrhea (*si-al-or-e′-a*) [σίαλον, spittle; ῥοία, flow]. Salivation. **S., Pancreatic,** a flow of pancreatic juice.

Sialoschesis (*si-al-os′-kes-is*) [σίαλον, spittle; σχέσις, holding]. Suppression of the secretion of saliva.

Sialostenosis (*si-al-o-ste-no′-sis*) [σίαλον, spittle; στενος, narrow]. Occlusion of a salivary duct.

Sialosyrinx (*si-al-o-si′-ringks*) [σίαλον, saliva; συριγξ, tube]. 1. A salivary fistula. 2. A syringe for washing out the salivary ducts. 3. A drainage-tube for the salivary ducts.

Sialozemia (*si-al-o-ze′-me-ah*) [σίαλον, spittle; ζημία, loss]. Loss of saliva.

Siam Disease. See *Fever, Yellow.*

Sibbens (*sib′-enz*) [Gael., *subhan*, raspberries]. A disease formerly endemic in the Scotch highlands, by some identified with syphilis, by others with yaws.

Siberian Plague (*si-be′-re-an plāg*). See *Plague.*

Sibi (*sim′-be*) [Fiji]. A Fiji term for elephantiasis or a tumor of the leg or arm.

Sibilant (*sib′-il-ant*) [*sibilare*, to hiss]. Articulating with a hissing sound. Also, the nature of certain wheezy sounds observed in auscultation. **S. Râle.** See *Râle.*

Sibilismus, Sibilus (*sib-il-iz′-mus, sib′-il-us*) [*sibilare*, to hiss]. A hissing sound.

Siccant, Siccative (*sik′-ant, sik′-at-iv*) [*siccare*, to dry]. 1. Drying; tending to make dry. 2. A drying agent or medicine.

Siccate (*sik′-āt*) [*siccare*, to dry]. In biology, to dry, as plants for a herbarium.

Sicchasia (*sik-a′-ze-ah*) [σικχαίνειν, to feel disgust]. Morbid loathing of food.

Siccus (*sik′-us*) [L.]. Dry.

Sick (*sik*) [ME., *sik*, sick]. Ill. Not well. In England the term commonly means nauseated, or "sick at the stomach." **"S. Time,"** popularly used for the period of menstruation. **S.-headache,** headache with anorexia, nausea, vomiting, etc. Migraine. **S.-list,** a list of persons, especially in military or naval service, who are disabled by sickness. **S.-report,** a sick-list. **S.-room,** a room occupied by one who is sick. **S.-stomach.** Synonym of *Nausea*, and of *Milk-sickness.*

Sickle-germs (*sik′-l-jermz*). A falciform stage in the development of *Coccidia.*

Sickliness (*sik′-le-nes*) [ME., *sik*, sick]. Predisposition to easily contract disease; insalubrity of climate.

Sickly (*sik′-le*) [ME., *sik*, sick]. Predisposed to disease. Unhealthy.

Sickness (*sik′-nes*) [ME., *siknesse*, sickness]. Nausea. Also, a general term including all morbid conditions, also menstruation. **S., African Sleeping.** See *African Lethargy.* **S., Bleeding,** hemophilia. **S., Falling,** epilepsy. **S., Gall,** remittent fever. **S., Green,** chlorosis. **S., Hungarian,** remittent fever. **S., Milk,** a form of poisoning due to the ingestion of diseased milk or meat. **S., Miners'.** See *Ankylostomiasis.* **S., Monthly.** See *Menstruation.* **S., Morning.** See *Morning Sickness.* **S., Mountain,** a sensation of nausea, with impeded respiration and irregular heart's action, due to the rarefied air of high altitudes. **S., Sea,** nausea, with vomiting and often extreme weakness, caused by unaccustomed motion. Naupathia.

Side (*sīd*) [ME., *side*, side]. A lateral half of the body or of any bilateral organ. **S.-bone:** 1. The hip-bone. 2. The disease or disordered condition in horses which causes the lateral cartilages above the heels to ossify. 3. An abnormal ossification of the lateral elastic cartilage in a horse's foot. **S.-saddle Flower.** See *Sarracenia.*

Sideration (*sid-er-a′-shun*) [*sideratio*, blight produced by the stars]. 1. Apoplexy. 2. Gangrene. 3. Lightning-stroke. [Obs.]

Siderine Yellow. See *Pigments, Conspectus of.*

Siderodromophobia (*sid-er-o-dro-mo-fo′-be-ah*) [σίδηρος, iron; δρόμος, way; φόβος, fear]. Morbid dread of traveling by railway.

Siderophilous (*sid-er-off′-il-us*) [σίδηρος, iron; φίλειν, to love]. Applied to cells that show a tendency to take up iron, *e. g.*, the red blood-corpuscles.

Siderosis (*sid-er′-o-sis*) [σίδηρος, iron]. The pigmentation of the lymphatic glands, liver, and kidneys, so called from the presence of iron in the pigment.

Siegle's Speculum. An apparatus for pneumatically testing the mobility of the membrana tympani.

Sielon (*si′-el-on*). See *Saliva.*

Sienna (*se-en′-ah*). See *Pigments, Conspectus of.*

Sierra salvia. See *Serra salvia.*

Sieve (*siv*) [ME., *sive*, sieve]. A vessel with a reticulated bottom, used for the separation of pulverized from coarse substances. The gauge of the sieve is usually expressed in the number of meshes per square inch. **S.-cells,** long cells of tubular or prismatic form constituting an essential element in fibro-vascular

bundles of the inner bark of exogenous stems. They are peculiar in the possession of circumscribed panels, with fine perforations, which allow of communication between contiguous cells. **S.-disc.** See *S.-plate.* **S.-hypha**; a hypha in which sieve-plates occur. **S.-plates**, the perforated panels of sieve-cells occurring at the points of contact of sieve-cells. **S.-pores**, the perforations in the panels of sieve-cells. **S.-tissue**, a cellular tissue made up of thin-walled cells which possess areas with sieve-like markings. The tissue is characteristic of the phlōem. **S.-tubes.** See *S.-cells.* **S.-vessel.** See *S.-cells.*

Siewer's Test. See *Tests, Table of.*

Sig (*sig*). 1. Abbreviation for *signa*, "label it," or for "*signetur*," "let it be labeled." 2. A colloquial name for urine.

Sigault's Operation. See *Operations, Table of.*

Sigh (*sī*) [ME., *sighen*, to sigh]. A peculiar prolonged and deep respiration; suspirium.

Sighing (*sī'-ing*) [ME., *sighen*, to sigh]. 1. The act of giving forth a sigh. 2. A deep respiration accompanied by sighs. 3. Characterized by sighs.

Sight (*sīt*) [ME., *sight*, sight]. That sense by which the image of an object projected upon the retina is conveyed to the mind. **S., Day.** See *Hemeralopia.* **S., Depraved.** See *Paropsis.* **S., Long.** See *Hyperopia.* **S., Mouse.** See *Myopia.* **S., Night.** See *Nyctalopia.* **S., Old.** See *Presbyopia.* **S., Short.** See *Myopia.* **S., Skew.** See *Dysopia.* **S., Weak.** See *Asthenopia.*

Sigillate (*sij'-il-āt*) [*sigillum*, a seal]. In biology, marked as if with a seal.

Sigmatism, Sigmatismus (*sig'-mat-izm, sig-mat-iz'-mus*) [*sigma*, the Greek letter *s* (σ)]. 1. Defective utterance of the sound of *s*. 2. Too frequent use of the *s* sound in speech. See *Lisping.*

Sigmoid (*sig'-moid*) [σίγμα, letter s; εἶδος, likeness]. Bearing a resemblance to the shape of the letter *sigma*; curved in two directions. **S. Catheter**, one shaped like an S, for passing into the female bladder. **S. Cavities**, a name applied to the depressions on the head of the ulna; the *greater* is a depression formed by the olecranon and coronoid process for articulation with the humerus; the *lesser*, on the outer side of the coronoid process, is for articulation with the radius. **S. Flexure**, the bend in the colon between the descending portion and the rectum. **S. Gyrus**, the S-shaped cerebral fold about and behind the cruciate fissure in *Carnivora*. **S. Mesocolon**, the fold of the peritoneum attaching the sigmoid flexure of the colon to the left iliac fossa. **S. Notch.** See *Notch.* **S. Valves**, the cardiac semilunar valves.

Sigmoiditis (*sig-moi-dī'-tis*) [σίγμα, sigma; εἶδος, like; ιτις, inflammation]. Inflammation of the sigmoid flexure of the colon.

Sigmoidostomy (*sig-moi-dos'-to-me*) [σίγμα, sigma; στόμα, mouth]. The creation of an artificial anus in the sigmoid flexure of the colon.

Sign (*sīn*) [*signum*, a mark or device]. In pathology, any diagnostic symptom. In pharmacy, a conventional character implying a direction or order. A table of *Eponymic Signs and Symptoms* is appended. See *Ataxia, Signs of; Death, Signs of*, etc. **S.-language**, the method of intercommunication employed by deaf-mutes, in which ideas are communicated by means of signs.

TABLE OF EPONYMIC SIGNS AND SYMPTOMS OF DISEASES.

Name.	Description.	How Elicited.	Disease Present in.	Significance.
Abadie's sign.	Spasm of the levator palpebræ superioris muscle.	Inspection.	Exophthalmic goiter.	Said to be pathognomonic (?).
Allis's sign.	Relaxation of the fascia between the crest of the ilium and the trochanter major.	Inspection.	Fracture of the neck of the femur.	
Argyll-Robertson pupil.	A pupil that acts in accommodation but not to light.	Usual tests for accommodation and light.	Locomotor ataxia.	
Baccelli's sign (*aphonic pectoriloquy*).	Reverberation of the whispered voice, heard through the chest-wall.	Whispered voice of patient auscultated through the chest.	Pleural effusion.	
Baruch's sign.	The resistance of the rectal temperature to a bath of 75° for fifteen minutes with friction.	Immersion in bath of 75° F.	Typhoid fever.	
Biermer's change of sound.	See *Gerhardt's change of sound* (in this table).			
Bouillaud, Tintement métallique of.	A peculiar clink sometimes heard to the right of the apex-beat of the heart.	Auscultation.	Cardiac hypertrophy.	
Brach-Romberg symptom.	See *Romberg's symptom.*			
Brown-Séquard's paralysis.	Hemiparaplegia with hemianesthesia of opposite side.		Lesion of lateral half of spinal cord.	
Burton's sign.	Blue line at junction of teeth with gums.	Visual examination.	Chronic lead-poisoning.	
Cheyne-Stokes' respiration.	A succession of respirations becoming progressively shorter and more shallow, then an intermission of varying duration, followed by progressive increase in depth and length of respirations.		In various affections in which the brain is implicated. Cerebral edema. Uremia.	Approaching death.

TABLE OF EPONYMIC SIGNS AND SYMPTOMS OF DISEASES.—*Continued.*

NAME.	DESCRIPTION.	HOW ELICITED.	DISEASE PRESENT IN.	SIGNIFICANCE.
Chvostek's sign.	Sudden spasm of one side of the face.	A slight tap upon the side of the face.	Post-operative tetany.	
Clark's (Alonzo) sign.	Obliteration of the hepatic dulness due to tympanitic distention of the abdomen.	Percussion.	Appendicitis and other peritoneal inflammations.	The presence of the i flated bowel, or of g between the liver ar the abdominal or th thoracic wall.
Corrigan's line.	A purple line at the junction of the teeth with the gums.	Visual examination.	Chronic copper-poisoning.	
Corrigan's pulse.	A forcible pulse-wave, which quickly recedes.	By the finger or sphygmograph over a superfical artery.	Aortic insufficiency.	Regurgitation of bloo at the aortic orifice.
Dalrymple's sign.	Abnormal widening of the palpebral aperture.	Visual examination.	Exophthalmic goiter.	
Davidsohn's sign.	Reflection of light through the pupil in translumination.	Electric light in the mouth.		Health.
Drummond's whiff.	A whiff heard at the open mouth, during expiration, proceeding from the glottis.	Auscultation.	Aortic aneurysm.	
Duroziez's murmur.	A double murmur occasionally heard in the femoral artery.	Auscultation.	Aortic incompetency.	Escape of blood pa imperfectly close aortic valve.
Farre's tubercles.	Superficial masses felt projecting beneath the capsule of the liver.	Palpation.	Carcinoma of the liver.	
Filipovitch's sign.	A saffron-like coloration of all the prominent parts of palms of hands and soles of feet.	Inspection.	Typhoid fever.	Doubtful. Blood a circulatory changes
Fisher's brain-murmur.	A systolic murmur over the anterior fontanel or in the temporal region of infants.	Auscultation.	Rickets and other conditions.	
Flint's murmur.	A second murmur frequently heard at the apex; it has a rumbling quality and may be presystolic, and is probably produced at the mitral orifice.	Auscultation.	Aortic incompetency.	Improper passage the blood.
Fœrster's shifting type.	Variations in the field of vision.	Perimetric limits differ according as they are determined by moving the disc from the center outward or from without to the center.	Anesthesia of the retina, traumatic neuroses, etc.	
Friedreich's respiratory change of sound.	The pitch of the percussion-note becomes increased at the height of a deep inspiration.	On percussion.	Pulmonary tuberculosis and other conditions.	Excavation; increas tension.
Friedreich's sign.	Diastolic collapse of the cervical veins.	Palpation. Inspection.	Adherent pericardium.	
Garel's sign.	Absence of luminous perception on the affected side of the walls and sinuses about the mouth—antrum of Highmore.	Electric transillumination.	Disease of the antrum.	
Gerhardt's change of sound.	A change of percussion-note according to the patient's position, whether upright, lying on the back, or on the side. Due to changes in the form of the air-space and fluid-contents of the thoracic cavity.	Percussion in the different positions.	Pneumothorax, pulmonary tuberculosis.	
Graefe's sign.	Failure of the upper lid to follow the eyeball in glancing downward.	By having the patient alternately rotate the eyes up and down.	Exophthalmic goiter.	Intraorbital pressure
Grancher's sign.	The expiratory murmur equals in pitch that of the inspiratory.	Auscultation.	Pulmonary condensation.	Obstruction to expir air.
Gubler's tumor.	A prominence seen on the dorsum of the carpus.	By flexing carpus	Wrist-drop of chronic lead-poisoning.	Probably some effusi into the synovial sac

TABLE OF EPONYMIC SIGNS AND SYMPTOMS OF DISEASES.—*Continued.*

Name.	Description.	How Elicited.	Disease Present in.	Significance.
Guyon's sign.	Renal ballottement.	Palpation.	Floating kidney.	
Heberden's nodosities.	Hard nodules, usually on the distal joints of the fingers.	Palpation.	Rheumatoid arthritis, usually in advanced life.	
Hegar's.	A softening of the lower uterine segment.	By forefinger in the rectum and the thumb in the vagina, with pressure from above.	Pregnancy.	Pregnancy.
Hicks' (Braxton).	Intermittent uterine contractions. Begins to be apparent at end of third month. May also be produced by any tumor that distends uterus.	Palpation.	Pregnancy.	Almost a positive sign of pregnancy.
Hippocratic facies.	That of agony, as in impending dissolution.	By involuntary contraction of the facial muscles.	In peritonitis and fatal diseases.	Approaching death.
Hippocratic fingers.	Clubbing of the finger-tips, with incurvation of the nails.	Inspection.	Pulmonary tuberculosis and other wasting diseases.	Emaciation.
Hippocratic succussion.	Splashing sound.	By shaking body of patient.	Pyopneumothorax.	Air and fluid in the pleural cavity.
Hutchinson's patch.	Dull-red coloration of the cornea.	Ciliary injection.	Interstitial keratitis.	Syphilis.
Hutchinson's teeth.	Upper central permanent incisor teeth are peg-shaped, and notched on the cutting edge.	Inspection.	Inherited syphilis.	Inherited syphilis.
Hutchinson's trio of symptoms.	Notched teeth, interstitial keratitis and otitis.	Inspection.	Inherited syphilis.	Inherited syphilis.
Jaccoud's sign.	Prominence of the aorta in the suprasternal notch.	Inspection.	Leukemia (and pseudo-leukemia).	
Jacquemin's sign.	Violet color of the mucous membrane of vagina; appears about the fourth week of gestation.	Inspection.	Pregnancy.	Venous congestion.
Jadelot's lines.	Various lines on the face of infants.	Inspection.	Various diseased conditions.	
Jorisenne's.	Pulse does not become accelerated on changing from the horizontal to the erect position.	Change of position as described.	Pregnancy.	Pregnancy.
Keen's.	Increased diameter through the leg at the malleoli.	Measurement.	Fracture of fibula (Pott's).	Solution of the tibio-fibular articulation.
Küster's.	Presence of a cystic tumor in the median line anterior to the uterus.	Palpation and inspection.	Ovarian dermoids.	Needs further confirmation.
Laennec's perles.	Rounded gelatinous masses.	Expectorated.	Bronchial asthma.	Mucous molds of the smaller bronchial tubes.
Laennec's râle.	A modified subcrepitant râle.	Auscultation.	Pulmonary emphysema.	Mucous in the bronchioles.
Mannkopf's symptom.	Increase in the frequency of the pulse.	By pressure on peripheral points.	Pain (not present in simulated pain).	True pain.
Oliver's sign.	Tracheal tugging.	By grasping the larynx between the thumb and finger and pressing upward.	Aneurysm of the aorta.	Transmitted impulse.
Palmo-plantar.	See *Filipovitch's*.			
Parkinson's facies.	Face expressionless, "wooden;" movements of the lips slow; eyebrows elevated. The whole expression is immobile and mask-like.	Inspection.	Paralysis agitans.	

TABLE OF EPONYMIC SIGNS AND SYMPTOMS OF DISEASES.—*Continued.*

NAME.	DESCRIPTION.	HOW ELICITED.	DISEASE PRESENT IN.	SIGNIFICANCE.
Parkinson's mask.	See *Parkinson's facies.*			
Parrot's nodes.	Osteophytes of the skull.	Palpation.	Of syphilitic origin.	Inherited syphilis.
Parrot's sign.	Dilatation of the pupil.	By pinching the skin of the neck.	Meningitis.	
Paul's sign.	A feeble apex-beat, with a forcible impulse over the body of the heart.	Palpation.	Pericarditis.	Pericardial adhesion
Porter's sign.	See *Oliver's sign* and *tracheal tugging*.			
Pott's boss.	Projecting spinous process.	Palpation.	Pott's disease.	Vertebral caries.
Quincke's pulse (symptom).	Blanching of the finger-nails at each diastole of the heart.	Inspection.	Aortic insufficiency.	Very marked regurgitation.
Raynaud's phenomena.	A white and cold condition of the fingers, alternating with burning heat and redness.		Raynaud's disease, *q. v.*	Vaso-motor disturbance.
Ritter's tetanus.	Tetanus of a muscle.	By suddenly breaking the circuit while a strong constant current is passing through a nerve.		Health.
Ritter-Rollet phenomenon.	Flexion of the foot by gentle electric stimulation. Extension of the foot by energetic stimulation.	Voltaic or faradic stimulation.		
Romberg's symptom.	Swaying of the body.	By standing patient with feet close together and with eyes closed.	Locomotor ataxia.	Disturbance of equilibrium. Static incoordination.
Rosenbach's sign.	Abolition of abdominal reflex.		In inflammatory intestinal diseases.	
Rosenthal's hyperacid vomiting.	The vomiting of very acid material.		Exaggerated secretion of HCl in the gastric juice.	Rossbach's disease.
Sequin's signal symptom.	The contraction of one muscle or group of muscles, preceding the epileptic attack.	Involuntary.	Epilepsy.	
Skeer's symptom.	A small circle that forms in the iris near the pupil in both eyes simultaneously.	Inspection.	Tuberculous meningitis.	Considered pathognomonic.
Skoda's consonating râles.	Bronchial râles heard through consolidated pulmonary tissue.	Auscultation.	Pneumonia.	Mucus in the bronchial tubes, surrounded by consolidated structure.
Skoda's resonance, sign or tympany.	A tympanitic note on percussion.	By percussing the chest above a large pleural effusion or above the line of consolidation in pneumonia.	Heard when a pleural effusion extends up to the 4th rib or above.	Vicarious action of portion of lung not involved (apex or upper lobe).
Stairs-sign.	Difficulty in descending stairs.	Attempt to descend stairs.	Early symptom of locomotor ataxia.	Incoördination.
Stellwag's symptom.	Apparent widening of the palpebral aperture.	Retraction of upper eyelid.	Exophthalmic goiter.	
Stokes' sign.	Violent throbbing in the abdomen to the right of the umbilicus.	Palpation.	Acute enteritis.	
Tache cérébraie or Tache méningeale.	The appearance of a red line.	By drawing the finger-nail over the skin.	Tuberculous meningitis, acute fevers, and other conditions.	Supposed at one time to be pathognomonic of tuberculous meningitis.
Tarnier's sign.	The effacement of the angle between the upper and lower uterine segments.	Digital examination.	Pregnancy.	Inevitable abortion.
Trousseau's phenomenon or sign.	Muscular spasm, which continues as long as pressure is applied.	Pressure on the larger arteries or on the nerve-trunk.	Tetany.	Heightened neuro-muscular irritability.
Trousseau's spots.	See *Tache cérébrale.*			

TABLE OF EPONYMIC SIGNS AND SYMPTOMS OF DISEASES.—*Continued.*

Name.	Description.	How Elicited.	Disease Present in.	Significance.
Valleix's points.	Tender spots along the course of a nerve.	Pressure.	Neuralgia.	
Wallerian degeneration.	Degeneration of nerves after separation from their trophic centers.		Injuries to nerves.	Loss of trophic influence.
Weber's symptom.	Paralysis of the oculo-motor nerve of one side and hemiplegia of the opposite side.			
Wernicke's symptom.	The condition of the pupillary reaction.	By throwing a ray of light on the blind half of the retina.	Hemianopsia.	If reaction is present, it would indicate a central trouble; if absent, a lesion of the path between the retina and the geniculate bodies may be inferred.
Westphal's foot-phenomenon.	Ankle-clonus.	By suddenly flexing foot on leg.	Lateral sclerosis.	Indicates disease of the pyramidal tracts.
Westphal's paradoxic contraction.	The tonic contraction of a muscle caused by the passive approximation of its extremities. Best known in the tibialis anticus.	In anterior tibial, by rapid dorsal flexion of the foot.	Paralysis agitans (Westphal), and sclerosis of the postero-lateral columns of the cord.	Always indicates disease.
Westphal's sign.	Abolition of the knee-jerk.	Percussion over the quadriceps tendon.	Locomotor ataxia, destructive lesions of lower part of cord, peripheral neuritis, etc.	
Westphal-Erb symptom.	Same as *Westphal's.*			
Williams' tracheal tone.	A dull tympanitic resonance, becoming higher pitched on opening the mouth.	Percussion.	Pleural effusion.	Arises from the vibration of air in a large bronchus surrounded by compressed lung.
Wintrich's sign.	Change in the pitch when the mouth is opened and closed.	Percussion.	Tuberculosis pulmonalis.	Pulmonary cavity.
Zenker's degeneration.	A degeneration of the muscular fibers, causing them to become brittle and easily broken on forcible contraction.		High or continued fevers.	

Signa (*sig'-nah*) [*signare*, to make a sign]. In prescription-writing, a conventional term meaning "mark." It designates the physician's directions to the patient concerning the medicine prescribed.

Signal (*sig'-nal*) [*signum*, a sign]. A sign. **S., Marcel Duprez',** the interruption of an electric current produced by a tuning-fork of 100 vibrations per second.

Signatura (*sig-nat-u'-rah*) [L.]. 1. Signature. 2. A characteristic mark. 3. The directions showing how medicines are to be taken.

Signature (*sig'-na-tūr*) [*signare*, to sign, mark]. In biology, a characteristic, distinguishing, or significant mark or appearance. **Ss., Doctrine of,** a system of discovering the medicinal uses of a plant or mineral from something in its external appearance (color, shape, or markings) that resembled the disease it would cure. Accordingly, the stony seeds of gromwell (*Lithospermum officinale*) were held good for gravel, the knotty tubes of *Scrophularia* for scrofulous glands, while the scaly pappus of *Scabiosa* showed it to be a specific in leprous diseases; the spotted leaves of *Pulmonaria*, that it was a sovereign remedy for tuberculous lungs, and the growth of *Saxifrage* in the fissures of rocks that it would disintegrate stone in the bladder; *Turmeric* and *Celandine* were recommended for jaundice on account of their color; *Liverwort* for torpidity of the liver; *Euphrasy*, being marked with an eye, was good for sore eyes; *Orchis*, resembling a testis, was good as an aphrodisiac; *Dock-root* was yellow, and therefore good for jaundice. Many plants still possess common names based on this doctrine, *e. g.*, **Backwort** (*Symphytum officinale*); **Bladder-herb** (*Physalis alkekengi*); **Blood-root** (*Potentilla tormentilla*); **Breakstone** (*Saxifraga sp., Pimpinella saxifraga*); **Bruisewort** (*Bellis perennis*); **Burstwort** (*Herniaria glabra*); **Cancerwort** (*Linaria spuria, L. elatine*); **Chafeweed** (*Gnaphalium sylvaticum*); **Colickwort** (*Alchemilla arvensis*); **Dropwort** (*Spiræa filipendula*); **Eyebright** (*Euphrasia officinalis*); **Felonwort** (*Solanum dulcamara*); **Gallwort** (*Linaria vulgaris*); **Goutweed** (*Ægopodium podagraria*); **Jaundice Tree** (*Berberis vulgaris*); **Milkwort** (*Polygala vulgaris*); **Nailwort** (*Draba verna*); **Navelwort** (*Cotyledon umbilicus*); **Neckweed** (*Cannabis sativa*); **Open-arse** (*Mespilus germanica*); **Palsywort** (*Primula veris*); **Pestilence-wort** (*Petasites vul-*

garis); **Quinseywort** (*Asperula cynanchica*); **Sharewort** (*Pallenis spinosa*); **Spleenwort** (*Asplenium ceterach*); **Stitchwort** (*Stellaria holostea*); **Tetterberry** (*Bryonia dioica*); **Throatwort** (*Campanula trachelium*); **Toothwort** (*Lathræa squamaria*); **Uvulawort.** See *Throatwort.*

Signum (*sig'-num*) [L.]. A mark, sign, or indication.

Siguatera (*sig-wah-te'-rah*) [Sp.]. The name given by Spanish colonists to a complex of symptoms that resulted from eating poisonous fishes indigenous to certain hot countries.

Sikimin (*sik'-im-in*) [*sikkim*, a region of the Himalaya]. A poisonous principle derived from *Illicium religiosum.* Unof.

Silent Region of the Brain and Cord. The gray matter of the cord.

Silex (*si'-leks*) [L.]. See *Silica.*

Silica Quartz (*sil'-ik-ah kworts*) [*silex*, flint]. The oxid of silicon, SiO_2. It occurs in nature in the mineral form, of which sea-sand is a familiar example.

Silicate (*sil'-ik-āt*) [*silex*, flint]. A salt of silicic acid.

Silicic (*sil-is'-ik*) [*silex*, flint]. Containing silicon.

Silicide (*sil'-is-id*) [*silex*, flint]. A combination of silicon with another element.

Silicious, Siliceous (*sil-ish'-us*) [*silex*, flint]. Having the nature of or containing silicon.

Silicium (*sil-ish'-e-um*). See *Silicon.*

Silicle (*sil'-ik-l*) [*silicula*, a little husk or pod]. In biology, a short pod not over three times longer than broad, *e. g.*, that of the Shepherd's Purse (*Capsella bursa-pastoris*).

Silicol (*sil'-ik-ol*) [*silex*, flint]. An alcohol from a silicon or silicon-carbon radicle.

Silicon (*sil'-ik-on*) [*silex*, flint], Si = 28; quantivalence IV. One of the elements, and, next to oxygen, the most abundant, forming about one-fourth of the crust of the globe. See *Elements, Table of.* In medicine, it is used in the form of an alkaline silicate chiefly. See *Potassium, Sodium,* and *Magnesium;* also *Tabasheer.* Some forms are used in dentifrices, and others in pharmacy. **S. hydrid,** a colorless inflammable gas.

Silicosis (*sil-ik-o'-sis*). See *Chalicosis.*

Silicula (*sil-ik'-u-lah*) [L.]. Same as *Silicle.*

Silicular (*sil-ik'-u-lar*) [*silicula*, a silicle]. In biology, having the shape or appearance of a silicle.

Silicule (*sil'-ik-ūl*). Same as *Silicle.*

Siliculose (*sil-ik'-u-lōz*) [*silicula*, a little husk]. In biology, the same as *Silicular.*

Silicyl (*sil'-is-il*) [*silex*, flint]. A radicle containing silicon directly combined with a trivalent radicle.

Siliqua (*sil-ik'-wah*) [*siliqua*, a husk, pod: *pl.*, *Siliquæ*]. Same as *Silique.*

Silique (*sil-ēk'*) [*siliqua*, a husk, pod]. In biology, the slender, two-valved capsule of some *Cruciferæ.* It is divided into cells by a false partition stretched between two opposite parietal placentæ, and which often persists after the valves have fallen away.

Silk [ME., *silk*, silk]. The simplest and most perfect of the textile fibers. It differs from all other fibers in that it is found in nature as a continuous fine thread. Silk is the product of the silk-worm (*Bombyx mori*), and is simply the fiber that the worm spins around itself for protection when entering the pupa or chrysalis state. The silk-fiber consists, to the extent of rather more than half its weight, of *fibroin*, $C_{15}H_{23}N_5O_6$, a nitrogenous principle. Covering this is the silk-glue, or *sericin*, $C_{15}H_{25}N_5O_8$. The most important physical properties of the silk-fiber are its luster, strength, and avidity for moisture. Besides the true silk, we have several so-called "wild silks," the most important of which is the Tussur silk, the product of the larva of the moth, *Antheræa mylitta*, found in India. The cocoons are much larger than those of the true silk-worm, are egg-shaped, and of a silvery drab color. The cocoon is very firm and hard, and the silk is of a drab color. It is used for the buff-colored Indian silks, and latterly largely in the manufacture of silk plush. Other wild silks are the *Eria* silk of India, the *Muga* silk of Assam, the *Atlas* or *Fagara* silk of China, and the *Yamamai* silk of Japan. Silk has been used as a hemostatic. See *Sericum.* **S., Epispastic,** silk containing some vesicant. **S. Floss, Dentists',** untwisted filaments of fine silk, prepared expressly for the purpose of cleaning the surfaces of the teeth, and used by some dentists for finishing the surfaces of fillings in the sides of teeth. **S.-grass.** See *Pineapple Fiber.* **S., Saddler's,** a heavy silk used by saddlers, and to some extent in surgery. **S.-weed.** See *Milk-weed.* **S.-worm,** the larva of the silk-moth. **S.-worm Gut,** the thread drawn from a silk-worm killed when ready to spin the cocoon.

Sillonneur (*sil-on-ur'*) [Fr.]. A three-bladed scalpel used by ophthalmologists.

Sillyhow (*sil'-e-how*) [E. dia.]. The caul which sometimes covers the head of the new-born child.

Silphium (*sil'-fe-um*) [σίλφιον, a plant so called on account of its resinous juice]. An umbelliferous plant, *Thapsia silphium*, Viviani, so highly esteemed among the ancients for its juice, which according to Pliny was a remedy for sixty diseases, internal and external, that it was sold for its weight in silver, and figured largely on the coins of Cyrene, its native home. The Greeks called it *silphium*, from *silphi*, its African name; the Romans *laserpitium.*

Silphology (*sil-fol'-o-je*) [σίλφη, an insect; λόγος, science]. The morphology and development of larvæ.

Silver (*sil'-ver*). See *Argentum* and *Elements, Table of.* **S., Coin,** an alloy consisting of nine parts silver to one of copper. **S. Fir.** See *Abies.* **S.-fork Deformity,** a peculiar displacement of the wrist and hand in fracture of the lower extremity of the radius. **S., Sterling,** an alloy consisting of 925 parts silver to 75 parts copper. **S. White.** Same as *White Lead.*

Simaba (*sim-a'-bah*) [native name in Guiana]. A genus of simarubaceous tropical trees. **S. cedron, S. ferruginea, S. floribunda,** etc., have exceedingly bitter barks, and are tonic and febrifuge. Unof.

Simaruba (*sim-ar-u'-bah*) [native name in Guiana]. 1. A genus of tropical American trees, the type of the order *Simarubaceæ.* **S. amara, S. glauca, S. officinalis, S. medicinalis,** and others have barks with tonic properties. Unof.

Similar (*sim'-il-ar*) [L.]. Having the same characteristics.

Simon's Position. See *Postures, Table of.* **S.'s Triangles.** See *Triangles, Table of.*

Simple (*sim'-pl*) [*simplex*, simple]. 1. Not complex; consisting of a single ingredient; not compound. 2. Wanting in intellect. 3. A medicinal plant.

Simpler, Simplist (*sim'-pler, sim'-plist*). An herb-doctor.

Simpler's Joy. The common vervain, *q. v.*

Simples (*sim'-plz*) [*simplex*, simple]. A common term for herbs having a medicinal value.

Simplist (*sim'-plist*). See *Simpler.*

Simpson's Method. See *Treatment, Methods of.*

Sims' Depressor. An instrument for holding back the wall of the vagina in examination of that cavity. **S. Feeder,** an instrument for aiding in the suture of tissues. **S. Posture or Position.** See *Postures, Table of.* **S. Speculum.** See *Speculum.*

Simulation (*sim-u-la'-shun*) [*simulatio; simulare*, to feign]. In medicine, the feigning or counterfeiting of disease. The pretence of a malingerer.

Simulo (*sim'-u-lo*). The fruit of certain species of *Capparis*, especially *C. coriacea*, of Peru; it is recommended as a cure for epilepsy, and possesses antiscorbutic and stimulant properties. Dose of the tincture ʒss–iij; of the fluid extract ʒj–iij. Unof.

Sinalbin (*sin-al'-bin*). A neutral crystalline glucosid found in white mustard, soluble in cold water.

Sinamin (*sin'-am-in*), C_3H_5CN. *Allyl cyanamid*, a substance obtained from crude oil of mustard.

Sinapeleum (*sin-ap-el-e'-um*) [σίναπι, mustard; ἔλαιον, oil]. Mustard-oil.

Sinapin (*sin'-ap-in*) [σίναπι, mustard], $C_{16}H_{22}NO_5$. A substance that occurs as a sulpho-cyanate in white mustard. Free sinapin is soluble and decomposable.

Sinapis (*sin'-a-pis*) [σίναπι, mustard]. Mustard. The seeds of *S. alba*, white mustard, and *S. nigra*, black mustard. They contain a ferment, myrosin, and a crystalline substance, which, when moistened, unite to form a volatile oil of allyl sulpho-cyanid. Locally the seeds act as a powerful rubefacient; internally, as a stomachic stimulant; in large doses as an emetic. Sinapis is much used locally in the form of the well-known "mustard-plaster." **S., Cataplasma** (B. P.), mustard-poultice, contains mustard, linseed meal, and water. **S., Charta**, mustard-paper, consists of black mustard mixed with a solution of India-rubber and spread on paper. **S., Liniment., Comp.**, contains oil of mustard 3, fld. ext. mezereum 20, camphor 6, castor-oil 15, alcohol *q. s.* **S., Ol.**, the volatile oil. Dose $\mathfrak{m}\ \frac{1}{8}$–$\frac{1}{4}$.

Sinapiscopy (*sin-ap-is'-ko-pe*) [σίναπι, mustard; σκοπεῖν, to view]. The use of mustard as a test of sensory disturbances, analogous to a similar use of *metalloscopy*.

Sinapism (*sin'-ap-izm*) [συναπισμός; σίναπι, mustard]. A mustard-plaster.

Sincaline (*sin'-kal-ēn*). Same as *Cholin*.

Sincipital (*sin-sip'-it-al*) [*sinciput*, the head]. Pertaining to the sinciput.

Sinciput (*sin'-sip-ut*) [*semi*, half; *caput*, head]. The superior and anterior part of the head. Also, the top of the head; the bregma.

Sindon (*sin'-don*) [σινδών, linen]. A pledget or dossil.

Sinew (*sin'-u*) [ME., *sinewe*, sinew]. Tendinous or ligamentous tissue. **S.-shrunk**, having some of the sinews wasted; said of horses or mules. The condition is mainly caused by overwork.

Singultus (*sing-gul'-tus*). See *Hiccough*.

Sinigrin (*sin'-ig-rin*) [σίναπι, mustard]. A crystalline, bitter-tasting, inodorous glucosid of black mustard, soluble in water, but not in alcohol or ether.

Sinistrad (*sin'-is-trad*) [*sinister*, the left hand]. Toward the left.

Sinistral (*sin'-is-tral*) [*sinister*, left]. At or in the direction of the left side of the body. See the opposite, *dextral;* also *Position and Direction, Table of.*

Sinistren (*sin'-is-tren*) [*sinister*, left]. Belonging to the sinistral side in itself.

Sinistrin (*sin'-is-trin*) [*sinister*, left]. A dextrin-like substance found in squills.

Sinistrocerebral (*sin'-is-tro-ser'-e-bral*) [*sinister*, left; *cerebrum*, cerebrum]. Occurring or situated in the left hemisphere of the brain.

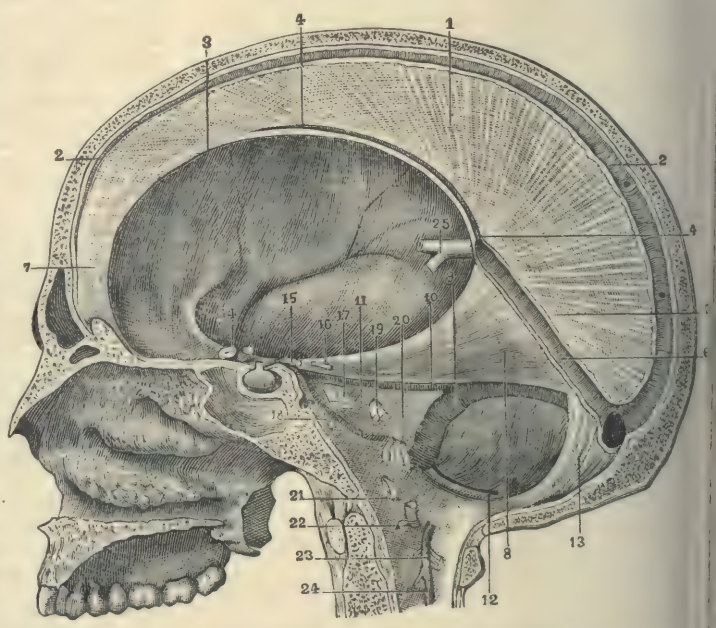
Sinistrorse (*sin'-is-trors*) [*sinister*, left; *vertere*, turn]. In biology, turning from right to left; said of a plant climbing in an opposite direction from the sun.

Sinual (*sin'-u-al*) [*sinus*, a curve]. Possessing the characteristics of a sinus.

Sinuate (*sin'-u-āt*) [*sinuare*, to curve, swell out in curves]. In biology, wavy, or winding in and out. Applied to the margins of leaves and other flattened organs.

Sinuation (*sin-u-a'-shun*) [*sinuatus*, from *sinuare*, to bend]. 1. The state of being sinuate. 2. A cerebral gyre.

Sinu-auricular (*sin-u-aw-rik'-u-lar*) [*sinus*, a curve; *auricula*, auricle]. In biology, pertaining to the sinus venosus and the auricle.



Sinuose (*sin'-u-ōz*). Same as *Sinuous*.

Sinuosity (*sin-u-os'-it-e*) [*sinuare*, to bend]. Anfractuosity; the state of being sinuous or bent.

Sinuous (*sin'-u-us*) [*sinuosus; sinus*, a curve]. Wavy; applied especially to tortuous fistulæ and sinuses.

Sinus (*si'-nus*) [*sinus*, a curve, fold, hollow: *pl.*, *Sinus* or *Sinuses*]. A hollow or excavation, a cavity, recess, pocket, dilatation, or channel in a bone or other structure. The term is applied also to an abnormal pathway or canal, usually the result of ulceration. **S. acusticus internus.** See *Canal, Internal Auditory.* **S., Air**, any one of the cavities within bones, containing air, especially those communicating with the nasal passages. **S. alæ parvæ.** See *S., Spheno-parietal.* **S. amplus ureteris**, the pelvis of the kidney. **S. ampullaceus.** See *Ampulla ossea.* **S., Anterior.** See *Lateral Ventricle.* **S. of Aorta.** See *S. of Valsalva.* **S., Aortic.** See *S. of Valsalva.* **S. aritii.** See *Lacrymal Fossa.* **S. arteriosus.** See *S. pulmonalis.* **S. atlantis**, a depression for the passage of vessels and nerves on the upper surface of the posterior part of the arch of the atlas. **S. auditorius**, the cavity of the tympanum. **S., Basilar.** See *S., Transverse.* **S. basilaris anterior.** See *S., Transverse.* **S. of Breschet**, the spheno-parietal sinus. **S. bulbi.** See *S. bulbi urethræ.* **S. bulbi rhachidici.** See *Fourth Ventricle.* **S. bulbi urethræ**, a dilatation of the bulb of the urethra. **S. canalis vertebralis**, any of the spinal veins. **S. caroticus, S. carotidien.** See *S., Cavernous.* **S. cavernosus.** See *S., Cavernous.* **S., Cavernous**, a large sinus extending from the sphenoid fissure to the apex of the petrous portion of the temporal bone, communicating behind with the inferior and superior petrosal sinuses and receiving the ophthalmic vein in front. **S. cavi cranii.** See *S., Cranial.* **S. choroidien**, See *S., Straight.* **S. circulaire de Ridley.** See *S., Circular.* **S. circulaire du trou occipital.** See *S. circularis foraminis magni.* **S., Circular**, a venous sinus surrounding the hypophysis, communicating on each side with the cavernous sinus. **S., Circular** (*of the placenta*), a plexus of veins in the maternal portion of the placenta in communication with the utero-placental sinus. **S. circularis.** See *S., Circular.* **S. circularis foraminis magni** (seu *occipitalis*). A venous plexus surrounding the posterior margin of the foramen magnum. **S. circularis iridis.** See *Canal of Schlemm.* **S., Clinoid.** See *S., Circular.* **S. cochleæ**, a vein in the aqueduct of the cochlea opening into the internal jugular vein. **S. du cœur.** See *Atrium.* **S. columnæ vertebralis**, the anterior longitudinal spinal veins. **S. communis.** See *Utricle* (2d def.). **S. communis venarum cardiacarum** (seu *cordis*). See *S., Coronary* (*of the heart*). **S. condylorum anterior.** See *Fossa intercondyloidea anterior.* **S., Confluence.** See *Torcular herophili.* **S. cordis.** See *Atrium.* **S. coronaire du placenta.** See *S., Circular* (*of the placenta*). **S. coronarius.** See *S., Coronary* (*of the heart*). **S., Coronary** (*of the heart*), a vein in the transverse groove between the left auricle and the left ventricle of the heart on its posterior aspect; it is by some regarded as a dilatation of the great cardiac vein into which it opens.

S. of Coronary Vein. See *S., Coronary* (*of the heart*). **S. coronoideus.** See *S., Circular.* **S. du corps calleux.** See *Callosal Fissure.* **S. costales.** See *Incisuræ costales.* **S. costarii.** See *Foveæ articulares laterales.* **S. coxæ.** See *Acetabulum.* **S., Cranial,** one of certain venous channels between the folds of the dura lined with a continuation of the tunica intima of the veins. **S. craniens.** See *S., Cranial.* **S. of Cuvier.** See *Ducts of Cuvier.* **S., Diploic,** channels containing veins which traverse the diploë of cranial bones. **S. ductus lactiferi.** See *Ampulla ductus lactiferi.* **S. duræ matris.** See *S., Cranial.* **S. ellipticus.** See *S., Circular.* **S. epididymidis,** the furrow between the posterior surface of the epididymis and the testicle. **S., Ethmoid.** See *Ethmoid Cells.* **S. ethmoidales.** See *Ethmoid Cells.* **S. of the External Meatus,** a space at the bottom of the external auditory canal between the concave inferior wall of the osseous meatus and the membrana tympani. **S. falciformis inferior.** See *S., Inferior Longitudinal.* **S. falciformis superior** (seu *triangularis*). See *S., Superior Longitudinal.* **S. fossæ basilaris.** See *S., Transverse.* **S. frænuli,** the depression at the side of the frenum of the penis. **S., Frontal,** an irregular cavity in the frontal bone, underlying the prominence at the root of the nose, and over the superior orbital margin, extending upward and outward between the two tables of the bone, separated from its fellow of the opposite side by a thin septum, and communicating with the nose by the infundibulum. **S., Galactophorous.** See *Ampulla ductus lactiferi.* **S. genæ pituitarius** (*highmori*). See *Maxillary Antrum.* **S., Genital,** the cleft of the vulva. **S., Genito-urinary.** See *S., Urogenital.* **S. Great** (*of the aorta*), a dilatation generally found on the right side of the ascending portion of the aorta. **S. of Highmore.** See *Maxillary Antrum.* **S. hippocampi inferior.** See *Hippocampus Major.* **S., Inferior Intercavernous,** the lower of the two veins sometimes replacing the single sinus intercavernosus anterior. **S., Inferior Longitudinal,** a venous sinus which extends along the posterior half of the lower border of the falx cerebri and terminates in the straight sinus near the anterior margin of the tentorium. **S., Inferior Petrosal,** a large venous sinus arising from the cavernous, running along the lower margin of the petrous portion of the temporal bone, and joining the lateral sinus, to form the internal jugular vein. **S. intercavernosus anterior,** the anterior half of the circular sinus. **S. intercavernosus posterior,** the posterior half of the circular sinus. **S., Intercavernous,** the anterior and posterior halves of the circular sinus. **S., Internal.** See *S., Straight.* **S. jugularis spurius.** See *S., Petro-squamous.* **S. of the Jugular Vein,** the bulbi venæ jugularis (distinguished as *inferior, internus,* and *superior*). **S. of Kidney,** the prolongation inward of the hilum of the kidney. **S. lacrimales.** See *Cells, Anterior Ethmoid.* **S. lacrimalis.** See *S., Lacrymal.* **S., Lacrymal,** a small pouch formed by a fold of skin at the inner angle of the eye in the deer and some other quadrupeds. It can be opened or shut at will, has no connection with the lacrymal passages, and contains a gland which secretes a viscid substance resembling the cerumen of the ear. **S., Lacteal.** See *Ampulla ductus lactiferi.* **S. lacteus lactiferus.** See *Ampulla ductus lactiferi.* **S. lactiferi secundarii,** dilatations of the milk-ducts in addition to the ampulla. **S. laiteux.** See *Ampulla ductus lactiferi.* **S. laryngis** (*of Morgagni*). See *Ventricle of the Larynx.* **S. of the Larynx.** See *Ventricle of the Larynx.* **S. Lateral,** a venous sinus which begins at the torcular and runs horizontally on the inner surface of the

MEDISECTION OF BRAIN, SHOWING IMPORTANT SINUSES.

1. Falx cerebri. 2, 2. Its convex border, with the great longitudinal sinus. 3. Its concave border. 4, 4. Inferior longitudinal sinus. 5. Base of falx cerebri. 6. Straight sinus. 7. Apex of falx cerebri. 8. Right half of the tentorium, seen from below. 9. Right lateral sinus. 10. Superior petrosal sinus. 11. Inferior petrosal sinus. 12. Posterior occipital sinus. 13. Falx cerebelli. 14. Optic nerve. 15. Motor oculi. 16. Pathetic. 17. Trigeminus. 18. Abducens. 19. Facial and auditory nerves. 20. Glosso-pharyngeal, pneumogastric and spinal accessory nerves. 21. Hypoglossal nerve. 22. First cervical nerve. 23. Second cervical nerve. 24, 24. Upper extremity of ligamentum denticulatum.

occipital bone to the base of the petrous portion of the temporal bone, where it unites with the inferior petrosal sinus to form the internal jugular vein. **S. laterales seu superioris.** See *Lacunæ laterales seu superioris.* **S. lateralis.** See *S., Lateral.* **S. longitudinales columnæ vertebralis,** the longitudinal spinal veins. **S. longitudinalis cerebri.** See *S., Superior-Longitudinal.* **S. longitudinalis inferior** (s. **minor**). See *S., Inferior Longitudinal.* **S. longitudinalis superior.** See *S., Superior Longitudinal.* **S. lunatus radii,** the semilunar cavity of the radius. **S. lunatus ulnæ.** See *Sigmoid Cavity, Lesser.* **S. Lymph,** small spaces scattered throughout the parenchyma of a lymphatic gland, between the pulp of the gland and the trabeculæ or dilatations of the lymphatic vessels. **S. maieri,** an anomalous dilatation in which both canaliculi lacrimales open. **S. of t**

Mammary Gland. See *Ampulla ductus lactiferi.* **S., Marginal,** a variety of the occipital sinus opening into the transverse. **S., Marginal** (*of the placenta*). See *S., Circular* (*of the placenta*). **S. marginalis.** See *S., Marginal.* **S., Mastoid.** See *Mastoid Cells.* **S. mastoideus.** See *Mastoid Cells.* **S. maxillaris.** See *Maxillary Antrum.* **S., Maxillary.** See *Maxillary Antrum.* **S. maximus.** See *Olecranon Fossa* and *S., Great* (*of the aorta*). **S. maximus aortæ.** See *S., Great* (*of the aorta*). **S. maximus cubitalis** (seu **humeri**). See *Olecranon Fossa.* **S., median sæptum.** See *S., Superior Longitudinal.* **S., Median, Superior.** See *S., Superior Longitudinal.* **S. medianus.** See *Vestibular Sacule.* **S. mediastinocostalis** (*pleuræ*), the part of the pleura where the costal and mediastinal portions unite behind the sternum. **S. mediastinophrenicus,** the part of the pleura where the mediastinal and diaphragmatic portions unite. **S. of Morgagni,** the interval between the upper border of the superior constrictor muscle and the basilar process of the occipital bone. See *Lacunæ morgagni, S. of Valsalva,* and *Ventricle of the Larynx.* **S. mucosi urethræ.** See *Lacunæ morgagni.* **S. muliebris.** See *Vagina.* **S. nasi accessorii,** the various air-sinuses connected with the nose. **S. obliquus.** See *S., Straight.* **S., Occipital,** a small venous sinus in the attached margin of the falx cerebelli, opening into the torcular herophili. See *S., Lateral.* **S. occipitalis, S. occipitalis posterior.** See *S., Occipital.* **S. occipitalis anterior.** See *S., Transverse.* **S. occipitalis transversus.** See *S., Transverse.* **S. opertus minor.** See *Occipital Fissure.* **S. ophthalmicus.** See *S., Cavernous.* **S. ophthalmopetrosus,** an anomalous opening into the transverse sinus. **S. palatinus.** See *Ethmoid Cells, Posterior.* **S. parieto-occipitalis.** See *Occipital Fissure.* **S. pedis,** the internal sinus between the astragalus and the os calcis. **S. pericardiacocostalis,** the left mediastinocostal sinus. **S. pericardii.** See *S. transversus pericardii.* **S. perpendicularis.** See *S., Straight.* **S., Petit's.** See *S. of Valsalva.* **S. petrobasilaris.** See *S., Superior Petrosal.* **S. petro-occipitalis inferior,** a vein uniting the cavernous sinus and the circellus venosus hypoglossi. **S., Petro-occipitalis superior.** See *S., Superior Petrosal.* **S., Petrosal,** venous sinuses along the borders of the petrous portion of the temporal bone. **S., Petroso-squamous.** See *S., Petro-squamous.* **S. petro-squamous,** a venous sinus running along the petro-squamous suture, and opening into the transverse sinus; it is believed to be a relic of a fetal communication with the internal jugular vein. **S. petrosus inferior.** See *S., Inferior Petrosal.* **S. petrosus medius,** an anomalous communication between the inferior and superior petrosal sinuses. **S. petrosus profundus.** See *S., Inferior Petrosal.* **S. petrosus superficialis** (seu **superior**). See *S., Superior Petrosal.* **S., Pharyngo-laryngeal.** See *Fossa laryngopharyngea.* **S. pharyngolaryngei.** See *Fossa laryngopharyngea.* **S. phrenicocostalis,** the part of the pleura where the costal and diaphragmatic portions join. **S. phrenicomediastinalis.** See *S. mediastinophrenicalis.* **S., Pilo-nidal.** See *Foveola coccygea.* **S. pituitarius frontis.** See *S., Frontal.* **S., Placental.** See *S., Utero-placental.* **S. pleuræ,** the spaces in the pleural sac, along the lower and inferior portions of the lung, which the lung does not occupy. **S. pocularis.** See *Uterus masculinus.* **S. of the Portal Vein,** an enlargement of the portal vein near the right end of the transverse fissure of the liver. **S., Posterior Basilar.** See *S., Occipital.* **S., Posterior Ethmoid.** See *Ethmoid Cells, Posterior.* **S., Posterior Occipital.** See *S., Occipital.* **S. primus et secundus** (*of Galen*), the transverse sinus. **S., Prostatic.** See *Uterus masculinus.* **S. prostaticus.** See *Uterus masculinus.* **S. protuberantiæ annularis,** the basilar groove of the pons. **S. pulmonalis,** the atrium of the left auricle. **S., Pulmonary.** See *S. pulmonalis.* **S., Pyramidal** (*of the larynx*). See *Fossa laryngopharyngea.* **S. pyriformis.** See *Fossa laryngopharyngea* and *Fossa, Hyoid.* **S. quartus.** 1. The fourth ventricle of the brain. 2. (*Of Galen*). See *S., Straight.* **S. quartus aortæ.** See *S., Great* (*of the aorta*). **S. quintus,** the fifth ventricle of the brain. **S. ad radicem linguæ** (Morgagni). See *Foramen cæcum* (*of the tongue*). **S. rectus.** See *S., Straight.* **S. renalis.** See *S. of the Kidney* and *Hilum of the Kidney.* **S. reuniens.** See *Meatus venosus.* **S. Rhomboidal, S. Rhomboid:** 1. A dilatation in the sacral region of the central canal of the spinal cord of birds. 2. The fourth ventricle of the brain. **S. rhomboidalis,** the fourth ventricle of the brain. **S. rhomboidalis lumbalis,** the expansion of the central canal of the spinal cord near the lumbar enlargement. **S., rhomboideus,** the fourth ventricle of the brain. **S., Ridley's.** See *S., Circular.* **S. sæpti** (*lucidi*), the fifth ventricle of the brain. **S. sagittalis superior.** See *S., Superior Longitudinal.* **S. secundus.** See *S., Superior Petrosal.* **S. of the Seminiferous Tubules.** See *Corpus highmori.* **S. semiovalis.** See *Fovea hemielliptica.* **S. septimus** (*of Guidi*), the superior longitudinal sinus. **S. sigmoideus.** See *S., Lateral.* **S. speculi,** the fifth ventricle of the brain. **S., Sphenoid,** air-sinuses which occupy the body of the sphenoid bone and communicate with the nasal cavity. **S., Sphenoparietal,** a vein uniting the cavernous sinus and a meningeal vein. **S. sphenoparietalis.** See *S., Sphenoparietal.* **S. squamopetrosus.** See *S., Petrosquamous.* **S., Straight** (*of the tentorium*), a sinus which is continuous with the inferior longitudinal sinus and, running along the junction of the falx cerebri and tentorium, is continuous with the lateral sinus. **S. subarachnoidalis.** See *Subarachnoid Space.* **S. sulciformis.** See *Fossula sulciformis.* **S. sulciformis** (*Morgagni*), the *Aditus ad aquæductum sylvii.* **S., Superior Longitudinal,** a triangular canal which runs along the upper edge of the falx cerebri, beginning in front at the crista galli and terminating at the torcular. It is received into a median groove in the frontal, parietal, and occipital bones. **S., Superior Petrosal,** a venous canal running in a groove in the petrous portion of the temporal bone extending from the posterior part of the cavernous sinus to the lateral sinus on the mastoid portion of the temporal bone. **S., Tarsal,** the passage between the tarsal bones occupied by the intertarsal ligament. **S. tentorii.** See *S., Straight.* **S. tentorii lateralis.** See *S., Superior Petrosal.* **S. tentorii lateralis** (seu **posterior**). See *S., Lateral.* **S. tentorii medius.** See *S., Straight.* **S. tentorii medius** (seu **posterior**). See *S., Straight.* **S., Terminal.** 1. See *S. terminalis.* 2. Of Toldt, sinus-like spaces near the hilum of a lymph-gland. **S. terminalis,** a vein that encircles the vascular area of the blastoderm, and empties either by one trunk, the anterior vitelline vein, into the left vitelline vein, or by two trunks into both vitelline veins. **S. tertius,** the *third ventricle* of the brain. **S., Transverse:** 1. A sinus uniting the inferior petrosal sinuses. 2. A venous network in the dura over the basilar process of the occipital bone. It opens into the inferior petrosal and the anterior spinal veins. **S. transversus.** See *S.,*

Transverse. **S. transversus pericardii,** an opening connecting the prolongation of the pericardium which covers the pulmonary artery and the aorta with that covering the auricles. **S. triangularis.** See *S., Superior Longitudinal.* **S. tuberculi** (*ossis metacarpi*), a depression upon the external surface of a metacarpal bone just above its distal articular surface. **S. tympani.** See *Sulcus tympani.* **S. of the Urethra.** See *Bulbi urethræ.* **S., Urino-genital, S., Urogenital:** 1. The canal or duct into which, in the embryo, the Wolffian ducts and the bladder empty, and which opens into the cloaca. 2. In comparative anatomy, the common receptacle of the genital and urinary ducts. **S. urino-genitalis, S. urogenitalis.** See *S., Urino-genital.* **S., Uterine,** the veins of the uterus when in a state of dilatation due to the enlargement of the organ, as in pregnancy. **S., Utero-placental,** slanting venous channels which issue from the placenta at its uterine surface by piercing the decidua serotina, and serve to convey the maternal blood from the intervillous lacunæ back into the uterine veins. **S. of the Uterus.** See *S., Uterine.* **S. of Valsalva,** dilatations of the aorta and pulmonary artery opposite the segments of the aortic and pulmonary valves. **S. valsalvæ.** See *S. of Valsalva.* **S., Valvular.** See *S. of Valsalva.* **S. of a Vein,** a pouch-like enlargement of a vein on the cardiac side of its valves. **S. venæ coronariæ** (*magna proprius*). See *S., Coronary* (*of the heart*). **S. venæ jugularis.** See *S. of the Jugular Vein.* **S. venæ portæ,** the sinus of the portal vein. **S. venarum cavarum,** the right auricle of the heart. **S. venosi duræ matris.** See *S., Cranial.* **S. venosus,** the canal of Schlemm. See *S., Venous.* **S. venosus anterior.** See *Vena mediana medullæ spinalis anterior.* **S. venosus cordis.** See *Atrium.* **S. venosus corneæ.** See *Canal of Schlemm.* **S. venosus hovii,** a ring-like anastomosis of the venæ vorticosæ. **S. venosus iridis.** See *Canal of Schlemm.* **S., Venous,** one conveying venous blood. See also *Meatus venosus.* **S., Vertebral,** veins within the bodies of the vertebræ. **S. vesicæ urinariæ.** See *Recessus vesicæ urinariæ.*

Siphilis (*sif'-il-is*). See *Syphilis.*

Sipho (*si'-fo*) [σίφων, tube]. A syringe.

Siphon (*si'-fon*) [σίφων, a tube]. 1. A tube bent at an angle one arm of which is longer than the other, for the purpose of transferring a liquid from one vessel to another. Trocars and aspirating instruments constructed on this principle are called **S.-trocars** and **S.-aspirators.** 2. In biology, a tubular organ for the passage of some fluid, as the inhalent and exhalent siphons of certain molluscs, or the sucking-tube of various parasitic arthropods.

Siphonage (*si'-fon-āj*) [σίφων, a siphon]. The action of a siphon, whether in drainage of wounds or in house-plumbing.

Siphonal (*si'-fon-al*) [σίφων, a tube]. Pertaining to or resembling a siphon.

Siphonate (*si'-fon-āt*) [σιφων, tube]. In biology, provided with a siphon.

Siphonet (*si'-fon-et*) [σίφων, a tube]. In biology, one of the pair of excretory tubes on the upper surface of the abdomen of a plant-louse (*Aphis*). It exudes honey-dew.

Siphoniferous (*si'-fon-if'-er-us*) [σίφων, tube; *ferre*, to bear]. Provided with siphons.

Siphoniform (*si'-fon-if-orm*) [σίφων, tube; *forma*, form]. Shaped like a siphon.

Siphonium (*si-fo'-ne-um*) [σίφων, a tube, pipe: *pl.*, *Siphonia*]. In biology, a special bony tube in some birds, which conducts the air from the tympanum to the articular piece of the mandible.

Siphonoma (*si-fon-o'-mah*) [σίφων, siphon; ὄμ tumor]. A peritoneal cylindroma, sometimes calle *Henle's tubular tumor.*

Siphonoplax (*si-fon'-o-plaks*) [σίφων, a tube, pipe; πλά a plate]. In biology, one of the calcareous plates whic form a tube about the siphons of boring mollus (*Pholadidæ*).

Siphosome (*si'-fo-sōm*) [σίφων, a tube; σῶμα, the body In biology, that portion of a siphonophoran stock d voted to obtaining food; the feeding-polyps. S *Nectosome.*

Siphuncle (*si'-fung-kl*) [σίφων, a tube]. In biology, small siphon, as the siphonet or honey-tube of a plan louse, or the funnel of a cephalopod.

Siphuncular (*si-fung'-ku-lar*) [σίφων, siphon]. Pe taining to a siphuncle.

Siphunculate (*si-fung'-ku-lāt*) [σίφων, tube]. In bio ogy, provided with a siphuncle.

Siphunculus (*si-fung'-ku-lus*). Same as *Siphuncle.* S *Syringe.*

Siren (*si'-ren*) [σειρήν, a mythic being who enticed her singing]. 1. An instrument for studying t qualities and properties of musical sounds. 2. Sa as *Sirenomelus.*

Sirenomelia (*si-ren-o-me'-le-ah*). Same as *Sire omelus.*

Sirenomelus (*si-ren-om'-el-us*) [σειρήν, mermaid; μέλ limb]. A form of single autositic monster of t species symelus, in which the lower extremities intimately fused, without the trace of a foot, or, most, with but a single toe.

Siret's Disinfectant. A disinfecting mixture conta ing copperas 100 parts, zinc sulphate 50 parts, sa dust 40 parts, coal-tar 5 parts, and rapeseed-oil parts.

Siriasis (*sir-i'-as-is*) [σείριος, the dog-star]. An name for a supposed attack of sideration, resembl sunstroke, and caused by the influence of the d star.

Sirloin (*sir'-loin*) [Fr., *surlonge*, a sirloin]. The mus lar mass from the loin of animals, particularly catt

Siro (*si'-ro*) [L.]. See *Comedo.* An old name for c tain parasites. See *Parasites* (*Animal*), *Table of.*

Sirup (*sir'-up*). See *Syrup.*

Sisal Hemp (*se'-sal*). See *Hemp.*

Sister (*sis'-ter*) [ME., *sister*, sister]. A female relat in the first degree of descent. **S.-cells,** cells p duced by the fission or gemmation of any gi mother-cell; daughter-cells.

Sit [ME., *sitten*, to sit]. To occupy a seat.

Site (*sīt*) [*situs*, place]. Situation. **S., Placent** the area to which the placenta is attached.

Sitfast. In farriery, a piece of dead tissue in the s which would be thrown off but that it has formed i connections with the fibrous skin beneath, or with deeper tissues, and is thus bound in its place a persistent source of irritation.

Sitiology (*sit-e-ol'-o-je*) [σιτιον, nourishment; λό a treatise]. The science of nourishment or dietet

Sitiomania (*sit-e-o-ma'-ne-ah*). See *Sitomania.*

Sitiophobia (*sit-e-o-fo'-be-ah*) [σιτιον, food; φό dread]. A form of insanity marked by abhorre of food.

Sitis morbosa (*si'-tis-mor-bo'-sah*) [morbid thir Synonym of *Polydipsia.*

Sitology (*si-tol'-o-je*). See *Sitiology.*

Sitomania (*si-to-ma'-ne-ah*) [σῖτος, food; μανία, m ness]. A mania occurring periodically, characteri by loss of volition and an overwhelming desire partake of food to an unlimited extent.

Sitophobia (*si-to-fo'-be-ah*) [σῖτος, food; φοβος, fe Morbid or insane aversion to food.

Situs (*si′-tus*) [*situs*, site]. A position. **S. viscerum inversus**, an anomaly in which the organs or viscera of the body are changed from the normal to the opposite side of the body.

Sitzbath (*sits′-bath*) [Ger., *sitz*, a seat; *bath*]. A hip-bath or half-bath; a bath taken in a sitting posture; semicupium.

Sivvens (*siv′-enz*). Same as *Sibbens*.

Size (*siz*) [ME., *sise*, size]. Extent or volume. **S.-glue.** See *Glue*.

Sizy (*si′-ze*) [*siza*, glue]. Viscous, like glue or size.

Sizygium (*si-zig′-e-um*). See *Syzygy*.

Skatol (*skat′-ol*) [σκατός, *gen.* of σκωρ, dung, dirt], C_9H_9N. The principal aromatic product of the decomposition of albumin in the intestinal canal. It resembles indol, crystallizes in brilliant, white plates, and possesses an intense fecal odor. It fuses at 93.5° C., and is soluble with difficulty in water. Warmed with dilute hydrochloric acid or nitric acid it gives a violet color. Its vapor-density is 65.2. Serum-albumin digested with pancreas and water at 36° C. for from six to ten days yields skatol on distillation; two and a half kilograms of albumin give one gram of skatol.

Skatophagia (*skat-o-fa′-je-ah*). See *Scatophagia*.

Skatoxyl (*skat-oks′-il*) [σκῶρ (σκατ-), dung; ὀξύς, acid]. A product of the oxidation of skatol. It is obtained from the urine in cases of disease of the large intestine.

Skeer's Symptom. See *Signs and Symptoms, Table of*.

Skein (*skān*) [ME., *skeyne*, skein]. 1. A fixed length of any thread or yarn of silk or other material, doubled again and again and knotted. 2. A synonym of *Spirem*. **S., Close.** See *Spirem*. **S., Loose**, the thickened chromatin fibrils resulting from a loosening of the spirem or close skein in mitotic cell-division.

Skeletins (*skel′-et-ins*) [σκελετόν, skeleton]. A name given to a number of insoluble epithelial products found chiefly in invertebrates. The group includes *chitin*, *conchiolin*, *cornein*, *spongin*, *fibroin*, and *silk*.

Skeletization (*skel-et-iz-a′-shun*) [σκελετόν, skeleton]. Removal of the soft parts and leaving only the skeleton.

Skeletography (*skel-et-og′-ra-fe*) [σκελετόν, skeleton; γράφειν, to write]. A description of the skeleton.

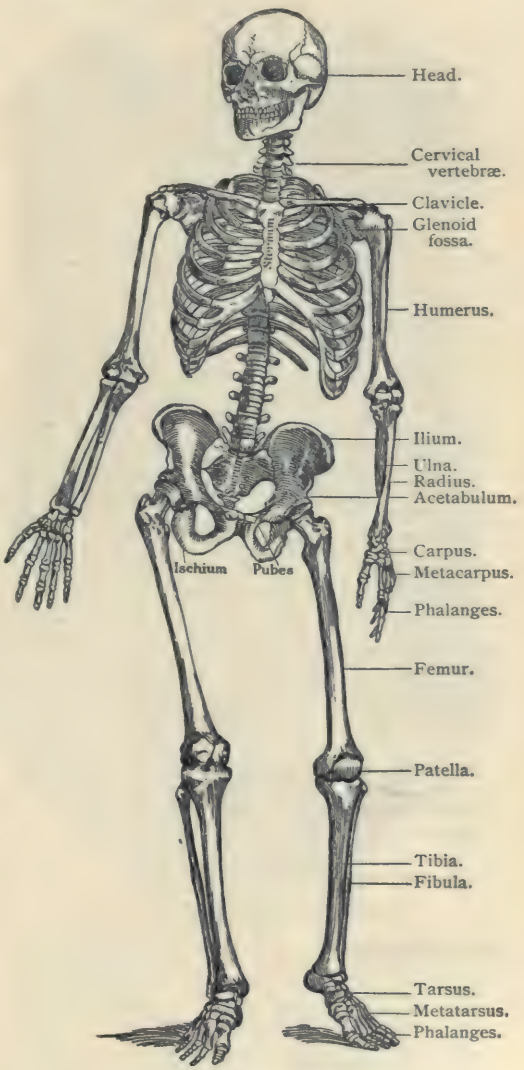
Skeletology (*skel-et-ol′-o-je*) [σκελετόν, skeleton; λόγος, science]. The sum of knowledge concerning the skeleton. See *Osteology*.

Skeleton (*skel′-et-on*) [σκελετόν, a dried body, a skeleton]. In biology, the supporting or inclosing structure for sustaining or protecting the soft parts of an organism. Cf. *Endoskeleton*, *Exoskeleton*, *Dermoskeleton*, *Scleroskeleton*, *Splanchnoskeleton*. **S., Cartilaginous**, the cartilaginous development from which the bony skeleton is formed through ossification.

Skeletonize (*skel′-et-on-īz*) [σκελετόν, skeleton]. To remove all the soft parts, leaving only the skeleton.

Skelos (*ske′-los*) [σκέλος, the leg: *pl.*, *Skelea*]. In biology, the vertebrate hind limb taken as a whole; it includes the *meros* or thigh, the *crus* or leg, and the *pes* or foot. Cf. *Armus*.

Skene's Glands. See *Gland*. **S.'s Instillation-tube**, a tube or pipet used for making applications of drugs to the interior of the uterus. **S.'s Tubes**, minute tubular outgrowths from the rudiments of the Wolffian ducts, corresponding to the vesiculæ seminales in the male.

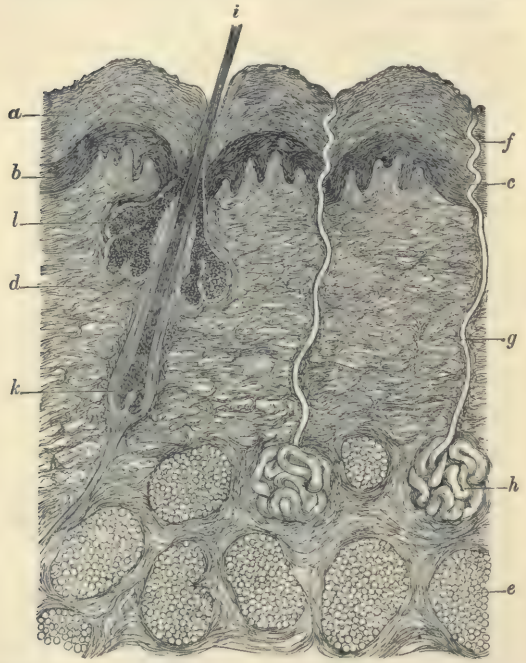


Skew Muscles. Triangular-shaped or quadrilateral-shaped muscles, the plane of whose line of origin intersects that of the insertion.

Skiagram (*ski′-ag-ram*) [σκία, shadow; γράμμα, a writing]. The finished printed X-ray picture.

Skiagraph (*ski′-ag-raf*). See *Skiagram*.

Skiagraphy (*ski-ag′-ra-fe*) [σκία, shadow; γράφειν, to write]. Photography by the X-Rays. Skotography, Skiography, Radiography, Electrography, Electro-skiagraphy, Rōntography, and the New Photography, are names that have been used to designate the method.



Skiascopy (*ski-as′-ko-pe*). See *Retinoscopy*.

BONY SKELETON.

Skin [ME., *skin*, skin]. The external protective membranous covering of the body. Also the chief organ of touch. It is composed of three layers, the epidermis, or scarf-skin, the cutis (derma), or true skin, and the *rete mucosum*, which gives the color to the skin. **S.-bone**, an ossification of the skin. **S.-bound**, affected with sclerema, *q. v.* See also *Scleroderma*. **S., Bronzed.** See *Addison's Disease*. **S.-disease**, a disease of the cutaneous surface. A classification of skin-diseases is appended. **S., Fish.** See *Ichthyosis*. **S., Glossy**, a neurotic dermatosis in which the skin becomes smooth and glossy. **S., Goldbeaters'**, a thin, tenacious sheet from the cecum of cattle, occa-

sionally used as a surgical dressing. **S., Goose.** See *Cutis anserina.* **S.-graft,** a graft, *q. v.* **S.-grafting,** the application of minute pieces of the outer layers of healthy skin to a granulating surface for the purpose of hastening its cicatrization. See *Dermatoplasty.* **S.,**

SECTION PERPENDICULARLY THROUGH THE HEALTHY SKIN.
a. Epidermis, or scarfskin. *b.* Rete mucosum, or rete malpighii. *c.* Papillary layer. *d.* Derma, corium, or true skin. *e.* Panniculus adiposus, or fatty tissue. *f, g, h.* Sweat-gland and duct. *i, k.* Hair, with its follicle and papilla. *l.* Sebaceous gland.

Piebald. See *Vitiligo.* **S.-planting.** Same as *S.-grafting.* **S., Scale.** See *Ichthyosis.* **S.-transplantation,** or **S.-transportation.** Same as *Dermatoplasty.*

SKIN-DISEASES, CROCKER'S CLASSIFICATION OF.

CLASS I.—HYPEREMIÆ—CONGESTIONS.

	Most Prominent Primary Lesion.
Erythema simplex,	Erythema.
" ab igne,	" and pigmentation.
" pernio,	"
" intertrigo,	"
" fugax,	"
" roseola,	"
" scarlatiniforme,	"

CLASS II.—EXUDATIONES—INFLAMMATIONS.

	Most Prominent Primary Lesion.
Erythema exsudativum multiforme,	Erythema.
" " iris,	" and vesicles.
" " nodosum,	"
" " induratum,	" and brawny swelling.
Peliosis rheumatica,	" and hemorrhages.
Pellagra,	"
Acrodynia,	"
Urticaria,	Wheals.
Prurigo,	Lenticular papules.
Eczema,	Multiform lesions.
Dermatitis repens,	Epidermic denudation and fluid exudation.
Impetigo contagiosa,	Vesicles and pustules.
Furunculus,	Phlegmons.
Carbunculus,	"
Pompholyx,	Bullæ and vesicles.
Herpes zoster,	Grouped vesicles.
" facialis,	" "
" progenitalis,	" "
Pemphigus,	Bullæ.
Hydroa,	Grouped bullæ.
Impetigo herpetiformis,	" pustules.
Psoriasis,	Scaly crusts on red base.
Ptyriasis rubra,	Diffuse redness with large scales.
" rosea,	Patches, with fine scales.
" rubra pilaris,	Papules, " " "
Lichen ruber,	" acuminate.
" planus,	" flat.
" scrofulosus,	" minute, convex.
" pilaris,	" follicular.
Conglomerative pustular folliculitis,	Pustules en plaques, aggregated.
Dermatitis,	Multiform lesions.

CLASS III.—HEMORRHAGIÆ—HEMORRHAGES.

Purpura,	Blood-extravasation.

CLASS IV.—HYPERTROPHIÆ—HYPERTROPHIES.

	Parts Affected.
Ichthyosis,	Epidermis and papillæ.
Keratosis pilaris,	Hair-follicles.
Verruca,	Epidermis and papillæ.
Clavus,	" " "
Cornu cutaneum,	" " "
Callositas,	Epidermis.
Tylosis,	"
Scleroderma,	Corium.
Sclerema neonatorum,	"
Œdema "	"
Elephantiasis,	The whole skin.
Lentigo,	Pigment.
Chloasma,	"
Acanthosis nigricans,	" with papillary growths.
Nævus pigmentosus,	" neoplasm.

CLASS V.—ATROPHIÆ—ATROPHIES.

	Parts Affected.
Albinism,	Pigment-deficiency.
Leukoderma,	" disturbance.
Atrophoderma (or xeroderma) pigmentosum,	Corium.
Atrophoderma albidum,	"
" senile,	"
" striatum et maculatum,	"
" neuriticum,	"
Perforating ulcer,	"
Morvan's disease,	Sensory nerves. Analgesic whitlows.
Ainhum,	Corium?

CLASS VI.—NEOPLASMATA—NEW-GROWTHS.

	General Character.
Darier's disease,	Crusted papules.
Molluscum contagiosum,	Degenerative.
Xanthoma,	Degenerative.
Colloid,	Degenerative.
Lupus vulgaris,	Infiltrating.
" erythematosus,	Infiltrating.
Scrofuloderma,	Infiltrating.
Tuberculosis,	Infiltrating.
Syphilis,	Infiltrating.
Lepra,	Infiltrating.
Rhinoscleroma,	Infiltrating.
Keloid,	Benign.
Fibroma,	Benign.
Myoma,	Benign.
Neuroma,	Benign.
Nævus vascularis,	Benign.
Telangiectasis,	Benign.
Angioma serpiginosum,	Benign.
Angiokeratoma,	Benign.
Lymphangiectodes,	Benign.
Lymphangioma tuberosum multiplex,	Benign.
Carcinoma,	Malignant.
Paget's disease,	Malignant.
Epithelioma,	Malignant.
Rodent ulcer,	Malignant.
Sarcoma,	Malignant.
Mycosis fungoides,	Malignant.
Yaws,	Malignant.
Verruga peruana,	Malignant.
Furunculus orientalis,	Malignant.
Phagedæna tropica,	Malignant.

CLASS VII.—NEUROSES—SENSORY DISEASES.

Hyperesthesia.	Pruritus.
Dermatalgia.	Anesthesia.

CLASS VIII.—MORBI APPENDICIUM—DISEASES OF THE APPENDAGES.

Most Prominent Primary Lesion.

4. SWEAT-GLANDS.

Hyperidrosis,	Excessive secretion.
Bromidrosis,	Altered quality.
Chromidrosis,	Altered quality.
Phosphorescent sweat,	Altered quality.
Uridrosis,	Altered quality.
Anidrosis,	Secretion absent.
Miliaria crystallina (Sudamina),	Retained secretion.
" vesiculosa,	Inflammation.
" papulosa,	"

5. SEBACEOUS GLANDS.

Seborrhea,	Excessive secretion.
Seborrheic dermatitis,	Multiform.
Sebaceous cysts,	Retention.
Milium,	"
Comedones,	"
Acne vulgaris,	Inflammation.
" rosacea,	"
" varioliformis,	"
Adenoma sebaceum,	Papular neoplasms.

6. HAIR-FOLLICLES.

Hirsuties,	Excessive growth.
Atrophy,	Defective "
Alopecia,	Baldness.
" areata,	" in patches.
Concretiones,	Growths on the hair-shaft.
Sycosis,	Inflammation.
Dermatitis papillaris capillitii,	" and keloid.

7. NAILS.

Pterygium,	Overlapping of nail-fold.
Onychia,	Inflammation in matrix.
Paronychia,	" around matrix.
Atrophy,	Defective growth.
Onychogryphosis,	Overgrowth.
Onycho-mycosis,	Fungus-growth in the nail.

CLASS IX.—PARASITI—PARASITES.

1. VEGETABLE.

	Parts Affected.
Favus,	Hair and skin.
Tinea trichophytina, tonsurans,	Hair.
Tinea trichophytina, decalvans,	"
Tinea trichophytina, circinata,	Skin.
Tinea trichophytina, barbæ,	Hair.
Tinea trichophytina, imbricata,	Skin.
Tinea trichophytina, versicolor,	"
Erythrasma,	"
Pinta,	"
Fungus-foot of India,	" and deeper tissues.

2. ANIMAL.

Scabies,	Acarus.
Demodex folliculorum,	"
Pediculosis, capitis,	Insect.
Pediculosis, corporis,	Insect.
Pediculosis, pubis,	Insect.
Dracunculus medinensis,	Filaria or thread-worms.
Filiaria sanguinis hominis,	Filaria or thread-worms.
Cysticercus cellulosæ cutis,	Tænia, or tape-worm embryo.

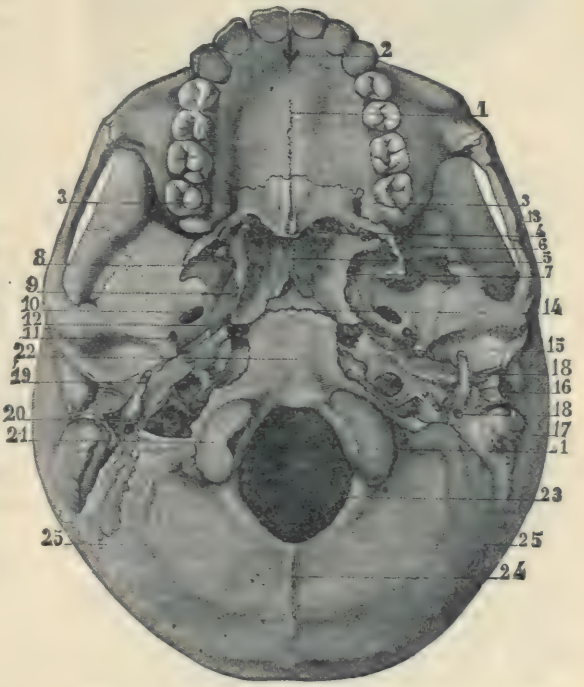
Skinniness (*skin'-e-nes*) [ME., *skin*, skin]. Leanness.

Skinny (*skin'-e*) [ME., *skin*, skin]. 1. Cutaneous. 2. Emaciated.

Skleriasis (*skle-ri'-as-is*). See *Scleroderma*.

Skleroseptum (*skle-ro-sep'-tum*) [σκληρός, hard; *septum*, fence, partition: *pl.*, *Sklerosepta*]. In biology, one of the radially arranged, perpendicular calcareous ridges arising from the foot-plate of a stone coral (*Hexacorallia*, *Madreporaria*), also called star-ridges. Cf. *Sarcosepta*.

Skoda, Consonating Râles of. Bronchial râles heard through the consolidated pulmonary tissue of pneumonia. **S.'s Resonance Sign or Tympany,** a tympanitic note heard above the line of fluid in a pericardial effusion, or above the line of consolidation in pneumonia. It is almost as tympanitic as the abdomen. See *Bruit skodique*.



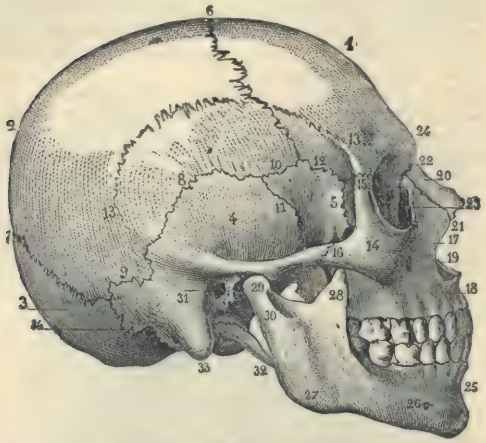
Skodaic Resonance. See *Skoda's Resonance*.

Skodaic Tympany (*sko'-da-ik tim'-pan-e*). See *Skoda's Resonance*.

Skoliosometer (*sko-le-o-som'-et-er*) [σκολιός, curved; μέτρον, measure]. See *Scoliosometer*.

Skopophobia (*sko-po-fo'-be-ah*) [σκοπός, a spy; φόβος, fear]. Insane dread of spies.

Skull (*skul*) [ME., *skulle*, skull]. The superior expansion of the vertebral column, the protective bony



BASE OF SKULL.

1. Median suture of palatine vault. 2. Inferior orifice of anterior palatine canal. 3, 3. Inferior openings of posterior palatine canals. 4. Posterior border of palatine vault; posterior nasal spine. 5. Posterior border of nasal septum. 6. Hamular process of internal pterygoid plate of sphenoid bone. 7. Internal pterygoid plate. 8. External pterygoid plate. 9. Scaphoid fossa. 10. Oval or inferior maxillary foramen. 11. Foramen spinosum. 12. Foramen lacerum medium. 13. Zygomatic arch. 14. Spheno-occipital suture. 15. Glenoid cavity. 16. External auditory canal. 17. Mastoid process. 18, 18. Styloid process and stylo-mastoid foramen. 19. Inferior orifice of carotid canal. 20. Foramen lacerum posterius. 21, 21. Occipital condyles. 22. Basilar process. 23. Foramen magnum. 24. External occipital crest. 25, 25. Inferior curved lines of occipital bone.

covering or container of the brain and organs of the special senses, consisting of the cranium and face. The cranium is made up of 8 bones—the occipital, 2 parietal, the frontal, 2 temporal, the sphenoid, and the ethmoid. The face is composed of 14 bones—nasal, superior maxillary, lacrymal, malar, palate, inferior turbinated, two each, and vomer and inferior maxillary, one each. **S.-cap,** the dome of the skull. See *Scutellaria*. **S., Landmarks of,** the eminences, chiefly the frontal

and parietal, the 2 temporal ridges, the sutures, and the craniometric points, *q. v.* **S., Natiform,** a skull

LATERAL ASPECT OF SKULL.

1. Frontal bone. 2. Parietal bone. 3. Occipital bone. 4. Temporal bone. 5. Greater wing of sphenoid bone. 6. Lambdoid suture. 7. Occipito-parietal suture. 8. Squamo-parietal suture. 9. Masto-parietal suture. 10. Spheno-parietal suture. 11. Spheno-temporal suture. 12. Spheno-frontal suture. 13, 13. Temporal ridge. 14. Malar bone. 15. Fronto-malar suture. 16. Malo-temporal suture. 17. Malo-maxillary suture. 18. Superior maxillary bone. 19. Infraorbital foramen. 20. Nasal bone. 21. Naso-maxillary suture. 22. Naso-frontal suture. 23. Lacrymal groove, at the bottom of which may be seen the suture between the lacrymal and the superior maxillary bones. 24. Nasal eminence. 25. Inferior maxillary bone. 26. Mental foramen. 27. Angle of lower jaw. 28. Coronoid process. 29. Condyle. 30. Neck of condyle. 31. External auditory canal. 32. Styloid process. 33. Mastoid process. 34. Masto-occipital suture.

covered with osteophytes. **S.-roof,** the roof of the skull; skull-cap.

Skunk. See *Mephitis.* **S.-bush.** See *Garrya.* **S. Cabbage,** the root of *Symplocarpus fœtidus,* a stimulant, antispasmodic, and narcotic. Dose of the fld. ext. ɱx–xl. Unof.

Slag [Sw., *slagg,* dross]. The earthy matter separated, in a more or less completely fused and vitrified condition, during the reduction of a metal from its ore.

Slaver (*slav'-er*) [ME., *slaver,* slaver]. Drivel; saliva, especially such as is involuntarily discharged.

Sleek (*slēk*) [ME., *slicke,* smooth]. Smooth; glossy, as the skin.

Sleep (*slēp*) [ME., *slepen,* to sleep]. The state of rest and recuperation of the bodily and mental voluntary powers. The consciousness may also be inactive or dreaming, *i. e.,* without the guidance and data of the will and lower centers, and hence illogically functional. **S.-drunkenness.** See *Somnolentia.* **S.-epilepsy.** See *Narcolepsy.* **S., Hypnotic, S., Magnetic, S., Mesmeric,** sleep produced by hypnotism. **S.-paralysis,** paralysis produced by pressure during sleep. **S., Paroxysmal.** See *Narcolepsy.* **S.-walking.** See *Somnambulism.*

Sleeping (*slēp'-ing*) [ME., *slepen,* to sleep]. Resting in slumber. **S.-dropsy,** a singular disorder seen only on the Atlantic coast of Africa, and characterized by daily paroxysms of somnolence, tending to become more and more continuous and profound until merged in fatal coma. Its onset is gradual, commencing with a slight frontal headache. It may persist for from three months to a year or more, and always ends fatally. It is also called *African Lethargy,* and is said by some to be only one of the manifestations of *filariasis.* See *Narcolepsy.* **S.-sickness.** See *African Lethargy, Narcolepsy, Nelavan,* and *Filariasis.*

Sleeplessness (*slēp'-les-nes*). See *Insomnia.*

Sleepy (*slē'-pe*) [ME, *slepen,* to sleep]. Inclined to sleep. **S.-disease.** See *Hypnopathy.* **S. Staggers,** a symptom in the horse, resulting from a variety of brain-affections, characterized by more or less drowsiness or coma associated with a staggering gait. See *Staggers.*

Slender Lobe of the Cerebellum. See *Lobe.*

Slick (*slik*). Same as *Sleek.*

Slide (*slīd*) [ME., *sliden,* to slide]. A small, rectangular slab of clear glass for the mounting, preservation, and ready examination of microscopic objects. The slide may vary in size; for ordinary work the most common dimensions are 26 × 76 millimeters, or 1 × 3 inches.

Slime (*slīm*) [AS., *slīm,* slime]. In biology, a viscid secretion of the cutaneous glands of various animals. Mucus. **S.-fungus.** Same as *S.-mold.* **S.-gland** (*a*) one of the modified leg-glands, with ducts emerging at the ends of the oral papillæ in the *Protracheata.* (*b*) one of the glands furnishing the viscid mucus-like substance of snails, fishes, etc. **S.-mold.** See *Myxomycetes.*

Sling [ME., *slinge,* a sling]. A swinging bandage and carriage for supporting a fractured limb. **S. of the Lenticular Nucleus,** a tract of nerve-fibers which enter the lenticular nucleus by passing beneath the optic thalamus.

Slink (*slingk*) [origin obscure]. To bear young or calve prematurely; said of a female beast; to miscarry. **S. Meat,** the meat of calves or lambs that have been cast prematurely.

Slinking (*slingk'-ing*) [origin obscure]. Abortion in cows or other beasts.

Slip (*slip*) [MD. D., *slippen,* slip, escape]. 1. A male fowl which has been unsuccessfully caponized. 2. A scion or cutting of a plant made for grafting or rooting. 3. Same as *Slide.*

Slippery Elm. See *Ulmus,* and *Fremontia.*

Slit [ME., *slit,* a slit]. A narrow opening; a visceral cleft; the separation between the labia; the vulvar cleft. **S., Genito-urinary, S., Urino-genital, S., Uro-genital,** the uro-genital opening. **S. of the Micro-spectroscope,** the spectral ocular, in place of an ordinary diaphragm, has two movable knife edges arranged that a slit-like opening of greater or less width and length may be obtained by the use of screws for that purpose.

Sloid, Sloyd (*sloid*) [Sw., *slojd,* slight, skill]. A system of manual training taught in elementary schools. It is of Swedish origin.

Slop [ME., *sloppe,* a pool]. A general term for liquid foods used in the course of acute diseases and during convalescence.

Slough (*sluf*) [ME., *slouh,* the skin of a snake]. A term applied to the separating and dying particles of tissue in suppurative and ulcerative processes. As a verb, to separate or die in consequence of gangrene; said of tissues.

Sloughing (*sluf'-ing*) [ME., *slouh,* the skin of a snake]. Gangrenous.

Slows (*slōz*). Synonym of *Milk-sickness.*

Sludge (*sluj*) [AS., *slog,* mud]. Sewage-deposit.

Slumber (*slum'-ber*) [ME., *slumberen,* to slumber]. 1. To sleep lightly. 2. Light sleep.

Small (*smawl*) [ME., *small,* not large]. Little in size; diminutive. **S.-pox.** See *Variola.* **S.-pox, Abortive,** variola in which but few pustules are present, these rapidly disappear. **S.-pox., Bastard.** See *Varicella.* **S.-pox, Confluent.** See *Variola confluens.* **S.-pox, Crystalline.** See *Varicella.*

pox, False. See *Varicella.* **S.-pox, Hemorrhagic.** See *Variola.* **S.-pox, Ichorous.** See *Varicella.* **S.-pox, Malignant.** See *Variola.* **S.-pox, Modified.** See *Varioloid.* **S.-pox, Ovine.** See *Sheep-pox.* **S.-pox, Spurious.** See *Varicella.* **S. Red Granular Kidney.** See *Bright's Disease.* **S. White Kidney.** See *Bright's Disease.*

Smalts (*smawlts*). See *Pigments, Conspectus of.*

Smart [ME., *smerten*, to smart]. 1. To feel a pungent pain. 2. A sharp, quick, active pain. **S.-weed.** See *Polygonum hydropiperoides.*

Smead-Dowd System. See *Ventilation.*

Smear-cultures (*smēr*). See *Culture.*

Smectic (*smek'-tik*). Same as *Detergent.*

Smegma (*smeg'-mah*) [σμῆγμα, a cleansing substance]. The sebaceous accretions upon the skin. **S. embryonum.** See *Vernix.* **S. of Prepuce,** the caseous substance secreted by the follicles of the prepuce.

Smegmatic (*smeg-mat'-ik*) [σμῆγμα, a cleansing substance]. Pertaining to, or of the nature of, smegma.

Smegmatorrhea (*smeg-mat-or-e'-ah*). Synonym of *Seborrhea.*

Smell (*smel*) [ME., *smellen*, to smell]. The perception of an odor by means of the olfactory *organ.* **S.-hollows,** elliptic pits on the antennæ of bees having olfactory functions.

Smelling (*smel'-ing*) [ME., *smellen*, to smell]. The sense of smell; olfaction. **S.-bottle,** a small bottle containing smelling-salts. **S.-salts,** a popular name applied to various preparations of ammonium carbonate flavored with aromatic substances. **S.-salts, English,** carbonate of ammonium impregnated with ethereal oils, such as oil of lavender or bergamot.

Smelting (*smelt'-ing*) [ME., *smelten*, to smelt]. The treatment of ore by which it is subjected to intense heat for the purpose of separating the contained metal.

Smilacin (*smi'-las-in*) [σμῖλαξ, the yew]. The precipitate from a tincture of the root of sarsaparilla, *Smilax officinalis*, alterant, detergent, diaphoretic, and stimulant. Dose 2 to 5 grains. Unof.

Smilax (*smi'-laks*). See *Sarsaparilla, China-root, Bamboo-brier.*

Smith, Bacillus of, S., Spirillum of. See *Bacteria, Synonymatic Table of.*

Smith's Method. See *Treatment, Methods of.*

Smiths' Cramp or Spasm. See *Spasm.*

Smoke (*smōk*) [ME., *smoken*, to smoke]. To emit a vapor or exhalation while burning. **S.-rockets,** an inflammable substance used in making the smoke-test for sewer-gas. **S.-test,** a method for finding defects in drains by means of smoke.

Smoker (*smo'-ker*) [ME., *smoken*, to smoke]. One who uses tobacco. **S.s' Cancer.** See *Cancer.* **S.s' Dyspepsia.** See *Dyspepsia.* **S.s' Patch,** a chronic inflammation of a small spot of the mucous membrane of the mouth arising from an irritation produced by the pipe. It varies in size from a quarter to a half of an inch in diameter, and is smooth and red in appearance. **S.s' Sore-throat,** the condition of catarrh of the pharynx and larynx, with hoarseness, common in habitual smokers. **S.s' Vertigo.** See *Vertigo.*

Smooth Sumach. See *Rhus glabra.*

Smother (*smuth'-er*) [ME., *smothren*, to suffocate]. To suffocate; to stifle.

Smothering (*smuth'-er-ing*) [ME., *smothren*, to suffocate]. Exclusion of air from the respiratory organs, as by covering the mouth and nostrils.

Smut [AS., *smitta*, a spot]. 1. A foul spot; the fouling matter itself. 2. A parasitic disease of plants, caused by fungi of the order *Ustilagineæ*, the first exact researches concerning which were published about 1850 by the brothers Tulasne. **S. of Broom Corn,** *Ustilago sorghi* (L.K.), Passerini. **S., Covered, of Barley,** *Ustilago hordei* (P.), Kell and Swingle. **S. of Indian Corn,** *Ustilago maydis* (D. C.). **S., Naked, of Barley,** *Ustilago nuda* (Jensen), Kell and Swingle. **S. of Oats,** *Ustilago avenæ* (P.), Jensen, var. *lævis*, Kell and Swingle. **S. of Rye,** *Ustilago occulta* (Walls), Rabh. **S. of Wheat,** *Bunt*, or *Stinking Smut*, *Tilletia fœtens*, Trelease; *Tilletia tritici* (Bjerk), Wint. The disease is spread by spores of these fungi adhering to the sound grains before they are planted, or by spores in the soil.

Smyrna (*smir'-nah*). Synonym of *Myrrh.*

Snake (*snāk*) [ME., *snake*, a snake]. A serpent. **S.-head.** See *Balmony.* **S.-root, Black.** See *Cimicifuga.* **S.-root, Canada.** See *Asarum.* **S.-root Seneca.** See *Senega.* **S.-root Virginia.** See *Serpentaria.* **S.-stone.** See *Madstone.* **S.-weed.** See *Bistort.*

Snap-finger. See *Spring-finger.*

Snare (*snār*) [ME., *snare*, snare]. A light or small écraseur, or wire loop, used in removing polypi and small excrescences.

Snarling Muscle. See *Muscles, Table of.*

Sneering Muscle. See *Muscles, Table of.*

Sneeze (*snēz*) [ME., *snesen*, to sneeze]. To expel the breath audibly and spasmodically through the nose for the removal of mucus or foreign bodies. **S.-cough,** a peculiar explosive sound produced by an attempt on the part of the patient to sneeze and cough at the same time. It is due to an irritation of the lower and posterior portions of the nasal cavities. **S.-wort.** See *Achillea.*

Sneezing (*snēz'-ing*) [ME., *snesen*, to sneeze]. Sternutation.

Snellen's Types. See *Test-types.*

Sniffles (*snif'-lz*) See *Snuffles.*

Snore (*snōr*) [ME., *snoren*, to snore]. 1. To breathe through the nose in such a manner as to cause a vibration of the uvula and soft palate, thereby producing a rough, audible tone. 2. The sound so produced.

Snoring (*snōr'-ing*). See *Stertor.*

Snort [ME., *snorten*, to snore]. To snore loudly.

Snout (*snowt*) [ME., *snoute*, snout]. The nose of an animal. See *Muzzle.*

Snow (*sno*) [ME., *snow*, snow]. The aqueous vapor of the atmosphere precipitated in a frozen form. **S.-blindness.** See *Blindness.* **S.-shoe Disease,** pain in the feet following a long march on snow-shoes. **S.-white.** Same as *Zinc White.*

Snow's Inhaler. See *Anesthetic.*

Snub-nose (*snub'-nōz*). See *Pug-nose.*

Snuff (*snuf*) [ME., *snuffen*, to snuff]. 1. Powdered tobacco, variously perfumed and mixed, used for inhalation into the nostrils. 2. A medicated powder to be insufflated into the nostrils. 3. To inhale; to smell. **S.-box, Anatomist's,** the *Foveola radialis.*

Snuffle (*snuf'-fl*) [LG., *snuffeln*, to snuffle]. To breathe hard through the nose. As a plural noun, a popular name for a catarrhal discharge from the nose in infancy. It is not infrequently symptomatic of syphilis.

Soap (*sōp*) [ME., *sope*, soap]. A chemic compound made by the union of certain fatty acids with a salifiable base. It is used for washing and cleansing purposes. See *Sapo.* A table is appended showing the composition of the chief soaps of pharmacy, as analyzed by M. Dechan. **S.-balls,** balls made of starch and soap. **S.-bark.** See *Quillaia.* **S., Black.** See *Sapo viridis.* **S., Castile,** soap made from olive-oil. **S., Cocoanut-oil,** soap made from cocoanut-oil. It is soluble in hard water. **S., Glassmakers',** native dioxid of manganese. **S., Green.** See *Sapo viridis.* **S., Hard,** soap prepared by means of soda alkali;

soda soap. **S.-liniment.** See *Linimentum saponis.* **S., Petroleum,** a soap made by heating together 5 parts of petroleum, 4 of white wax, 5 of alcohol, and 10 of hard soap. **S., Soft,** soap made by means of potash alkali; potash soap. **S., Taxidermists',** a soap made by mixing 32 parts each of grated olive-oil soap, arsenious acid and boiling water, 12 of potassium carbonate, 4 of unslaked lime, and 1 of camphor. **S., Tincture of Green.** See *Sapo viridis.* **S.-wort,** *Bouncing Bet,* the root of *Saponaria officinalis.* Its properties are due to an extractive, saponin. It is a paralyzant to the peripheral nerve-endings and the respiratory centers, and is a useful alterative in syphilitic and scrofulous complaints. Dose of the fld. ext. ♏xv–℥j. Unof.

Variety.	Fatty Acids.	Combined Alkali.	Free Alkali.	Silica.	Sulphates and Chlorids.	Insoluble Matter.	Water.	Insoluble in Alcohol.
Hard Soap (*Sapo durus*).	81.5	9.92	.08	.00	.28	0.20	10.65	0.50
White Castile Soap (*S. Cast. alb.*).	76.7	9.14	.09	.00	.36	0.90	13.25	0.60
Mottled Castile Soap.	68.1	8.9	.19	.15	.63	0.80	21.70	1.30
Tallow Soap (*Sapo animalis*).	78.3	9.57	.28	.00	.47	0.40	12.50	1.10
Soft Soap (*Sapo mollis*).	48.5	12.6	.38	.17	.93	1.00	39.50	1.60

Sobbing (*sob'-ing*) [ME., *sobben,* to sob]. Convulsive inspirations due to contraction of the diaphragm and spasmodic closure of the glottis. The sound produced is characteristic.

Soboliferous (*sob-o-lif'-er-us*) [*soboles,* a shoot; *ferre,* to bear]. Bearing vigorous shoots.

Socaloin (*so-kal'-o-in*) [*Socotra,* an island in the Indian Ocean; ἀλοη, aloes], $C_{15}H_{16}O_7$. The aloin derived from socotrine aloes.

Socia (*so'-se-ah*) [L.]. One accompanying. **S. parotidis,** an occasional small, separate lobe, or exclave, of the parotid gland.

Social (*so'-shal*) [*socius,* a companion]. In biology, gregarious, growing near, or together. **S. Evil,** prostitution.

Society Screw. The screw at the lower end of the draw-tube or body-tube of a microscope for receiving the objective.

Socin's Antiseptic Paste. See *Paste.*

Sociology (*so-se-ol'-o-je*) [*socius,* a fellow-being; λόγος, a treatise]. A treatise on the mutual relations of people and of social organization.

Sock (*sok*) [ME., *socke,* a sock]. A short-legged stocking. **Ss., Neapolitan,** socks containing mercurial ointment, which are to be worn continuously for the purposes of inunction.

Socket (*sok'-et*) [ME., *soket,* a socket]. The concavity or excavation of an articulation.

Socle (*so'-kl*) [*soccus,* a light shoe]. In biology, the supporting structure of the sense-organs of certain worms. See *Pedalia.*

Soda (*so'-dah*) [L.], Na_2O. The oxid of the metal sodium. Also, popularly, almost any salt of sodium. See *Sodium.* **S.-ash,** a substance produced in the manufacture of sodium carbonate. **S., Baking,** sodium bicarbonate. **S., Caustic,** sodium hydroxid, a strongly alkaline base with a great affinity for water. **S.-powder,** a baking-powder. **S., Washing,** sodium carbonate. **S.-waste,** a by-product in the manufacture of sodium carbonate. **S.-water,** the so-called soda-water sold by druggists and confectioners consists of filtered water impregnated or aërated with carbon dioxid. It contains no soda.

Sodium (*so'-de-um*) [*soda,* soda; *gen.,* *Sodii*]. Na = 23; quantivalence 1; sp. gr. 0.972. A metal of the alkaline group, characterized by its strong affinity for oxygen. It has a silver-white luster, and is softer than lead. It decomposes water, forming sodium hydrate. The action of the sodium-salts is similar to that of potassium-compounds. See *Elements, Table of.* **S. acetas,** $NaC_2H_3O_2.3H_2O$, diuretic, a good saline draught. Dose gr. xx–℥j. **S.-amalgam,** a compound of sodium and mercury. **S. arsenias,** Na_2HAsO_4, used in preparing liquor sodii arseniatis. **S. benzoas,** $NaC_7H_5O_2$. Dose gr. x–xxx. **S. bicarbonas,** $HNaCO_3$, "saleratus," "baking-soda;" antacid; 20 gr. neutralize 16.7 gr. of citric acid or 17.8 gr. tartaric acid. Effervescent. It is much used for the aëration of bread. Dose gr. x–℥j. **S. bicarb., Troch.,** each contains gr. iij of the salt. **S. bicarb. venalis,** commercial bicarbonate. **S. bisulphis,** $NaHSO_3$, sodium bisulphite. **S. boras,** $Na_2B_2O_7$, borax. **S. bromidum** (B. P.), NaBr. Dose gr. x–xxx. **S. carbonas,** Na_2CO_3, antacid; 20 gr. neutralize 9.7 gr. citric, or 10.5 gr. tartaric acid. Effervescent. Dose gr. v–xxx. **S. carb., exsiccatus,** the carbonate dried until it loses 50 per cent. of its weight. **S. chloras,** $NaClO_3$, the basis of an agreeable gargle. Dose gr. v–xx. **S. chloridum,** NaCl, common salt. Dose gr. x–℥j. **S. ethylas,** C_2H_5NaO, caustic alcohol, unof., in contact with water breaks into caustic soda and alcohol; **S. formas,** $NaCHO_2.H_2O$, used in the form of parenchymatous injections in surgical tuberculosis. Dose gr. ss–iij. **S. hydras,** Na(HO), "caustic soda," very alkaline and powerfully escharotic. **S. hypophosphis,** $NaPH_2O_2$, used in preparing syrupus hypophosphitum. **S. hyposulphis,** $Na_2S_2O_3 + 5H_2O$, an antiseptic salt. **S. iodidum,** NaI. Dose gr. iij-x. **Sodæ, Liq.,** solution of soda. Dose ♏v-℥ss; contains 56 parts of the hydrate in 944 of distilled water. **S. nitras,** $NaNO_3$, "cubic niter," "Chili saltpeter." **S. nitris,** $NaNO_2$, used in preparing sweet spirit of niter. **S. phosphas,** Na_2HPO_4, sodium orthophosphate. **S. pyrophosphas,** $Na_2P_2O_7$, sodium pyrophosphate. **S. salicylas,** $NaC_7H_5O_3$, sodium salicylate. Dose gr. x-xv. **S. santonas,** $Na_2C_{15}H_{18}O_4$, a vermifuge for threadworms. Dose gr. v. **S. sulphas,** Na_2SO_4, "Glauber's Salt," a mild purgative. Dose gr. v–xx; as a purgative ℥ss–j. **S. sulphis,** Na_2SO_3, sodium sulphite. **S. sulphocarbolas,** $NaC_6H_5SO_4.2H_2O$. Dose gr. x–xv. **S. valerianas,** $NaC_5H_9O_2$. Dose gr. j–v.

Sodomist, Sodomite (*sod'-om-ist, sod'-om-it*) [Σόδομα, Sodom]. One guilty of sodomy.

Sodomy (*sod'-om-e*) [Σόδομα, Sodom, a former city of Asia]. Sexual connection by the anus. **S., Masturbating,** a name proposed for intromission of objects into the rectum to produce sexual excitement.

Sœmmering's Bone. The marginal process of the malar bone. **S.'s Crystalline Swelling,** an annular swelling behind the iris, due to proliferation of the cells of the capsule after cataract-operation. **S., Foramen of.** See *Foramina, Table of.* **S., Ganglion of,** the substantia nigra of the thalamus. **S., Nerve of.** See *Nerves, Table of.* **S., Yellow Spot of.** See *Macula lutea.*

Soft [ME., *soft*, soft]. Yielding readily to pressure; not hard. **S. Palate.** See *Palate*.

Softening (*sof'-en-ing*) [ME., *soft*, soft]. The act of becoming less cohesive, firm, or resistant. **S., Acute Gastric,** a disease of childhood in which the stomach and intestines are said to undergo softening. It is probably a post-mortem phenomenon. **S., Anemic,** disintegration and liquefaction of the brain-substance from lack of blood-supply. **S. of the Bones,** osteomalacia. **S. of the Brain,** a disease of the cerebral tissue dependent upon inflammation or blood-failure, the symptoms varying according to the part affected, but consisting in loss of function, partial or complete. According to the appearances presenting the softening has been distinguished as red, yellow, or white. See *General Paralysis of the Insane*. **S. Colliquative,** the name applied to that condition in which the affected tissues liquefy. **S., Esophageal,** softening of the lower portion of the esophagus due to the solvent action of the gastric juice. **S. of the Heart,** myomalacia cordis, a softening of the cardiac muscle consequent on arterial anemia. **S., Hemorrhagic,** the softening of parts involved in a hemorrhage. **S., Mucoid,** myxomatous degeneration. **S., Red, or Yellow** (*of the brain*), when hemorrhage accompanies the ischemic softening, and the products of disintegration of the blood mingle with the nerve-substance, giving it a red or yellow hue. **S. of the Spinal Cord,** various stages in myelitis known by the terms *gray*, *green*, *red*, *white*, and *yellow* softening. **S. of the Stomach,** gastromalacia, consequent upon highly acid contents with a feeble circulation in the walls, but usually a post-mortem phenomenon. See *Auto-digestion*. **S. of a Thrombus,** may be *simple* or *red*, *puriform* or *yellow*, the latter resulting in the extremely unfavorable condition of *Thrombophlebitis*. **S., White** (*of the brain*), when the ischemia is unaccompanied with hemorrhage.

Soil [ME., *soile*, soil]. The ground; earth. **S.-diseases,** those diseases produced by emanations from a decomposing organic soil, or arising from imperfect drainage of decaying animal matter. **S.-pipe,** the main discharge-pipe of a system of house-plumbing; usually an upright, hollow cylinder of iron.

Sola (*so'la*) [Beng., *sola*, the sola]. A plant of tropical regions, *Æschynomene aspera*. Its pith-like wood is largely manufactured into pith helmets, or sun-hats, especially in India.

Solanidin (*so-lan'-id-in*). See *Solanin*.

Solanin (*sol'-an-in*) [*solanum*, the nightshade]. A glucosid found in *Bittersweet*. It is composed of sugar and another substance, *solanidin*. It is a poisonous narcotic. Dose gr. ¼-iv. Unof. See *Bittersweet*.

Solanoid (*sol'-an-oid*) [*solanum*, nightshade; εἶδος, like]. Of a potato-like texture, as a *solanoid* carcinoma.

Solanum (*so-la'-num*) [L.]. A genus of the family of *Solanaceæ*. The tomato, potato, jurubeba, and black nightshade belong to this genus. See also *Bittersweet*.

Solar (*so'-lar*) [*solaris*, of the sun]. Pertaining to or resembling the sun. **S. Ganglion.** See *Ganglia, Table of*. **S. Oil,** an oily liquid produced from tar-oil by rectification and employed as an illuminant. **S. Plexus.** See *Plexus*.

Solarium (*so-la'-re-um*) [*solaris*, solar; *sol*, sun]. A room enclosed with glass, and arranged for the administration of sun-baths.

Solayre's Obliquity. See *Obliquity*.

Soldaini's Reagent and Test. A reagent for testing for sugar in the urine. It consists of a solution of cupric carbonate in potassium dicarbonate. It is made by dropping into a saturated solution of potassium dicarbonate iron water, very gradually and with constant shaking, a saturated solution of cupric sulphate until it ceases to be redissolved; filter, and preserve in bottles. In testing add 2 c.c. to 4 c.c. of urine and heat. A yellow precipitate indicates glucose.

Sole (*sōl*) [ME., *sole*, sole]. The plantar surface of the foot. **S.-leather.** See *Leather*. **S.-plate,** (*a*) the name given by Boas to the palmar side of claws and hoofs, as distinguished from the volar side (*Sohlenhorn*); (*b*) the flattened nucleated mass of soft, faintly granular protoplasm closely applied to the surface of a voluntary muscle to receive the ultimate fibrillæ of the medullated nerve-fibers composing its motor supply. It forms part of the motor disc or end-plate. **S.-reflex.** See *Reflexes, Table of*.

Solea (*so'-le-ah*). See *Sole*.

Solearis (*so-le-a'-ris*). Synonym of *Soleus*.

Solen (*so'-len*) [σωλήν, a channel]. 1. A channel. 2. The central canal of the spinal cord.

Solenochalasis (*so-len-o-kal-a'-sis*) [σωλήν, channel; χαλαστικός, making supple]. Dilatation of a tubular organ.

Solenostegnosis (*so-len-o-steg-no'-sis*) [σωλήν, a channel; στεγνωσις, stenosis]. Constriction of a tubular organ.

Soleus (*so-le'-us*). See *Muscles, Table of*.

Solid (*sol'-id*) [*solidus*, solid]. A substance the molecules of which are in a condition of strong mutual attraction. **S. Green.** See *Pigments, Conspectus of*. **S. Ocular.** See *Ocular*. **S. Violet.** Same as *Gallocyanin*.

Solidago (*sol-id-a'-go*) [*solidus*, solid: *gen.*, *Solidaginis*]. Golden-rod, a genus of some 100 species of composite-flowered plants, mostly American. **S. odora** is carminative, diaphoretic, stimulant, diuretic, and antemetic. **S. rigida** is tonic and astringent. **S. virgaurea,** of both continents, is astringent, tonic, and vulnerary.

Solidarity (*sol-id-ar'-it-e*) [*solidus*, solid]. The unitary nature of the relations of the various parts of an organism, whereby all individual parts are subordinated to the welfare of the whole.

Solidification (*sol-id-if-ik-a'-shun*) [*solidus*, solid; *facere*, to make]. The act of becoming solid, or of possessing molecular attraction.

Solidism (*sol'-id-izm*) [*solidus*, solid]. The theory that diseases depend upon alterations in the solids of the body.

Solidist (*sol'-id-ist*) [*solidus*, solid]. The name given to one opposed to the doctrines of the humoralists.

Solitarius (*sol-it-a'-re-us*) [L.]. Single, solitary.

Solitary (*sol'-it-a-re*) [*solitarius*, solitary]. Marked by solitude; single. **S. Bundle,** a strand of nerve-fibers in the medulla. **S. Follicles,** certain minute glands found in the mucous membrane of the intestines. **S. Glands.** See *Gland*. **S. Kidney,** Rokitansky's term for the single mass produced by the congenital fusion of the two kidneys.

Solium (*so'-le-um*). See *Tænia solium*.

Solomon's Seal (*sol'-o-monz-sēl*). The root of *Convallaria polygonatum*, a tonic, mucilaginous and slightly astringent. It was formerly a popular domestic remedy for rheumatism and gout, and is externally employed in contusions. Dose of fld. ext. ʒj–ij. Unof.

Soluble (*sol'-u-bl*) [*solubilis*, soluble]. That which may enter into solution. Capable of being dissolved. **S. Albumin.** See *Native Albumin*. **S. Blue.** See *Pigments, Conspectus of*. **S. Eosin.** See *Pigments, Conspectus of*. **S. Glass,** the silicate of sodium, potassium, or magnesium. A viscid liquid that hard-

ens into a firm varnish when applied to bandages and dressings. **S. Primrose.** Same as *Erythrosin*. **S. Starch** ($C_6H_{10}O_5$). *Amylodextrin;* a substance obtained by heating starch paste to 40° C. on a water-bath and digesting with a small amount of saliva. The solution loses its opalescent appearance and becomes limpid and clear, like water. It is dextrorotatory and does not reduce Fehling's fluid. **S. Stool,** feces of semi-solid consistency.

Solute (*so-lut'*) [*solvere*, to set free]. In biology: (*a*) free; not adhering or adnate; (*b*) soluble.

Solutio (*so-lu'-she-o*) [L.]. A solution.

Solution (*so-lu'-shun*) [*solutio*, a solution]. The overcoming of cohesion in the molecules of a solid by means of a liquid menstruum and their diffusion among those of the liquid. The infusion of the molecules of a gaseous or of a liquid substance among those of a liquid; a liquid in which a solid has been dissolved; "a homogeneous mixture exerting an osmotic pressure." **S., Arsenical,** *Liquor potassii arsenitis*. **S., Burnett's,** an aqueous solution of zinc chlorid. **S., Centinormal,** a solution $\frac{1}{100}$ of the strength of a normal solution. **S. of Contiguity,** the separation of two parts normally in contact. **S. of Continuity,** division of a tissue by traumatism, inflammation, or disease. **S., Decinormal,** a solution $\frac{1}{10}$ of the strength of a normal solution. **S., Dobell's,** a solution containing 2 drams of borax, 1 of sodium bicarbonate, 45 grains of carbolic acid, 1 oz. of glycerin, and water to make 1 pint. **S., Donovan's,** a solution of the iodids of arsenic and mercury. **S., Fehling's,** a solution of cupric sulphate, potassium tartrate, and sodium hydrate in water. It is used in testing for sugar. See *Tests, Table of*. **S., Fowler's.** *Liquor potassii arsenitis*. **S., Koppeschaar's,** a decinormal bromin volumetric solution. It is employed to test the strength of carbolic acid. **S., Labarraque's,** a solution of chlorinated soda. **S., Lugol's,** a solution of iodin and potassium iodid in water. **S., Magendie's,** a solution of 16 grains of sulphate of morphin in 1 oz. of water. **S., Mayer's,** decinormal mercuric potassium iodid volumetric solution. **S., Monsel's,** *Liquor ferri subsulphatis*. **S., Normal,** a standard solution containing in each liter an amount of the reagent sufficient to exactly replace or combine with one gram of hydrogen. **S., Normal Saline,** a solution of 75 parts of sodium chlorid in 10,000 of water. **S., Saturated,** a solution in which no more of the molecules of the solid can be diffused through the menstruum. See also *Liquor*. **S., Seminormal,** a solution having ½ the strength of a normal solution. **S., Standard,** a solution containing definite quantities of chemicals whose exact reactions are known. **S., Standardized,** one made of standard strength. **S., Vlemingkx's,** a solution of quicklime and flowers of sulphur in water. It is useful in seborrhea. **S., Volhard's,** decinormal potassium sulphocyanate volumetric solution. **S., Volumetric.** See *S., Standard*.

Solutol (*sol'-u-tōl*) [*solvere*, to dissolve]. An alkaline solution of cresol in sodium cresol. It is prepared by adding cresol to an excess of caustic soda and then adding more cresol. It is used as a disinfectant.

Solvent (*sol'-vent*) [*solvere*, to dissolve]. A liquid menstruum for effecting solution or overcoming molecular cohesion. Water is the chief solvent for crystalline substances and salts, alcohol for gums and resins, and ether, chloroform, and benzine for fats.

Solveol (*sol'-ve-ol*). A neutral solution of cresol in sodium cresol; it is disinfectant and makes a clear mixture with water: 0.3 per cent. solutions may be used for asepsis; 0.5 per cent. solutions for antisepsis.

Solvine (*sol'-vin*) [*solvere*, to dissolve]. One of a number of liquids obtained from certain oils, by the action of concentrated sulphuric acid. They are blood-poisons, dissolving the red corpuscles. See *Sulphoricineolic Acid*.

Soma (*so'-mah*) [σῶμα, the body: *pl.*, *Somata*]. In biology, the body alone, considered without the limbs.

Somacule (*so'-mak-ūl*) [dim. of σῶμα, the body]. Foster's term for a physiologic unit corresponding to, but greatly more complex than, the chemic molecule, any division of which will interfere with its physiologic specificity.

Somascesis (*so-mas-se'-sis*). See *Gymnastics*.

Somatic (*so-mat'-ik*) [σωματικός; σῶμα, body]. Pertaining to the body or organism as a whole. **S. Cavity,** the body-cavity or perivisceral cavity. **S. Cells,** undifferentiated body-cells or parenchyma-cells. **S. Death,** the final cessation of all vital activities in the body at large. See *Death*. **S. Mesoderm,** the upper or outer leaf of the mesoderm (*Hautfaserblatt*) separated by the cœlomic fissure from the lower or inner leaf. (*Darmfaserblatt*). **S. Musculature,** the muscles of the outer wall of the body-cavity or somatopleure, as distinguished from those of the splanchnopleure, the splanchnic musculature.

Somatoblast (*so-mat'-o-blast*) [σῶμα, body; βλαστός, a germ]. Any plastidule from which cell-material (in contradistinction to nuclear material) is built up or developed.

Somatocyst (*so-mat'-o-sist*) [σῶμα, the body; κύστις, bladder]. In biology, a pneumatophore formed by inflation of the stem or body, as in some *Siphonophora* (*Physalia*).

Somatodidymus (*so-mat-o-did'-im-us*) [σῶμα, body; δίδυμος, twin]. A double monster having the trunks united.

Somato-etiologic (*so-mat'-o-e-te-o-loj'-ik*) [σῶμα, body; αἰτία, cause; λόγος, science]. Relating to some mental disturbance caused by physical disease.

Somatogenic (*so-mat-o-jen'-ik*) [σῶμα, the body; γενής, produced]. Pertaining to somatogeny.

Somatogeny (*so-mat-oj'-en-e*) [σῶμα, body; γεννᾶν, to produce]. The acquirement of bodily characters, especially the acquirement of characters due to the environment.

Somatologic (*so-mat-o-loj'-ik*) [σῶμα, body; λόγος, science]. Pertaining to somatology.

Somatology (*so-mat-ol'-o-je*) [σῶμα, body; λόγος, science]. The study of anatomy and physiology, or of organized bodies; biology, apart from psychology.

Somatome (*so'-mat-ōm*) [σῶμα, body; τομή, section]. In biology, a transverse segment of an organized body; a somite or metamere, actual or ideal. Goodsir's term for one of the primitive segments of a vertebrate; "primitive vertebra" (*Urwirbel*). Cf. *Metasomatomes*.

Somatomegaly (*so-mat-o-meg'-al-e*) [σῶμα, body; μεγάλη, large]. Gigantism.

Somatomic (*so-mat-om'-ik*) [σῶμα, body; ταμεῖν, to cut]. Pertaining to a somatome.

Somatopagus (*so-mat-o-pa'-gus*) [σῶμα, body; πάγος, fixed]. A double monstrosity having two trunks.

Somatoplasm (*so'-mat-o-plazm*) [σῶμα, the body; πλάσμα, anything formed]. In biology, the protoplasm of the body-cells; Weismann's term for that form of living matter which composes the mass of the body, and which is the subject of death, as distinguished from germ-plasm, which composes the reproductive cells and is possessed of potential immortality. See *Heredity*.

Somatopleura (*so-mat-o-plu'-rah*) [σῶμα, the body; πλευρά, the side: *pl.*, *Somatopleuræ*]. In biology, the body-wall, composed of the somatic mesoderm and the ectoderm.

Somatopleural (*so-mat-o-plu'-ral*) [σῶμα, body; πλευρά, side]. Pertaining to a somatopleura.

Somatopleure (*so'-mat-o-plūr*). Same as *Somatopleura*.

Somatopleuric (*so-mat-o-plu'-rik*). Same as *Somatopleural*.

Somatose (*so'-mat-ōz*) [σῶμα, body]. A proprietary albumose food-product.

Somatotomy (*so-mat-ot'-o-me*) [σῶμα, body; τομή, section]. Anatomy; dissection.

Somatotridymus (*so-mat-o-trid'-im-us*) [σῶμα, body; τρίδυμος, triple]. A monster with three trunks or bodies.

Somatotropic (*so-mat-o-trop'-ik*) [σῶμα, body; τρέπειν, to turn]. In biology, exhibiting somatotropism.

Somatotropism (*so-mat-ot'-ro-pizm*) [σῶμα, the body; τρέπειν, to turn]. In biology, the influence of the attraction of gravitation on growing organs in plants.

Sombrerite (*som-bra'-rīt*) [Sp., *sombrero*, a sounding-board]. An impure calcium phosphate, a source of phosphorus, found in West Indian guano.

Somital (*so'-mit-al*). Same as *Somitic*.

Somite (*so'-mīt*) [σῶμα, the body]. In biology, one of the segments, arthromeres, diarthromeres, or metameres of an articulated organism.

Somitic (*so-mit'-ik*) [σῶμα, the body]. In biology, resembling or pertaining to a somite.

Somnal (*som'-nal*) [*somnus*, sleep],

$$CCl_2 — CH\begin{matrix}OC_2H_5\\NH.CO.OC_2H\end{matrix}.$$

A hypnotic formed by the union of chloral, alcohol and urethan. It acts like chloral, but is more pleasant. Dose ℥xxx.

Somnambulism (*som-nam'-bu-lizm*) [*somnus*, sleep; *ambulare*, to walk]. The condition of half-sleep, in which the senses are but partially suspended; also termed sleep-walking. Also, the type of hypnotic sleep, in which the subject is possessed of all his senses, often having the appearance of one awake, but whose will and consciousness are under the control of the operator. Charcot calls this simply **somnambulism**, which constitutes the third type of the hypnotic state. The second he calls **catalepsy**, produced by the gong suddenly sounded or the electric light suddenly brought before the subject's eyes; the eyes are wide open and the muscles acquire the curious waxy condition designated as *flexibilitas cerea*. The subject seems to have no mental communication with the outside world. This latter characteristic also distinguishes **lethargy**, or the first type of the hypnotic state, in which there is unconsciousness, irresponsiveness of the senses to stimulation, and a fixed position of certain muscles. See, also, *Hypnotism*.

Somniation (*som-ne-a'-shun*) [*somniatio*]. Dreaming.

Somnifacient (*som-nif-a'-se-ent*) [*somnus*, sleep; *facere*, to make]. 1. Narcotic or soporific. 2. A medicine producing sleep; a hypnotic.

Somniferin (*som-nif'-er-in*) [*somnus*, sleep; *ferre*, to bear]. 1. A morphin-ether discovered by Bombelon, said to be stronger than morphin, and without bad effects or influence upon the heart. 2. An alkaloid derived from *Withania somnifera*, a solanaceous plant of Asia and the Mediterranean region. It is said to be narcotic. Unof.

Somniferous, Somnific (*som-nif'-er-us, som-nif'-ik*) [*somnus*, sleep; *ferre*]. Producing sleep.

Somnific (*som-nif'-ik*) [*somnus*, sleep]. Causing sleep.

Somnifugous (*som-nif'-u-gus*) [*somnus*, sleep; *fugere*, to flee]. Driving away sleep.

Somniloquence, Somniloquism, Somniloquy (*som-nil'-o-kwens, som-nil'-o-kwizm, som-nil'-o-kwe*) [*somnus*, sleep; *loqui*, to talk]. The act of talking in one's sleep.

Somnium (*som'-ne-um*). See *Dream*.

Somnolence (*som'-no-lens*) [*somnolentia; somnus*, sleep]. A condition of drowsiness or sleep.

Somnolent (*som'-no-lent*) [*somnolentus*]. Inclined to sleep.

Somnolentia (*som-no-len'-she-ah*) [L.]. *Sleep-drunkenness;* a condition of incomplete sleep in which a part of the faculties are abnormally excited, while the others are in repose.

Somnovigil (*som-no-vij'-il*). See *Coma-vigil*.

Somnus (*som'-nus*). See *Hypnosis*.

Sonde (*sond'*) [Fr.]. See *Sound*.

Sonitus (*son'-it-us*). See *Tinnitus*.

Sonometer (*so-nom'-et-er*) [*sonus*, a sound; μέτρον, a measure]. An instrument for determining the pitch of a sound, and also for determining its relation to a chord.

Sonora (*so-no'-rah*). Gum. The gum of the creasote plant, *Larrea mexicana*.

Sonorous (*so-no'-rus*) [*sonus*, sound]. Ringing; capable of producing a musical sound.

Sonstadt's Solution. A solution used to test the specific gravity of gems. It consists of 3720 grains of red iodid of mercury and 2830 grains of iodid of potassium in 15½ drams of distilled water.

Sonus (*so'-nus*). See *Sound*.

Soor (*Sōr*) [G.]. See *Thrush*.

Soot [ME., *soot*, soot]. A complex carbon deposit of wood-smoke; an old-time remedy in certain diseases. **S.-cancer.** See *Chimney-sweeps' Cancer*.

Sophistication (*so-fis-tik-a'-shun*) [σοφιστικός, deceitful]. The adulteration or imitation of a substance.

Sophomania (*sof-o-ma'-ne-ah*) [σοφός, wise; μανία, madness]. Insanity in which the patient believes himself to excel in wisdom.

Sophora (*so-fo'-rah*) [Arab.]. A genus of leguminous trees, shrubs, and herbs, mostly growing in warm regions. **S. sericea** (see *Loco*) is a poisonous plant of the U. S.; its seeds contain sophorin. **S. speciosa**, a tree of Texas, also yields sophorin.

Sophorin (*so-fo'-rin*) [Arab.]. A paralyzant, poisonous alkaloid which exists in the seeds of some species of *Sophora*.

Sophronistæ dentes (*sof-ro-nis'-te den'-tēz*). Wisdom-teeth, or dentes sapientiæ.

Sopient (*so'-pe-ent*) [*sopor*, sleep]. Sedative, soporific.

Sopor (*so'-por*) [L.]. Sleep, especially the profound sleep symptomatic of a morbid condition.

Soporifacient (*so-por-if-a'-se-ent*) [*sopor*, sleep; *facere*, to make]. A drug producing sleep; a hypnotic.

Soporiferous (*so-por-if'-er-us*) [*sopor*, sleep; *ferre*, to bear]. Producing or causing sleep.

Soporific (*so-por-if'-ik*) [*sopor*, sleep; *facere*, to make]. 1. Narcotic; inducing sleep. 2. A medicine or agent which induces sleep; a hypnotic.

Soporose, Soporous (*so'-por-ōz, so'-por-us*) [*sopor*, sleep]. Sleepy; partaking of the nature of sound sleep.

Sora (*so'-rah*). Synonym of *Urticaria*.

Sorbefacient (*sor-be-fa'-se-ent*) [*sorbere*, to suck; *facere*, to make]. 1. Promoting absorption. 2. A medicine or agent that induces absorption.

Sorbic (*sor'-bik*) [*sorbus*, the sorb-tree]. Pertaining to or derived from the mountain ash. **S. Acid.** See *Acid*.

Sorbin (*sor'-bin*). See *Sorbinose*.

Sorbinose (*sor'-bin-ōz*) [*sorbus*, the sorb-tree], $C_6H_{12}O_6$. *Sorbin*, a ketone alcohol, found in mountain-ash berries, and consisting of large crystals, which possess a very sweet taste. It reduces alkaline copper-solutions,

but is incapable of fermentation under the influence of yeast. See *Carbohydrates, Table of.*

Sorbite (*sor'-bīt*) [*sorbus*, the sorb-tree], $C_6H_{14}O_6 + H_2O$. A hexahydric alcohol occurring in mountain-ash berries, forming small crystals which dissolve readily in water. They melt at 110° C. Sorbite corresponds, in all probability, to grape-sugar.

Sorbose (*sor'-bōz*). Same as *Sorbinose.*

Sordes (*sor'-dēz*) [*sordere*, to be foul]. Filth. Pus or suppuration. Also, any filthy or morbid secretion or deposition, especially the crusts that accumulate on the teeth and lips in low fevers. **S. aurium,** cerumen. **S. capitis.** See *Scabies capitis.* **S., Dental,** the collection of matter found upon the teeth in some diseases.

Sordid (*sor'-did*) [*sordere*, to be dirty]. In biology, dull or dirty in hue.

Sore (*sōr*) [ME., *sore*, sore]. 1. Any ulcer, chafe, or wound; a sensitive, inflamed spot. 2. Painful. **S., Bed-.** See *Bed-sore.* **S.-eyed,** affected with ophthalmia or blepharitis. **S., Fungating,** a soft chancre with abundant granulations. **S., Hard.** Synonym of *Chancre.* **S.-heels.** See *Horse-pox.* **S., Hunterian,** a true or hard chancre. **S., Indurated, S., Infecting.** Synonyms of *Chancre.* **S.-mouth,** stomatitis. **S.-mouth, Nursing,** that produced by nursing. **S., Oriental,** a general term for any one of a number of suppurative sores of the Orient. **S., Soft,** a chancroid. **S.-throat,** a popular name embracing almost every inflammation or morbid affection of the throat. **S.-throat, Clergymen's,** chronic follicular pharyngitis. **S.-throat, Gouty,** a pharyngitis due to gout. **S.-throat, Hospital,** chronic pharyngitis. **S.-throat, Malignant, S.-throat, Putrid,** pharyngitis attended with ulceration. **S.-throat, Rheumatic,** pharyngitis due to rheumatism. **S.-throat, Ulcerated,** pharyngitis attended with ulceration. **S., Veneral,** a chancroid.

Sorediate (*so-re'-de-āt*) [σωρός, a heap]. In biology, bearing soredia.

Sorediferous (*sor-e-dif'-er-us*) [σωρός, a heap; *ferre*, to bear]. In biology, bearing soredia.

Soredium (*so-re'-de-um*) [σωρός, a heap; ἰδιον, a dim. suffix: *pl.*, *Soredia*]. In biology, one or more algal cells wrapped in hyphæ and discharged from the fronds of lichens, serving the purposes of vegetative propagation.

Sorghum (*sor'-gum*) [*sorgum*, sorghum]. A variety of sugar-cane, *S. saccharatum*, of the family *Graminaceæ.* Also a syrup made from the expressed inspissated juice of the same.

Soroche (*so-ro'-ke*) [Sp.]. Mountain sickness.

Sorophore (*so'-ro-fōr*) [σωρός, a heap; φορος, bear]. In biology, the cushion lying along the ventral edge of the sporocarp of *Marsilea*, which at germination becomes detached at one end, and exposed in the form of a cord, bearing the sori in two rows.

Sororiation (*sor-or-e-a'-shun*) [*soror*, a sister]. The development which takes place in the female breasts at puberty.

Sorose (*so'-rōz*) [σωρός, a heap]. In biology, bearing a *sorus* or a *sorosis.*

Sorosis (*so-ro'-sis*) [σωρός, a heap]. In biology, a fruit like that of the mulberry, which consists of a collection of small, fleshy fruits, the product of a compact flower-cluster.

Sorrel (*sor'-el*) [ME., *sorel*, sorrel]. See *Sheep-sorrel.* **S.-tree.** See *Sourwood.*

Sorts (*sorts*) [ME., *sort*, sort]. In the drug-trade, refuse or culls; the poorest grade of any drug.

Sorus (*so'-rus*) [σωρός, a heap: *pl.*, *Sori*]. The name applied to the fruit-dot or collection of sporangia of the ferns.

Sosibious (*so-sib'-e-us*) [σώζειν, to save; βίος, life]. Able to preserve life.

Soteriology (*so-te-re-ol'-o-je*). Synonym of *Hygiene.*

Soudan Brown. See *Pigments, Conspectus of.* **S. Red.** Same as *Naphthalin-red.*

Souffle (*soo'-fl*) [Fr.]. A blowing sound. See *Murmur.* **S., Cardiac.** See *Heart-murmur.* **S., Fetal,** an inconstant murmur heard during pregnancy, and supposed to be due to the compression of the umbilical cord. **S., Funic** or **Funicular,** a hissing sound, synchronous with the fetal heart-sounds, heard over the abdomen of a pregnant woman. **S., Splenic,** a sound said to be audible over the spleen in cases of malaria, leukemia and biliary calculus. **S., Umbilical.** See *S., Funic.* **S., Uterine,** the proper term for what was formerly called the *Placental Souffle,* a sound heard in the latter months of pregnancy, and caused by the entrance of blood into the dilated arteries of the uterus.

Soul (*sōl*) [ME., *soule*, soul]. The moral and emotional part of man's nature. **S.-blindness.** See *Blindness, Psychic,* and *Apraxia.* **S., Spinal,** a suppositious consciousness present in the spinal cord.

Sound (*sownd*) [ME., *sownde*, sound]. The sensation produced upon the auditory nerve by aërial vibrations. See *Hearing.* Also, an instrument for insertion into the bladder to test for calculus. **S., Anasarcous,** a moist bubbling sometimes heard on auscultation when the skin is edematous. **S., Bandbox,** the resonant percussion-note sometimes heard in emphysema. **S., Bellocq's.** See *Bellocq's cannula.* **S., Bellows,** an endocardial murmur which sounds like a bellows. See *Bellows.* **S., Blowing,** a blowing murmur. **S., Bottle.** See *Amphoric Murmur.* **S., Bronchial,** the large, harsh sound of bronchial respiration. **Ss., Cardiac.** See *S., Heart.* **S., Cracked-pot,** a form of tympanitic resonance indicative of a cavity. **S., Esophageal,** a long flexible sound for examination of the esophagus. **Ss., Fetal Heart-,** the sounds produced by the beating of the fetal heart, best heard near the umbilicus of the mother. **S., Flapping,** the clap made by the closure of the cardiac valves. **Ss., Friction-,** the sounds produced by the rubbing of one rough surface upon another. **S., Funicular Bellows.** See *Souffle.* **Ss., Heart-,** the two sounds heard over the cardiac area. The first, dull and prolonged, is said to sound like *lubb*, and is isochronous with the systole of the ventricles. The second, sharp and short, is said to sound like *dup*, and is isochronous with the closure of the semilunar valves. **S., Hollow.** See *Amphoric Percussion.* **S., Kettle-singing,** a chest-sound sometimes heard in incipient pulmonary tuberculosis. It resembles water boiling in a kettle. **S., Lacrymal,** a fine sound for exploring or dilating the lacrymal canal. **S., Metallic Heart-.** See *Metallic Murmur.* **S., Metamorphosing Breath-,** a sound due to the passage of air through a narrow opening into and out of a pulmonary cavity. **S., Muscle-,** the sound heard through the stethoscope when placed over a muscle in the state of contraction; sussurus. **S., Osseous,** a high-pitched intense auscultatory sound having a slightly metallic timbre. **S., Pulmonary,** the respiratory murmur. **S., Respiratory,** respiratory murmur. **S., Sawing,** a cardiac murmur resembling the sound produced by sawing. **S.-shadow,** the interference with a sound-wave caused by an object being placed between the ear and the source of sound. **S., Subjective.** See *Phonism.* **S., To-and-fro,** the friction-sound of pericarditis and pleuritis. **S., Tubular,** the sound of tracheal respiration. **S., Urethral,** an elongated steel instrument, usually slightly conical, for examination and

dilatation of the urethra. **S., Uterine,** a graduated probe for measurement of the uterine cavity.

Sour (*sowr*) [ME., *sour*, sour]. Having an acid taste; fermented. **S. Dough.** See *Leaven.* **S.-wood,** sorrel-tree; the leaves of *Oxydendron arboreum;* they are tonic, refrigerant and diuretic, and of reputed value in dropsy. Dose of the fld. ext. ♏xxx–℥ij. Unof.

Souring (*sowr'-ing*) [ME., *sour*, sour]. A disease of wine due to the conversion of the alcohol into acetic acid. It is caused by the formation in the wine of the vinegar plant.

Southern (*suth'-ern*) [ME., *southerne*, southern]. Pertaining to the south. **S. Vanilla.** See *Liatris odoratissima.* **S.-wood.** See *Artemisia.*

Southey's Drainage-tubes. Small tubes employed for draining away the fluid from limbs that are the seat of extensive anasarca. It is said that large amounts of fluid can thus be drained away in a comparatively short time, and that there is but slight risk of erysipelas or other inflammatory process being set up around the puncture.

Soy Bean, or **Soya Bean** (*soi'* or *soi'-yah*) [Jap.]. A kind of bean, the seed of *Glycine soja* (also referred to as *Soja hispida* and *Dolichos sinensis*), a plant of Japan and China and India. Diabetic bread, biscuits, and cakes are prepared from its flour, which contains no starch. The sauce called *soy* is also made from this bean.

Soyka's Plates. Dishes employed in the cultivation of bacteria. They are similar to Petri's capsules, but differ from them in having from eight to ten depressions ground in the lower plate, which resemble the "wells" in hollow slides.

Sozal (*so'-zal*) [σοζειν, to protect]. An astringent organic salt of aluminum, used as an antiseptic.

Sozin (*so'-zin*) [σώζειν, save, keep]. In biology, a defensive proteid which occurs naturally in a normal animal; one of the two provisional classes into which Hankin divides *Alexins* or defensive proteids. See *Proteids, Defensive,* and *Toxosozin.*

Sozodont (*so'-zo-dont*) [σοζειν, to protect; ὀδους, tooth]. A dentrifice supposed to be prepared mainly of Castile soap and alcohol.

Sozoiodol (*so-zo-i'-o-dol*) [σώζειν, to save; ἰωδης, like a violet], $C_6H_2(HSO_3)I_2.OH$. A combination of sulphur, iodin, and carbolic acid. It is useful as an antiseptic.

Sozolic Acid (*so-zo'-lik*). See *Aseptol.*

Space (*spās*) [ME., *space*, space; *spatium*, space]. A name given for purposes of description to sundry enclosed or semi-enclosed places within or about the body. **S., Anterior Perforated,** a triangular space at the mesal side of the Sylvian fissure. **S., Arachnoid.** See *S., Subarachnoid,* and *S., Subdural.* **S., Axillary,** the axilla. **S., Bregmatic,** the anterior fontanel. **S., Circumlental,** the interspace between the ciliary body and the equator of the lens. **Ss., Circumvascular Lymph-,** channels surrounding the blood-vessels and communicating with lymphatic vessels. **S., Corneal,** that between the corneal layers. **S., Douglas's.** See *Douglas's Pouch.* **S., Epidural** (*of the spinal canal*), a lymph-space between the spinal dura and the periosteum lining the canal. **S.-feelings,** Hering's term for the perceptions or inferences of space-relations resulting from the retinal image. **S. of Fontana,** one of the intercommunicating cavities in the spongy tissue occupying the angle between the cornea and the iris. **S., Haversian** or **Medullary,** in the cancellous tissue of bone. **S. of His.** See *S., Circumvascular Lymph-.* **Ss., Intercellular,** cavities formed by the splitting or separation of the walls of adjoining cells. **S., Intercostal,** the space between two contiguous ribs. **S., Intercrural.** See *S., Interpeduncular.* **Ss., Interfascicular,** spaces between the bundles in fibrous tissue. **S., Interglobular,** an apparent, irregular space in the interglobular substance of the dentine. **S., Intermesoblastic,** the cavity between the visceral and parietal laminæ of the mesoblastic plates of the embryo. **Ss., Intermetatarsal,** spaces between the metatarsal bones. **S., Interosseous,** the space between two parallel bones. **S., Interparietal.** See *S., Virchow-Robin.* **S., Interpeduncular,** a diamond-shaped depression at the base of the brain, lying between the optic tracts and the crura cerebri. **S., Intertunical.** See *S., Virchow-Robin.* **S., Intervaginal** (*of the optic nerve*). See *S., Subvaginal.* **S., Investing.** See *Lymph-sinus.* **S., Ischiorectal.** See *Ischio-rectal Fossa.* **S., Lacunar.** See *Lacuna.* **S., Lymph,** a sinus or space through which lymph passes. **S., Marrow.** See *Medullary Cavity.* **S., Mediastinal,** the cavum mediastinum. **S., Pelvirectal,** the same as the *Ischiorectal Fossa, q. v.* **Ss., Pericellular,** lymph-spaces in the brain. **S., Perichoroidal,** a lymph-space between the sclera and the choroid. **S., Perigastric,** the cavity surrounding the stomach and other viscera. **Ss., Perineurial,** lymph-spaces between the lamellæ of the perineurium. **S., Perivascular.** See *S., Circumvascular Lymph-.* **S., Perivitelline.** See *S., Yolk.* **Ss., Placental Blood-,** the intervillous lacunæ of the placenta. **Ss., Pleuro-peritoneal.** See *S., Intermesoblastic.* **S., Poiseuille's.** See *S., Lymph-.* **S., Popliteal,** a lozenge-shaped space at the back of the knee and thigh. **S., Posterior Perforated,** the depression just behind the albicantia at the base of the brain. **S., Posterior Triangular,** the space lying above the clavicle and between the sterno-cleido-mastoid and the trapezius muscle and the occiput. **S., Prevesical,** a space lying immediately above the pubis and between the transversalis fascia and the posterior surface of the rectus abdominis. **S., Retroperitoneal,** the space lying behind the peritoneum, but in front of the spinal column and the lumbar muscles. **S., Semilunar, of Traube.** See *Semilunar.* **S.-sense,** the faculty by which the form of objects is recognized. **S., Subarachnoid,** the space between the arachnoid and the pia proper. It contains the cerebrospinal fluid. **S., Subdural,** the space between the dura and the arachnoid. Normally it contains only a capillary layer of fluid. **S., Subvaginal,** a lymph-space within the sheath of the optic nerve. **S. of Tenon,** a lymph-space between the sclera and the fascia of Tenon. **S., Traube's,** a semilunar tympanitic space overlying the stomach. See *Semilunar.* **S., Utero-rectal.** See *Douglas's Pouch.* **S., Utero-vesical,** the utero-vesical fossa. **S., Virchow-Robin,** an adventitious lymph-space found between the coats of the cerebral capillaries. **S., Visual,** the visual field. **S., Yolk,** the space formed by the retraction of the vitellus from the zona pellucida.

Spadiceous (*spa-dish'-us*) [σπάδιξ, a palm branch]. In biology, bearing a spadix.

Spadicose (*spa'-dik-ōz*) [σκάδιξ, a palm branch]. In biology, spadiceous.

Spadix (*spa'-diks*) [σπάδιξ, a palm branch: *pl.*, *Spadices*]. In biology, a fleshy spike, commonly enveloped in a spathe.

Spaeth and Braun, Iodoform-bacillus of. A medicated bacillus for use in puerperal fever. It consists of iodoform 20 grams, gum arabic, glycerin, and pure starch each 2 grams, made into three suppositories. One is introduced into the uterine cavity.

Spagiric (*spaj-ir'-ik*) [σπάειν, to stretch or rend:

ἀγείρειν, to collect]. Pertaining to the obsolete chemic, or Paracelsian, school of medicine.

Spagirism (*spaj'-e-rizm*) [*σπάειν*, to stretch; *ἀγείρειν*, to collect]. The Paracelsian, or spagiric school, or doctrine, of medicine.

Spagirist (*spaj'-e-rist*) [*σπάειν*, to stretch; *ἀγείρειν*, to collect]. A Paracelsian; a physician of the obsolete alchemistic school.

Spamenorrhea (*spa-men-or-e'-ah*) [*σπάνις*, scarcity; *μήν*, month; *ῥοία*, flow]. Scantiness of menstruation.

Span (*span*) [*σπᾶν*, draw out; *spatium*, space, extension]. The distance between the tip of the thumb and the little finger outstretched.

Spanemia, Spanæmia (*span-e'-me-ah*). See *Anemia*.

Spanemic, Spanæmic (*span-e'-mik*). See *Anemic*.

Spanipelagic (*span-ip-el-aj'-ik*) [*σπανός*, scarce, rare; *πελαγικός*, pertaining to the open sea]. In biology, applied to such marine organisms as only rarely come to the surface, living mostly in the ocean-depths. Cf. *Plankton*.

Spanish (*span'-ish*) [ME., *Spainisc*, Spanish]. Pertaining to Spain. **S. Black.** See *Pigments, Conspectus of*. **S. Brown.** See *Pigments, Conspectus of*. **S. Catarrh.** Synonym of *Influenza*. **S. Fly.** See *Cantharis*. **S. Needle.** See *Bidens*. **S. Red.** Same as *Venetian Red*. **S. White.** Same as *Bismuth White*. **S. Windlass.** See *Garrot*.

Spanopogon (*span-o-po'-gŏn*) [*σπάνις*, scarcity; *πώγων*, the beard]. A man having little or no beard.

Sparadrap (*spar'-a-drap*) [*sparadrapum: pl., Sparadrapa*]. A waxed cloth; also a plaster, spread upon cotton, linen, silk, leather, paper, or the like.

Sparagmatodes (*spar-ag-mat-o'-dēz*) [*σπάραγμα*, a piece torn off; *εἶδος*, like]. Afflicted with convulsions or cramps.

Sparagmos (*spar-ag'-mos*) [*σπαραγμός*, a tearing]. A cramp; a choking sensation.

Sparagmus (*spar-ag'-mus*) [*σπαραμός*, a tearing: *pl., Sparagmi*]. A severe convulsion; a laceration, or tearing.

Sparallium (*spar-al'-e-um*) [L.]. An old name for a vaginal clyster.

Spare (*spār*) [AS., *spær*, sparing]. Lean; thin.

Sparganosis (*spar-gan-o'-sis*) [*σπαργάνωσις*, a swathing]. Same as *Spargosis*.

Spargosis (*spar-go'-sis*) [*σπάργωσις*; *σπαργάειν*, to be distended]. A term loosely applied to enlargement of the breasts; distention of a secretory organ; the swathing of a child's head in cloth; elephantiasis, *q. v.*

Spartein (*spar-te'-in*) [*σπάρτον*, Spanish broom], $C_{15}H_{26}N_2$. A volatile liquid alkaloid not containing oxygen. It occurs in *Sarothamnus scoparius* (see *Scoparius*), and is a colorless, thick oil, boiling at 311° C. It is narcotic. It stimulates the action of the vagus, and acts more quickly than digitalis, but not as powerfully. It is an uncertain diuretic and cardiac tonic, but is often efficacious when digitalis fails. Dose gr. $\frac{1}{15}$–$\frac{1}{5}$.

Spartium (*spar'-te-um*) [*σπάρτον*, Spanish broom]. A genus of leguminous plants. **S. junceum**, Spanish broom, a leguminous Old-world shrub. In small doses its seeds are diuretic and tonic; in larger doses, cathartic and emetic.

Spasm (*spazm*) [*σπασμός*, a convulsion]. Convulsive muscular contraction, local or general, voluntary or involuntary. **S., Bell's,** convulsive facial tic. **S., Bronchial,** asthma. **S., Clonic,** alternate muscular contraction and relaxation. **S., Cynic.** See *Spasmus cynicus*. **S., Drivers',** one of the so-called professional neuroses. It consists of cramp-like pains in the arms of drivers upon taking the reins in the hands. **S., Facial,** a peculiar clonic contraction of the muscles supplied by the facial nerve, at times confined to the muscles surrounding the eye, or else involving one entire side of the face. It is usually reflex in origin, and due to carious teeth or other local irritation. **S., Fixed,** permanent or continuous tetanic rigidity of one or more muscles. **S. of the Glottis.** See *Laryngismus stridulus*. **S., Habit-,** half-voluntary spasmodic movements, the result of habit, sometimes called *Habit-chorea*. **S., Histrionic,** a condition in which local involuntary twitchings of the face, acquired in childhood, persist during adult life, and are increased by emotional causes. **S., Inspiratory,** a spasmodic contraction of nearly all the inspiratory muscles. **S., Lingual.** See *Aphthongia*. **S., Mobile,** slow, irregular movements depending upon hemiplegia. **S., Perineal.** See *Vaginodynia*. **S., Phonetic** (*of the glottis*), spastic aphonia consisting of a spasm of the glottis, with elevation, resulting in interference with respiration. **S., Salaam,** clonic spasm of the muscles of the leg, causing jumping movements. **S., Sewing,** an affection of tailors, seamstresses, and shoemakers, in which clonic and tonic spasms attack the muscles of the hands on attempting to use them in the regular work. **S., Smiths',** a spasm that occurs in those engaged in pen-blade manufacturing, saw-straightening, razor-blade striking, scissors-making, file-forging, etc. It consists in spasmodic movements of the arm used, and finally paralysis. See *Hemiplegia, Hephestic*. **S., Spinal Accessory.** See *Tic rotatoire*. **S., Synclonic,** tremulous agitation. **S., Tonic,** persisting rigidity of contraction. See, also, *Carpopedal, Histrionic, Nictitating, Nodding, Saltatorial, Tetanic*, etc. **S., Winking.** See *Spasmus nictitans*. **S., Writers',** writers' cramp, *q. v.*

Spasmatic (*spaz-mat'-ik*) [*σπάσμος*, spasm]. Pertaining to spasm; also, one in convulsions.

Spasmi (*spaz'-mī*) [*pl., Spasmus*]. Spasms.

Spasmo- (*spaz'-mo-*) [*σπασμός*, spasm]. A prefix to denote connection with, or relation to, spasm.

Spasmodermia (*spaz-mo-der'-me-ah*) [*σπασμός*, spasm; *δέρμα*, skin]. A spasmodic skin-affection.

Spasmodic (*spaz-mod'-ik*) [*σπασμώδης*]. Pertaining to, or characterized by, convulsion or a spasm. **S. Cholera.** Synonym of *Cholera morbus*. **S. Colic.** See *Cramp Colic*. **S. Croup.** See *Laryngismus stridulus*. **S. Dorsal Tabes.** See *Charcot's Disease*. **S. Dysmenorrhea.** Same as *Dysmenorrhea, Idiopathic*. **S. Neurosis.** See *Neurosis*. **S. Spinal Paralysis.** See *Lateral Sclerosis, Primary*. **S. Tabes dorsalis.** See *Paraplegia, Infantile Spasmodic* and *Lateral Sclerosis, Primary*. **S. Theory of Inflammation.** See *Theory*. **S. Torticollis.** See *Tic rotatoire*.

Spasmodyspnea (*spaz'-mō-disp-ne-ah*) [*σπασμός*, spasm; *dyspnea*]. Spasmodic difficulty of breathing.

Spasmolipopyria (*spaz-mo-lip-op-i'-re-ah*) [*σπασμός*, spasm; *λείπειν*, to leave; *πῦρ*, fever]. A disease in which death takes place from convulsions, there being no fever present. It is supposed to be a form of yellow fever.

Spasmologic (*spaz-mo-loj'-ik*) [*σπασμός*, spasm; *λόγος*, science]. Pertaining to spasmology.

Spasmology (*spaz-mol'-o-je*) [*σπασμός*, spasm; *λόγος*, a treatise]. The sum of scientific knowledge of the nature and causes of convulsions.

Spasmolygmus (*spaz-mo-lig'-mus*). See *Hiccough*.

Spasmophilia (*spaz-mo-fil'-e-ah*) [*σπασμός*, spasm; *φιλέειν*, to love]. A morbid ease or tendency of being thrown into spasms.

Spasmorthopnea (*spaz-mor-thop-ne'-ah*) [*σπασμός*, spasm; *ὀρθος*, straight; *πνεῖν*, to breathe]. Spasmodic orthopnea.

Spasmotoxin (*spaz-mo-toks'-in*) [*σπασμός*, spasm; *τοξικόν*, poison]. A ptomain-base of composition $C_7H_{17}NO_2$.

undetermined, obtained by Brieger from cultures of the tetanus-germ, together with other unnamed toxins, one of which induced complete tetanus, with salivation and lacrymation. Spasmotoxin induces in animals violent clonic and tonic convulsions. See *Ptomains, Table of.*

pasmotracheocynanche (*spaz'-mo-tra'-ke-o-sin-ang'-ke*). Synonym of *Asthma.*

pasmous (*spaz'-mus*) [σπασμός, spasm]. Having the nature of a spasm.

pasmus (*spaz'-mus*) [σπασμός, spasm]. A spasm. **S. bronchialis.** Synonym of *Bronchial Asthma.* **S. cynicus,** spasmodic contraction of muscles on both sides of the mouth, giving a grinning expression. **S. intestinorum.** Synonym of *Enteralgia.* **S. muscularis.** Synonym of *Cramp.* **S. nictitans,** spasmodic action of the orbicularis palpebrarum muscle, causing a winking-like movement of the lid. **S. nutans,** salaam convulsions, nodding spasm. **S. oculi.** Synonym of *Nystagmus.* **S. ventriculi.** Synonym of *Enteralgia* and of *Gastrodynia.*

astic (*spas'-tik*) [σπαστικός; σπάειν, to draw]. Pertaining to or characterized by spasms. Drawn out of shape or contracted by disease; applied especially to a muscle. **S. Anemia,** anemia with abnormal smallness of the arteries. **S. Diplegia.** See *Paraplegia, Infantile Spasmodic.* **S. Paralysis.** See *Paralysis.*

asticity (*spas-tis'-it-e*) [σπαστικός; σπάειν, to draw]. The quality of being spastic; the state of, or tending toward, spasm.

atha (*spa'-thah*) [σπάθη, a broad, flat blade: *pl.*, *spathæ*]. Same as *Spathe.*

athaceous (*spa-tha'-se-us*) [σπάθη, a broad, flat blade]. Furnished with a spathe, or resembling a spathe.

athal (*spa'-thal*) [σπάθη, a broad, flat blade]. In biology, inclosed in or furnished with a spathe.

athe (*spāth*) [σπάθη, a broad, flat blade]. In biology, a peculiar bract, often large and colored, which subtends or encloses a spadix.

athed (*spāthd*). Same as *Spathaceous.*

athella (*spa-thel'-ah*) [σπάθη, a blade]. In biology, (*a*) one of the glumes of a grass; (*b*) see *Spathilla.*

athilla (*spa-thil'-ah*) [dim. of *spatha*, a spathe]. In biology, a diminutive spathe. In the palms spathillæ surround separate parts of the inflorescence.

atile (*spat-il'-e*) [σπατίλη]. Loose liquid feces.

atium (*spa'-she-um*). See *Space.*

atula (*spat'-u-lah*). A flexible steel blade used for spreading ointments, dispensing medicines, and other purposes in the manipulation of medicines. **S., Tongue,** a tongue-depressor.

atular (*spat'-u-lar*) [*spatula*, a spatula]. Like a spatula.

atulate (*spat'-u-lāt*) [*spatula*, a blade]. In biology, resembling an old-fashioned spatula in outline. Applied to leaves and other flattened organs.

atule (*spat'-ūl*) [*spatula*, a blade]. In biology, a structure having a spatulate shape.

atuliform (*spat'-u-lif-orm*). Same as *Spatulate.*

atuligerous (*spat-u-lij'-er-us*) [*spatula*, spatula; *ferre*, to bear]. In biology, provided with a spatula.

avin (*spav'-in*) [ME., *spaveyne*, spavin]. A disease of horses affecting the hock-joint, or joint of the hind leg between the knee and the fetlock. **S., Blood,** a dilatation of the vein that runs along the inside of the hock of a horse, forming a soft swelling. **S., Bog,** a encysted tumor on the inside of the hock of a horse, containing gelatinous matter. **S., Bone,** a disease of the bones at the hock-joint. **S., High,** an enlargement on the upper and inner part of the hock.

Spawn [ME., *spawnen*, to spawn]. In biology: 1. Applied to aggregates of young animals during their early stages. 2. To produce or lay eggs, *e.g.* a fish.

Spay (*spā*) [σπάδων, a eunuch]. To castrate. To remove the ovaries of a female.

Speak (*spēk*) [ME., *speken*, to speak]. To use articulate utterance.

Speakers' Cramp. See *Dysphonia spastica.*

Spearmint (*spēr'-mint*). See *Mentha viridis.* **S., Oil of,** a colorless oil obtained from *Mentha viridis* by distillation.

Specialist (*spesh'-al-ist*) [*specialis*, particular, special]. One, especially a physician or surgeon, who limits his practice to certain specified diseases, or to the diseases of a single organ or class.

Speciality, Specialty (*spesh-e-al'-it-e, spesh'-al-te*) [*species*, species]. The particular branch pursued by a specialist.

Specialization (*spesh-al-iz-a'-shun*) [*specialis*, particular, special]. In biology, the modification of simple homogeneous tissues into special organs or parts adapted to the localization of function. See *Differentiation.*

Species (*spe'-shēz*) [*species*, species]. 1. That which may be distinguished by its characteristics. Also, in biology, a group of things having a number of common characteristics; one of the constituent groups of a genus. "The smallest group to which distinctive and invariable characters can be assigned." (Huxley.) "An assemblage of individuals which differ from each other by very small or trifling and inconstant characters, of much less value than those in which they differ from any other assemblage of individuals." (J. L. Le Conte.) 2. A name in German and French pharmacy, and in the National Formulary, for certain mixtures of herbs, used in making decoctions and infusions. **S.-cycle,** in biology, the entire series of forms exhibiting or illustrating all the phases in the life-history of a species. **S. emollientes,** a mixture of the leaves of althea and mallow, of the leaves and branches of the melilot, of matricaria and flaxseed, in equal parts; used as an emollient cataplasm; it is official in Germany and is given in the National Formulary. **S. laxantes.** See *Saint Germain Tea.* **S., Morphologic,** one of "such living beings as constantly resemble one another so closely that it is impossible to draw any line of demarcation between them, while they differ only in such characters as are associated with sex." (Huxley.) **S., Nascent,** an incipient species; a form undergoing modification. **S., Origin of,** a term employed by naturalists to denote the evolution of differentiated groups or species from groups of individuals characterized by general similarity or by homogeneity of structure. **S. pectoralis.** See *Breast-tea, German.*

Specific (*spe-sif'-ik*) [*species*, species; *facere*, to make]. Of or pertaining to a species; that which distinguishes a thing or makes it of the species of which it is. Also, a medicine which has a selective curative influence on an individual disease. **S. Conduction-resistance,** the special conduction-resistance dependent upon the molecular properties of the conducting material. **S. Diseases,** those supposed to be directly the result of the action of a distinct contagium, virus, or microbe; especially applied to syphilis. **S. Gravity.** See *Gravity.* **S. Heat,** the amount of heat given off or absorbed by a definite weight (1 lb or 1 kilo) in undergoing a measured change of temperature (1° C. or 1° F.). **S. Intensity,** a term used in vital statistics to represent the number living at any age divided by the number dying at that age. It is highest at about 14 years of age. **S. Names,** the last term of an onym

in binomial nomenclature. **S. Rotatory Power,** the angle of rotation which a layer of unit-thickness would give to a certain light-ray. **S. Stain,** a pigment used in microscopy, having a peculiar affinity for certain histologic elements. The chief are: Anilin Chlorid, Acid Fuchsin, Congo Red, Gold Chlorid, Iodin, Methyl-violet, Nigrosin, Osmic Acid, Phloroglucin, Rose Bengale, Safranin, Silver Nitrate, Victoria Blue. See *Stain*, *Plasmatic Stain*, *Nuclear Stain*, and *Table of Stains*. **S. Warmth,** that amount of warmth which is necessary to warm one gram of a given substance one degree. According to Adamkiewicz, the specific warmth of muscle is even greater than that of water, although it has been assumed that the specific warmth of water is greater than that of any other known substance, with the exception of hydrogen.

Specificity (*spes-if-is'-it-e*) [*species*, species ; *facere*, to make]. The quality of being specific, or of accomplishing a determinate function and not another. The qualities giving an organ or tissue a distinct character.

Specillum (*spe-sil'-um*) [L.: *pl.*, *Specilla*]. A probe, especially one of silver, armed with a button-shaped head, for exploring wounds, fistulæ, etc.

Specimen (*spes'-im-en*) [L.]. An example; an exhibit. **S., Living,** sometimes applied to a patient exhibited before an audience.

Spectacles (*spek'-tak-ls*) [*spectaculum*, a show]. Framed or mounted lenses for the correction of optical or muscular defects of the eye. See *Lens*. The difference between the old and new systems of numbering lenses is shown in the annexed Table, from Landolt.

COMPARATIVE TABLE OF THE INCH AND THE METRIC SYSTEMS OF NUMBERING SPECTACLE-LENSES. (*From Landolt.*)

Inch System.				Metric System.			
No. of lens in inch system.	Focal distance in English inches. Index of refraction = 1.53.	Focal distance in millimeters.	Equivalents in dioptries (D).	Number of lens in metric system (D).	Focal distance in millimeters.	Focal distance in English inches.	Corresponding No. of the inch system. Index of refraction = 1.53.

S., Bifocal. See *Bifocal*. **S., Orthoscopic.** See *Orthoscopic*. **S., Pantoscopic,** a synonym of *Bifocal*, *q. v.* **S., Periscopic.** See *Periscopic*. **S., Prismatic,** spectacles with prismatic lenses, either alone or combined with spheric or cylindric lenses. **S., Protective,** lenses, usually tinted, to shield the eyes from light, dust, heat, etc.

Spectra (*spek'-tra*) plural of *Spectrum*, *q. v.*

Spectral (*spek'-tral*) [*spectrum*, specter]. Pertaining to a spectrum. **S. Ocular.** See *Ocular*.

Spectro-colorimeter (*spek'-tro-kul-or-im'-et-er*) [*spectrum*, spectrum ; *color*, color ; *μέτρον*, measure]. An apparatus for the isolation of a single spectral color. It is used for the detection of color-blindness.

Spectrology (*spek-trol'-o-je*) [*spectrum*, spectrum ; *λόγος*, science]. The science of spectrum-analysis.

Spectrometer (*spek-trom'-et-er*) [*spectrum*, spectrum ; *μέτρον*, measure]. An instrument for the determination of the refractive indices of liquids.

Spectrometry (*spek-trom'-et-re*) [*spectrum*, spectrum ; *μέτρον*, measure]. The measurement of the spectrum or the observational use of the spectrometer.

Spectro-microscope (*spek'-tro-mi'-kro-skōp*). See *Microspectroscope*.

Spectrophotometer (*spek'-tro-fo-tom'-et-er*) [*spectrum* ; *φωτος*, light ; *μέτρον*, measure]. An apparatus for determining the amount of color in spectrum-analysis.

Spectro-polarimeter (*spek'-tro-po-lar-im'-et-er*) [*spectrum*, spectrum ; *polus*, pole ; *μέτρον*, measure]. An instrument in which a spectroscope and polarizing apparatus are combined for the purpose of determining the concentration of solutions of substances that rotate the plane of polarized light.

Spectroscope (*spek'-tro-skōp*) [*spectrum*, an image ; *σκοπεῖν*, to see]. An instrument for the production and examination of the spectrum. Hénoque's *analyseur chromatique* is a modified spectroscope by means of which the spectrum of the blood in living tissues as the nail or palm, may be analyzed. Hyperemia, it is said, may be definitely measured, and the changes which the blood undergoes in the tissues observed and timed.

Spectroscopic (*spek-tro-skop'-ik*) [*spectrum*, spectrum ; *σκοπεῖν*, to view]. Pertaining to the spectroscope. **S. Ocular.** See *Ocular*.

Spectroscopy (*spek-tros'-ko-pe*) [*spectrum*, spectrum ; *σκοπεῖν*, to see]. The use of the spectroscope, as in chemic analysis.

Spectrum (*spek'-trum*) [L.: *pl.*, *Spectra*]. The band of ether-waves from a radiant body, having passed through a prism, or having been reflected from a diffraction-grating, and thereby arranged regularly according to their wave-lengths. **S., Absorption,** a spectrum which contains dark lines or bands. These are produced in a continuous spectrum by the absorption of incandescent vapors, through which the light has passed, as in the solar atmosphere. **S.-analysis,** determination of the nature of bodies by the character of their spectra. **S., Auditory.** See *Phonism*. *Photism*. **S., Comparison,** the arrangement side by side of the spectra of two different substances. The prism is placed just below the slit of the spectroscope so that light entering from a mirror at the side of the drum shall be totally reflected in a vertical direction, and thus parallel with the rays from the microscope. **S., Complementary,** a spectrum derived from bodies which change in chemic or molecular constitution before reaching a sufficiently high temperature to become luminous. **S., Continuous,** a spectrum without sudden variations of hue, in which the various rainbow or spectral colors merge gradually

into one another. **S., Double.** See *S., Comparison.* **S., Line,** the spectrum resulting from incandescent gas. It consists not of the various rainbow colors, but of sharp, narrow, bright lines, the color depending on the substance; all the rest of the spectrum is dark. **S., Normal,** a spectrum in which the red color occupies about the same space as the blue and the violet. **S., Solar,** the spectrum of sunlight. It contains many dark lines, the greater part of which can be identified in the spectra of known terrestrial substances. The presence in the sun's atmosphere of thirty-six elements has been established. (Rowland, 1891.)

peculum (*spek'-u-lum*) [L.: *pl.*, *Specula* or *Speculums*]. An instrument for examining the ear, nose, and other cavities; also, an instrument for dilating parts. In biology, see *Ocellus.* **S., Sims',** a peculiar form of vaginal speculum, sometimes called duckbill speculum.

pedalskhed (*sped-alsk'-ked*). A Skandinavian term for leprosy.

peech (*spēch*) [ME., *speche*, speech]. Vocal sounds conveying ideas. **S.-center.** See *Center.* **S., Disorders of;** three principal classes of speech-disorders may be made:—I. Those in which speech is entirely absent. *a.* MUTISM, an inability to utter articulate sound, secondary to a lesion of the auditory apparatus. *b.* ANARTHRIA, inability to utter articulate sound, due to a cerebral lesion. *c.* ALALIA, inability to utter articulate sound, due to paralysis of the vocal mechanism. *d.* APTHONGIA, temporary inability to speak, due to spasm of the hypoglossus. II. Those in which speech is impaired or made difficult through an extracerebral lesion, *Dyslalia*, *q. v.* *a.* APHONIA, loss of the power of intonation, the faculty of articulation being preserved. *b.* STAMMERING, STUTTERING, a hesitancy in pronunciation due to a want of promptitude in the vocal mechanism. *c.* LALLING, the imperfect pronunciation of letters or words, as by children or inebriated persons. It is due to a want of precision in the vocal mechanism. It includes: 1. SLURRING, thickness of speech. 2. MOGILALIA, the inability to articulate some single letter. *Rhotacism*, *Sigmatacism*, *Lambdacism*, *Iotacism*, and *Gammacism*, are subclasses due to the omission or defective pronunciation of *R*, *S*, *L*, *J*, and *K* and *G*, respectively. 3. PARALALIA, the production of a distinctly different sound from that desired or the substitution of one letter for another. *Pararhotacism*, *Parasigmatacism*, *Paralambdacism*, *Paraiotacism*, and *Paragammacism*, are the substitution of other distinct sounds for *R*, *S*, *L*, *J*, and *K* and *G*, respectively. When *Th* is substituted for *S* it is called *Lisping.* 4. RHINOLALIA, defects of articulation caused by increase or decrease of the nasal resonance. III. Those in which speech is impaired or made difficult by a central lesion. *a.* BRADYLALIA, or BRADYPHASIA, an abnormal slowness of speech due to pathologic cause. *b.* LOGORRHEA, excessive volubility of speech. The unmeaning volubility in certain forms of insanity is called *Verbigeration.* *c.* ECHOLALIA, the echo-like repetition of words just heard, without attempt to attach meanings to them. *d.* EMBOLOLALIA, or EMBOLOPHRASIA, the frequent interpolation into speech of a useless or meaningless word or syllable. 1. *Angophrasia*, hemming and hawing. 2. *Logospasmus choreiformis*, the spasmodic interpolation of a word; a subvariety when the word is of a disreputable or dirty character is called *Coprolalia.* *e.* APHASIA, *q. v.*

pelter (*spelt'-ter*) [origin obscure]. Crude zinc.

pend [Med. Lat., *spendere*, Lat., *dispendere*, to lay out, to expend]. Vulgarly, to ejaculate the semen.

Spent [*spendere*, to spend]. Exhausted; impotent. **S. Acid,** a battery-acid that has become too weak for efficient action.

Sperm, Sperma (*sper'-mah*) [σπέρμα, seed]. The semen, or seed. **Sperm-ball,** a spheric cluster of spermatozoa. **S.-blastoderm,** a blastodermic layer of formative spermatozoa. **S.-blastula,** a spheric blastula whose surface is a sperm-blastoderm. **S.-cell,** a spermatozoön. **S.-morula,** a spheric morula. **S.-nucleus,** the nucleus of a spermatozoön. **S.-oil,** an oil procured from the deposits in the head of the sperm-whale. In the living animal, the solid spermaceti is held in solution in the liquid sperm-oil; when the liquid becomes cold the spermaceti separates out. The oil is very limpid, relatively free from odor, and burns well in lamps; specific gravity 0.875. It is used as a lubricant on account of its low cold-test and its viscosity, and also as an illuminant. **S.-rope,** a string of spermatozoa.

Spermaceti (*sper-mas-e'-te*) [σπέρμα, seed; κῆτος, whale], $C_{16}H_{31}O_2.C_{16}H_{33}$. Cetylpalmitic ester; a substance that occurs in the oil from peculiar cavities in the heads of sperm-whales; upon standing and cooling, it separates as a white, crystalline mass, which can be purified by pressure and by recrystallization from alcohol. It occurs then in waxy, shining needles or leaflets, melting at 49° C. Its specific gravity is 0.943 at 15° C.; its melting-point is from 43° to 49° C. It is only slightly soluble in ether, chloroform, and carbon disulphid. It is used in the manufacture of candles and in pharmaceutic preparations. See *Cetaceum.*

Spermacrasia (*sper-mak-ra'-ze-ah*) [σπέρμα, seed; *acrasia*]. Imperfection of the semen.

Spermagone (*sper'-mag-ōn*) [σπέρμα, seed; γονεία, generation]. Same as *Spermogone.*

Spermagonium (*sper-mag-o'-ne-um*) [σπέρμα, seed; γονεία, generation: *pl.*, *Spermagonia*]. Same as *Spermogonium.*

Spermalist (*sper'-mal-ist*). Same as *Spermist.*

Spermangium (*sper-man'-je-um*) [σπέρμα, seed; ἀγγεῖον, vessel: *pl.*, *Spermangia*]. In biology, a sporecase or conceptacle.

Spermaphyte (*sper'-maf-īt*) [σπέρμα, seed; φυτόν, plant]. Same as *Spermophyte.*

Spermarium (*sper-ma'-re-um*) [σπέρμα, seed: *pl.*, *Spermaria*]. In biology, a *spermary*, *q. v.*

Spermary (*sper'-ma-re*) [σπέρμα, seed]. The analogue in the male of the ovary; *i. e.*, the organ generating the sperm-cells; in the higher animals, called the testis, or testicle.

Spermatanergia (*sper-mat-an-ur'-je-ah*) [σπέρμα, seed; *anergia*]. Sterility in the male.

Spermatemphraxis (*sper-mat-em-fraks'-is*) [σπέρμα, seed; ἔμφραξις, obstruction]. Obstructive spermatocele of the tubules.

Spermatheca (*sper-math-e'-ka*) [σπέρμα, seed; θήκη, a case: *pl.*, *Spermathecæ*]. In biology, a receptacle for spermatozoa; specifically, a globular pouch connected with the oviduct of the queen-bee, and which receives and becomes the depository of the millions of spermatozoa ejaculated during the marital flight.

Spermathecal (*sper-math-e'-kal*) [σπέρμα, seed; θήκη, a case]. Pertaining to a spermatheca.

Spermatic (*sper-mat'-ik*) [σπερματικός]. Pertaining to the semen. **S. Artery,** a branch of the aorta supplying the testicle. **S. Canal.** See *Inguinal Canal.* **S. Cones.** See *Cone.* **S. Cord,** the cord of arteries, veins, lymphatics, nerves and the excretory duct of the testicle passing from the testicle to the internal abdominal ring. **S. Crystals,** a variety of crystals formed in seminal fluid after prolonged standing. See under

Spermin. **S. Gelatin,** a gelatinous substance found in the spermogonia of certain cryptogams. **S. Rete.** See *Rete testis.*

Spermatid (*sper'-mat-id*) [σπέρμα, seed]. A seminal cell.

Spermatin (*sper'-mat-in*) [σπέρμα, seed]. The odorous, mucilaginous matter found in semen. Its nature is unknown.

Spermatis (*sper'-mat-is*) [σπέρμα, seed]. A spermatic vein.

Spermatischesis (*sper-mat-is'-ke-sis*). Synonym of *Aspermatism.*

Spermatism (*sper'-mat-izm*) [σπέρμα, seed]. 1. A discharge of semen. 2. The theory that the fetus is the direct development of the male element or spermatozoön.

Spermatismus (*sper-mat-iz'-mus*) [σπέρμα, seed]. The emission of semen.

Spermatist (*sper'-mat-ist*). Same as *Spermist.*

Spermatitis (*sper-mat-i'-tis*) [σπέρμα, seed; ιτις, inflammation]. Same as *Funiculitis.*

Spermatium (*sper-ma'-she-um*) [σπέρμα, seed: *pl.*, *Spermatia*]. In biology, one of the rod-shaped bodies, supposed to be male gametes, found in the spermogonia of certain fungi.

Spermato- (*sper'-mat-o-*) [σπέρμα, seed]. A prefix to denote connection with the semen.

Spermatoal (*sper-mat-o'-al*) [σπέρμα, seed; ῳόν, an egg]. Pertaining to a spermatoön.

Spermatoblast (*sper'-mat-o-blast*) [σπέρμα, seed; βλαστός, bud, sprout]. In biology, one of the nuclei of daughter-cells, produced by mother-cells, and derived by cell-division from spermatogenic cells. The spermatoblasts are originally round, but soon elongate, become pyriform, and give rise directly to spermatozoids. Cf. *Spermatogenetic cells.*

Spermatoblastic (*sper-mat-o-blas'-tik*) [σπέρμα, seed; βλαστός, germ]. Pertaining to spermatoblasts.

Spermatocele (*sper'-mat-o-sēl*) [σπέρμα, seed; κήλη, tumor]. A spermatic cyst or encysted hydrocele of the testicle or epididymis.

Spermatoclemma (*sper-mat-o-klem'-ah*) [σπέρμα, seed; κλέμμα, a stealing: *pl.*, *Spermatoclemmata*]. Involuntary emission of semen during waking. A synonym of *Pollution.*

Spermatocratia (*sper-mat-o-kra'-she-ah*). Synonym of *Spermatorrhea.*

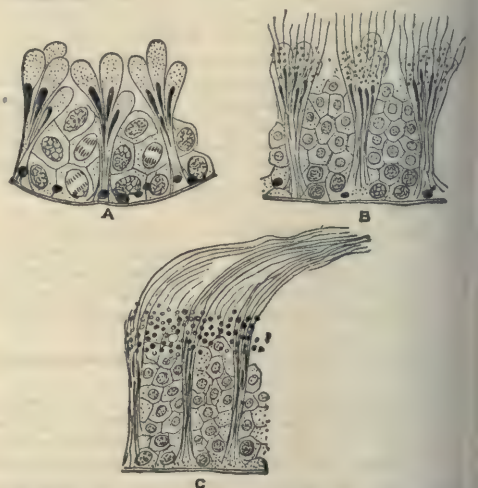
Spermatocyst (*sper'-mat-o-sist*) [σπέρμα, seed; κύστις, cyst]. A seminal vesicle; a pathologic cyst containing spermatozoa.

Spermatocystic (*sper-mat-o-sis'-tik*) [σπέρμα, seed; κύστις, cyst]. Pertaining to a spermatocyst.

Spermatocystidium (*sper-mat-o-sis-tid'-e-um*) [σπέρμα, seed; κύστις, bladder: *pl.*, *Spermatocystidia*]. Same as *Antheridium.*

Spermatocystidorrhagia (*sper-mat-o-sis-tid-or-a'-je-ah*) [σπέρμα, seed; κύστις, cyst; ῥηγνυναι, to burst forth]. Hemorrhage from the seminal vesicles.

Spermato-cystitis (*sper-mat-o-sis-ti'-tis*) [σπέρμα, seed; κύστις, cyst; ιτις, inflammation]. Inflammation of the vesiculæ seminales.



Spermatocytal (*sper-mat-o-sī'-tal*) [σπέρμα, seed; κύτος, a cell]. Pertaining to a spermatocyte.

Spermatocyte (*sper'-mat-o-sīt*) [σπέρμα, seed; κύτος, cell]. The germinal cell from which the spermatozoön develops. Cf. also, *Cell, seminal, Cell, spermatogenetic,* and *Seminiferous Tubule.*

Spermatogem (*sper-mat'-o-jem*) [σπέρμα, seed; *gemma*, a bud]. See *Spermosphere.*

Spermatogemma (*sper-mat-o-jem'-ah*) [σπέρμα, seed; *gemma*, bud]. In biology, a tissue formed of spermatocytes; a spermatoblast.

Spermatogenesis (*sper-mat-o-jen'-es-is*) [σπέρμα, seed; γένεσις, origin]. In biology, the formation of spermatozoa.

TUBULES OF TESTIS OF RAT, showing spermatogenesis. A. Less advanced stage. B. and C. More advanced stages. A. and B. Transverse section. C. Longitudinal section. × 300. (*From Stirling.*)

Spermatogenetic (*sper-mat-o-jen-et'-ik*) [σπέρμα, seed; γένεσις, genesis]. Pertaining to spermatogenesis. **S. Cell,** one of two kinds of cells forming a layer next the basement-membrane of the seminiferous tubules; they produce mother-cells, which in turn produce daughter-cells, the nuclei of which constitute the spermatoblasts and give rise to spermatozoa. Cf. *Spermatoblast.*

Spermatogenous (*sper-mat-oj'-en-us*) [σπέρμα, seed; γενής, producing]. Producing spermatozoa.

Spermatogeny (*sper-mat-oj'-en-e*) [σπέρμα, seed; γενής producing]. In biology, the same as *Spermatogenesis.*

Spermatogonia (*sper-mat-o-go'-ne-ah*). See *Gonocyte.*

Spermatogonium (*sper-mat-o-go'-ne-um*) [σπέρμα, seed; γονή, generation: *pl.*, *Spermatogonia*]. In biology, a formative seminal cell or mass of spermatoblasts; *pycnidium.*

Spermatoid (*sper'-mat-oid*). See *Spermatozoön.*

Spermatolepsis (*sper-mat-o-lep'-sis*). Synonym of *Pollution.*

Spermatologic (*sper-mat-o-loj'-ik*) [σπέρμα, seed; λόγος, science]. Pertaining to spermatology.

Spermatologist (*sper-mat-ol'-o-jist*) [σπέρμα, seed; λόγος, science]. One versed in spermatology.

Spermatology (*sper-mat-ol'-o-je*) [σπέρμα, seed; λόγος, a treatise]. The sum of what is known regarding the origin, nature, qualities and characteristics of the seminal fluid.

Spermatomere (*sper'-mat-o-mēr*) [σπέρμα, sperm; μέρος, share]. Any one of the portions into which the pronucleus of the fertilized ovum may divide.

Spermatoön (*sper-mat-o'-on*) [σπέρμα, seed; ῳόν, egg]. The nucleus of a sperm-cell or spermatozoön.

Spermatopathy (*sper-mat-op'-ath-e*) [σπέρμα, sperm; πάθος, disease]. Disease of the sperm-cells or of the secreting mechanism.

Spermatophobia (*sper-mat-o-fo'-be-ah*) [σπέρμα, sperm; φόβος, fear]. False spermatorrhea; morbid dread of spermatorrhea.

Spermatophoral (*sper-mat-off'-o-ral*) [σπέρμα, seed; φέρειν, to bear]. Pertaining to a spermatophore.

Spermatophore (*sper'-mat-o-fōr*) [σπέρμα, seed; φέρειν

to bear]. In biology, a receptacle of seminal products, common among invertebrates.

Spermatophorous (*sper-mat-off'-or-us*) [σπέρμα, seed; φορεῖν, to bear]. Bearing seed or spermatozoa.

Spermatophthora (*sper-mat-off'-tho-rah*) [σπέρμα, seed; φθορά, decay]. Weakness or inferiority of the semen.

Spermatoplania (*sper-mat-o-pla'-ne-ah*) [σπέρμα, seed; πλάνη, a wandering]. A supposed metastasis of the semen.

Spermatopoietic (*sper-mat-o-poi-et'-ik*) [σπέρμα, semen; ποιεῖν, to make]. The production or secretion of semen.

Spermatorrhea (*sper-mat-or-e'-ah*) [σπέρμα, semen; ῥοία, a flow]. Involuntary discharge of semen without sexual excitement. **S. dormientum**, a nocturnal emission of semen. **S., False**, when spermatozoids are not in the fluid; called, also, prostatorrhea. **S., True**, when spermatozoids are present.

Spermatoschesis (*sper-mat-os'-kes-is*) [σπέρμα, semen; σχέσις, suppression]. Suppression of the seminal fluid.

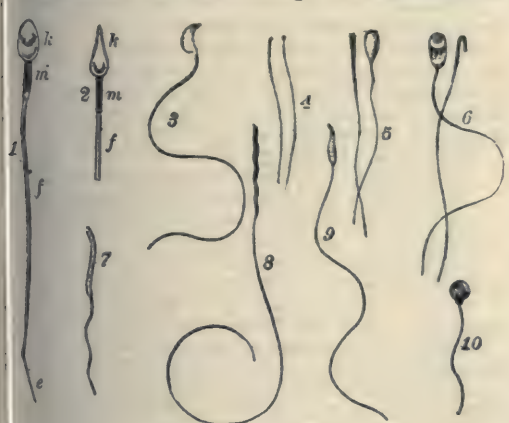
Spermatosis (*sper-mat-o'-sis*). See *Gonepoiesis.*

Spermatosome (*sper'-mat-o-sōm*). See *Spermatozoön.*

Spermatosphere (*sper'-mat-o-sfēr*). See *Spermatoblast.*

Spermatospore (*sper'-mat-o-spōr*) [σπέρμα, seed; σπόρος, a sowing]. In biology, a primitive cell giving rise by division to spermatoblasts.

Spermatotheca (*sper-mat-o-the'-kah*) [σπέρμα, seed; θήκη, a case]. Same as *Spermatheca.*



Spermatovum (*sper-mat-o'-vum*) [σπέρμα, seed; *ovum*, egg: *pl.*, *Spermatova*]. In biology, an impregnated ovum.

Spermatozemia (*sper-mat-o-ze'-me-ah*). See *Spermatorrhea.*

Spermatozoal, Spermatozoan (*sper-mat-o-zo'-al, sper-mat-o-zo'-an*) [σπέρμα, seed; ζῷον, animal]. Pertaining to a spermatozoön.

Spermatozoid or Spermatozoöid (*sper-mat-o-zo'-id, sper-mat-o-zo'-oid*). Same as *Spermatozoön.*

Spermatozoön (*sper-mat-o-zo'-on*) [σπέρμα, semen; ζῷον, animal: *pl.*, *Spermatozoa*]. The detached, independently mobile cilium of an enlarged epithelial cell of the seminal tubules. The essential element of fecundation of the semen.

SPERMATOZOA.

Human (× 400), the head seen from the side. 2. On edge. *k.* Head. *m.* Middle piece. *f.* Tail. *e.* Terminal filament. 3. From the mouse. 4. From bothriocephalus latus. 5. From the deer. 6. From the mole. 7. From the green woodpecker. 8. From the black swan. 9. From a cross between a goldfinch and a canary. 10. From cobitis. (*Landois.*)

Spermaturia (*sper-mat-u'-re-ah*) [σπέρμα, seed; οὖρον, urine]. The presence of semen in the urine.

Spermic (*sper'-mik*). Same as *Spermatic.*

Spermidium (*sper-mid'-e-um*) [σπέρμα, seed: *pl.*, *Spermidia*]. See *Achenium.*

Spermiduct (*sper'-mid-ukt*) [σπέρμα, seed; *ductus*, a duct]. A duct for the passage of semen; the vas deferens.

Spermin (*sper'-min*) [σπέρμα, seed], C_2H_5N. A non-poisonous alkaloid obtained from sputum, human semen, the organs of leukemic patients, and alcoholic anatomic preparations. "Charcot's Crystals," "Charcot-Leyden Crystals," or "Charcot-Neumann crystals," are said to be simply phosphate of spermin. Such crystals have been found in the sputa of emphysema associated with catarrh, in the bronchial discharges of acute bronchitis, in the blood and spleen of leukemic and anemic patients, in the normal marrow of bones, and in human semen. These crystals are said to be identical with "spermatic crystals" a variety of crystals formed in seminal fluid after prolonged standing. According to Fürbringer they are probably formed by the action of semen on the prostatic secretion. As these crystals are found almost constantly, after death, in the fluid of the prostate, and not within the contents of the seminal vesicles, they are more appropriately termed *prostatic crystals.* (*Piersol.*) Spermin seems to have a very wide distribution in certain diseases, especially leukemia. See also *Piperazin.*

Spermism (*sper'-mism*) [σπέρμα, seed]. In biology, the theory that the animal is the result of the development of a spermatozoön, the ovum acting only as an accessory matrix.

Spermist (*sper'-mist*) [σπέρμα, seed]. A believer in spermism.

Spermoblast (*sper'-mo-blast*). See *Spermatoblast.*

Spermoblastic (*sper-mo-blas'-tik*). Same as *Spermatoblastic.*

Spermobole (*sper-mob'-o-le*). See *Spermatismus.*

Spermocarp (*sper'-mo-karp*) [σπέρμα, seed; καρπός, fruit]. In biology, an *antheridium.*

Spermococcus (*sper-mo-kok'-us*) [σπέρμα, seed; κόκκος, berry]. The head of the spermatozoön without its protoplasmic sheath; the nucleus of a spermule.

Spermoderm (*sper'-mo-derm*) [σπέρμα, seed; δέρμα, skin]. In biology, the same as *Episperm;* the outer covering of the seed.

Spermogenous (*sper-moj'-en-us*) [σπέρμα, seed; γεννᾶν, to produce]. Active in the formation of spermatozoa.

Spermogone (*sper'-mo-gōn*) [σπέρμα, seed; γονός, producing]. Same as *Spermogonium.*

Spermogoniferous (*sper-mo-gon-if'-er-us*) [σπέρμα, seed; γονός, producing; *ferre*, to bear]. In biology, producing spermogonia.

Spermogonium (*sper-mo-go'-ne-um*) [σπέρμα, seed; γονός, producing; *pl.*, *Spermogonia*]. In biology, a receptacle in which spermatia are developed. See *Peridium.*

Spermogonous (*sper-mog'-o-nus*) [σπέρμα, seed; γονός, bearing]. In biology, resembling spermogonia.

Spermolith (*sper'-mo-lith*) [σπέρμα, semen; λίθος, a stone]. A calculus in the spermatic duct or vesiculæ seminales.

Spermologic (*sper-mo-loj'-ik*) [σπέρμα, seed; λόγος, science]. Pertaining to spermology.

Spermologist (*sper-mol'-o-jist*) [σπέρμα, seed; λόγος, science]. One versed in spermology.

Spermology (*sper-mol'-o-je*) [σπέρμα, seed; λόγος, science]. In biology: 1. Same as *spermatology.* 2. That branch of science which treats of the seeds of plants.

Spermoneuralgia (*sper-mo-nu-ral'-je-ah*) [σπέρμα, seed; νεῦρον, nerve; ἄλγος, pain]. Neuralgia of the testicles and spermatic cord.

Spermonucleus (*sper-mo-nu'-kle-us*) [σπέρμα, seed; *nucleus*, a little nut, kernel: *pl.*, *Spermonuclei*]. In biology, the male pronucleus.

Spermophlebectasia (*sper-mo-fleb-ek-ta'-ze-ah*) [σπέρμα, seed; φλέψ, vein; ἔκτασις, distention]. Varicosity of the spermatic vein.

Spermophore (*sper'-mo-fōr*). Same as *Spermophorum*.

Spermophorum (*sper-moff'-o-rum*) [σπέρμα, seed; φέρειν, to bear: *pl.*, *Spermophora*]. In biology, a seminal vesicle; a spermatophore.

Spermophyte (*sper'-mo-fīt*) [σπέρμα, seed; φυτόν, plant]. In biology, a phanerogam, a plant bearing seeds, in distinction from one that produces spores.

Spermophytic (*sper-mo-fīt'-ik*) [σπέρμα, seed; φυτόν, plant]. Pertaining to a spermophyte.

Spermoplasm, Spermoplasma (*sper'-mo-plazm, sper-mo-plaz'-mah*) [σπέρμα, seed; πλάσμα, anything molded]. In biology, the substance of a spermule.

Spermorrhagia (*sper-mor-a'-je-ah*). See *Spermatorrhea*.

Spermorrhea (*sper-mor-e'-ah*). See *Spermatorrhea*.

Spermosphere (*sper'-mo-sfēr*) [σπέρμα, seed; σφαῖρα, sphere]. In biology, a mass of spermatoblasts, or incipient spermatozoa.

Spermospore (*sper'-mo-spōr*). See *Spermatophore*.

Spermotheca (*sper-mo-the'-kah*) [σπέρμα, seed; θήκη, a case]. In biology, a pericarp.

Spermous (*sper'-mus*). Same as *Spermatic*.

Spermovarian (*sper-mo-va'-re-an*) [σπέρμα, seed; *ovum*, an egg]. Pertaining to a spermovarium.

Spermovarium (*sper-mo-va'-re-um*) [σπέρμα, a seed; *ovum*, an egg: *pl.*, *Spermovaria*]. See *Ovotestis*.

Spermovary (*sper-mo'-va-re*). Same as *Spermovarium*.

Spermovum (*sper-mo'-vum*) [σπέρμα, seed; *ovum*, an egg: *pl.*, *Spermova*]. In biology, same as *Spermatovum*.

Spermozoön (*sper-mo-zo'-on*). See *Spermatozoön*.

Spermule (*sper'-mūl*) [σπέρμα, seed]. In biology, a spermatozoön, or male generative element.

Spermulum (*sper'-mu-lum*). Same as *Spermule*.

Sphacel (*sfas'-el*). Same as *Sphacelus*.

Sphacela (*sfas'-el-ah*) [σφάκελος, gangrene: *pl.*, *Sphacelæ*]. In biology, a hollow chamber, filled with a mucilaginous or watery substance and oöspheres, developed from the apical cells in certain marine *Algæ* (*Sphacelariaceæ*).

Sphacelate, Sphacelated (*sfas'-el-āt, sfas'-el-a-ted*) [σφάκελος, dead]. Necrosed; gangrenous; mortified.

Sphacelation (*sfas-el-a'-shun*) [σφάκελος, dead]. Necrosis.

Sphacele (*sfas'-ēl*). Same as *Sphacela*.

Sphacelinic Acid (*sfas-el-in'-ik*). See *Ergot*.

Sphacelism (*sfas'-el-izm*) [σφάκελος, dead]. The condition of being affected with sphacelus.

Sphacelium (*sfa-se'-le-um*) [σφακελίζειν, to destroy, mortify]. The *Claviceps purpurea*, or the first stage of the formation of ergot.

Sphaceloderma (*sfas-el-o-der'-mah*) [σφάκελος, dead; δέρμα, skin]. *Raynaud's Disease; Symmetrical Gangrene; Gangrene of the Skin.* A rare disease characterized by a local stagnation occurring at the periphery of the circulation, producing symmetrically distributed gangrenous spots on the body. The essential factor in the disease is a vaso-motor spasm of the capillaries of the extremities. The disease occurs in three well-defined grades, which are, in the order of severity, *local syncope*, *local asphyxia*, and *local gangrene*. The so-called "*dead finger*," frequently seen in females, is an example of the first grade. The affected part is cold, dead-white, and bloodless; this is but temporary, and is followed by a period of reaction. In the second form of the disease the affected parts become cold and cyanotic, while in the third form a true gangrene of the affected parts takes place. Pain is the most prominent symptom of the disease, which usually attacks children or adults under thirty years of age. Women of the neurotic temperament are more liable to be affected, and especially does it occur after some sudden mental shock. See *Dermatitis gangrænosa*. **Dermatitis gangrænosa infantum**, a gangrenous eruption following certain pustular eruptions in children. **Diabetic Gangrene**, a serpiginous form of gangrene occurring in advanced cases of diabetes, and consisting of patches forming on the skin of the limbs.

Sphaceloid (*sfas'-el-oid*) [σφάκελος, dead]. Resembling a sphacelus or gangrenous part.

Sphacelous (*sfas'-el-us*) [σφάκελος, dead]. Pertaining to sphacelus; gangrenous; necrosed.

Sphacelus (*sfas'-el-us*) [σφάκελος, gangrene]. The disorganized or dead part of a limb or organ affected with gangrene. Formerly any excessive pain or agitation. See *Gangrene*.

Sphæræsthesia (*sfe-res-the'-ze-ah*). See *Spheresthesia*.

Sphæraphide (*sfe-raf'-id*) [σφαῖρα, sphere; ῥαφίς needle]. In biology, one of a cluster of needle-shaped crystals arranged in spheric masses and found in ferns and other plants. The term is extended to include other crystalline masses having a somewhat rounded shape; a spherocrystal.

Sphærenchyma (*sfe-reng'-kim-ah*). See *Spherenchyma*.

Sphæridium (*sfe-rid'-e-um*) [σφαῖρα, a ball: *pl.*, *Sphæridia*]. In biology, one of the minute spheroid bodies described by Lövén as resting upon the ambulacral plates, especially upon those nearest the mouth, in all the *Echinidea*, except *Cidaris*. It is possibly auditory in function.

Sphærobacterium (*sfe-ro-bak-te'-re-um*). See *Spherobacterium*.

Sphæroid (*sfe'-roid*). See *Spheroid*.

Sphæroma (*sfe-ro'-mah*). See *Spheroma*.

Sphæromere (*sfe'-ro-mēr*). See *Spheromere*.

Sphærometer (*sfe-rom'-et-er*). See *Spherometer*.

Sphærospore (*sfe'-ro-spōr*). Same as *Spherospore*.

Sphærula (*sfe'-ru-lah*) [σφαῖρα, a ball, a sphere: *pl.* *Sphærulæ*]. In biology, a form of special asexual reproductive bud, developed in fresh-water sponges at certain seasons at the expense of the parent animal and usually associated with the decay of the latter.

Sphage (*sfāj*) [σφαγή, the throat]. The throat; the anterior portion of the neck.

Sphagiasmus (*sfa-je-az'-mus*) [σφαγίασμός; σφαγή, throat]. Epileptic spasm of the muscles of the neck.

Sphagitis (*sfa-jī'-tis*) [σφαγή, the throat; ιτις, inflammation]. Inflammation of the jugular vein.

Sphagnicolous (*sfag-nik'-o-lus*) [σφάγνος, moss; *colere*, to inhabit]. In biology, growing among mosses.

Sphagnous (*sfag'-nus*) [σφάγνος, moss]. In biology, pertaining to mosses.

Sphagnum (*sfag'-num*). See *Muskeg Moss*.

Sphalerocarpium (*sfal-er-o-kar'-pe-um*) [σφαλερός, slippery, uncertain; καρπός, fruit: *pl.*, *Sphalerocarpia*]. In biology, a naked seed, surrounded, except at the apex, by a fleshy cup or aril. It is produced by the yew (*Taxus baccata*) and other members of the *Taxaceæ*.

Sphenencephalus (*sfe-nen-sef'-al-us*). See *Sphenocephalus*.

Sphenic (*sfe'-nik*) [σφήν, wedge]. Wedge-like.

henion (*sfe'-ne-on*) [σφήν, wedge]. The apex of the sphenoid angle of the parietal bone on the surface of the skull. See *Craniometric Points*.

heno- (*sfe'-no-*) [σφήν, wedge]. A prefix used to denote connection with the sphenoid bone, or to indicate a wedge-like shape.

heno-basilar (*sfe'-no-ba'-zil-ar*) [σφήν, wedge; βάσις, base]. Pertaining conjointly to the sphenoid bone and the basilar portion of the occipital bone. **S. Groove,** the depression on the body of the sphenoid bone and the basilar portion of the occipital bone, upon which the pons rests.

henoccipital (*sfe-nok-sip'-it-al*) [σφήν, wedge; *occiput*, occiput]. Pertaining to the sphenoid and the occipital bone; spheno-basilar.

henocephalia (*sfe-no-sef-a'-le-ah*) [σφήν, wedge; κεφαλή, head]. The condition of a sphenocephalus.

henocephalus (*sfe-no-sef'-al-us*) [σφήν, wedge; κεφαλή, head]. A variety of single autositic monsters of the species otocephalus, in which the two eyes are well separated; the ears are united under the head; the jaws and mouth are distinct; and the sphenoid is altered in shape, so that it is analogous in form to what is found normally in birds.

heno-ethmoid (*sfe'-no-eth'-moid*) [σφήν, wedge; ἠθμός, sieve; εἶδος, like]. Belonging or relating to both the sphenoid and ethmoid bones.

heno-frontal (*sfe'-no-frun'-tal*) [σφήν, wedge; *frons*, forehead]. Belonging or relating to both the sphenoid and frontal bones.

henoid (*sfe'-noid*) [σφήν, wedge; εἶδος, likeness]. Cuneiform. Relating or pertaining to the sphenoid bone. **S. Bone,** one of the cranial bones at the anterior base of the skull, articulating with all the other bones of the head. **S. Fontanel,** the membranous interspace at the junction of the squamous and coronal sutures of the fetal skull. **S. Sinus.** See *Sinus*.

henoides (*sfe-noi'-dēz*) [σφήν, wedge; εἶδος like]. The sphenoid bone.

henoido-auricular (*sfe-noi'-do-aw-rik'-u-lar*) [σφήν, wedge; *auriculus*, auricle]. Pertaining to the sphenoid and binauricular diameters of the skull. **S.-a. Index,** the ratio of the minimum sphenoid diameter of the skull with the binauricular diameter, the latter being taken as 100.

henoido-frontal (*sfe-noi'-do-frun'-tal*) [σφήν, wedge; *frons*, forehead]. Pertaining to the sphenoid and frontal diameters of the skull. **S.-f. Index,** the relation between the minimum sphenoid diameter of the skull and the minimum frontal diameter taken as 100.

henoido-parietal (*sfe-noi'-do-par-i'-et-al*) [σφήν, wedge; *paries*, wall]. Belonging or relating to the sphenoid and parietal diameters of the skull. **S.-p. Index,** the relation between the minimum sphenoid diameter of the skull and the maximum frontal diameter taken as 100.

heno-malar (*sfe'-no-ma'-lar*) [σφήν, wedge; *mala*, the cheek]. Pertaining to the sphenoid and malar bones.

heno-maxillary (*sfe'-no-maks'-il-a-re*) [σφήν, wedge; *maxilla*, maxilla]. Pertaining conjointly to the sphenoid and maxillary bones. **S.-m. Fossa.** See *Fossa*.

henometer (*sfe'-nom'-et-er*) [σφήν, wedge; μέτρον, measure]. An instrument for measuring the wedge to be removed in osteotomy for curvature.

heno-occipital (*sfe'-no-ok-sip'-it-al*) [σφήν, wedge; *occiput*, occiput]. Belonging or relating to both the sphenoid and occipital bones.

heno-orbital (*sfe'-no-or'-bit-al*) [σφήν, wedge; *orbita*, orbit]. Belonging or relating to both the sphenoid bone and the orbit.

heno-palatine (*sfe'-no-pal'-at-in*) [σφήν, wedge; *palatum*, palate]. Pertaining conjointly to the sphenoid bone and the palate. **S.-p. Foramen,** the sphenopalatine notch converted into a foramen by articulation with the sphenoidal turbinated bone. **S.-p. Ganglion.** See *Ganglion*. **S.-p. Notch,** a deep notch separating the orbital and sphenoid processes of the palate bone. See *Notch*.

Spheno-parietal (*sfe'-no-par-i'-et-al*) [σφήν, wedge; *paries*, wall]. Belonging or relating to both the sphenoid and parietal bones.

Spheno-petrosal (*sfe'-no-pe-tro'-sal*) [σφήν, wedge; πέτρα, rock]. Pertaining conjointly to the sphenoid bone and the petrous portion of the temporal bone.

Sphenopharyngeus (*sfe-no-far-in-je'-us*). See *Muscles, Table of*.

Spheno-pterygoid (*sfe'-no-ter'-ig-oid*) [σφήν, wedge; πτέρυξ, wing; εἶδος, like]. Pertaining to the body of the sphenoid bone and to the pterygoid process.

Sphenorbital (*sfe-nor'-bit-al*) [σφήν, wedge; *orbita*, orbit]. See *Spheno-orbital*.

Sphenosis (*sfe-no'-sis*) [σφήν, wedge]. The wedging of the fetus in the pelvis.

Spheno-squamosal, Spheno-squamous (*sfe'-no-skwa-mo'-sal, sfe'-no-skwa'-mus*) [σφήν, wedge; *squama*, scale]. Belonging or relating to both the sphenoid bone and the squamous portion of the temporal bone.

Spheno-temporal (*sfe'-no-tem'-po-ral*) [σφήν, wedge; *tempora*, the temple; *temporal*]. Pertaining conjointly to the sphenoid and temporal bones.

Sphenotic (*sfe-no'-tik*) [σφήν, wedge; οὖς, ear]. Pertaining to the sphenoid bone and the otic capsule.

Sphenotresia (*sfe-no-tre'-ze-ah*) [σφήν, wedge; τρῆσις, perforation]. A variety of craniotomy in which the basal portion of the fetal skull is perforated.

Sphenotribe (*sfe'-no-trīb*) [σφήν, wedge; τρίβειν, to rub]. The instrument used in performing sphenotresia.

Spheno-turbinal, Spheno-turbinate (*sfe-no-ter'-bin-al, sfe-no-ter'-bin-āt*) [σφήν, wedge; *turbo*, a scroll]. 1. Pertaining to the sphenoid and turbinate bones. 2. One of the sphenoidal spongy bones situated cephalad of the body of the sphenoid.

Spheno-vomerine (*sfe'-no-vo'-mer-in*) [σφήν, wedge; *vomer*, vomer]. Pertaining to the sphenoid bone and the vomer.

Spheral (*sfe'-ral*) [σφαῖρα, sphere]. Like a sphere.

Sphere (*sfēr*) [σφαῖρα, sphere]. 1. A ball or globe. 2. A space. **S. of Attraction,** a clear spot in the cell-plasma, outside of and close to the nucleus of an ovum undergoing mitosis. It contains the centrosoma of Boveri, and is the center of the formation of the amphiasters in karyokinesis, *q. v.* **S.-crystal.** Same as *Sphæraphide*. **S., Embryonic.** See *S., Segmentation-*. **S.-Granule,** a large granular corpuscle found in serous exudations. **S., Hearing,** the area in the brain which is supposed to be the seat of hearing. It is in the temporal lobe. **S., Motor,** a region in the central nervous system which, when stimulated, gives rise to motion. **S., Protoplasmic Primordial.** See *S., Segmentation-*. **S., Segmentation-,** a nucleated cell derived from division of the vitellus in the process of segmentation. **S., Sensory,** a sensory area of the central nervous system. **S., Vitelline, S., Yolk-,** the mulberry-like mass of cells that results from the fission of the substance of the ovum after fertilization. **S., Yeast-,** in biology, an aggregation of certain sprouting forms of the genus *Mucor*.

Spherenchyma (*sfe-reng'-kim-ah*) [σφαῖρα, a ball; ἔγχυμα, an infusion]. In biology, applied to a form of parenchyma in which the cells are globular.

Spheresthesia (*sfe-res-the'-ze-ah*) [σφαῖρα, globe; αἴσθησις, sensation]. Perverted feeling, as of the contact of a ball or globe-shaped body.

Spheric, Spherical (*sfe'-rik, sfe'-rik-al*). Having the shape of or pertaining to a sphere. **S. Aberration.** See *Aberration.* **S. Homology,** in biology, Wilder's term for the topical relation between the morphically identical, converging spheromeres of a radiate animal.

Spheriform (*sfe'-rif-orm*) [σφαῖρα, sphere; *forma*, form]. Spheric.

Spheriocarcinoma (*sfe-re-o-kar-sin-o'-mah*) [σφαῖρα, sphere; καρκίνωμα, carcinoma]. A carcinoma having a spheric shape.

Spherobacteria (*sfe-ro-bak-te'-re-ah*) [σφαῖρα, sphere; βακτήριον, a rod]. In Cohn's classification a genus of unicellular microbes, round or oval, stationary, and devoid of cilia or flagella. The micrococci.

Spherocerebrin (*sfe-ro-ser'-e-brin*) [σφαῖρα, a ball; *cerebrum*, cerebrum]. A nitrogenized substance occurring in brain-tissue among a group of cerebrinacides.

Spherocrystal (*sfe-ro-kris'-tal*) [σφαῖρα, sphere; κρύσταλλος, crystal]. Same as *sphæraphide.*

Spheroid (*sfe'-roid*) [σφαῖρα, sphere; εἶδος, like]. Having the form of a sphere. A solid resembling a sphere. **S., Oblate,** one in which the polar axis is less than the equatorial diameter. **S., Prolate,** one in which the polar axis exceeds the equatorial diameter.

Spheroma (*sfe-ro'-mah*) [σφαῖρα, sphere; ὄμα, tumor]. Any spheric-shaped tumor or protuberance.

Spheromere (*sfe'-ro-mer*) [σφαῖρα, a ball; μέρος, a part]. In biology, an *actinomere, q. v.*

Spherometer (*sfe-rom'-et-er*) [σφαῖρα, sphere; μέτρον, a measure]. An instrument for determining the degree of curvature of optic lenses and of the tools for their grinding.

Spherosiderite (*sfe-ro-sid'-er-īt*). Carbonate of iron in spheroidal masses, occurring in trap.

Spherosome (*sfe'-ro-sōm*) [σφαῖρα, sphere; σῶμα, body]. In biology, the body-wall of a radiated animal; suggested by L. Agassiz in place of *perisome.*

Spherospore (*sfe'-ro-spōr*) [σφαῖρα, a sphere; σπόρος, a seed]. In biology, Agassiz' name for a *tetraspore.*

Spherular (*sfe'-ru-lar*) [dim. of σφαῖρα, a sphere]. Resembling a spherule.

Spherulate (*sfe'-ru-lāt*) [dim. of σφαῖρα, sphere]. In biology, studded with spherules.

Spherule (*sfe'-rūl*) [σφαῖρα, sphere]. A globule. **S., Segment.** See *Sphere, Segmentation.*

Sphincter (*sfingk'-ter*) [σφιγκτήρ; σφίγγειν, to squeeze]. A muscle surrounding and closing an orifice. **S. ani. S. vaginæ.** See *Muscles, Table of.* **S. of the Pupil.** See *Iris.* **S., Third,** of the rectum, a duplicature of mucosa projecting well into the lumen of the gut from the right side, forming rather more than a semicircle, and involving more of the ventral than of the dorsal wall. It is also called *Kohlrausch's Fold.*

Sphincteralgia (*sfingk-ter-al'-je-ah*) [σφιγκτήρ, sphincter; ἄλγος, pain]. Pain in the sphincter ani muscle, or about the anus.

Sphincterate (*sfingk'-ter-āt*) [σφιγκτήρ, sphincter]. Provided with a sphincter.

Sphincterectomy (*sfingk-ter-ek'-to-me*) [σφιγκτήρ, sphincter; ἐκτομή, excision]. Oblique blepharotomy; Stellwag's operation for the dilatation of the palpebral fissure, or for blepharospasm.

Sphincterial, Sphincteric (*sfingk-te'-re-al, sfingk-ter'-ik*) [σφιγκτήρ, sphincter]. Pertaining to a sphincter or to its function.

Sphincterismus (*sfingk-ter-iz'-mus*) [σφιγκτήρ, sphincter]. A spasmodic contraction of the sphincter ani muscle, usually attendant upon fissure or ulcer of the anus, but occasionally occurring independently of such lesion.

Sphincterolysis (*sfingk-ter-ol'-is-is*) [σφιγκτήρ, sphincter; λύσις, solution]. The operation of freeing the iris in anterior synechia.

Sphincteroplasty (*sfingk'-ter-o-plas'-te*) [σφιγκτήρ, sphincter; πλάσσειν, to form]. The formation of an artificial sphincter by plastic operation.

Sphincterotomy (*sfingk-ter-ot'-o-me*) [σφιγκτήρ, sphincter; τομή, section]. The surgical cutting of a sphincter.

Sphingoin (*sphing'-go-in*) [σφίγγειν, to bind]. An alkaloid derived from cerebral tissue.

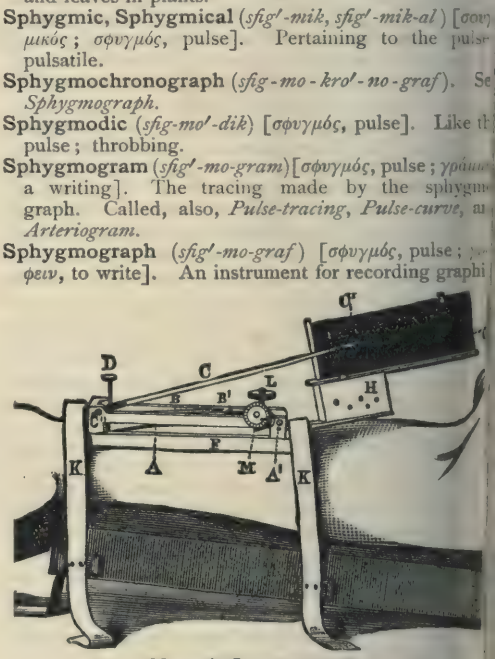
Sphingo-myelin (*sfing-go-mi'-el-in*) [σφίγγειν, to bind; μυελός, marrow]. A brain-phosphatid allied to myelin. It is capable of being decomposed into *neurin* and a substance which is convertible into sphingosin.

Sphingosin (*sfin'-go-sin*) [σφίγγειν, to bind]. An alkaloidal cerebroside occurring in brain-tissue.

Sphingostearic Acid (*sfing-go-ste-ar'-ik*). See *Acid.*

Sphinxis (*sfingks'-is*). See *Constriction.*

Sphrigosis (*sfrig-o'-sis*) [σφριγᾶν, to be full and vigorous]. In biology, excessive growth of wood, stem and leaves in plants.



Sphygmic, Sphygmical (*sfig'-mik, sfig'-mik-al*) [σφυγμικός; σφυγμός, pulse]. Pertaining to the pulse or pulsatile.

Sphygmochronograph (*sfig-mo-kro'-no-graf*). See *Sphygmograph.*

Sphygmodic (*sfig-mo'-dik*) [σφυγμός, pulse]. Like the pulse; throbbing.

Sphygmogram (*sfig'-mo-gram*) [σφυγμός, pulse; γράμμα, a writing]. The tracing made by the sphygmograph. Called, also, *Pulse-tracing, Pulse-curve,* and *Arteriogram.*

Sphygmograph (*sfig'-mo-graf*) [σφυγμός, pulse; γράφειν, to write]. An instrument for recording graphi

MAREY'S SPHYGMOGRAPH.

A. Steel spring. B. First lever. C. Writing lever. C' free writing end. D. Screw for bringing B in contact wit G. Slide with smoked paper. H. Clockwork. L. S for increasing the pressure. M. Dial, indicating the pr sure. K, K. Straps for fixing the instrument to the arm the arm to the double inclined plane or support.

ally the differential features of the pulse in health a disease.

Sphygmographic (*sfig-mo-graf'-ik*) [σφυγμός, pul γράφειν, to write]. Pertaining to the sphygmograp

Sphygmography (*sfig-mog'-ra-fe*) [σφυγμός, pul γράφειν, to write]. A description of the pulse, pathologic variations and their significance.

Sphygmoid (*sfig'-moid*) [σφυγμός, pulse; εἶδος, semblance]. Resembling or having the nature continuous pulsation.

Sphygmology (*sfig-mol'-o-je*) [σφυγμός, pulse; λόγος, treatise]. The sum of what is known regarding the pulse.

Sphygmomanometer (*sfig-mo-man-om'-et-er*) [σφυγμός, pulse; μανός, rare; μέτρον, measure]. An instrument for measuring the tension of the blood-current. See *Blood-pressure.*

Sphygmometer (*sfig-mom'-et-er*). See *Sphygmograph.*

Sphygmophone (*sfig'-mo-fōn*) [σφυγμός, pulse; φωνή, sound]. 1. A sphygmograph that marks each pulse-wave by sounding. 2. An apparatus in which a microphone is employed for the medical examination of the pulse.

Sphygmoscope (*sfig'-mo-skōp*) [σφυγμός, pulse; σκοπεῖν, to examine]. An instrument for showing mechanically the movements of the heart or the pulsations of a blood-vessel. **S., Gas-,** makes registration by a gas-jet.

Sphygmoscopy (*sfig-mos'-ko-pe*) [σφυγμός, pulse; σκοπεῖν, to observe]. The art of tracing the pulse-curve by the sphygmoscope.

Sphygmo-systole (*sfig-mo-sis'-to-le*) [σφυγμός, pulse; συστολή, contraction]. The influence of the cardiac systole upon the pulse.

Sphygmotechny (*sfig'-mo-tek-ne*) [σφυγμός, pulse; τέχνη, art]. The art of diagnosis and prognosis by means of the pulse.

Sphygmotonometer (*sfig-mo-to-nom'-et-er*) [σφυγμός, pulse; τόνος, tone; μέτρον, measure]. An instrument for use in estimating the elasticity of the arterial walls.

Sphygmous (*sfig'-mus*) [σφυγμός, pulse]. Pertaining to or having the nature of a pulse.

Sphygmus (*sfig'-mus*) [σφυγμός, pulse]. The pulse; a pulsation.

Sphyrotomy (*sfi-rot'-o-me*) [σφῦρα, malleus; τομή, a cutting]. An operation consisting in the removal of the malleus or its handle, together with a portion of the membrana tympani.

Sphyxis (*sfiks'-is*). See *Pulsation.*

Spica (*spi'-kah*) [L.]. 1. A spike or spur. 2. A spiral bandage with reversed turns. **S.-bandage.** See *Bandage.*

Spicate (*spi'-kāt*) [*spica*, a spike]. In biology, arranged in the form of a spike; spurred.

Spice (*spīs*) [ME., *spice*, spice]. An aromatic vegetable substance used for flavoring; a condiment. **S.-berry,** a popular name for *Gaultheria procumbens.* **S.-plaster.** See *Emplastrum aromaticum.* **S.-poultice,** a poultice made from the mixture of a variety of spices. **S.-wood.** See *Fever Bush.*

Spiced (*spīst*) [ME., *spice*, spice]. Flavored by means of spice.

Spiciferous (*spi-sif'-er-us*) [*spica*, a spike; *ferre*, to bear]. In biology, bearing spikes.

Spiciform (*spi'-sif-orm*) [*spica*, spike; *forma*, form]. Having the form of a spica.

Spicose, Spicous (*spi'-kōz, spi'-kus*) [*spica*, spike]. In biology, having spikes.

Spicula (*spik'-u-lah*) [dim. of *spica*, a spike: *pl.*, *Spiculæ*]. A small spike-shaped bone or fragment of bone.

Spicular (*spik'-u-lar*) [*spicula*, a spicule]. Having the form of a spicule.

Spiculate (*spik'-u-lāt*) [dim. of *spica*, a spike]. Having the shape of, or covered with spicules.

Spicule (*spik'-ūl*) [dim. of *spica*, a spike]. A needle-shaped body; a spike. **S., Bony,** a needle-shaped bone or fragment of bone. **S.-sheath,** in biology, the investment of a sponge-spicule.

Spiculiferous (*spik-u-lif'-er-us*) [*spicula*, spicule; *ferre*, to bear]. Having spicula.

Spiculiform (*spik'-u-lif-orm*) [*spicula*, spicule; *forma*, form]. Having the form of a spicule.

Spiculigenous (*spik-u-lij'-en-us*) [*spicula*, spicule; γενής, producing]. Producing spicules.

Spiculigerous (*spik-u-lij'-er-us*) [*spicula*, spicule; *gerere*, to bear]. Same as *Spiculiferous.*

Spiculose, Spiculous (*spik'-u-lōs, spik'-u-lus*) [*spicula*, spicule]. Having spicules.

Spiculum (*spik'-u-lum*) [*spiculum*, a little sharp point: *pl.*, *Spicula*]. In biology, a spicule, or spicular organ, as the *spiculum amoris* or copulatory organ of certain worms and molluscs.

Spider (*spi'-der*) [ME., *spither*, a spider]. An arthropod of the class *Arachnida.* **S. Cancer.** See *Acne rosacea.* **S.-cells;** in biology: (*a*) Bacilli the flagella of which are present in such numbers as to give the microbes the appearance of minute spiders. See *Bacillus typhi abdominalis*, under *Bacteria*, *Synonymatic Table of;* (*b*) the characteristic cells of the neuroglia. They have numerous long and delicate prolongations. See also *Deiters' Cells.* **S. Nevus.** See *Acné rosacea.* **Ss'. Web** (*tela araneæ*), formerly much used as a hemostatic, and also in some systemic diseases; used also as a moxa, with the blow-pipe.

Spigel's Line. See *Lines, Table of.*

Spigelia (*spi-je'-le-ah*) [after Adrian van der *Spiegel*, a Belgian physician]. Pink-root. The roots of *S. marilandica.* A popular vermifuge, generally administered with senna. In large doses an uncertain cathartic. Dose gr. xx–℥ij. **S., Ext., Fld.** Dose for a child ℿx–xx; for an adult ℥j–ij. **S., Infus., Comp.,** "worm-tea," "pink and senna," unof.; spigelia 15, senna, fennel āā 10, manna 30, water 500. Dose ℥jss–v. *S. anthelmia*, of tropical America, has similar properties.

Spigelian Lobe (*spi-je'-le-an*) [after Adrian van der *Spiegel*, a Belgian physician]. The lobe of the liver projecting from the back part of the under surface of the right lobe.

Spigelin (*spi-je'-lin*) [after Adrian van der *Spiegel*, a Belgian physician]. An alkaloid said to exist in the anthelmintic species of *Spigelia*, of which it appears to be an active principle.

Spigelius, Line of. See *Lines, Table of.* **S., Lobulus of.** See *Spigelian Lobe.*

Spike (*spīk*) [*spica*, a spike, ear of corn]. 1. In biology, that form of indeterminate anthotaxy in which the flowers are sessile, or nearly so, and arranged on a lengthened axis. 2. A sharp point. 3. *S.-lavender*, a plant, *Lavandula spica;* it yields *oil of spike.*

Spiked (*spīkt*). See *Spicate.*

Spikelet (*spi'-klet*) [*spica*, a spike, ear of corn]. In biology, a small or secondary spike; applied to the inflorescence of grasses.

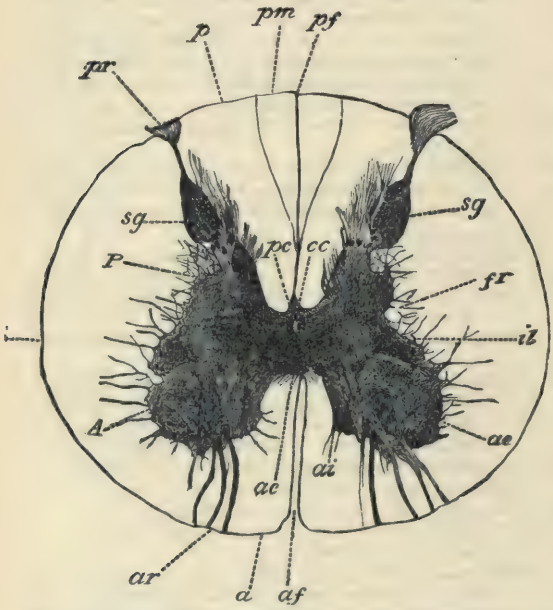
Spikenard (*spīk'-nard*) [ME., *spikenard*, spikenard]. Nard. A name given to the rhizome of various species of valerian, and especially to *Nardostachys jatamansi*, formerly much used in medicine, now used in washes and unguents, chiefly in the Orient. Unof. It is not to be confounded with American spikenard, *Aralia racemosa.*

Spillman's Soap. A soap used in treating syphilis. It is made of pure olive-oil and caustic potash, with which is incorporated 50 per cent. of mercury. It is neutral in reaction and causes no irritation. A portion of the body is lathered with the soap, and after drying it is covered with thin paper or some suitable garment. After 24 hours the part is washed off and dusted with rice-powder.

Spiloma (*spi-lo'-mah*). See *Nævus vascularis.*

Spiloplania (*spi-lo-pla'-ne-ah*) [σπίλος, a stain; πλανή, wandering]. A condition characterized by transient

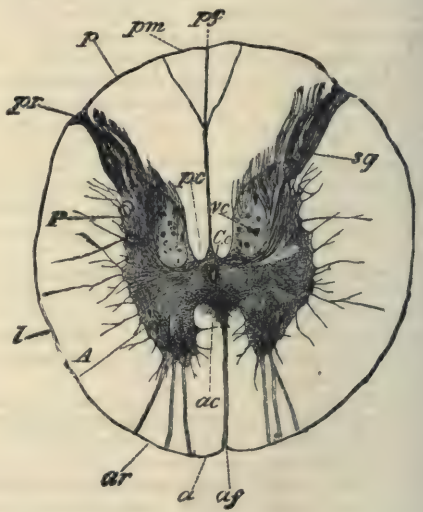
or wandering maculæ of the skin. Also, a synonym of *Elephantiasis græcorum*.



Spiloplaxia (*spi-lo-plaks'-e-ah*) [σπίλος, spot; πλάξ, a broad surface]. A condition marked by the large red spots symptomatic of elephantiasis; seen also in some cases of pellagra.

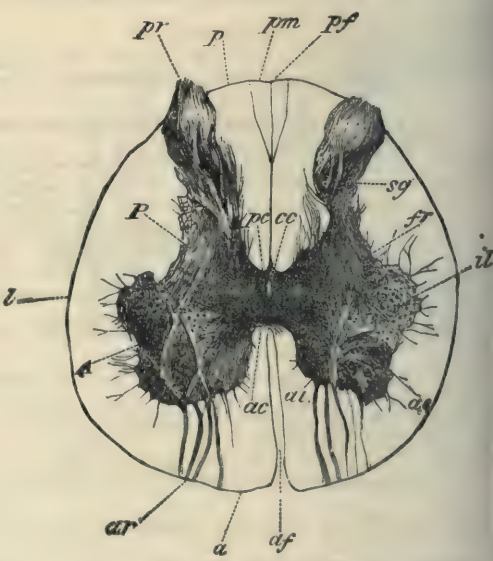
Spilosis poliosis. Synonym of *Canities*.

Spilus (*spi'-lus*) [σπίλος, a spot]. A mole or colored mark on the skin; nevus.



Spina (*spi'-nah*) [L., the backbone]. 1. A thorn. 2. The spine. **S. bifida**, a hernia of the spinal membranes through a cleft or abnormality of the lower part of the vertebral column; called, also, *Hydrorrhachitis*. **S. cervina.** Same as *Buckthorn*. **S. helicis.** See *Crista helicis*. **S. suprameatum**, an elevation just above the superior angle of the mastoid process of the temporal bone. It appears to be the posterior part of the zygomatic line. It is an important guide in the operation of opening the mastoid. **S. ventosa**, a rarefying form of osteitis in which the bone is eroded or destroyed, and the subperiosteal tissue and osseous marrow contain numerous small cells with transuded red blood-corpuscles. It is frequently a result of syphilis.

Spinal (*spi'-nal*) [*spina*, spine]. Pertaining to the spine. **S. Accessory Nerve.** See *Nerve*. **S. Accessory Spasm.** See *Tic rotatoire*. **S. Bulb,** the oblongata. **S. Canal.** See *Canal, Vertebral*. **S. Centers,** motor centers situated in the spine. The principal are the cilio-spinal, connected with the dilatation of the pupil; the auro-spinal; the vesico-spinal; the erection-center; the ejaculatory center; the parturition, and numerous vasomotor centers. **S. Column,** the vertebral column, composed of 33 vertebræ. **S. Cord,** the myelon, or medulla spinalis; the neural structure occupying the vertebral canal and extending from the atlas to the first lumbar vertebra, and terminating in the *filum terminale*. It is the great conducting medium of nervous impulses both afferent and efferent and within itself from side to side, and is the great organ of reflexes. It consists of white matter externally and gray matter internally. **Fissures,** the *ventral median*, *dorsal median*, and two *lateral*, divide each half of the cord into four **Columns**, *a ventral*, *lateral*, *dorsal*, and *dorsal median*. In the **Ventral Column** lie the uncrossed, ventral, or direct



TRANSECTION OF THE SPINAL CORD IN THE CERVICAL REGION.

A. Ventral gray column. *a*. Ventral white column. *l*. Lateral white column. *ac*. Ventral commissure. *ar*. Ventral roots. *af*. Ventral median fissure. *il*. Intermediolateral gray column. *vc*. Vesicular column of Clarke. *P*. Dorsal gray column. *p*. Dorsal-external white column. *pm*. Dorsal-median column. *pc*. Dorsal commissure. *cc*. Central canal. *pr*. Dorsal roots. *pf*. Dorsal-median fissure. *ae* and *ai*. External and internal ventral vesicular columns. *sg*. Substantia gelatinosa. (*Bevan Lewis*.)

TRANSECTION OF THE SPINAL CORD IN THE THORACIC REGION. (*Bevan Lewis*.)

TRANSECTION OF THE SPINAL CORD IN THE LUMBAR REGION. (*Bevan Lewis*.)

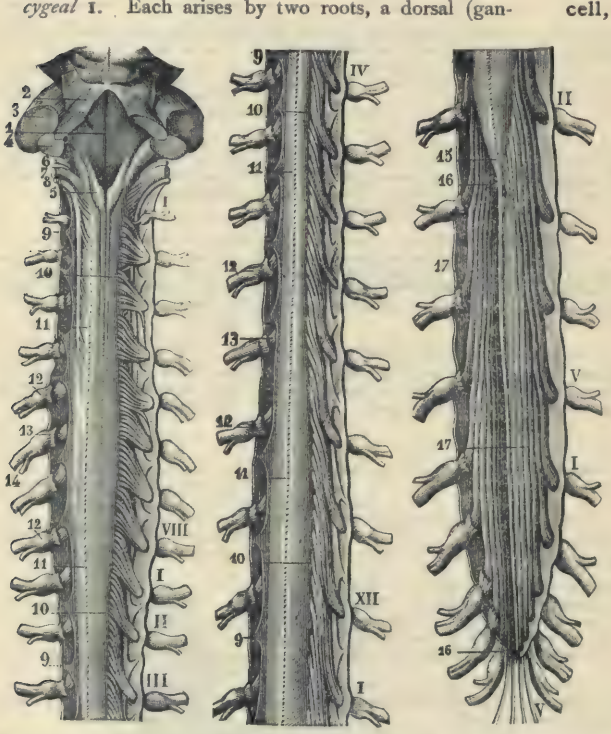


TABLE SHOWING THE LOCALIZATION OF FUNCTION IN THE DIFFERENT SEGMENTS OF THE SPINAL CORD.

(*After Starr.*)

Segment.	Muscles.	Reflex.	Sensation.
II and III C.	Sterno-mastoid; trapezius; scaleni and neck; diaphragm.	Hypochondrium (?). Sudden inspiration induced by sudden pressure beneath the lower border of ribs.	Back of the head to the vertex. The neck.
IV C.	Diaphragm; deltoid; biceps; coraco-brachialis; supinator longus; rhomboid; supra-spinatus and infra-spinatus.	Pupil. Fourth to 7th cervical. Dilatation of the pupil induced by irritation of neck.	The neck, upper part of the shoulder, and outer part of the arm.
V C.	Deltoid; biceps; coraco-brachialis; supinator longus; supinator brevis; rhomboid; teres minor; pectoralis (clavicular part); serratus magnus.	Scapular. Fifth cervical to 1st dorsal. Irritation of skin over the scapula induces contraction of the scapular muscles. Supinator longus. Tapping its tendon at wrist induces flexion of forearm.	Back of the shoulder and arm. Outer side of the arm and forearm, front and back.
VI C.	Biceps; brachialis anticus; pectoralis (clavicular part); serratus magnus; triceps; extensors of wrist and fingers; pronators.	Triceps. Sixth to 7th cervical. Tapping elbow-tendon induces extension of forearm. Posterior wrist. Sixth to 8th cervical. Tapping tendons causes extension of hand.	Outer side of the forearm, front, and back. Outer half of the hand.
VII C.	Triceps (long head); extensors of wrist and fingers; pronators of wrist; flexors of wrist; subscapular; pectoralis (costal part); latissimus dorsi; teres major.	Anterior wrist. Tapping anterior tendons causes flexion of wrist. Palmar. 7th cervical to 1st dorsal. Stroking palm causes closure of fingers.	Inner side and back of arm and forearm. Radial half of the hand.
VIII C.	Flexors of wrist and fingers; intrinsic muscles of hand.		Forearm and hand, inner half.
I T.	Extensors of thumb; intrinsic hand-muscles; thenar and hypothenar eminences.		Forearm, inner half. Ulnar distribution to the hand.
II to XII T.	Muscles of back and abdomen; erectores spinæ.	Epigastric. Fourth to 7th thoracic. Tickling mammary region causes retraction of the epigastrium. Abdominal. Seventh to 11th thoracic. Stroking side of abdomen causes retraction of belly.	Skin of chest and abdomen, in bands running around and downward, corresponding to spinal nerve. Upper gluteal region.
I L.	Ilio-psoas; sartorius; muscles of abdomen.	Cremasteric. First to 3d lumbar. Stroking inner thigh causes retraction of scrotum.	Skin over the groin and front of the scrotum.
II L.	Ilio-psoas; sartorius; flexors of knee (Remak); quadriceps femoris.	Patella tendon. Striking tendon causes extension of leg.	Outer side of the thigh.
III L.	Quadriceps femoris; inner rotators of thigh; abductors of thigh.		Front and inner side of the thigh.
IV L.	Abductors of thigh; adductors of thigh; flexors of knee (Ferrier); tibialis anticus.	Gluteal. Fourth to 5th lumbar. Stroking buttock causes dimpling in fold of buttock.	Inner side of thigh and leg, to the ankle. Inner side of the foot.
V L.	Outward rotators of thigh; flexors of knee (Ferrier); flexors of ankle; extensors of toes.		Back of the thigh and leg, and outer part of the foot.
I to II S.	Flexors of ankle; long flexors of toes; peronei; intrinsic muscles of foot; perineal muscles.	Plantar. Tickling sole of foot causes flexion of toes and retraction of leg. Foot-reflex. Achilles' tendon. Over-extension of foot causes rapid flexion; ankle-clonus. Bladder and rectal centers.	Back of thigh. Leg and foot, outer side. Skin over sacrum. Anus. Perineum. Genitals.

pyramidal tract and the ventral ground bundle of fibers. In the **Dorsal Column** are Goll's Column (postero-median, postero-internal) and the funiculus cuneatus (Burdach's Column, posterior radicular zone, or postero-external column). In the **Lateral Column** are the antero-lateral tract, the lateral mixed paths (lateral limiting tract), the lateral or crossed pyramidal tract, and the direct cerebellar tract. **S. Cord, Degeneration of**; injury of certain parts of the brain causes descending secondary degeneration of certain parts of the cord bearing centrifugal impulses, and whose trophic centers lie in the motor areas of the brain. Ascending secondary degeneration follows injury of the cord in those fibers conducting impulses in a centripetal direction, the trophic centers being probably in the spinal ganglia of the dorsal roots. See *Wallerian Law*. **S. Epilepsy**, Brown-Séquard's name for ankle-clonus. See also *Epilepsy*. **S. Foramina.** See *Foramina, Table of.* **S. Ganglia.** See *Ganglia, Table of.* **S. Gutter**, the depression on either

side of the spinous processes of the vertebral column. **S. Incurvation.** See *Lordosis.* **S. Irritation.** See *Neurasthenia, Spinal.* **S. Localization,** the determination of the functions of the various portions of the spinal cord. **S. Marrow,** the spinal cord itself within the vertebral canal. **S. Nerves,** the 31 pairs of nerves arising from the cord are grouped into pairs each, *Cervical* 8, *Dorsal* 12, *Lumbar* 5, *Sacral* 5, *Coccygeal* 1. Each arises by two roots, a dorsal (gan-

SUPERIOR OR CERVICAL SEGMENT OF SPINAL CORD. MIDDLE OR DORSAL PORTION OF CORD. INFERIOR PORTION OF CORD AND CAUDA EQUINA.

1. Floor of fourth ventricle. 2. Superior cerebellar peduncle. 3. Middle cerebellar peduncle. 4. Inferior cerebellar peduncle. 5. Enlargement at upper extremity of postero-median column. 6. Glosso-pharyngeal nerve. 7. Vagus. 8. Spinal accessory. 9, 9, 9, 9. Ligamentum denticulatum. 10, 10, 10, 10. Posterior roots of spinal nerves. 11, 11, 11, 11. Postero-lateral fissure. 12, 12, 12, 12. Ganglia of posterior roots. 13, 13. Anterior roots. 14. Division of united roots into anterior and posterior nerves. 15. Terminal extremity of cord. 16, 16. Filum terminale. 17, 17. Cauda equina. I, VIII. Cervical nerves. I, XII. Dorsal nerves. I, V. Lumbar nerves. I, V. Sacral nerves.

gliated) root, and a ventral (anterior, non-gangliated) root. On the dorsal root is the spinal ganglion. Beyond the ganglion the two roots unite to form, in the spinal canal, the mixed trunk of a spinal nerve. The ventral roots supply efferent fibers to all the voluntary muscles of the trunk and extremities, to the smooth muscular fibers of the bladder, ureter, uterus, etc., vasomotor, inhibitory, secretory, and trophic fibers. The dorsal roots intermediate sensory and tactile impulses. **S. Point.** See *Point apophysaire* and *Craniometric Points.* **S. Reflexes.** See *Reflexes, Table of.* **S. System,** the spinal cord and nerves considered as a whole.

Spinalis (*spi-nā'-lis*). See *Muscles, Table of.*

Spinate (*spī'-nāt*) [*spinatus*, having spines]. Armed with spines or thorn-shaped processes.

Spindle (*spin'-dl*) [ME., *spindle*, spindle]. A tapering rod or pin. A body having a fusiform shape. **S., Achromatic, S., Cleavage, S., Karyokinetic, S., Nuclear, S., Segmentation,** the double, cone-like appearance of the nucleus during certain stages of karyokinesis. **S.-cataract,** a form of cataract characterized by a spindle-shaped opacity extending from the posterior surface of the anterior portion of the capsule to the anterior surface of the posterior portion of the capsule, with a central dilatation. **S.-cell,** a fusiform cell. **S.-celled,** having fusiform cells, a form of cell typical of certain morbid growths, especially sarcoma; fusocellular. **S.-legged,** having long, thin legs. **S.-oils.** See *Lubricating Oils.* **S.-shanked.** Same as *S.-legged.* **S.-shaped,** shaped like a spindle. Fusiform.

Spine (*spīn*) [*spina*, a thorn, a prickle]. In biology, (*a*) a sharp-pointed dermal outgrowth; (*b*) a point or process of a bone; a sharp, hard, stiff bone or ossicle; (*c*) a back-bone or spinal column, so called from its spinous processes. **S.-ache,** pain in or about the spine. **S., Cauda equina of.** See *Cauda equina.* **S., Cleft, or Cloven.** See *Spina bifida.* **S., Cruciate.** See *S. of Tibia.* **S., Ethmoid,** the spine on top of the sphenoid bone. **S., Filum terminale of.** See *Filum terminale.* **S., Frontal.** See *Frontal Crest.* **S., Hemal,** the part that closes in the hemal arch of a typical vertebra. **Ss., Iliac,** there are four of these: the *anterior inferior* is the eminence immediately above the acetabulum; the *anterior superior* is the anterior termination of the crest; the *posterior inferior* is a slight eminence upon the margin immediately above the great sciatic notch; the *posterior superior* is the posterior extremity of the crest. **S., Irritable.** See *Spina Irritation.* **S., Ischiatic.** See *S. of Ischium.* **S. of Ischium,** a pointed eminence on the posterior border of the body of the ischium. It is the lower border of the great sciatic notch. **S., Mental.** See *Genial Tubercles.* **Ss., Nasal,** there are three of these: the *anterior*, or *nasal spine of the superior maxillary*, is the inferior sharp edge of the nasal crest of this bone; the *posterior*, or *nasal spine of the palate bone*, is the prominence upon the posterior margin of the palatal plate of the palatal bone; the *third*, or *common nasal spine*, is the sharp process projecting from the middle of the inferior surface of the frontal bone. **S., Neural,** the part that closes in the neural arch of the typical vertebra. **S., Occipital External,** the external occipital crest. **S., Palatine.** See *S., Nasal.* **S., Pharyngeal,** the ridge on the under surface of the basilar process of the occipital bone. **S. of the Pubes,** the prominent tubercle on the upper border of the body of the pubes. **S., Pubic.** See *S. of the Pubes.* **S., Railway,** the designation given to a series of nervous symptoms developed from shock produced by a railway accident or from the concussion produced by constant travel. **S. of the Scapula,** the plate of bone crossing the dorsum of the scapula and dividing it into two unequal parts. **S., Sciatic.** See *S. of Ischium.* **S., Sphenoid,** the spinous process of the greater wing of the sphenoid bone. **S. of the Sphenoid.** See *S., Sphenoid*, and *S., Ethmoid.* **S. of the Tibia,** the elevation upon the upper surface of the tibia between its two articulating surfaces. **S., Typhoid**

acute inflammation of one or more vertebræ following typhoid fever.

Spinescent (*spi-nes'-ent*) [*spinescere*, to grow thorny]. In biology, coarse, harsh, or spiny.

Spinicerebral (*spin-is-er'-e-bral*). See *Cerebro-spinal.*

Spiniferous (*spi-nif'-er-us*) [*spina*, spine; *ferre*, to bear]. Bearing spines.

Spiniform (*spi'-nif-orm*) [*spina*, a thorn; *forma*, form]. In biology, spine-like.

Spinigerous (*spi-nij'-er-us*). Same as *Spiniferous.*

Spinirector (*spi-ne-rek'-tor*) [*spina*, spine; *erector*, erector]. The erector spinæ muscle.

Spinitis (*spi-ni'-tis*). See *Myelitis.*

Spinobulbar (*spi-no-bul'-bar*) [*spina*, spine; *bulbus*, the oblongata]. Pertaining jointly to the spinal cord and the oblongata.

Spinola (*spi-no'-lah*). See *Spina bifida.*

Spinometer (*spi-nom'-et-er*). Same as *Scoliosometer.*

Spinose (*spi'-nōs*) [*spinosus*, full of thorns]. In biology, possessing thorns; or shaped like a thorn.

Spinous (*spi'-nus*) [*spina*, spine]. Pertaining to the spine; spiny or spiniform. **S. Process**, the apophysis or prominence at the posterior part of each vertebra.

Spintherism, Spintherismus (*spin'-ther-izm, spin-ther-iz'-mus*) [σπινθερίζειν, to emit sparks]. Synchisis scintillans; the illusory sensation of sparks dancing before the eyes.

Spintheroma (*spin-ther-o'-mah*) [σπινθήρ, spark]. Photopsia due to the presence of cholesterin-crystals.

Spintheropia (*spin-ther-o'-pe-ah*) [σπινθήρ, spark; ὄψ, sight]. Same as *Spintherism.*

Spinula (*spin'-u-lah*) [*spinula*, dim. of *spina*, a spine: *pl.*, *Spinulæ*]. In biology, a little hook or spine.

Spinulate (*spin'-u-lāt*) [*spinula*, a little spine]. Provided with a spinula.

Spinule (*spin'-ūl*). Same as *Spinula.*

Spinulose, Spinulous (*spin'-u-lōz, spin'-u-lus*) [*spina*, spine]. Spiny; having spines.

Spiny (*spi'-ne*) [*spina*, spine]. Full of spines. **S. Clotbur**, the herb *Xanthium spinosum*, reported to be a specific in hydrophobia. Its properties have not been investigated. Unof.

Spira (*spi'-rah*) [L., a spire]. A convolution of the brain; a spiral.

Spiracle (*spi'-rak-l*) [*spiraculum*, a breathing-hole]. In biology, a respiratory aperture.

Spiraculum (*spi-rak'-u-lum*) [L., a breathing-hole: *pl.*, *Spiracula*]. In biology, a spiracle.

Spiræa (*spi-re'-ah*). See *Hardhack* and *Queen of the Meadow.*

Spiral (*spi'-ral*) [*spiralis; spira*, a spire]. A curve with constantly increasing diameters; wound like the threads of a screw. **S. Bandage.** See *Bandage.* **S. Canal.** See *Cochlea.* **S., Cheese**, the *Spirillum tyrogenum.* **Ss., Curschmann's**, a form of curled and tufted fibrous exudate, seen in the sputum of asthma, pneumonia, etc. They are held to be pathognomonic of exudative bronchiolitis. See *Ss., Leyden's.* **S. Duct**, a duct whose wall has a spiral thickening on its inner surface. **S., Finkler and Prior's.** See *Spirillum.* **S. Ganglion.** See *Ganglion.* **S. Groove.** See *Sulcus spiralis.* **S., Herxheimer's**, peculiar fibers in the epidermis and the epithelium of certain mucous membranes. Eddowes thinks them to be of a fibrinous nature. **S. Lamina.** See *Lamina.* **S. Layer**, the middle of the three layers of the tracheal tube of an insect. **Ss., Leyden's**, a mesh of delicate fibers usually arranged in spiral form, which are found in the sputum and are the result of desquamative catarrhal inflammation. **S. Tendency.** See under *Theory.* **S. Tubes of Kidney.** See *Tubuli uriniferi.* **S. Vessel**, a tubular structure formed by the endwise coalescence of elongated cells with spiral layers of thickening in their walls.

Spiration (*spi-ra'-shun*). See *Respiration.*

Spire (*spir*) [*spira*, a coil, twist]. In biology, a conic, tapering structure, a sprout, a stalk, or the exserted whorls of the shell of a spiral gasteropod mollusc.

Spirem (*spi'-rem*) [*spira*, a coil, a twist]. In biology, the "close skein," or "mother-skein" of chromatin-fibrils in a cell undergoing mitotic division. The first stage in karyokinesis.

Spiricle (*spi'-rik-l*) [*spira*, a coil]. In biology, a coiled thread found in the hairs on some seeds; they uncoil when dampened and give rise to a motion which tends to bury the seed in the soil.

Spiriferous (*spi-rif'-er-us*) [*spira*, a coil; *ferre*, to bear]. Spired; having a spire.

Spirillum (*spi-ril'-um*) [*spirillum*, a curled hair]. A genus of bacteria whose elements are curved, often forming a spiral of several turns. See *Bacteria, Synonymatic Table of.* **S. Fever.** See *Relapsing Fever.*

Spirit (*spir'-it*) [*spiritus*, spirit]. In pharmacy, an alcoholic or hydro-alcoholic solution of a volatile substance. It is prepared either by solution or by distillation. See *Spiritus.* **S.-blue, S.-brown, S.-colors.** See *Pigments, Colors, and Dyestuffs.* **S. Diphenylamin-blue.** Same as *Bavarian Blue.* **S.-eosin.** Same as *Primrose.* **S. of Mindererus.** See *Ammonium.* **S.-proof**, any liquor containing at least 49 per cent. of absolute alcohol. **S., Rectified**, spirit free from fusel-oil, and containing at least 85 per cent. absolute alcohol. **S., Rum**, a spirit distilled from fermented alcohol. **S.-vinegar.** See *Vinegar.* **S.-violet.** Same as *Rosanilin-violet.* **S. of Wine.** See *Spiritus.* **S.-yellow.** Same as *Anilin-yellow.* See *Pigments, Conspectus of.*

Spiritism (*spir'-it-izm*). See *Spiritualism.*

Spiritous (*spir'-it-us*) [*spiritus*, spirit]. Alcoholic.

Spiritualism (*spir'-it-u-al-izm*) [*spiritus*, spirit]. The theory of an immaterial entity underlying or causing organic phenomena, as opposed to materialism, which last explains such phenomena by the operation of mechanical forces. The term has been incorrectly used for *Spiritism*, or "necromancy by the supposed evocation of the spirits of the dead."

Spirituous (*spir'-it-u-us*) [*spiritus*, spirit]. Pertaining to alcoholic liquors.

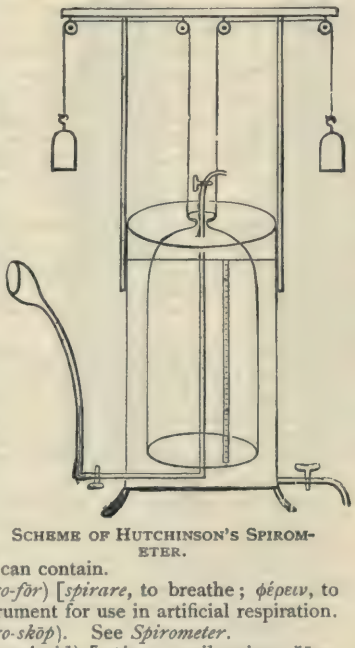
Spiritus (*spir'-it-us*) [L.]. Spirit. In pharmacy, an alcoholic mixture obtained by the distillation of wine, or fermented saccharine mixtures. Good spirit should contain not less than 40 per cent. of absolute alcohol. There are 25 official *spiriti.* **S. frumenti**, *whiskey*, spirit obtained by the distillation of fermented grain (mainly corn or rye). It should contain 44-50 per cent. of alcohol. **S. juniperi**, gin or whiskey (rye or barley) with which juniper-berries and hops have been distilled. **S. odoratus**, cologne-water, consists of alcohol 800, water 158, acetic ether 2, oil of bergamont 16, oils of lemon and rosemary āā 8, oils of lavender-flowers and orange-flowers āā 4 parts. **S. rector**, in biology, a force exerted by the aggregate of an organism over its parts, constraining newly integrated atoms to take a definite form. See *Nisus formativus.* **S. vini gallici**, or **Spirit of Wine**, brandy; a liquor obtained by the distillation of wine. It should contain 39-47 per cent. of alcohol.

Spirobacterium (*spi-ro-bak-te're-um*) [*spira*, a spiral; βακτήριον, *bacterium*]. A schizomycete in the form of spiral filaments.

Spirocheta (*spi-ro-ke'-tah*) [*spira*, a coil; χαίτη, a bristle]. In biology, a genus of *Schizomycetes*, characterized by flexible, spiral filaments. But one species

is known, *S. obermeieri*. See under *Bacteria, Synonymatic Table of*. **S. evansi**, Steel. Not a bacterium at all, but an infusorian, *Trypanosoma evansi* (Evans), Balbiani, the cause of the epizoötic pernicious anemia in horses, mules, and camels, called *Surra*, *q. v.* See *Parasites, Animal, Table of*.

Spirocolon (*spi-ro-ko'-lon*). A form of syphilis at one time prevalent in Greece.



Spirograph (*spi'-ro-graf*) [*spirare*, to breathe; γράφη, a record]. An instrument for registering the movements of respiration.

Spirographin (*spi-ro-graf'-in*) [σπεῖρα, coil; γράφειν, to write]. A substance obtained from the cartilage and skeletal tissues of the worm, *Spirographis*.

Spiroid (*spi'-roid*) [*spira*, spire]. Resembling a screw; having spiral convolutions.

Spiroloculine (*spi-ro-lok'-u-lin*) [*spira*, a coil; *loculus*, a little box or cell]. In biology, characterized by spirally arranged loculi.

Spirometer (*spi-rom'-et-er*) [*spirare*, to breathe; μέτρον, a measure]. An instrument used to measure the quantity of air exhaled.

SCHEME OF HUTCHINSON'S SPIROMETER.

Spirometric (*spi-ro-met'-rik*) [*spirare*, to breathe; μέτρον, measure]. Pertaining to the spirometer.

Spirometry (*spi-rom'-et-re*) [*spirare*, to breathe; μέτρον, measure]. The estimation of the amount of air used in respiration, or of the quantity of air which the lungs can contain.

Spirophore (*spi'-ro-fōr*) [*spirare*, to breathe; φέρειν, to carry]. An instrument for use in artificial respiration.

Spiroscope (*spi'-ro-skōp*). See *Spirometer*.

Spirozoöid (*spi-ro-zo'-oid*) [*spira*, a coil, spire; ζῷον, an animal; εἶδος, form]. In biology, a defensive zoöid of certain *hydrozoans*, consisting of a long, slender, spirally coiling filament provided with lasso-cells.

Spirulate (*spi'-ru-lāt*) [*spira*, a coil, spire]. Spiral in form or arrangement.

Spissate (*spis'-āt*). See *Inspissate*.

Spissitude (*spis'-it-ūd*) [*spissitudo, spissare*, to thicken]. The state of being thick.

Spit [ME., *spitten*, to spit]. 1. To eject sputum from the mouth. 2. Saliva. 3. In biology, a frothy secretion produced by certain insects as a means of protection.

Spithameous (*spith-am-e'-us*) [σπιθαμή, a span]. In biology, span-high.

Spitting (*spit'-ing*) [ME., *spitten*, to spit]. The act of expectorating. **S. of Blood.** See *Hemoptysis*.

Spittle (*spit'-l*). Same as *Sputum* or *Saliva*.

Spittoon. See *Cuspidor*.

Spitzka-Lissauer, Column of. See *Column*.

Spix, Angles of. In craniometry, those angles formed: (1) between the alveolo-nasal line and the coronal line; (2) between the alveolo-nasal line and the naso-basilar line. **S., Horizontal Plane of**, in craniometry, the alveolo-condylean plane.

Splanchna (*splangk'-nah*) [σπλάγχνα, viscera]. 1. The intestines. 2. The viscera.

Splanchnapophyseal (*splangk-nap-off-is'-e-al*) [σπλάγχνα, viscera; ἀπόφυσις, apophysis]. Pertaining to a splanchnapophysis.

Splanchnapophysis (*splangk-nap-off'-is-is*) [σπλάγχνα, viscera; ἀπόφυσις, apophysis]. An apophysis or outgrowth of a vertebra on the opposite side of a vertebral axis from a neurapophysis, and inclosing some viscus.

Splanchnectopia (*splank-nek-to'-pe-ah*) [σπλάγχνα viscera; ἔκτοπος, displaced]. The abnormal position or dislocation of a viscus.

Splanchnemphraxis (*splangk-nem-fraks'-is*) [σπλάγχνα, viscera; ἔμφραξις, obstruction]. Obstruction of the intestine.

Splanchneurysma (*splangk-nu-riz'-mah*) [σπλάγχνα, viscera; ἀνεύρυσμα, aneurysm]. Distention of the intestines.

Splanchnic (*splangk'-nik*) [σπλαγχνικός; σπλάγχνα viscera]. Pertaining to the viscera.

Splanchnoblast (*splangk'-no-blast*) [σπλάγχνα, the viscera; βλαστός, a germ]. In biology, an *Anlage* proton, or incipient rudiment destined to take part in the formation of the viscera; one of the "*histoblasts*" of Künckel and Herculais. Cf. *Neuroblast* and *Imaginal Disc*.

Splanchnocele (*splangk'-no-sēl*) [σπλάγχνα, the viscera κοῖλος, hollow]. 1. A protrusion of any abdominal viscus. 2. In biology, Hajek's name for that part of the celom which persists in the adult, and gives rise to the pericardial, pleural, and abdominal cavities, the ventral celom, or pleuro-peritoneal space. It appears as a narrow fissure in the parietal zone of the mesoblast.

Splanchnodiastasis (*splangk-no-di-as'-tas-is*) [σπλάγχνα, viscera; διαστασις, diastasis]. Displacement or separation of the viscera.

Splanchnodyne (*splangk'-no-dīn*) [σπλάγχνα, viscera ὀδυνη, pain]. Intestinal pain.

Splanchnographic (*splangk-no-graf'-ik*) [σπλάγχνα viscera; γράφειν, to write]. Pertaining to splanchnography.

Splanchnography (*splangk-nog'-ra-fe*). See *Splanchnology*.

Splanchnolith (*splangk'-no-lith*) [σπλάγχνα, viscera λίθος, a stone]. Calculus of a viscus.

Splanchnolithiasis (*splangk-no-lith-i'-as-is*) [σπλάγχνα viscera; λίθος, stone]. The condition of calculi of the intestine.

Splanchnologic (*splangk-no-loj'-ik*) [σπλάγχνα, viscera; λόγος, science]. Pertaining to splanchnology.

Splanchnologist (*splangk-nol'-o-jist*) [σπλάγχνα, viscera; λόγος, science]. One versed in splanchnology.

Splanchnology (*splangk-nol'-o-je*) [σπλάγχνα, viscera λόγος, treatise]. The sum of what is known of the nature and functions of the viscera.

Splanchnon (*splangk'-non*) [σπλάγχνον, viscus]. viscus. See *Splanchna*.

Splanchnopathy (*splangk-nop'-ath-e*) [σπλάγχνα, viscera; πάθος, disease]. Disease of viscera.

Splanchnopleura (*splangk-no-plu'-rah*) [σπλάγχνα viscera; πλευρά, the side]. In biology, the wall of the alimentary tract of a vertebrate, formed by the splanchnic mesoderm and the entoderm.

Splanchnopleural (*splangk-no-plu'-ral*) [σπλάγχνα viscera; πλευρά, side]. Pertaining to the splanchnopleura.

Splanchnopleure (*splangk'-no-plūr*) [σπλαγχνα,

viscera; πλευρά, the side]. Same as *Splanchnopleura.*

Splanchnopleuric (*splangk-no-plu'-rik*). Same as *Splanchnopleural.*

Splanchnoptosis (*splangk-nop-to'-sis*) [σπλάγκνα, viscera; πτῶσις, a falling]. A condition of relaxation of the abdominal viscera; it includes gastroptosis, enteroptosis, nephroptosis, less commonly hepatoptosis and splenoptosis.

Splanchnosclerosis (*splangk-no-skle-ro'-sis*) [σπλάγχνα, viscera; σκληρός, hard]. Visceral induration.

Splanchnoscopy (*splangk-nos'-ko-pe*) [σπλάγχνα, viscera; σκοπεῖν, to examine]. Exploration and examination of the viscera.

Splanchnoskeleton (*splangk-no-skel'-et-on*) [σπλάγχνα, viscera; σκελετόν, skeleton]. In biology, that portion of the skeleton specially related to the viscera.

Splanchnosympathy (*splangk-no-sim'-path-e*) [σπλάγχνα, viscera; συμπάθεια, sympathy]. The reflex actions among the viscera themselves and between the viscera and other organs.

Splanchnotomic (*splangk-no-tom'-ik*) [σπλάγχνα, viscera; τέμνειν, to cut]. Pertaining to splanchnotomy.

Splanchnotomy (*splangk-not'-o-me*) [σπλάγχνα, viscera; τέμνειν, to cut]. Dissection, or anatomy, of the viscera.

Splashing (*splash'-ing*) [origin obscure]. Making a plashing sound. **S. Fremitus,** a noise heard in succussion in some cases of pleural effusion; it may be simulated by the presence of fluid in a distended stomach.

Splay (*spla*) [ME., *splayen,* to splay]. To dislocate, as a horse's shoulder. **S.-foot.** See *Talipes.* **S.-mouth,** a wide mouth.

Spledget (*splej'-et*). A pledget, or cloth, used in dressing a sore or wound. [Old.]

Spleen (*splēn*) [σπλήν, spleen]. 1. One of the abdominal viscera, situated just below the diaphragm upon the left side; its function is not certainly determined, though probably hematopoietic. 2. Melancholy; low spirits; hypochondriasis; ill-temper; surliness. **S., Accessory,** a loose portion of splenic tissue in the neighborhood of the spleen. **S., Bacon,** a uniformly lardaceous spleen. **S., Floating.** See *S., Wandering.* **S., Indian,** an indurated spleen sometimes found in Anglo-Indians. **S., Lardaceous,** an enlargement of the spleen due to waxy degeneration. **S.-pulp,** the proper tissue of the spleen. **S., Sago-,** a spleen of which the Malpighian follicles are the seat of amyloid change. **S.-sick,** splenetic. **S., Wandering.** See *Wandering Spleen.* **S., Waxy.** See *S., Lardaceous.* **S.-wort.** See *Filix* and *Asplenium.*

Spleeny (*sple'-ne*) [σπλήν, spleen]. Hypochondriacal; melancholy; ill-tempered; perverse.

Splen- (*splen-*) [σπλήν, spleen]. A prefix used to denote connection with or relation to the spleen.

Splenadenoma (*splen-ad-en-o'-mah*) [σπλήν, spleen; ἀδήν, gland; ὄμα, tumor]. Splenic lymphadenoma.

Splenalgia (*splen-al'-je-ah*) [σπλήν, spleen; ἄλγος, pain]. Pain in the spleen.

Splenalgic (*splen-al'-jik*) [σπλήν, spleen; ἄλγος, pain]. Affected with splenalgia.

Splenalgy (*splen-al'-je*). Same as *Splenalgia.*

Splenauxe (*splen-awks'-e*) [σπλήν, spleen; αὐξή, increase]. Enlargement of the spleen.

Splencular (*splen'-ku-lar*) [σπλήν, spleen]. Pertaining to a splenculus.

Splenculus (*splen'-ku-lus*) [σπλήν, spleen: *pl.*, *Splencŭli*]. A supplementary spleen; an exclave of the spleen.

Splendid Line of Haller. See *Lines, Table of.*

Splenechos, Splenechus (*splen-e'-kos, splen-e'-kus*) [σπλήν, spleen; ἠχος, sound]. The percussion-sound obtained over the spleen.

Splenectasis (*splen-ek'-tas-is*) [σπλήν, spleen; ἔκτασις, enlargement]. Enlargement of the spleen.

Splenectomist (*splen-ek'-to-mist*) [σπλήν, spleen; ἐκτομή, excision]. A surgeon who performs splenectomy.

Splenectomy (*splen-ek'-to-me*) [σπλήν, spleen; ἐκτομή, excision]. Excision of the spleen.

Splenectopia, Splenectopy (*splen-ek-to'-pe-ah, splen-ek'-to-pe*) [σπλήν, spleen; ἔκτοπος, dislocated]. Displacement of the spleen.

Splenelcosis (*splen-el-ko'-sis*) [σπλήν, spleen; ἕλκωσις, ulceration]. Ulceration of the spleen.

Splenelcus (*splen-el'-kus*) [σπλήν, spleen; ἕλκος, ulcer]. An ulcer upon the spleen.

Splenemia, Splenæmia (*splen-e'-me-ah*) [σπλήν, spleen; αἷμα, blood]. Splenic leukemia.

Splenemphraxis (*splen-em-fraks'-is*) [σπλήν, spleen; ἐμφραξις, obstruction]. Congestion of the spleen from any cause.

Splenepatitis (*splen-ep-at-i'-tis*) [σπλήν, spleen; ἧπαρ, liver; ιτις, inflammation]. Inflammation involving both liver and spleen.

Splenetic (*splen-et'-ik*) [σπλήν, spleen]. Splenic. Pertaining to the spleen; ill-humored; fretful; hypochondriacal.

Splenial (*sple'-ne-al*) [σπλήνιον, bandage]. 1. Serving as a bandage or splint. 2. Pertaining to the splenium or to the splenius.

Splenic (*splen'-ik*) [σπληνικός]. Pertaining to or affecting the spleen. **S. Fever.** See *Anthrax.* **S. Pulp.** See *Pulp.*

Splenicogastric (*splen-ik-o-gas'-trik*) [σπληνικός, splenic; γαστήρ, stomach]. Belonging or pertaining to both the spleen and the stomach.

Splenicopancreatic (*splen-ik-o-pan-kre-at'-ik*) [σπληνικός, splenic; πάγκρεας, pancreas]. Belonging or pertaining to both the spleen and the pancreas.

Splenicterus (*splen-ik'-ter-us*) [σπλήν, spleen; ἴκτερος, jaundice]. Inflammation of the spleen associated with jaundice.

Spleniculus (*splen-ik'-u-lus*). See *Splenculus.*

Splenicus (*splen'-ik-us*) [σπλήν, spleen]. 1. Splenic. 2. A drug acting upon the spleen.

Splenification (*splen-if-ik-a'-shun*) [σπλήν, spleen; *facere,* to make]. In pathology, the conversion, during certain diseases, of the substance of the lungs or of the liver into tissue resembling that of the spleen.

Spleniserrate (*splen-is-er'-āt*) [σπλήνιον, bandage; *serra,* saw]. Pertaining to the splenius and serrate muscles.

Splenisis (*splen-is'-is*) [σπλήν, spleen]. A degeneration of the lung sometimes found in yellow fever. The lung contains dark-brown spots having a color and consistency resembling those of the spleen.

Splenitis (*splen-i'-tis*) [σπλήν, spleen; ιτις, inflammation]. Inflammation of the spleen.

Splenium (*sple'-ne-um*) [σπλήνιον, bandage]. The rounded caudal extremity of the callosum. It represents a flexion of the callosal sheet upon itself, so that there is a dorsal lamina, a ventral lamina, and a caudal connecting portion. The thick fold or pad at the posterior end of the corpus callosum.

Splenius (*sple'-ne-us*) [σπλήνιον, bandage]. The posterior mastoid muscle; it is in two parts—the splenius capitis and the splenius colli. See *Muscles, Table of.*

Splenization (*splen-iz-a'-shun*) [σπλήν, spleen]. A condition of the lungs during the first or second stage of pneumonia, in which period the tissue of the lungs resembles that of the spleen. **S., Hypostatic,** hypostatic pneumonia.

Spleno- (*splen'-o-*). Same as *Splen-*.

Splenocele (*splen'-o-sēl*) [σπλήν, spleen; κήλη, hernia]. Hernia of the spleen.

Spleno-colic (*splen-o-kol'-ik*) [σπλήν, spleen; κόλον, colon]. Pertaining conjointly to the spleen and the colon. **S.-c. Ligaments,** a peritoneal fold between the spleen and the mesocolon.

Splenodynia (*splen-o-din'-e-ah*) [σπλήν, spleen; ὀδύνη, pain]. Pain in the spleen.

Splenographic (*splen-o-graf'-ik*) [σπλήν, spleen; γράφειν, to write]. Pertaining to splenography.

Splenography (*splen-og'-ra-fe*) [σπλήν, spleen; γράφειν, to write]. The descriptive anatomy of the spleen.

Splenohemia (*splen-o-hē'-me-ah*) [σπλήν, spleen; αἷμα, the blood]. Congestion of the spleen. Hyperemia of the spleen.

Splenoid (*splen'-oid*) [σπλήν, spleen; εἶδος, resemblance]. Resembling the spleen.

Splenokeratosis (*splen-o-ker-at-o'-sis*) [σπλήν, spleen; κέρας, wax]. Splenic induration.

Splenologic (*splen-o-loj'-ik*) [σπλήν, spleen; λόγος, science]. Pertaining to splenology.

Splenology (*splen-ol'-o-je*) [σπλήν, spleen; λόγος, science]. The sum of what is known of the splenic structure, function, and diseases.

Splenolymphoma (*splen-o-lim-fo'-mah*). See *Splen-adenoma.*

Splenoma (*splen-o'-mah*) [σπλήν, spleen; ὄμα, tumor]. Tumor of the spleen.

Splenomalacia (*sple-no-mal-a'-se-ah*) [σπλήν, spleen; μαλακία, softness]. Softening of the tissue of the spleen.

Splenomegalia (*splen-o-meg-a'-le-ah*) [σπλήν, spleen; μέγας, large]. Idiopathic hypertrophy of the spleen; an essential hypersplenia. Simple enlargement of the spleen apart from leukemia, or cachexia; by some it is considered merely as Hodgkin's disease of exclusively splenic type, while others (Debove and Grancher) hold it to be a special disease.

Splenomegaly (*splen-o-meg'-al-e*). See *Splenomegalia.*

Splenoncus (*splen-ong'-kus*). See *Splenoma.*

Splenoparectasis (*splen-o-par-ek'-tas-is*) [σπλήν, spleen; ἔκτασις, distention]. Enlargement of the spleen.

Splenopathy (*splen-op'-ath-e*) [σπλήν, spleen; πάθος, disease]. Disease of the spleen.

Splenophlegmone (*splen-o-fleg'-mon-e*) [σπλήν, spleen; φλεγμονη, inflammation]. Phlegmonous inflammation of the spleen.

Splenophraxia, Splenophraxis (*splen-o-fraks'-e-ah, sple-no-fraks'-is*). See *Splenemphraxis.*

Spleno-phrenic (*splen-o-fren'-ik*) [σπλήν, spleen; φρήν, diaphragm]. Pertaining to the spleen and the diaphragm. **S.-p. Ligament,** a peritoneal fold between the spleen and the diaphragm.

Splenophthisis (*splen-off'-this-is*) [σπλήν, spleen; φθίσις, wasting]. Atrophy of the spleen.

Splenopneumonia (*splen-o-nu-mo'-ne-ah*) [σπλήν, spleen; πνεύμων, lung]. Pneumonia with splenization of the lung.

Splenorrhagia (*splen-or-a'-je-ah*) [σπλήν, spleen; ῥηγνύναι, to burst forth]. Hemorrhage from the spleen.

Splenotomic (*splen-o-tom'-ik*) [σπλήν, spleen; τέμνειν, to cut]. Pertaining to splenotomy.

Splenotomy (*splen-ot'-o-me*) [σπλήν, spleen; τέμνειν, to cut]. Incision or dissection of the spleen.

Spleno-typhoid (*splen-o-ti'-foid*) [σπλήν, spleen; τύφος, stupor]. Typhoid fever with splenic complication.

Splent (*splent*) [ME., *splente,* splint]. An exostosis occurring on the inner surface of the metacarpal bone of the horse.

Splenypertrophia (*splen-i-per-tro'-fe-ah*) [σπλήν, spleen; ὑπερ, over; τροφή, nourishment]. Hypertrophy of the spleen.

Splint [ME., *splinte,* splint]. 1. A piece of wood, metal, or other material for keeping the ends of a fractured bone in permanent apposition during the process of contact while healing. 2. See *Splent.* **S., Agnew's** (*for hip-joint disease*), a long splint with a perineal band (fitted closely against the tuber ischii) and a foot-piece; used after the disappearance of acute symptoms, and designed to support the weight of the trunk. **S., Anchor,** a splint used for fracture of the jaw. Metal loops fit over the teeth, and are held in contact by a rod and nut. **S.-bandage,** an immovable bandage. **S., Bavarian,** coarse flannel is cut to fit the part, and stitched over the limb. A thick paste of plaster-of-Paris is rubbed upon the cloth to secure immobility. **S., Bond's** (*for fracture of the lower end of the radius*), a thin, wooden splint, with sole-leather edges an inch high, and a curved block to rest in the palm of the hand. A pasteboard splint is used on the back of the forearm, both reaching from below the elbow to almost the distal ends of the metacarpal bones. **S.-bone,** the fibula. **S., Bracketed,** a splint consisting of two pieces of wood or metal joined by brackets. **S., Levis's,** a perforated metal splint extending from below the elbow almost to the distal ends of the metacarpal bones. It is hollowed to fit the arm and palm, and the metacarpal joints are flexed over it.

Splinter (*splin'-ter*) [ME., *splinteren,* to split]. See *Sequestrum.* Applied, also, popularly to a bit of wood or other material that pierces the skin. **S.-bone,** the fibula; a term applied to one of the two small bones extending from the knee to the fetlock of the horse, behind the shank-bone.

Split [origin obscure]. A longitudinal fissure. **S. Pelvis,** congenital non-union of the bones of the pubes at the symphysis.

Spodiomyelitis (*spo-de-o-mi-el-i'-tis* [σποδιός, gray; μυελός, marrow; ιτις, inflammation]. An acute inflammation in the anterior cornua of the spinal cord, in which the larger multipolar ganglion-cells are destroyed; it occurs usually in children during their period of first dentition. See *Poliomyelitis, Acute Anterior.*

Spodium (*spo'-de-um*) [σποδός, ashes]. An old term for animal charcoal.

Spodogenous (*spo-doj'-en-us*) [σποδός, ashes; γεννᾶν, to produce]. Arising from débris, or from the waste matters of the economy.

Spokebone (*spōk'-bōn*). See *Radius.*

Spoliative (*spo'-le-a-tiv*) [*spoliare,* to plunder]. Diminishing; applied to venesection practised for the purpose of diminishing the mass of blood.

Spondias (*spon'-de-as*) [σπουδιάς, a tree]. Hog-plum; a genus of trees of the order *Anacardiaceæ,* growing in China, the West Indies, tropical South America, and the islands of the Pacific. The trees bear an edible fruit, which is aperient and refrigerant; the leaves are mildly anodyne and diaphoretic, and the root and bark possess astringent properties. The seeds are poisonous.

Spöndle, Foramen of. See *Foramina, Table of.*

Spondles (*spon'-dls*) [σπόνδυλος, a vertebra]. The vertebræ.

Spondyl- (*spon'-dil-*) [σπόνδυλος, vertebra]. A prefix used to denote connection with one or more vertebræ.

Spondylalgia (*spon-dil-al'-je-ah*) [σπόνδυλος, vertebra; ἄλγος, pain]. Pain referred to a vertebra.

Spondylarthritis (*spon-dil-ar-thri'-tis*) [σπόνδυλος, vertebra; ἄρθρον, joint; ιτις, inflamma-

tion at a vertebral articulation. **S. synovialis,** inflammation of the synovial membranes of the articular processes of the vertebræ (Hüter).

pondylarthrocace (*spon-dil-ar-throk'-as-e*) [σπόνδυλος, vertebra; ἄρθρον, joint; κακή, evil]. Caries of a vertebra.

pondylexarthrosis (*spon-dil-eks-ar-thro'-sis*) [σπόνδυλος, a vertebra; ἐξ, out; ἄρθρον, joint]. Dislocation of a vertebra.

pondylitis (*spon-dil-i'-tis*) [σπόνδυλος, a vertebra; ιτις, inflammation]. Inflammation of one or more vertebræ; Pott's disease. **S. cervicalis,** arthritis of one or more cervical vertebræ. **S. deformans,** chronic inflammation of the vertebræ, of a gouty or rheumatic nature, terminating in ankylosis and deformity. **S. tuberculosa,** tuberculous spondylitis. See *Pott's Disease* in *Diseases, Table of.*

pondylizema (*spon-dil-i-ze'-mah*) [σπόνδυλος, vertebra; ίζεμα, a subsiding]. Pelvic obstruction caused by partial or total loss of a vertebra, in consequence of which the vertebræ above overhang the brim of the pelvis. See *Spondylolisthesis.*

pondylocace (*spon-dil-ok'-as-e*). See *Spondylarthrocace.*

pondylodynia (*spon-dil-o-din'-e-ah*) [σπόνδυλος, vertebra; ὀδύνη, pain]. Pain in a vertebra.

pondylolisthesis (*spon-dil-ol-is-the'-sis*) [σπόνδυλος, vertebra; ὀλίσθησις, a slipping]. Deformity of the spinal column produced by the gliding forward of the lumbar vertebræ in such a manner that they overhang the brim and obstruct the inlet of the pelvis; especially the separation of the last lumbar vertebra from, and its slipping forward on, the sacrum.

pondylolisthetic (*spon-dil-o-lis-thet'-ik*) [σπόνδυλος, vertebra; ὀλίσθησις, a slipping]. Pertaining to, or of the nature of spondylolisthesis.

pondylomyelitis (*spon-dil-o-mi-el-i'-tis*) See *Spondylitis.*

pondylopathia (*spon-dil-o-pa'-the-ah*). See *Spondylopathy.*

pondylopathy (*spon-dil-op'-ath-e*) [σπόνδυλος, vertebra; πάθος, a suffering]. Any disease of the vertebræ.

pondyloptosis (*spon-dil-op-to'-sis*). See *Spondylolisthesis.*

pondylopyosis (*spon-dil-o-pi-o'-sis*) [σπόνδυλος, vertebra; πύον, pus]. Suppurative inflammation of one or more vertebræ.

pondyloschisis (*spon-dil-os'-kis-is*) [σπόνδυλος, vertebra]. Deficient ossification in the arch of the fifth lumbar vertebra; this is said to be one of the causes of spondylolisthesis. The condition may affect one or both sides of the vertebræ.

pondylotomy (*spon-dil-ot'-o-me*) [σπόνδυλος, vertebra; τομή, section]. Section of a vertebra in embryotomy; section of a vertebra in correcting a deformity. Cf. *Rachiotomy.*

pondylous (*spon'-dil-us*) [σπόνδυλος, vertebra]. Vertebral; like a vertebra.

pondylus (*spon'-dil-us*) [σπόνδυλος, vertebra]. A vertebra.

ponge (*spunj*) [σπόγγος, any spongy substance]. In biology, a cœlenterate animal of the class *Porifera.* The sponge of commerce belongs to the order *Ceraspongiæ,* having a skeleton of horn-fibers (*spongin*), without proper spicules. **S.-animalcule,** a sponge-cell. **S., Antiseptic,** a sponge that has been rendered destructive of germs. **S., Burnt,** sponge-charcoal made from fine sponges cleansed and burned, then powdered, and sifted through a No. 100 silk sieve. **S., Compressed,** a fine sponge, cleansed, exposed to pressure, and dried. It is used particularly as "sponge-tents" in gynecology, and in the treatment of mastitis. **S., Fine Levant** (*Euspongia officinalis mollissima*), this is the finest sponge of commerce; it is obtained from the Adriatic Sea, the Eastern Mediterranean Sea, and the Red Sea. **S.-graft.** See *Graft.* **S.-grafting,** a method of promoting the repair of chronic ulcers and other solutions of continuity rebellious to ordinary treatment by the application of pieces of sponge covered with oil-silk. Speedy cicatrization follows as a rule. **S., Grass, the Honey-comb Sponge** (*Spongia cerebriformis*), a poor quality of sponge from Florida and the Bahamas. **S.-holder,** an instrument, consisting of a rod, which serves as the handle, furnished at the distal end with a device for clasping a sponge. **S.-holder, Finger,** a sponge-holder having a thimble at one end; it is used within the throat. **S., Horse, Venetian Bath-sponge, Gerbis Sort** (*Hippospongia equina*), the coarsest of all the Mediterranean sponges. It is obtained along the Mediterranean coast. **S., Levant.** See *S., Fine Levant.* **S.-method of Voltolini,** the removal of soft tumors from the vocal bands, by means of a small sponge firmly attached to a suitable handle, introduced into the glottis, and roughly moved up and down. **S., Prepared,** a sponge rendered soft and elastic, and suitable for surgical uses by soaking in cold water and separation of the calcareous matter. **S., Sheepswool** (*Spongia gossypina*), the finest and toughest of the sponges from the Bahamas and the Florida Keys. **S.-tent.** See *Tent.* **S., Turkey.** See *Fine Levant.* **S., Vegetable,** the fibrous network of the fruit of *Luffa ægyptiaca;* it is used as a sponge-brush and flesh-brush. **S., Waxed,** a fine sponge, which, after being cleansed, is soaked in melted yellow wax, and then exposed to pressure in a warm press; it is used to make sponge-tents. **S., Worsted,** a substitute for sponge in surgery. Cut up coarse, white "four-ply fingering" worsted into lengths of about two meters; tie up a large handful of these in a double thickness of ordinary "unprepared gauze," boil them for an hour or more, and put away for use in a 1–20 carbolic lotion. **S., Zimocca** (*Euspongia zimocca*), the flat, tough sponge of commerce, obtained from the Adriatic, about the Greek Islands, and the coast of Barbary.

Spongia (*spon'-je-ah*). See *Sponge.* **Carbo spongiæ.** See *Sponge, Burnt.* **Pulvis spongiæ ustæ.** See *Sponge, Burnt.* **S. cerata.** See *S., Waxed.* **S. Compressa.** See *Sponge Compressed.* **S. cynorrhodontis, S. cynosbati,** bedegar; an excrescence occurring on various species of the wild-rose, due to the puncture of cynips rosæ. **S. fluviatilis,** small sponges found on stones and on water-plants in streams, ponds, and marshy places. **S. lacustris,** a Russian variety used by homeopaths in the preparation of a tincture. **S. officinalis.** See *S. præparata.* **S. præparata.** See *Sponge, Compressed,* and *S., Prepared.* **S. Usitatissima,** sponges with fine pores cleansed and pressed. **S. usta.** See *Carbo spongiæ.*

Spongiform (*spun'-jif-orm*) [σπόγγος, sponge; *forma,* a form]. Resembling or having the physical characters of a sponge.

Spongin (*spun'-jin*) [σπογγιά, also σπόγγος, sponge]. In biology, the horny substance forming the skeletal fibers of the ceratose sponges. It resembles silk in chemic composition, but differs from it in being insoluble in an ammoniacal solution of copper sulphate (*cuproso-ammonium sulphate*). It is also called *spongiatin.*

Sponginblast (*spun'-jin-blast*) [σπογγιά, sponge; βλαστός, a germ]. In biology, a spongin-secreting cell.

Spongioblast (*spun′-je-o-blast*) [σπόγγος, a sponge; βλαστός, a germ]. In biology, a variety of cell derived from the invaginated ectoderm forming the

PORTION OF WALL OF NEURAL TUBE,

Exhibiting germ-cells (*g*) among the differentiating spongioblasts. (*From Piersol, after His.*)

neural tube. The spongioblasts are especially concerned in the production of the neuroglia-cells. Cf. *Neuroblasts.*

Spongiole (*spun′-je-ōl*) [*spongiola*, a little sponge]. In biology, a name formerly applied to the spongy tissue of the root-tip, on account of its supposed property of sucking up moisture like a sponge.

Spongiolin (*spun′-je-o-lin*). See *Spongin.*

Spongiopiline (*spun′-je-o-pi′-lin*) [σπογγίον, dim. of σπόγγος, sponge; πῖλος, felt]. Felted or woven cloth, into which tufts of sponge are incorporated; one side is coated with rubber; it is a good substitute for a cataplasm.

Spongioplasm (*spun′-je-o-plazm*) [σπόγγος, sponge; πλάσμα, anything formed or molded]. In biology, the extremely fine, elastic, protoplasmic threads forming the intracellular reticulum, and containing between them the clear, homogeneous, active *hyaloplasm*, *q.v.* "In muscle-fibers the spongioplasm is regularly arranged, consisting of parallel filaments which run longitudinally and are bound by transverse filaments at regular intervals in a plane at right angles to the longitudinal axis." (Lang.)

Spongiosa (*spun-je-o′-sah*) [σπόγγος, sponge]. Cancellous tissue.

Spongiose (*spun′-je-ōz*) [σπόγγος, sponge]. Full of pores, like a sponge.

Spongoblast (*spung′-go-blast*). Same as *Spongioblast.*

Spongoid (*spun′-goid*) [σπόγγος, sponge; εἶδος, resembling]. Resembling sponge.

Spongomere (*spung′-go-mēr*) [σπόγγος, a sponge; μέρος, a part]. In biology, the upper portion of a sponge, characterized by the presence of chambers lined with collar-cells. Cf. *Hypomere.*

Spongos, Spongus (*spun′-gos, spun′-gus*). See *Sponge.*

Spongy (*spun′-je*) [σπόγγος, sponge]. Having the texture of sponge; very porous. **S. Bones,** bones having a porous, reticulated structure, especially the turbinated bones of the nose, and the sphenoid and ethmoid bones. **S. Portion of the Urethra.** See *Urethra.*

Spontaneity (*spon-tan-e′-it-e*) [*spons*, will, abl. *sponte*, of one's own accord]. In biology, variation in structure or function attributable to some innate or hereditary condition of the organism and not to its environment; purposeless, or uncalled-for activity.

Spontaneous (*spon-ta′-ne-us*) [*spons*, will]. Voluntary, or without extraneous impulse; instinctive; automatic.

S. Ankle-clonus, a rhythmic movement of the leg and foot, corresponding to ankle-clonus, but occurring spontaneously. **S. Combustion.** See *Combustion.* **S. Cretinism.** See *Cretinism.* **S. Evolution.** See *Evolution.* **S. Generation.** See *Abiogenesis.* **S. Version.** See *Version.*

Spool-worm. Synonym of *Oxyuris vermicularis.* See under *Parasites* (*Animal*), *Table of.*

Spoon [ME., *spoon*, spoon]. A utensil consisting of an oval or circular bowl and a handle; a spoon-shaped instrument; a curet. **S.-saw,** a spoon-shaped instrument or curet with serrated edges, used for scraping away fungous growths. **S.-nail,** a condition of the nail in which it is thinned and concave from side to side, with the edges everted, and with hollowing to a less degree antero-posteriorly. It has been observed in some wasting diseases.

Spora (*spo′-rah*) [L.]. See *Spore.*

Sporaceous (*spor-a′-shus*) [*spora*, spore]. Consisting of or convertible into spores.

Sporadic (*spor-ad′-ik*) [σποραδικός, scattered]. Scattered. Applied to diseases, or cases of disease, that may spread, but which are not epidemic. **S. Cholera,** a synonym of *Cholera morbus.*

Sporadicity (*spor-ad-is′-it-e*) [σποραδικος, scattered]. The quality of being sporadic.

Sporangidium (*spor-an-jid′-e-um*) [σπόρος, spore]. The theca or capsule of mosses.

Sporangiferous (*spor-an-jif′-er-us*) [σπόρος, spore; *ferre*, to bear]. Bearing sporangia.

Sporangiform (*spor-an′-jif-orm*) [σπόρος, spore; *forma* form]. Having the form of a sporangium.

Sporangioid (*spor-an′-je-oid*) [σπόρος, spore; εἶδος like]. Sporangiform.

Sporangiole (*spor-an′-je-ōl*) [σπόρος, spore; ἀγγεῖον vessel]. A capsule containing spores. Same as *Sporangium.*

Sporangiophore (*spor-an′-je-o-fōr*). See *Sporangiophorum.*

Sporangiophorum (*spor-an-je-off′-or-um*) [σπόρος, seed; ἀγγεῖον, vessel; φέρειν, to bear: *pl.*, *Sporangiophora*] In biology, the stalk or receptacle of a sporangium, including the leaf-like organ which bears the spores in *Equisetaceæ*, and the axis of the sporangia of certain ferns.

Sporangiospore (*spor-an′-je-o-spōr*) [σπόρος, seed; ἀγγεῖον, vessel; σπόρος, seed]. In biology, one of the spores of a slime-mold (*Myxomycetes*).

Sporangium (*spor-an′-je-um*) [σπόρος, seed; ἀγγεῖον, vessel: *pl.*, *Sporangia*]. In biology, a capsule producing or enclosing spores. Cf. *Macrosporangium, Microsporangium, Oösporangium, Zoösporangium.*

Sporation (*spor-a′-shun*) [σπόρος, seed]. See *Sporulation.*

Spore (*spōr*) [σπορά, seed, produce, offspring]. 1. In biology, one of the free, motile or non-motile reproductive bodies of a cryptogam, which arise by ordinary processes of vegetation and not directly by a union of sexual elements. In some cases its first stage is that of a naked primordial mass of protoplasm (zoöspore); rarely it is multicellular, composed of *merispores* or breaking up into *sporids* (polyspore). 2. In animals, any germ or reproductive element less organized than a true cell; also, any spermatic or ovulary cell; also the germ of a disease. Cf., *Accidiospore, Androspore, Ascospore, Auxospore, Basidiospore, Bispore, Carpospore, Chlamydospore, Clinospore, Macrospore, Megaspore, Merispore, Microspore, Oöspore, Polyspore, Prespore, Pseudospore, Pycnidiospore, Resting-spore, Sporid, Stylospore, Swarmspore, Teleutospore, Tetraspore, Uredospore, Zoöspore, Zygospore.* **S.-capsul**

a spore-case. **S.-case,** the sporangium or covering of a spore. **S.-cell,** a spore. **S., Compound,** a spore that produces secondary spores. **S., Daughter,** a spore produced in a mother-cell. **S.-formation,** the origination of spores. **S.-group.** Same as *Sporidesm.* **S., Inactive,** a non-motile fertile cell. **S., Mother-,** a mother-cell. **S., Naked,** a gymnospore. **S.-plasm,** the protoplasm of a sporangium. **S., Primary,** a spore the germination of which produces a prothallium; a protospore. **S.-sac,** the sac lining the cavity of the sporangium of mosses. See *Sporangium.* **S., Secondary,** a merispore. Cf. *S. Compound.* **S., Swarm,** a spore endowed with the power of locomotion.

Sporid (*spor'-id*) [σπορος, seed]. See *Sporidium.*

Sporidesm (*spor'-id-esm*) [σπόρος, seed; δέσμη, a bundle]. In biology, a septate or compound spore.

Sporidiferous (*spor-id-if'-er-us*) [σπόρος, spore; *ferre*, to bear]. Bearing sporidia.

Sporidiola (*spor-id-e-o'-lah*). See *Sporule.*

Sporidiolum (*spor-id-i'-o-lum*) [dim. of *sporidium*, from σπόρος, seed: *pl.*, *Sporidiola*]. In biology, a *spermatium.*

Sporidium (*spor-id'-e-um*) [σπόρος, seed; ἴδιον, a dim.: *pl.*, *Sporidia*]. In biology, a spore borne upon a promycelium.

Sporiferous (*spor-if'-er-us*) [σπορά, spore; *ferre*, to bear]. In biology, spore-bearing.

Sporiparity (*spor-ip-ar'-it-e*) [σπόρος, spore; *parere*, to bear]. Reproduction by means of spores.

Sporiparous (*spor-ip'-ar-us*) [σπορά, spore; *parere*, to produce]. In biology, reproducing by means of spores.

Sporoblast (*spor'-o-blast*) [σπόρος, seed; βλαστός, germ]. In biology, one of the four round bodies produced by the process of endogenous cell-formation in a *Coccidium.* Pfeiffer and Wolters refer to these as *sporogonia*, while Neumann broadens the application of the word "*sporoblast*" to make it include the "*spore*" as well as the "*sporoblast*" of other authorities. Cf. *Sporophore.*

Sporocarp (*spor'-o-karp*) [σπόρος, seed; καρπός, fruit]. See *Sporocarpium.*

Sporocarpium (*spor-o-kar'-pe-um*) [σπόρος, seed; καρπός, fruit: *pl.*, *Sporocarpia*]. In biology, the fructification resulting from the conjugation of two sexual elements of identical structure, as found in the Ascomycetous fungi; also, the structure inclosing the sporangia in heterosporous ferns.

Sporocladium (*spor-o-kla'-de-um*) [σπόρος, spore; κλάδος, a branch]. In certain *Algæ* a branch producing spores.

Sporocyst (*spor'-o-sist*) [σπόρος, seed; κύστις, a bag or pouch]. In biology: (*a*) a certain larval stage of fluke-worms (*trematoda*), which gives rise to new germs called *rediæ, q. v.*; (*b*) used by Wolters as equivalent to macrospore and microspore of gregarines; (*c*) the mother-cell of a spore; a sporocyte.

Sporocystic (*spor-o-sis'-tik*) [σπόρος, seed; κύστις, a bag or pouch]. In biology, of or pertaining to a sporocyst.

Sporocyte (*spor'-o-sīt*) [σπόρος, spore; κύτος, a hollow]. In biology, the mother-cell of a spore; a sporocyst.

Sporoderm (*spor'-o-derm*) [σπόρος, seed; δέρμα, skin]. In biology, the coat of a spore, including exospore and endospore. Cf. *Spermoderm.*

Sporoduct (*spor'-o-dukt*) [σπόρος, spore; *ducere*, to lead]. A passage through which spores are conducted.

Sporogen (*spor'-o-jen*) [σπόρος, seed; γενής, producing]. In biology, an organism which reproduces by means of spores.

Sporogenesis (*spor-o-jen'-es-is*) [σπόρος, seed; γένεσις, generation]. In biology, spore-formation or reproduction by spores.

Sporogenous (*spor-oj'-en-us*) [σπόρος, seed; γενής, producing]. In biology, spore-producing.

Sporogone (*spor'-o-gōn*). Same as *Sporogonium.*

Sporogonium (*spor-o-go'-ne-um*) [σπόρος, seed; γονή, generation: *pl.*, *Sporogonia*]. In biology, the non-sexual generation of a moss, proceeding from the fertilized oösphore; cf. *Sporophyte, Sporocarp;* also called *Sporogone.*

Sporogony (*spor-og'-o-ne*). Same as *Sporogenesis.*

Sporoid (*spor'-oid*) [σπόρος, spore; εἶδος, like]. Sporular.

Sporologist (*spor-ol'-o-jist*) [σπόρος, spore; λόγος, science]. A botanist.

Sporont (*spo'-ront*) [σπόρος, seed; ὤν (ὀντ-) being]. In biology, a gregarine without an epimerite, as distinguished from a *cephalont.*

Sporophore (*spor'-o-fōr*) [σπόρος, seed; φέρειν, to bear]. In biology: (*a*) that portion of a fungus thallus specialized for the bearing of propagative bodies; a special hypha; (*b*) Pfeiffer's name for the protoplasmic material of a *Coccidium* which remains after the formation of the *sporoblasts.* It is the *Theilungskörper* of German authors and the *reliquat de segmentation* of Railliet et Lucet. Wolters, however, employs the term *sporophore* in speaking of the *noyau de reliquat*, a small portion of protoplasm which is left unused in the *macrospores* and *microspores* of the *Gregarina* after the formation of the *falciform bodies.*

Sporophoric (*spor-o-fō'-rik*) [σπόρος, spore; φέρειν, to bear]. Having the character of a sporophore.

Sporophorous (*spor-off'-or-us*) [σπόρος, spore; φέρειν, to bear]. Spore-bearing.

Sporophyl, Sporophyll, Sporophyllum (*spor'-o-fil, spor-o-fil'-um*) [σπόρος, seed; οἰλλον, leaf]. In biology, the modified leaf which bears the spores, or receptacles holding the spores, in many of the vascular cryptogams; the fertile leaf.

Sporophyte (*spor'-o-fīt*) [σπόρος, seed; φυτόν, plant]. In biology, the non-sexual generation of one of the vascular cryptogams and higher cellular cryptogams. It is often of great size and extended length of life, and is that which is commonly known as the fern, club-moss, etc. On it are produced, without any process of fertilization, the *spores.*

Sporophytic (*spor-o-fit'-ik*) [σπόρος, spore; φυτόν, a plant]. Resembling a sphorophyte.

Sporos (*spor'-os*) [σπόρος, spore]. Semen.

Sporosac (*spor'-o-sak*) [σπόρος, seed; σάκκος, a bag, a sack]. In biology: (*a*) one of the medusiform reproductive buds of certain *Hydrozoa* (*Tubulariæ, Campanularia*). They are *Medusæ* which have undergone retrograde formation, without oral-opening tentacles or sense-organs; (*b*) a sporocyst.

Sporostegium (*spor-o-ste'-je-um*) [σπόρος, seed; στέγειν, cover, roof]. In biology, the oösporangium or fructification of the *Characeæ;* the *Chara-fruit.*

Sporotrichium (*spor-o-trik'-e-um*) [σπόρος, spore; θρίξ, hair]. A genus of hyphomycetous *Fungi.* **S. dermatodes,** a whitish mold that infests *Arundo donax* in Provence and contact with which causes the *maladie des cannes*, a dermatitis of the face, genitalia, etc. It is common among basket-makers and others handling the reeds.

Sporous (*spo'-rus*) [σπόρος, spore]. Pertaining to a spore.

Sporozoa (*spor-o-zo'-ah*) [σπορά, seed; ζῷον, an animal]. A class of parasitic *Protozoa* including five orders: the **Gregarinidia,** parasitic in various worms and arthropods; the **Coccidiidia,** or oviform psorosperms, parasitic in the hepatic and intestinal epithelium of

various mammals, including man; the **Sarcosporidia**, or tubuliform psorosperms, parasitic in the muscles of various animals. See *Sarcocystis miescheri* under *Parasites* (*Animal*), *Table of;* the **Myxosporidia**, the psorosperms of fishes; the **Microsporidia**, or the psorosperms of articulates. See *Pébrine* and *Microsporidia*.

Sporozoöid (*spor-o-zo'-oid*) [σπορός, seed; *zooid*, animal-like]. In biology: (*a*) one of the two "sickle-cells" or "falciform bodies" produced by every spore of the true *Coccidia*. The small portion of the spore-plasma remaining unused is called the *noyau de reliquat* or *reliquat de differentiation*, or *Restkörper;* (*b*) any oöspore.

Sporozoön (*spor-o-zo'-on*) [σπορά, seed; ζῷον, an animal: *pl.*, *Sporozoa*]. In biology, a member of the *Sporozoa*.

Sport (*spōrt*) [ME., *sport*, sport]. A branch bearing foliage, blossoms, and fruit unlike those of the parent plant.

Sporular (*spor'-u-lar*) [σπόρος, spore]. Having the character of a sporule.

Sporulate (*spor'-u-lāt*) [σπόρος, spore]. 1. To form spores. 2. To convert into spores.

Sporulation (*spor-u-la'-shun*) [σπόρος, spore]. The production of spores or sporules; *sporation*.

Sporule (*spor'-ūl*) [σπόρος, seed]. A term applied to a minute spore; also sometimes to minute granules within a spore.

Sporuliferous (*spor-u-lif'-er-us*) [σπόρος, spore; *ferre*, to bear]. Bearing sporules.

Sporuloid (*spor'-u-loid*) [σπόρος, spore; εἶδος, like]. Sporular.

Spot [ME., *spot*, spot]. See *Macula* and *Spilus*. **Ss., Acoustic.** See *Macula*. **S., Blind** (*of Mariotte*). The entrance of the optic nerve, where the rods and cones are absent. **S., Corneal**, an opacity of the cornea; leukoma. **Ss., Cribriform.** See *Macula cribrosa*. **S.-disease.** See *Pébrine*. **S., Embryonic**, the nucleolus of the ovum. **S., Germinal, S., Germ.** See *S., Embryonic*. **S., Hectic**, the bright flush on the cheek of a person suffering from hectic fever. **Ss., Lenticular**, ephelides; the exanthem of typhoid fever. **S., Light** (*on the membrana tympani*), a cone of light on the anterior and inferior part of the tympanic membrane, with its apex directed inward. **S., Mariotte's**, the optic disc. **S., Milk**, a spot found post-mortem on the external surface of the visceral layer of the pericardium, usually over the right ventricle; it varies from a half to one inch in diameter, and is of common occurrence in persons who have passed middle life. **S., Mothers'**, mothers' mark; nevus. **Ss., Rose**, the typhoid rash. **S., Sömmerring's.** See *Macula lutea*. **Ss., Sun.** See *Lentigo*. **S. of Wagner**, the macula germinativa. **S., Wine**, port-wine mark; strawberry mark. **S., Yellow.** See *Macula lutea*.

Spotted (*spot'-ed*) [ME., *spot*, spot]. Marked with maculæ. **S. Fever.** See *Fever, Cerebro-spinal*. **S. Sickness.** See *Pinta Disease*.

Spotting (*spot'-ing*) [ME., *spot*, spot]. A disease of plants in which small black spots appear, and beneath which the tissues decay.

Sprain (*sprān*) [OF., *espreindre*, to press]. Injury and consequent soreness from strain of a muscle, tendon, or ligament by too great traction upon it. **S.-fracture**, separation of a tendon, with detachment of a small shell of bone. **S., Riders'**, a sprain of the adductor longus muscle of the thigh, resulting from a sudden effort on the part of the horseman to maintain his seat or equilibrium, owing to "shying" or other unexpected movement of his horse.

Spray (*sprā*) [Ger., *spreiden*, to spread]. A liquid blown into minute particles by a strong current of air or steam. **S., Listerian Steam**, a carbolized spray from a steam atomizer, formerly used at surgical operations. **S.-producer**, an atomizer.

Spread (*spred*) [ME., *spreden*, to spread]. To scatter; to disperse; to distribute over a surface. **S. of Dividers**, the space including the image between the points of the dividers. This is measured in determining the magnification of a simple microscope.

Spreio (*spri'-o*). Written also *Sprue*. A popular term for thrush.

Spring [ME., *spring*, spring]. The first of the four seasons of the year; also, a device having resiliency. **S. Conjunctivitis.** See *Vernal*. **S. Fever.** See *Eonosus*. **S.-finger**, a condition in which there is an obstruction to flexion and extension of one or more fingers at a certain stage of these movements. It is due to injuries or may result from inflammation of the tendinous sheaths. **S.-halt**, an involuntary convulsive movement of the muscles of either hind leg in the horse, by which the leg is suddenly and unduly raised from the ground and lowered again with unnatural force. **S.-ligament**, the inferior calcaneoscaphoid ligament of the sole of the foot. **S.-nail**, a hang nail. **S. Ophthalmia.** See *Vernal*. **S.-worm.** See *Oxyuris vermicularis* under *Parasites* (*Animal*) *Table of*.

Sprout (*sprowt*) [D., *spruite*, a sprout]. A young root or stem from a seed; a quickly-grown branch. **S. chain**, a chaplet of cells formed by that mode of multiplication in which the parent-cell sends out a small process, which increases in size and is gradually separated by the formation of a septum at the point of junction.

Spruce (*sprūs*). The name of certain species of *Abies*, or fir. **S.-beer**, a beverage made by boiling four ounces each of pimenta, ginger, and hops, and a half-pint of essence of spruce in three gallons of water for about ten minutes, straining, adding one pint of yeast, six gallons of molasses, and eleven gallons of water, and leaving it to ferment for twenty-four hours. **S.-gum**, a resinous exudate obtained from *Abies alba* and *Abies nigra*.

Sprue (*sprū*). Synonym of *Thrush*.

Sprung Knee. In the horse an alteration in the direction and articulation of the bones which form the various carpal joints, so that instead of forming a vertical line from the distal end of the forearm to the cannon-bone, the knee (*wrist*) is more or less bent forward.

Spumescent, Spumose (*spu-mes'-ent, spu'-mōs*) [*spuma*, froth, foam]. Appearing like froth.

Spunk (*spungk*). See *Agaricus*.

Spur (*sper*) [ME., *spure*, spur]. A sharp point, or projection. The angle made by any branch with the main blood-vessel. In biology, a pointed spine-like outgrowth, either of the integument or a projecting appendage. **S.-gall**, a callous and hairless place on the side of a horse, caused by the use of a spur.

Spurge (*sperj*) [ME., *sporgen*, spurge]. A general name for plants of the genus *Euphorbia*.

Spurious (*spu'-re-us*) [*spurius*, false]. Not legitimate; bastard. **S. Hydrocephalus.** See *Diarrhea, Acute Inflammatory*. **S. Labor.** See *False Pains*. **S. Melanosis.** See *Miners' Phthisis*. **S. Pregnancy.** See *Pseudocyesis*.

Spurred (*sperd*) [ME., *spure*, spur]. In biology, having spurs. **S. Rye.** See *Ergot*.

Sputa (*spu'-tah*). Plural of *Sputum*, *q. v.*

Sputum (*spu'-tum*) [*spuere*, to spit]. The secretion ejected from the mouth in spitting. It consists no

mally of saliva and mucus from the nasal fossæ and the fauces. In disease it may be purulent, muco-purulent, fibrinous, nummular, bloody, and may contain the *débris* of suppuration of any part finding an outlet through the mouth. Certain diseases, especially pneumonia and pulmonary tuberculosis, are marked by the specific character of their sputa. Microscopically, in diseased conditions, there are found various materials, as follows: blood, oil-globules, pus-corpuscles, granular *débris*, fragments of lung-tissue, bacteria, Curschmann's spirals, and Charcot-Leyden crystals. **S., Black-pigmented,** sputum having a black color from inhaled particles of carbon. **S., Cavernous,** nummular sputum, from a pulmonary cavity. **S. coctum,** opaque, yellowish or greenish, viscid, generally partially confluent, though occasionally nummulated, sputum of the later stages of acute bronchitis. **S. crudum,** scanty, viscid expectoration in the early stages of acute bronchitis. **S., Egg-yolk,** sputum having a yellow color. **S., Globular,** spheric masses of sputum of the later stages of bronchitis; yellow in color, and consisting of epithelium, pus-corpuscles, mucus, etc. **S., Green,** bloody sputum in which oxidation of the hemoglobin has taken place; it is seen in pneumonia. **S., Icteric,** sputum tinged green or yellow, due to the presence of bile-pigment; it is observed in icterus. **S., Nummular,** heavy, round, coin-like masses of sputum, such as occurs in pulmonary tuberculosis. **S., Prune-juice, S., Rusty,** the typical, dark-colored sputum of the third stage of pneumonia; the color is due to the admixture of blood. **S. puriforme,** sputum having the appearance of pus. **S. rotunda.** See *S., Nummular.* **S. tuberculosum,** a purulent or muco-purulent sputum containing tubercle-bacilli, occurring in pulmonary tuberculosis and in caseous pneumonia. **S., Yellow,** sputum having a yellow color, due to the presence of fungi; the term is also applied to sputum rendered yellow by oxidation of the contained hemoglobin.

Spyrokolon (*spi-ro-ko'-lon*) [literally, pustules on the nates]. A form of syphilis which has been more or less prevalent throughout Greece. It begins usually on the nates or scrotum and genitals as an eruption of pustules, which spreads to various parts of the body. No ordinary primary lesion can be discovered.

Squalor (*skwol'-or*, or *skwa'-lor*) [L.]. Filth. Disorder and uncleanliness.

Squama (*skwa'-mah*) [L.: *pl.*, *Squamæ*]. *Scale;* a dry, laminated exfoliation of the epidermis; it is usually the result of an inflammation, but may be due to preternatural dryness of the skin, or follow an acute hyperemia. Scales may be small and branny or very large and thin, and of a silvery-white or yellowish color. **S. rhopalaris,** the sense-scale, or covering of the rhopal niche in acraspede *Medusæ*.

Squamate (*skwa'-māt*) [*squama*, a scale]. Scaly, or scale-like.

Squamation (*skwa-ma'-shun*) [*squama*, a scale]. The state of being squamate.

Squame (*skwām*) [*squama*, a scale]. In biology, a scale.

Squamella (*skwa-mel'-ah*) [L., dim. of *squama*]. A very small scale.

Squamellate (*skwa-mel'-āt*) [*squama*, scale]. Same as *Squamulate.*

Squamelliferous (*skwa-mel-if'-er-us*) [*squama*, scale; *ferre*, to bear]. Furnished with squamellæ.

Squamiferous (*skwa-mif'-er-us*) [*squama*, scale; *ferre*, to bear]. Provided with squamæ.

Squamiflorous (*skwa-mif-lōr'-us*) [*squama*, scale; *flos*, flower]. Having flowers like scales.

Squamiform (*skwa'-mif-orm*) [*squama*, scale; *forma*, form]. Squamate.

Squamigerous (*skwa-mij'-er-us*). Same as *Squamiferous.*

Squamo-cellular (*skwa-mo-sel'-u-lar*) [*squama*, scale; *cellula*, a small cell]. Flat-celled.

Squamoid (*skwa'-moid*) [*squama*, scale; εἶδος, like]. Resembling a squama.

Squamomastoid (*skwa-mo-mas'-toid*) [*squama*, scale; *mastoid*]. Pertaining to the squamous and mastoid portions of the temporal bone.

Squamoparietal (*skwa-mo-par-i'-et-al*) [*squama*, scale; *paries*, wall]. Pertaining to the squamosal and parietal bones.

Squamopetrosal (*skwa-mo-pe-tro'-zal*) [*squama*, scale; πετρά, rock]. Pertaining to the squamous and petrous portions of the temporal bone.

Squamosal (*skwa-mo'-zal*). See *Squamous.*

Squamose (*skwa'-mōz*) [*squama*, scale]. Scaly.

Squamosphenoid (*skwa-mo-sfe'-noid*) [*squama*, scale; *sphenoid*]. Pertaining to the squamous portion of the temporal bone and to the sphenoid bone.

Squamotemporal (*skwa-mo-tem'-po-ral*) [*squama*, scale; *temporal*]. Squamosal.

Squamotympanic (*skwa-mo-tim-pan'-ik*) [*squama*, scale; *tympanic*]. Pertaining to the squamosal and tympanic bones.

Squamous (*skwa'-mus*) [*squamosus*, scaly]. Scaly. Characterized by thickened laminæ of morbid cuticle. A term applied to an order of cutaneous diseases distinguished by desquamation. It is applied also to certain parts of bones having a scale-like appearance. **S. Suture,** the suture between the squamous portion of the temporal bone and the frontal and parietal bones.

Squamozygomatic (*skwa-mo-zi-go-mat'-ik*) [*squama*, scale; *zygomatic*]. Pertaining to the squamous and zygomatic portions of the temporal bone.

Squamula (*skwa'-mu-lah*) [L.]. A minute scale.

Squamulate (*skwa'-mu-lāt*) [*squamula*, a little scale]. Having little scales.

Squamule (*skwa'-mūl*) [*squamula*, a little scale]. A squamula.

Squamuliform (*skwa'-mu-lif-orm*) [*squamula*, a little scale; *forma*, form]. Having the form of a squamula.

Squamulose (*skwa'-mu-lōz*) [*squamula*, a small scale]. Covered with minute scales.

Square Cap. A variety of provisional head-dressing. A handkerchief is folded so that the edge of one side is three inches in advance of that of the other. The long side is placed next to the head, allowing it to hang down some distance in front of the face. The ends of the short side are drawn down and tied under the chin; then the ends of the long side are drawn downward and forward, folded back, and tied behind over the back of the neck.

Squarra (*skwar'-ah*) [ἐσχάρα, a scab]. A rough crust of *tinea.* **S. tondens,** alopecia areata.

Squarrose (*skwar'-ōz*) [*squarrosus*, scurfy, scaly]. In biology, applied to stems or other organs that are roughened with closely arranged bracts or other spreading processes.

Squarrous (*skwar'-us*) [ἐσχάρα, a scab]. Scurfy; having crusts or scabs.

Squaw-root. See *Caulophyllum.*

Squibb's Diarrhea-mixture. See *Opii, Tinct., Comp.*

Squill (*skwil*). See *Scilla.*

Squinancy (*skwin'-an-se*). See *Quinsy.*

Squint (*skwint*) [origin obscure]. See *Strabismus.* **S.-hook,** a hook for picking up the tendon in an operation for strabismus.

Squirrhus (*skwir'-us*). See *Scirrhus.*

Squirting Cucumber. See *Elaterium.*

Srint [Hungarian]. A disease characterized by inflammatory swellings in the mouth, throat, or anus. It is endemic in Hungary.

Stab-culture, a culture in which the inoculating point is thrust into a tube of agar, or other suitable solid culture-material; it is used for the propagation of anaërobic schizomycetes; it is also called *Stichcultur*, *Stick-culture* or *Thrust-culture*.

Stabile (*sta'-bil*) [*stabilis*]. Not moving; permanent; in electrotherapeutics, opposed to labile, the electrode being held continually upon one point.

Stable-fly (*sta'-bl-fli*). See *Stomoxys calcitrans* in *Parasites* (*Animal*), *Table of*.

Stachys (*sta'-kis*) [στάχυς, woundwort]. A genus of labiate plants, including motherwort, a perennial herb growing in Europe, Asia, and North America. It is said to possess tonic and diuretic properties, and to be a vascular stimulant. **S. palustris.** Hedge-nettle; it grows in marshy places in Europe and North America.

Stachytarpha, Stachytarpheta (*stak-it-ar'-fah*, *stak-it-ar'-fe-tah*) [στάχυς, a spike; ταρφειός, thick]. A genus of the *Verbenaceæ*. Bastard vervain; an aromatic shrub growing in the West Indies and South America. The leaves and root are said to be tonic, stimulant, diuretic, and anthelmintic. The leaves are known as Brazilian tea, and in Europe are used to adulterate tea.

Stactometer (*stak-tom'-et-er*) [στακτός, a dropping; μέτρον, a measure]. An instrument for measuring drops.

Stadium (*sta'-de-um*) [L.]. Stage or period. **S. acmes**, the height of a disease; crisis. **S. augmenti**, the period in which there is increase in the intensity of the disease. **S. caloris**, the period during which there is fever; the hot stage. **S. contagii**, the prodromal stage of an infectious disease. **S. convalescentiæ**, the period of recovery from disease. **S. decrementi**, defervescence of a febrile disease; the period in which there is a decrease in the severity of the disease. **S. decrustationis**, the stage of an exanthematous disease in which the lesions form crusts. **S. desquamationis**, the period of desquamation in an exanthematous fever. **S. eruptionis**, that period of an exanthematous fever in which the exanthem appears. **S. exsiccationis.** See *S. decrustationis*. **S. florescentiæ**, the stage in an eruptive fever in which the exanthem develops. **S. incubationis.** See *Stage*, *Latent*. **S. maniacale**, the last stage of excitement in mania, after which the nervous manifestations gradually subside. **S. nervosum**, the paroxysmal stage of a disease. **S. prodromorum**, in eruptive fevers, the stage prior to the appearance of the eruption. **S. staseos.** See *S. acmes*. **S. suppurationis**, the period in the course of variola in which suppuration occurs. **S. ultimum**, the final stage of a febrile affection.

Staff (*staf*) [ME., *staff*, staff]. An instrument used in lithotomy for passing into the bladder through the urethra. **S.-tree.** See *Celastrus*.

Staffordshire Knot. See *Knot*.

Stage (*stāj*) [ME., *stage*, stage]. 1. A definite period of a disease characterized by certain symptoms; a condition in the course of a disease. 2. The horizontal plate projecting from the pillar of a microscope, for supporting the slide or object. **S., Algid**, a condition characterized by subnormal temperature, feeble, flickering pulse, secondary nervous manifestations, etc. It occurs in cholera and other diseases marked by exhausting intestinal discharges. **S., Amphibolic**, the stage of a disease intervening between its height and its decline. **S., Asphyxial**, the preliminary stage of Asiatic cholera, marked by extreme thirst, muscular cramps, etc., due to loss of water from the blood. **S., Cold**, the initial stage, rigor or chill of an attack of a malarial paroxysm. **S., Expulsive** (*of labor*), the stage which begins when dilatation of the cervix uteri is complete. See *Labor*. **S., First** (*of labor*), that stage in which the molding of the fetal head and the dilatation of the cervix are effected. See *Labor*. **S., Flexion** (*of labor*), the expulsive stage up to the period in which extrusion of the head occurs. **S., Hot**, the second or pyrexial stage of a malarial paroxysm. **S., Infective**, that period of an eruptive fever during which it is infectious. **S., Initial**, the prodromal stage of an eruptive fever. **S. of Invasion**, the period in the course of a disease in which the system comes under the influence of the morbific agent. **S. of Latency**, the incubation-period of an infectious disease, or that period intervening between the entrance of the virus and the manifestation of the symptoms to which it gives rise. **S., Latent.** See *S. of Latency*. **S., Placental** (*of labor*), the period occupied by the expulsion of the placenta and fetal membranes. **S., Pre-eruptive**, the period of an eruptive fever following infection and prior to the appearance of the eruption. **S., Pyrogenetic**, the stage of invasion in febrile diseases. **S., Second** (*of labor*). See *S., Expulsive*. **S., Sweating**, the third or terminal stage of a malarial paroxysm. **S., Third** (*of labor*). See *S., Placental*.

Staggers (*stag'-erz*) [MD., *staggeren*, to stagger]. One of the various forms of functional and organic disease of the brain and spinal cord in domestic animals, especially horses and cattle. Enzoötic cerebritis of horses, sheep, etc., blind-staggers, louping-ill, gid, sturdy, turnside, stavers. See *Cœnurus cerebralis*, under *Parasites* (*Animal*), *Table of*. See, also, *Loco* and *Grass-staggers*. **S., Blind**, staggers due to cerebral disease. **S.-bush**, *Andromeda mariana;* a plant allied to the mountain laurel, growing in the seaboard States of North America. **S.-Grass**, *Loco*, or *Loco Disease*, *q. v.*, produced by eating various so-called loco-weeds, *e. g.*, *Amaryllis atamasco*, *Astragalus mollio-sinus*, *A. hornii*, *Oxytropis lamberti*, etc. **S. Mad, S., Sleepy**, staggers due to inflammation of the cerebral envelops. **S., Stomach**, staggers due to cerebral disturbance dependent on gastric disorder.

Stagmodeopsoriasis (*stag-mo-de-op-so-ri'-as-is*) [στάγμα, a dropping; *εἶδος*, like; *ψωρίασις*, psoriasis]. Psoriasis in which the lesions "look like drops of mortar on the skin;" psoriasis guttata.

Stagnation (*stag-na'-shun*) [*stagnare*, to settle]. The cessation of motion. In pathology, a cessation of motion in any fluid; stasis.

Stahl's Ear. See *Ear*, *Deformities of*. **S.'s Theory.** See *Animism*.

Stain (*stān*) [by apheresis from distain, *dis*, priv.; *tingere*, to color]. 1. A discoloration. 2. A pigment employed in microscopy to render visible minute and transparent elements or to produce certain microchemic reactions. See *Nuclear Stain*, *Plasmatic Stain*, *Specific Stain*, also *Stains*, *Table of*, page 1367.

Stainable (*sta'-na-bl*) [ME., *steinen*, to stain]. Capable of being stained.

"Stairs" Sign. A sign in locomotor ataxy, consisting in a difficulty in descending stairs. It is an early symptom of the disease.

Staircase (*stār'-kās*) [ME., *staire*, stair; *case*]. A continuous series of responses to nerve-stimuli, varying from a minimal intensity to a maximum intensity. (Romanes.) See *Summation*.

Stalagmometer (*stal-ag-mom'-et-er*) [σταλαγμός, a dropping; μέτρον, a measure]. A contrivance for measuring the size of drops.

BLEACHING FLUIDS.

These are used to dissolve and decolorize organic pigments in tissues containing them, and to overcome the staining of objects treated with osmic acid. **Chloroform**, combined with nitric acid, will clear strongly pigmented chitin. **Grenacher's Mixture.** For the eyes of *Arthropods* and other animals. Mix 1 part of glycerin with 2 parts of 80 per cent. alcohol, and add 2 or 3 drops of hydrochloric acid. This fluid dissolves pigment, while at the same time a stain is formed which, in the course of from 12 to 24 hours, colors the nuclei. The object may be previously stained with borax-carmin. The carmin does not wash out as rapidly as the pigment, but the decolorization must be watched. **Hydrogen Dioxid** (*Hydrogen Peroxid, Oxygenated Water*). The sections, fastened on slides, are placed in a 10-volume, or 2 per cent. solution. The melanin is reduced to a pale-yellow color in from 6 to 48 hours, according to the amount of pigment present and the light to which the specimen is exposed (strong sunlight materially hastens the process). If the treatment is continued longer the coloring-matter can be entirely removed, and by watching the process a little carefully the decolorization can be stopped at any point before absolute removal. Practically it has been found to be of advantage to leave sufficient color to mark the position of the pigment-cells. The liquid does no appreciable injury to the structural elements. See also *Pouchet's Mixture.* **Javelle Water.** See *Corrosion-fluids, Eau de Javelle.* **Labarraque's Solution.** See *Corrosion-fluids, Eau de Labarraque.* **Mayer's Chlorin-solution.** To remove the staining that occurs as a result of treatment with osmic acid. The specimen is put in from 70 to 90 per cent. alcohol; the bottom of the vessel is then covered with crystals of potassium chlorate, and a few drops of strong hydrochloric acid are added by means of a pipet. The appearance of a green color indicates the evolution of chlorin, which should be diffused through the alcohol by shaking the vessel. Objects are bleached in half a day. Nitric acid may be used instead of hydrochloric, in which case the bleaching agent is the freed oxygen. Marsh generates chlorin in a small bottle, and conveys it by means of glass tubing to the bottom of a bottle containing the sections in water. **Pouchet's Mixture.** Treat the tissue with glycerin to which hydrogen dioxid has been added—5 or 6 drops to from 5 to 10 c.c. of glycerin. Osmium preparations may be bleached in this mixture. The same author recommends creasote as a solvent and decolorizer for granular animal pigments. **Sargent's Chlorin-solution.** For bleaching insects, and suitable only for the preparation of the hard parts. The solution consists of 2 grams of potassium chlorate, 10 drops of hydrochloric acid, and water, 30 c.c. Soak the objects for two days and then wash thoroughly.

CELL-MOUNTS.

Balsam-paraffin for Cells (*Julien*). This substance consists of paraffin saturated with balsam-cement, and is prepared as follows: Reduce commercial Canada balsam to a wax-like consistence by slow evaporation in a shallow tin pan over a low flame. Test by cooling a few drops from time to time. Melt slowly a quarter of a pound of paraffin, with a melting-point above 45° C. (113° F.), add a lump of the balsam-cement about the size of a marble, and then digest at gentle heat, stirring frequently, for about an hour. The appearance of a slight, yellow tinge indicates the saturation of the paraffin by the balsam. When it is desired to prepare a cell, the balsam-paraffin is cautiously heated to the melting-point in a shallow porcelain capsule. These paraffin cells are suitable for dry or liquid mounts, excepting for the latter when Canada balsam, dammar, or oils are used as preservatives. The great advantage of the balsam-paraffin is its chemic indifference to the reagents employed in the preservation-media. **Paper-cell Method** (*Lee*). By means of a punch cut out a ring of paper, one mm. in breadth and about one mm. smaller in diameter than the cover-glass. Moisten this paper circlet with the mounting-fluid and center it on the slide. Fill the cell thus formed with the mounting-fluid; place the object in it; put on the cover; fill the annular space between the paper and the margin of the cover with glycerin-jelly, and as soon as this has set turn a ring of Bell's cement on it. For **Mounting-media.** See under *Mounting.*

CEMENTS AND VARNISHES.

These substances are chiefly used for sealing fluid mounts, to prevent the admission of air and evaporation of the liquid. Before applying a cement, all fluid mounts should be ringed with glycerin-jelly, to avert "running in." **Amber Varnish.** Fuse 6 lbs. of clear, pale amber, add 2 gallons of hot clarified linseed-oil, boil until the mixture "strings," and when partially cooled add about 4 gallons of turpentine. Behrens recommends this cement for its extreme tenacity. **Apáthy's Cement.** Heat together, in a porcelain capsule, equal parts of hard paraffin (60° C. melting-point) and Canada balsam, until the mixture assumes a golden tint and no longer emits vapors of turpentine. On cooling, this forms a firm mass, which for use is warmed, and applied with a glass rod. This cement is suitable for closing glycerin mounts. **Asphalt Varnish.** This is one of the best media, used either as a cement or as a varnish. Kitton advises asphalt

dissolved in benzol and a small quantity of gold size. **Bell's Cement.** Useful as a cement and varnish. It is soluble in ether and chloroform, and resists the action of cedar-oil. Its composition is unknown. **Brunswick** or **Japan Black.** See *Pigments, Conspectus of.* Equal parts of this substance and gold size, with a little Canada balsam, may be used. It works easily and dries quickly. **Colophonium and Wax.** To 2 parts of melted wax add, piecemeal, from 7 to 9 parts of colophonium; filter and cool. For use, melt by placing the vessel containing the mass in hot water. This cement is impervious to water, glycerin, and caustic potash. **Gold Size.** An excellent cement when of good quality. **Kitton's White-lead Cement.** Rub together thoroughly, with a little turpentine, equal parts of powdered white lead, red lead, and litharge; then mix with gold size. The cement should be thin enough to work with a brush, and must be made as required. **Marine Glue.** That known in commerce as G K 4 is the best. It is soluble in ether, naphtha, and potassium hydroxid, and is used for securing glass cells to slides. **Sealing-wax Varnish.** Cover coarsely powdered sealing-wax with alcohol, and digest at a gentle heat. Useful only as a varnish. **Shellac Varnish** (*Beale*). Break shellac in small pieces, and shake in a bottle with alcohol until a thick solution is obtained. The addition of 20 drops of castor-oil to the ounce is said to improve this varnish, which is useful chiefly for protecting balsam mounts from the action of cedar-oil. The addition of Venice turpentine renders it less brittle. **Stieda's White-zinc Cement.** Rub up zinc oxid with turpentine, and for every gram add eight grams of a thick, syrupy solution of dammar in turpentine. This makes a white cement like Ziegler's, the composition of which is unknown. Cinnabar, in place and in double the quantity of the zinc, will give a red cement. **Tolu-balsam Cement** (*Carnoy*). A superior cement, consisting of tolu balsam 2 parts, Canada balsam 1 part, and a saturated solution of shellac in chloroform 2 parts, with the addition of enough chloroform to give the mixture a syrupy consistence. **Turpentine** (*Parker*). Dissolve true Venice turpentine in enough alcohol to make a solution that will pass through a filter. After filtering, evaporate about one-fourth of the whole on a sand-bath. Test it by dropping a little in cold water, and if on removing it from the water it is hard and gives a vitreous fracture, evaporation has proceeded far enough. Csoker uses common resinous turpentine, which he melts in small pieces over a water-bath. When cool, the resulting mass should be dark-brown and brittle. This cement is used for closing glycerin mounts, and is applied by means of a wire bent at right angles, the short arm being just the length of the side of the cover-glass, which should be square; the wire is heated in a spirit-lamp, plunged into the cement, and brought down flat on the slide at the margin of the cover. The turpentine distributes itself evenly and hardens immediately. This is a safe and valuable medium and fixes rapidly.

CLEANING OF SLIDES AND COVERS.

Strong nitric acid, water, alcohol, and ether are recommended by Behrens, to be used in the order named. James treats slides that have been used with a mixture of equal parts of benzine, turpentine, and alcohol. For slides on which are balsam-mounted objects the balsam should first be removed by xylol, turpentine, or other solvent. **Gibbes'** (*Heneage*) **Method.** Place the covers in concentrated sulphuric acid for an hour or two hours; wash until the drainings give no acid reaction, first with methylated spirit, then with absolute alcohol, and wipe dry with an old silk handkerchief. **Potassium Bichromate and Sulphuric Acid.** Potassium bichromate 200 grams; water 1000 c.c.; sulphuric acid 1000 c.c. Dissolve the bichromate in the water with the aid of heat. Pour the solution into a bottle that has been warmed and surrounded by a wet towel. Add slowly and at intervals the sulphuric acid. This mixture is corrosive and must be kept in glass vessels. It may be used more than once, but when the color changes markedly from that seen in the first mixture, it should be thrown away. **Seiler's Solution.** Potassium bichromate 25 gm.; sulphuric acid 75 c.c.; water 325 c.c. Place the slides and covers in the solution for a few hours, then rinse well with water, and dry with a soft, linen cloth. Slides and covers that have been used are treated as follows: The covers are put into a mixture of equal parts of alcohol and hydrochloric acid, and in a few days are transferred to the bichromate solution, and treated like new ones. The slides are scraped with a knife to free them from the mounting-medium, and are then put into the bichromate mixture. **Sulphuric and Nitric Acid Mixture.** Nitric acid 200 c.c. sulphuric acid 300 c.c.

CLEARING AGENTS.

Liquids used to render microscopic preparations transparent, to rid them of alcohol, and to facilitate penetration of the mounting-media. Those chiefly employed are essential oils. **Anilin-oil.** An important medium because of its ability to clear watery objects; it will even clear aqueous media without the intervention of alcohol, which sometimes renders it valuable as a penetrating medium prior to paraffin embedding. It is also used for clearing celloidin sections. **Bergamot-oil.** Clears 95 per cent. alcohol preparations, also celloidin or collodion sections, and does not extract anilin dyes. It is one of the least refractive of the clearing agents. **Carbolic Acid.** A concentrated solution in alcohol clears instantaneously even very watery preparations. It is a good medium for celloidin in sections, but should not be used for soft objects to be mounted in balsam, as they are apt to shrink by osmosis in the latter medium. Gage employs a mixture of melted carbolic acid, 40 c.c., and turpentine, 60 c.c. **Carbolic Acid and Xylol.** A mixture of one part of carbolic acid and three parts of xylol is used to clarify celloidin sections, which may be taken from 70 per cent. alcohol, and do not require further dehydration. A layer of previously heated copper sulphate in the bottom of the bottle will keep the mixture free from water. **Cedar-oil.** This agent clears readily tissues in 95 per cent. alcohol, and does not extract anilin colors. Five or six hours are required to clear celloidin in sections. When of good quality the oil has a light-yellow color. **Chloroform** is deficient in penetrating power, and requires a long time to clear an object of any size. It may be used for celloidin and paraffin sections. **Clove-oil.** New oil is pale; the tint deepens with age. Long immersion in this medium renders tissues brittle, sometimes an advantage in making minute dissections, as is also its tendency to form very convex drops. If desired, these properties may be counteracted by mixing it with bergamot oil. As this oil is a solvent of celloidin, it cannot be used for clearing celloidin sections. New oil extracts anilin colors more rapidly than old. This agent has the highest index of refraction of all the usual clearing agents, and is one of the most important. **Creasote.** The properties of this agent are similar to those of carbolic acid. Beechwood creasote is a good clearing medium for celloidin sections. **Lavender-oil.**

the same properties and is used in the same way as clove-oil. **Naphtha** clears paraffin or celloidin sections, but is too volatile for a general clearing agent. **Oil of Origanum.** Ninety-five per cent. alcohol preparations are quickly cleared, also celloidin sections. For the latter, *Oleum origani cretici* should be used. Anilin colors are somewhat extracted by this agent. **Sandal-wood Oil.** Ninety-five per cent. alcohol preparations are cleared rapidly, celloidin sections more slowly, by this agent. Anilin colors are not affected by it. **Toluol** clears paraffin and celloidin sections, and is sometimes used as a penetration-fluid before the paraffin bath. **Turpentine.** This agent has a low index of refraction, and, used for alcohol objects, causes contraction and alters the structure of cells. It is much used for paraffin sections, as it possesses the property of dissolving the paraffin and clearing the section at the same time. **Xylol** is used for paraffin and celloidin sections. It causes shrinkage if the sections are not thoroughly dehydrated.

CORROSION-METHODS.

Boiling or prolonged soaking in strong solution of **Caustic Soda** will remove the soft parts from skeletal structures. Caustic potash may be used in the same way. **Eau de Javelle** (*Potassium Hypochlorite*). Rub up 20 gm. of chlorinated lime in 100 c.c. of distilled water; dissolve 20 gm. of potassium carbonate in 100 c.c. of distilled water; mix, and after one hour filter. This solution is particularly recommended for preparing the skeleton of siliceous sponges and that of similar structures. In the study of the iris, choroid, and other pigmented organs, Altmann recommends Javelle water. Fat, especially when previously treated with osmic acid, resists the action of this fluid. The tissue impregnated with fat is hardened in osmic acid, and treated with Javelle water, which destroys everything but the fat, which remains as an osmium-stained mold of the tissue-spaces. **Eau de Labarraque.** (*Sodium Hypochlorite*). Twenty grams of chlorinated lime are rubbed up in 100 c.c. of distilled water and mixed with 40 gm. of crystallized sodium carbonate dissolved in the same quantity of water. Let the mixture stand for an hour, and filter. This is used in the same way as Javelle water. With the aid of heat, chitin is dissolved in either of the solutions in a short time (Loos). Chitinous structures, macerated for 24 hours or more in these solutions diluted with 4 to 6 volumes of water, become soft and transparent, and permeable to staining fluids, aqueous or alcoholic. This method is especially applicable to *Nematoda* and their ova. **Hyrtl's Corrosion-method.** Commercial mastic varnish is gradually evaporated over a spirit-lamp, or by other means, until it is of such a hardness that it cannot be indented with the finger, and with difficulty with the finger nail. The varnish should never be heated to boiling. By means of a glass rod, allow a drop of hot varnish to fall in cold water; if this cannot be flattened out between the fingers when cold, and only with difficulty after warming in the palm of the hand or on the tongue, it is sufficiently evaporated. To six parts of hardened varnish add one part of white beeswax. To color the injection-mass, five colors are recommended: For red mass, cinnabar; for blue, cobalt or ultramarine; for yellow, light or dark chrome-yellow; for green, emerald green; for white, carbonate of lead. The latter holds more poorly than the others, becoming somewhat brownish after heating. To 24 ounces of the mass, add from 16 to 20 drams of the color: a little more than this for the blue and green. The colors should be rubbed up evenly in a mortar, with enough of the fluid varnish to give a syrupy consistency, and this mixture poured slowly into the heated mass, while constantly stirring with a small wooden spatula. The mass is warmed, preparatory to injection, over an ordinary spirit-lamp, to a temperature just short of boiling, and should be constantly stirred. The method of injecting the varnish mass differs in no way from that of ordinary injections. For corroding away the fleshy parenchyma, concentrated hydrochloric acid is used. The organ is placed in a glass jar, of a depth at least two inches greater than the diameter of the organ. It is first rinsed with cold water, and then the cold acid poured over it in sufficient quantity to float it. The greater the amount of acid, the quicker the corrosion. From two to ten days will be required for corrosion, according to the size and density of the organ. A fine spray or jet of water is then played upon the organ, and the corroded flesh carefully washed away. The preparation is then laid for two or three hours in clean water and then dried and mounted. **Noll's Method:** Place a piece of sponge on a slide, and treat it with a few drops of eau de Javelle; the soft parts will dissolve in 20 to 30 minutes; remove any precipitates by cautious treatment with acetic acid, wash several times in alcohol, treat with oil of cloves, and mount in balsam. In **Wood's Metal Corrosion Method**, the organ to be injected is placed in water of a temperature to keep the metal used in a fluid condition, and the liquid metal is injected by ordinary methods. The injected organ is then placed in cold, running water until the flesh has macerated away, when the cast is cleaned with a brush.

COVER-GLASS PREPARATIONS.

Such preparations are usually made in examining blood, sputum, or other fluid or semi-fluid substance. In the case of sputum a tiny mass is placed on a cover-glass, another is pressed gently down upon this, and the two glasses are separated by sliding one over the other, the object being to secure a thin, even film on each glass. The film may also be spread with the edge of a cover-glass or with a platinum spatula. The preparations are then left to dry in air, or they may be dried by exposing them to a temperature of 120° for twenty minutes, or by passing them quickly thrice through the flame of a spirit-lamp or Bunsen burner. When dry, they are ready to stain. To obtain a cover-glass preparation of blood, cleanse the finger, prick the pad, wipe off the first drop of blood that exudes, touch the apex of the second drop with a cover-glass, spread in the manner described, and dry in air.

CYTOLOGIC METHODS.

Cell-structure may be studied in living cells, in fresh, unhardened cells, and in hardened tissue in sections. **Accessory Nuclei.** Fix the tissue in Flemming's solution for 1 hour, then place it for 24 hours in Flemming's fluid diluted 3 or 4 times; wash thoroughly, harden in alcohols of increasing strength. Stain for 24 hours with hematoxylin according to Apáthy's modification of Heidenhain's method; keep in the dark. Decolorize in a 1 per cent. alcoholic solution of potassium bichromate prepared just before using (by mixing 70 c.c. of strong alcohol with 30 c.c. of a stock solution of potassium bichromate 10 parts, distilled water 300 parts). The decolorizing mixture should be put in a dark-colored glass bottle, and the tissue left in for from 12 to 24 hours, according as a light or dark stain is desired. Pass into 70 per cent. alcohol—also in a dark bottle, and after one or more days dehydrate in abso-

lute alcohol. Infiltrate with thick cedar-oil, embed in paraffin which is overheated, and section. (Gustav Platner, *Arch. f. mikr. Anat.*, 1889, Bd. 33, Heft I.) **Achromatin and Plasma Stains.** Foremost among these is the Ehrlich-Biondi fluid, which is used by Heidenhain as follows: Dilute 6 parts of the staining fluid with 400 parts of water. Fill two beakers with distilled water, and add to each a few drops of the diluted staining solution. To one beaker add, with continual agitation, drop by drop, a 1 : 500 solution of acetic acid, until a crimson color appears. The contents of the two beakers are to serve as controls. The dilute solution first prepared is now acidified with dilute acetic acid, added drop by drop, with continual agitation, and from time to time a few drops are added to a beaker of distilled water, until a crimson tint is obtained corresponding to that of the test-beaker, when the staining bath is ready. Treat sections for two hours with 0.1 per cent. acetic acid, then for 10 to 15 minutes with official tincture of iodin, rinse in alcohol, and place in the stain for from 12 to 18 hours. **Altmann's Granules,** *Altmann's (R.) Method.* The tissue is fixed in osmic acid and stained with cyanin. The granules then appear in chains of a violet color. The substance between the granules stains readily with hematoxylin or carmin, but not with cyanin, and *vice versâ*. ("Die Structur des Zellkernes," *Arch. v. Du B. Reymond, Anat. Abth.*, 1889.) **Chromatin Stains.** Of these the foremost in importance, for fresh tissues, is methyl-green, which may be used alone or in the Ehrlich-Biondi mixture (see *Staining Reagents*); also Bismarck-brown in dilute glycerin, or in aqueous solution with acetic acid. For osmium objects, Mayer's hemalum. For sections of hardened tissues, Böhmer's hematoxylin, the finer hematein stains, safranin, gentian-violet, Victoria-blue, and other anilins, used according to the indirect method. Babes stains in safranin, as follows: A supersaturated solution of safranin in water is warmed to 60° C. and filtered warm. On cooling it becomes turbid through the formation of small crystals. Place the sections in a watch-glassful of this turbid solution, and warm for a few seconds (until the liquid clears); after one minute wash in water and treat with alcohol and turpentine in the usual way. Do not clear in clove-oil. **Ehrlich's Granules and Granular Cells** (*Mastzellen*). See *Staining of the Blood.* **Fresh Cells.** Tease out a piece of living tissue in a drop of a solution of methyl-green containing 0.75 per cent. of acetic acid; then expose for 15 minutes to vapor of osmic acid, by inverting the slide over the mouth of a bottle containing a small quantity of a one per cent. solution; remove when the cells are brown; add a drop of solution of Ripart and Petit, and cover. Scrapings from the freshly-cut surface of a recently excised liver or lymphatic gland, having been treated with 1 to 2 per cent. acetic acid, may be stained with fuchsin added in sufficient quantity to a 2 per cent. acetic acid to saturate it. This renders the nuclei visible (v. Kahlden). Segmenting ova of *Echinodermata* may be stained on the slide by placing a drop of safranin at the edge of the cover-glass. When the ova are dark, the excess of stain is removed by means of bibulous paper, and one per cent. acetic acid is allowed to flow under the cover. **Karyokinesis.** 1. Place small pieces of tissue hardened in strong Flemming's solution in an alcoholic solution of safranin (2 gm. to 60 c.c.) for from 24 to 48 hours. Wash for a few minutes in water, and carry to acidulated absolute alcohol (10 drops of acetic acid to 100 c.c.) for from ½ to 1 minute. When thick clouds of color are no longer given off, carry to absolute alcohol. After 1 or 2 minutes, clear and mount. 2. *Baumgarten's Method.* This method may be employed conjointly with a stain for bacteria. Harden the tissue for several weeks in a dilute solution of chromic acid; stain for from 5 to 10 minutes in a concentrated alcoholic solution of fuchsin; rinse quickly in absolute alcohol; stain for from 5 to 10 minutes in an aqueous solution of methylene-blue. In examining for bacteria also, stain first for 24 hours in anilin-water methyl-violet (decolorize with dilute acid if staining for tubercle-bacilli); then follow with fuchsin and methylene-blue, as indicated. 3. *Benda's Method.* Fix in Flemming's fluid, imbed in paraffin, and stain the sections as follows: Place for 24 hours in a concentrated solution of neutral copper acetate, kept at a temperature of 40° C. Wash well with water, and stain to a dark-gray tint in aqueous hematoxylin solution. Decolorize in 0.2 per cent. hydrochloric acid, until of a light-yellow, and then neutralize the acid by returning the sections to the copper solution, in which they should remain until they acquire a grayish-blue tint. Wash, dehydrate, and mount in balsam. 4. *Bizzozero-Vassale Method.* Fix in absolute alcohol. Stain 10 minutes in Ehrlich's gentian-violet solution; wash quickly in absolute alcohol; transfer to Gram's solution for two minutes, then pass into absolute alcohol for 30 seconds; 0.1 per cent. chromic acid, 30 to 40 seconds; absolute alcohol, 20 to 30 seconds; 0.1 per cent. chromic acid, 30 seconds; absolute alcohol, 30 seconds; oil of cloves; renew the last until no more color is given off. Treat with xylol, and mount in xylol-balsam. 5. *Gram's Method.* This is the same as for bacteria. The resting nuclei are either wholly or partially decolorized, while the dividing nuclei retain the dye. 6. *Mitosis in the Amnion.* Kill the pregnant animal, and place the uterus in a saturated watery solution of picric acid, opening the organ and the membranes under the fluid. Harden for 24 hours, wash in alcohol, and harden in alcohols, beginning with 7[illegible] per cent. Tinge a small part of the membrane in Ehrlich's acid hematoxylin diluted one-half. 7. *Mitosis in Lieberkühn's Glands.* Harden a section of small intestine in mercuric chlorid, and stain with acid fuchsin and methyl-green. The resting nuclei will be blue and those in active mitosis green. 8. *Mitosis in the Vermiform Appendix.* Fix in Flemming's solution, Fol's solution, or absolute alcohol; stain 5 to 10 minutes in the following mixture: gentian-violet, 1 gm.; absolute alcohol, 15 c.c.; anilin-oil, 3 c.c.; water, 8 c.c. Wash in absolute alcohol; immerse 30 to 4[illegible] seconds in 1 per cent. chromic acid, then for the same length of time in absolute alcohol; repeat the chromic acid and absolute alcohol to remove all excess of dye; clear, and mount in balsam. **Living Cells.** Young larvæ of *Amphibia* are the best objects for the study of cells *intra vitam*. Place the larvæ of *Salamandra* in a watch-glassful of water containing 5 to 10 drops of a solution of 1 part curare in 100 parts each of water and glycerin. Half to one hour's immersion is required for curarization. It is not necessary to wait until the larvæ are motionless; they may be removed as soon as their movements have become slow. The gills and the caudal "fin" may then be studied. The tail may be excised from the living animal and studied for some time in one per cent. salt-solution or other indifferent medium. The adult animal offers for study the thin, transparent bladder. Larvæ may be bred from adults, if well fed with aquatic worms, and supplied with a vessel of water. The larvæ will be deposited in the water. The cytoplasm of living cells may be stained with methylene-blue, dahlia, or gentian-violet dissolved in water or in an indifferent liquid. **Microchemic Reactions.** 1. Chromatin is distinguished from lecithins and albuminoids by treating fresh ce[illegible]

with 0.1 per cent. hydrochloric acid, in which it is insoluble; the lecithins and albuminoids are dissolved out. Methyl-green is a test for chromatin, as it stains nothing else in the nucleus. 2. *Glycogen in Leukocytes.* Treat with 1 per cent. solution of iodin, containing 2 gm. of potassium iodid, a preparation of frogs' blood. The white corpuscles are killed, and many stained yellow. In some of them mahogany-colored granules of stained glycogen are seen. 3. *Glycogen in Liver-cells.* Harden the liver of a well-fed frog in osmic acid, make a thin section and wash it with iodin, and the granules of glycogen in the hepatic protoplasm will be colored brown. 4. *Tizzoni's Reaction for Iron.* Harden the spleen, kidney, or liver of a young animal in alcohol. Place the sections in a freshly prepared solution of 3 c.c. of 1 : 12 potassium ferricyanid, 90 c.c. of water, and 1.5 c.c. of 25 per cent. hydrochloric acid. Particles of free iron are colored blue. **Spermatologic Methods.** Tease fresh material on a slide, fix with a strong solution of potassium permanganate, and stain with gentian-violet or dahlia. For aqueous mounts, use Ripart and Petit's solution or one of Pacini's mercurial fluids. Sections of the hemaphrodite gland of *Lamellibranchiata* may be stained for from 2 to 3 hours in a mixture of equal parts of a concentrated alcoholic solution of methyl-green and safranin diluted with 8 volumes of water; wash out in alcohol 5 to 10 minutes, and mount in balsam. Nuclei of ova are red; heads of spermatozoa, bluish-green. **Watase's Method for Differentiating Sexual Cells.** The sexual cells are fixed in Auerbach's fluid or simply in a saturated aqueous solution of sublimate, and the pieces embedded in paraffin. The sections are fixed to the slide with dilute alcohol or distilled water. Saturated solution of anilin-oil in water is added to alcohol until the latter is 20 per cent. in strength; with this menstruum one per cent. solution of cyanin $\beta\beta$ is made for a blue stain; and the same strength solution of chromotrop RR for a red stain; or for a more powerful red stain, use erythrosin in one per cent. solution. For contrast-staining it is immaterial which solution, cyanin or chromotrop, is used first; erythrosin must be used before the blue stain. Stain quickly, and wash in 50 per cent. alcohol. The nucleus of the ovum becomes red, while that of the spermatozoön becomes blue, showing the former to be erythrophilous, the latter cyanophilous.

DECALCIFYING FLUIDS.

These fluids usually consist of an acid, combined with a hardening agent, to prevent swelling of the tissue. The specimen should be previously fixed by any of the usual methods, tested from time to time with a needle or razor, and when the process of decalcification is complete should be washed in water and placed in 67 per cent. alcohol, gradually increasing the strength to 82 per cent. **Bayerls' Fluid.** Chromic acid, 1 part; hydrochloric acid, 1 part; water, 100 parts. **Von Ebner's Fluid** prevents swelling of the tissue. It has the following composition: Hydrochloric acid, 2.5 c.c., alcohol, 500 c.c., distilled water, 100 c.c., sodium chlorid, 2.5 grams. Use a large volume of the fluid and renew it frequently. If it be desired to examine the fibrillar structure of bone, mount the sections in 10 per cent. sodium chlorid solution; otherwise the ordinary mounting-media may be employed. **Fol's Fluid.** Nitric acid, 3 c.c., one per cent. chromic acid, 70 c.c., water, 100 c.c. Let the tissues remain in this fluid for two weeks, renewing it every other day. Wash thoroughly and preserve in 90 per cent. alcohol. **Gage's Fluid.** This agent answers well for the preparation of small salamanders, etc., for sectioning. It consists of 67 per cent. alcohol, 100 c.c., and pure nitric acid, 3 c.c. More rapid in action, and recommended for the decalcification of teeth, is a fluid composed of nitric acid, 5 c.c., saturated aqueous solution of alum, 100 c.c., and water, 100 c.c. It should be renewed every two days. **Haug's Phloroglucin Fluid.** One of the most rapid decalcifying agents, and without injurious action on the tissue-elements, with the exception of blood. It is prepared as follows: Warm slowly and carefully one gram of phloroglucin in 10 c.c. of pure nitric acid, and to the resulting ruby-colored solution add 50 c.c. of distilled water. If a larger quantity is desired, add nitric acid and water to the foregoing proportion until the volume measures 300 c.c., the limit of the protective influence of the phloroglucin. Previously to being brought into this fluid, the tissues should be well fixed. Fetal bones and those of lower vertebrates are decalcified in half an hour. Older and harder bones require several hours. When decalcification is completed, wash in running water for two days. The sections stain well. Another formula, useful for teeth when rapid action is not necessary, consists of phloroglucin, 1 gram, nitric acid, 5 c.c., 95 per cent. alcohol, 70 c.c., distilled water, 30 c.c. The function of the phloroglucin is to protect the organic tissue-elements against the action of the acid. **Hydrochloric Acid.** A rapid decalcifying agent, usually employed in combination with chromic acid or alcohol. A 10 per cent. solution of sodium chlorid in 3 per cent. hydrochloric acid is recommended. Hydrochloric acid and glycerin, 5 c.c. of the acid to 95 c.c. of the glycerin, constitute a good mixture for softening teeth. **Mayer's Desilicification Method.** A process for removing siliceous parts from sponges, etc. Place the object in alcohol in a vessel of guttapercha or glass coated internally with paraffin. Hydrofluoric acid is then added, drop by drop, care being taken to avoid the fumes, which attack mucous membranes with great energy. Contact with the acid causes wounds that heal with difficulty. Small pieces of sponge are freed from silica in a few hours or a day, and the tissues do not suffer. (A dangerous method.) **Nitric Acid.** An efficacious agent, which causes no swelling, and does not attack the tissue-elements. One per cent. and 10 per cent. solutions are used, the latter for large, hard bones, the former for young bones. The specimens should previously have been fixed in absolute alcohol, and the decalcifying fluid changed daily. They must be removed as soon as decalcification is complete, or they will become discolored. They are then washed in running water for two hours, and preserved in alcohol, which should be renewed in a few days. **Pereny's Fluid,** is recommended for rapid action and preservation of the tissue-elements. It is composed of 10 per cent. nitric acid, 4 parts, absolute alcohol and one-half per cent. chromic acid, each, 3 parts. **Phosphoric Acid.** A 10 to 15 per cent. solution is recommended for young bones. **Picric Acid.** A saturated watery solution is employed, to which a few crystals of the acid are added to keep it saturated. The tissue is suspended in the fluid, and when soft is washed and preserved in alcohol. Young bone is usually decalcified in a fortnight. **Thoma's Fluid.** This consists of 95 per cent. alcohol and pure nitric acid, in the proportion of one c.c. of the latter to 25 c.c. of the former. Fix the tissue in 95 per cent. alcohol; then place it for several days in the decalcifying fluid, shaking and renewing it frequently. When this has been done, wash in alcohol, and place it in a jar containing an excess of precipitated calcium carbonate; renew and shake until every trace

of acid is removed from the tissue. **Waldeyer's Chlorpalladium Fluid.** Palladium chlorid, one ctg., and hydrochloric acid, 1000 c.c. After decalcification, wash the tissue thoroughly in water, and place successively in 30, 60, and 90 per cent. alcohol.

DECOLORIZING, DIFFERENTIATING, AND MORDANTING SOLUTIONS.

Acid Alcohol. Hydrochloric acid 1 c.c., absolute alcohol 70 c.c., water 30 c.c. **Acidulated Glycerin.** See *Examination and Preservation Media.* **Acidulated Water.** Distilled water 1000 c.c., hydrochloric acid 1 c.c. **Anilin-water** (*Ehrlich*). Shake up 3 c.c. of anilin-oil with 97 c.c. of distilled water, and filter. The filtrate should be clear. Used as a mordant for anilin dyes. It does not keep well, and should be freshly prepared. **Gram's Solution.** Iodin 1 part, potassium iodid 2 parts, distilled water 300 parts. This solution gives a reaction with tissues which have undergone amyloid degeneration. It is much used in the staining of microörganisms by Gram's method. **Lithia Water.** Saturated aqueous solution of lithium carbonate 1 c.c., and distilled water 30 c.c., used as an intermediate agent in staining microörganisms. **Lœffler's Mordant Solutions.** 1. Ten c.c. of a 20 per cent. solution of tannin, 5 c.c. of a cold saturated solution of ferrous sulphate, 1 c.c. of an aqueous or alcoholic solution of fuchsin (or 1 c.c. of an alcoholic solution of methyl-violet). 2. One per cent. solution of caustic soda. 3. Sulphuric-acid solution of such strength that 1 c.c. will be completely neutralized by 1 c.c. of 1 per cent. caustic-soda solution. **Nitric Acid.** Pure nitric acid 10 c.c., distilled water 30 c.c. Used in the process of staining microörganisms. **Pal's Solution.** Oxalic acid 1 gm., potassium sulphate 1 gm., distilled water 200 c.c. Used in staining nerve-tissues after treatment with potassium permanganate. **Potassium Permanganate.** In one per cent. solution, used as a mordant for anilin dyes. In one-quarter per cent. solution it is used to differentiate tissues after staining with hematoxylin. **Sulphanilic and Nitric Acid Solution.** Saturated solution of sulphanilic acid 30 c.c., nitric acid (sp. gr. 1.42) 10 c.c. Used in the process of staining microorganisms. **Sulphuric Acid Solutions.** (*a*) Sulphuric acid (sp. gr. 1.84) 10 c.c., distilled water 30 c.c. (*b*) Sulphuric acid (sp. gr. 1.84) 10 c.c., alcohol (90 per cent.) 90 c.c. Used in the process of staining microörganisms. **Toluidin Water.** Toluidin 10 c.c., distilled water 90 c.c. Mix, agitate, and filter. Used for the same purpose as anilin-water, and may be substituted for it. **Weigert's Differentiating Fluid.** Borax 2 gm., potassium ferricyanid 2.5 gm., distilled water 200 c.c. Used after Weigert's hematoxylin.

DISSOCIATING FLUIDS.

These fluids soften and dissolve the interstitial material of tissues, and facilitate the separation of their histologic elements. I. MACERATING FLUIDS. **One-third Alcohol.** See *Fixing Fluids.* This is particularly recommended by Ranvier for epithelia. Thin advises one-fourth alcohol for dissociating the retina. **Ammonium and Potassium Sulphocyanid.** A 10 per cent. solution of either of these salts is recommended by Stirling as a dissociating medium for epithelium. Small pieces are macerated for 24 to 48 hours, and may then be stained with eosin, fuchsin, or picrocarmin. The fibers of a crystalline lens dissociated in either of these fluids become beaded or moniliform. **Ammonium Chromate.** A 5 per cent. solution is used for dissociating the "rodded" cells of the renal tubules, cells of the salivary glands, Purkinje's fibers of the heart, etc. It acts in 24 to 36 hours, and the tissues must be well washed for preservation. **Artificial Iodized Serum.** See *Examination and Preservation Media.* **Artificial Saliva.** *Calberla's formula:* potassium chlorid 0.4 gm., sodium chlorid 0.3 gm., sodium phosphate and calcium chlorid, each 0.2 gm., in 100 parts of water saturated with carbon dioxid; of this solution one volume is combined with one volume of water and half a volume of Müller's fluid. This mixture is recommended particularly for dissociation of the developing muscle and nerve of *Ophidia* and *Amphibia.* The tissue-elements are isolated by teasing and shaking, and the preparation is mounted in concentrated potassium-acetate solution. **Baryta Water.** A 50 per cent. solution is useful for dissociating white fibrous tissue, *e. g.*, tendon. **Beale's Fluid.** The mucus expressed from the gastric glands of the pig is rapidly dried on glass plates, powdered, and preserved in a stoppered bottle. Dissolve the powder in distilled water or glycerin, and filter the solution. Tissues are digested several hours in this fluid at a temperature of 37° C. Eight-tenths of a grain of the powder will dissolve 100 grains of coagulated white of egg. The powder retains its properties for years. **Brock's Medium.** For the nervous system of *Mollusca:* equal parts of 10 per cent. potassium-bichromate solution and the visceral fluid of the animal. **Caustic Potash, Caustic Soda.** Strong solutions, 35 to 50 per cent., should be employed; they do not greatly mar the forms of cells, while weak solutions destroy them. The tissue may be treated on the slide. Weak solutions may be employed for dissociating the cells of hair, nails, and epidermis. Professor and Mrs. Gage (*Proceedings Am. Soc. Microscopists*, 1889) have found that preparations treated with these alkalies can be permanently preserved by displacing the alkali with from 50 per cent. to 60 per cent. of potassium acetate and then mounting in glycerin or glycerin-jelly. **Chloral.** A mild, macerating medium in 2 to 5 per cent. solution. It preserves delicate elements admirably, and is recommended by Landowsky (*Archiv. f. mik. Anat.*, 1876, p. 359) for salivary glands; by Hickson for the retinæ of *Arthropods.* **Béla Haller's Mixture.** One part glacial acetic acid, 1 part glycerin, 2 parts water. Recommended for the central nervous system of *Mollusca.* Maceration is complete in 30 to 40 minutes. **Hertwig's Liquid,** for the nervous system of *Medusæ.* A mixture of equal parts of 0.05 per cent. osmic acid and 0.2 per cent. acetic acid. For *Actinæ* 0.04 per cent osmic acid is used; both the solutions are made in sea-water, and the washing out is done in 0.2 per cent. acetic acid. **Iodized Serum.** See *Examination and Preservation Media.* It is used in the study of fresh tissue, especially medullated nerve-fiber. A tiny fragment is placed in 4 or 5 c.c. of weak serum in a closed vessel, and allowed to soak for a day or more, fresh iodin being added as often as the serum becomes pale. When sufficiently macerated, the tissue is teased or pressed out and mounted. **Landois' Fluid.** Dissolve in 100 c.c. of distilled water 5 gm. each of neutral ammonium chromate, potassium phosphate, and sodium sulphate. This fluid is especially useful for the central nervous system, and small pieces must lie in it from one to five days. **Möbius' Media.** 1. One part of sea-water and 4 to 6 parts of 0.5 per cent. solution of potassium bichromate. 2. For *Lamellibranchiata:* one per cent. each of osmic and acetic acids, and 0.25 per cent. of chromic acid dissolved in sea-water. **Müller's Solution.** See *Fixing Fluids.*

Nitric Acid. Twenty per cent. solution is a useful medium for the maceration of muscle. After 24 hours' treatment, the isolated fibers may generally be obtained by shaking the tissue with water in a test-tube. **Nitric Acid and Glycerin.** A mixture of glycerin 50 c.c., nitric acid 1 c.c., and water 150 c.c., is recommended for isolating the elements of nerve tissue. **Nitric Acid and Potassium Chlorate,** *Kühne's Method.* Mix in a watch-glass one part of potassium chlorate with four of nitric acid, and in this immerse a fragment of muscle for half an hour, and then shake it with water in a test-tube to separate the fibers. **Oxalic Acid.** Maceration for several days in a concentrated solution has been found useful in the examination of nerve-endings. **Potassium Permanganate.** See *Fixing Fluids.* **Salt-solution.** A 10 per cent. solution of sodium chlorid is a valuable macerating agent for white fibrous and other tissue. **Schiefferdecker's Methyl Mixture.** Methyl alcohol 5 c.c., glycerin 50 c.c., distilled water 100 c.c. Used for dissociating the retina and other nerve-tissues. Macerate the perfectly fresh tissues for several days. **Sulphuric Acid.** Recommended by Max Schultze for isolating the fibers of the crystalline lens. Macerate for 24 hours in 30 c.c. of water containing 4 to 5 drops of pure sulphuric acid, and then agitate. Very dilute sulphuric acid is stated by Odenius to be the best medium for the examination of nerve-endings in tactile hairs. Hot sulphuric acid is used to dissociate horny epidermic structures—hair, nails, horn. II. DIGESTION FLUIDS. **Bickfalvi's Fluid.** One gram of dried gastric mucosa is mixed with 20 c.c. of 0.5 per cent. hydrochloric acid, put into an incubator 3 to 4 hours, and then filtered. The tissue should not remain in the solution for more than a half to one hour. **Brücke's Fluid.** This consists of glycerinated extract of pigs' stomach 1 volume, 0.2 per cent. hydrochloric acid 3 volumes, and a few crystals of thymol. **Kühne's Fluid.** Trypsin is obtained by extracting the pancreas of an ox with ether and alcohol, and evaporating to dryness; one part is then heated for 3 to 4 hours, at a temperature of 40° C., with 5 to 10 parts of a 0.1 per cent. solution of salicylic acid, the solution pressed through linen, and filtered when cold. **Kuskow's Fluid.** Pepsin one part, dissolved in 3 per cent. oxalic acid, 200 parts. The solution should be freshly made, and objects macerated in it 10 to 40 minutes at the ordinary temperature. **Schiefferdecker's Pancreatin Fluid.** A saturated solution of pancreatin in cold distilled water is made and filtered. Pieces of epidermis are macerated in it for 3 to 4 hours, at about the body-temperature. The forms of the prickle-cells are clearly shown, and the nuclei are preserved.

EMBEDDING.

Embedding methods are divided into two classes, according to the end which it is intended to accomplish: 1, simple embedding; 2, interstitial embedding, or infiltration. **Simple Embedding** consists in surrounding objects which are too small or too delicate to be firmly held by the fingers or by instruments with some plastic substance which gives them firm support without injurious pressure, and thus allows of the cutting of thin sections without distortion. Among the materials used are: (1) *Moist Paper.* Strips of printing paper softened in water are rolled around the object, which, thus wrapped, is firmly pressed into the microtome-cylinder. (2) *Paraffin Infiltration and Embedding.* The initial step in this process consists in the infiltration of the object with a clearing agent; that is, by some substance which is a solvent of paraffin. It is then immersed in melted paraffin until it is thoroughly saturated. The paraffin should be kept just at the melting-point and should be renewed if the object is large. The duration of the bath depends on the size of the object. When this second step in the process is completed, embed in paraffin, as in simple embedding. To prevent crystallization of the paraffin, the embedded object should be quickly cooled, which may be done by floating it in the containing receptacle on cold water. When chloroform is the clarifying agent, the subsequent treatment differs from the foregoing, and is as follows: The object is saturated with absolute alcohol, then brought into chloroform (containing a little ether to prevent the object from floating), and then penetrated; the chloroform and the object are gradually warmed to the melting-point of the paraffin used, small pieces of paraffin being added during the warming. When bubbles are no longer given off from the object, the chloroform has been entirely displaced by the paraffin, and the object is ready to embed (*Giesbrecht*). A little tray or box is made of paper, and some melted paraffin is poured into it; as soon as the mass has cooled sufficiently to support the object this is placed on its surface. More melted paraffin is poured on until the object is enclosed. Boxes may be constructed by placing pieces of type-metal upon a plate of glass which has been wetted with glycerin and gently warmed. In such a box the paraffin may be kept in a liquid state by warming over a spirit lamp, thus allowing small objects to be placed in any desired position by means of a heated needle under a dissecting microscope. Small objects may be embedded in the following manner: A hole is melted in the end of a cylinder of paraffin by means of a piece of wire which has been heated in the flame of a spirit-lamp. The object is then pushed into the melted paraffin and placed in the desired position. The *Watch-glass Method*, which is unequaled for small objects, is as follows: Melt paraffin in a watch-glass, place the object in it, and allow it to cool; then cut out a block containing the object, or the whole mass of paraffin may be turned out by rapidly warming the bottom of the watch-glass. (3) *Pith.* A cylinder of pith is halved longitudinally, a cavity corresponding to the object to be embedded is made by scooping out the inner face of either half-cylinder and the object is placed between them. The cylinder is then pushed into a microtome well and moistened with alcohol, so that the pith may swell and firmly enclose the object. *Heidenhain's Modified Method.* Fix the object in a supersaturated solution of corrosive sublimate made in a one-half per cent. solution of common salt. After one-half hour's immersion, transfer to 95 per cent. alcohol, where it should remain 24 hours. Clear in bergamot-oil and embed in paraffin. Section, remove paraffin by xylol or benzine, and place in 95 per cent. alcohol. Then treat 15 minutes with pure tincture of iodin, to remove the excess of corrosive sublimate, and place again in 95 per cent. alcohol. The sections are now ready for staining. **Interstitial Embedding.** Practically, this is a process of hardening. The natural cavities of the object are filled with the embedding mass, and each separate anatomic element surrounded with the supporting substance, thus securing firmness and at the same time ensuring natural relations of all structural details. The materials mainly used are *Paraffin*, for small sections, and *Celloidin*, or collodion, for large sections. **Embedding Masses.** The most generally useful is **pure paraffin,** melting at 45° C. **Soap Masses** are very penetrating, and have the advantage of being transparent and of cutting better than

paraffin. A transparent soap is prepared as follows: 25 gm. of shavings of sodium stearate soap, and 100 c. c. of 96 per cent. alcohol are heated in a retort over a water-bath until the soap is dissolved, and then filtered. The filtrate should be transparent. If a drop poured into a watch-glass solidifies into a white mass, add water in small quantities until the tested drop remains pellucid. **Gelatin Masses** are used for tissues that have not been dehydrated. The objects are prepared by penetration with water, instead of alcohol or a clearing agent. After the mass is cooled, it may sometimes be cut at once, but it is usually necessary to harden it, which may be done by freezing or by treating for a few days with 90 per cent. alcohol or with chromic acid, or for a few minutes with absolute alcohol. **Brunotti's Cold Gelatin.** Dissolve with heat 20 gm. of gelatin in 200 c.c. of distilled water, filter, and add 30 c.c. of glacial acetic acid and 1 gm. of corrosive sublimate. Soak the object in a small quantity diluted with two or three volumes of water, embed in the undiluted mass, and harden in alcohol. This process does not require heat. **Gerlach's Gelatin.** Gelatin 40 gm., saturated solution of arsenious acid 200 c.c., glycerin 120 c. c. Clarify with white of egg. Objects are prepared for embedding by a bath of one-third glycerin. **Klebs' Gelatin** (*Glycerin-jelly*). A concentrated solution of isinglass mixed with half its volume of glycerin. **Celloidin** is stated to be a preparation of pure pyroxylin. It is non-explosive, and is soluble in ether and alcohol. Collodion, prepared by dissolving guncotton or soluble cotton in equal parts of 95 per cent. alcohol and sulphuric ether, is in every way as good as celloidin and considerably cheaper. Celloidin should be used in thin (2 per cent.) and in thick (6 per cent.) solutions. The object is thoroughly dehydrated in absolute alcohol, placed in a mixture of equal parts of ether and alcohol for 12 to 24 hours, or longer if the object be large. It is then placed for 24 hours in a thin solution of celloidin, 8 gm. in 100 c.c. each of alcohol and ether, and transferred from this to a thick solution of celloidin, 8 gm. in 50 c.c. each of alcohol and ether. Select a cork or piece of soft, dry wood, and dip it in the thick celloidin solution; when dry, place the prepared tissue upon it and drop the thick celloidin solution upon this with a pipet until it is embedded in a jelly-like mass. Blocks or cylinders of glass or vulcanized fiber serve better than cork as they sink in the liquids used. Harden in 90 per cent. alcohol, and preserve in 70 per cent. alcohol. When making sections, keep the knife and section wet with alcohol. Apáthy advises previous smearing of the knife with vaselin, as it cuts better and is protected from the alcohol. Use bergamot-oil to clear. Sections may be kept in from 60 per cent. to 80 per cent. alcohol. **Fisk's Castor-oil and Oil of Thyme Method.** The mixture consists of red oil of thyme 3 parts, castor-oil 1 part, and is used only with collodion-embedded objects. The castor-oil makes the collodion slightly flexile, so that the sections do not move so readily on the slide, when the balsam is applied. There is no true action as a fixative, for the collodion is not dissolved in any way, only softened and toughened. The edge of the knife is preserved for a longer time. The castor-oil gives more "body" to the mixture, making a good lubricator, and floats the sections readily. Very thin sections can be obtained by absorbing the oil and coating the object with a thin layer of 1 per cent. collodion before cutting each section. This coating is also useful if there is any tendency for the section to crumble or tear. The mixture is highly antiseptic, and specimens may be left in it indefinitely, to advantage and without shrinking. If the objects have been stained *in toto*, the process is very short. If section-staining is desired, the sections after their transfer to the slide, should have as much of the superfluous oil removed as possible and a few drops of ether-alcohol (equal parts of each) are poured over them to fasten them to the slide. The sections are then put into 95 per cent. alcohol to dissolve out any oil that may be left, and passed through from 70 per cent. to 35 per cent. alcohol, to water, stained, carried back through the same grades and mounted as usual. This is one of the best and most useful of methods. **Von Koch's Copal Method.** The object is dehydrated in alcohol, placed in a thin solution of copal in chloroform, made by triturating small fragments of copal in a mortar with fine sand, pouring on chloroform, and filtering The solution is slowly evaporated by heating. When concentrated enough to draw out into threads that are brittle, the object is removed and allowed to dry. Sections are cut by means of a fine saw, rubbed smooth on one side and with the smooth side down, are cemented on a slide. When the cement has hardened, the sections are rubbed until they are of the requisite thinness, washed in water, and mounted in balsam. This method is used for the study of hard and soft structures in their natural relations. **Kultschizky's Celloidin-paraffin Method.** After the object is taken from the ether-and-alcohol bath it is put into celloidin-solution for 24 hours, then into origanum-oil, then into a mixture of origanum-oil and paraffin which has been heated to 40° C., and finally into melted paraffin. The method is especially adapted for delicate specimens. Ryder uses chloroform instead of oil of origanum. **Joliet's Gum-and-glycerin Method.** Pure gum arabic is dissolved in water to the consistency of a thick syrup. To a little of this solution in a watch-glass add 6 to 10 drops of glycerin, and mix. Embed the object, previously soaked in glycerin, in the mass in the watch-glass and leave to dry for several days. Cut dry, dissolve the gum from the sections in water, and mount in glycerin. This mass has the advantage of being transparent. **Photoxylin.** A substance having the appearance of cotton-wool and chemically closely allied to celloidin. It dissolves in a mixture of ether and alcohol, equal parts, and is used in the same way as celloidin. It has the advantage of forming a mass that remains transparent. **Syrup-and-gum Congelation-mass.** Hardened brain-tissue previously soaked in water, is well soaked in a syrup made of double refined sugar 2 ounces, water fluid-ounce. Wash the superfluous syrup from the surface and put into ordinary mucilage an hour before cutting. Embed in the freezing microtome and float the sections into water (Hamilton). Cole advises parts of syrup and 5 parts of gum for the brain spinal cord, retina, and all tissues liable to tear easily. The gum is made by dissolving 4 ounces of gum acacia in 6 ounces of water; the syrup, by boiling 1 pound of loaf-sugar in 1 pint of water Add 5 gr. of carbolic acid to each ounce of the medium.

Collodionization of Sections. It sometimes happens that objects, such, for example, as ova, are too delicate and too easily broken to be cut in the ordinary way it is necessary to cover the exposed surface before cutting each section with a thin layer of collodion or celloidin. The collodion should be of such consistency, from ½ per cent. to 1 per cent. solution, that when applied in a thin layer to a surface of paraffin it will dry in two or three seconds without leaving a shiny surface.

EMBRYOLOGIC METHODS.

Artificial Fecundation. This practice can be easily carried out with the *Amphibia anura*, *Teleostea*, *Cyclostomata*, *Echinodermata* and many *Vermes* and *Cœlenterata*. In the *Amphibia*, the ova should be extracted from the uterus, placed in a watch-glass, and treated with water in which the testes or vasa deferentia of the male have been teased. The spermatozoa of fish rapidly lose their vitality in water, hence, the milt must be added immediately to the spawned ova, then a little water added, and the whole placed in a suitable hatching apparatus with running water. Artificial fecundation of *Invertebrates* is performed in a like manner, and can sometimes be accomplished under the microscope. The penetration of the spermatozoön and some of the subsequent changes can thus be observed. **Amphibia.** Ova of amphibia are covered with thick coats of albumin, which must be removed in their preparation for section-cutting. Whitman places the fixed eggs in a 10 per cent. solution of sodium hypochlorite, diluted with 5 or 6 volumes of water, until they can be shaken free. Blochmann recommends eau de Javelle (see *Bleaching Fluids*), diluted three or four times with water, and agitates the eggs, previously fixed in Flemming's solution (see *Fixing Fluids*), for from 15 to 30 minutes. Preserve the ova in alcohol. *Axolotl.* These ova have an albuminous layer separated from the yolk by a liquid which is not coagulated by reagents. . Place them for a few hours in picrosulphuric acid, then pierce the inner chorion, and gently press out the ova. Harden in alcohol. Stain in the mass with borax-carmin or Henneguy's acetic acid alum-carmin, and embed in paraffin or celloidin. Collodionize the sections. *Rana.* Place the ova in water heated to 90°–96° C. for 5 to 10 minutes. Incise the albuminous coverings, and remove the ova under water. Place them in 0.5 per cent. osmic-acid solution or in alcohols of 70, 80, and 90 per cent. *Salamandra.* Fix in warm, platinum-chlorid solution (0.25 to 0.3 per cent.) for 3 to 24 hours, according to the size of the embryo. Wash in water, and pass through successive alcohols. Stain sections on the slide. *Triton.* Incise the several concentric coats of albumin which surround the ovum ; remove, and place it in Kleinenberg's fixing solution (see *Fixing Fluids*). Or, put the eggs in a solution of acetic acid 2 per cent., chromic acid 0.5 per cent., and after ten hours incise the membranes and turn the embryos out. Finally, pass through successive alcohols. **Aves.** *Superficial Examination.* During the first 48 hours of incubation of the egg (hen's) the blastoderm is always uppermost. To open the egg, place it in a dish and cover it with a 0.75 per cent. sodium-chlorid solution at a temperature of 38° C. Break the shell at the broad end over the air-chamber, to keep this end from tilting up. The shell is then filed through at one point, and the opening enlarged with forceps. Remove the upper half of the shell, bit by bit. Then remove the shell-membrane in the long axis of the egg, and the yolk and embryo will come into view. A quicker but less satisfactory method is to break the egg across and pour the yolk and white into the sodium-chlorid solution. Maintain the salt-solution during the period of examination at 38° C. over a sand-bath. *Duval's Orientation Method.* To obtain sections of any desired direction of the ova of *Aves*, before the development of the primitive streak, Duval proceeds as follows. During incubation the embryo is generally lying on the yolk, so that the large end of the egg is to its left, and the small end to its right; hence, the position of the blastoderm can be marked out. Construct a triangular, bottomless box from a strip of paper 5 mm. wide and 50 mm. long; lay this on the yolk enclosing the cicatricula in such a position that the base corresponds to the anterior region of the embryo. By means of a pipet fill the paper triangle with 0.3 per cent. osmic-acid solution. When the preparation becomes dark, place the whole egg in a weak chromic-acid solution, remove the white, and place the rest in a fresh chromic-acid solution for several days ; a black triangle will mark the position of the cicatricula, and may be cut out with scissors and scalpel. *Examination of an Opaque Object.* Place the blastoderm on a slide, and dry just sufficiently to make its edges adhere to the glass; immerse in a solution of picric acid for two or three hours, and examine with a simple lens. *Examination and Preservation in toto.* Open the egg in salt-solution, pierce the blastoderm at the outer margin of the vascular area with a fine scissors, and carry the incision completely around. Then place the excised blastoderm in a watch-glass, and remove the vitelline membrane by gentle shaking with a needle. The blastoderm can then be placed on a slide, surrounded by a ring of putty, covered with salt-solution and a cover-glass, and examined under the microscope. Keep the slide at about 38° C. Permanent preparations of embryos in toto, up to about 50 hours, may be made by treatment with osmic acid, 1 per cent. After separation of the vitelline membrane, hold a drop of the acid, by means of a pipet in contact with the embryo for 15 or 20 minutes. Then mount in a cell in balsam. *Development of the Blood-vessels.* Obtain blastoderms of 30 or 40 hours, immerse in gold chlorid, 0.5 per cent., for 1 minute, wash in distilled water, mount in glycerin, and examine. This method renders the nuclei and protoplasmic processes distinct. Or, immerse the blastoderm in 1 per cent. solution of potassium bichromate for 1 day, and mount in glycerin. Or, use a 0.5 per cent. solution of osmic acid for from ½ to 1 hour, then place in absolute alcohol for 1 day, and mount in glycerin. *Gerlach's Window Method.* Remove the shell at the small end of the egg, withdraw a little white with a pipet; the blastoderm will change its position and appear under the window thus made. Paint the margins of the window with gum-mucilage, and build a small, circular wall of cotton-wool on it, cover with a cover-glass, and ring with gum. The progress of development can be followed thus to the fifth day. *Preparation.* During the first 24 hours of incubation the blastoderm can be separated from the yolk only with extreme difficulty, so that they must be fixed together. Open the egg in salt-solution, then lift so that the blastoderm is above the surface of the fluid, and treat it with a fixing solution dropped from a pipet; then remove it by a circular incision about its margins, free the vitelline membrane, and place the blastoderm in a hardening fluid. Dehydrate in absolute alcohol, clear in chloroform, and embed in paraffin. **Segmentation.** To observe this process, it is necessary to obtain the eggs from the oviduct of the hen. The yolk must be hardened as a whole, preferably in chromic acid. **Fol's Method for Reconstruction of Embryos from Sections.** Before cutting sections of the object, make an outline drawing of it, under the magnification to be employed for the reconstructed drawing, and in a plane perpendicular to that of the intended sections. Then cut the sections, and make drawings of all under the same magnification used for the sagittal drawing. Trace over the sagittal drawing a series of equidistant parallel lines corresponding to the sections cut. (If the sections are $\frac{1}{100}$ mm. thick and the drawing is magnified 100 times, the lines should be 1 mm.

apart.) The outline drawing is now to be filled in with the details of the drawings of the sections. This is accomplished as follows: A piece of glass, of the size of the intended drawing, is coated with gelatin and ruled with a series of close, parallel lines with differently colored inks, the colors recurring in regular order. Cut the plate in two equal parts on a line perpendicular to the ruled lines. Lay one plate on the outline drawing so that its cut edge covers the line corresponding to the first section to be filled in, then lay the other plate on the drawing of the sections in such a position that the limit of the drawing corresponds to the same colored lines that cover the limits of the outline drawing. Trace on the plate that covers the drawing of the section the outline of the internal organs. Lay it against its fellow on the outline drawing, making the lines correspond. Mark off the outlines of the internal organs. Repeat this operation for each section and connect the series of dots so made and the drawing is completed. Another method of reconstructing objects from microscopic sections is that suggested by **Born.** By the aid of the camera, the outlines of the sections are transferred to wax plates, which are then cut out so as to correspond, in outlines as well as dimensions, to the sections equally magnified in all three directions. With plates thus prepared, it is only necessary to put them together in the proper order to obtain a complete model. **Mammalia.** For the study of the early stages, the ova must be obtained from the tubæ (of a rabbit or other small animal) several hours after copulation. Dissect out the tubæ and cornua of the female, allow them to cool, and wait for the muscular contraction to cease. Dissect off all the peritoneal investment, and slit the tubæ open longitudinally. The folds of the tubal mucosa are spread out by means of needles and forceps, and the ova searched for by means of a magnifying glass. The ova are best examined in the peritoneal fluid of the mother or in the aqueous humor, blood-serum, or artificial serum. Kölliker injects Müller's fluid or a weak osmic-acid solution into the oviduct, and collects the fluid that runs out in a series of watch-glasses, which are examined for the ova under the microscope. During the fourth, fifth, and sixth days after copulation the ova are free in the uterine cornua, and are easily visible to the eye, and may be obtained in a like manner as from the tubæ. When the ova become fixed in the uterus they are easily distinguished by the peculiar aspect of the cornua in which there are small elevations at the site of each ovum. To obtain the ova it is necessary to incise the cornua transversely into as many segments as there are eminences, care being taken to have the ova in the center of the segments. The segments are then fixed to the bottom of a dissecting dish by pins, with the mesometrial surface downward. Fill the dissecting dish with serum, Müller's fluid, or Kleinenberg's picro-sulphuric-acid, or nitric-acid solution. The ovular eminence is then incised longitudinally and the ova carefully freed. *Preparations.* To make permanent preparations of the various stages of fecundation and segmentation, the living ovum is placed in a 1 per cent. solution of osmic acid, on a slide, then into Müller's or Kleinenberg's solution. In an hour the solution is changed and the whole is placed in a moist chamber for two or three days. It is then treated with increasing strengths of glycerin, and mounted in pure glycerin, acidulated with formic acid; or ova may be stained with picro-carmin after treatment with osmic acid and careful washing. To demonstrate the blastoderm cells, treat the living ova in a ⅓ per cent. solution of argentic nitrate for ½ to 3 minutes, then place in distilled water and expose to the light. These specimens cannot be rendered permanent; they ultimately become black. The blastodermic vesicle can be opened with a fine needle after 3 days, and the blastoderm washed, stained, and mounted in glycerin or balsam, or prepared with gold chlorid. For embryonic areas and the more advanced embryos, place ova in a 0.5 per cent. osmic-acid solution until quite dark (about 1 hour), then treat with successive alcohols for several hours. For sections, Kölliker fixes the ova in osmic acid, and v. Beneden treats them for 24 hours with 1 per cent. chromic-acid solution, washes thoroughly, and carries them through successive alcohols. *Piersol* recommends Kleinenberg's solution or, for young stages, Altmann's 3 per cent. nitric acid. Stain small embryos with borax-carmin or Delafield's hematoxylin (see *Staining Reagents*), and for larger ones Henneguy's acetic acid alum-carmin gives the best results. For sections, embed in paraffin and mount in balsam.

EXAMINATION OF THE BLOOD.

Alkalinized Urine. Used in the enumeration of blood-corpuscles. Saturate a quantity of urine with borax, filter, and dilute until its sp. gr. is 1020. The contour of the cells remains unchanged in this medium. **Auerbach's Method** *for Amphibian Red Blood-corpuscles.* By fixing the blood-film on the cover-glass by means of a saturated solution of picric acid or a mixture of 0.1 to 0.25 per cent. solution of corrosive sublimate, 1 per cent. solution of boric acid, 1 per cent. sodium chlorid, or 2 per cent. to 10 per cent. ammonium chromate, certain differentiations of the corpuscle are possible. With picric-acid fixation and subsequent staining with eosin and anilin-blue, the cell-wall stains blue, while the adjacent protoplasm within stains red. The protoplasm may further be separated into a cortical and a medullary layer, the former containing the hemoglobin. In picric-acid preparations the cortical layer shows a beautiful network, while the medullary part is clear, like a large hole. In sublimate preparations the medullary part has dark granules. **Blood-platelets.** Ligate the finger and prick the pad. Wipe off the first blood that exudes, and touch the apex of the second drop with the cover-glass; drop it gently on the slide, do not press it on, and platelets will have their faces, not their edges, presented to view. Stirling recommends that the finger be pricked through a drop of normal saline solution containing methyl-violet (0.75 cm. in 1000 c.c.). The colorless corpuscles are stained light-blue, the platelets dark-violet or dark-blue. **Ehrlich's Methods.** *Ehrlich's Granules.* Dry a cover-glass preparation of blood for several hours at 120° C., or rapidly over the flame of a Bunsen-burner. Stain 1 hour or longer in eosin-glycerin; wash in water, dry, and mount in balsam. Or, stain in glycerin, 30 c.c., and 2 gm. each of aurantia, indulin, and eosin. If the eosin-indulin-glycerin solution be used the δ-granulations are purplish-red and the nuclei bluish-black. 1. *Oxyphilous*, or *Eosinophilous Granules.* Cover-glass preparations of blood are fixed by dry heat, as indicated, or by chemic reagents corrosive sublimate, or osmic acid. The preparation is then floated on a 1 per cent. aqueous solution of eosin, a quarter to one minute. A trace of acetic acid added to the fluid causes the specimen to over-stain rapidly, and the excess of dye is removed from all parts of the cells, except the oxyphilous granules, by dipping the cover-glass into a very dilute solution of sodium carbonate. 2. *Neutrophile Granules.* These are the ε-granulations of Ehrlich. They are stained only by neutral dyes, *e. g.*, acid fuchsin, fuchsin-S, methylene-blue. 3. *Basophilous Granules.* These are

best stained with Lœffler's methylene-blue. If the specimen has been stained with eosin, and the excess washed out, a second or two suffices for the methylene-blue stain. Both oxyphilous and basophilous granules may be stained in the same specimen by preceding the blue stain with eosin. *Ehrlich's "Mastzellen."* 1. *In blood* these cells are stained by a mixture composed of water, 100 c.c., absolute alcohol, saturated with dahlia, 50. c.c., glacial acetic acid 10 to 12.5 c.c. The leukocytes are stained blue, the granules have a "metachromic red-violet tint," and correspond to the γ-granulations. 2. In tissues: a small piece of fresh tissue, or a section previously hardened in alcohol, is placed in a watch-glass containing anilin-water and 20 to 30 drops of a concentrated alcoholic solution of dahlia or gentian. Heat until vapor begins to arise, stain 24 hours, wash in acid-alcohol until nearly decolorized, dehydrate in absolute alcohol, clear, and mount. Nuclei of the cells are red, the granules in the protoplasm of the granular cells blue. The tissue may also be stained with lithium-carmin. **Fixing of Blood.** *Garlinski's Modification of Gaule's Sublimate Method.* A small pipet is filled with the indifferent fluid used in counting blood-corpuscles. A drop of blood is drawn into the pipet, where it mixes with the indifferent fluid. A little of this mixture is placed on a slide, and a concentrated watery solution of corrosive sublimate poured upon it. After a few minutes the morphologic elements of the blood become attached to the glass without alteration of form. The specimen is then washed with water, treated for some minutes with absolute alcohol, and again washed with water, when it is ready for staining. (*Grundzüge der allg. Pathologie d. Zelle. S. M. Lukjanow, Leipzig, 1891.*) **Garlinski's Method.** Stain for 2 minutes in Böhmer's hematoxylin; wash in 1 per cent. aqueous solution of alum and distilled water; then stain in 1 per cent. aqueous solution of nigrosin for a few seconds; wash and stain in 1 per cent. aqueous solution of rose bengal 5 minutes; wash and stain in anilin-yellow, 1 per cent. alcoholic watery solution, 5 minutes. Wash, dehydrate, mount in balsam. Cell-protoplasm is yellow; nuclei are blue or green; any parasites in the corpuscles are stained by the rose bengal. **Hayem's Solution.** Used for fixing blood-corpuscles of both animals and man. Dissolve in 200 c.c. of distilled water, 0.5 gm. of corrosive sublimate, 5 gm. of sodium sulphate, and 1 gm. of sodium chlorid. Run directly from a blood-vessel 1 part of blood to 100 of the fluid. The corpuscles will be fixed in about 24 hours. Decant the supernatant fluid, and wash the corpuscles in water to remove the salts. **Hemin Crystals.** Place a particle of dried blood on a slide, add a crystal of common salt and two drops of acetic acid, heat over the flame of a spirit-lamp until it steams, and allow it to cool. The crystals may be preserved by removing the acid and mounting them in glycerin-jelly or balsam. **Leukocytes.** A cover-glass preparation of blood is floated on a solution of eosin, washed and floated on a solution of hematoxylin, washed, dehydrated, and mounted. Methylene-blue or methyl-violet may be used in place of the hematoxylin. **Martinotti and Resigotti's Method.** Harden small pieces of tissue in absolute alcohol, and color the sections in a watery solution of safranin-O; decolorize in 2 parts of a 1 per cent. solution of chromic acid to 8 or 9 parts of alcohol. Wash in absolute alcohol, clear in oil of bergamot, and mount in balsam. Only the fibrils of the nuclei are stained. **Rollett's Method of Preparing Hemoglobin Crystals.** Defibrinated blood is placed in a platinum capsule on a freezing mixture, frozen, and then thawed. The lake-colored blood is then poured into a plate until it forms a stratum not more than 1½ mm. in thickness and allowed to evaporated slowly in a cool place. **Sectioning Blood.** 1. *Biondi's Method.* Fix two drops of blood in 5 c.c. of 2 per cent. osmic-acid solution from one to 24 hours, and then mix the blood and osmium solution with agar-agar jelly melted at 35° to 37° C. When cool, harden in 85 per cent. alcohol. After a few days, or when the mass has acquired sufficient consistence, embed in paraffin. The sections are treated according to the usual methods, and may be stained with methyl-green, methylene-blue, fuchsin, or safranin; also, double-stained with methyl-green and eosin. 2. *Foà's Method.* Coagulated blood or small pieces of hematopoietic organs are fixed in a solution of 2 gm. of corrosive sublimate in 100 gm. of Müller's fluid. The latter fixes the hemoglobin, the sublimate fixes structures of protoplasm and nuclei. Embed in paraffin, section, and stain 1 to 3 minutes in a mixture of Böhmer's hematoxylin 25 gm., 1 per cent. aqueous alcoholic solution of safranin 20 gm., and distilled water 100 gm. Wash in water, then in a weak alcoholic solution of picric acid, dehydrate, and mount in balsam. **Weigert's Method for Fibrin.** Make celloidin sections, and stain one minute in Weigert's fibrin stain: 5 per cent. solution of gentian-violet 4.4 c.c., 96 per cent. alcohol 6 c.c., anilin-oil 1 c.c. Dry with unsized printing paper, and add a drop of Gram's solution saturated with iodin. Most of the stained parts are decolorized. Remove the iodin with printing paper; clear in equal parts of anilin-oil and xylol, renewing it until all the water is removed. The water gives the section a white appearance. Dry with filter-paper, wash well with xylol, and mount in xylol-balsam. **Zenker's Method.** For red blood-corpuscles in tissues. The tissue is taken as fresh as possible, placed in Müller's fluid for 24 hours, in which it turns yellow. Longer immersion is detrimental. Wash about two hours in running water; harden in 50, 70, and 96 per cent., and, lastly, in absolute alcohol. Embed in paraffin. Celloidin sections do not stain as well. Stain on the slide in the Ehrlich-Biondi triple mixture (see *Staining Reagents*) for 24 hours; rinse half a minute in running water, and decolorize in 96 per cent. alcohol, until clouds of color no longer appear; dehydrate in absolute alcohol. The red blood-corpuscles appear a brilliant golden-yellow; the nuclei of all cells have a violet or green tinge; the chromatin network and nucleoli are invisible. Weigert's fibrin stain may be used in the same way, but not after prolonged immersion in Müller's fluid. (*Virch. Arch.*, 1894, Bd. 135. *Folge xiii, Bd. v.*)

EXAMINATION AND PRESERVATION MEDIA.

Indifferent liquids, glycerin, and resinous preparations used in examining, preserving, and mounting tissues and organisms. I. INDIFFERENT LIQUIDS. Media having a composition and density similar to that of the plasma which constitutes the natural *habitat* during life of the object they are intended to preserve, and therefore, supposed to have no action on the tissues. To be "indifferent," these liquids must possess such a density and such a proportion of crystalloids and colloids as will reduce osmotic processes to a minimum. **Alum Sea-water.** A saturated solution of alum in sea-water is useful for the study and preservation of the tissues of marine organisms. **Aqueous Humor.** This may be obtained from a freshly excised ox's eyeball. Puncture the cornea with a slender, triangular knife, and collect the aqueous humor as it exudes. If only a small quantity is desired, puncture the excised eye of a

frog with a fine capillary pipet. **Blood-serum.** The blood is allowed to clot, and in a day or two the serum is poured off, and any red corpuscles removed from it by means of a centrifugal apparatus. This fluid does not keep, and must be fresh for use. Iodin is sometimes added, forming *iodized serum*. **Chloral.** One, 2.5, and 5 per cent. aqueous solutions are recommended by Munson, Brady, and Landowsky respectively. **Frey's Artificial Iodized Serum.** To a filtered mixture of white of egg 15 gm., sodium chlorid 0.2 gm., distilled water 135 c.c., add 3 c.c. of tincture of iodin. Filter through flannel, and add a little iodin to the filtrate. **Fruit-juice** requires no preparation beyond filtering. It may be iodized. **Iodized Serum.** To the fresh amniotic liquid of a sheep or cow add iodin crystals. Keep the solution in a stoppered bottle and shake frequently. It should acquire a dark-brown color. **Kronecker's Artificial Serum.** Sodium chlorid 6 gm., sodium hydroxid 0.06 gm., distilled water 1000 c.c. **Normal Salt-solution.** Sodium chlorid from 6 to 7.5 gm., distilled water 1000 c.c. Used in the study of living structures. **Physiologic Salt-solution.** See *Normal Salt-solution*. **Syrup.** A good medium for examining fresh structures, and prepared by dissolving equal parts of loaf-sugar in water by boiling. The addition of 1 per cent. of carbolic acid or chloral will preserve it from mold. **Water.** Structures fixed in osmic or chromic acid, or a solution of a metallic salt, may be examined in water, which has the advantage of having a low index of refraction. A little thymol will preserve it from mold. **White of Egg** needs only to be filtered to prepare it for use. It may be iodized. II. GLYCERIN AND OTHER FLUID MEDIA. **Acidulated Glycerin.** Glycerin 50 c.c., glacial acetic acid or formic acid 1 c.c., distilled water 50 c.c. Used after staining in borax or lithium-carmin, previous to mounting in glycerin. **Beale's Glycerin-jelly.** Equal parts of pure glycerin and gelatin, soaked, melted, and clarified. **Brandt's Glycerin-jelly.** Melted gelatin 1 part, and glycerin 1.5 parts. Filter through spun glass, and add a few drops of carbolic acid to the filtrate. For mounting, melt a little on the slide, having previously soaked the object for a short time in the medium warmed by gentle heat. **Calberla's Liquid.** One part each of glycerin, alcohol, and water. A valuable examination fluid. For very delicate objects, Lee recommends the same formula, with two parts of water instead of one. **Calcium Chlorid.** A 50 per cent. or saturated solution is used. The addition of a little camphor will preserve it. As this salt is very hygroscopic, the mount need not be closed at once. **Carbolic Acid.** A 1 per cent. solution is used as a mounting-medium. **Carnoy's Solutions.** 1. A concentrated aqueous solution of methyl-green containing 1 per cent. of acetic acid and 0.1 per cent. of osmic acid, used in the study and preservation of fresh tissues. It has a selective action on nuclei. 2. Powdered tannin 0.5 gm., water 100 c.c. **Castor-oil.** Recommended by Grenacher, on account of its low refractive index, for certain delicate tissues (sections of eyes of *Cephalopods*), on the supposition that it would augment visibility for the more refractive elements of these tissues. **Copper Acetate.** A solution of 1 gm. of copper acetate and 4 gm. of mercuric chlorid in 250 c.c. of glycerin and 1 c.c. of glacial acetic acid is used in preserving and mounting green algæ. **Creasote.** As a mounting-medium, a 5 per cent. aqueous solution is used. **Deane's Glycerin-jelly.** Dissolve 30 gm. of gelatin in 60 gm. of water, and add 120 gm. of glycerin. This must be used warm. **Fabre-Domergue Glucose Medium.** Dissolve glucose in warm water and dilute to 25° of the areometer (sp. gr. 1.1968). To 1000 parts of this solution add 200 parts of methyl-alcohol, 100 parts of glycerin, and camphor to saturation. Neutralize by the addition of a little potash or soda. This medium is said to preserve, unchanged, nearly all animal pigments. **Farrant's Solution** (*Hamilton*). Make a saturated solution of arsenious acid in water by boiling, let it stand twenty-four hours, and filter. Then to equal quantities of water, glycerin, and arsenious acid solution add picked gum arabic until a thick, syrupy fluid is obtained. In about a week, filter slowly through frequently changed filter-paper. **Fol's Glycerin-jellies.** 1. Melt together one volume of Beale's jelly and one volume of water, and add 2 to 5 per cent. of carbolic acid. 2. Gelatin 30 parts, water 70 parts, glycerin, 100 parts, alcoholic solution of camphor 5 parts. 3. Gelatin 20 parts, water 150 parts, glycerin 100 parts, alcoholic solution of camphor 15 parts. **Gage's Fluid.** Mercuric chlorid 0.5 gm., salt 4 gm., white of egg 15 c.c., water 200 c.c. Mix thoroughly and filter. Used in the study of ciliated cells and red blood-corpuscles. **Gannal's Solution.** A preserving medium consisting of aluminum acetate 1 part, and water 10 parts. **Gilson's Fluid.** Mercuric chlorid 0.15 gm., 15 per cent. acetic acid 2 c.c., 60 per cent. alcohol 60 c.c., and water and glycerin each 30 c.c. An admirable medium for the study of fine cellular detail in well-fixed tissues. **Glycerin.** As a medium for examination and mounting, glycerin is usually diluted with water, which lowers its index of refraction, often an advantage from an optic point of view, on account of the increased visibility it gives to many structures. On the other hand, undiluted glycerin has the advantage of being a more efficacious preservative. Objects mounted in glycerin should be subjected to a prolonged preliminary soaking in glycerin of gradually increasing strength; if done on the slide, and treated with fresh glycerin daily, the edges of the cover-glass should be luted to make the preparation air-tight, glycerin being so hygroscopic as to rapidly diminish in strength when exposed to air. To facilitate the removal of the cover-glass, warm the slide gently; this treatment will also counteract the shrinking action of glycerin on delicate tissue-elements and restore them to their normal contour and dimensions. Glycerin, being a solvent of calcium carbonate, is not a suitable medium for the preparation of calcareous structures. By dissolving glycerin cadmium chlorid, chloral, and certain other substances, its index of refraction may be raised about that of crown-glass, which greatly augments clearing action, and allows the full aperture of homogeneous objectives to be brought to bear on the object. A saturated solution of zinc sulphocarbolate in glycerin will raise its index of refraction from 1.46 to 1.501, and is prepared by taking equal parts by weight of Price's glycerin and zinc sulphocarbolate, and boiling for an hour or more. Filter while hot. **Glycerin and Alcohol.** Useful for bringing delicate objects gradually from weak into pure glycerin. Glycerin 1 part, alcohol 1 part, water 2 parts. **Glycerin-jelly.** Soak in 150 c.c. of distilled water, 25 gms. of gelatin for two hours, and add 3 c.c. of carbolic acid and 1 c.c. of glycerin; heat for fifteen minutes and filter through spun glass. Wrap the cork of the bottle in which the jelly is preserved in linen dipped in dilute carbolic acid. For use, melt it in hot water, place a drop on the section, upon which gently press a cover-glass. **Glycerin and Gum.** Useful when the arsenious acid of Farrant's medium is objectionable. To chloroform-water (1 : 200) 200 c.c., gum acacia 1 gm., and glycerin 100 c.c. Dissolve the gum in chloroform-water, with frequent stirring and with

heat; add the glycerin. Mix and filter through the best Swedish filter-paper, on which has been deposited a thin layer of talc. **Glycerin and Formic Acid.** This is especially used for picrocarmin preparations, and is made by adding formic acid to dilute glycerin—1 per cent. **Goadby's Fluids.** *First formula:* Bay-salt (coarse sea-salt) ℥iv, alum ℥ij, mercuric chlorid 2 grs., boiling water 1 qt. This fluid, diluted with an equal volume of water, is recommended by Schultze for preserving *Medusæ*, *Echinodermata*, *Entomostraca*, *Polythalmia*, *Polycystina*, and *Annelid Larvæ*. He advises the subsequent use of glycerin to secure transparency. *Second formula:* Bay-salt, ℥viij, mercuric chlorid gr. 2, water 1 qt. The absence of the alum renders this fluid suitable for the preservation of objects containing calcium carbonate. **Häntsch's Liquid.** Glycerin 1 part, alcohol 3 parts, water 2 parts. **Harting's Fluid.** One part of mercuric chlorid to 200 to 400 of water. It is recommended for preserving blood-corpuscles, nerve-tissue and muscle-tissue, etc. **Hayem's Mounting-media.** These are solutions of gum with chloral, for objects stained with carmin or hematoxylin, and of gum with potassium acetate, for objects stained with anilin colors, and are prepared as follows: Fill a tall 60 c.c. glass two-thirds full with gum arabic, and add either a solution of chloral containing 5 to 10 per cent. of glycerin or of potassium or ammonium acetate. The gum with frequent shaking dissolves in a few days, and the resulting syrupy fluid is then filtered. **Iodin.** Liquor iodi (Br. Ph.) 100 c.c., distilled water 300 c.c., glycerin 200 c.c., gum arabic 260 gms. Mix and dissolve without heat; filter through Swedish paper coated with a thin layer of talc. Used in mounting tissues stained with iodin. **Jæger's Liquid.** Glycerin and alcohol each 1 part, sea-water 10 parts. **Kaiser's Glycerin-jelly.** Soak one part of gelatin for 2 hours in 6 parts of distilled water, then add 7 gm. of glycerin and 1 gm. of carbolic acid for every 100 gm. of the mixture. Warm for 10 to 15 minutes, stirring constantly until the flakes produced by the acid have disappeared. Filter while warm through spun glass laid wet in the filter. For use it must be warmed. **Klein's Dammar Lac.** Dissolve in 2 oz. of turpentine, 1½ oz. of gum dammar, and filter. Dissolve ½ oz. of gum mastic in 2 oz. of chloroform, and filter. Mix the two solutions and filter again. **Langerhans' Gum and Glycerin.** A modification of Farrant's medium. Gum arabic 5 parts, in water 5 parts; after 12 hours add glycerin 5 parts, and 5 per cent. aqueous solution of carbolic acid 10 parts. Used in preserving marine animals. **Lawrence's Glycerin-jelly.** Soak a quantity of Nelson's gelatin for 2 or 3 hours in cold water. Decant the superfluous water, and melt the gelatin by the aid of heat. To 8 parts of the gelatin, when it has cooled, but is still fluid, add 1 part of white of egg; boil until the albumin coagulates and the gelatin is clear; filter through flannel, and to 8 parts of the filtrate add 6 parts of a mixture of 1 part of glycerin and 2 parts of camphor-water. **Levulose.** This substance is non-crystallizable, and is recommended as a preservative of carmin and anilin stains (hematoxylin partially fades in it). Objects may be brought into it from water. The index of refraction is somewhat higher than that of glycerin. **May's Fluid.** Glycerin 60 c.c., 1 per cent. arsenic acid 10 c.c., methyl-alcohol 10 c.c., water 20 c.c. **Methyl-green.** See *Carnoy's Solution*. **Meyer's Salicylic Vinegar.** A solution of one part of salicylic acid in 100 parts of pyroligneous acid. For *Larvæ*, *Nematodes*, etc., add 1 part of the salicylic vinegar to 10 parts of glycerin diluted with twice its volume of water; for *Infusoria*, add 1 part of the vinegar to 10 parts of glycerin diluted with four times its volume of water. **Noll's Salicylic Vinegar and Gum.** A mixture of equal parts of Meyer's dilute fluid and Farrant's medium. This mixture does not become turbid and does not dry up. It is an admirable medium for delicate *Crustacea* and their larvæ. **Owen's Fluid.** Mercuric chlorid 0.014 gm., alum 79 gm., salt 137 gm., water 1680 gms. Used for preserving soft-bodied animals. **Pacini's Fluids.** (*a*) Mercuric chlorid 1 part, sodium chlorid 2 parts, water 200 parts. Especially useful for the blood-corpuscles of cold-blooded animals. (*b*) Solution *a* plus two parts of mercuric chlorid. For the examination of the blood-corpuscles of warm-blooded animals. (*c*) Mercuric chlorid 1 part, acetic acid 2 parts, water 300 parts. For the examination of the nuclei of animal tissues. (*d*) Mercuric chlorid 1 part, sodium chlorid 2 parts, glycerin (25° Beaumé) 13 parts, water 113 parts. Let the mixture remain undisturbed 2 months; then take for use 1 part, dilute it with 3 parts of water, and filter. This fluid is recommended as a preservative of all delicate tissues. (*e*) Mercuric chlorid 1 part, acetic acid 2 parts, glycerin (25° Beaumé) 43 parts, water 115 parts. This mixture is used for the same purposes as the preceding. It is said to preserve the white but to destroy the red corpuscles of the blood. (*f*) One part of mercuric chlorid in 200 of water. This fluid has been used to remove the salt or acid, when necessary, from objects preserved in the preceding fluids. *Modifications of the foregoing solutions: a.* Sublimate 1 part, sodium chlorid 2 parts, water 100 parts. Used for the more vascular tissues of warm-blooded animals. *b.* Solution *a* diluted with an equal volume of water; for similar tissues of cold-blooded animals. *c.* One part each of sublimate and salt in 300 parts of water; for pus-corpuscles. *d.* One part of sublimate in 300 parts of water; for blood-corpuscles. *e.* One part each of corrosive sublimate and acetic acid in 300 parts of water; for demonstrating the nuclei in epithelia, connective tissue, and pus-corpuscles. *f.* Solution *e* plus 2 parts of acetic acid; for ligaments, muscles, and nerves. *g.* Solution *e* plus 4 parts of acetic acid; for glandular tissues. *h.* Corrosive sublimate 1 part, phosphoric acid 1 part, water 30 parts; for cartilaginous tissues. **Picrocarmin.** Recommended by Ranvier as a medium for the examination of fresh tissues. Carnoy finds that cells live in it for a time, but finally become gorged with water and deteriorate. **Potassium Acetate.** A mounting-fluid for sections stained with anilin dyes. Dissolve by gentle heat 250 gm. of potassium acetate in 100 c.c. of distilled water. A nearly saturated solution is also employed. Let a drop flow under the cover-glass, and in 24 hours close the mount. **Ripart and Petit's Fluid.** A preserving medium for delicate, fresh tissues. Its fixing action is enhanced by the addition of a drop of osmic-acid or corrosive-sublimate solution, and it may be used in combination with methyl-green. It is prepared by dissolving 0.2 gm. each of copper acetate and crystallized copper chlorid in glacial acetic acid 0.5 gm., camphor-water and distilled water each 50 c.c. **Seaman's Glycerin-jelly.** Dissolve 10 parts of gelatin in water to the consistency of stiff jelly at the temperature of the room; add 1 part of glycerin and a little camphor-water. Filter through muslin, and add a little alcohol. **Stephenson's Mercuric Iodid and Potassium Iodid.** A saturated solution of these substances has an index of 1.680, the highest of any known aqueous fluid. Tissues are well preserved in this medium, but a precipitate forms in it which ruins the preparations. III. Resinous Media. **Canada Balsam.** Evaporate the balsam in a water-bath to dryness, and dissolve in an equal volume of xylol,

benzol, toluol, chloroform, or turpentine. Filter through paper and keep in a "capped" bottle. If it gets too thick, dilute by adding more of the solvent employed. **Colophonium.** A solution in turpentine is recommended by Kleinenberg. This medium sets very slowly, and so affords ample time for arranging objects in it. Alcohol must not be used as a solvent, as in time it throws down a precipitate. **Dammar.** The menstrua are the same as for Canada balsam, and the solutions are prepared in the same way. A solution in a mixture of benzol and turpentine is recommended by Flemming and Pfitzner. **Oil of Cedar.** This medium soon sets hard enough to hold the cover in place, and so obviates the necessity of sealing the mount, except for immersion-work. See *Clearing Agents*. **Seiler's Alcohol Balsam.** Evaporate Canada balsam to dryness in a water-bath; dissolve while warm in warm absolute alcohol, and filter through absorbent cotton. **Venice Turpentine.** Vosseler recommends this medium as possessing certain advantages over Canada balsam and dammar. The turpentine is mixed with an equal volume of 96 per cent. alcohol, allowed to stand in a warm place for three weeks, and then decanted. Sections may be mounted in this medium without previous clearing in an essential oil, and it is said that stains are permanent in it. Its index of refraction being lower than that of the media already named, it gives better definition to the delicate details. **Xylol-balsam.** See *Canada Balsam*.

FIXATIVES.

To facilitate the staining and mounting of sections, various preparations are used to cause them to adhere to the slide. The following include the more important fixatives and methods of procedure. I. AQUEOUS SECTIONS. **Fol's Gelatin Method.** Dissolve 4 gm. of gelatin in 20 c.c. of glacial acetic acid by means of the water-bath and agitation. Add to 5 c.c. of this solution 70 c.c. of 70 per cent. alcohol and 1 to 2 c.c. of 5 per cent. aqueous solution of chrome-alum. Pour this preparation on the slide and allow it to dry. Immerse the slide in water containing the sections, arrange them on it, and remove it. This method is applicable to sections made under water. II. CELLOIDIN SECTIONS. **Apáthy's Oil of Bergamot Method.** Cut the sections with a knife anointed with vaselin and wetted with 95 per cent. alcohol and float them on bergamot-oil. Before they sink, push each one, by means of a needle, into place on a piece of tracing paper dipped in the oil. When the desired number are in position, the paper is drained, dried on the under side with blotting-paper, turned over, and gently pressed down on the slide. Remove the paper by rolling it up from one end; the sections remain adherent to the slide. The remaining bergamot-oil may be removed by cigaret-paper. **Apáthy's Series-on-the-Knife Method.** The knife is evenly rubbed with yellow vaselin and moistened with 70 to 90 per cent. alcohol. The sections as they are cut, are drawn with a needle to a dry part of the blade, and arranged in rows, so that the celloidin of one section overlaps that of the next. When a series has been completed, the sections are dried by laying blotting-paper upon them and then painted over with the thickest celloidin solution used for embedding. This is allowed to evaporate for five minutes in air, and then wetted with 70 per cent. alcohol, which hardens the celloidin into a continuous lamella which can be readily detached by means of a scalpel. **Pregl's Acetone-celloidin Method** (*Sternberg*). When not embedded in paraffin, the sections, completely dehydrated, are taken out of absolute alcohol on a thin cover-glass, upon which they are extended; a piece of filter-paper is applied to the side of the cover-glass to absorb the alcohol, and before the section is completely dry a drop of acetone-celloidin is placed upon it by means of a glass rod. The cover-glass is now moved about in the air to promote rapid evaporation of the alcohol, and then placed in water. The sections remain attached to it. The acetone-celloidin solution is prepared by adding celloidin in small, dry pieces to acetone until a concentrated solution is obtained. A large drop of this added to c.c. of absolute alcohol makes a suitable solution for use. This must be kept in a glass-stoppered bottle and be frequently renewed, as it absorbs moisture from the air. The acetone obtained from dealers must be dehydrated by adding red-hot copper sulphate. **Summers' Ether Method.** After placing the sections in 95 per cent. alcohol for a minute or two, arrange them on the slide and pour over them ether vapor from a bottle partly full of liquid ether. This softens the celloidin and makes it perfectly transparent. The slide may now be placed in 95 per cent. alcohol, and the sections will be firmly fixed to it. **Weigert's Method.** This method consists in holding the series between two adherent films of celloidin. A glass plate of sufficient size to accommodate the sections, cleansed with ether and alcohol, is coated with a thin film of celloidin and left to dry. The sections, as they are cut, are taken off on a strip of tissue-paper which has been laid upon a piece of blotting paper wet with 80 per cent. alcohol. When the series is complete the tissue-paper is lifted and turned section-side down, on the celloidin film on the glass plate; the tissue-paper is then removed, and any remaining alcohol absorbed with bibulous paper. A other film of celloidin is then poured over the section and after a short exposure to the air, the plate is immersed in water, section-side up. In a short time the film enclosing the sections will become detached and float to the surface. Remove it on tissue paper, and stain, either whole or in parts, in the usual way. The plate, with the adherent films, may, if desired, be preserved in 80 per cent. alcohol. III. PARAFFIN SECTIONS. **Flögel's Gum Method.** To a filtered solution of 1 part of gum arabic in 20 parts of water, add a little alcohol to prevent mold. Pour this preparation over perfectly clean slides, and drain. Sections 1 mm. in thickness may be placed on the wet gum surface and floated to the proper position—a good method when the slide is not subsequently treated with aqueous solutions. **Frenzel's Gum Method.** To a thin mucilage of gum arabic dissolved in water add an aqueous solution of chrome-alum, and then a little glycerin and a trace of alcohol. Put a little of the preparation on the slide, place the sections in position, and heat 15 minutes at a temperature of 30 to 45° C., which renders the gum insoluble. This gum has the advantage of not reacting to the majority of stain fluids. Safranin and fuchsin should be avoided. **Gaule's Methods.** Moisten the slides with water or dilute alcohol, place the sections in position, remove the surplus fluid by means of bibulous paper and dry in a thermostat at 50° C. for 24 hours. Sections so treated are then heated for a moment above the melting-point of paraffin, which fixes them securely to the slide. Gaule's xylol method is as follows: Place the sections on a slide moistened with alcohol; warm slightly, cover, and run under a mixture of equal parts of Canada balsam and xylol. Refill the cell daily as the xylol evaporates, and complete with xylol-balsam. **Mayer's Albumen Method.** Mix equal volumes of fresh filtered white of egg

glycerin, and add a little thymol as a preservative. Paint a thin, even film on the slide; on this arrange the sections, and warm just enough to coagulate the albumen (70° C.). A very useful fixative for sections that are to be stained on the slide. Acids, alkalies, and picrocarmin must be avoided, as they dissolve the albumen. *Ohlmacher's Modification.* Apply a thin, smooth layer of Mayer's albumen to the slide, and on this drop a little distilled water, which will diffuse evenly over the albumen. Arrange the sections in position, and heat gently over a spirit-flame until they flatten out, being careful not to melt the paraffin. Drain off the water, dry the slide with bibulous paper, and evaporate the remaining moisture in an oven at a temperature below the melting-point of paraffin. **Obregia's Method.** Coat slides with a solution prepared as follows: Mix 30 c. c. of a syrupy solution of confectioners' sugar, made with distilled water, 20 c. c. of absolute alcohol, and 10 c. c. of a clear, syrupy solution of pure dextrin in distilled water; put them aside to dry. After 2 or 3 days, when the surface is just sticky to the moistened finger, arrange the sections in position, and heat for a few minutes; remove the paraffin with xylol, wash with alcohol, and then cover with a 3 per cent. solution of photoxylin in a mixture of equal parts of absolute alcohol and ether. Leave the slides to evaporate in the horizontal position, cut the sheet of collodion into ribbons, float them off in water, and proceed as in Weigert's method. **Schällibaum's Collodion Method.** Shake up one part of collodion with 3 to 4 parts of clove-oil. Apply this mixture thinly on the slide; place the sections in position, warm over a spirit-lamp until the oil collects in drops between the sections and the paraffin is melted; then hold the slide to the lips, blow upon it vigorously, and the paraffin and oil will be scattered, leaving the sections dry and securely fixed. This method is recommended for stained sections. **The Shellac Method.** A filtered solution of bleached, white shellac in absolute alcohol is spread over the slide with a glass rod. When dry, apply a very thin layer of creasote, which gives a sticky surface for the sections, then heat on a water-bath for 15 minutes at the melting-point of paraffin, allow the slide to cool, and the sections will be fixed.

FIXING AND HARDENING FLUIDS.

eagents used to preserve the structural elements of tissues. Their action consists in the rapid coagulation of certain constituents of tissue—albuminoids, gelatin, mucin—by which their histologic and cytologic details are *fixed* in the form and attitude they normally had in life, and are also hardened so as to resist any change of form from the action of other reagents with which they may subsequently be treated. **Acetic Acid.** A valuable fixative of wide application, and especially useful for fixing very contractile objects, such as are found in the *Vermes* and *Cœlenterata*. Pour a liberal quantity of glacial acetic acid over the organism, and in five or six minutes wash in 50 per cent. alcohol, changing it frequently and gradually increasing the strength. **Acidulated Alcohol.** Used for the preparation of marine animals which are to be preserved in alcohol. It is a mixture of 97 volumes of 90 per cent. alcohol (in which is dissolved a little picric acid) and 3 volumes of pure hydrochloric acid. The acid facilitates penetration by preventing the precipitation of the salts of sea-water. After penetration, the organism is washed in 90 per cent. alcohol until the yellow stain of the picric acid no longer appears. **Alcohol.** An excellent fixing medium, suitable for all tissues, except those of the central nervous system and those undergoing fatty infiltration or degeneration. It is also used to harden and preserve objects that have been fixed in other fluids. As a preservative it is not without defects, as it alters the structure of tissues by continuously dehydrating their albuminoids. Toluol, ether, and xylol are recommended as substitutes (*Kultschitzky*). As a fixing agent alcohol is usually employed in gradually increasing strengths, beginning with 50 or 70 per cent. *Absolute Alcohol.* One of the most penetrating fixing agents, which has the advantage of preserving the structure of glands and of nuclei. It should be employed in large quantities. Hydration may be prevented by suspending in the alcohol strips of gelatin (*Lowrie*). After fixation, preserve the object in 90 per cent. alcohol. Mayer recommends boiling absolute alcohol for fixing certain *Arthropoda*. Absolute alcohol is prepared in Ranvier's laboratory by adding anhydrous copper sulphate to 95 per cent. alcohol. Pulverized copper sulphate is heated to red heat, in order to drive off the water of crystallization; when cool, the white powder is placed in a wide-mouthed bottle, holding about a liter, and three-fourths full of alcohol. The bottle is quickly closed and the whole shaken. After standing a day or more—with occasional shakings—it is decanted, treated with fresh copper sulphate, and the operation repeated until the copper sulphate no longer shows a blue color on contact with the alcohol. As a test, a drop of the alcohol thus dehydrated may be mixed with a drop of turpentine on a glass slide and examined under the microscope; if no particles of water are to be seen, the alcohol is absolute enough for all practical purposes. *Methylated Spirit* contains a little methyl-alcohol, and is nearly as strong as absolute (ethyl) alcohol, and its strength may be increased by placing in it some well-dried potassium carbonate, which absorbs any water present in it. "*One-third Alcohol*" (*Ranvier's Alcohol*). This classic reagent consists of two parts of water and one part of alcohol of 36° Beaumé, which contains nearly 89.6 per cent. absolute alcohol. It is a very mild fixative, and is chiefly used for extemporaneous and dissociation preparations. *Rectified Spirit* contains 84 per cent. of alcohol and 16 per cent. of water. **Altmann's Nitric Acid.** Particularly useful for preserving mitotic figures, nuclei, embryonic tissues, and the retina. A 3 per cent. pure acid is used, the solution having a sp. gr. of 1.02. Immersion for a quarter to half an hour is sufficient for blastoderms and small embryos; two to four hours are required for fixing larger objects. Wash out thoroughly and harden in strong alcohol. Any staining process may be used. **Broca's Fluid.** Used for the preservation of brain-tissue. It consists of zinc chlorid, 10 grams, and alcohol, 90 per cent., 100 c.c. After two or three days, transfer the tissue to 95 per cent. alcohol. **Carnoy's Fluid.** One of the most penetrating and rapid of fixatives, applicable to tissues in general, and useful for the study of karyokinesis in the ova of *Ascaris*. First formula: glacial acetic acid 1 part, absolute alcohol 3 parts. Second formula: glacial acetic acid 1 part, absolute alcohol 6 parts, chloroform 3 parts. The chloroform is said to render the action of the mixture more rapid. **Chromic Acid.** Used in aqueous or alcoholic solution in strengths varying from 0.1 to 2 per cent. Weaker solutions are used for nerve-tissue. Wash out several hours in running water. If the object be preserved in alcohol, it must be protected from the light, or a precipitate will be thrown down on its surface. The brownish-green color of objects fixed in chromic acid may be removed by treating them with hydrogen dioxid. A 0.02 per cent. solu-

tion is recommended for macerating nerve-tissue and non-striated muscle-tissue, a cube of 5 mm. requiring about 24 hours' immersion in 10 c.c. of the medium (*Ranvier*). **Copper Sulphate.** Recommended by Bedot for the preparation of delicate pelagic animals. A large volume of a 15 or 20 per cent. solution is added to the sea-water containing the animals. Fixation occurs in a few minutes. A few drops of nitric acid are added, and the whole is left for 4 or 5 hours. The animals are then hardened in a large volume of Flemming's fluid, in which they should remain for 24 hours, and are preserved in alcohol. **Corrosive Sublimate.** A most excellent reagent, generally applicable, useful particularly for fixing glands and glandular structures. Saturated aqueous and alcoholic solutions are usually employed. The tissues turn white when fixed. All the corrosive sublimate must be washed out in alcohol, or the sections will be sprinkled with crystals of the salt. The hardening is completed in alcohol. Glass, wood, or platinum should be used in manipulating objects immersed in this reagent. Sections may be stained with any of the usual reagents. **Cox's Sublimate Solution.** A combined hardening and impregnating fluid, consisting of 5 per cent. solutions of potassium bichromate and mercuric chlorid each 20 parts, potassium chromate 16 parts, water 30 or 40 parts. The reaction should be only slightly acid. The pieces are left in this solution two or three months, then cut with a freezing-microtome. The sections are put in 5 per cent. solution of sodium carbonate for an hour or two, washed in water, then in oil, and covered by a rapidly drying resin, like sandarac. This coating may be covered by castor-oil, and the cover-glass pressed down. The preparations are not permanent in balsam or dammar. **Davidoff's Fixing Fluid.** This is a mixture of a saturated solution of corrosive sublimate 75 c.c. and glacial acetic acid 25 c.c. It is useful for ova, which should remain in it for a half to one hour; then wash in water and transfer to alcohol, gradually increasing its strength. **Delafield's Fluid.** A fixing agent suitable for tissues having delicate structural elements. It has the following composition: 1 per cent. osmic acid solution 10 c.c., 0.2 per cent. chromic acid solution 100 c.c., 95 per cent. alcohol 100 c.c., acetic acid 1 c.c. **Erlicki's Fluid.** One of the best hardening agents for large objects, and more rapid in its action than Müller's fluid. It is composed of potassium bichromate 2.5 parts, copper sulphate 1 part, water 100 parts. The formation of mold is prevented by adding a little camphor or naphthalene. **Ferric Chlorid.** Objects are fixed for a short time in a dilute alcoholic solution, washed in alcohol, and stained in pyrogallol. This process is recommended as a general zoölogic method, but chiefly for *Infusoria* and other ciliated organisms, and for its selective action on nerve end-organs. **Fish's (*P. A.*) Liquid.** This is found to preserve the shape, to harden, and to differentiate brain-substance. It contains alcohol (95 per cent.) 200 c.c., water 800 c.c., glycerin 75 c.c., zinc chlorid 50 gm. The alcohol and water should be mixed first, so as to get a strength of 22 per cent., as determined by the alcoometer. More alcohol may be required, but the entire quantity of dilute alcohol should not exceed 1000 c.c. Then add the glycerin and zinc until the specific gravity of the mixture is 1.04. When the brain is introduced, it should rest just at the surface, and the vessel should be deep enough to prevent it touching the bottom. Cotton may be laid over the top if any part projects. It is well also to inject the fluid into the cavities and blood-vessels daily for a week. After a few days the brain will sink, when, without removing it from the liquid, the pia is stripped off. Half of the liquid is now replaced by alcohol and the brain is steadied with cotton. After 2 days half of the lighter liquid is replaced by alcohol, and in 2 or 3 days more pure alcohol is used. **Flemming's Fluid.** *1st Formula:* Chromic acid 0.2 gm., glacial acetic acid 0.1 c.c., water 100 c.c. This is especially recommended for fixing the achromatic spindle-fibers in nuclei. *2d Formula:* One per cent. chromic acid 45 c.c., 2 per cent. osmic acid 12 c.c., glacial acetic acid 3 c.c. This fixes small pieces (2–3 mm. thick) in from a few to twenty-four hours, and is useful for fixing the figures in cell-division and for many other purposes. A weaker solution is also used: One per cent. osmic and glacial acetic acids each 10 c.c., one per cent. chromic acid 25 c. c., water 100 c.c. The second formula is the one generally known as *Flemming's Fluid.* **Fol's Fluid** A modification of Flemming's fluid. It contains less osmic acid. To 2 c.c. of 1 per cent. osmic acid add 25 c.c. of 1 per cent. chromic acid, 5 c.c. of 2 per cent. glacial acetic acid, and 68 c.c. of water. **Giacomini's Method of Preservation of the Brain** consists of two stages. In the first stage the fresh organ, still enveloped in its membranes, is immersed in a saturated solution of zinc chlorid. In this it floats with a little of its surface above the fluid; and so while its form is not interfered with by pressure, must be turned two or three times a day, in order that all parts may be uniformly acted on. If the subject has been dead for some time, 600 grams of the solution may be injected through the carotids under slight pressure, so as to give a firmness to the somewhat soft ish brain before its removal. After 48 hours, the surface is hard enough to have the membranes removed. Let this be done without taking the organ out of the solution, or, if it be taken out, let it be put into water immediately, so that it may the less lose its form by pressure. After having been cleaned, let it remain in the solution till, as the hardening proceeds, it begins to sink no longer, and then remove it. At this stage it will be firm, slightly diminished in volume, the fissures a little opened, and the color whitish, unless the membranes have been left on too long, in which case the course of the large vessels will be stained of a rusty color from the blood pigment. It is now immersed in alcohol of commerce for not less than 10 or 12 days, but it may be for an indefinite period; here it sinks, and so must be often turned, to avoid deformity by pressure on the bottom of the vessel, and it is well to renew the spirit 2 or 3 times—the oftener, the sooner the process is finished. After this immersion the consistence is greater, the size a little less, and the convolutions somewhat closer together. In the second stage the organ is immersed in glycerin of commerce or with 1 per cent. of carbolic acid added. When first put in it floats, with some of its upper surface above the surface of the glycerin, but gradually becoming heavier as the alcohol evaporates, and glycerin is imbibed it sinks more and more deeply till it is just level with the liquid—then it is to be taken out. In this part of the process, neither surface, color, consistence, nor volume is altered, but it becomes heavier. A brain should gain from 150 to 200 grams in from twenty to thirty days according to its volume. Now set aside for several days, till the surface is dry, and then cover it with several layers of gum mastic varnish, or, better still, marine glue, diluted with a little alcohol. This varnish is not to prevent evaporation—the glycerin does that—but is simply as a protective against dust and injury. **Hermann's Fluid.** A modification of Flemming's fluid. Platinum chlorid is used instead of chromic

acid; in other respects the formulæ are alike. **Iodin.** A good and rapid fixing agent for delicate tissues. Lugol's solution may be used, of which the formula is as follows: Iodin 4 parts, potassium iodid 6 parts, water 100 parts. Ranvier recommends a saturated solution of iodin in a saturated aqueous solution of potassium iodid, filtered, and diluted to a brown-sherry color. **Johnson's** (*Lindsay*) **Fluid.** Potassium bichromate, 2.5 per cent., 65 parts; 2 per cent. osmic acid 15 parts, 2 per cent. platinum chlorid 15 parts, acetic or formic acid 5 parts. Ten parts of a 5 per cent. solution of uranium nitrate may be added; this will prevent the tendency of the osmic acid to blacken and will give a delicate chestnut-brown tint. **Klein's Fluid.** This should be freshly prepared and kept in the dark. It is made by mixing 2 parts of 6 per cent. chromic acid with 1 part of methylated spirit. For hardening the intestine Klein recommends a 5 per cent. solution of neutral ammonium chromate. **Kleinenberg's Fluid.** *Picro-sulphuric Acid.* This reagent is especially adapted for fixing embryonic tissue and soft pathologic structures, as sarcoma and myxoma. It is prepared as follows: to 100 c.c. of a saturated aqueous solution of picric acid add 2 c.c of strong sulphuric acid; after an hour filter, and to the filtrate add 300 c.c. of distilled water. A few hours to several days are required for fixation. Wash in warm alcohol to remove the acid. **Kolossow's Fluid.** Recommended for its great penetrating power. It consists of a 0.5 per cent. solution of osmium in a 2 or 3 per cent. solution of uranium nitrate or acetate. **Kultschitzky's Fluid** fixes tissues without causing the precipitation of the albuminoids, so likely to occur in solutions containing chromic acid. It is prepared by adding in excess finely powdered potassium bichromate and copper sulphate to 50 per cent. alcohol, and placing in the dark for 24 hours. At the moment of using, add a few drops of acetic acid, 5 or 6 to 100 c.c. Fix objects for 12 to 24 hours in the dark, then treat with strong alcohol, and they are ready for sectioning. **Lang's Sublimate Solution.** Used for fixing *Planaria*. Its composition is as follows: mercuric chlorid 5 grams, sodium chlorid 6 grams, acetic acid 5 c.c., water, 100 c.c. The *Planaria* are placed on their backs and the fluid poured over them. After half an hour they are placed in 70 per cent., then in 90 per cent., and then in absolute alcohol. They are sufficiently hardened in two days. **Lemon-juice.** Recommended by Van Gehucten as a fixative for nuclei. It should be fresh and filtered. Fix for five minutes, and wash out in water. **Mercuric Chlorid.** See *Corrosive Sublimate*. **Merkel's Fluid.** A delicate reagent, used for hardening fish ova, and consisting of equal volumes of 1.4 per cent. chromic-acid and 1.4 per cent. platinum-chlorid solutions. Several hours or days may be required for penetration. Prick the ova and wash in alcohol of 50 to 70 per cent. A few hours' immersion in this fluid will, it is claimed, effectually prevent blackening of objects fixed in osmic acid. **Müller's Fluid.** This agent is very extensively used, as it penetrates well and hardens evenly. It has the following composition: potassium bichromate 2.5 parts, sodium sulphate 1 part, water 100 parts. The addition of a little camphor, chloral, thymol, or naphthalene will prevent the formation of mold. The time required for hardening depends on the size of the object. This fluid diluted to 0.2 per cent. is used as a macerating agent. **Osmic Acid.** An aqueous solution is used in strengths varying from 0.05 to 2 per cent. The time required for fixing depends on the object and the strength of the solution, and varies from a few seconds for *Infusoria* in a 0.5 per cent. solution to 24 hours for tactile corpuscles in a 1 per cent. solution. The osmium must be thoroughly removed by washing in water, as any remaining in the tissue in time over-colors it. Solutions of osmic acid must be protected from the light at all times. Fatty tissue should have the fat dissolved out by alcohol before immersion in osmic-acid solutions, or it may afterward be decolorized by turpentine. For delicate membranes osmic acid may also be employed in the form of vapor. As a macerating agent for the cortex cerebri (Rindfleisch), a 0.1 per cent. solution is used, and may be followed by dissociation in glycerin. A 1 or 2 per cent. solution is the best fixing agent for blood. **Palladium Chlorid.** Recommended by Cattaneo as the best fixative for *Infusoria*. It is prepared by dissolving 10 grams in one liter of water containing 5 or 6 drops of hydrochloric acid. One or 2 minutes' immersion will suffice for the fixation of small objects. It is an impregnation reagent, and colors certain tissue-elements in various tones of brown. According to Schultze, it has a special faculty for penetrating tissues rich in connective tissue, and gives a better consistence than chromic acid or Müller's fluid. *Paladino's Palladium Chlorid.* Used to demonstrate the axis-cylinders in peripheral nerves. After hardening in potassium-bichromate solution place the tissue in a 0.1 per cent. solution of palladium chlorid, to which a little hydrochloric acid has been added; in 2 or 3 days transfer to a 4 per cent. solution of potassium iodid for 1 to 2 hours. Dehydrate and embed in paraffin. **Perenyi's Fluid.** An important embryologic reagent. It produces perfect fixation of segmentation-spheres and nuclei, and has the advantage that fuchsin, eosin, picrocarmin, and other stains may be dissolved in it. It is composed of 10 per cent. nitric acid 4 parts, absolute alcohol and 0.5 per cent. chromic acid each 3 parts. **Picro-nitric Acid.** *Mayer's formula.* Water 100 c.c., nitric acid (25 per cent. N_2O_5) 5 c.c., and as much picric acid as will dissolve in the mixture. The properties of this fluid are similar to those of picro-sulphuric acid, and it has the advantage of not crystallizing lime-salts in tissues containing them. Eight c.c. of 25 per cent. hydrochloric acid may be substituted for the nitric acid, the mixture possessing the same properties and being known as *picro-hydrochloric acid*. **Picric Acid.** A fixing agent of great penetration, and, therefore, especially suitable for the preparation of chitinous structures. A saturated solution is employed. The time required for fixation varies from a minute to a day, and depends on the size of the object. Wash out in alcohol and stain in alcoholic solutions. **Platinum Chlorid** (*Rabl*). Objects are placed in an aqueous solution, 1 : 300, for 24 hours, then washed with water and hardened in alcohol. Safranin or Delafield's hematoxylin may be used to stain. This reagent is valuable in the study of karyokinesis. It renders Pfitzner's granules and the longitudinal division of the elements plainly visible. **Potassium Permanganate** (*Du Plessis*). Useful for the study of isolated and very contractile cells, as spermatozoa. It is said to kill more rapidly than any other agent, 2 per cent. osmic acid not excepted. A saturated aqueous solution is used. It is also used for washing out over-staining with carmin, and in 1 per cent. solution as a mordant for anilin dyes (*Henneguy*), and for reducing silver impregnations. **Rabl's Fluid.** Especially useful for the study of mitosis and nuclei generally. It must be freshly prepared at the moment of using, and consists of 200 c.c. of 0.33 per cent. chromic acid and 4 or 5 drops of formic acid. Fix for 12 to 24

hours, wash thoroughly in water, and harden in alcohol of gradually increasing strength. Sections may be stained in hematoxylin or safranin. **Silver Nitrate.** Used in the study of epithelia. Solutions of 0.5 to 2 per cent. are employed, and fix rapidly. Wash out in distilled water. Weak solutions do not interfere with subsequent staining.

INJECTION-MASSES.

These are composed of a dye combined with some suitable substance, technically termed, respectively, the *coloring-mass* and the *vehicle*, and are used for injecting gland-tubes and blood-vessels. I. AQUEOUS MASSES. **Emery's Carmin.** Add, with continual stirring, acetic acid to a 10 per cent. ammoniacal solution of carmin until the color of the fluid is blood-red from incipient precipitation of the dye. The clear solution is poured off and injected cold, and the specimens are thrown at once in strong alcohol to fix the carmin. This fluid is for the injection of fishes. **Letellier's Ammonium Vanadate and Tannin.** Make a solution of ammonium vanadate in warm water and of tannin in hot water. For use, mix the two solutions according to the tint desired. The walls of vessels are stained black. **Müller's Berlin Blue.** Precipitate a strong solution of Berlin blue with 90 per cent. alcohol. The fluid is neutral and the precipitate finely divided. **Taguchi's Indian Ink.** Rub up on a hone Japanese or Chinese ink, until a fluid is obtained that does not run when dropped on thin blotting-paper or form a gray circle round the drop. Inject until the preparation appears black, and then put it into some hardening fluid, not pure water. This is useful for *Invertebrata*, lymphatics, and juice-canals. II. CELLOIDIN MASSES. **Schiefferdecker's Masses.** For corrosion-preparations. 1. Place pulverized asphalt in a closed vessel with ether for twenty-four hours, and shake occasionally. Pour off the ether into another vessel, and dissolve in it small pieces of celloidin until the solution is like the thicker fatty oils. The undissolved asphalt may be used to color fresh ether. 2. *Vesuvianin-brown.* Dissolve celloidin in concentrated solution of vesuvianin in absolute alcohol. This color is not fast. 3. *Opaque Blue.* Add pulverized Berlin blue to celloidin dissolved in equal parts of absolute alcohol and ether. 4. *Opaque Red.* Rub up in a mortar pulverized cinnabar with a little absolute alcohol, and add the paste to celloidin dissolved in equal parts of absolute alcohol and ether. Too much pigment will make the injection brittle. Strain the mass through flannel wet with ether. Clear the syringes and nozzles with ether to free them from grease. *Corrosion of the Preparations.* Throw the injected organs into unrectified hydrochloric acid, and let them remain in it until all the soft parts are destroyed, changing the acid occasionally, if necessary. Wash under a slow stream of water, leave for some weeks in water, rinse, and put in glycerin or in equal volumes of glycerin, alcohol, and water. Artificial gastric juice is also excellent for corrosion. III. GELATIN MASSES. **Brücke's Blue Mass.** Take a 10 per cent. solution of potassium ferrocyanid, and precipitate it with so much of a dilute solution of iron sesquichlorid that the weight of the dry chlorid employed shall be $\frac{1}{10}$ or $\frac{1}{8}$ that of the ferrocyanid. Wash the precipitate on a filter with the filtrate until only a clear-yellow liquid runs off, then wash with water until the water begins to be blue. Dry the precipitate, press it between blotting-paper in a press, break the mass in pieces, and dry in the air. **Carter's Carmin Mass.** Rub up 4 gm. of carmin in a little water in a mortar, and add enough water to bring the measure up to 45 c.c. Add 8 c.c. of strong ammonia, and stir until the carmin is dissolved. Glacial acetic acid, 6 c.c., is then added, drop by drop, with continuous stirring, and finally the gelatin, 60 c.c. of a 1 : 6 solution in water. *Fearnley's Modification:* Cut up 7 gm. of Coignet's gelatin, and soak it in 50 c.c. of water 4 to 5 hours. Rub up in a mortar with a little water 3 gm. of carmin, and add 6 c.c. of strong ammonia; after standing for 2 hours, pour it in a bottle, rinsing the mortar with 30 c.c. of water. Place the gelatin and unabsorbed water on a water-bath to melt. Add about 6 c.c. of glacial acetic acid to the carmin solution (stop the acid when the color changes to crimson), and stir it into the gelatin. Cover the mass with methylated spirit, and keep it in a cool place. For use, dissolve it on a water-bath, and filter through fine flannel wrung out of hot water. **Fol's Blue Mass.** *A Modification of Thiersch's Formula. a.* To 120 c.c. of a cold saturated solution of iron sulphate add 300 c.c. of warm gelatin solution. *b.* To 600 c.c. of the gelatin solution add 240 c.c. of a saturated solution of oxalic acid, and then 240 c.c. of a cold saturated solution of potassium ferricyanid. Pour the first mixture gradually into the second, shaking vigorously, and warm for fifteen minutes over a boiling water-bath. When the mass has set, press it through netting into strings, wash in running water, and dry on prepared paper, without remelting. For use, swell the strings in cold water, and warm with enough oxalic acid for complete solution. **Fol's Brown Mass.** Soak 500 gm. of gelatin in 2 liters of water in which 140 gm. of salt have been dissolved. Melt the mass over a water-bath and add, gradually, with vigorous shaking, 300 gm. of silver nitrate in a liter of water. Press the mass out through netting, stir it up, in clear daylight, with a mixture of 1½ liters of a cold saturated solution of potassium oxalate and 500 c.c. of a cold saturated solution of iron sulphate. When the whole mass is black, wash for several hours, remelt, and pour on paper. **Fol's Carmin Mass.** Soak in water for a couple of hours one kilog. of Simeon's photographic gelatin, pour off the water, melt the gelatin over a water-bath, and add one liter of a solution of carmin made as follows: Dilute a strong solution of ammonia with 3 or 4 parts of water and add carmin to saturation, removing the excess by filtration just before adding the liquid to the gelatin. Add to the mass enough acetic acid to turn the dark-purple color to a blood-red hue, and when firm, cut it in pieces. Tie up the pieces in fine netting, and compress them with the hand under water acidulated with 0.1 per cent. of acetic acid. The mass is driven out in fine strings, which are washed for several hours in a sieve in running water, then remelted, and poured on large sheets of parchment-paper soaked with paraffin, and dried in an airy place. Separate the mass from the paper and cut into long strips. For use, soak them a few minutes in water and melt them over a water-bath. **Frey's White Mass.** Place 125 to 185 gm. of a cold saturated solution of barium chlorate in a tall, glass cylinder, and add sulphuric acid very carefully, drop by drop. Allow the precipitate to settle for twelve hours; then decant almost all of the supernatant liquid. The remaining mucilaginous mass, containing the precipitate, is to be mixed with an equal part of concentrated gelatin solution. Injected organs may be preserved in chromic acid. **Hoyer's Blue Mass.** The filtered and washed precipitate of soluble Berlin blue is placed in a little water on a Graham's dialyzer, and the external water changed until the solution begins to pass through the parchment. After

diluting, pass the solution through filter-paper. For injection the fluid may be used pure. It may also be combined with gelatin as follows: Warm the solution almost to boiling, and gradually add a warm, thin solution of gelatin until coagulation begins; then strain through wet flannel. **Hoyer's Lead-chromate Mass.** Filter through flannel 1 volume of a solution of gelatin, 1 : 4, and add 1 volume of a cold, saturated solution of potassium bichromate; warm the mixture almost to boiling, and add, gradually, 1 volume of a cold, saturated solution of neutral lead acetate, also warmed. Cool the mass to the body-temperature and inject at once. It flows so freely that even the lymphatics may be injected, and its intense color gives the vessels unusual distinctness. If the solution of lead acetate is added to a hot bichromate solution, an orange-red precipitate is obtained; if both the solutions are cold when mixed, the precipitate is bright-yellow. **Hoyer's Silver-nitrate Yellow Mass.** Mix with an equal volume of a 4 per cent. solution of silver nitrate a concentrated solution of gelatin, heat, and add a small quantity of an aqueous solution of pyrogallic acid, which reduces the silver in a few seconds. Add chloral and glycerin as in Hoyer's formula for carmin gelatin. The mass is brown in the larger vessels and yellow in the capillaries. It does not change in alcohol, chromic or acetic acid, or potassium bichromate. **Neutralization of a Carmin Mass.** *Ville's Method.* The traces of acid mechanically retained in commercial gelatin are eliminated by placing it in a stop-cock funnel and washing for an hour or more with running water. To test the reaction of the coloring-mass, moisten a strip of dichroic litmus-paper in distilled water, and hold as closely as possible to the injection-mass (which is kept melted on a water-bath); it becomes blue at first, but as the acid is added the reaction is less evident, and when the change of color appears very slowly, the addition of the acid should cease. *Dichroic Litmus-paper* is prepared as follows: A tincture obtained by decoction of cake-litmus is slightly acidified with an excess of sulphuric acid, then heated and agitated with an excess of precipitated barium carbonate and filtered. The solution is exposed to the air in wide vessels until the blue color has given place to a reddish tint, when strips of white, unsized paper are dipped into it and dried in the shade on stretched threads, in a place free from ammonia vapor. **Ranvier's Blue Mass.** Soak 5 gm. of Coignet's gelatin for one hour in distilled water, wash it, and place it in a beaker on a water-bath; when it is dissolved add 125 c.c. of a saturated aqueous solution of Brücke's blue, previously heated on a water-bath, and stir vigorously with a glass rod, which should show no granules when withdrawn. Filter through flannel. The precipitate thrown down by the gelatin disappears if the heating be continued. **Ranvier's Carmin Mass.** Mix in a stoppered bottle 2 to 5 gm. of pure carmin with a little distilled water; add ammonia, drop by drop, until the liquid is transparent, and shake. Place 5 gm. of Coignet's gelatin in distilled water for one hour, wash it in water, and heat it in a beaker over a water-bath. When the gelatin is dissolved, add, stirring briskly, the solution of carmin. Make a solution of 2 parts of distilled water to 1 part of glacial acetic acid, and pour it, drop by drop, into the mass, stirring with a glass rod. Stop adding the acid when the ammoniacal odor disappears and there is a faint acid scent. Filter the mass through new flannel. IV. GLYCERIN MASSES. These are used cold. The addition of amyl nitrite to the mass just before using is advised, to counteract its tendency to stimulate contraction of the arteries. The animal may also be anesthetized with a mixture of ether and amyl nitrite. **Beale's Acid Blue Mass.** Dissolve 0.5 gm. of potassium ferrocyanid in 30 c.c. of glycerin, and 10 drops of tincture of iron sesquichlorid in 30 c.c. of glycerin, and add the latter solution, drop by drop, to the former. Then add 30 c.c. of water and 3 drops of strong hydrochloric acid. If desired, 8 c.c. of alcohol may be added. This is said to be an admirable formula. **Beale's Blue Mass.** Dissolve 1.8 gm. of potassium ferrocyanid in 30 c.c. each of water and glycerin. Add to 30 c.c. of water 4 c.c. of tincture of ferric chlorid. Gradually, and with agitation, add the iron solution to the potassium solution. Then add slowly 30 c.c. of alcohol and 60 c.c. of water, the mixture being constantly shaken. Injected specimens should be preserved in acidulated glycerin, or the color may fade. **Beale's Carmin Mass.** Dissolve in a little water, with about 5 drops of ammonia, 0.4 gm. of carmin, and add 15 c.c. of glycerin; then add gradually, with agitation, another 15 c.c. of glycerin with 8 or 10 drops of acetic acid or hydrochloric acid. Test with blue litmus paper and add acid until the reaction is decidedly acid. Add another 15 c.c. of glycerin, 5 c.c. of alcohol, and 25 c.c. of water. **Robin's Cold-flowing Masses.** 1. *Carmin.* Rub up 3 gm. of carmin in a mortar with a little water and enough ammonia to dissolve the carmin, add 50 c.c. of glycerin, and filter. Add a 10 per cent. solution of acetic acid in glycerin, drop by drop, until a slightly acid reaction is obtained. 2. *Prussian Blue.* (*a*) Potassium ferrocyanid (sat. sol.) 90 c.c., glycerin 50 c.c.; (*b*) liquor ferri perchloridi, 80°, 3 c.c., glycerin 50 c.c. Mix *a* with *b* slowly. 3. *Green.* A saturated solution of potassium arsenite 80 c.c., and glycerin 50 c.c., is mixed with a saturated solution of copper sulphate 40 c.c., and glycerin 50 c.c. 4. *Mahogany-red.* (*a*) Potassium ferrocyanid (concent. sol.) 20 c.c., glycerin 50 c.c.; (*b*) copper sulphate (concent. sol.) 35 c.c., glycerin 50 c.c. Mix *a* and *b* slowly, with agitation, and add to the vehicle at the moment of injecting. 5. *Yellow.* (*a*) Cadmium sulphate (sat. sol.) 40 c.c., glycerin 50 c.c.; (*b*) sodium sulphid (sat. sol.) 30 c.c., glycerin 50 c.c. Mix *a* with *b*, with constant shaking. V. VEHICLES AND OTHER MASSES. **Bjeloussow's Gum Arabic Mass.** Make a saturated solution of borax in water, and a syrupy solution of gum arabic. Mix the two, using 2 parts of the latter to 1 part of the former. Rub up the mass with distilled water, added gradually, and press through a fine cloth, repeating this until the mass is free from clots. It should coagulate in alcohol, and swell to twice its original volume. It must not be combined with cadmium or cobalt. Cold-blooded animals may be injected while alive. **Cadmium Mass.** *a.* Forty c.c. of a saturated solution of cadmium sulphate and 50 c.c. of glycerin. *b.* Thirty c.c. of a saturated solution of sodium sulphid and 50 c.c. of glycerin. Mix the two solutions with agitation and combine with 3 volumes of vehicle. **Copper Ferrocyanid Mass.** *a.* Twenty c.c. of a strong solution of potassium ferrocyanid and 50 c.c. of glycerin. *b.* Thirty-five c.c. of a strong solution of copper sulphate and 50 c.c. of glycerin. Mix the solutions, with agitation. Combine with 3 volumes of vehicle at the moment of using. **Fol's Metagelatin Vehicle.** To a solution of gelatin add a slight proportion of ammonia, and after heating several hours the mixture no longer coagulates on cooling. This vehicle may be thinned by the addition of weak alcohol, and coloring masses added. Its advantage is that it obviates the necessity of warm injections. The

injected preparations are thrown into strong alcohol or chromic acid, which sets the mass. **Hoyer's Oil-color Masses.** Mix with 30 parts of lavender, fennel, thyme, or rosemary oil, 5 parts of artists' Berlin blue oil-color, rubbed up with 5 parts of thickened linseed-oil. Let the mixture stand 24 hours in a closed vessel; then decant. Shake before using. This is useful for injecting the vessels of the spleen and other structures difficult of injection. **Hoyer's Shellac Mass.** Place in a wide-necked flask a quantity of good shellac, with enough 80 per cent. alcohol to cover it. After 24 hours, warm it on a water-bath, to complete the solution; cool, dilute with alcohol to a thin syrupy consistence, and strain through thick muslin. Color the solution with anilins in filtered concentrated alcoholic solution. Cinnabar may be used for corrosion-preparations. Berlin blue and yellow arsenic sulphid are useful; both yield a green color. The pigments should be rubbed to fine powder with water, and alcohol added. When the mixture has settled, pour off the dilute and add strong alcohol. By shaking the flask the coarser particles settle; pour off the fluid containing the finer ones, add it to the shellac solution, and strain through muslin. Hydrochloric acid does not attack this solution; hence it is useful for corrosion-preparations. **Joseph's White-of-egg Mass.** Take filtered white-of-egg and dilute it with 1 to 5 per cent. of carmin solution. This mass remains liquid when cold. It coagulates when immersed in dilute nitric, chromic, or osmic acid, is transparent, and indifferent to reagents. It is useful for Invertebrates. **Robin's Gelatin Vehicles.** 1. Soak 1 part of "colle de Paris" gelatin in 10 parts of cold water; heat in a water-bath, and add 2 per cent. of chloral as a preservative. 2. Dissolve in a water-bath 50 gm. of "colle de Paris" gelatin in 300 gm. of water containing a little arsenious acid; add a few drops of carbolic acid and 150 gm. of glycerin. This does not keep as well as the pure gelatin vehicle. **Scheele's Green Mass.** *a.* Eighty c.c. of a saturated solution of potassium arseniate and 50 c.c. of glycerin. *b.* Forty c.c. of a saturated solution of copper sulphate and 50 c.c. of glycerin. Combine the two solutions with three volumes of the vehicle.

STAINING OF CONNECTIVE AND OTHER TISSUES.

Areolar Tissue. Inject hypodermatically into the subcutaneous tissue of a dog or rabbit a 1 : 1000 solution of silver nitrate. With a pair of curved scissors snip off a little of the edematous tissue, and stain with picrocarmin for from 10 to 12 hours in a moist chamber. The fibrous and cellular elements are then brought into view by treating with glycerin slightly acidulated with formic acid. **Bile-capillaries.** *Golgi's Method.* Fix small cubes of liver 3 to 4 days in a mixture of 4 parts of a 3 per cent. solution of potassium bichromate and 1 part of a 1 per cent. osmic acid; then place in a 0.75 per cent. solution of silver nitrate for two days, wash in distilled water, and harden in alcohol. Section and mount in balsam. The capillaries appear as a black network on a yellow ground. **Bone.** 1. *Flemming's Method.* Soak sections of decalcified bone in water, and place in a drop of water on a glass plate; remove the excess of water with bibulous paper and cover with another glass plate to prevent rolling; place the whole in a dish and cover with alcohol. In half an hour the sections will be fixed and flat. Place in absolute alcohol. To mount, wash in fresh alcohol, then in ether; place the sections on glass, cover with two thicknesses of blotting-paper and a glass plate, and dry for a day in the air or in an oven. Put a drop of melted balsam on a slide and another drop on a cover-glass; place the section on the slide, cover, put on a clip, and warm. 2. *White's Method.* Suitable for osseous or dental tissue. Sections ground moderately thin are soaked in ether for 24 hours, then placed for 2 or 3 days in a thin solution of collodion stained with fuchsin, then hardened in alcohol, ground to the requisite thinness between two plates of ground glass, with water and pumice powder, and mounted, dry, in thick balsam. The stained collodion is prepared by dissolving fuchsin in methylated spirit and adding the ether and pyroxylin. 3. *Vivante's Method.* Place very small pieces of young bone for 8 days in Müller's fluid, then in the osmium-bichromate mixture, then in silver solution. After impregnation decalcify for 20 days in von Ebner's fluid; then wash in water, place in a solution of sodium carbonate, and embed in paraffin. **Cartilage.** 1. *Ranvier's Method.* Place sections of fresh cartilage for 24 to 48 hours in a few c.c. of Ranvier's purpurin solution (see *Staining Reagents*), wash in water, and mount in glycerin. The nuclei are stained, the matrix remaining almost colorless. 2. Rub the cartilaginous end of the freshly excised femur of a frog with a stick of silver nitrate, and expose to sunlight. Section, and mount in Farrant's solution. The matrix is stained brown, and the apparently empty spaces contain the cells, which are too transparent to be readily seen. **Columnar Cells.** Wash a piece of the mucosa of the small intestine of a cat in distilled water, place for 10 minutes in 0.5 per cent. silver-nitrate solution, and silver in the usual way. Harden in alcohol, detach the epithelium, mount in glycerin. A view is obtained of the free ends of the cells with the cement-substance between them as "silver lines," and also of the open mouths of the goblet-cells. **Cornea.** *Klein's Method.* Remove from a living cornea, by brushing, the conjunctival epithelium, and rub the corneal surface with a stick of silver nitrate; in half an hour detach the cornea, and examine it in distilled water. Negative images of the corneal cells are thus obtained. To obtain positive images, treat according to Ranvier's gold chlorid lemon-juice method (see *Staining Reagents, Metallic Stains*). *Rollett's Method.* Immerse a fresh cornea in aqueous humor, place it in a moist chamber, and expose to the action of iodin vapor; when brown, peel off the epithelium and examine. A good method, the result being almost equal to that of the gold method. **Corpuscles of Grandy.** Remove the skin and papillæ from the margins of the fresh beak of a duck, and put pieces into 50 per cent. formic acid for 20 minutes, or until transparent; remove the corneous layer of epithelium, rinse in water, and treat with gold chlorid, according to Pritchard's method (see *Staining Reagents, Metallic Stains*). The same method may be used for the *corpuscles of Herbst.* **Elastic Tissue.** 1. *Martinotti's Method.* Fix for 3 weeks in 2 per cent. chromic acid, wash, and stain 48 hours in 5 per cent. Pfitzner's safranin solution (see *Staining Reagents*). The elastic fibers appear of an intense black, the other tissues showing the usual tints of safranin staining. 2. *Unna's Orcein Method.* Dissolve 0.1 gm. of orcein (Grübler) in 20 gm. of 95 per cent. alcohol and 5 gm. of water; dissolve 0.1 gm. of strong hydrochloric acid in a like mixture of alcohol and water. Take a number of watch-glasses, and pour 10 drops of the stain in each; add 5 drops of the acid mixture to the first glass, 6 to the next, and so on, increasing the proportion by one drop, until all are acidulated. In each glass place 1 or 2 sections, and stain 12 hours. Examine in a drop of glycerin; the elastic fibers appear a shiny brown on a lighter ground. **Epithelium.** *Kromayer's Method.*

Stain sections of skin hardened in Müller's fluid for 5 minutes in a mixture of equal parts of anilin-water and concentrated aqueous solution of methyl-violet; wash in water, immerse for a few seconds in Gram's solution, wash again in water, dry with filter-paper, and differentiate in a mixture of 1 part of anilin to 2 parts of xylol, and then place in pure xylol. This process demonstrates the "intra-cellular and intercellular fibrils" of epithelia. *Mitrophanow's Method.* For the study of prickle-cells and intercellular canals. Wash the tail of an axolotl larva in distilled water; immerse it for an hour in 0.25 per cent. gold-chlorid solution containing one drop of hydrochloric acid to about 5 c.c.; wash, and reduce in a mixture of 1 part formic acid and 6 parts water. **Goblet-cells.** Scrape the mucous surface of the stomach of a frog after hardening for 24 hours in dilute alcohol, and press the scrapings between two cover-glasses. Allow the film adhering to each glass to dry, and then stain with the Ehrlich-Biondi fluid. **Inner Ear.** Open the cochlea in Flemming's solution, and fix 4 or 5 hours; decalcify, if necessary, in 1 per cent. palladium-chlorid solution. Make paraffin sections and stain with Renaut's eosin-hematoxylin, or with safranin. **Isolated Mucous and Demilune Cells.** Place small fragments of the fresh submaxillary gland of a dog in 5 per cent. ammonium chromate for 4 to 6 days; then tease a small piece in the same fluid. Each isolated mucous cell has its fibrillar network, a spheric nucleus embedded in protoplasm, and what was the attached end of the cell prolonged into a process. **"Mastzellen."** *Schiefferdecker's Method.* Place a piece of the mesentery of a rat in a solution of gentian-violet in anilin-water for 24 hours; rinse in water, decolorize in acid alcohol, rinse again in water, counterstain with carmin, and mount in balsam. The nuclei appear red, the granules blue. See *Staining of Blood, Ehrlich's "Mastzellen."* **Pacinian Corpuscles.** Harden a piece of skin in alcohol or osmic acid. Stain sections in picrocarmin, safranin, or hematoxylin, or stain in the mass with borax-carmin. **Plasma-cells.** 1. *Nordmann's Method.* Stain sections in a solution of vesuvin containing 4 or 5 per cent. of hydrochloric acid; after a few minutes' immersion, remove and dehydrate in absolute alcohol. 2. *Unna's Method.* Add 10 to 15 drops of a solution of methylene-blue 1 part, caustic potash 0.05 parts, in distilled water 100 parts, to a watch-glassful of anilin-water; stain sections of tissue hardened in alcohol for several hours; dehydrate in absolute alcohol, differentiate in cresol, rinse in xylol, and mount in balsam. **Red Marrow.** 1. Expose a cover-glass preparation of red marrow to osmium vapor for one or two minutes, stain in picrocarmin, and mount in glycerin. 2. Stain a cover-glass preparation for 24 hours in the Ehrlich-Biondi mixture, and mount in xylol-balsam. **Retina.** 1. Remove the lens and the vitreous body, and inject into the cavity of the eye a mixture of equal parts of acetic acid and osmic acid, 2 per cent.; 3 minutes are required to fix. Wash in alcohol for 15 minutes, and place for 2 hours in Johnson's bichromate and platinic mixture (see *Fixing Fluids*); wash in running water, suspend for 2 days in a large volume of 2.5 per cent. potassium-bichromate solution, and pass through successive alcohols, beginning with 20 per cent. and ending with absolute. Stain in the Ehrlich-Biondi mixture, adding to it one-third of 20 per cent. solution of nigrosin. The nuclear cells appear pale-brown, the nucleoli a deeper-brown. The Müller fiber layers, the molecular layers, and the rods are stained a beautiful green. 2. (*a*) Kill in the dark a frog that has been kept in darkness 36 hours, and harden the eye in alcohol. (*b*) Kill another frog kept in direct sunlight for a few hours, and harden the retina in alcohol. Make sections, and stain with picrocarmin. The pigment-cells covering the rods of the retina in *a* are retracted, while those in *b* are pushed out between the segments of the rods. Pin the excised eyeball of a triton (without opening the bulb) to a cork, and expose to osmium vapor for 10 minutes. Then divide it by an equatorial incision, and place the posterior pole in one-third alcohol for from 6 to 10 hours, and then for the same length of time in picrocarmin; harden in osmic acid, embed and cut in soft paraffin. **Salivary Glands.** 1. *Heidenhain's Method.* Harden small pieces for 1 hour in 75 per cent. alcohol, 5 hours in absolute alcohol, 24 hours in a fresh supply of absolute alcohol. Stain 6 to 8 hours in 10 c.c. of a 1 per cent. aqueous solution of hematoxylin, and differentiate 6 to 8 hours in 1 per cent. solution of potassium bichromate. Embed in paraffin. The nuclei appear bluish-black, the cell-substance steel-gray, and the demilunes very distinct. 2. *Schiefferdecker's Method.* Stain sections, hardened as described, for half an hour in a watch-glassful of alcohol, to which a few drops of a 5 per cent. alkaline alcoholic solution of eosin have been added; then place them for a few minutes in a 1 per cent. aqueous solution of anilin-green; dehydrate and mount. **Tactile Corpuscles.** Impregnate pieces of skin with gold chlorid, according to Löwit's method (see *Staining Reagents, Metallic Stains*), harden in alcohol, section, and stain in picrocarmin, hematoxylin, or purpurin. **Tendon.** 1. Take the tendon of the anterior and superior insertion of the gemini muscles of a rabbit, remove as far as possible the adherent muscle-fibers, treat according to Ranvier's formic-acid-gold method (see *Staining Reagents, Metallic Stains*); after reduction of the metal scrape with a fine scalpel, to remove the muscle-tissue that masks the *corpuscles of Golgi*, which this method is intended to demonstrate. 2. Harden a rat's tail, denuded of integument, for 3 hours in 5 per cent. corrosive-sublimate solution, and wash well in alcohol. Stain in bulk in borax-carmin, decalcify in dilute hydrochloric acid, embed in paraffin, and make transverse sections. **Terminal Discs in Tongue of Frog.** Curarize or etherize the frog, and inject through the abdominal vein a solution of methylene-blue 1 part in 800 parts of 0.6 per cent. salt-solution, and secure access of air to the mouth. Good results are also obtained by simply pouring the stain into the mouth. **Test for Non-striped Muscle.** Fix the tissue in a mixture of 10 volumes of 90 per cent. alcohol and 1 volume of formic acid; wash, and stain for 24 hours in alum-carmin. The connective-tissue cells are swollen and unstained. The cytoplasm of the muscle-cells appears red.

STAINING OF MICROÖRGANISMS.

I. General Methods. **Ahrens' Method** for *Bacteria in Milk or Fatty Substances.* Dilute the milk with an equal quantity of water or, in case of denser substances, with a larger volume. Spread on a cover-glass, and fix by heating after it has become dry. Stain for 5 minutes in 12 or 15 drops of methyl-blue to which 3 or 4 drops of chloroform have been added. Then remove, and allow the chloroform to evaporate; wash in water; mount. **Bizzozero's Method,** for microörganisms in the vermiform appendix. Stain the preparation in a gentian-violet solution, wash in absolute alcohol for half a minute, transfer to Gram's solution for two minutes; then wash alternately in 1 per cent. chromic acid and absolute alcohol, allowing the preparation to remain half an hour or more in each fluid; repeat the chromic acid and alcohol, clear, and mount. The surplus stain must be well removed by the alcohol. **Ehrlich-Weigert Method.** Float the cover-glass (film-surface

downward) upon a watch-glassful of Ehrlich-Weigert's anilin-methyl-violet stain; heat the watch-glass gently until the fluid begins to steam; let it cool for 3 to 5 minutes; decolorize in 1 part nitric acid and 3 parts water, and then in 60 per cent. alcohol for 1 or 2 seconds; wash in water; counterstain with a saturated aqueous solution of Bismarck-brown; wash, dry, and mount. Anilin-gentian-violet or anilin-fuchsin may be used instead of anilin-methyl-violet. Sections of tissue should not be heated. **Gram's Method.** Heat 2 to 5 minutes, or stain cold 20 to 30 minutes (tubercle-bacilli, 12 to 24 hours), in saturated solution of gentian-violet anilin-water; rinse quickly in absolute alcohol; transfer to Gram's solution (1 to 1½ minutes), in which the specimen turns black; wash in alcohol until the black color vanishes and a pale-gray color appears; dry and mount in Canada balsam. The decolorization may be hastened by adding 3 per cent. nitric acid to the alcohol and then washing in pure alcohol. All the tissue-cells are decolorized by this method, while the bacteria are stained a deep-blue. The cells may be subsequently stained with a watery or alcoholic solution of Bismarck-brown 2 to 5 minutes, then washed in absolute alcohol until the section is yellowish-brown. This method is of diagnostic value, as certain bacteria are stained, others decolorized by it. Bacteria *stained* by Gram's method: tubercle-bacillus; Frænkel-Weichselbaum pneumococcus; streptococcus pyogenes; streptococcus of erysipelas; staphylococcus pyogenes aureus, albus, citreus, and flavus; anthrax-bacillus; bacillus of hog-erysipelas. Bacteria *decolorized* by Gram's method: Typhoid-bacillus, gonococcus, Friedländer's capsule-bacillus, Koch's comma-bacillus, glanders-bacillus, and the spirillum of relapsing fever. Botkin advises washing the preparation in plain anilin-water before decolorizing in the iodin-solution. *Modifications of Gram's Method.* 1. *Weigert's.* The sections, stained with gentian-violet, or methyl-violet, are not transferred to alcohol from the iodin-solution, but are laid upon slides and covered with anilin-oil. This is removed with blotting-paper, and followed by xylol and xylol-balsam. The anilin-oil dehydrates and differentiates. 2. *Kühne's.* (*a*) A solution is prepared of 1 gram of Victoria blue in 50 c.c. of 50 per cent. alcohol, and diluted to half its strength with 0.5 per cent. aqueous solution of ammonium carbonate. Stain from 1 to 5 minutes; decolorize in Gram's solution, and treat as in Gram's method, using fluoresceïn (1 gm. to 50 c.c. absolute alcohol) instead of alcohol, to extract the stain. (*b*) Add hydrochloric acid (1 drop to 50 gm. water) to a concentrated aqueous solution of violet, and use for staining; continue as in Gram's method. 3. *Günther's* (*Schenk*). The cover-glass preparation or the section is left for about 2 minutes in gentian-violet anilin-water. Excess of stain is removed with blotting-paper, and the specimen brought for 2 minutes into Gram's solution, then into pure alcohol for half a minute, exactly 10 seconds into 3 per cent. hydrochloric acid in alcohol, then directly into fresh, plain alcohol, which is changed until no more color is extracted from the preparation. Cover-glass preparations are dried and mounted; sections cleared in xylol and mounted in xylol-balsam. Tubercle-bacilli and lepra-bacilli must remain in the staining fluid 12 hours. **Koch's Method,** for bacteria in tissues. Stain in aqueous solution of methyl-violet, fuchsin, or methylene-blue. Wash in a saturated solution of potassium carbonate diluted with an equal volume of water. The color will be removed from the nuclei of the cells, but remains in the bacteria; dehydrate, clear in cedar-oil, and mount in balsam. **Kühne's Carbol-methylene-blue Method.** The section is placed in the following solution for about ½ hour: methylene-blue 1.5 parts, absolute alcohol 10 parts; triturate in a watch-glass and add, gradually, 100 parts of a 5 per cent. solution of carbolic acid. After staining, wash the section in water; decolorize carefully in hydrochloric acid, 10 drops to 500 c.c. of water; immerse at once in a solution of lithium (8 drops of saturated solution of lithium carbonate in 10 c.c. of water); place in a bath of distilled water for a few minutes; dip into absolute alcohol colored by methylene-blue; dehydrate in anilin-oil that contains a little methylene-blue in solution: wash in pure anilin-oil (not colored), then in a light fluid ethereal oil, as oil of thyme or terebene; clear in xylol; mount in balsam. Recommended for staining the bacillus of glanders. **Kühne's Dry Method.** Sections are stained for 10 to 15 minutes in 1 per cent. solution of ammonium carbonate mixed with a concentrated aqueous solution of methylene-blue; then wash in water, decolorize in an aqueous solution of hydrochloric acid; wash in water, dry upon the slides, clear in xylol, and mount in balsam. **Pregl's Substitute for Kühne's Method.** The sections, fixed to a slide or cover-glass by Pregl's method (see *Fixatives*), are stained by dropping Kühne's carbol-methylene-blue solution upon them. Wash in water, and place immediately in 50 per cent. alcohol. When the sections acquire a pale-blue color with a greenish tinge, dehydrate in absolute alcohol, clear in xylol, and mount. **Unna's Methods.** For the recognition of fungi in epidermic scales. 1. Place the crust or comedo on a slide, add a drop of acetic acid, and rub to a pulp by means of another slide laid crosswise upon the first; separate the slides, and dry quickly over a spirit-flame. Wash out the fat with a few drops of ether and alcohol, and stain in two drops of solutions of borax and methylene-blue, cover with the other slide, and warm over the flame for 10 to 20 seconds; rinse in water, decolorize in glycol 2 to 5 minutes, rinse again in water, then in alcohol, dry over the flame, and mount in balsam. 2. Treat sections for 5 minutes with an aqueous solution of borax-methylene blue, then for 5 minutes with a 5 per cent. solution of potassium iodid to which a crystal of iodin has been added. Rinse in alcohol until a blue cloud forms; differentiate in creasote for from a few seconds to half an hour, according to the intensity of the stain. Carry to rectified oil of turpentine. In this the bluish color changes to red or brown. Preserve in a solution of colophonium in oil of turpentine. **Weigert's Iodin Method** (*Schenk*). Sections are stained in gentian-violet anilin-water, rinsed in a solution of common salt, laid upon the slides, and dried; then solution of iodin is dropped upon them. After again drying, anilin-oil is poured over the sections, renewed several times, and finally displaced by xylol. Mount in balsam. II. SPECIAL METHODS. **Actinomyces.** Select whitish granules from the suspected pus by spreading it on a glass plate upon a dark background. Prepare cover-glasses as for other methods. The preparation may be stained in lithium-carmin and then by Weigert's method for bacteria. 1. *Weigert* advises a dark-red solution of orseille in absolute alcohol 20 parts, acetic acid 5 parts, and water 40 parts. The specimen is left in the stain 1 hour, then washed in alcohol and counterstained in 1 per cent. aqueous solution of gentian-violet. It is again washed in alcohol, and mounted. 2. *Gram's Method*, with eosin as a contrast-stain, shows the clubs very well. 3. *Ehrlich's Method* (*Crookshank*). Sections are placed in alcohol or distilled water, then in Ehrlich's logwood for about ½ minute, and transferred to distilled water; then placed in a large dish of tap-water, ½ hour or more, till a blue color appears. They are next stained in a solution of rubin S. and orange, 1 to 2 minutes; washed in distilled water,

dehydrated, cleared, and mounted. 4. *Plaul's Method.* Float sections for 10 minutes in a solution of magenta, 2 parts, anilin-oil 3 parts, alcohol (sp. gr. 0.830) 20 parts, distilled water 20 parts (*Gibbes*). Warm the solution to 45° C. Rinse in water, and counterstain 5 to 10 minutes in concentrated alcoholic solution of picric acid. Wash in water for 5 minutes and then in alcohol for 15 minutes. Pass through absolute alcohol and clove-oil, and mount. The clubs appear red, the tissue yellow. Better than the magenta is the Ziehl-Neelsen solution. When this is used, remove the picric acid by long immersion in alcohol, and counterstain with gentian-violet or methylene-blue (*Crookshank*). **Amœba coli.** *Councilman and Lafleur's Method.* Sections of tissue hardened in alcohol are stained in Lœffler's methylene-blue. The amebæ are colored dark-blue. The nuclei are best demonstrated by fixing in Flemming's solution and staining with safranin, by which method the nucleoli may often be seen (*Schenk*). Cover-glass preparations may also be made. **Bacillus anthracis.** *Kühne's Method.* Place the section for 5 minutes in carbolic black-brown solution, rinse in lithia-water and then in 90 per cent. alcohol, stain 5 minutes in carbol-fuchsin, and decolorize in fluoresceïn-alcohol. The carbolic black-brown acts as a mordant and fixes the red color. **Bacillus of Eve and Lingard.** Stains easily by Gram's method and in ordinary anilin dyes, but not by Lustgarten's method. **Bacillus lepræ.** Stains with the anilin dyes and by Gram's method. Double-stained preparations are easily made. 1. *Babes' Method.* Stain in a solution of rosanilin hydrochlorate in anilin-water; decolorize in 33 per cent. nitric acid. Use methylene-blue as a contrast-stain for the nuclei. 2. *Baumgarten's Method* (*C. v. Kahlden*). Stain 6 to 7 minutes in a dilute alcoholic solution of fuchsin (5 drops of a concentrated solution to a watch-glassful of water); decolorize ¼ minute in nitric acid 1 part, alcohol 10 parts; wash in water, counterstain in methylene-blue; wash again in water, dry, and mount in balsam. Lepra-bacilli appear red upon a blue ground. A longer time is necessary for staining tubercle-bacilli. 3. *Lustgarten's Method.* Cover-glass preparations are stained with anilin-water fuchsin, or gentian-violet; decolorized by 1 per cent. sodium hypochlorite; rinsed in water; dried; mounted. **Bacillus of Lustgarten.** 1. *Lustgarten's Method.* Place thin sections in Ehrlich-Weigert's gentian-violet solution for 12 to 24 hours, or 2 hours at 40° C. Wash thoroughly in alcohol; transfer for 10 seconds to a 1.5 per cent. solution of potassium permanganate. A precipitate is formed that adheres to the section; wash in a dilute aqueous solution of pure sulphuric acid, then in water, and if not decolorized return to the potassium-permanganate solution and repeat the process. When decolorized, dehydrate and mount in balsam. Cover-glass preparations are washed off in water instead of in alcohol. Tubercle-bacilli and lepra-bacilli may be stained in the same way. 2. *De Giacomini's Method.* Leave sections 24 hours in anilin-water-fuchsin; wash in water; decolorize in ferric chlorid, first in a dilute, then in a saturated solution. Counterstain with Bismarck brown. Stain cover-glass preparations for a few minutes in the heated solution. **Bacillus mallei.** This bacillus stains in aqueous solutions of anilin colors, and best when the solution is feebly alkaline. 1. Add to 3 c.c. of a 1:10,000 solution of caustic potash 1 c.c. of a saturated alcoholic solution of an anilin color; or the anilin-water-fuchsin or methyl-violet solution of Ehrlich may be used, diluting it at the moment of using with an equal quantity of a 1:10,000 solution of caustic potash (*Sternberg*). 2. Lœffler advises for cover-glass preparations, heating for 5 minutes in Ehrlich's solution, then decolorizing in 1 per cent. solution of acetic acid to which tropeolin has been added to give it the yellow color of Rhine wine, and washing quickly in distilled water. 3. For sections, Lœffler advises his alkaline methylene-blue; decolorizes in a mixture of distilled water 10 c.c., strong sulphuric acid 2 drops, 5 per cent. oxalic acid 1 drop. Sections are left in this about 5 seconds. 4. *Noniewicz's Method* (*Schenk*). Sections are transferred from alcohol to alkaline methylene-blue for 2 to 5 minutes, rinsed in water, and decolorized in a mixture of 0.5 per cent. acetic acid 75 parts and 0.5 per cent. aqueous solution of tropeolin OO 25 parts. Thin sections are only dipped quickly into the solution; thick sections remain 2 to 5 seconds. Wash with water; spread upon the slide, dry in air or over a flame, clear in xylol, and mount in balsam. The bacilli appear black on a blue ground. 5. *Schütz's Method.* Sections or cover-glass preparations are placed for several hours in an aqueous solution of methylene-blue, then washed in weak acetic acid (0.5 c.c. to 100 c.c.), dehydrated in alcohol, cleared in cedar-oil, and mounted in balsam (after Squire). **Bacillus tetani** may be stained by Gram's method. For double staining of bacilli and spores, the method of Ziehl may be employed. **Bacillus tuberculosis.** 1. *Arens' Chloroform Method* (*Schenk*). Three drops of absolute alcohol are dropped in a watch-glass upon a crystal of fuchsin the size of a millet-seed, and 2 to 3 c.c. of chloroform are added. This solution becomes turbid and then clears When clear, the cover-glass preparation is laid in it for from 4 to 6 minutes, until the chloroform is evaporated, then decolorized in concentrated alcohol to which hydrochloric acid (3 drops to a watch-glassful) has been added, rinsed in water, and counterstained with dilute methylene-blue. 2. *Czaplewski's Methods.* (*a*) After staining in warm Ziehl's solution, drain, and immerse 6 or 10 times in as aturated alcoholic solution of fluoresceïn containing an excess of methylene-blue. Counterstain in a saturated solution of methylene-blue, and wash quickly in water. (*b*) Stain the cover-glass preparation in carbol-fuchsin, heating it until clouds of vapor arise. The following solution is then dropped upon the slide, held obliquely, until the surface is cleared: hydrochloric acid and sodium chlorid each 2.5 parts, dissolved in distilled water 100 parts; then add 500 parts of alcohol. The slide is then washed with water, dried in air, and treated with a drop of some immersion-oil that can be removed by xylol. (*Arbeiten aus dem Path. Anat. Institut zu Tübingen*, 1892, Bd. 1, Heft 3. Also *Monatschr. f. prakt. Derm.* XVII, No. 4.) 3. *Ehrlich's Method* (*Schenk*) for tubercle-bacilli in pus. Spread the pus very thinly; place the cover-glass for 1 to 2 hours in cold anilin-fuchsin; decolorize with nitric acid 1 part, and sulphanil-nitric acid, saturated solution, 3 to 6 parts. The after-stain is methylene-blue. 4. *Frænkel's Method* (*Schenk*). The cover-glass is stained with anilin-water-fuchsin, transferred to a fluid consisting of a saturated solution of methylene-blue in 50 parts of water, 30 of alcohol, and 20 of nitric acid. When the preparation appears blue, it is washed in alcohol and acetic acid or in pure water. 5. *Friedländer's Method.* Place upon the dried film-surface of the cover-glass 3 or 4 drops of carbol-fuchsin, heat until vapor arises, wash in distilled water, drain, and add a few drops of a decolorizing solution (pure nitric acid 5 c.c. to 80 per cent. alcohol 100 c.c.); decolorization takes place quickly. Wash in water, counter-stain about 5 minutes with methylene-blue, without heat; wash; dry and mount. 6. *Gabbet's Modification of Frænkel's Method.* Stain in Ziehl's carbol-fuchsin for about 2 minutes, without heating; wash in water; stain in 25 per cent. sul-

phuric acid 100 c. c. and methylene-blue 2 c. c., for 1 or 2 minutes; wash in water; dry and mount. In the case of sections, dehydrate with alcohol; clear and mount. A good and quick method. 7. *Gibbes' Method* (*Schenk*). Two grams of fuchsin and one of methylene-blue are slowly introduced into a solution of 3 c. c. of anilin-oil in 15 c.c. of absolute alcohol. When they are completely dissolved, 15 c.c. of water are added. A few drops are heated in a test-tube and poured into a watch-glass. In this the cover-glass is laid for 5 minutes, then washed in alcohol until no more color is given off. The bacilli appear red on a blue ground. If desired, stain further with a concentrated aqueous solution of eosin. 8. *Günther's Method* (*Schenk*). Stain with warm anilin-water-fuchsin; carry the cover-glass, with the prepared side up, into alcohol acidulated with hydrochloric acid, 3 : 100; move about for a moment and rinse in water. With a pipet, let a few drops of a dilute alcoholic solution of methylene-blue fall upon the cover-glass; wash in water, dry, pass three times over the flame, and mount in xylol-balsam. 9. *Kaatzer's Method*. Float the cover-glass preparation for 24 hours in a supersaturated alcoholic solution of gentian-violet, or, if warmed to 80° C., for 3 minutes. Decolorize in a solution of 90 per cent. alcohol 100 c.c., water 20 c.c., strong hydrochloric acid 20 drops. Rinse in 90 per cent. alcohol, after-stain for 2 minutes in concentrated aqueous solution of vesuvin, wash in distilled water, dry, and mount in balsam. 10. *Koch's Original Method* (*Sternberg*). Stain sections or cover-glass preparations in Koch's methylene-blue solution, containing caustic potash, for 20 to 24 hours, or, if heated to 40° C., for ½ to 1 hour; then in an aqueous solution of vesuvin for 2 minutes. Wash out excess of stain in water. Dry the cover-glass preparation in air and mount. Dehydrate the sections in absolute alcohol, clear in cedar-oil, mount in balsam. The bacilli are stained blue and the tissues brown. This method has been superseded by the Koch-Ehrlich Method. 11. *Koch-Ehrlich Method* (*Schenk*). Stain the cover-glass preparation for 24 hours at the temperature of the room, or for 15 minutes with heat, in anilin-water alcoholic solution of fuchsin, gentian-violet, or methyl-violet (prepared by adding to anilin-water enough of a concentrated alcoholic solution of the dye to produce opalescence). Then immerse the preparation in 33 per cent. nitric acid, and when it assumes a yellow-green tint transfer to 70 per cent. alcohol. Counterstain 1 to 5 minutes in methylene-blue, malachite-green, or picric acid for fuchsin, in Bismarck brown for gentian-violet or methyl-violet. Wash in water, dry, and mount in balsam. Prolonged action of the nitric acid will decolorize the bacilli. 12. *Pfuhl-Petri's Method* (*Schenk*). Preparations are stained in 10 c.c. of an alcoholic solution of fuchsin in 100 c.c. of water, decolorized in glacial acetic acid, washed in water, dried, and mounted in balsam. 13. *Pittion's Method* (*Schenk*). The prepared cover-glass is dipped for a minute into a mixture of an alcoholic fuchsin-solution 1 part, and 3 per cent. ammonia 10 parts, rinsed in water, carried to a concentrated solution of anilin-green in alcohol 50 c.c., water 30 c.c., nitric acid 20 c.c. for ¾ of a minute, rinsed, dried, and mounted. 14. *Reeves'* (*J. E.*) *Method*. A carbolized, double stain, used for either tissue or cover-glass preparations, is made as follows: Dissolve 2.5 gm. of rosanilin hydrochlorate and 1.5 gm. of methylene-blue in 20 c.c. of absolute alcohol and 3 c.c. of anilin-oil; agitate thoroughly, and gradually add 30 c.c. of 5 per cent. carbolized water. Filter a little of the stain into a watch-glass, heat it gently until it steams; drop enough of the hot stain on the cover-glass preparation to flood it, and cover it with a bell-glass for 5 to 10 minutes. Wash and decolorize in alcohol, dry, and mount in xylol-balsam. Fifteen to twenty minutes are required to stain sections; otherwise the procedure is the same as for cover-glass preparations. 15. *Tubercle-bacilli in Milk* (*Schenk*). Place a drop of the milk upon a cover-glass, add 2 or 3 drops of a 1 per cent. solution of sodium carbonate, and mix well with a platinum needle; then warm carefully until complete evaporation has taken place. A thin film of soap remains, and is stained like an ordinary cover-glass preparation. *Unna's Method*. Stain for from 10 minutes to several hours in polychromic methylene-blue (Grübler), wash in water, and treat with a 33 per cent. aqueous solution of tannic acid 2 to 5 minutes. Wash thoroughly and transfer to absolute alcohol, gold-orange alcohol, or to 25 per cent. nitric acid; follow with dilute alcohol, water, and absolute alcohol. Clear in bergamot-oil. This process double-stains tubercle-bacilli and leprosy-bacilli. 16. *Weichselbaum's modification of the Ziehl-Neelsen Method* (*Schenk*). The red-stained cover-glass preparations are transferred directly to an alcoholic methylene-blue solution, in which they remain until they show a homogeneous blue color. They are then rinsed in water, dried, and mounted in balsam. 17. *Ziehl-Neelsen Method*. Float the cover-glass preparation upon Ziehl's carbol-fuchsin, heat till vapor arises (about 3 to 5 minutes), wash in water, and decolorize in 15 per cent. nitric or 5 per cent. sulphuric acid, then in 60 to 80 per cent. alcohol to remove the remnant of color. Wash well, dry, and mount in balsam. In the case of tissue-sections, stain cold for 15 minutes and decolorize as detailed; upon removal from the alcohol, counterstain with methylene-blue; wash, dehydrate, clear, and mount. **Bacillus typhi abdominalis.** Stains with anilin dyes, but is easily decolorized. Does not stain by Gram's method. Cover-glass preparations stain well with aqueous solutions, especially fuchsin. They are to be rinsed in water, not in alcohol. *Gaffky's Method* for sections of tissues: Harden the tissue in alcohol, place sections for 20 to 24 hours in a deep-blue solution made by adding a saturated alcoholic solution of methylene-blue to distilled water, wash in distilled water, dehydrate in absolute alcohol, and clear in turpentine and balsam. The best stains for the typhoid-bacillus are Lœffler's methylene-blue and Ziehl's carbol-fuchsin. The sections must remain in the dye at least 12 hours. Baumgarten recommends Ehrlich's stain for tubercle-bacilli. In this case a very dilute solution of acetic acid is used for rinsing. The flagella may be shown by Lœffler's method. By leaving the specimens for several days in Ehrlich's anilin-water fuchsin the spores may be stained. Spores also appear if the stain is heated and then extracted by nitric acid. Counterstain with methylene-blue. **Coccidium oviforme.** *Gibbes' Method*. Sections of rabbit's liver, hardened in alcohol, are stained in a filtered solution of rosanilin sulphate, 2 gm., in 100 c.c. of a solution of anilin-oil 2 c.c., cologne 10 c.c., distilled water 88 c.c. Ten minutes are required to stain. After washing in water and then in alcohol, the sections are differentiated in a solution of iodin-green, 1 gm. in 100 c.c of the foregoing anilin-oil solution. When the red color has changed to a dull-purple, the substitution has proceeded far enough. It is well to make an examination in distilled water from time to time. **Flagella.** The first successful method was that of Koch, who used a concentrated aqueous solution of hematoxylin, and then transferred the cover-glass to a 5 per cent. solution of chromic acid or to Müller's fluid. The flagella were stained brown-black. 1. Crookshank stains with

a drop of a saturated solution of gentian-violet in absolute alcohol. Before evaporation takes place rinse with water, dry, and mount in balsam. 2. *Læffler's Method* (*Sternberg*). A small quantity of a pure culture is suspended in a few drops of distilled water. Small drops of water are distributed upon clean glass covers by means of a platinum-wire loop, and are sowed with bacilli from the first drop. The little drops are spread out by the platinum wire, allowed to dry in the air, then passed through the flame in the usual way. Care must be taken not to overheat. Lœffler's mordant (No. 1) is placed upon the cover-glass so as to fully cover it as an arched drop. The cover-glass is then heated until steam begins to arise; too much heat produces a precipitate. The mordant is left for ½ to 1 minute upon the cover-glass and gently moved about. Wash in distilled water, then in absolute alcohol to remove all remnants of the mordant. Drop the staining solution (preferably neutral saturated anilin-water fuchsin) so as to fully cover the glass, and heat till vapor begins to be given off; wash, dry, mount. 3. *Trenkmann's Method* (*Schenk*). A few drops of boiled water are placed upon a slide, and a small drop of the culture added and intermixed. Of this mixture a droplet is spread upon a cover-glass, dried in air, laid, without heating, in a 2 per cent. solution of tannin and 0.5 per cent. hydrochloric acid, in which it is allowed to remain for from 6 to 12 hours. It is then washed in water and placed in iodin-water for half an hour, washed, and carried to a weak solution of anilin-oil gentian-violet for half an hour, again washed, then dried, and mounted. **Gonococcus.** The gonococci are seen in the pus-cells grouped around the nucleus. Watery solutions of anilin dyes, preferably methylene-blue, stain the cocci intensely. Gram's method decolorizes them. 1. *Schütz* stains for 5 or 10 minutes in a saturated solution of methylene-blue in 5 per cent. carbolic-acid water and differentiates for 3 seconds in acetic acid 5 parts, water 20 parts, washes in water, and counterstains in a dilute solution of safranin. 2. *Czenzynski's* solution of methylene-blue and eosin stains the cocci blue and the pus-cells pink. 3. *Neisser* stains for 2 or 3 minutes in a concentrated alcoholic solution of eosin, slightly warmed; removes the excess with filter-paper, and counterstains in a concentrated alcoholic methylene-blue solution for from a quarter to half a minute. The cocci appear blue, the cells red. **Influenza-bacillus** (*of Pfeiffer and Canon*). *Canon's Method* of staining it in blood: Spread the blood upon cover-glasses in the usual way. When dry, place the covers in absolute alcohol for 5 minutes and then transfer them to Czenzynski's staining solution. In this they remain for from 3 to 6 hours in an incubating oven at 37° C., when they are washed, dried, and mounted. The bacillus also stains well in Lœffler's methylene-blue, with heat, and in dilute Ziehl's solution. It does not stain by Gram's method. **Koch's Comma-bacillus.** Stains easily in diluted alcoholic or concentrated solutions of anilin dyes; if cold, in about 10 minutes; if heated, more quickly and more deeply. Gram's method is not applicable. For sections use fuchsin or methylene-blue. 1. *Koch's Method.* Stain sections well hardened in absolute alcohol for 24 hours in strong aqueous solution of methylene-blue. If the staining fluid be warmed, less time is necessary (*Crookshank*). 2. *Nicati and Rietsch's Method* (*Crookshank*). A small quantity of the stools or of the scrapings of the intestinal mucosa is spread and dried upon a slide, steeped for a few seconds in corrosive sublimate solution or in 1 per cent. osmic acid, and stained in fuchsin-anilin solution. 3. *Babes' Method.* Place sections for 24 hours in aqueous solution of fuchsin; wash in distilled water faintly acidulated with acetic acid or in 1 per cent. corrosive-sublimate solution; carry them quickly through alcohol and oil of cloves. **Phagocytes.** Sections of a Peyer's patch, hardened in absolute alcohol and embedded in paraffin, are stained first with alum-carmin, and then with gentian-violet by Gram's method. The bacilli are stained a deep bluish-violet. **Plasmodium malariæ.** A minute drop of blood from the finger-end is spread upon cover-glasses and the film fixed by heat in the usual way, or by placing the covers in a mixture of equal parts of absolute alcohol and ether. Czenzynski's solution may be used to stain, the red corpuscles taking up the eosin, the malarial organisms the methylene-blue. Plehn recommends methylene-blue, concentrated aqueous solution 60 parts, eosin 0.5 per cent. solution in 75 per cent. alcohol 20 parts, 20 per cent. potassium-hydroxid solution 12 parts. Stain for 5 or 6 minutes and wash in water. **Pneumo-bacillus of Friedländer.** *Friedländer's Method.* Stain for 24 hours in warm, concentrated alcoholic solution of gentian-violet 50 parts, distilled water 100 parts, glacial acetic acid 10 parts; then wash in 1 per cent. acetic acid, dehydrate in alcohol, dry or clear, and mount. The capsule is pale-blue, the center deep-blue. For cover-glass preparations Friedländer advises the following: place in acetic acid for a few minutes; displace the acid by blowing upon the preparation through a pipet; stain a few seconds in a saturated solution of anilin-water gentian-violet; rinse in water; dry with filter-paper; mount in balsam. **Pneumococcus of Fraenkel, Klebs, Eberth, and Weichselbaum.** This may be stained by Gram's method. *Methods to demonstrate the capsules.* 1. *Ribbert* places the preparation for a few minutes in a hot, saturated solution of dahlia-violet in water 100 parts, alcohol 50 parts, glacial acetic acid 12.5 parts. Staining takes place rapidly; wash quickly in water. The capsules appear light-blue, the cocci dark-blue. An overstain makes the capsules also dark-blue. 2. *Roux* stains for a few seconds in an aqueous solution of methyl-violet, and, without washing, counterstains for the same length of time in Lœffler's alkaline methylene-blue. 3. *C. v. Kahlden* stains for some hours in a 1 per cent. solution of fuchsin in 5 per cent. carbolic acid. The capsule appears pale-red, the coccus deep-red. **Protozoa in Carcinoma.** *Russell's Method.* Stain sections for 10 minutes in a saturated solution of fuchsin in 20 per cent. carbolic acid, wash in water, then in absolute alcohol, and stain for 5 minutes in a 1 per cent. solution of iodin-green in 2 per cent. carbolic acid; dehydrate in absolute alcohol, clear in clove-oil, and mount in balsam. The "parasites" are red or purple, the tissue-cells blue. **Spirochætæ obermeieri.** Stain with Lœffler's solution or any of the common basic anilin dyes. *Günther's Method.* Air-dried cover-glasses are placed in 5 per cent. acetic acid for 10 seconds, removed, and the acid displaced by blowing upon the preparation through a glass tube and then holding it for a moment, film-surface downward, over strong ammonia just previously shaken. Then stain in gentian-violet anilin-water or in an aqueous solution of other anilin dyes, and proceed as usual. The acetic acid bleaches the red blood-corpuscles. **Spores.** Spores are more resistant to the action of stains than other parts of bacteria. 1. *Günther's Method.* Float the prepared cover-glass on a solution of anilin-water fuchsin or gentian-violet heated to boiling, and remove from the flame for a minute. Repeat this process 5 times and then wash in a 3 per cent. solution of acetic acid in alcohol, and afterward in water. 2. *Möller's Method* (*Sternberg*). Dry the cover-glass preparation in air, pass it thrice

through a spirit-flame, or place it for 2 minutes in absolute alcohol. Treat with chloroform for 2 minutes, rinse in water, and carry to 5 per cent. chromic acid for 1 or 2 minutes, and wash in water. Pour a few drops of carbol-fuchsin upon the preparation and heat to boiling (which occurs in about a minute); drain and decolorize in 5 per cent. sulphuric acid, wash thoroughly in water, and counterstain for half a minute with methylene-blue or malachite-green in aqueous solution. The spores are stained dark-red, the protoplasm of the bacilli blue or green, according to the after-stain used. 3. *Neisser's Method* (*Sternberg*). Pass the cover-glass preparation three times through the flame of a Bunsen burner, float upon a solution of anilin-fuchsin, and heat to near the boiling-point for 1 hour; wash in water, and decolorize in hydrochloric acid 25 parts, and alcohol 75 parts. Counterstain in a saturated aqueous solution of methylene-blue. The spores are stained red, the protoplasm of the bacilli blue. Prolonged action of the hydrochloric-acid solution will decolorize the spores as well as the bacilli. 4. Place the slide or cover-glass, with the culture dried upon it, in a hot-air oven for 1 hour at 120° C., or for 15 minutes at 180° C., or the cover-glass may be passed 8 or 10 times through the flame of a Bunsen-burner. Stain in an aqueous solution of a basic anilin dye. The spores alone are stained (*Sternberg*). **Streptococcus erysipelatosus** (Fehleisen) may be stained with the usual anilin dyes and by Gram's method. III. Preliminary Methods. **Biedert's Method.** Used in examining sputa which contain few tubercle-bacilli. Mix 15 c.c. of the sputa with from 75 to 100 c.c. of water and a few drops of potassium or sodium hydroxid solution. Boil until the sputa are thin. Place in a conical glass vessel and after two days pour off the supernatant liquid. Stain the precipitated sediment. **Kaatzer's Method.** Mix the sputa with from a 1 to a 3 per cent. solution of caustic soda or potash. This disolves the cells and mucus, but preserves the elastic fibers and bacteria. Stain the sediment. Clear the preparation with a dilute solution of acetic acid. **Kühne's Method.** This method is used to overcome the viscidity of sputum and to facilitate the spreading of a thin and even film on the cover-glass. It consists in adding to the sputa an equal volume of a saturated solution of borax. A concentrated aqueous solution of ammonium carbonate will reduce the consistency of less viscid sputa. **Mühlhäusen's Method.** This method is used to render sputa less viscid. It consists in adding to the sputum from 6 to 8 times its volume of a 2 per cent. solution of caustic potash. **Preserving Sputum.** *Savelieff's Method.* This is a process for preserving sputum for purposes of subsequent examination. Let the patient expectorate in a receptacle containing 95 per cent. alcohol, in which the sputum may remain for several months, and in which it is hardened by dehydration and coagulation. A few drops of caustic-potash solution added to a small lump of the hardened sputum on a slide will liquefy it in a few minutes, and from this the cover-glass preparations are made. When dry, fix the film by passing the cover-glass thrice through the flame of a spirit-lamp, wash in water to remove the potash, and then stain according to any of the given methods. **Sectioning Sputum.** *Gabritschewsky's Method.* Place the denser portions of freshly expectorated sputum in Müller's fluid, or some other hardening reagent, and then embed in celloidin. Stain the sections in safranin, alum-carmin or hematoxylin-eosin. Aronson and Philip treat the sputum first with corrosive sublimate, and, according to Schmidt, it may be embedded in paraffin as well as celloidin.

STAINING OF NERVE-TISSUE.

Adamkiewicz's Method. Wash sections of spinal cord in water, then in water acidulated with nitric acid, and stain in a concentrated solution of safranin. Treat with alcohol and clove-oil until no more color is given off; wash in water, then in water acidulated with acetic acid, stain in methylene-blue, and clear as before. This process is said to demonstrate the "chromoleptic zones" which surround the gray matter. The myelin ("erythrophilous substance" of Adamkiewicz) appears red, the nuclei of nerves, neuroglia, and vessels appear violet. This method is of value in the study of degenerative changes, as the erythrophilous substance of pathologic nerves does not take the stain. **Alt's Method.** Adapted to the study of peripheral axis-cylinders. Stain for two hours in a solution of Congo red in absolute alcohol; wash out in alcohol. **Axis-cylinders of, Centric Fibers** (*Bevan W. Lewis*). Remove the myelin from sections by prolonged immersion in water, and then stain with anilin blue-black. The axis-cylinders appear as slightly wavy, swollen bands. **Ciaccio's Method.** This method is especially suitable for the terminations of nerves in muscles and in the cornea. Place small pieces of tissue, about 2 mm. cubes, for 5 minutes in the fresh, filtered juice of a lemon; wash, and place for from ½ to 1 hour in a 1 per cent. solution of gold and cadmium chlorids in the dark; wash, and carry to a 1 per cent. solution of formic acid for 24 hours in the dark, then for 12 hours in sunlight; lastly, for 24 hours in pure formic acid; wash, tease, and mount in glycerin. **Dausac's** (*A. Michel*) **Method.** Very minute pieces of tissue are fixed in a watery solution of picric acid, chromic acid, and nitric acid (the proportions are not given) for from 1 to 2 hours; washed in water for from ½ to 1 hour; embedded in celloidin, cut, and placed in 90 per cent. alcohol. The sections are now transferred to Ehrlich's fluid for from 2 to 5 minutes, rinsed in water, and placed for from 2 to 5 minutes in a 1 per cent. solution of potassio-gold chlorid; rinsed in formic acid for 1 minute, carried to a caustic-soda solution, 1 : 6, rinsed in water, and placed in a 10 per cent. solution of lithium carbonate for ½ hour. From this they are brought into a 10 per cent. solution of potassium iodid for from 2 to 3 minutes, and are then reduced for 10 minutes in a strong solution of sodium thiosulphate. The axis-cylinders are stained a black-violet; the remaining tissue is faintly colored. Platinum chlorid or palladium chlorid gives the same result. Dausac recommends this method also for fibrin and elastic fibers. **Exner's Method.** A small piece of the cortex cerebri, not exceeding 1 cubic centimeter in size, is placed in a relatively large volume of 1 per cent. osmic acid, which should be renewed every 2 days. After from 5 to 10 days, wash with water, treat with alcohol, and embed. Treat sections on the slide with strong ammonia, which clears the tissue, and reveals the medullated fibers stained black. Pieces of tissue, as fresh as possible, not over ½ cm. in thickness, are placed in a 1 per cent. solution of osmic acid, the quantity of which must be at least 10 times the volume of the tissue, and which should be renewed in 2 days. In 5 or 6 days wash in water and embed. The sections are placed on the slide in glycerin to which a drop of ammonia has been added (strong ammonia and water 1 : 50). The medullated fibers appear gray or black. The preparation is not permanent. **Free Nerve-endings in the Skin.** Place small cubes of the skin of the palmar surface of the fingers or toes, all adipose tissue being removed, in boiled gold chlorid and formic acid after this mixture has cooled. In an hour, transfer the tissues to slightly acidulated water and expose to sunlight until the gold is reduced. Harden in alcohol, section, and mount in

formic glycerin. **Freud's Method.** Wash sections of tissue hardened in Erlicki's fluid with water, and place them for from 3 to 5 hours in a 1 per cent. gold-chlorid solution. Wash with water and treat for 3 minutes with a solution of caustic soda, 1 part, in water, 5 or 6 parts. Drain, but do not wash, and place in a 10 per cent. solution of potassium iodid. Remove in from 5 to 15 minutes, wash in water, dehydrate, and mount. Impregnation of axis-cylinders is obtained by this process. **Gerlach's Method.** Harden pieces of spinal cord for from 15 to 20 days in 1 or 2 per cent. ammonium bichromate. Make thin sections, and impregnate them in a solution of potassio-gold chlorid 1 part, water 10,000 parts, slightly acidulated with hydrochloric acid. In from 10 to 12 hours, wash in hydrochloric acid, 1 : 3000, and bring into a mixture of hydrochloric acid 1 part, and 60 per cent. alcohol 1000 parts, then for a few minutes into absolute alcohol. Clear and mount. **Golgi's Gold Method.** To demonstrate motor nerve-endings. Treat the tissue for 1 or 2 minutes in a 0.5 per cent. solution of arsenic acid, and then for from 15 to 20 minutes with a 0.5 per cent. solution of potassio-gold chlorid, and reduce in the sunlight in a 1 per cent. solution of arsenic acid. 1. *Flechsig's Modification.* Harden in a 2 per cent. aqueous solution of potassium chromate, and impregnate with a 1 per cent. solution of corrosive sublimate, weeks or months, according to the size of the specimen. Place the sections in 96 per cent. alcohol. Stain for from 1 to 8 days at 35° C. in the following: pure extract of Japanese redwood 1 gm., absolute alcohol 10 c.c., distilled water 900 c.c., and 5 c.c. each of saturated solutions of tartaric acid and sodium sulphate. Each section is then placed in 3 c.c. of a 0.2 per cent. solution of potassium permanganate until the purple color of the fluid has faded out; then decolorize in Pal's solution. When the yellow color has vanished, carry into a mixture of a 1 per cent. potassio-gold chlorid solution 5 drops, and absolute alcohol 20 c.c. After the precipitate of sublimate has turned black and the red tissue has become blue, wash quickly in distilled water 20 c.c. and 5 per cent. solution of potassium cyanid 1 drop. Dehydrate in absolute alcohol, and clear in lavender-oil. The nerve-fibers are stained red, the ganglion-cells, with their processes, black. 2. *Kühne's Modification.* Used for nerve-endings. Instead of using Golgi's gold solution, place the tissue in the following: 1 per cent. potassio-gold chlorid 12 c.c., 2 per cent. osmic acid 3 c.c., 5 per cent. arsenic acid 60 c.c. From this bring into 1 per cent. arsenic acid, and reduce in sunlight. The tissue may be preserved in May's fluid. (See *Examination and Preservation Media*). **Golgi's Silver Methods.** 1. Soak pieces of perfectly fresh spinal cord in a 2 per cent. potassium bichromate solution, for from 8 to 15 days in summer and for about one month in winter. Wash them, and put them into a 0.75 per cent. solution of silver nitrate; in warm weather the action will be complete in 2 or 3 days, in from 8 to 10 days in winter. Dehydrate in alcohol, section if necessary, clear in oil of turpentine, tease in turpentine, and mount in dammar. The preparations are then exposed to diffused daylight or to direct sunlight, to effect secondary impregnation. By this method may be demonstrated the chain of conical funnels, set one within the other, and embracing the axis-cylinder with their narrow apertures. Somewhat greater precision of result is obtained by interstitial injection of the fresh tissue with osmic acid before placing in the bichromate solution. 2. For the study of peripheral nerves, the process is modified as follows: Immerse pieces of nerve in the bichromate solution for from 4 hours to 2 days; transfer them to the silver bath, in which they should remain for from 12 to 24 hours. Wash with successive alcohols, tease in alcohol, dehydrate, clear with turpentine, and mount in dammar. Reduce in direct sunlight. The preparations are permanent, but the results are not so fine as in the following method. 3. Place a piece of fresh nerve in a mixture of 10 parts of a 2 per cent. solution of potassium bichromate and 2 parts of a 1 per cent. solution of osmic acid; after an hour's immersion, cut into lengths of from ½ to 1 cm., and return to the solution. Four hours after the first immersion, begin to add pieces of silver nitrate to the bath, and, from time to time, transfer pieces of nerve, so as to ensure the proper duration of immersion for some of the pieces. The duration of the silver bath should not be less than 8 hours, and may be indefinitely prolonged. The strength of the silver solution should be 0.5 per cent. 1. *Obregia's Modification.* The sections are transferred from absolute alcohol (after they have been in sublimate or silver solution) directly into 10 c.c. of absolute alcohol containing 8 or 10 drops of a 1 per cent. solution of gold chlorid. The latter should be made half an hour before and exposed to diffuse light. The specimens in the solution are kept in the dark for from 15 to 30 minutes, then washed rapidly in 25 per cent. alcohol, then in water, and for 5 or 10 minutes (not longer) in 10 per cent. solution of sodium sulphid. They are again washed in water, and stained with carmin, hematoxylin, or Weigert's stain, and mounted in balsam. 2. *Ramón y Cajal's Modification.* Small pieces of brain are fixed for from 12 to 24 hours, in the dark, in potassium bichromate 3 parts, osmic acid, 1 per cent., 25 parts, water 100 parts. An abundant quantity of the fluid should be used, and changed several times during the first day. Embryonic tissue requires from 12 to 24 hours' immersion, adult tissue from 2 to 3 days. After hardening, which must not be excessive, wash in a 0.25 per cent. solution of silver nitrate, for 15 minutes, and then place in a 0.75 per cent. solution of silver nitrate containing 1 drop of formic acid to each 100 c.c. (*Van Gehuchten*). The tissue may be left in the silver bath for from 36 to 48 hours. The silver will be thrown down as a very fine precipitate of silver bichromate. 3. *Sala's Modification.* Place the tissue for 4 or 5 days in a 2 per cent. solution of potassium bichromate, for from 24 to 30 hours in 8 parts of the bichromate solution and 2 of the osmium solution, then in a silver bath of 0.75 per cent. strength. Wash with water, fix to a cork with gum, harden in alcohol for a few hours, and cut without embedding. 4. *Sehrwald's Modification.* Prior to bringing the tissues into the silver bath, put them into a 10 per cent. solution of gelatin in water; they may be embedded in the gelatin in a paper tray, with the aid of a little heat, and thus brought into the silver solution. The gelatin is removed by warm water saturated with silver chromate. This process prevents the formation of the precipitate that frequently occurs at the margins of the preparation in Golgi's method. Samassa holds that the precipitation may be prevented by preserving the preparation without a cover. Fick and Huber recommend that the use of an aqueous fluid be avoided and that the section be mounted without a cover, or that the cover be raised from contact with the slide by means of wax feet, or that the balsam be rendered anhydrous (by heating it on the slide with the specimen) and the cover put on in the usual way. 5. *Van Gehuchten's Modification.* This process is like that of Ramón y Cajal, with this difference: 1 c.c. of formic acid is added to each 100 c.c. of the silver bath, to assist its action. Twenty-four hours' immersion is sufficient. The tissue is then washed, treated for 15 minutes with alcohol, then for the same time with absolute alcohol, and for the same time with celloidin solution, after which it is

hardened for 15 minutes in 70 per cent. alcohol, cut, and mounted in the usual way. **Golgi's Sublimate Method.** Harden the tissue for from 15 to 20 days in Müller's fluid, and pass it directly into a 0.25 or 0.5 per cent. solution of mercuric chlorid, which should be renewed until it no longer turns yellow. After at least 10 days' immersion in this solution, sections are cut on a freezing microtome, washed thoroughly in water, dehydrated, cleared, and mounted. The nerve-cells, with their processes and nuclei, are brought out prominently. Pal's modification of this method consists in after-treatment of the sections with a weak solution of sodium sulphid. **Hoyer's Method.** For corneal nerves. Immerse corneæ for from ½ to 5 hours, according to size, in an acidulated 0 5 per cent. solution of potassio-gold chlorid. To demonstrate the intra-epithelial ramifications of nerves, reduce for from 16 to 24 hours by exposure in distilled water containing 2 drops of pyrogallic-acid developing solution, such as is used in photography; or, instead, the corneæ may be placed in a warm, concentrated solution of tartaric acid at the temperature of an incubating oven until the gold is reduced. **Isolated Neuroglia Cells.** Make an interstitial injection of 1 per cent. osmic acid into the white matter of the spinal cord. Tease a piece, and stain it with picrocarmin. **Jakimovitch's Method.** Used to demonstrate Frohmann's lines and Ranvier's crosses. Place small pieces of nerve, in the dark, in a 1 per cent. silver-nitrate solution; continue the immersion for 48 hours, and renew the solution frequently. Wash in water, and expose to light for from 5 to 7 days in 1 part each of formic acid and amyl-alcohol in 100 parts of water. Tease, and mount in glycerin. **Joseph's (M.) Method.** Used to demonstrate Frohmann's lines and Ranvier's crosses. Place the fresh nerve in 1 per cent. silver nitrate and 10 per cent. nitric acid mixture diluted with water. After several hours, transfer to a weak solution of potassium bichromate, and thence pass through solutions of increasing concentration until it is hardened. It may then be teased and mounted. **Kaiser's Method.** Stain celloidin sections of spinal cord in a solution of 1 part naphthylamin-brown (Grübler), alcohol 100 parts, water 200 parts. Wash with alcohol and clear with origanum-oil. Chromophilous ganglion-cells appear dark-brown; chromophobous cells, light on a dark ground. **Korybutt-Daszkiewicz's Method.** For the study of the central nervous system. Secure sections to the slide by means of distilled water. Stain for 1 minute in Böhmer's hematoxylin, and wash in a 1 per cent. solution of alum and distilled water; stain for 1 minute in a 1 per cent. aqueous solution of nigrosin, and wash in water; stain for from 15 to 20 seconds in a 0.5 per cent. alcoholic, watery solution of eosin, and wash for a few minutes in distilled water; transfer to absolute alcohol; stain for 20 minutes in a 0.5 per cent. alcoholic, watery solution of safranin; wash well in alcohol; clear, but not in clove-oil, and mount in balsam. **Kupffer's Method.** A nerve is stretched on a cork, and treated for 24 hours with 0.5 per cent. osmic acid; then washed in water for 2 hours, and stained for from 24 to 28 hours in a saturated, aqueous solution of acid fuchsin. After this it is washed out for from 6 to 12 hours (not more in any case) in absolute alcohol, and cleared in clove-oil, embedded in paraffin, and cut. The axis-cylinder appears as a bundle of red fibrils floating in an albuminous liquid. **Magini's Method.** Used to demonstrate the finer structure of ganglion-cells and their processes. Harden cubes of from 2 to 3 cm. for from 2 to 3 months in Müller's fluid, wash well with distilled water, and bring for 10 days into from a 0.5 to a 1 per cent. solution of zinc chlorid, which should be changed daily, until it does not becom yellower than bichromate solution. Section, was quickly with alcohol, clear partially with creasot and mount in dammar. **Marchi's Method.** Used demonstrate early degeneration of nerves, prior sclerosis. After hardening in Müller's fluid, plac the tissue in a large quantity of a mixture of Mü ler's fluid 2 parts, 1 per cent. osmic acid 1 par The degenerated fibers are stained black, th normal are yellow or uncolored. **Martinotti Method.** Stain for 2 or 3 hours or days in a sa urated solution of nigrosin in a saturated solution o picric acid in alcohol; wash out in a mixture of 1 pa formic acid and 2 parts alcohol, until the gray sul stance appears to the unaided eye differentiated fro the white. This method is of value in the stud of pathologic tissue. **May's Methods.** 1. For periph eral nerves and ganglia, macerate pieces of muscle i 0.5 per cent. arsenic acid, and when swollen place fo 20 minutes in solution of 1 per cent. potassio-gol chlorid 4 c.c., 2 per cent. osmic acid 1 c.c., 0.5 pe cent. arsenic acid 20 c.c. Then wash in water, an expose to sunlight for 3 hours in a 1 per cent. solu tion of arsenic acid, kept at 45° C. in a water-bath Clear in a mixture of glycerin 40 c.c., water 20 c.c 25 per cent. hydrochloric acid 1 c.c. 2. Treat a sma piece of muscle for 12 hours with water containing per cent. of glacial acetic acid, and transfer to a fresh made solution of 0.5 per cent. potassio-gold chlorid c.c., 2 per cent. osmic acid, 1 c.c., 2 per cent. glaci acetic acid 50 c.c. After from 2 to 3 hours bring in acidulated glycerin, and when the tissue is transpare examine in glycerin or Farrant's solution. **Modi cations of Weigert's Method.** 1. *Benda's Mo fication.* Small pieces of nervous tissue are placed 3 days or more in a saturated solution of picric ac washed in water, and the hardening continued in al hol. Embedding in paraffin is best. Thin sections placed in a concentrated solution of iron sulphate, wash repeatedly, and put into a 1 per cent. solution of he atoxylin until deep-black in color (about 10 minute They are bleached in a solution of chromic acid, 1 : 20 washed, dehydrated, and mounted. The fibers and intimate structure of the cells are well brought 2. *Berkley's Modification.* Small pieces are fixe Flemming's solution for from 24 to 30 hours, at a t perature of 25° C., then transferred directly into abso alcohol, which is changed twice during the following hours, and then placed from 12 to 24 hours in celloi Thin sections should be cut, washed in water, and into a saturated solution of copper acetate over night a covered vessel. If necessary to be rapidly done, sections may be heated over a water-bath to between and 40° C. for 25 minutes, and then allowed to c After washing in water the sections are stained hematoxylin solution, prepared as follows: 50 c.c water are boiled in a flask and 2 c.c. of a saturated tion of lithium carbonate added; boil a little longer, add 1.5 or 2 c.c. of a 10 per cent. solution of hemato in absolute alcohol. The flask is then shaken, cor and allowed to cool. The solution improves in a or two, but may be used at once. After staining sections are washed and put into Weigert's bora potassium ferrocyanid solution, which may be di one-third. The decolorizing ought to be comple from 1 to 3 minutes. Then wash several times in w then in alcohol, and mount in xylol-balsam. medullated nerves appear blue-black, the glia subs yellowish, the nerve-cells unstained. 3. *Breglia's ification.* Mordant sections for from 10 to 15 minu a mixture of 15 c.c. of 90 per cent. alcohol and fro 7 c.c. of a saturated aqueous solution of neutral

acetate; then bring them for from 5 to 10 minutes into 1 part of a saturated aqueous solution of lithium-carbonate and 3 parts of water. Stain for from 18 to 24 hours in Japanese red-wood solution (see formula in Flechsig's method), and differentiate in Weigert's decolorizing mixture. 4. *Flesch's Modification.* Celloidin or other sections are put for a few minutes or more in a 0.5 per cent. chromic-acid solution, then rinsed in water, and brought into the stain. Decolorize in the usual way. This method has the advantage of staining more rapidly and producing better differentiation of the nerve-cells, especially in the peripheral ganglia, and also of giving differentiation of the medulla of central and peripheral nerves. 5. *Haug's Modification.* Small segments of fresh cord are put for 2 days into a saturated, aqueous solution of neutral copper acetate, then for from a day to a day and a half into a 5 per cent. or a saturated solution of potassium bichromate; rinsed in water, and placed in 70 per cent. alcohol, for from 36 to 48 hours, in the dark; then treated for the same period with absolute alcohol, in the dark, and embedded. Treat paraffin sections with alcohol, then water, and stain for from 15 to 30 minutes in a well-ripened mixture of 1 part hematoxylin, 1 part ammonium-alum, 30 parts alcohol, 300 parts water. Rinse in water, differentiate in acid alcohol until a red color appears, wash with water until they turn blue or bluish-gray, counterstain, if desired, by momentary immersion in a neutral carmin solution, and mount. 6. *Hill's Modification.* Pieces of nervous tissue are put in from a 2 to a 2.5 per cent. solution of potassium bichromate for 6 weeks; then washed daily in 30 per cent. alcohol until the fluid remains clear; then fully hardened in strong alcohol. Wash in water small pieces and put them in solution of carmin and alum prepared thus: Boil for 3 hours, in water in which carmin and potash-alum have been placed, and restore the water lost by evaporation. Both carmin and alum should be in excess. Filter when cold. After 2 days put the pieces for 24 hours in a half-saturated solution of copper acetate, then into hematoxylin for 8 hours at 40° C. Decolorize in Weigert's decolorizing fluid. The nerve-cells and non-medullated fibers are rendered susceptible of staining by the alum-carmin. 7. *Kultschitzky's Modification.* Harden for one or two months in Erlicki's solution, embed in celloidin and photoxylin, and cut. Stain sections for from 1 to 24 hours in hematoxylin 1 gm., dissolved in a little alcohol and added to 100 c.c. of 2 per cent. acetic acid. Wash out in a saturated solution of sodium or lithium carbonate. A finer differentiation is obtained by decolorizing in a lithium-carbonate solution containing 10 per cent. of potassium ferricyanid. 8. *Lissauer's Modification.* A rapid method which gives good results with cerebral tissue even when it is imperfectly hardened. Place sections that have been hardened in Müller's fluid in a 2 per cent. solution of chromic acid, and heat until bubbles begin to form; rinse in water, place in Weigert's hematoxylin, and heat again till bubbles begin to form. Differentiate by Pal's method. 9. *Pal's Modification.* After staining in the hematoxylin solution, the sections are washed in water, to which, if they are not stained a deep-blue, a trace of lithium carbonate is added. They are next placed in a 0.25 per cent. solution of potassium permanganate for half a minute, rinsed in water, and then brought into a decolorizing solution composed of 1 part each of chemically pure oxalic acid and potassium sulphite, and 200 parts of distilled water. In a few seconds the gray substance is decolorized, the white remaining blue. Wash well in water, and double-stain with eosin or picrocarmin. 10. *Rossi's Modification.* Harden in a solution of 1 gm. of chromic acid and 5 gm. of copper acetate in 100 c.c. of water. Dehydrate, and embed in celloidin. Stain for 2 hours in hematoxylin (7 or 8 drops of a 5 per cent., alcoholic solution to 30 c.c. of alcohol). Differentiate in acid alcohol, wash out for 20 minutes in water, dehydrate, and mount. Double-stain if desired in borax-carmin. 11. *Schäfer's Modification.* Harden the tissue for from 4 to 6 weeks, and put the sections in Marchi's fluid (1 part of a 1 per cent. osmic-acid and 2 parts of a 3 per cent. potassium-bichromate solution). Wash quickly in water, and stain in hematoxylin 1 gm., acetic acid 2 c.c., water 100 c.c. Differentiate by Pal's method. This method is applicable when sections have been too long in alcohol. 12. *Vasale's Modification.* From alcohol the sections are transferred to a solution of hematoxylin 1 gm. to 100 c.c. of water, and decolorized by the aid of heat. After from 3 to 5 minutes they are put into a saturated, filtered solution of copper acetate and left for the same length of time, when they become black. They are washed in water and placed in a solution of borax 2 parts, potassium ferricyanid 2.5 parts, and water 300 parts, in which the degenerated areas, the cells, and the neuroglia become decolorized, the medullated fibers remaining dark. After decolorization, wash in water, dehydrate, clear, and mount. Counterstaining by picro-carmin or alum-carmin may be practised. 13. *Wolter's Modification.* 1. Stain sections in a solution of 2 gm. of hematoxylin in a little alcohol and 100 c.c. of 2 per cent. acetic acid at 45° C. for 24 hours. Dip them in Müller's fluid, and differentiate by Pal's method. This is an intense myelin stain; medullated fibers appear blue-black, ganglion-cells yellow, the ground light. Or, sections of tissue hardened in Müller's fluid and cut in celloidin are mordanted for 24 hours in a mixture of 2 parts of 10 per cent. vanadium chlorid and 8 parts of 8 per cent. aluminum acetate; then washed for 5 or 10 minutes in water, and stained in the foregoing solution of hematoxylin and differentiated with Weigert's decolorizing fluid. This is a myelin stain, with a splendid differentiation of the processes of Purkinje's cells. **Monti's Copper Method.** Small pieces of nervous tissue are hardened in a 2 or 3 per cent. solution of potassium bichromate or Müller's fluid until they are quite firm. They are then immersed in a mixture of equal parts of copper sulphate and Müller's fluid. A reaction takes place which stains the nerve-cells a reddish color in direct, or a blackish-yellow color in transmitted light. **Nerves and Nerve-cells in a Frog's Heart.** Find the sinus venosus, and ligate the inferior and two superior venæ cavæ opening into it; make an incision into one of the aortæ, and into it tie a fine, glass cannula. Inject normal saline solution to wash out the cavities of the heart. Distend the cavities with 2 per cent. gold chlorid 4 parts and formic acid 1 part, previously boiled together and cooled. Ligate the other aorta, adjust a ligature below the cannula, cut out the heart, and place it for from a ½ to 1 hour in 5 c.c. of the gold mixture. Open the auricles, wash the heart in water, and expose it to light in distilled water 50 c.c., containing 3 drops of acetic acid. Reduction of the gold takes place in from 3 to 4 days. Examine the auricular septum in glycerin, for pyriform nerve-cells with straight and spiral nerve-processes. A 2 per cent. solution of osmic acid, used in place of the gold solution, brings the nerve-fibers into prominence. **Nigrosin Method.** For axis-cylinders. Stain sections for from 5 to 10 minutes in concentrated aqueous solution of nigrosin, decolorize in dilute, then in absolute alcohol, and clear in origanum-oil. **Nikiforoff's Modification of Adamkiewicz's Method.** Harden in a chrome-salt and transfer directly to alcohol. Section, and place in alcohol. From the alcohol sections are brought for 24 hours into a concentrated aqueous solution of safranin, or anilin-water safranin, or in 5 per cent. carbolic acid and safranin. Differentiate in alcohol until the gray is distinguishable from the white

substance. Transfer to a 0.1 per cent gold-chlorid solution until the gray matter shows a violet tinge, wash carefully in water, place in absolute alcohol. When the rosy-violet of the gray substance forms a distinct contrast to the red medullary substance carry to clove-oil, then to xylol or toluol, and mount in balsam. **Nissl's Method.** Treat bichromate objects with 95 per cent. alcohol; then stain for 72 hours in an aqueous solution of Congo red, 5 : 400; wash out for from 5 to 10 minutes in 95 per cent. alcohol; treat for 6 hours with a 3 per cent. solution of nitric acid in alcohol; dehydrate for 5 minutes in alcohol, clear in clove-oil and mount in balsam. A specific stain for axis-cylinders. **Paladino's Method.** For axis-cylinders. Pieces not more than from 5 to 8 mm. in thickness, hardened in potassium bichromate, chromic acid, or corrosive sublimate, are put for two days into a large quantity (200 c.c. for each piece) of a 0.1 per cent. aqueous solution of palladium chlorid. Then place them for 24 hours in a 1 per cent. solution of potassium iodid, using a relatively small volume, or the palladium iodid formed in the tissues may be extracted. After from 1 to 2 hours, dehydrate and embed in paraffin by the chloroform method. Medulla, axis-cylinders, and cell-processes are stained brown. **Platner's Method.** Small, fresh nerves are fixed and hardened for several days in 1 part of ferric-chlorid solution and 3 or 4 of water or alcohol, washed out in water or alcohol until the washings no longer give the reaction for iron with potassium rhodanid, and stained for several days or weeks in a concentrated solution of dinitroso-resorcin in 75 per cent. alcohol; then dehydrated, embedded, and sectioned. A specific reaction for the neurokeratin network of medullated nerves is obtained by this method. **Rehm's Method.** For axis-cylinders. Stain sections for a few minutes in a concentrated aqueous solution of Congo red, wash in alcohol, treat for 10 minutes, until they become blue, with acid alcohol, clear with origanum-oil, and mount. This gives a clear axis-cylinder stain with considerable other detail. Or, alcohol-hardened sections may be stained for 1 or 2 days in a 0.5 per cent. aqueous solution of hematoxylin, washed out in an aqueous solution of lithium carbonate until no more color is given off, then dehydrated, and mounted. Counterstain for a few minutes in a 0.1 per cent. aqueous solution of Bismarck brown. Axis-cylinders, cells, and processes appear gray-black. **Sahli's Methods.** 1. Sections of nerve-tissue hardened in Müller's fluid are stained for a few minutes or hours in a liquid prepared as follows: Mix 24 parts of a saturated aqueous solution of methylene-blue, 16 parts of a 5 per cent. solution of borax, and 40 parts of water; let the mixture stand a day, and filter. Wash sections in water or alcohol until the gray matter can be distinguished from the white, clear in cedar-oil, mount in balsam. Nerve-tubes and nuclei of neuroglia appear blue, ganglion-cells greenish. Micrococci, if present, are stained. 2. Sections hardened as detailed, and washed for from 5 to 10 minutes in water, may be stained for several hours in a concentrated aqueous solution of methylene-blue. When they have acquired a deep-blue color, rinse in water, and stain for 5 minutes in a saturated, aqueous solution of acid fuchsin. Rinse in alcohol, and differentiate in a liberal quantity of water. The axis-cylinders appear red, the myelin-sheaths blue. A still finer differentiation is obtained by rinsing in alcohol containing from 0.1 to 1 per cent. of a potassium-hydroxid solution, and then differentiating in water. Clear with cedar-oil, mount in balsam dissolved in cedar-oil. **Schmaus' Method.** For axis-cylinders in the spinal cord. After hardening in Müller's fluid, stain sections for from 15 to 20 minutes in the following solution: sodium carminate 1 gm., uranium nitrate 0.5 gm., water 100 c.c., heat for half an hour, and, when cold, filter. Wash out in water. Another stain that may be used is a 0.25 per cent. solution of English blue-black in 50 per cent. alcohol, to which a little picric acid has been added. **V. Thanhoffer's Methods.** For multipolar nerve-cells. Press fresh tissue between two cover-glasses, separate these, and let them dry in air. Float them on a concentrated aqueous solution of methylene-blue for several hours. Wash in water, pass through alcohol and clearing fluid, or dry in air. Mount in balsam (that is not dissolved in chloroform). Or, place fresh tissue for 3 or 4 days in Landois' fluid; then stain in bulk for from 24 to 48 hours in equal parts of strong ammoniacal carmin and methylene-blue solutions. **Upson's Gold Methods.** 1. Harden the tissue in Müller's fluid for from 2 to 6 months; then wash in water, and place for 2 days in 5 per cent. and then for 2 months in 95 per cent. alcohol. Embed in celloidin, and treat the sections with 80 per cent. alcohol for a few days before staining. The section to be stained is first rinsed in water, then transferred to a 1 per cent. aqueous solution of gold chlorid for from 10 to 30 minutes, washed in water, immersed for ½ a minute in a 10 per cent. solution of sodium hydroxid, again washed in water, and then placed in a reducing fluid consisting of 5 c.c. of sulphurous acid, from 5 to 10 drops of a 5 per cent. tincture of iodin, and 1 drop of a 37 per cent. solution of ferric chlorid. When the sections assume a red color, they should be removed from this fluid, and washed, dehydrated, and mounted in the usual way. 2. Place the sections, soon after cutting, in a 1 per cent. gold chlorid solution for ½ an hour; wash in water, and immerse for ½ a minute in a 15 per cent. solution of sodium hydroxid, to which add, at the time of using, a trace of chromic acid. Wash again, and place in a reducing fluid consisting of 15 drops of solution of stannous chlorid, 1 or 2 gm., in 30 c.c. of a 1 per cent. tincture of iodin, distilled water 3 c.c., 3 drops of a 5 per cent. solution of iron phosphate, and 3 c.c. of sulphurous acid. 3. For axis-cylinders and nerve-cells. Harden in the dark in a solution of potassium bichromate for 3 months, increasing the strength from 1 to 2.5 per cent. Wash and transfer to alcohol, increasing in strength from 50 to 95 per cent. Section, free or embedded, dehydrate, and put sections in a 1 per cent. gold-chlorid solution with 2 per cent. of hydrochloric acid added. Wash, transfer on filter-paper to 10 per cent. solution of potash 5 c.c., containing a trace of potassium ferricyanid. After ½ a minute, wash, and transfer to the following: sulphurous acid 5 c.c.; 3 per cent. tincture of iodin from 10 to 15 drops; mix, and add solution of ferric chlorid 1 drop. When the section has become pale-colored, wash, dehydrate, clear, and mount. 4. Sections made as detailed are placed in a 1 per cent. gold chlorid solution 5 c.c., saturated solution of ammonium vanadate 10 drops, hydrochloric acid 3 drops. Remain after 2 hours' immersion, wash in distilled water, and place for from ½ to 1 minute in a mixture of a 10 per cent. caustic-potash solution 5 drops, 10 per cent. potassium-permanganate solution 10 drops, and a trace of ammonium vanadate; rinse in distilled water, and treat until they become red with the following freshly prepared reducing mixture: 3 per cent. tincture of iodin to which has been added 15 drops of tin chlorid, 3 c.c. of distilled water, from 3 to 5 drops of a saturated solution of iron phosphate, and sulphurous acid 3 c.c. A precipitate will be thrown down when these solutions are mixed, and at the instant that this occurs the section should be put into it. The remaining treatment is as the other methods. **Van Gieson's Picro-acid-fuchsin Method.** Harden small pieces of nerve-tissue in Müller's fluid or alcohol, or both, and embed in celloidin

The sections are stained rather deeply in Delafield's hematoxylin, washed in water, and then placed for a few minutes in a solution of picric acid and acid fuchsin, made by adding to a saturated aqueous solution of picric acid a saturated aqueous solution of Grübler's acid fuchsin, drop by drop, until a garnet color appears; they are again washed in water, then dehydrated in alcohol, cleared in oil of origanum, and mounted in balsam. The ganglion-cells, neuroglia, blood-vessels, and sclerosed areas are stained garnet, the axis-cylinders red, and the myelin yellow. This stain is well adapted to all tissues in which picrocarmin is used. **Weigert's Method.** This method depends on the production in the tissues of a chromium or copper lake, in consequence of which hematoxylin acquires the property of staining the myelin of nerves in a specific way. The steps of the process are as follows: The tissue is hardened in Müller's or Erlicki's fluid, and, when it has acquired a brown coloration, is embedded by infiltration with celloidin, and placed for 1 or 2 days in a saturated solution of neutral copper acetate diluted with 1 volume of water and kept at the temperature of an incubating oven. In this the tissue becomes green and the celloidin bluish-green, and the change of color indicates that the mordantage is complete. Preserve in 80 per cent. alcohol. Stain sections in Weigert's hematoxylin (see *Staining Reagents*). The time required varies according to the tissue: for the spinal cord and the medullary layers of the brain 2 hours, for the cortical layers of the brain 24 hours; rinse in water, and differentiate in a solution of borax 2 parts, potassium ferricyanid 2.5 parts, water 200 parts, ½ to several hours being necessary. Wash in water, dehydrate, and mount in balsam. The nuclei may be demonstrated by previous staining in alum-carmin. **Weigert's New Method.** See *Weigert's Method without Decolorizing*. **Weigert's Method without Decolorizing.** Tissues hardened in Müller's fluid and alcohol are embedded in celloidin, and then put into a mixture of equal parts of a 10 per cent. solution of sodium-potassium tartrate and a cold saturated solution of copper acetate, which is kept at from 38° to 40° C. They are next placed in a half-saturated solution of copper acetate at the same temperature for 48 hours. The blocks, rinsed in water, may be kept in 80 per cent. alcohol and cut at any time. The staining fluid is composed of 1 part of an alcoholic hematoxylin solution (1 to 10), and 9 parts of a saturated solution of lithium carbonate; this fluid is to be freshly made. Stain for from 4 to 12 hours; wash, dehydrate in 90 per cent. alcohol, and clear in anilin-xylol (2 to 1), then in pure xylol, and mount in xylol-balsam. The advantage of the method is the clearness with which the fine medullated fibers are distinguished from the cells and other parts, and it is less tedious than the old method. **Wolters' Method.** Harden either peripheral or central nervous tissue in Kultschitzky's fluid, and follow by alcohol. Embed in celloidin or paraffin. Mordant sections 24 hours in the vanadium-chlorid and aluminum-acetate mixture used in Wolters' modification of Weigert's method; wash for 10 minutes in water and stain for 24 hours in the hematoxylin solution used in Wolters' modification of Weigert's method. Wash out in acid alcohol until the sections acquire a light blue-red color. Remove the acid in pure alcohol, dehydrate, clear in oil of origanum, and mount. Besides the axis-cylinders, which are sharply stained, all the tissue-elements are colored. **Ziehen's Method.** Pieces of nerve-tissue are put for 5 weeks in a mixture of equal parts of 1 per cent. solutions of gold chlorid and corrosive sublimate. The sections are put in 0.25 per cent. solution of iodin. The nerve-fibers, medullated and non-medullated, the nerve-cells, and the neurolgia-cells are colored blue.

STAINING REAGENTS.

The stains employed in microscopic anatomy (histology) are divided into two groups, according to their selective action on the tissues: the histologic, or plasmatic stains, and the cytologic, or nuclear stains. The substances chiefly used are the coal-tar or anilin dyes, carmin, hematoxylin, gold and silver. I. Anilin Stains. These are classified by Ehrlich as acid, basic, and neutral. The basic dyes are excellent nuclear stains, and are most used. Some of them have special affinities for certain tissues, and are of the utmost value in bacteriologic research. They are further classified as plasmatic stains, and, according to the method of staining, as *direct* and *indirect* nuclear stains. The **indirect, or "Flemming" Method,** which is suitable only for sections, consists in overstaining all the tissue-elements in a strong solution of the dye, and then decolorizing. As the nuclei have the strongest affinity for these stains, they resist the washing-out process longest, and still retain the color when it has been yielded up by the ground-substance. The washing-out is usually done in alcohol, but in some instances may be effected by staining with another anilin, which displaces the first in the ground-substance; this process is known as **substitution.** The initials attached to the names of anilin dyes indicate a certain tint of a color and its depth or intensity; as, cyanin B, which means cyanin of a peculiar shade of blue, cyanin BB meaning a deeper shade of the same blue, and so on. The initials may also signify chemic change; as, fuchsin S, which denotes sulphonation of the dye. **Acid Fuchsin.** A diffuse stain, having a special affinity for axis-cylinders. A solution of 2 gm. in 40 c.c. of 90 per cent alcohol and 160 c.c. of distilled water is employed. Wash out in 90 per cent. alcohol. Weigert stains sections of tissue hardened in Müller's fluid in a saturated aqueous solution of acid fuchsin for from 1 to 24 hours, then rinses them quickly in water, immerses for a few minutes in a saturated solution of potassium hydroxid 1 part, alcohol 10 parts. Wash thoroughly to remove the alkali, dehydrate, clear, and mount. This process differentiates the finer nerve-fibrils in the spinal cord. **Acid Rubin.** See *Acid Fuchsin*. **Anilin Blue-black.** See *Nigrosin*. **Anilin Brown.** Sections are stained in a saturated solution of anilin brown in equal parts of water and glycerin, and washed and preserved in glycerin. This stain is used especially in microphotography. **Anilin Red.** See *Fuchsin*. **Artificial Indigo.** See *Nigrosin*. **Bengalin.** See *Nigrosin*. **Benzopurpurin.** A dark-red, plasmatic stain, affording a good contrast to hematoxylin and other blue nuclear stains. Sections are stained for from 2 to 5 minutes in a solution containing 0.25 gm. of purpurin to 20 c.c. of 90 per cent. alcohol and 80 c. c. of distilled water. **Bismarck Brown.** A direct and indirect nuclear stain. A solution of 0.5 gm. in 20 c.c. of 90 per cent. alcohol and 80 c.c. of distilled water gives a good nuclear stain. The addition of carbolic acid is advised. This dye has also the property of staining certain cellular elements during life. **Blackley Blue.** See *Nigrosin*. **Chromotrop.** See, under *Cytologic Methods, Watase's Method for Differentiating Sexual Cells*. **Congo Red.** An acid stain used in the study of the central nervous system. Stain for 2 or 3 minutes in a 2 per cent. aqueous solution. **Corallin.** See *Fuchsin*. **Cyanin** (*Quinolein Blue*). A plasmatic dye. It stains fatty matters a deep-blue, other tissues a pale-blue. Dissolve 1 gm. in 90 per cent. alcohol, and then dilute with water. A weak solution should be used; a very weak solution, 1:500,000, in the medium that constitutes the native habitat of the organism, stains *Infusoria intra vitam*. **Dahlia-violet.** A nuclear stain, recom-

mended for demonstrating the granules in Ehrlich's *Mastzellen*. Tissues hardened in alcohol are stained for several hours in a solution of dahlia-violet 2 gm., in 90 per cent. alcohol 25 c.c., distilled water 70 c.c., glacial acetic acid 5 c.c. Wash in alcohol until nearly colorless. **Deltapurpurin.** See *Benzopurpurin.* **Dinitroso-resorcin.** See *Staining of Nerve-tissue, Platner's Method.* **Eosin.** Stains rapidly and gives a beautiful, diffuse, rosy hue. It is one of the best contrast-stains with hematoxylin. Make a 5 per cent. aqueous solution, and dilute as required. It is also a specific stain for red blood-corpuscles (to which it gives a copper color), for certain leukocytes, and for the giant-cells of leprosy and tubercle. **Erythrosin.** See *Eosin.* **Fuchsin.** Dissolve 1 gm. of fuchsin in 15 c.c. of distilled water, and 50 c.c. of 90 per cent. alcohol, and add 100 c.c. of glycerin. This solution is used for staining blood-corpuscles. *Carbol-fuchsin:* fuchsin 1 gm., carbolic acid 5 gm., alcohol 10 gm., distilled water 100 gm. **Gentian-violet.** A nuclear stain, prepared by dissolving 0.5 gm. of the dye in 80 c.c. of distilled water, 20 c.c. of 90 per cent. alcohol, and glacial acetic acid 1 c.c. Stains in 5 minutes. Dissolved in indifferent media it may be used for staining *intra vitam*, and in acid solutions colors the nuclei of fresh tissues. It may be used according to Gram's method. **Hoffmann's Blue.** A nuclear stain for sieve areas. Dissolve 1 gm. of Hoffmann's blue in 20 c.c. of 90 per cent. alcohol and 80 c.c. of distilled water, and add 0.5 c.c. of glacial acetic acid. Let sections remain in the solution for about 10 minutes. **Indulin.** See *Nigrosin.* **Iodin-green.** See *Methyl-green.* **Magenta.** See *Fuchsin.* **Manchester Brown.** See *Bismarck Brown.* **Metanil-yellow.** A plasmatic stain with a special affinity for connective tissues. It is also used to differentiate certain preparations (Griesbach). **Methylene-blue.** An important reagent, which gives a specific stain for lymph-spaces and intercellular cement, closely resembling gold and silver impregnation, for medullated nerves, and for plasma-cells. It also stains *intra vitam*, and is a specific reagent for the axis-cylinders of sensory nerves in living animals (Ehrlich). Small and permeable aquatic organisms may be stained during life by adding to the water containing them enough of the dye to give it a very pale tint. Nerve-tissue may be stained by injecting the dye into the vascular system of a living, narcotized animal, or by removing the organ and immersing it in the solution. From one-half to 1 per cent. solutions in physiologic salt-solution are employed for this purpose. The color is not permanent, but may be fixed by ammonium picrate. Parker fixes the color by dehydrating in a solution of mercuric chlorid, 1 gm., in methylal 5 c.c.; washing in a mixture of 2 parts of the methylal and sublimate solution, 1 part pure methylal, 3 parts xylol. The object is then placed in xylol for 4 or 5 days, when it is ready to mount or embed. Mayer's albumen should not be used to fix sections to the slide, as it discharges the color. A solution of 0.25 gm. in 90 per cent. alcohol, 20 c.c., and distilled water, 80 c.c., is used for tissue-staining. One per cent. and saturated alcoholic (15 gms. to 100 c.c.) solutions are used for staining micro-organisms. **Dogiel's Methylene-blue and Ammonium Picrate.** Stain for 10 minutes in a 4 per cent. solution of methylene-blue in normal salt-solution; soak for ½ an hour or more in a saturated solution of ammonium picrate, wash in fresh ammonium picrate, and examine in dilute glycerin. This process is used to demonstrate epithelia and lymph-spaces, and has the effect of negative impregnation with silver nitrate. A positive image is obtained by a short bath in the stain, a negative image by from 15 to 30 minutes' immersion. Striking images of the cruciform figures in the nodes of Ranvie in medullated nerves are obtained by this reagent (S Mayer). **Methyl-green.** This is chiefly used as a nu clear stain for fresh or recently fixed tissues; it is also reagent for amyloid degeneration (Heschl), giving violet color. Use 0.5 gm. of methyl-green in 20 c.c. o 90 per cent. alcohol, 80 c.c. of distilled water, and c.c. of acetic acid. Stain the tissue for 5 minutes, wash in acidulated water, differentiate in 90 per cent. alcohol and dehydrate. The nucleïn reaction depends on th presence of the acetic acid. Arnold recommends a di lute solution of methyl-green containing 0.6 per cent sodium chlorid for staining cells and nuclei. Bizzoz ero has observed that the elements of blood and pus also ciliated epithelium and spermåtozoa, do not stai with methyl-green if the cells are highly alkaline; if the alkalinity is diminished they are dyed violet; if th cells are acid, they are colored green. Carnoy regard methyl-green as the best stain for nucleoli. **Methyl violet.** A good chromatin stain. Dissolve 0.5 gm in 200 c.c. of distilled water and 5 c.c. of glacial aceti acid. Stain sections for 20 minutes, wash in distille water, and then in equal parts of glycerin and wate Mount in Farrant's medium. This is also a reage for tissues undergoing amyloid degeneration. Th amyloid substance stains pink. **Naphthylamin brown.** See *Staining of Nerve-tissue, Kaiser' Method.* **Nigrosin** (*Anilin Blue-black*). A pla matic stain having a special affinity for ganglion-cell and much used in the study of the central nervous sy tem. Dissolve 2 gm. in 100 c.c. of distilled wate and stain sections for from 10 to 15 minutes. **Orang** A plasmatic dye used for counter-staining. Dissolve gm. in 20 c.c. of 90 per cent. alcohol and 80 c.c. water. Stain for 10 minutes and wash out in alcoh **Phenylene-brown.** See *Bismarck Brown.* **Quinc leïn.** See *Cyanin.* **Rubin, Roseïn.** See *Fuchsi* **Rosanilin Acetate, Sulphate, and Hydrochlorat** See *Fuchsin.* **Rose-bengal.** Take of rose-beng 1 gm., 90 per cent. alcohol 20 c.c., and distilled wat 80 c.c. This solution is especially useful for demo strating the beginning of amyloid degeneration; it stai the tissues bright-red. It is also recommended staining the spinal cord and as a contrast-stain. **S franin.** *Pfitzner's formula:* safranin (Grübler's) part, absolute alcohol 100 parts, water 200 par *Flemming* uses a concentrated alcoholic solution dilut ½ with water. *Babes' formulæ:* (*a*) equal pa of a concentrated alcoholic and a concentrated aque solution; (*b*) water 100 parts, anilin-oil 2 parts, safra in excess. The latter may be used according to method of Gram, and is recommended for the dem stration of mitotic figures. **Solferino.** See *Fuch* **Spiller's Purple.** Rub up in a mortar 2 gm. of S ler's purple, No 1, with 10 c.c. of alcohol, and 100 c.c. of distilled water. It is used as a double sta and for the fibrin in coagulated blood. If the sectio to be mounted in balsam, use cedar-oil to clarify **Vesuvin.** See *Bismarck Brown.* **Victoria Bl** A beautiful nuclear stain. Use a saturated aqueous lution, or 0.25 gm., in 20 c.c. of 90 per cent. alco and 80 c.c. of distilled water. Chromatin and nucl are stained blue, cytoplasm greenish-blue, or not all. As clove-oil washes out the color, clear in ce oil. This stain has a special affinity for elastic fib fixation in Flemming's fluid or other chrom-osmi mixture is necessary to secure this reaction. II. C MIN AND COCHINEAL. These dyes give nuclear actions, and are chiefly used for staining in the m **Acetic-acid Carmin.** To boiling 45 per c acetic acid add carmin until no more will dissolve. filter. For use, dilute to 1 per cent. The concentr

solution fixes and stains at the same time, and is a valuable reagent for the study of fresh objects. It is a pure nuclear stain. **Acetic-acid Alum-carmin.** Boil an excess of carmin in a saturated potash-alum solution; when cool, add 10 per cent. of glacial acetic acid, and filter after several days For use, add enough of the filtrate to distilled water to give it a deep-rose tint, stain for from 24 to 48 hours, and wash for 2 hours in distilled water. Dehydrate in alcohol. This solution has great penetration, and stains the deeper tissue-layers as admirably as the more superficial ones. **Beale's Carmin.** Dissolve 0.6 gm. of carmin in 2 c.c. of strong ammonia; boil for a few seconds, and stand aside uncovered for an hour, or until the excess of ammonia has evaporated. Then add 60 c.c. each of glycerin and water and 15 c.c. of alcohol; filter, stand aside to settle, and decant. **Csokor's Alum-cochineal.** A nuclear and diffuse stain. Nuclei are stained violet, and other tissues different tones of red. It is composed of powdered cochineal 1 gm., and calcined alum 1 gm., water 100 c.c., carbolic acid 0.5 c.c. **Delage's Osmium-carmin** has the staining properties of carmin and the fixing properties of osmium, and so stains and fixes tissues at the same time. It is prepared by evaporating on a water-bath a strong ammonium-carmin, until red clouds on its surface indicate that the excess of ammonia has disappeared; and when cool, adding an equal volume of a 1 per cent. solution of osmic acid. Filter under a bell-jar. As the reagent soon loses its fixing properties, the acid and carmin should be mixed at the time of using. It is said to rival gold chlorid in bringing out the more minute tissue-elements. **De la Rue's Cochineal.** Exhaust cochineal in boiling water, precipitate the extract with lead acetate slightly acidulated with acetic acid, being careful not to use an excess of the lead. Wash the precipitate with distilled water until the wash-water ceases to give a precipitate with mercuric chlorid; then decompose it with hydrogen sulphid, filter, and evaporate the filtrate to a syrupy consistence on a water-bath. Dry, and exhaust the dark-purple product with alcohol, which dissolves out the carminic acid. **Frey's Carmin.** Dissolve in 30 c.c. of distilled water 0.3 gm. of carmin, adding ammonia, drop by drop, until the solution is complete. Then add 30 c.c. of glycerin and 4 c.c. of alcohol; shake, and keep in a stoppered bottle. **Grenacher's Alcoholic Borax-carmin.** Dissolve 4 gm. of borax in 100 c.c. of distilled water; add 3 gm. of carmin, warm, and dilute with 100 c.c. of 70 per cent. alcohol. Filter before using, and transfer the tissue from the stain directly into alcohol acidulated with from 4 to 6 drops of hydrochloric acid, in which it should remain until it acquires a bright, transparent appearance. This solution is used for staining in bulk, and gives a splendid color. **Grenacher's Alum-carmin.** Dissolve 5 gms. of ammonium-alum in 100 c.c. of distilled water, adding 1 gm. of carmin, cooling, filtering, and bringing up to 100 c.c. by adding water. This solution is not suitable for calcareous structures, but is otherwise an admirable reagent. **Grenacher's Borax-carmin.** Heat to boiling carmin 0.5 gm., borax 2 gm. in 100 c.c. of distilled water, and while hot add, drop by drop, about 17 c.c. of acetic acid, or until the color turns from purple to red. After 24 hours decant, filter, and add 0.5 c.c. of carbolic acid. **Hamann's Acid Carmin.** Dissolve 30 gm. of carmin in 200 c.c. of strong ammonia; add acetic acid until the fluid becomes neutral, or is only slightly acid. Allow it to stand for from 2 to 5 weeks, and filter. **Haug's Alum Borax-carmin.** Take 1 gm. each of carmin and borax, 2 gm. of ammonium-alum, pulverize, and add 100 c.c. of liquor aluminis acetatis and boil for ½ an hour; decant, and filter after 24 hours. The solution is ready for use in 1 week. **Haug's Ammonium Lithium-carmin.** A permanent solution, recommended for preparations which stain with difficulty. Pulverize and boil in 100 c.c. of water, carmin 1 gm. and ammonium chlorid 2 gm.; after cooling add from 0.3 to 0.5 gm. of lithium carbonate and, drop by drop, from 15 to 20 c.c. of a strong solution of ammonia. This solution stains in from 1 to 3 minutes, and gives a gorgeous strawberry-red color. Differentiate in acid alcohol, and follow with absolute alcohol. **Heidenhain's Neutral Carmin.** Dissolve 1 gm. of carmin in 3 c.c. of ammonia, and add 96 c.c. each of glycerin and water. Heat on a water-bath until the excess of ammonia is driven off, or neutralize with acetic acid. **Henneguy's Acetic-acid Alum-carmin.** Boil an excess of carmin in a saturated solution of potassium-alum, and when cool add 10 per cent. of glacial acetic acid, and leave the mixture to settle for several days; then remove the sediment by filtration, and for use add enough of the solution to distilled water to produce a deep-rose tint. Stain for from 24 to 48 hours, and wash for 2 hours in distilled water. **Hoyer's Alcoholic Carmin.** Heat the carmin in a retort with alcohol, acidulated with sulphuric acid, until dissolved; filter, and dilute freely with water. As long as a rose-red precipitate forms, add lead acetate to the filtrate. As soon as the precipitate is violet, filter, and add to the filtrate lead acetate as long as the violet precipitate forms; collect it on a filter, wash, and dry it. Suspend it in a small quantity of strong alcohol, add alcohol strongly acidulated with sulphuric acid until the violet precipitate loses its color and becomes intensely red. Filter. Two drops of the filtrate added to a watch-glass of alcohol make a strong stain. **Hoyer's Ammonium-carmin.** Dissolve 1 gm. of carmin in from 1 to 2 c.c. of strong ammonia and from 6 to 8 c c. of water. Heat in a glass vessel on a sand-bath until the large bubbles become small, and the purplish color turns to bright-red, showing that the free ammonia has evaporated. Allow the solution to cool and settle, saving the bright-red deposit for use again, and add chloral to the neutral, dark fluid, which will keep well. **Hoyer's Neutral Carmin.** Dilute ammonium-carmin with from 4 to 6 times its volume of strong alcohol; collect the scarlet-red precipitate which forms on a filter, wash and dry it. Dissolve this powder in a solution of neutral ammonium picrate. **Mayer's Aluminum Carminate.** Carminic acid 1 gm., aluminum chlorid 3 gm., water 200 c.c., and a few crystals of thymol. Gives a blue-violet color, and is a good substitute for alum-carmin when the use of alum is contra-indicated. **Mayer's Cochineal.** A nuclear stain, which is red or blue according to the reaction of the tissues, which should previously have been hardened in 70 per cent. alcohol. Take 1 gm. of coarsely powdered cochineal and 10 c.c. of 70 per cent. alcohol; digest for several days and filter. Let the tissues stain, according to size, for from 15 minutes to several days, wash in 70 per cent. alcohol, follow by acid alcohol for a light yellowish-red stain, or by alkaline water for a deep purple-red. *New formula*: Pulverize in a mortar. 5 gm. of cochineal, mix with 5 gm. of calcium chlorid and 0.5 gm. of aluminum chlorid, add 8 drops of nitric acid (sp. gr. 1.20) and 100 c.c. of 50 per cent. alcohol; heat to the boiling-point. Let the mixture stand a number of days, shake it frequently, and finally filter. The objects must be treated with 50 per cent. alcohol before and after staining. **Mayer's Carmalum.** Take 1 gm. of carminic acid, 10 gm. of alum, and 200 c.c. of distilled water, heat the mixture, and filter, adding an antiseptic to keep it clear. The fluid is light-red in color, shading toward violet, and is said to have good penetrating powers, even in osmium preparations, and

to be better than alum-carmin for staining *in toto*. **Mayer's Paracarmin.** Dissolve carminic acid 1 gm., aluminum chlorid 0.5 gm., calcium chlorid 4 gm. in 100 c.c. of 70 per cent. alcohol, with or without heat. Filter, after precipitation, and the solution will have a clear-red color. Suitable for staining bulky objects with large cavities, such as *Salpa*. **Orth's Carmin Stains.** *Lithium-carmin*. Digest 2.5 gm. of carmin in 97.5 c.c. of a saturated solution of lithium carbonate and filter. The stain is diffuse, but on treatment with acid alcohol becomes restricted to the nuclei. Tissues refusing to stain in any other medium do so in this fluid. *Picrolithium-carmin* consists of 1 part of lithium carmin and 2 or 3 parts of a saturated solution of picric acid. After staining, wash out in acid alcohol. **Partsch's Cochineal Alum-carmin.** Boil powdered cochineal in 5 per cent. alum solution, filter, and add a little salicylic acid as a preservative. This is said to give more delicate differentiation than other alum-carmins. **Partsch-Grenacher's Alum-carmin.** A nuclear stain, prepared as follows: Boil for 15 minutes 2 gm. of pure carmin, No. 40, and 5 gm. of ammonium-alum in 200 c.c. of distilled water. Cool, filter, and add 2 c.c. of carbolic acid. **Ranvier's Carmin.** This is composed of carmin 1 gm., ammonia 1 c.c., water 100 c.c. Rub up the carmin in a mortar with a little water and add the ammonia. When the carmin is all dissolved add the rest of the water. If there is an excess of ammonia, heat the solution until the carmin begins to precipitate. **Reeves'** (*J. E.*) **Borax-carmin.** A nuclear stain, consisting of the best No. 40 carmin 4 gm., pulverized borax 8 gm., and carbolized water, 2 per cent., 120 c.c. Heat in a porcelain vessel to boiling, and, when cool, filter. Stains in from 1 minute to ½ an hour, according to the character of the tissue. A decolorizing and differentiating fluid composed of pure hydrochloric acid 10 c.c., 70 per cent. alcohol 105 c.c., may be used with this stain. After immersion in this fluid the section must be well washed with water, to remove the acid, and if desired it may now be double-stained in a weak, aqueous solution of sodium sulph-indigotate. **Rollet's Acid Carmin.** Boil pulverized carmin in dilute sulphuric acid, filter off the red precipitate, and dissolve in water for use. **Schneider's Acid Carmin.** Boil pulverized carmin in 45 per cent. acetic acid until no more will dissolve, filter, and dilute to 1 per cent. for use. **Schweigger-Seidel's Acid Carmin.** Add an excess of acetic acid to ammonium-carmin, and filter. **Sodium Carminate.** See *Staining of Nerve-tissue, Schmaus' Method.*

III. HEMATOXYLIN AND HEMATEÏN. Solutions of these substances are used for staining sections, and also tissues, *in toto*, especially such as have been fixed in chromium and osmium fluids. **Böhmer's Hematoxylin.** A valuable nuclear stain. Dissolve 1 gm. of hematoxylin in 100 c.c. of absolute alcohol. Make a second solution of 5 gm. of alum in 100 c.c. of distilled water. Add the first solution, drop by drop, to the second, until a deep-violet color is obtained. Let the mixture stand in an open vessel, exposed to the light, for several days. Filter, and add a little thymol to the filtrate. **Cook's** (*Alleyer*) **Hematoxylin.** An alum-hematoxylin containing copper sulphate. Reduce in a mortar 6 grams each of extract of logwood and alum and 1 gram of copper sulphate, and dissolve in 40 c.c. of water. Filter after 2 days, and add a crystal of thymol to the filtrate. **Cuccati's Iodin-hematoxylin.** Dissolve 25 gm. of chemically pure potassium iodid in 25 c.c. of distilled water. Pour this solution, slowly and with constant agitation, into 75 c.c. of absolute alcohol, and keep in a well-stoppered bottle. Rub up in a mortar 75 cg. of crystallized hematoxylin with 6 gm. of chemically pure, neutral potash-alum, and add 3 c.c. of the iodin-solution; keep the mixture agitated, and gradually add the remainder of the solution. Shake for some time, to dissolve the alum, stand aside for from 10 to 15 hours, shake again, filter, and preserve in a tightly stoppered bottle. Objects should be left in the liquid for 10 hours, then washed, dehydrated, and mounted. The solution is said to be a pure chromatin stain. **Delafield's Hematoxylin.** An excellent nuclear stain. Dissolve 4 gm. of hematoxylin in 25 c.c. of absolute alcohol, and add 400 c.c. of a saturated, aqueous solution of ammonium-alum. Expose to light and air for 3 or 4 days; filter; add to the filtrate 100 c.c. each of glycerin and methyl-alcohol. **Ehrlich's Acid Hematoxylin.** Used for staining sections and in the mass. Dissolve 1 gm. of hematoxylin in 30 c.c. of alcohol, and add 50 c.c. each of glycerin and water, alum in excess, and 4 c.c of glacial acetic acid. Let the mixture ripen in the light until it acquires a deep-red color. Objects stained in it should be washed in undistilled water. **Ehrlich's Ammoniated Hematoxylin.** Dissolve 2 gm. of hematoxylin and 0.4 gm. of ammonium carbonate in 80 c.c. of 90 per cent. alcohol. Expose in an evaporating dish for 24 hours, warm, and bring up to 40 c.c. by adding 50 per cent. alcohol, and then add 2 gm. of ammonium-alum, 80 c.c. of distilled water, 100 c.c. of glycerin, and 10 c.c. of acetic acid. Dilute 1:10 for use. **Gage's Hematoxylin.** Boil 7.5 gm. of alum in 200 c.c. of distilled water for about 5 minutes; when cool, add enough freshly boiled distilled water to make up the loss by evaporation; add 4 gm. of chloral, and then 0.1 gm. of hematoxylin dissolved in 10 c.c. of 95 per cent. alcohol. Let the mixture ripen for a week. It stains sections in from 1 to 5 minutes, and if too concentrated may be diluted with freshly distilled water. This solution does not readily deteriorate. **Hamilton's Hematoxylin.** A rapid and strong nuclear stain of the following composition: hematoxylin 12 gm., ammonium-alum 50 gm., glycerin 65 c.c., distilled water 130 c.c., carbolic acid 5 c.c. Heat the mixture to boiling before adding the carbolic acid, and expose to sunlight for 1 month. **Haug's Hematoxylin.** A nuclear stain, giving good results with nervous tissue. Dissolve 1 gm. of hematoxylin in 10 c.c. of absolute alcohol, and add to 200 c.c. of an aqueous solution of aluminum acetate. Let the solution ripen until the violet-black hue becomes brown-black. After staining, treat the sections with acid alcohol, and wash in water until they appear blue. **Heidenhain's Hematoxylin.** Place the object to be stained in a 33 per cent. solution of hematoxylin in distilled water for from 12 to 24 hours, and then for the same length of time in a 0.5 per cent. solution of neutral potassium chromate, and wash out the excess of this with water, treating further as desired. The stain is clear, from black to gray in color, rich in detail, and adapted to staining in mass, and has the advantage that objects can be decolorized to any extent by prolonging the washing in the chromate. If instead of this a 1 per cent. alum solution be used the stain will be blue. *Apáthy's Modification.* Make a 1 per cent. solution of hematoxylin in 70 or 80 per cent. alcohol. After staining, wash out in a 1 per cent. solution of potassium bichromate in from 70 to 80 per cent. alcohol. The mixture should be made freshly and kept in the dark while using, as should also the objects while being washed, and they should be finished by washing in several changes of 70 per cent. alcohol. **Iron Hematoxylin.** Sections are treated with a weak aqueous solution of ferric acetate, washed in water, and stained in 0.5 per cent. aqueous solution of hematoxylin. A blue-black or black-brown stain is obtained. This pro

cess is recommended by Bütschli for staining sections of protozoa 1 μ thick. Another method is as follows: Treat sections for from ½ an hour to 2 or 3 hours with from a 1.5 to a 4 per cent. solution of ferric-ammonium sulphate; wash in water, and stain for from 1 to 12 hours in an aqueous solution of hematoxylin, about 0.5 per cent. Rinse with water and treat again with the iron solution. As soon as differentiation is complete, wash for 15 minutes in running water, and mount. The results vary according to the duration of the treatment with the iron and hematoxylin solutions; short baths give a blue preparation, in which the nuclear structures are highly differentiated; prolonged baths give black preparations, showing connective-tissue fibers and red blood-corpuscles black, central and polar bodies intensely black, cytoplasm sometimes colorless, sometimes gray, in which case cell-plates and achromatic spindle-fibers are stained. Micro-organisms are sharply stained. **Kleinenberg's Hematoxylin.** Adapted to staining in the mass. Make a saturated solution of calcium chlorid in 70 per cent. alcohol. Shake it, and let it stand; decant, and add alum in excess; shake again, and, after a day or two, filter. To 1 volume of the filtrate add 8 volumes of a saturated solution of alum in 70 per cent. alcohol; to this mixture add, drop by drop, a saturated solution of hematoxylin in absolute alcohol, until a purple color appears. It becomes darker in time and on exposure to light. It should be prepared some months before it is wanted. **Mallory's Phosphomolybdic-acid Hematoxylin.** Ten per cent. solution of phospho-molybdic acid 1 part, hematoxylin 1 part, water 100 parts, chloral from 6 to 10 parts. Expose to sunlight for a week. Filter before using, and save the used portions. Stain sections for from 10 minutes to an hour, wash in 40 to 50 per cent. alcohol, changing it 2 or 3 times. Dehydrate and mount. If the solution does not stain readily, add a little hematoxylin. The stain is blue, and in its general effect similar to nigrosin. It is recommended for preparations of the central nervous system. **Mayer's Ammonium-nitrate Hemateïn.** Hemalum 10 c.c., 70 per cent. alcohol 10 c.c., ammonium nitrate 5 gm. Dissolve, let the solution stand until the excess of alum crystallizes out, 12 to 24 hours, and filter. Useful for staining small objects *in toto*. **Mayer's Hemalum.** An excellent stain for large objects. It consists of two solutions; one of hemateïn, or ammonium-hemateïn, 1 gm., dissolved by the aid of heat in 50 c.c. of 90 per cent. alcohol; the other of alum 50 grams and distilled water 1 liter. The solutions are mixed, left to cool, and then filtered. A crystal of thymol may be added to prevent the formation of mold. For most purposes it is advisable to dilute this stain with water or alum-solution. Hemalum plus 2 per cent. glacial acetic acid gives a more precise nuclear stain. **Mayer's Hemacalcium.** Rub together in a mortar, very thoroughly, 1 gm. each of hemateïn or ammonium-hemateïn and aluminum chlorid, and dissolve in 600 c.c. of 70 per cent. alcohol, to which 10 c.c. of glacial acetic acid have been added; then add 50 grams of calcium chlorid. The color of the fluid is red-dish-violet. Objects overstained in it are treated with a 2 per cent. alcoholic solution of aluminum chlorid or from a ½ to a 1 per cent. solution of sodium or potassium acetate in absolute alcohol. Clearing with bergamot-oil or clove-oil causes early fading. **Reeves'** (*J.E.*) **Hematoxylin.** To one part of 5 or 10 c.c. of 5 per cent. carbolized water add enough sodium sulphindigotate to produce a deep bluish-green color, and 7 parts of Delafield's hematoxylin. The mixing should be done at the time of using. After staining, which requires from ½ to 1 hour or more, immerse the section in water acidulated with a few drops of nitric acid, and allow it to remain until it shows a clear, deep, sky-blue color; wash in water and dehydrate for 20 minutes in alcohol. This stain differentiates the inclusions in carcinoma-cells—chromatin, parasites, etc. **Renaut's Glycerin-hematoxylin.** To a saturated solution of alum in glycerin add, drop by drop, a saturated alcoholic solution of hematoxylin until the mixture has a deep color. Expose to light and air for several weeks, and then filter. Sections may be mounted in the stain. **Sanfelice's Iodin-hematoxylin.** Useful for staining in the mass. Make a solution of hematoxylin, 0.7 gm. in absolute alcohol 20 c.c., and pour it, drop by drop, into a solution of alum 0.2 gm. and distilled water 60 c.c. Let the mixture stand exposed to the light for 3 or 4 days; then add 10 to 15 drops of tincture of iodin, shake, and let it stand again for 3 or 4 days. Tissues are immersed in this fluid for from 12 to 24 hours, and then transferred for 24 hours to 90 per cent. alcohol acidulated with acetic acid. **Weigert's Hematoxylin.** See *Staining of Nerve-tissue, Weigert's Method.* After using, this stain may be regenerated as follows: Add about 5 per cent. of baryta-water, shake it well, and let it stand for 24 hours; then pass carbon dioxid through it, let it stand another 24 hours, and filter (*Fanny Berlinerblau*). IV. METALLIC STAINS. These are chiefly used in the study of epithelial, connective, and nervous tissues, for which they exhibit a remarkable selectivity. The results obtained vary according to the method of impregnation, a *negative* or primary impregnation coloring the intercellular substance, leaving the cells colorless; a *positive* or secondary impregnation staining the cells and not the intercellular spaces. **Ferric Chlorid.** After impregnation in a solution of ferric chlorid, reduction is effected in tannic, gallic, or pyrogallic acid (*Polaillon*). Another method is to fix the preparation in the iron-solution and then treat for 24 hours with alcohol containing a trace of gallic acid (*Fol*). **Gold Chlorid.** Recommended for tracing nerve-endings in fresh tissues, and for staining connective-tissue and cartilage-cells. Place small pieces of tissue, ¼ inch square, in from a 0.5 to a 1 per cent. solution of commercial gold chlorid in distilled water. Keep in the dark, and when the tissue has become yellow, wash in distilled water. Then expose to the light in 50 c.c. of water containing 2 drops of acetic acid for 48 hours, or until the tissue acquires a purple tint. Mount in glycerin. *Boiled Gold Chlorid.* Used in studying the terminations of nerves on sensory surfaces. To 4 parts of a 1 per cent. solution of gold chlorid add 1 part of formic acid, boil, and cool. In this place small pieces of fresh tissue for from 10 minutes to 1 hour; wash in water, and transfer to formic acid, 1 : 4, keeping in the dark, where reduction occurs. *Cohnheim's Method.* Place fresh tissue in a 0.5 per cent. solution of gold chlorid until it is yellow; then expose it to the light in water acidulated with acetic acid until reduction occurs, and mount in acidulated glycerin. *Chrchtschonovitsch's Method.* Place the fresh tissue in a 0.5 per cent. solution of auric chlorid for from 30 to 45 minutes; then in distilled water for 24 hours; then in a saturated solution of tartaric acid at a temperature of 50° C., until the gold is reduced. Wash in water and harden in alcohol. *Freud's Method.* Harden the tissue in Müller's fluid; stain in equal parts of a 1 per cent. gold chlorid solution and 95 per cent. alcohol for from 3 to 5 hours; wash in water, and place in a solution of caustic soda 1 c.c., and distilled water 6 c.c., for from 2 to 3 minutes. Wash in water and carry to a 10 per cent. solution of potassium iodid for from 5 to 15 minutes; wash, dehydrate in alcohol, and mount. Glass instruments should be used. This method, when successful, gives islolated staining of axis-cylinders. *Gold Chlorid and Chromic Acid* (*Kolosson*). To 100 parts of a 1 per cent. solution of gold chlorid add

1 part of hydrochloric acid; place the tissues in this mixture for 2 or 3 hours; wash with water, and keep in the dark in chromic acid, $\frac{1}{80}$ or $\frac{1}{100}$ per cent. for 2 or 3 days; then wash thoroughly. *Löwit's Method.* Mix 2 parts of distilled water and 1 part of formic acid (sp. gr. 1.16); in this mixture place small pieces of fresh tissue, from 1 to 2 mm. in thickness, for from a ½ to 1 minute, or until they become somewhat transparent. Then transfer to a 1 per cent. solution of gold chlorid, protecting the tissue from the light as much as possible; in from 15 to 20 minutes, or when it is yellow, place it in a solution of formic acid, 1 : 3, for 24 hours, keeping it in the dark. Then immerse in pure formic acid for 24 hours, in the dark, and, finally, wash thoroughly in water. *Pritchard's Method.* After the tissues have been treated with a gold-solution, the gold is reduced with the following mixture: amyl-alcohol 1 c.c., formic acid 1 c.c., water 98 c.c. Remove the tissue from the gold-solution, wash it in water, place in the preceding mixture for 24 hours in the dark, when it will probably have become of a violet color; if not, place it in a fresh quantity of the fluid for 24 hours longer. Wash in water and harden in alcohol. *Ranvier's Formic-acid Method.* Place the tissue in a mixture of 4 parts of a 1 per cent. solution of gold chlorid to 1 part of formic acid, the mixture having been previously boiled and cooled. Allow muscle to remain in this solution for 20 minutes, epidermis for from 2 to 4 hours. The reduction of the gold is accomplished in acidulated water by the action of daylight, or in the dark in 1 part of formic acid to 4 parts of water. *Ranvier's Lemon-juice Method.* Express and filter the juice of a lemon, and place the fresh tissue in it for 5 or 10 minutes, when it becomes transparent. Quickly rinse in distilled water, and transfer to a 1 per cent. gold-chlorid solution for from 10 minutes to 1 hour, the time depending on the tissue. Wash with water, and place in 50 c.c. of water acidulated with 2 drops of acetic acid; reduction occurs on exposure to light. *Viallanes' Osmic-acid Method.* Treat the tissues with a 1 per cent. solution of osmic acid until they begin to turn brown; then with ¼ formic acid for 10 minutes; then place them in a solution of gold chlorid, 1 : 5000, in the dark, for 24 hours. Reduce in the light in ¼ formic acid. **Osmic Acid.** Tissues fixed in osmic acid and subsequently treated with weak pyrogallic acid are stained greenish-black (*Lee*). A developing mixture of water, alcohol, tannin, and pyrogallic acid or a 5 per cent. solution of tannin is used by *Kolosson*. Treatment with oxalic acid 1 part, in water 15 parts, gives a Burgundy-red stain to osmium-objects, which should be washed in water before they are put into the acid (*Brösicke*). **Silver Nitrate.** Particularly adapted to the study of epithelial and connective tissues. Make a 1 per cent. solution in distilled water, and dilute from 2 to 4 times for use. Very thin sections of fresh tissue are washed in distilled water, to remove the chlorids, immersed for ½ hour in the solution, in the dark, washed in distilled water, and then placed in water and exposed to sunlight until brown. Fix in a solution of sodium hyposulphite, in the dark, and mount in glycerin-jelly. The *Hertwig's* employ a 1 per cent. solution for marine animals. *Tourneux and Hermann*, in their studies of the epithelia of *Invertebrates* used a solution of 3 : 1000, in which the tissues were left for 1 hour and then washed in alcohol (36°). *Dekhuysen* treats the tissue with a 1.3 per cent. solution of potassium nitrate, then immerses it in 0.25 per cent. solution of silver nitrate containing 3 per cent. of nitric acid. After from 3 to 6 minutes in the silver-bath, the tissue is placed for a few minutes in pure 3 per cent. nitric acid, then in 96 per cent. alcohol, then in clove-oil, in which reduction occurs, in diffused light, in a few minutes. This method is said to give good fixation of tissues, and to permit the use of a nuclear after-stain with hematoxylin, safranin, or methyl-green. The process is the same as that employed by Harmer for marine animals. *Von Recklinghausen* effects reduction by washing the preparation in normal salt-solution before exposing to light in distilled water. *Thanhoffer* exposes to light for a few minutes in water acidulated with acetic acid. *Krause* uses, after washing, a light-red solution of potassium permanagate, in which reduction occurs very quickly even in the dark. *Jakimovitch* exposes the tissues to light in a mixture of formic acid 1 part, amyl-alcohol 1 part, water 100 parts; from 5 to 7 days are required, and the mixture must be renewed from time to time. The after-blackening is prevented by washing in sodium-hyposulphite solution (*Legros*). V. OTHER ORGANIC STAINS. **Grenacher's Purpurin.** Dissolve from 1 to 3 per cent. of powdered alum in 50 c.c. of glycerin, add a knife-pointful of purpurin, and boil. No alcohol should be used. The orange-colored solution should stand for 2 or 3 days, and then be filtered. This is a nuclear stain which is stable, from 10 to 30 minutes producing a good result. **Nuclear Black** (*Kernschwarz*). A black liquid of unknown composition, recommended by Platner as a cytologic stain. Dilute the liquid somewhat and wash out in dilute ammonia or a saturated solution of lithium carbonate diluted with 3 or 4 volumes of water. Mitotic figures stain deeply, resting chromatin less deeply, cytoplasm faintly gray. **Phloroglucin.** For staining lignified cellulose. Take of phloroglucin 1 gm., 90 per cent. alcohol 20 c.c., distilled water 80 c.c.; treat the sections for 15 minutes, and follow by strong hydrochloric acid. This gives a stain of cherry-red, varying in proportion to the extent of the lignification. **Ranvier's Purpurin.** Boil in a porcelain capsule 200 c.c. of water and 1 c.c. of alum; then add purpurin rubbed up in water, and continue the boiling. A saturated solution of purpurin is secured by having an undissolved excess in the capsule. Filter the hot mixture into a flask containing 60 c.c. of 90 per cent. alcohol. This solution does not keep well. **Wedl's Orseille.** French orchilla extract, a sufficient quantity, from which the excess of ammonia has been removed by warming in a sand-bath, is poured into a mixture of 20 c.c. of absolute alcohol, 5 c.c of glacial acetic acid, and 40 c.c. of distilled water, the dye being added gradually until a dark-reddish fluid is produced. This is a protoplasmic stain, the nuclei remaining colorless. VI. COMBINATION-STAINS. These are of two kinds. In the one class a pure nuclear stain is combined with a dye taking effect on the extra-nuclear elements; in the other, a stain giving a reaction with all the elements of one tissue is combined with one or more stains taking effect on all the elements of the other tissues. **Alum-carmin and Osmic Acid** (*Zoltán von Roboz*). To 50 or 60 gm. of water add alum-carmin until the mixture is nearly rose-red; then add 10 drops of a 1 : 500 solution of osmic acid. Stain objects, in the dark, from 24 to 48 hours. A nuclear double stain; resting chromatin and nucleoli appear purple, kinetic chromatin red, protoplasm brown. Recommended for staining *Pluteus* and similar objects. **Alum-carmin and Picric Acid.** Mix 10 volumes of alum-carmin and 1 of saturated picric-acid solution (*Legal*). **Anilin Blue and Safranin** (*Garbini*). Stain sections for from 2 to 4 minutes in 0.5 per cent. anilin-blue solution, wash in water, then place in a 0.5 per cent. lithium-carbonate solution, then in 0.5 per cent. hydrochloric acid until a clear, blue color appears. Wash again in water, and stain for 10 minutes in 1 per cent. safranin-solution, dehydrate in methyl-alcohol and

clarify in clove-oil 2 parts and cedar-oil 1 part. This stain is especially recommended for salivary glands; one set of cells is colored red, the other blue; and for the gastric glands, in which the parietal cells stain red, the central cells blue, the villous epithelium blue, the goblet-cells reddish. In hair-follicles, the sheath of Henle colors red, the sheath of Huxley blue. **Anilin Green and Bismarck Brown** (*List*). Used in the same way as methyl-green and Bismarck brown, and yields similar results. **Anilin Green and Eosin** (*Schiefferdecker, Arch. f. Mik. Anat., xv,* 1878, p. 30). To a watch-glassful of alcohol add a few drops of an aqueous solution of eosin, and stain for from ½ to several hours; wash in water, and stain for a few minutes in a 1 per cent. aqueous solution of anilin green, rinse in water, extract in alcohol, and clear in clove-oil. This combination has a special affinity for glandular and connective tissue. **Baumgarten's Fuchsin and Methylene-blue.** Sections of tissue fixed in a chromic fluid are stained for 24 hours in a solution of from 8 to 10 drops of a concentrated alcoholic solution of fuchsin in a watch-glassful of water. Rinse with alcohol, and stain for from 5 to 10 minutes in a concentrated aqueous solution of methylene-blue; wash out in alcohol and clear in clove-oil. The nuclei are red, the other elements blue. **Borax-carmin and Picrocarmin.** A few drops of picrocarmin added to a watch-glassful of Grenacher's alcoholic borax-carmin gives a beautiful and precise double stain. Baumgarten's borax-picrocarmin is prepared by adding crystals of picric acid to Grenacher's solution, until it assumes a bright-red color. **Carmin and Anilin Blue.** Stain with carmin, dehydrate, and stain for a few minutes in an alcoholic solution of anilin blue. Clear with turpentine, then treat with alcohol, and mount. **Carmin and Methyl-green** (*Flesch*). Stain with picrocarmin and follow with an aqueous solution of methyl-green. This stain gives good differentiation. **Chenzynsky's Stain.** See *Czenzynke's Stain.* **Czenzynke's Double Stain.** Concentrated aqueous solution of methylene-blue 40 c.c., 0.5 per cent. solution of eosin in 70 per cent. alcohol 20 c.c., distilled water 40 c.c. This is used to stain the blood, and colors the red corpuscles red, the leukocytes blue; also for the plasmodium malariæ, the gonococcus, and the influenza-bacillus of Pfeiffer and Canon. **Dahlia and Eosin** (*Schiefferdecker*). Use in the same way as anilin green and eosin, taking a 1 per cent. solution of dahlia. **Ehrlich-Biondi-Heidenhain Triple Stain.** To 100 c.c. of a saturated aqueous solution of orange add, with continual agitation, 20 c.c. of a saturated, aqueous solution of acid fuchsin and 50 c.c. of a like solution of methyl-green; dilute with from 60 to 100 volumes of water. A drop on blotting-paper should form a spot bluish-green in the center, orange at the periphery; a red zone outside the orange indicates that the mixture contains too much fuchsin. From 6 to 24 hours are required to stain. Wash out in alcohol and clear in xylol. Chromatic elements are colored blue; cytoplasm, violet or orange-red; caryoplasm the same, but in lighter tones, and all the denser protoplasmic elements the same, but darker (*Gilson*). The stain *par excellence* for photo-micrography, except for connective tissue (*Lindsay Johnson*). A slightly acid reaction of the alcohol used for washing out will produce a relatively strong coloration by the methyl-green, while that by the fuchsin will be relatively pale; the opposite result will be obtained if the alcohol contains a trace of alkali. The addition of very dilute acetic acid, until the red tint is markedly intensified, will restore the energy of the fuchsin, which is likely to decline after a time (*Heidenhain*). **Ehrlich-Biondi Mixture.** See *Ehrlich-Biondi-Heidenhain Triple Stain.* **Ehrlich - Westphal Dahlia and Carmin.** Partsch-Grenacher's carmin solution 100 c.c., glycerin 100 c.c., concentrated alcoholic solution of dahlia-violet 100 c.c., glacial acetic acid 20 c.c. Nuclei are stained red, "Mastzellen" blue-violet. **Flemming's Safranin, Gentian, and Orange.** Stain in a strong alcoholic solution of safranin diluted with anilin-water; rinse in distilled water, and wash out in absolute alcohol containing 0.1 per cent. of hydrochloric acid; then stain in a strong, aqueous solution of gentian, wash in distilled water, treat with a concentrated aqueous solution of orange, and wash in absolute alcohol. The orange, by virtue of its acid properties, displaces the gentian and the result is a double, not a triple, stain. Chromatin and nuclei are stained purple-red; achromatin fibrils gray or violet; "attractive spheres," centrosomes, polar corpuscles, and *Zwischenkörper*, from reddish-violet or brownish-violet to black-brown, according to the intensity of the reagent. **Gaule's Quadruple Stain.** The object, fixed in a concentrated solution of corrosive sublimate, is stained successively in hematoxylin, nigrosin, eosin, and safranin. According to their affinity for the different stains, Gaule distinguishes hematoxylophile nucleoli, or caryosoma; safranophile nucleoli, or plasmosoma, and mixed nucleoli; and those that react to both hematoxylin and safranin. **Genevan Double Stain.** Useful for staining vegetable tissue. Decolorize the sections in Javelle water, and then immerse for a few seconds in a slightly alcoholic and ammoniacal solution of Congo red 2 per cent. and chrysoidin 0.2 per cent. A beautiful triple stain is obtained. **Hanstein's Rosanilin-violet.** Used for staining plant-tissues, and composed of fuchsin and methyl-violet, each 1 gm., in 100 c.c. of 90 per cent. alcohol. It stains cellulose cell-walls a faint violet, lignified cell-walls red. It is also useful in differentiating the histologic details of bast; the fibers stain red, the sieve-tubes and parenchyma scarcely at all, the protoplasm bluish-violet, the amyloid substance, gums, and nuclei different shades of red, resins blue, tannin, foxy-red, or brick-red (*Bower*). **Hematoxylin and Safranin.** Stain feebly with dilute Delafield's hematoxylin for about 24 hours, wash in water, then in acid alcohol; then stain in Pfitzner's safranin and wash out in absolute alcohol (*Rabl*). The stains may be combined in one mixture, as follows: Böhmer's hematoxylin 25 c.c., safranin (1 per cent. aqueous and alcoholic solution) 20 c.c., distilled water 100 c.c. From 1 to 3 minutes are required for staining, and before dehydrating treat the section with a weak alcoholic solution of picric acid or orange. This combination is recommended for staining marrow, for the investigation of the development of blood (*Foá*). **Hematoxylin and Rubin and Orange.** Stain in Ehrlich's hematoxylin, wash in distilled or acidulated water, then in water containing a trace of an alkali, and then stain in the rubin and orange (*Pringle*). **Kossinski's Safranin and Indigo-carmin.** Stain sections in a saturated aqueous solution of indigo-carmin, wash in water, then in alcohol, and stain in a 0.5 per cent. dilute alcoholic solution of safranin. **Löwenthal's Sodium Picrocarmin.** Dissolve 1 gm. of caustic soda in 1000 c.c. of distilled water, add 10 gm. of carmin, boil, filter, and then add distilled water to make 2000 c.c. Add gradually, as long as agitation causes the ensuing turbidity to disappear, a 1 per cent. aqueous solution of picric acid. **Merkel's Carmin and Indigo-carmin.** Solution *a*. Dissolve 2 gm. of carmin and 8 gm. of borax in 130 c.c. of water. *b*. Dissolve 8 gm. each of indigo-carmin and borax in 130 c.c. of water. When required, mix

equal volumes of *a* and *b*. Sections must remain in the mixture for 24 hours, and then be placed for ½ an hour in a saturated solution of oxalic acid. **Methyl-green and Bismarck Brown.** Stain in Weigert's Bismarck brown for a few minutes, wash, and stain in a 0.5 per cent. aqueous solution of methyl-green. Clear with bergamot-oil or xylol (*List*). **Methyl-green and Rosanilin Nitrate.** Stain for a few minutes in a 0.5 per cent. aqueous solution of methyl-green, wash, and stain for from 10 to 15 minutes in a 0.0001 per cent. aqueous solution of rosanilin nitrate, and wash out rapidly in absolute alcohol. **Methyl-green and Eosin.** Mix 60 parts of methyl-green and 1 of eosin, and dissolve in warm 30 per cent. alcohol. Sections stain in from 5 to 10 minutes, and should be quickly washed in successive alcohols (*Calberla*). Stain for a few minutes in a mixture of 3 parts of absolute alcohol and 1 part of a 0.5 per cent. aqueous solution of eosin, wash, and stain for 5 minutes in a 0.5 per cent. aqueous solution of methyl-green (*List*). **Methyl-violet and Eosin.** (*Schiefferdecker*). Proceed as for anilin green and eosin, using a 1 per cent. aqueous solution of methyl-violet. **Orceïn.** A vegetable dye obtained from tinctorial lichens, which unites in itself the properties of basic and acid stains, and also 2 contrast-colors. A saturated acetic-acid solution is used. After staining, the section is washed in distilled water, immersed in alcohol, and quickly transferred to cedar-oil, in which it is mounted. Nuclei are colored blue and protoplasm red. **Pianese Double Stain.** Prepare a saturated solution of nigrosin in a saturated alcoholic solution of picric acid; mix 2 volumes of this with 1 volume of anilin-water, and evaporate in open air. The crystals deposited are dissolved in absolute alcohol, and from this solution green crystals are obtained soluble in alcohol, ether, and water. For tissues, make a 2 per cent. solution in alcohol, for microörganisms, in water. Stain sections first in lithium-carmin, treat with acid alcohol, wash, and immerse in an alcoholic solution of picro-nigrosin until they assume a brown hue. Decolorize in oxalic acid. Nuclei are stained red, plasma dark-yellow; cartilage yellow; connective tissue pale-green; elastic fibers violet. **Picro-lithium-carmin.** See Orth's carmin stains. **Ranvier's Ammonium-picro-carmin.** Dissolve 1 gm. of carmin in 3 c.c. of stronger ammonia and 5 c.c. of distilled water by gentle heat, then add 200 c.c. of a saturated, aqueous solution of picric acid, boil, and filter. This stain is valuable for complex tissues, like skin. **Ranvier's Picrocarmin.** This gives a double stain without the use of an acid or an alkali. Add a saturated, ammoniacal solution of carmin to a saturated, aqueous solution of picric acid until precipitation just appears, mix well, and leave protected from dust, in shallow vessels, to crystallize. When the bulk is reduced to ⅓, decant the liquid, filter, and evaporate it to dryness on a water-bath. Dissolve the residue and the crystalline deposit in water, filter, and evaporate to dryness. A 1 per cent. solution of the resulting brown powder yields a good stain. **Renaut's Eosin-hematoxylin.** Concentrated aqueous solution of potassium eosin 30 c.c., saturated alcoholic solution of hematoxylin 40 c.c., saturated solution of potassium-alum in glycerin (sp. gr. 1.26) 130 c.c. Mix, and stand aside for 5 or 6 weeks in a vessel covered with a sheet of perforated paper, until the alcohol is evaporated, and then filter. This reagent stains slowly. Objects may be mounted in the solution diluted with from 1 to 2 volumes of glycerin; the tissues gradually absorb the colors, leaving the medium colorless. This solution has a selective action on the cells of salivary and gastric glands; mucous cells become pale-blue, salivary ferment-cells rose-colored. **Safranin and Indigo-carmin** (*Kossinski*). Sections are stained for from 10 to 20 minutes in a saturated solution of indigo-carmin, and, after washing in water and then alcohol, are stained in a 0.5 per cent. solution of safranin in dilute alcohol. The same author also recommends safranin and nigrosin, and stains first in a 0.1 per cent. aqueous solution of nigrosin for 3 to 5 minutes. **Stöhr's Picro-carmin.** Dissolve 1 gm. of carmin in 50 c.c. of water and 5 c.c. of liquor ammoniæ, then add 50 c.c. of a saturated solution of picric acid. Leave the mixture for 2 or 3 days in a large, flat evaporating dish, then filter, and add a drop of chloroform to the filtrate to preserve it. **Weigert's Picrocarmin.** In a vessel protected from evaporation soak for 24 hours 2 gm. of carmin in 4 gm. of ammonia. Add 200 gm. of a concentrated solution of picric acid, and put the whole away for 24 hours more. Acetic acid is then added until the first precipitate appears. After another 24 hours, a precipitate will be formed that can only be partially removed by filtration. Now add ammonia, drop by drop, at intervals of 24 hours, until the solution becomes clear. If it stains too yellow, add acetic acid; if too red, a little ammonia. VII. STAINS FOR MICROÖRGANISMS. **Balmer-Fränzel's Anilin Gentian-violet.** Gentian-violet 2 gm., anilin-water 100 c.c. Filter before using. **Borofuchsin.** This consists of equal parts of boric acid and fuchsin dissolved in dilute alcohol. **Carbolic Black-brown.** Black-brown 1 gm., absolute alcohol 10 c.c., aqueous solution of carbolic acid 100 c.c. Dissolve the dye in the alcohol, and add the carbolic acid. **Cose and Simon's Gentian-violet.** Gentian-violet 2 gm., 90 per cent. alcohol 5 c.c., anilin-water 100 c.c. **Ehrlich's Anilin Gentian-violet.** Five c.c. of a saturated alcoholic solution of gentian-violet and 100 c.c. of anilin-water. **Ehrlich-Weigert's Solutions.** 1. Anilin-water 100 c.c., concentrated alcoholic solution of fuchsin 11 c.c., absolute alcohol 10 c.c. Methyl-violet may be substituted for the fuchsin. Keeps about 2 weeks. 2. Saturated alcoholic solution of methyl-violet 11 c.c., anilin-water 100 c.c., absolute alcohol 10 c.c. **Frænkel's Polychromatic Stain.** *a*. Fuchsin-solution. *b*. Ninety per cent. alcohol 50 c.c., distilled water 30 c.c., nitric acid 20 c.c., methylene-blue as much as will dissolve; filter. *c*. Alcohol 70 c.c., nitric acid 30 c.c., Bismarck brown as much as will dissolve. Stain tubercle-bacilli preparations in solution *a*, then in *b*. The bacilli will appear red and the nuclei and other bacteria blue. If a blue stain is used first the specimen may be counterstained in solution *c*, the nuclei then being brown. **Friedländer's Fuchsin.** Fuchsin 1 gm., glacial acetic acid 2 c.c., 90 per cent. alcohol 5 c.c., distilled water 100 c.c. **Friedländer's Gentian-violet.** See *Staining of Microörganisms, Pneumo-bacillus of Friedländer*. **Fuchsin.** (*Concentrated Alcoholic.*) Fuchsin 25 gm., absolute alcohol 100 c.c. (*Aqueous.*) Fuchsin 1 gm., 90 per cent. alcohol 20 c.c., distilled water 80 c.c. **Gentian-violet.** 1. (*Concentrated Alcoholic.*) Gentian-violet 25 gm., absolute alcohol 100 c.c. 2. (*Aqueous.*) Gentian-violet 1 gm., 90 per cent. alcohol 20 c.c., distilled water 80 c.c. **Gibbes' Double Stain.** (See *Staining of Microörganisms, Gibbes' Method.*) **Gibbes' Magenta.** Fuchsin (magenta) 2 gm., anilin-oil 3 gm., 90 per cent. alcohol 20 c.c., distilled water 20 c.c. **Gold Orange.** See *Staining of Microörganisms, Unna's Method.* **Koch's Differentiating or Polychromatic Stain.** *a*. Koch's methylene-blue solution. *b*. Aqueous solution of Bismarck brown. Preparations of tubercle-bacilli are stained first in *a*, then in *b*. The blue of the nuclei and other bacteria is changed to brown, while the tubercle-bacilli retain the blue color. **Koch's Methylene-blue.** Saturated alcoholic methylene-blue solution 1 c.c., 10 per cent. solution of caustic

potash 0.2 c.c., distilled water 200 c.c. **Kühne's Carbolic Methylene-blue.** Methylene-blue 1.5 gm., absolute alcohol 10 c.c., 5 per cent. aqueous solution of carbolic acid 100 c.c. Rub up the dye in the alcohol, and add, slowly, the carbolic acid. Deteriorates with age. **Kühne's Methyl-violet.** Methyl-violet 1 gm., distilled water 90 c.c., alcohol 100 c.c. When using add 1 drop of nitric acid to each 50 c.c. of the stain. **Lœffler's Methylene-blue.** Thirty c.c. of a concentrated alcoholic methylene-blue solution are added to 100 c.c of a solution of caustic potash (0.01 : 100). Filter before using. **Methyl-violet.** 1. (*Alcoholic.*) Methyl-violet 25 gms., absolute alcohol 100 c.c. 2. (*Aqueous.*) Methyl-violet 1 gm., alcohol 20 c.c., distilled water 80 c.c. **Neelsen or Ziehl-Neelsen Carbol-fuchsin.** See *Fuchsin.* **Ribbert's Dahlia-violet.** See *Staining of Microörganisms, Pneumococcus.* **Rindfleisch's Fuchsin.** Distilled water, 90 per cent. alcohol, nitric acid, each 50 c.c., and enough fuchsin to saturate. Add the fuchsin gradually and stir frequently. Used for staining tubercle-bacilli. **Sahli's Methylene-blue.** Distilled water 40 c.c., saturated, aqueous solution of methylene-blue 24 c.c., borax-solution (5 per cent.) 16 c.c. Used when anilin-oil is not available. **Trenkmann's Gentian-violet Anilin-water.** A drop of a concentrated, alcoholic solution of gentian-violet is let fall into a test-glass and 10 c.c. of water are added. Half of this is then poured away and the glass filled with anilin-water; a solution is thus obtained that remains clear and stains the bacteria deeply, but the ground very slightly. Cover-glasses should remain about ½ an hour in the staining fluid. **Watson Cheyne's Contrast-stain.** Saturated alcoholic solution of methylene-blue 20 c.c., distilled water 100 c.c., formic acid (sp. gr. 1.2) 1 c.c. Used after staining in fuchsin anilin-water. Place sections in the solution for from 1 to 2 hours. **Weigert's Differentiating Stain.** *A.* Aqueous solution of gentian-violet; *B.* acidulated (*acetic acid*) picro-carmin. Stain sections in *A*, then in *B*. The blue of the nuclei will be altered to red and the bacteria will remain blue. **Weigert's Gentian-violet.** Gentian-violet 2 gm., ammonium hydroxid 0.5 c.c., distilled water 90 c.c., absolute alcohol 10 c.c.; mix and filter. **Ziehl's Fuchsin.** Filtered, saturated, aqueous solution of carbolic acid 90 parts, saturated alcoholic solution of fuchsin 10 parts. Used for staining the typhoid-bacillus. **Ziehl's or Ziehl-Neelsen's Solution.** See *Staining of Microörganisms, Kühne's Fuchsin.*

ZOÖLOGIC METHODS.

Annelids. The blood-vessels of annelids may be demonstrated by treating them for 2 or 3 hours with *aqua regia* (2 parts of hydrochloric acid to 4 parts of nitric acid). The animals should be laid open before being put into the mixture. The vessel-walls appear black on a yellow ground. The nerves may be brought to view by staining with methylene-blue (see *Staining Reagents*). Ehler's fluid (see *Fixing Fluids*) is recommended for fixing and hardening. The intestine of *Lumbricus* may be cleansed by putting the animal into a tall glass jar filled with scraps of moistened blotting-paper; they gradually evacuate the earthy contents of the gut and fill it with paper (*Kükenthal*). Coffee-grounds may be used instead of paper, and are said to cut better when embedded. The animals may be narcotized by exposing them for ½ an hour to the vapor of chloroform; if exposed for a longer period they will die in a state of extension. **Eyes of Arthropods.** *Hickson's Method.* Remove the posterior wall of the head of a fly, and expose the rest to osmium-vapor for 20 minutes; wash in 60 per cent. alcohol, harden in absolute alcohol, and make sections. Fix sections to the slide with Mayer's albumin (see *Fixatives*), remove the paraffin with turpentine, wash with absolute alcohol, and decolorize by inverting the slide over a capsule containing 90 per cent. alcohol to which a few drops of nitric acid have been added; wash with pure alcohol. *Parker's Method.* For the eye of *Homarus.* Make paraffin sections and fix them to the slide with Schällibaum's collodion, treat with alcohol, then with water, and then for ½ a minute with a 0.1 per cent. caustic-potash solution; wash thoroughly, and stain for 3 hours in Weigert's hematoxylin (see *Staining Reagents*) at a temperature of 50° C.; wash, dehydrate, and mount in balsam. **Eyes of Gastropods.** *Carrière's Method.* Excise the eye and a part of the tentacle; expose them to osmium vapor for a few minutes, and prepare sections in the usual way. Fix the sections to the slide with Schällibaum's collodion (see *Fixatives*), decolorize with very dilute Javelle water, stain with picro-carmin, and mount in dammar. **Gelatin Casts.** A method for making anatomic models, etc., from a combination of gelatin 2 oz., glycerin 4 oz., the best Irish glue 4 oz., and boiled linseed-oil ¼ oz. Soften the glue in 60 per cent. alcohol, melt it, stir in the glycerin and oil, and add a few drops of carbolic acid. This mixture has the merit of resisting ordinary temperature-changes, and models made of it are not softened by heat or rendered brittle by cold. In making a cast, melt the mixture and pour it into the mold, which should be previously warmed. If it is desired to color the casts, dry or tube colors may be used, and should be well mixed with the glycerin before being added to the glue (J. W. Scollick). **Infusoria.** As a mechanical means of slowing the movements of minute organisms, Eismond directs that a drop of a thick, aqueous solution of cherry-tree gum be added to the water containing them, and an *intra vitam* stain may be obtained by adding methylene-blue to the gum-solution. Jensen prepares a solution of 3 gm. of gelatin in 100 c.c. of water, which is a jelly at the ordinary temperature; for use it is warmed, and a drop of it is mixed in a watch-glass with a drop of water containing the organisms. This method inhibits movement while preserving life, and is recommended for vivisection. Living *Infusoria* may be stained in very dilute solutions of cyanin, methylene-blue, and other anilins, in the medium that constitutes their natural habitat. They may also be examined in a colored medium which does not stain them, but which simply serves as a dark background. For this purpose a solution of anilin black is recommended; the organisms will live in this for several weeks. Cattaneo fixes the organisms for a few minutes in a 0.33 per cent. aqueous solution of palladium chlorid, or with the double chlorid of gold and cadmium, which demonstrates the nuclei better than the palladium. Brass treats protozoa that are opaque through accumulation of nutritive material for a few minutes with Kleinenberg's fluid and then with boiling water; from this they are brought into water containing a little ammonia. To stain, neutralize the ammonia by adding acetic acid, and bring into borax-carmin; wash, and mount in dilute glycerin. The method of Certes is as follows: Expose the organisms to osmium-vapor for from 10 to 30 minutes, cover, and remove the excess of liquid with bibulous paper. Prepare a solution of picrocarmin, 1 part, in 1 part each of water and glycerin, and place a little of this stain at the edge of the cover-glass; place the slide in a moist chamber, and when the water has evaporated and the glycerin taken its place, strong glycerin is added and gradually substituted for the dilute. The organisms thus prepared

are fixed in their natural forms, and the nuclear structures clearly brought out by the picrocarmin. **Larvæ of Echinodermata.** *Pluteus* larvæ are placed for 2 or 3 minutes in a cold, saturated solution of corrosive sublimate, then washed in water and stained with Mayer's cochineal (see *Staining Reagents*). The stain should be diluted so as to possess a barely perceptible tinge of color, and the objects left in it from 12 to 24 hours. They are then mounted in balsam or oil of cloves (Barrios). This method is equally applicable to other forms. **Medusæ.** *Van Beneden's Method.* This consists in pouring glacial acetic acid over the organisms, and after 5 or 6 minutes washing them in alcohol, changing it frequently, and gradually increasing its strength. It is said that the tentacles may be kept from rolling up by imparting a swirling motion to the fixing fluid, putting in but one medusa at a time, and keeping up the vortex motion until the animal is fixed. *The Hertwigs' Method.* For the study of the nervous system. The organisms are treated with a mixture of equal parts of 0.05 per cent. osmic acid and 0.2 per cent. acetic acid, and after 2 or 3 minutes washed in 0.1 per cent. acetic acid until every trace of osmic acid is removed. They are then placed in 0.1 per cent. acetic acid for 24 hours, washed in water, stained with Beale's carmin, and mounted in glycerin. **Nerve and Muscle of Arthropods.** Place a number of *Milnesium tarai gradum* in a test-tube containing water from which the air has been expelled by boiling. Cover the surface of the water with a drop of oil, so as to exclude the air. After 24 hours or more the animals will be found fixed and extended in a cataleptic state, and they can then be examined in boiled water. They are quite transparent in this condition, and the nervous and muscular systems stand out distinctly. **Porifera.** Small sponges may be fixed by the usual reagents, preferably by osmic acid, and should be immediately transferred to absolute alcohol and stained with an alcoholic solution—Mayer's cochineal solution is recommended (see *Staining Reagents*). Sections may be made by decalcifying in alcohol acidified with hydrochloric acid, and then embedding in paraffin in the usual way. **Rotifers.** The living animal may be examined after quieting with warm water or a 2 per cent. solution of cocain hydrochlorate. For permanent preservation Rousselet recommends the following process. Place the animals in a trough containing water, and narcotize them by adding cocain of 1 or 2 per cent. strength; watch them under the microscope until the cilia cease to vibrate, and then fix them in Flemming's strong solution, which should be introduced into the trough by means of a pipet. After 15 minutes wash them in several changes of distilled water, and mount in distilled water containing a little Flemming's solution, about 8 drops to 30 c.c. of water. **Sarcolemma of Insects.** To demonstrate the two lamellæ of the sarcolemma, digest muscle of an insect in artificial gastric juice for from ½ to 1 hour, at the temperature of the room in summer, and examine in gastric juice. **Siphonophora.** *Bedot's Method.* Add to the sea-water containing the animals a considerable quantity of from 15 to 20 per cent. solution of copper sulphate; this fixes them in a few minutes. Add a few drops of nitric acid, and after from 4 to 5 hours add Flemming's solution in the proportion of 2 parts to 1 of the sulphate solution. After 24 hours, a few drops of a 25 per cent. alcohol are introduced by means of a pipet in such a manner as to disturb the colony as little as possible; alcohol of gradually increasing strength, up to 70 per cent., is cautiously added during the next 14 days, and 90 per cent. alcohol is used for preservation. This method has the advantage of preserving the specimens with all their swimming-bells and polyps *in situ*. **Trematodes.** *Fisher's Method.* These forms may be preserved entire as follows: Treat *Opisthotrema cochleare* with absolute alcohol, then stain with hematoxylin or picrocarmin, clear in clove-oil, and mount in balsam. **Trichinæ.** Examination of the living parasite. Place a piece of trichinized muscle about the size of a cherry-stone in a bottle containing 3 gr. of pepsin, 2 dr. of water, and 2 drops of hydrochloric acid; keep at 98° F. for about 3 hours, shaking occasionally. When the flesh and cysts are dissolved, pour the fluid into a conical glass and let it settle. The trichinæ are then drawn off with a pipet, placed on a slide with water, and examined on a warm stage (Barnes).

Stalaxis (*stal-aks'-is*). Synonym of *Staxis*.

Stalk (*stawk*) [ME., *stalken*]. Any lengthened support to an organ.

Stallion (*stal'-yon*) [ME., *stalyone*, stallion]. The male of the horse.

Stamen (*sta'-men*) [στήμων, a thread as spun, the warp in the loom: *pl.*, *Stamens*]. In biology, the pollen-bearing organ of the flower, when complete consisting of a stalk or filament and a pollen-sac or anther.

Stamina (*stam'-in-ah*) [στήμων]. Natural strength of constitution. Vigor. Inherent force.

Staminal (*stam'-in-al*) [στήμων, a thread]. Pertaining to a stamen.

Staminate (*stam'-in-āt*) [στήμων, a thread]. Possessing stamens. Applied to flowers which have stamens but not pistils.

Staminidium (*stam-in-id'-e-um*) [στήμων, a thread: *pl.*, *Staminidia*]. An *Antheridium*.

Staminiferous (*stam-in-if'-er-us*) [στήμων, a thread; *ferre*, to bear]. Bearing stamens.

Staminigerous (*stam-in-ij'-er-us*). Same as *Staminiferous*.

Staminode (*stam'-in-ōd*). Same as *Staminodium*.

Staminodium (*stam-in-o'-de-um*) [στήμων, a thread; εἶδος, form]. In biology, a stamen-like organ; a rudimentary or aborted stamen; a *parastemon*. See *Lepal*.

Staminody (*stam'-in-o-de*) [στήμων, a thread; εἶδος, form]. In biology, the conversion of various organs of a flower into stamens.

Stammer (*stam'-er*) [ME., *stameren*, to stammer]. To utter with hesitation. To articulate only after repeated attempts; to stutter. In a wider sense, any speech-disturbance is called a *stammer*.

Stammers' Cell. See *Cell*.

Stanch (*stanch*, or *stawnch*) [ME., *staunche*, stanch]. To check or stop (a flow); as to stanch a hemorrhage or a wound.

Stand [ME., *standen*, to stand]. To have an upright posture. Also, a frame or a table to place things upon. **S., Microscope,** the tripod or base of the microscope with the tube, but without eye-pieces and objectives.

Standard (*stan'-dard*) [ME., *standard; extendere*, to spread out]. An established rule or model. A criterion for comparison. See *Vexillum*.

Standardization (*stan-dar-diz-a'-shun*) [ME., *standard* standard]. Regulation by a standard; conformity to or use as a standard of comparison; the bringing of a preparation up to a definite standard.

Standstill (*stand'-stil*) [ME., *standen*, to stand; ME. *stille*, still]. A state of quiescence dependent upon suspended action. **S., Expiratory,** suspension of action at the end of expiration. **S., Inspiratory,** a halt in the respiratory cycle at the end of inspiration when the lungs are filled with air. The condition can be produced by stimulating the central end of the cut vagus. **S., Respiratory,** suspended respiration

Stannic (*stan'-ik*) [*stannum*, tin]. Pertaining to stannum, or tin. **S. Acid,** H_2SnO_3, a gelatinous, white precipitate, which, on drying, forms a semi-transparent, vitreous mass. It is dibasic. **S. Anhydrid,** tin oxid. **S. Hydroxid.** See *S. Acid.*

Stanniol (*stan'-ne-ol*) [*stannun*, tin]. Tin-foil.

Stannius's Experiments. Experiments showing the action of the various cavities of the frog's heart under stimulation.

Stannum (*stan'-um*) [L.: *gen.*, *Stanni*]. See *Tin.*

Stapedectomy (*sta-pe-dek'-to-me*) [*stapes*, stirrup; εκτομή, excision]. Surgical removal of the stapes.

Stapedio-vestibular (*sta-pe'-de-o-ves-tib'-u-lar*) [L., *stapes*, stapes; *vestibulum*, vestibule]. Relating to the stapes and the margin of the fenestra ovalis.

Stapedius (*sta-pe'-de-us*). See *Muscles, Table of.*

Stapes (*sta'-pēz*) [L., a stirrup]. The stirrup-shaped bone of the middle ear articulating with the incus and the fenestra ovalis.

Staphisagria (*staf-is-a'-gre-ah*) [σταφίς, dried grape; ἄγριος, wild: *gen.*, *Staphysagriæ*]. Stavesacre. The seed of *Delphinium staphisagria.* Its properties are due to an alkaloid, delphinin, $C_{22}H_{35}NO_6$, and other extractives. It is a violent emetic, cathartic, and parasiticide. It lowers the activity of the heart, producing adynamia. It is used internally in asthma and rheumatism, and externally for itch and lice. **S., Ung.,** unof., 1 part of powdered seeds with 2 each of olive-oil and lard. *Delphinin.* Unof. Dose gr. $\frac{1}{12}$–$\frac{1}{6}$.

Staphisagrin (*sta-fis-a'-grin*) [σταφίς, dried grape; ἄγριος, wild]. An amorphous alkaloid obtained from *Staphisagria.*

Staphylæa (*staf-il-e'-ah*). Synonym of *Staphylea.*

Staphylagrum (*staf-il-a'-grum*) [σταφυλή, uvula; ἀγρεῖν, to take hold of]. An old instrument formerly used to hold the uvula during amputation of that body.

Staphyle (*staf'-il-e*) [σταφυλή, a grape]. The uvula.

Staphyledema (*staf-il-e-de'-mah*) [σταφυλή, uvula; οἴδημα, edema]. Edema of the uvula. Any morbid enlargement of the uvula.

Staphylematoma (*staf-il-em-at-o'-mah*) [σταφυλή, the palate; αἷμα, blood]. Hematoma of the palate.

Staphyleus (*staf-il-e'-us*) [σταφυλή, the uvula]. Pertaining to the uvula.

Staphylhematoma (*staf-il-hem-at-o'-ma*) [σταφυλή, uvula; αἷμα, blood; ὄμα, tumor]. An extravasation of blood into the uvula.

Staphyline (*staf'-il-in*) [σταφύλη, uvula]. Pertaining to the uvula or to the entire palate. **S. Glands.** Synonym of *Palatine Glands.*

Staphylinopharyngeus (*staf-il-in-o-far-in-je'-us*) [σταφυλή, uvula; φαρυγξ, pharynx]. Relating to the pharynx and the palate.

Staphylinotherapeutics (*staf-il-in-o-ther-ap-u'-tiks*) [σταφυλή, uvula; *therapeutics*]. See *Grape-cure.*

Staphylinus (*staf-il-i'-nus*) [σταφυλή, uvula]. Synonym of *Staphyleus.* **S. externus,** abductor of the Eustachian tube. **S. internus,** elevator of the palate. **S. medius,** azygos uvulæ. See *Muscles, Table of.*

Staphylion (*sta-fil'-e-on*) [σταφυλή, uvula]. The middle point of the posterior nasal spine. See *Craniometric Points.*

Staphylitis (*staf-il-i'-tis*) [σταφυλή, uvula; ιτις, inflammation]. Inflammation of the uvula.

Staphylium (*sta-fil'-e-um*) [σταφυλή, a bunch of grapes]. The mammary nipple.

Staphylo- (*staf'-il-o-*) [σταφυλή, uvula]. A prefix used to denote connection with the uvula.

Staphylocausticum (*staf-il-o-kaws'-tik-um*) [σταφυλή, the uvula; καυστικός, caustic]. A caustic used for application to the uvula.

Staphylococcus (*staf'-il-o-kok-us*) [σταφυλή, grape; κόκκος, a berry]. A micrococcus. Used by Rosenbach as a generic name for the pus-cocci described by him. "Staphylococci are characterized by the fact that, for the most part, the individual cocci in a culture are solitary." (Sternberg.) See *Bacteria, Synonymatic Table of.*

Staphylodialysis (*staf-il-o-di-al'-is-is*) [σταφυλή, uvula; διάλυσις, relaxation]. Relaxation of the uvula.

Staphyloma (*staf-il-o'-mah*) [σταφυλή, grape; ὄμα, tumor: *pl.*, *Staphylomata*]. A giving way or bulging of the cornea or sclera of the eye and the formation of a tumor. **S., Annular,** one surrounded on all sides by atrophic choroid. **S., annulare,** S. scleroticæ in the ciliary region extending around the entire corneal margin. **S., Anterior.** See *Keratoglobus.* **S. anticum scleræ.** Synonym of *S., Ciliary.* **S., Ciliary,** one in the region of the ciliary body. **S. conicum.** Synonym of *S. pellucidum.* **S. corneæ,** a bulging of the cornea, the result of traumatism or chronic inflammation, due to a thinning of the membrane, with or without previous ulceration. The cornea is opaque, and, at times, thickened instead of thinned. By some the term is restricted in its application to a protrusion beginning in prolapse of the iris, iridic tissue replacing the cornea. **S. corneæ racemosum,** S. corneæ with perforation at several points, through which small portions of the iris protrude. **S., Intercalary,** one developing in that region of the sclera which is united with the periphery of the iris. **S. iridis,** hernia of the iris. **S. laterale,** staphyloma situated on one side of the equator of the eyeball. **S. pellucidum,** a term for the transparent ectasia of the cornea. **S., Posterior,** bulging backward of the sclerotic at the posterior pole of the eye. **S., Projecting.** Synonym of *S. pellucidum.* **S. scleræ,** a protrusion of the sclerotic at any point in its circumference. It is due to long-standing intraocular inflammation. **S. uveæ,** a protrusion of a portion of the uveal tract through a perforated sclera.

Staphylomatic, Staphylomatous (*staf-il-o-mat'-ik, staf-il-o'-mat-us*) [σταφυλή, grape; ὄμα, tumor]. Pertaining to, of the nature of, or affected with, staphyloma.

Staphyloncus (*staf-il-ong'-kus*) [σταφυλή, uvula; ὄγκος, tumor]. Swelling of the uvula.

Staphylo-pharyngorrhaphy (*staf-il-o-far-in-gor'-a-fe*). See *Passavant's Operation* in *Operations, Table of.*

Staphyloplasty (*staf'-il-o-plas-te*) [σταφυλή, uvula; πλάσσειν, to mold]. A plastic operation for the closure of cleft palate. See *Mosetig-Moorhof's, Schönbein's,* and *Trendelenberg's Operations,* in *Operations, Table of.*

Staphyloptosis (*staf-il-op-to'-sis*) [σταφυλή, uvula; πτῶσις, falling]. Abnormal elongation of the uvula.

Staphylorrhaphy (*staf-il-or'-a-fe*) [σταφυλή, uvula; ῥαφή, suture]. Suture of the lips of a cleft palate or uvula. See *Fergusson's* and *Pollock's Operations,* in *Operations, Table of.*

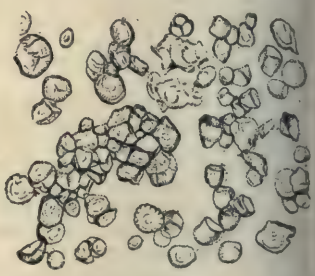
Staphylotome (*staf'-il-o-tōm*) [σταφυλή, uvula; τομή, a cutting]. A cutting instrument used in staphylotomy.

Staphylotomy (*staf-il-ot'-o-me*) [σταφυλή, uvula; τομή, a cutting]. Amputation of the uvula.

Staphylygroma (*staf-il-ig-ro'-mah*) [σταφυλή, the uvula; ὑγρός, wet]. Synonym of *Staphyledema.*

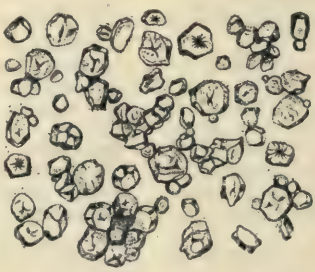
Star [ME., *starre*, star]. 1. A celestial body appearing as a luminous point. 2. In biology, applied to various radiate structures, granules, cells, groups of cells, or organisms. **S. Anise.** See *Illicium.* **S.-cells,** endothelial cells of vessels, first described by Kupffer and regarded as nervous elements on account of their shape and thin, elongated processes, but after-

ward shown to belong to the endothelial tissues; they have the power of enclosing various granules; Kupffer's cells. **S., Daughter.** See *Diaster*. **S. Grass.** See *Aletris*. **S.-ridges.** See *Sclerosepta*. **Ss. of Verheyen.** See *Verheyen*.

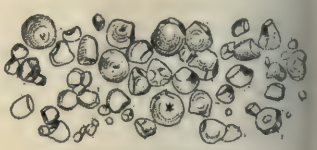


Starch (*starch*) [ME., *starche*], $C_6H_{10}O_5$. *Amylum*, *q. v.*, one of the most widely-spread plant-substances, being found in nearly all plants above the fungi, except, perhaps, *Monotropa*, and in nearly all the organs of plants, though not at all seasons. It occurs most abundantly in the seeds, tubers, bulbs, roots, and rhizomes, also in the pith, bark, and leaves. Starch is, perhaps, the most important of the heat-givers or force-producers in the food of plant-eating animals. The following table, after Church and Krocker, gives the quantities of starch in 100 lbs. of several kinds of vegetable products and preparations:—

	Pounds.
Rice,	76–87
Sago, tapioca, arrow-root, corn-flour, maizena,	83
Pearl-barley,	38–76
Fine wheat-flour,	74
Rye,	44–71
Wheat,	53–69
Maize,	66–67
Buckwheat, without husks,	44–64
Millet, without husks,	64
Scotch oatmeal,	63
Beans,	36–52
Peas,	39–51
Wheaten bread,	48
Wheaten bran,	44
Oats, whole,	37–40
Lentils,	40
Potatoes,	10–24
Parsnips,	3
Vegetable marrow,	½



Starch occurs in peculiar forms called *granules or grains*, which in shape, size, and markings are often quite characteristic of the different plants in which they occur. These form a white, glistening powder, insoluble in cold water, but nearly completely dissolved by hot water. When heated with water the granules swell up at 50° C., burst, partially dissolve, and form *starch-paste*. The soluble portion is called *granulose*, the insoluble, *starch-cellulose*. Iodin produces a characteristic blue coloration with starch. The most complete enumeration and classification of starches is that of Muter as amplified by Allen and Blyth, by which they are divided into five groups, on the basis of their physical and microscopic differences, as follows: I. *The potato-group* includes such oval or ovate starches as give a play of colors when examined by polarized light and a selenite plate, and having the hilum and concentric rings clearly visible. It includes *tout les mois*, or canna arrow-root, potato-starch, maranta, or St. Vincent arrow-root, Natal arrow-root, and curcuma arrow-root. II. *The leguminous starches* comprise such round or oval starches as give little or no color with polarized light, have concentric rings all but invisible, though becoming apparent in many cases on treating the starch with chromic acid, while the hilum is well-marked and cracked or stellate. It includes the starches of the bean, pea, and lentil. III. *The wheat-group* comprises those round or oval starches having both hilum and concentric rings invisible in the majority of granules. It includes the starches of wheat, barley, rye, chestnut, and acorn, and a variety of starches from medicinal plants, such as jalap, rhubarb, senega, etc. IV. *The sago-group* comprises those starches of which all the granules are truncated at one end. It includes sago, tapioca, and arum, together with the starch from belladonna, colchicum, scammony, podophyllum, canella, aconite, cassia, and cinnamon. V. *The rice-group*. In this group all the starches are angular or polygonal in form. It includes oats, rice, buckwheat, maize, dari, pepper, as well as ipecacuanha. In addition to the differences in form and marking mentioned, the starch-granules differ in size according to their different sources, so that under the microscope they can be distinguished by the measurement of the average diameter of the granule. This ranges, according to Karmarsch, from .01 to .185 millimeter, or from .0004 to .0079 inch. See *Tests, Table of*. **S., Animal.** See *Glycogen*. **S.-bath.** See *Bath*. **S., Corn,** a substance that has very small granules, is highly nutritive, and is obtained from Indian corn. **S.-enema,** an enema consisting of starch-water. **S., Gelatinized,** a preparation used as a test in the U. S. Ph. **S., Hepatic.** See *Glycogen*. **S., Hydrated,** a paste produced by adding hot water



POTATO-STARCH.

TAPIOCA.

MAIZE.

RIO ARROW-ROOT.

BERMUDA ARROW-ROOT.

SAGO OF COMMERCE.

to starch. **S., Iceland.** Synonym of *Lichenin*. **S. Iodid,** a compound of starch with iodin. **S., Iodized,** starch that has been acted upon by iodin. **S. of the Liver.** See *Glycogen*. **S. and Opium Clyster,** the opium-enema. **S.-sugar.** See *Dextrose* and *Glucose*.

tartin's Lotion. A lotion much used in acute vesicular eczema. It consists of oxid of zinc ½ ounce, prepared powdered calamin 4 scruples, glycerin 1 ounce, lime-water 7 ounces. Cheese-cloth cut in strips may be dipped into this and bound on the parts with a roller. **S.'s Mixture.** A mixture frequently used in the treatment of *Acne vulgaris*. It consists of sulphate of iron 2 grains, sulphate of magnesium 1½ drams, dilute sulphuric acid 15 minims, infusion of quassia 1 ounce. This is taken three times a day immediately after meals. It acts as an aperient, and also corrects the anemia.

tarvation (*star-va'-shun*) [Ger., *sterben*, to die]. 1. Death from hunger. 2. Severe hunger; extreme suffering from hunger or from cold. Deprivation of anything essential to nutrition or the proper discharge of the functions of the body. **S.-cure.** See *Hunger-cure; Fasting*.

tarve (*starv*) [ME., *sterven*, to die]. To perish from lack of food.

tarwort (*star'-wurt*). See *Aletris*.

tas's Process. A process for the separation of alkaloids from organic matter in cases of suspected poisoning. It is based on the principle that the salts of the alkaloids are soluble in water and in ethyl-alcohol, but not in ether, amyl-alcohol, benzene, chloroform, or acetic ether; while the uncombined alkaloids (or most of them) are nearly insoluble in water, but are more or less soluble in ether and the other solvents named.

tas-Otto Method. A method of extracting the putrefactive alkaloids from tissues. It depends upon the fact that the salts of the alkaloids are soluble in water and in alcohol, and generally insoluble in ether, while the free alkaloids are soluble in ether, and may be removed from alkaline fluids by agitation with ether. The method is applied as follows: "Treat the mass with twice its weight of pure 90 per cent. alcohol, and from 10 to 30 grains of tartaric or oxalic acid; digest the whole for some time at about 70° C. and filter. Evaporate the filtrate at a temperature not exceeding 35° C., either in a strong current of air or in vacuo over sulphuric acid. Take up the residue with absolute alcohol, filter, and evaporate again at a low temperature. Dissolve the residue in water, alkalinize with sodium bicarbonate, and agitate with ether. After separation, remove the ether and allow it to evaporate spontaneously. The residue may be further purified by redissolving in water and again extracting with ether. The method has been modified in some of its details, especially by Selmi and Marino-Zuco. **S.-Otto Process.** See *Stas's Process*.

tasis (*stah'-sis*) [σάσις; ἱστάναι, to stand]. A condition of standstill of the current of any of the fluids of the body, but especially of the blood, which condition forms an early stage of the inflammatory process, with resultant migration of the white corpuscles and serous exudation. **S., Diffusion,** stasis in which there occurs diffusion of serum or lymph. **S., Venous,** stasis due to venous congestion.

tasobasophobia (*sta-zo-ba-zo-fo'-be-ah*) [στάσις, standing; βάσις, a step, walk; φοβός, fear]. A peculiar fear in consequence of which the act of walking or of standing becomes impossible. Cf. *Basophobia*.

tate (*stāt*) [*status; stare*, to stand]. A condition. **S. Medicine,** that department of medical study that concerns public health, and is in part occupied with the statistics of disease.

Statement (*stāt'-ment*) [*stare*, to stand]. A declaration. **S., Ante-mortem,** a declaration made immediately before death, and which if made with the consciousness of impending death is legally held as binding as a statement sworn to.

Static (*stat'-ik*) [στατικός, causing to stand]. At rest. In equilibrium. **S. Ataxia.** See *Ataxia*. **S. Breeze,** a method of administration of static electricity, consisting in the withdrawal of a static charge from a patient by means of a pointed electrode. **S. Electricity.** See *Electricity*. **S. Pelvis,** the bony pelvis. **S. Shock,** a mode of applying Franklinic electricity, placing the patient on an insulated stool, and applying one pole of a static machine to this platform, while the other pole is applied to the body of the patient by the operator. **S. Test.** See *Birth*. **S. Theory.** See *Goltz*.

Statice (*stat'-is-e*). See *Marsh Rosemary*.

Statics (*stat'-iks*) [στατική, the art of weighing]. The science relating to forces in a condition of equilibrium. See *Mechanics*.

Station (*sta'-shun*) [L., *statio; stare*, to stand]. Standing position, or attitude.

Stationary (*sta'-shun-a-re*) [*stationarius*, pertaining to a post]. Not moving. A descriptive term applied to diseases that remain in the same locality for a period without changing their geographic environment, or that persist without growing better or worse. **S. Air,** the amount of air which is constantly in the lungs during normal respiration.

Statistics (*sta-tis'-tiks*) [*status*, a state]. A numerical collection of facts relating to any subject. **S., Medical,** that part of medicine pertaining to details of mortality, climate, and the geographic distribution of diseases. **S., Vital.** Same as *S., Medical*.

Statobathmism (*stat-o-bath'-mism*) [στατός, standing, fixed; βαθμός, a step, threshold]. In biology, Cope's term for inherited growth-energy which has not been interfered with by physical energy; as distinguished from *physiobathmism* and *kinetobathmism*. Cf. *Bathmism*.

Statoblast (*stat'-o-blast*) [στατός, standing; βλαστός, a bud, germ]. In biology, in fresh-water *Sponges* and *Bryozoa*, a modified gemmule or parthenogenetic egg, provided with a protective horny envelop, and often with one or more layers of surrounding silicious spicules. These are produced on the approach of winter or in tropical climates just before the dry season. The so-called *winter egg*. See *Œleoblast*.

Statoblastic (*stat-o-blas'-tik*) [στατός, standing; βλαστός, germ]. Pertaining to a statoblast.

Statogenesis (*stat-o-gen'-es-is*) [στατός, standing; γένεσις, producing]. Same as *Statogeny*.

Statogenetic (*stat-o-jen-et'-ik*) [στατός, standing; γένεσις, genesis]. Of the nature of or pertaining to statogeny.

Statogeny (*sta-toj'-en-e*) [στατός, standing; γένεσις, producing]. In biology, that department of biology which treats of the potential or static forms of energy involved in the adaptive processes or structure-modifications of living organisms; a form of *ergogeny*, as distinguished from *kinetogeny*.

Statometer (*stat-om'-et-er*) [στατός, standing; μέτρον, measure]. See *Exophthalmometer*.

Statosphere (*stat'-o-sfēr*) [στατός, standing, fixed; σφαῖρα, a globe]. In biology, the envelop of the statoblast of fresh-water sponges and bryozoans.

Statospore (*stat'-o-spōr*) [στατός, standing, fixed; σπορα, seed]. In biology, a resting spore, or hypnospore.

Stature (*stat'-ūr*) [*statura*, stature]. The height of

any animal when standing. In quadrupeds, it is measured at a point over the shoulders. In man, it is the measured distance from the heel to the top of the head.

Status (*sta'-tus*) [L.]. A condition, with the idea of permanence or continuance. A stage in disease in which, having reached its height, it remains there for a time before convalescence begins. **S. arthriticus,** nervous manifestation of masked gout. **S. eclampticus,** the state of a person in eclampsia. **S. epilepticus,** a condition, with rise of temperature, symptoms of gravity, and, frequently, death, associated with epileptic paroxysms succeeding one another rapidly, at intervals of a few minutes or an hour or two. **S. hystericus,** the hysteric state. **S. nervosus.** Synonym of *Neurasthenia.* **S. præsens,** the state of a case at the time the condition is noted. **S. typhosus,** a condition of low, muttering delirium, attended with marked prostration, dull and heavy expression, congestion of the facial capillaries, stupor, mental sluggishness, heavy, dull eyes, contracted pupils, marked subsultus tendinum, slipping down into the bed, tongue slowly protruded, tremulous, dry and brown, the teeth and mouth covered with sordes; all sensibilities seem blunted; involuntary discharge of feces, incontinence of urine from retention; the pulse is small, feeble, dicrotic; the heart-sounds are very weak, the first sound may be inaudible, the second is short and relatively accentuated; venous congestion of the lungs naturally follows unless improvement occurs, pulmonary edema supervenes, the urine often becomes scanty and bloody, and the patient dies. **S. vertiginosus,** a condition of prolonged vertigo, in the course of which the patient for days or weeks together cannot turn or move in any fashion without being seized with the extremest vertigo.

Statuvolence (*sta-tu'-vo-lens*) [*status,* state; *volens,* willing]. Autohypnotism; voluntary somnambulism or clairvoyance; a trance into which one voluntarily enters without aid from another.

Staub's Fluid. A chloro-albuminous solution of mercury, used in the treatment of syphilis. It consists of the following: Bichlorid of mercury and chlorid of ammonium each 20 grains, chlorid of sodium 1 dram, liquor ovi albi and distilled water each 4 ounces. Of this 20 minims are injected as a dose.

Stauroplegia (*staw-ro-ple'-je-ah*) [σταυρός, cross; πληγή, a stroke]. Crossed hemiplegia, or paralysis of the arm on one side and the leg on the opposite side.

Stavers (*sta'-vers*). See *Staggers.*

Stavesacre (*stāvz'-a-ker*). See *Staphisagria.*

Stay Knot. See *Knot.*

Steam (*stēm*) [ME., *steem,* steam]. The vapor of water; water in a gaseous state. **S.-atomizer.** See *Atomizer.* **S.-doctor,** an old name for a Thompsonian physician, from the extensive use of steaming and sweating made by that school. **S.-tug Murmur,** the double murmur of aortic obstruction and insufficiency. It may be expressed by the word *hoo-chee, hoo* representing the obstructive murmur, and *chee* the regurgitant murmur.

Steapsin (*ste-ap'-sin*) [στέαρ, fat]. A diastasic ferment which causes fats to combine with an additional molecule of water and then split into glycerin and their corresponding acids. See *Ferments.*

Stear (*ste'-ar*) [στέαρ, fat]. See *Adeps.*

Stearaldehyd (*ste-ar-al'-de-hīd*) [στέαρ, fat; *aldehyd*], $C_{18}H_{36}O$. A substance appearing in tablets having a bluish luster; it fuses at 63.5° C. and boils at 192° C.

Stearate (*ste'-ar-āt*) [στέαρ, fat]. A salt of stearic acid.

Stearerin (*ste-ar'-er-in*) [στέαρ, fat]. A fatty substance found in the oil of sheeps' wool and which is analogous to stearin.

Stearic (*ste-ar'-ik*) [στέαρ, fat]. A name applied to an acid derived from fats and oils. **S. Aldehyd,** $C_{17}H_{35}$ CHO, a substance bearing the same relation to stearic acid that an ordinary aldehyd bears to acetic acid. **S. Acid.** See *Acid.*

Steariform (*ste-ar'-if-orm*) [στέαρ, fat; *forma,* form]. Having the appearance of or resembling fat.

Stearin (*ste'-ar-in*) [στέαρ, fat], $C_3H_5O_3(C_{18}H_{35}O_2)_3$. An ether or glycerid formed by the combination of stearic acid and glycerin. When crystallized it forms white, pearly scales, soft to the touch, but not greasy, and odorless and tasteless when pure. It is insoluble in water, but soluble in hot alcohol and ether.

Stearocnote (*ste-ar-ok'-nōt*) [στέαρ, fat; ὀκνός, inactive]. An insoluble but fusible solid substance occurring in brain-tissue.

Stearodermia (*ste-ar-o-der'-me-ah*) [στέαρ, fat; δερμα, the skin]. An affection of the sebaceous glands of the skin.

Stearol (*ste'-ar-ōl*) [στέαρ, fat]. A medicament having fat as an excipient.

Stearolic Acid (*ste-ar-ol'-ik*). See *Acid.*

Stearone (*ste'-ar-ōn*) [στέαρ, fat], $C_{35}H_{70}O$. A substance obtained by the partial decomposition of stearic acid. It is a volatile liquid, and seems to be the same as stearic acid deprived of two equivalents of carbonic acid.

Stearophanic Acid (*ste-ar-o-fan'-ik*). Synonym of *Stearic Acid.*

Stearopten (*ste-ar-op'-tēn*) [στέαρ, fat; πτηνός, winged volatile]. Any camphor-like, crystalline substance held naturally in solution in a volatile oil.

Stearoxylic Acid (*ste-ar-oks-il'-ik*). See *Acid.*

Stearrhea, Stearrhœa (*ste-ar-e'-ah*) [στέαρ, fat; ῥοια, a flow]. See *Seborrhea.* **S. congestiva.** Synonym of *Seborrhœa congestiva.* **S. flavescens,** a seborrhea in which the sebaceous matter turns yellow after being deposited upon the skin. **S. nigricans.** See *Chromidrosis.* **S. simplex,** ordinary seborrhea.

Stearyl (*ste'-ar-il*) [στέαρ, fat; ὕλη, matter], $C_{18}H_{35}O$. The radicle of stearic acid.

Steatin (*ste'-at-in*) [στεάτινον, pertaining to suet]. Same as *Stearin.* 2. Any cerate containing a considerable proportion of tallow.

Steatinum (*ste-at-i'-num*) [στέατινον, pertaining to suet]. A name given to certain pharmaceutic preparations similar to cerates.

Steatite (*ste'-at-īt*). See *Talcum.*

Steatocele (*ste-at'-o-sēl*) [στέαρ, fat; κήλη, a tumor]. A tumor formed by a collection of fatty matter in the scrotum.

Steato-cryptosis (*ste-at-o-krip-to'-sis*) [στέαρ, fat; κρύπτη, a crypt, or sac]. Abnormality of function of the sebaceous glands.

Steatodes (*ste-at-o'-dēz*) [στέαρ, fat; εἶδος, resemblance]. Fatty.

Steatogenous (*ste-at-oj'-en-us*) [στέαρ, fat; γενής, produced]. Producing steatosis.

Steatolysis (*ste-at-ol'-is-is*) [στέαρ, fat; λύσις, solution]. The emulsifying process by which fats are prepared for absorption and assimilation.

Steatolytic (*ste-at-o-lit'-ik*) [στέαρ, fat; λύσις, solution]. Accomplishing a steatolysis.

Steatoma (*ste-at-o'-mah*) [στέαρ, fat; ὄμα, tumor: *pl. Steatomata*]. A sebaceous encysted tumor; a lipoma. **S. melliceris,** a sebaceous cyst. **S. testicu** Synonym of *Steatocele.*

Steatomatous (*ste-at-o'-mat-us*) [στέαρ, fat; ὄμα, tumor]. Pertaining to a steatoma.

Steatomyces (*ste-at-o-mi'-sēz*) [στέαρ, fat; μύκης, a mushroom]. A fatty fungous growth.

Steatopathic (*ste-at-o-path'-ik*) [στέαρ, fat; πάθος, disease]. Pertaining to diseases of the sebaceous glands.

Steatopyga, or Steatopygia (*ste-at-op'-ig-ah, ste-at-o-pi'-je-ah*) [στέαρ, fat; πυγή, buttock]. *Hottentot deformity;* enormous fatness of the buttock, common among the women of some African tribes.

Steatopygous (*ste-at-op'-ig-us*) [στέαρ, fat; πυγή, buttock]. Characterized by or pertaining to an abnormal largeness of the glutei muscles and adjacent parts.

Steatopygy (*ste-at-op'-ij-e*). See *Steatopygia.*

Steatorrhea, Steatorrhœa (*ste-at-or-e'-ah*) [στέαρ, fat; ῥοία, flow]. An increased flow of the secretion of the sebaceous follicles. See *Seborrhea.* **S. amianthaca,** a form of seborrhea in which the excess of solid constituents gives the appearance of scaliness of the skin. See, also, *Seborrhea.* **S. nigricans.** Same as *Seborrhœa nigricans.* **S. simplex,** excess of sebaceous excretion of the face.

Steatosis (*ste-at-o'-sis*) [στέαρ, fat]. Fatty degeneration. The condition due to the existence and progress of steatoma, or fatty degeneration of a part. Also, any abnormal accumulation of fat.

Steatospongus (*ste-at-o-spun'-gus*) [στέαρ, fat; σπόγγος, a sponge]. Synonym of *Steatomyces, q. v.*

Steatozoön (*stē-at-o-zo'-on*) [στέαρ, fat; ζῷον, an animal]. The parasite, *Demodex folliculorum,* contained in comedones. See *Parasites* (*Animal*), *Table of.*

Stechiologic, Stœchiologic, Stoicheiologic (*stek-e-o-loj'-ik*) [στοιχεῖον, a first principle; λόγος, science]. Pertaining to stechiology.

Stechiology, Stœchiology, Stoicheiology (*stek-e-ol'-o-je*) [στοιχεῖον, a first principle; λόγος, science]. The doctrine of elements.

Steel (*stēl*) [ME., *steel,* steel]. Iron chemically combined with a certain proportion of carbon. It holds an intermediate position between white cast iron and wrought iron, partaking of the most valuable qualities of both. Steel of good quality is fine-grained, elastic, and tough. See, also, *Ferrum.* **S. Balsam.** Synonym of *Lin. ferri nitrici.* **S.-blue.** Same as *Berlin Blue.* **S.-grinders' Phthisis.** See *Pneumonokoniosis.* **S.-pen Palsy.** See *Writers' Cramp.* **S. Wine.** Synonym of *Vinum ferri.*

Stege (*stē'-je*) [στέγος, roof]. The inner layer of the rods of Corti.

Stegnosis (*steg-no'-sis*) [στέγνωσις, a checking of a discharge; a soldering]. Constipation, or costiveness; the checking of a discharge; the closing of a passage; stenosis.

Stegnotic (*steg-not'-ik*) [στεγνωτικός]. Effecting stegnosis. Astringent.

Steirosis (*sti-ro'-sis*) [στείρωσις]. Sterility.

Stella (*stel'-ah*) [L., "star"]. A star-shaped bandage; stellate bandage.

Stellate (*stel'-āt*) [*stella,* a star]. In biology, star-shaped, or with parts radiating from a center, as stellate stigmas, stellate hairs, etc. **S. Bandage,** one that is wound crosswise on the back. **S. Fracture,** a fracture in which there are numerous fissures radiating from the central point of injury. It usually occurs in flat bones. **S. Hair,** a hair which divides at the end in a star-shaped fashion. **S. Laceration,** one involving the tissues in several directions, as a stellate laceration of the cervix uteri. **S. Ligament.** See *Ligament.* **S. Veins,** minute venous radicles arranged in stellate fashion and located just beneath the capsule of the kidney.

Stelliform (*stel'-if-orm*) [*stella,* star; *forma,* form]. Having the form of a star.

Stellula (*stel'-u-lah*) [dim. of *stella,* a star]. In anatomy, a plexus of veins in the cortex of the kidney. **Stellulæ Verheynii,** a stellate network of veins in the outer part of the cortex of the kidney.

Stellwag's Symptom. Slight retraction of the upper lid in exophthalmic goiter, whether complicated or not with Graefe's symptom, and giving rise to a widening of the palpebral fissure. See *Signs and Symptoms, Table of.*

Stem [ME., *stem,* stem]. The pedicle of a tumor; the shaft of a hair; the supporting stalk of a leaf or plant. **S., Brain,** the brain, less the fissured portion of the cerebrum. **S.-eelworm.** See *S.-sickness.* **S., Gland,** a gland-duct. **S. of Hair.** Synonym of *Hair-shaft.* **S., Herbaceous,** in biology, a stem that dies in winter. **S.-pessary,** a pessary having a stem or rod which enters the os uteri. **S.-sickness,** a parasitic disease of clover, due to the presence of the stem-eelworm (*Tylenchus devastatrix*).

Stemma (*stem'-ah*) [στέμμα, a wreath, a garland: *pl.,* *Stemmata*]. In biology: (*a*) one of the simple eyes of an invertebrate; an ocellus; (*b*) one of the facets of a compound eye; (*c*) the tubercle giving attachment to the basal joint of an antenna.

Stenagma (*sten-ag'-mah*) [στενάζειν, to sigh]. Synonym of *Sigh.*

Stenagmus (*sten-ag'-mus*) [στενάζειν, to sigh]. Sighing.

Stench [ME., *stench,* a smell]. An ill smell; an offensive odor. **S.-pipe,** an upright pipe that reaches above the roof of a house; it is intended to give vent to foul vapors that accumulate in waste-pipes, and water-closets. **S.-trap,** in sewerage and plumbing, a device for preventing a reflux of foul vapors and gases.

Steno, Duct of. See *Duct.*

Steno- (*sten'-o-*) [στενός, narrow]. A prefix, denoting narrowing or constriction.

Stenobregmate (*sten-o-breg'-māt*) [στενός, narrow; βρέγμα, the bregma]. The condition in which the upper and fore part of the head is narrow.

Stenocardia (*sten-o-kar'-de-ah*) [στενός, narrow; καρδία, heart]. Contraction of the heart, or of its orifices; angina pectoris.

Stenocarpin (*sten-o-kar'-pin*) [στενός, narrow; καρπος, fruit]. A fraudulent anesthetic and mydriatic, asserted to have been obtained from the leaves of *Gleditschia triacanthos,* the tear-blanket tree. It has been proved to be a mixture of cocain and atropin.

Stenocephalous (*sten-o-sef'-al-us*) [στενός, narrow; κεφαλή, head]. Having a head narrow in one or more of its diameters.

Stenochoria (*sten-o-ko'-re-ah*) [στενός, narrow; χῶρος, space]. Narrowness, stricture, or partial obstruction. Also, contraction of the vagina. **S. saccilacrimalis,** stenosis of the lacrymo-nasal duct.

Stenocoriasis (*sten-o-ko-ri'-as-is*) [στενός, narrow; κόρη, pupil]. Narrowing of the pupil.

Stenocrotaphia, or Stenocrotaphy (*sten-ok-ro-ta'-fe-ah,* or *sten-o-kro'-ta-fe*) [στενός, narrow; κρόταφος, the temple]. A narrowing of the temporal region of the skull.

Stenomycteria (*sten-o-mik-te'-re-ah*) [στενός, narrow; μυκτήρ, the nose]. Nasal stenosis.

Stenon, Duct of. See *Duct.*

Stenopeic (*sten-o-pe'-ik*) [στενός, narrow; ὀπαῖος, pierced]. Applied to lenses that allow the passage of rays only through a straight, narrow slit.

Stenopetalous (*sten-o-pet'-al-us*) [στενός, narrow; πέταλον, a leaf]. In biology, furnished with narrow petals.

Stenophyllous (*sten-of-il'-us*) [στενός, narrow; φύλλον, a leaf]. In biology, possessing narrow leaves.

Stenoraic (*sten-o-ra'-ik*). See *Stenopeic.*

Stenosis (*sten-o'-sis*) [στενός, narrow]. Constriction or narrowing of any pore, duct, vessel, or passage. **S., Aortic,** a narrowing of the aortic orifice at the base of the heart or a narrowing of the aorta itself. **S., Cardiac,** as a consequence of inflammation of the connective tissue in the myocardium, the conus arteriosus upon either side of the heart may become diminished in diameter, with consequent hindrance to the free passage of blood from the ventricle into its corresponding artery. This constitutes what is called *stenosis of the heart.* The second sound is fully formed and sharply defined, thus distinguishing the condition from valvular stenosis. **S., Cicatricial,** stenosis due to a contracted cicatrix. **S., Granulation,** narrowing caused by encroachment or contraction of granulations. **S., Mitral,** stenosis of left auriculo-ventricular orifice. **S., Post-tracheotomy,** stenosis after tracheotomy. **S., Sub-aortic.** See *S., Aortic.*

Stenostegnosis, Stenostenosis (*sten-o-steg-no'-sis, sten-o-sten-o'-sis*) [*Stenononianus*, or *Stensen;* στεγνωσις, constriction]. Stenosis of Stensen's duct.

Stenostomatous (*sten-o-sto'-mat-us*) [στενός, narrow; στόμα, mouth]. Having a small mouth.

Stenostomia (*sten-o-sto'-me-ah*) [στενός, constriction; στόμα, mouth]. A narrowing or closure of the mouth.

Stenostomy (*sten-os'-to-me*) [στενός, narrow; στόμα, a mouth]. The contraction of any mouth or aperture.

Stenothermal (*sten-o-ther'-mal*) [στενός, narrow; θερμον, heat]. Capable of sustaining a small range of temperature.

Stenothorax (*sten-o-tho'-raks*) [στενός, narrow; θώραξ, thorax]. Having a straight, short thorax.

Stenotic (*sten-ot'-ik*) [στενός, narrow]. Characterized by stenosis; reduced in size or caliber; contracted.

Stensen, Canal of. See *Duct.* **S., Duct of.** See *Duct.* **S., Foramen of.** See *Foramina, Table of.* **S.'s Experiment,** compression of the abdominal aorta of an animal, so as to cut off the blood-supply to the lumbar region of the spinal cord. It leads to rapid paralysis of the posterior portion of the body.

Stentorin (*sten'-to-rin*) [στέντωρ, a Greek herald]. A blue pigment obtained by E. Ray Lankester from infusorians of the genus *Stentor.*

Stephanial, Stephanic (*stef-an'-e-al, stef-an'-ik*) [στέφανος, a wreath]. Pertaining to the stephanion.

Stephanion (*stef-an'-e-on*) [στέφανος, a wreath; crown]. See *Craniometric Points.*

Stepmother's Blessing. A popular term for hangnail.

Steppage (*step'-āj*) [ME., *steppe*, a step]. The peculiar gait seen in dorsal tabes, arsenical, alcoholic, and other forms of neuritic paralysis.

Steppe Disease. Synonym of *Rinderpest.* **S. Murrain.** See *Rinderpest.*

Stercobilin (*ster-ko-bil'-in*) [*stercus*, fecal matter; *bilis*, bile]. A coloring-matter found in intestinal excrement. It is identical with hydrobilirubin.

Stercoraceous (*ster-ko-ra'-shus*) [*stercus*, dung]. Fecal; having the nature of feces. Applied especially to vomiting when fecal matter is mixed with the ejected substances.

Stercoral (*ster'-ko-ral*). See *Stercoraceous.*

Stercoremia (*ster-ko-re'-me-ah*) [*stercus*, dung; αἷμα, blood]. A condition resulting from arrest of intestinal excretion, and absorption of toxic matters formed in the intestines.

Stercorin (*ster'-ko-rin*) [*stercus*, dung]. A fecal extractive resembling biliary cholesterin.

Sterculia (*ster-ku'-le-ah*) [*stercus*, dung]. A genus of some 85 species of tropical trees. **S. urens** of India, and **S. tragacantha** of Africa afford some part of the gums known as tragacanth. **S. acuminata** produces the kola-nut. See *Kola.*

Sterculiaceous (*ster-ku-le-a'-shus*) [*stercus*, excrement]. Of, or pertaining to, the genus *Sterculia.*

Stercus (*ster'-kus*) [*stercus*, dung]. Feces.

Stereoblastula (*ster-e-o-blas'-tu-lah*) [στερεός, solid; βλαστός, a germ: *pl.*, *Stereoblastulæ*]. In biology, a solid blastula. Also spelled *sterroblastula.*

Stereo-chemistry (*ster-e-o-kem'-is-tr.*) [στερέος, solid; χημεια, chemistry]. Stereo-isomerism; theoretic explanations of close isomerisms, by which it is assumed that the differences between the various isomers are due to the different positions of the same atoms or radicles in tri-dimensional representations of the molecules. Ordinary structural formulæ involve only two dimensions, length and breadth, but these are not sufficient to explain numerous cases of isomerism now known, and a "spatial" or "solid" conception of the molecule is necessary. The term allo-isomerism has been proposed for these cases.

Stereocyst (*ster'-e-o-sist*) [στερεός, solid; κύστις, cyst]. A hard cyst, or cystic growth.

Stereogastrula (*ster-e-o-gas'-tru-lah*) [στερεός, solid; γαστήρ, stomach: *pl.*, *Stereogastrulæ*]. In biology, a solid gastrula. Also spelled *Sterrogastrula.*

Stereognostic (*ster-e-og-nos'-tik*) [στερεός, solid; γνώσις, knowledge]. Pertaining to the cognition of solidity, or tri-dimensional forms.

Stereogram (*ster'-e-o-gram*) [στερεός, solid; γράμμα, writing]. A stereoscopic picture.

Stereograph (*ster'-e-o-graf*). Same as *Stereogram.*

Stereographic (*ster-e-o-graf'-ik*) [στερεός, solid; γράφειν, to write]. Pertaining to stereography. **S. Dermatoneurosis.** See *Urticaria, Factitious.*

Stereography (*ster-e-og'-ra-fe*) [στερεός, solid; γράφειν, to write]. Graphic representation of the skull; the branch of craniometry.

Stereom (*ster'-e-ōm*) [στερεός, solid]. The strength-giving fibers of fibro-vascular tissue. See *Mestom.*

Stereomonoscope (*ster-e-o-mon'-o-skōp*) [στερεός, solid; μόνος, single; σκοπεῖν, to view]. An instrument with two lenses for producing a single picture giving the effect of solidity.

Stereoneura (*ster-e-o-nu'-rah*) [στερεός, solid; νεῦρον, nerve]. A term proposed by Wilder for the invertebrates whose nervous axis, when it exists, presents no cavity as in the vertebrates or celoneura.

Stereophantoscope (*ster-e-o-fan'-to-skōp*) [στερεός, solid; φαντασμαι, to appear]. A panorama-stereoscope using rotating discs in place of pictures.

Stereophoroscope (*ster-e-o-for'-o-skōp*) [στερεός, solid; φέρειν, to carry; σκοπεῖν, to see]. A stereoscopic zoetrope; an instrument for the production of a series of images apparently in motion and in stereoscopic relief.

Stereoplanula (*ster-e-o-plan'-u-lah*) [στερεός, solid; *planula*, from *planus*, flat]. In biology, a solid planula. Also spelled *Sterroplanula.*

Stereoplasm (*ster'-e-o-plazm*) [στερεός, solid; πλάσμα, anything formed or molded]. In biology: (*a*) a secretion of the basal membrane of certain *Actinia*, superseding and supplementing the dissepiments. (*b*) Nægeli's term for the solid part of protoplasm. See *Protoplasm.*

Stereoplasma (*ster-e-o-plaz'-mah*) [στερεός, solid; πλάσμα, something formed or molded]. See *Stereoplasm.*

Stereoscope (*ster'-e-o-skōp*) [στερεός, solid; σκοπεῖν, to see]. An instrument by which two similar pictures of the same object are made to overlap so that the re-

flected images are seen as one, thereby giving the appearance of solidity and relief. The stereoscope is used in the treatment of strabismus, in which condition it serves as an excellent means of ocular gymnastics. It is also of service in optometry to nullify convergence and diminish accommodation.

Stereoscopic (*ster-e-o-skop'-ik*) [στερεός, solid; σκοπεῖν, to view]. Pertaining to stereoscopy. **S. Vision,** binocular vision. See *Stereoscope.*

Stereoscopy (*ster-e-os'-ko-pe*) [στερεός, solid; σκοπεῖν, to view]. The use of the stereoscope.

Sterigma (*ster-ig'-mah*) [στήριγμα, a prop, support: *pl.*, *Sterigmata*]. In biology, a stalk or support.

Sterile (*ster'-il*) [*sterilis*, barren]. Not fertile or capable of reproducing; applied mainly to females. Free from microörganisms or spores.

Sterility (*ste-ril'-it-e*) [*sterilitas*]. The condition of being sterile, infertile, or incapable of reproducing. **S., Facultative,** sterility caused by the prevention of conception. **S., Idiopathic.** See *Azoöspermatism.* **S., Relative,** sterility due to other causes than abnormality of the sexual organs.

Sterilization (*ster-il-is-a'-shun*) [*sterilis*, barren]. The condition of rendering sterile, infertile, or incapable of reproducing. In bacteriology, the destruction by heat of the spores or mature forms of bacilli, micrococci, or other forms of microscopic life. In most instances a temperature of 100° C. (212° F.) devitalizes not only the mature forms, but the spores as well. In a few instances this temperature is not fatal to either. This, *e. g.*, is the case with *B. tenuis*, the rods resisting 100° and the spores 115°. **S., Hueppe's Method of,** the repeated exposure to a temperature of from 52° to 65° C. **S., Intermittent,** a method of sterilization of organic infusions introduced by Prof. Tyndall, in which an interval of time is allowed to elapse between the several heatings, giving an opportunity for any spores present to develop into adult microbes, in which form they readily succumb to the action of heat. **S.-test, Hochenegg's,** the surgical dressings are impregnated with a mixture composed of 150 parts of a solution of aluminum acetate of the Austrian Pharmacopeia, 150 parts water, and 5 parts of a 21 per cent. paste of alizarin. This is a yellowish-brown mixture, but on exposure to the temperature of boiling water becomes bright-red.

Sterilizator (*ster-il-iz-a'-tor*) [*sterilis*, sterile]. An instrument for sterilizing or killing germs by heat, including the exact determination of the degree of heat required to effect this in the case of different species.

Sterilized (*ster'-il-izd*) [*sterilis*, sterile]. Rendered sterile.

Sterilizer (*ster'-il-i-zer*). See *Sterilizator.*

Sternad (*stur'-nad*) [στέρνον, breast-bone]. Toward the sternal aspect.

Sternal (*stur'-nal*) [στέρνον, the breast-bone]. Pertaining to the sternum. **S. Band.** See *Band.* **S. Canal.** See *Canal.*

Sternalgia (*stur-nal'-je-ah*) [στέρνον, breast-bone; ἄλγος, pain]. Pain in the sternum.

Sternalgic (*stur-nal'-jik*) [στέρνον, breast-bone; ἄλγος, pain]. Affected with sternalgia.

Sternalis (*stur-na'-lis*) [στέρνον, breast-bone]. Connected with the sternum; sternal.

Sterneber (*stur'-ne-ber*). See *Sternebra.*

Sternebra (*stur'-ne-brah*) [*sternum*, sternum; *vertebra*, vertebra]. Any one of the serial segments of the sternum.

Sternebral (*stur'-ne-bral*) [*sternum*, sternum; *vertebra*, vertebra]. Pertaining to or of the nature of a sternebra.

Sternen (*stur'-nen*) [*sternum*, sternum]. Belonging to the sternum in itself.

Sterniform (*stur'-nif-orm*) [*sternum*, sternum; *forma*, form]. Shaped like a sternum.

Sternite (*stur'-nit*) [στέρνον, breast-bone]. The under or ventral sclerite of an abdominal segment.

Sternitic (*stur-nit'-ik*) [στέρνον, breast-bone]. Pertaining to a sternite.

Sterno- (*ster'-no-*) [*sternum*, sternum]. A prefix used to denote connection with the sternum. **S.-clavicular,** pertaining jointly to the sternum and the collar-bone. **S.-cleido-mastoid; S.-hyoid; S.-thyroid.** See *Muscles, Table of.*

Sterno-abdominalis (*stur-no-ab-dom-in-a'-lis*) [στέρνον, breast-bone; *abdomen*, abdomen]. The triangularis sterni and the transversus abdominis considered as a single muscle.

Sternocostal (*stur-no-kos'-tal*) [*sternum*, sternum; *costa*, a rib]. Pertaining conjointly to the sternum and the ribs.

Sternocoxal (*stur-no-koks'-al*) [*sternum*, sternum; *coxa*, hip]. Pertaining to the sternites and coxæ of an arthropod.

Sternofacial (*stur-no-fa'-shal*) [*sternum*, sternum; *facies*, face]. Pertaining to the sternum and the face.

Sternoglossal (*stur-no-glos'-al*) [στέρνον, breast-bone; γλῶσσα, tongue]. Pertaining to the sternum and the tongue.

Sternohyoid (*stur-no-hi'-oid*) [*sternum*, sternum; *hyoid*]. Pertaining to the sternum and the hyoid bone.

Sternoid (*stur'-noid*) [στέρνον, breast-bone; εἶδος, resemblance]. Resembling the sternum.

Sternomaxillary (*stur-no-maks'-il-a-re*) [*sternum*, sternum; *maxilla*, jaw]. Pertaining to the sternum and the mandible.

Sternon (*stur'-non*). Same as *Sternum.*

Sternopagia (*stur-no-pa'-je-ah*) [στέρνον, breast-bone; πάγος, fixed]. The condition of a sternopagus.

Sternopagus (*stur-nop'-ag-us*) [*sternum*, sternum; πάγος, set]. A double monomphalic monstrosity united by the sterna.

Sternoscapular (*stur-no-skap'-u-lar*) [*sternum*, sternum; *scapula*, scapula]. Pertaining to the sternum and the scapula.

Sternothyroid (*stur-no-thi'-roid*) [*sternum*, sternum; *thyroid*]. Pertaining to the sternum and the thyroid cartilage.

Sternotracheal (*stur-no-tra'-ke-al*) [*sternum*, sternum; *trachea*]. Pertaining to the sternum and the trachea.

Sternotribe (*stur'-no-trīb*) [στέρνον, breast-bone; τρίβειν, to rub]. In biology, touching the heart.

Sternum (*stur'-num*) [στέρνον, breast-bone]. The flat, narrow bone in the median line in the front of the chest, composed of three portions, the manubrium, or presternum, the gladiolus, and the xiphisternum, or ensiform, or xiphoid, appendix. See illustration of Thorax, anterior view, page 224.

Sternutament (*ster-nu'-tam-ent*) [*sternutamentum; sternutare*, to sneeze]. A substance causing sneezing.

Sternutation (*ster-nu-ta'-shun*) [*sternutatio*, a sneezing]. The act of sneezing.

Sternutatory (*ster-nu'-tat-or-e*) [*sternutare*, to sneeze]. 1. Provocative of sneezing. 2. An errhine; a drug or compound that causes sneezing.

Sterroblastula (*ster-o-blas'-tu-lah*) [στερεός, solid; βλαστός, a bud, a germ]. See *Stereoblastula.*

Sterrogastrula (*ster-o-gas'-tru-lah*) [στερεός, solid; γαστήρ, stomach]. See *Stereogastrula.*

Sterroplanula (*ster-o-plan'-u-lah*) [στερεός, solid; *planula*, from *planus*, flat]. See *Stereoplanula.*

Stertor (*stur'-tor*) [*stertere*, to snore]. Sonorous breathing, or snoring. The rasping, rattling sound produced

when the larynx and the air-passages are obstructed with mucus.

Stertorous (*stur'-to-rus*) [*stertere*, to snore]. Breathing with a snoring sound.

Stetharteritis (*steth-ar-ter-i'-tis*) [στῆθος, heart; ἀρτηρία, artery; ιτις, inflammation]. Inflammation of the arteries of the thorax.

Stetho- (*steth'-o*) [στῆθος, chest]. A prefix to denote connection with or relation to the chest.

Stethocatharsis (*steth-o-kath-ar'-sis*). Synonym of *Expectoration.*

Stethocele (*steth'-o-sēl*). See *Pneumonocele.*

Stethocelodyspnea (*steth-o-se-lo-disp-ne'-ah*) [στῆθος, chest; κήλη, hernia; δύσπνοια, dyspnea]. Dyspnea due to hernia of the lung.

Stethochysis (*steth-ok'-is-is*). See *Hydrothorax.*

Stethogoniometer (*steth-o-go-ne-om'-et-er*) [στῆθος, chest; γωνία, angle; μέτρον, measure]. An instrument for measuring the curvature of the chest.

Stethograph (*steth'-o-graf*) [στῆθος, chest; γράφειν, to record]. An instrument for recording the respiratory movements of the chest-wall.

Stethographic (*steth-o-graf'-ik*) [στῆθος, chest; γράφειν, to write]. Pertaining to the stethograph or to stethography.

Stethography (*steth-og'-ra-fe*) [στῆθος, chest; γράφειν, to write]. The art of recording graphically the movements of the chest-wall.

Stethokyrtograph (*steth-o-kir'-to-graf*) [στῆθος, chest; κυρτος, curved; γράφειν, to write]. An apparatus designed for measuring and recording the dimensions of the chest.

Stethomenia (*steth-o-me'-ne-ah*) [στῆθος, chest; μήν, month]. Vicarious menstruation by way of the bronchial tubes.

Stethometer (*steth-om'-et-er*) [στῆθος, chest; μέτρον, measure]. An instrument for measuring the amount of expansion of the chest and the relative expansibility of the two sides.

Stethometry (*steth-om'-et-re*) [στῆθος, chest; μέτρον, measure]. The measuring of respiratory movements by means of a stethometer.

Stethomyitis (*steth-o-mi-i'-tis*) [στῆθος, chest; μῦς, muscle; ιτις, inflammation]. Inflammation of the muscles of the chest.

Stethophonometer (*steth-o-fo-nom'-et-er*) [στῆθος, chest; φωνή, sound; μέτρον, measure]. An instrument to measure the phenomena elicited by auscultation.

Stethopolyscopium (*steth-o-pol-is-ko'-pe-um*) [στῆθος, chest; πολύς, many; σκοπεῖν, to view]. A stethoscope having several tubes for the simultaneous use of several observers.

Stethorrheuma (*steth-or-u'-mah*) [στῆθος, chest; ῥεύμα, rheum]. Rheumatism of the thorax.

Stethoscope (*steth'-o-skōp*) [στῆθος, breast; σκοπεῖν, to examine]. An instrument for ascertaining the condition of the organs of circulation and respiration by their sounds. It consists of a hollow tube, one end being placed over the locality to be examined, the other at the ear of the examiner. A binaural form of the instrument consists of a Y-shaped tube, the flexible branches being applied each to an ear of the listener. By this means not only are all extraneous sounds shut out, but an intensified sound is conveyed to the ear.

Stethoscopic (*steth'-o-skop-ik*) [στῆθος, chest; σκοπεῖν, to view]. Pertaining to or detected by means of the stethoscope.

Stethoscopist (*steth'-o-skop-ist*) [στῆθος, chest; σκοπεῖν, to view]. One versed in the use of the stethoscope.

Stethoscopy (*steth-os'-ko-pe*) [στήθος, chest; σκοπεῖν, to view]. Examination of the chest, especially that which is performed with the aid of the stethoscope.

Stethospasm (*steth'-o-spāzm*) [στῆθος, chest; σπασμός, spasm]. Spasm of the pectoral muscles.

Stevens' Saline Mixture. A mixture composed of sodium chlorid 20 grains, potassium chlorate 7 grains, sodium carbonate 30 grains, water 12 fluidrams; recommended to be taken every half hour in malignant cholera.

Sthenia (*sthen'-e-ah*) [σθένος, strength]. Normal or excessive force or vigor (opposed to *asthenia*).

Sthenic (*sthen'-ik*) [σθένος, strength]. Strong, active. **S. Fever,** synochus; a form of continued fever marked by high bodily temperature, quick and tense pulse, and highly colored urine.

Sthenopyra (*sthen-o-pi'-rah*) [σθένος, strength; πῦρ, fever]. Sthenic fever.

Stibiacne (*stib-e-ak'-ne*) [στίβι, antimony sulphuret; ἀκνη, acne]. Acne caused by the use of antimony.

Stibial (*stib'-e-al*) [στίβι, antimony sulphuret]. Pertaining to stibium, or antimony.

Stibialism (*stib'-e-al-izm*) [στίβι, antimony sulphuret]. Antimonial poisoning.

Stibium (*stib'-e-um*). See *Antimonium.*

Stichcultur (*stich'-kŭl'-tūr*) [Ger.]. See *Stab-culture.*

Stick (*stik*) [ME., *stiken*, to stick]. 1. To pierce with a pointed weapon. 2. A slender piece of wood. **S.-caustic.** See *Argentum.* **S.-lac.** See *Lac.*

Sticking Plaster. See *Adhesive Plaster.*

Stictacne (*stik-tak'-ne*) [στικτός, punctated; ἀκνη, acne]. Acne punctata; acne in which the pustules have a red, raised base, with a central black point.

Stiebel, Canal of. See *Canal.*

Stiega, Canal of. See *Canal.*

Stiff (*stif*) [ME., *stif*, stiff]. Inflexible, unyielding, immovable in continuity; applied especially to normally movable parts. **S. Joint.** See *Ankylosis.* **S. Neck.** See *Torticollis.*

Stifle (*sti'-fl*) [ME., *stifil*, to choke]. 1. To choke up; to kill by impeding respiration. 2. The stifle-joint, *q. v.* 3. Disease or other affection of the stifle-bone, *q. v.* **S.-bone,** the patella of the horse. **S.-joint,** the knee-joint of the horse.

Stifling (*sti'-fling*) [ME., *stifil*, to choke up]. Close; oppressive. **S.-bone.** Same as *Stifle-bone.*

Stigma (*stig'-mah*) [στίγμα, point: *pl.*, *Stigmata*]. A minute cicatrix. In biology, a spot or mark, as (*a*) one of the so-called eye-spots, usually red, in many colored *Flagellata*; (*b*) the outer aperture of a tubular trachea, in the *Antennata* (*Myriapoda* and *Hexapoda*); (*c*) the external opening of a segmental organ in the *Annelida*; see *Pseudo-stomata*; (*d*) that part of a pistil which receives the pollen; (*e*) the spot at which the ovisac ruptures in the escape of an ovum into the oviduct. See also, *Stigmata.*

Stigmal (*stig'-mal*) [στίγμα, stigma]. Pertaining to a stigma.

Stigmata, Bakers', Nodules on the backs of the fingers caused by kneading dough. **S., Hereditary** psychic stigmata resembling those of an ancestor and supposed to be inherited. **S., Hysteric,** the specific, peculiar phenomena or symptoms of hysteria—as the anesthesia, hyperesthesia, hysterogenic zones, reversal of the color-field, contraction of the visual field, the phenomena of transport, amblyopia, impairment of the sense of hearing, of taste, and of the muscular sense, etc. **S. maydis.** See *Zea mays.* **S., Neurasthenic.** See *S., Hysteric.* **S. nigra,** the black spots caused by the presence of grains of gun-powder in the skin. **S., Psychic** certain mental states characterized by susceptibility to

particular suggestions. **S. rubra,** petechiæ due to various causes. **S., Somatic,** the objective signs of certain nervous affections. **S., Venous,** varicose veins.

stigmatal (*stig'-mat-al*) [στίγμα, stigma]. Stigmatic.

stigmatic (*stig-mat'-ik*) [στίγμα, spot]. Belonging or pertaining to a stigma; characterized by a stigma, or by stigmata.

stigmatiferous (*stig-mat-if'-er-us*) [στίγμα, stigma; *ferre*, to bear]. Bearing stigmata.

stigmatiform (*stig-mat'-if-orm*) [στίγμα, stigma; *forma*, form]. Having the form of a stigma.

stigmatism (*stig'-mat-ism*) [στίγμα, point]. A condition of the refractive media of the eye in which rays of light from a point are accurately brought to a focus on the retina. Synonymous with emmetropia. See, also, *Astigmatism*.

stigmatization (*stig-mat-iz-a'-shun*) [στίγμα, point]. The formation of ecchymotic spots upon the body.

stigmatodermia (*stig-mat-o-der'-me-ah*) [στίγμα, a prick; δέρμα, skin]. Disease of the prickle-cell layer of the skin.

stigmatoid (*stig'-mat-oid*) [στίγμα, point; εἶδος, like]. Resembling a stigma.

stigmatose (*stig'-mat-ōz*) [στίγμα, stigma]. Marked with stigmata.

stil de grain. Same as *Brown-pink*, in *Pigments, Conspectus of*.

stilbene (*stil'-bēn*) [στίλβειν, to glitter], $C_{14}H_{12}$. *Toluylene*, a substance produced by the action of sodium upon bitter-almond oil or benzol chlorid. It crystallizes in large monoclinic leaflets or prisms, and dissolves easily in hot alcohol, melts at 120° C., and distils at 306° C.

stilet, stilette (*sti-let'*) [Fr., dim. of Lat. *stilus*, a point]. The small, sharp-pointed instrument enclosed in the cannula. Also, the wire of a flexible catheter.

still (*stil*) [ME., *stille*, still]. Quiet; at rest. **S.-born,** born lifeless.

stillicidium (*stil-is-id'-e-um*) [*stilla*, a drop; *cadere*, to fall down]. The flow of a liquid drop by drop. Also, the flow of the urine in strangury. **S. lacrimarum,** overflow of tears from obstruction of the canaliculus or nasal duct. **S. narium,** coryza. **S. sanguinis.** See *Staxis*. **S. urinæ,** dribbling of urine. **S. uteri.** See *Menses*. **S., Virulent,** gonorrhea.

stilligoute (*stil'-ig-oot*) [Fr., *stillare*, to let fall; *gutta*, a drop]. A dropper; a pipet that lets a liquid fall in drops.

stilling, Canal of. See *Canal*. **S.'s Sacral Nucleus,** an island of nerve-cells in the sacral region of the spinal cord. See *Nucleus*.

stillingia (*stil-in'-je-ah*) [after Benjamin *Stillingfleet*, an English botanist]. Queen's Root. The root of *S. sylvatica*, or "queen's delight." Its active principle is not known. It is expectorant, diuretic, and sialogogue, with reputed alterative properties; in larger doses, emetic and cathartic. It is used with sarsaparilla as an antisyphilitic in the tertiary stage. It is valuable with quinin in intermittent fever. Dose of the powd. root gr. x–ʒj; of the fld. ext. ɱx–ʒj; of the tinct., unof., ʒss–ij; of the decoction (strength ʒj to Oj), unof., ʒj–ij.

stillingin (*stil-in'-jin*) [after Benjamin *Stillingfleet*, an English botanist]. A precipitate from a tincture of the root of *Stillingia sylvatica;* resolvent, stimulant, diuretic, antisyphilitic. Dose 1 to 3 grains. Unof.

stilogonidium (*sti-lo-go-nid'-e-um*) [στῦλος, a pillar; γονή, generation, seed: *pl.*, *Stilogonidia*]. In biology, a stalked gonidium, or asexual reproductive body; a *stylospore*.

Stilus (*sti'-lus*) [*stilus*, a point]. 1. A more correct form of the word *Stylus*, used as an anatomic term. 2. A small tube or a bit of wire sometimes retained in the obstructed lacrymal duct, with a view to the restoration of its function.

Stimulant (*stim'-u-lant*) [*stimulus*, a goad]. 1. Quickening or increasing some trophic or functional process. 2. An agent exciting the functions of an organ or some process of the economy. **S., Cardiac,** one that increases the heart's action. **S., Cerebral,** one that exalts the action of the cerebrum. **S., Cutaneous,** one that increases the activity of the skin, producing diaphoresis. **S., Diffusive,** one that has a prompt but transient effect. **S., Hepatic,** one that excites the liver. **S., Intestinal,** one that acts upon the intestinal tract. **S., Local,** one acting directly on the end-organs of the sensory nerves of the skin. **S., Renal,** one producing diuresis. **S., Spinal,** one exciting the spinal cord. **S., Stomachic,** one giving tone to the stomach, aiding digestion, etc. **S., Vasomotor,** one exciting the vaso-motor apparatus.

Stimulate (*stim'-u-lāt*) [*stimulare*, to stimulate]. To treat with stimulants. To induce increased activity.

Stimulating (*stim'-u-la-ting*) [*stimulare*, to stimulate]. Having the power to stimulate.

Stimulation (*stim-u-la'-shun*) [*stimulatio*]. The action of a stimulant; the process of stimulating; the effect of the administration of a stimulant.

Stimulose (*stim'-u-lōz*) [*stimulus*, a goad]. Provided with stinging needles or hairs.

Stimulus (*stim'-u-lus*) [L.: *pl.*, *Stimuli*]. Anything exciting the animal economy, or any part thereof, to increased functional activity. **Stimuli, Adequate** or **Homologous,** those for whose action the sense-organs are specially adapted. **S., Chemic,** irritation caused by a chemic agent. **S., Heterologous,** one acting upon the nervous elements of the sensory apparatus along their entire course. **S., Homologous,** a stimulus only acting upon the end-organ. **S., Mechanical,** irritation caused by mechanical means, as by pinching or striking. **S., Summation of.** See *Summation*.

Sting [ME., *stingen*, to sting]. 1. A minute, punctured, and often a poisoned wound, made by the pointed defensive or offensive organ of some insect, or other animal or plant. 2. A sharp-pointed defensive organ of reptiles and insects.

Stinging (*sting'-ing*) [ME., *stingen*, to sting]. 1. Producing a burning pain. 2. Wounding by means of a sting. **S.-cell,** one of the urticating cells or lasso-cells of a *Cnidarian*. See *Cnida, Nematophore, Nematocyst*.

Stink (*stingk*) [ME., *stinken*, to stink]. 1. To emit a strong, offensive smell. 2. A disgusting odor. **S.-glands.** See *Gland*. **S.-trap.** See *Stench-trap*.

Stinking Smut. See *Smut*.

Stipe (*stīp*) [*stipes*, a stock, post]. In biology, a stem, stalk or support. Cf., *Thecaphore, Gynophore, Anthophore, Gynobase, Gonophore, Carpophore*.

Stipel (*stī'-pel*) [*stipes*, a post]. The stipule of a leaflet.

Stipellate (*stī'-pel-āt*) [*stipella*, a stipel]. In biology, bearing stipels.

Stipes (*stī'-pēz*) [*stipes*, a stock, trunk]. In biology: 1. A stalk, stem, or stipe. 2. A mesal branch of the anteroccipital fissure of the brain.

Stipiform (*stī'-pif-orm*) [*stipes*, stock; *forma*, form]. Having the form of a stipe.

Stipitate (*stip'-it-āt*) [*stipes*, a stock, trunk]. In biology, placed upon a stalk or stipe.

Stipitiform (*stip'-it-if-orm*) [*stipes*, stock; *forma*, form]. In biology, stipiform.

Stipula (*stip'-u-lah*) [*stipula*, a stalk: *pl.*, *Stipulæ*]. In biology: 1. A pin-feather of a bird. 2. See *Stipule*.

Stipulaceous (*stip-u-la'-shus*). Same as *Stipular*.

Stipular, Stipulary (*stip'-u-lar, stip'-u-la-re*) [*stipula*, a stalk]. Pertaining to a stipule.

Stipulate (*stip'-u-lāt*) [*stipula*, a stalk]. Having stipules.

Stipulation (*stip-u-la'-shun*) [*stipula*, a stalk]. In biology, the situation and structure of the stipules.

Stipule (*stip'-ūl*) [*stipula*, a stalk, stem, blade]. In biology, (*a*) one of the blade-like bodies at the base of the petioles of leaves; (*b*) Braun's term for the unicellular foliar structures arising from the basal nodes of *Chara*, on both the inner and outer sides of the leaf; (*c*) one of the small leaves or hair-like appendages (*paraphyllum*) found among the true leaves of certain mosses; (*d*) a pin-feather of a bird.

Stipuliferous (*stip-u-lif'-er-us*) [*stipula*, a stipule; *ferre*, to bear]. Having stipules.

Stipuliform (*stip'-u-lif-orm*) [*stipula*, stipula; *forma*, form]. In biology, having the form of a stipula.

Stipulosus (*stip-u-lo'-sus*) [*stipula*, a stipule]. Having stipules which are comparatively large.

Stirling and Brito's Method. A method of preparing hemoglobin crystals. Mix a drop of blood with a few drops of water on a glass slide and seal the preparation. After a few days beautiful crystals are developed.

Stirosis (*ste-ro'-sis*). Synonym of *Sterility*.

Stirp (*sturp*) [*stirps*, a stock, root, race]. In biology, a term introduced to express the sum-total of hereditary organic units contained in the fertilized ovum.

Stirpicultural (*stur-pik-ul'-tu-ral*) [*stirps*, a race; *cultura*, culture]. Pertaining to stirpiculture.

Stirpiculture (*stur'-pik-ul-tūr*) [*stirps*, stock, race; *cultura*, culture]. The proposed improvement of the human species by attention to the laws of breeding.

Stirps (*sturps*) [*stirps*, stock, race, root: *pl.*, *Stirpes*]. In biology, a race or permanent variety; a lineage, family.

Stirrup, Stirrup-bone (*stir'-up*) [ME., *stirop*, stirrup]. The stapes.

Stitch [ME., *stiche*, twinge]. 1. A sudden, sharp, lancinating pain. 2. See also *Suture*.

Stocking, Elastic. A stocking of elastic fibers for the compression of a limb affected with varicose veins and other diseases.

Stoechiology (*stek-e-ol'-o-je*) [στοιχεῖον, an element; λόγος, a treatise]. The study of the chemic elements of the gases, fluids, and solids of the body; physiologic chemistry. See *Stechiology*.

Stoerck's Blennorrhea. A form of *laryngitis sicca* ending frequently in adhesion between the anterior portions of the vocal bands.

Stoicheiology (*stoi-ke-ol'-o-je*). See *Stechiology*.

Stokes' Disease. Exophthalmic goiter. See *Diseases, Table of.* **S. Expectorant,** a preparation used in the treatment of bronchitis. It consists of pulverized carbonate of ammonium 16 grains, fluid extract of senega and squills each ½ dram, paregoric 3 drams, syrup of tolu sufficient to make two ounces. A dram of this is given p. r. n. **S. Law.** See *Law, Angstrom's.* **S. Liniment.** See *Linimentum.* **S. Reagent.** A reducing agent employed in the physiologic laboratory. It is a solution of ferrous sulphate to which a little tartaric or citric acid has been added and then ammonia till the reaction is alkaline. It should be freshly made when used. **S. Sign,** violent throbbing in the abdomen in cases of acute enteritis. The throbbing is to be felt to the right of the umbilicus, and may occasion much distress. See *Signs and Symptoms, Table of.*

Stolidity (*stol-id'-it-e*) [*stoliditas*]. A term designating stupidity of various degrees, even to amentia, or complete imbecility—oftener, however, signifying merely a phlegmatic or immobile temperament.

Stolon (*sto'-lon*) [*stolo*, a shoot, branch]. In biology (*a*) a slender, prostrate branch, taking root, or bearing a bulb at the tip, where it forms one or more new plants; (*b*) an analogous budding stock in certain compound animals; *e. g.*, *Social Infusoria*, *Actinozoa*, *Hydrozoa*, *Ascidiæ*.

Stolonate (*sto'-lon-āt*) [*stolo*, a shoot]. Stoloniferous.

Stoloniferous (*sto-lon-if'-er-us*) [*stolo*, a shoot; *ferre*, to bear]. Producing stolons.

Stoma (*sto'-mah*) [στόμα, mouth]. 1. The mouth. 2. In biology: (*a*) an opening on the surface of a plant, especially the leaves, for the passage of gases and moisture. "A stoma is formed of an epidermal cell which divides into two equal sister-cells by a wall vertical to the leaf" (Sachs); (*b*) a mouth, ostium, or pore, as the openings in endothelial membranes establishing direct communication between adjacent lymph-channels.

Stomacace (*sto-mak'-as-e*) [στόμα, mouth; κάκη, evil]. Canker of the mouth. Fetor of the mouth with ulcerated gums; also, scorbutic sore-mouth.

Stomach (*stum'-ak*) [στόμαχος]. The most dilated part of the alimentary canal, the principal organ of digestion, situated in the abdomen in the left hypogastric, the epigastric, and part of the right hypochondriac regions, above the transverse colon and below the diaphragm. **S.-ache,** pain in the stomach or abdomen. **S.-brush,** a brush designed to be introduced into the stomach to stimulate secretion. **S.-bucket,** a small silver vessel attached to a thread, used in obtaining a specimen of the contents of the stomach. **S.-cough,** a reflex cough excited by irritation of the stomach or of the small intestine. **S.-drops.** See *Bitter Tincture*. **S., Honey-comb.** See *Reticulum*. **S., Hour-glass,** a stomach having an hour-glass shape, due to a band of exudation. **S.-pump,** an instrument for withdrawing the contents of the stomach. See *Pump*. **S.-staggers,** a disease in horses depending on a paralytic affection of the stomach. **S.-tooth,** a low canine tooth, especially one of the first dentition. **S.-tube,** a flexible tube for irrigation, etc., of the stomach. **S.-worm,** a common intestinal roundworm. See *Ascaris lumbricoides*, under *Parasites (Animal)*, *Table of.*

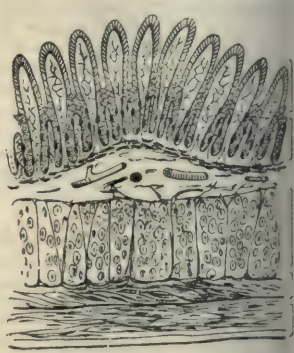


Diagram of Wall of the Stomach showing the relative thickness of the mucous membrane, *a*, *b*, *c*, and the transverse, *e*, oblique, *f*, and longitudinal muscle fibers.

Stomachal (*stum'-ak-al*) [στόμαχος, the stomach]. Pertaining to the stomach.

Stomachalgia (*stum-ak-al'-je-ah*) [στόμαχος, stomach; ἄλγος, pain]. Pain in the stomach.

Stomachic (*sto-mak'-ik*) [στόμαχος, stomach]. 1. Pertaining to or stimulating the secretory and digestive functions of the stomach. 2. A stimulant exciting the functional activity of the stomach.

Stomachoscopy (*stum-ak-os′-ko-pe*) [στόμαχος, stomach; σκοπεῖν, to view]. Examination of the stomach.

Stomata (*sto′-mat-ah*) [pl. of *Stoma*]. Mouths.

Stomatal (*sto′-mat-al*) [στόμα, mouth]. Relating to stomata.

Stomatalgia (*sto-mat-al′-je-ah*) [στόμα, mouth; ἄλγος, pain]. Pain in the mouth.

Stomate (*sto′-māt*) [στόμα, mouth]. Having stomata.

Stomatelcia, Stomatelcosis (*sto-mat-el′-se-ah, sto-mat-el-ko′-sis*) [στόμα, mouth; ἕλκωσις, ulceration]. Ulceration of the mouth.

Stomatic (*sto-mat′-ik*) [στόμα, mouth]. Relating or belonging to the mouth.

Stomatiferous (*sto-mat-if′-er-us*) [στόμα, mouth; *ferre*, to bear]. In biology, provided with stomata.

Stomatitis (*sto-mat-i′-tis*) [στόμα, mouth; ιτις, inflammation]. Inflammation of the mouth. **S. aphthosa.** See *Aphthæ*. **S., Aphthous.** See *Aphthæ*. **S., Catarrhal,** the most frequent form and especially encountered in infants, when it is often termed "*erythema neonatorum.*" The mucous membrane is swollen, and the tongue furred; there is pain on sucking or in older children on chewing, and salivation is present to a more or less marked degree. This form of stomatitis is usually associated with the exanthemata and other acute diseases. **S., Corrosive.** See *S., Gangrenous.* **S. cremosa.** Synonym of *Thrush.* **S. epidemica,** an acute infectious stomatitis which occurs in epidemics. **S., Epizoötic,** aphthæ epizoöticæ. **S., Follicular.** Synonym of *Aphthæ.* **S., Gangrenous.** See *Cancrum oris.* **S. materna,** stomatitis occurring during pregnancy or lactation. **S. Mercurial,** that arising from poisoning by mercury. **S. mycosa.** See *Thrush.* **S. parasitica.** Synonym of *Thrush.* **S., Phlegmonous.** Synonym of *S., Ulcerative.* **S., Pseudomembranosa.** Synonym of *Thrush.* **S., Pultaceous.** See *Aphthæ.* **S., Saturnine,** stomatitis due to lead-poisoning. **S., Scorbutic,** stomatitis due to scurvy. **S., Simple,** a simple erythema of the mouth. **S., Ulcerative,** a grave form of catarrhal stomatitis. It is characterized by the formation of small ulcers on the cheeks, lips, and tongue, with copious salivation, pain, fetid breath, slight fever, and at times great prostration. **S. ulcerosa.** Synonym of *S., Ulcerative.* **S., Vesicular.** Synonym of *Aphthæ.*

Stomatium (*sto-ma′-she-um*). See *Stoma.*

Stomatocace (*sto-mat-ok′-as-e*) [στόμα, mouth; κακός, evil]. Fetid ulceration of the mouth.

Stomatocatharsis (*sto-mat-o-kath-ar′-sis*). Synonym of *Salivation.*

Stomatode (*sto′-mat-ōd*) [στόμα, mouth; εἶδος, like]. Having a stoma.

Stomatodendron (*sto-mat-o-den′-dron*) [στόμα, mouth; δένδρον, a tree: *pl.*, *Stomatodendra*]. In biology, one of the branches of a complex tree-like mass suspended from the middle of the umbrella in the *Rhizostomidæ.* These branches end in and are covered with minute polypites interspersed with clavate tentacula.

Stomatodynia (*sto-mat-o-din′-e-ah*) [στόμα, mouth; ὀδύνη, pain]. Pain in the mouth.

Stomatodysodia (*sto-mat-o-dis-o′-de-ah*) [στόμα, mouth; δυσωδία, foul odor]. A foul odor of the breath; ill-smelling breath.

Stomatogastric (*sto-mat-o-gas′-trik*) [στόμα, mouth; γαστήρ, stomach]. In biology, applied to the nerves; pertaining to the mouth and the stomach.

Stomatoiatria (*sto-mat-o-e-a′-tre-ah*) [στόμα, mouth; ἰατρεία, treatment]. The medical treatment of diseases of the mouth.

Stomatologic (*sto-mat-o-loj′-ik*) [στόμα, mouth; λόγος, science]. Pertaining to stomatology.

Stomatologist (*sto-mat-ol′-o-jist*) [στόμα, mouth; λόγος, science]. One versed in stomatology.

Stomatology (*sto-mat-ol′-o-je*) [στόμα, mouth; λόγος, learning]. The sum of what is known about the mouth.

Stomatomalacia (*sto-mat-o-mal-a′-se-ah*) [στόμα, mouth; μαλακία, softening]. Sloughing or softening of parts of the mouth.

Stomatomenia (*sto-mat-o-me′-ne-ah*) [στόμα, mouth; μήν, month]. Vicarious menstruation by way of the mouth.

Stomatomia (*sto-mat-o′-me-ah*) [στόμα, mouth; τέμνειν, to cut]. A general term for the incision of a mouth, as of the uterus.

Stomatomorphous (*sto-mat-o-mōr′-fus*) [στόμα, mouth; μορφή, form]. In biology, shaped like a mouth.

Stomatomycosis (*sto-mat-o-mi-ko′-sis*) [στόμα, mouth; μύκης, fungus]. A disease of the oropharynx due to the development therein of the *Oïdium albicans.* **S. oïdica.** See *Thrush.*

Stomato-necrosis (*sto-mat-o-ne-kro′-sis*). Synonym of *Cancrum oris.*

Stomatonoma (*sto-mat-o-no′-mah*). Same as *Stomacace.*

Stomatopannus (*sto-mat-o-pan′-us*) [στόμα, mouth; πάννυς, thread]. Enlargement of the glands of the mouth.

Stomatopathy (*sto-mat-op′-ath-e*) [στόμα, mouth; πάθος, disease]. Any disease of the mouth.

Stomatophorous (*sto-mat-off′-or-us*) [στόμα, mouth; φέρειν, to bear]. Having a mouth.

Stomatophyma (*sto-mat-o-fi′-mah*) [στόμα, mouth; φυμα, growth]. Any enlargement or growth in the mouth.

Stomatoplastic (*sto-mat-o-plas′-tik*) [στόμα, mouth; πλάσσειν, to form]. Pertaining to stomatoplasty.

Stomatoplasty (*sto′-mat-o-plas-te*) [στόμα, mouth; πλάσσειν, to form]. Plastic operations upon or about the mouth.

Stomatopoiesis (*sto-mat-o-poi-e′-sis*). See *Stomatoplasty.*

Stomatopyra (*sto-mat-o-pi′-rah*). See *Aphthæ.*

Stomatorrhagia (*sto-mat-or-a′-je-ah*) [στόμα, mouth; ῥηγνύναι, to burst forth]. Copious hemorrhage from the mouth.

Stomatorrhea (*sto-mat-or-e′-ah*) [στόμα, mouth; ῥοία, a flow]. A discharge of liquid from the mouth.

Stomatoscope (*sto′-mat-o-skōp*) [στόμα, mouth; σκοπεῖν, to inspect]. An instrument to aid in the inspection of the mouth.

Stomatosepsis (*sto-mat-o-sep′-sis*) [στόμα, mouth; σῆψις, sepsis]. Stomatosis due to septic infection.

Stomatosis (*sto-mat-o′-sis*) [στόμα, mouth]. Disease of the mouth.

Stomatospasmus (*sto-mat-o-spaz′-mus*). See *Trismus.*

Stomatotheca (*sto-mat-o-the′-kah*) [στόμα, mouth; θήκη, box, chest: *pl.*, *Stomatothecæ*]. In biology, that part of a pupa-case which covers the mouth.

Stomatotyphus (*sto-mat-o-ti′-fus*) [στόμα, mouth; τυφος, stupor]. A form of typhus in which the beginning lesions are found in the mouth.

Stomatous (*sto′-mat-us*) [στόμα, mouth]. Provided with stomata.

Stomencephalus (*sto-men-sef′-al-us*). See *Stomocephalus.*

Stomenorrhagia (*sto-men-or-a′-je-ah*) [στόμα, mouth; ῥηγνύναι, to burst forth]. Bleeding from the mouth.

Stomocephalus (*sto-mo-sef′-al-us*) [στόμα, mouth; κεφαλή, head]. A variety of single autositic monsters of the species cyclocephalus, in which there is the same deformity as in rhinocephalus or in cyclocephalus, associated with a defect of the maxillary bones, so that the excess of skin hangs in folds around the

mouth, resembling somewhat the proboscis of rhinocephalus.

Stomodæum (*sto-mo'-de-um*) [στόμα, mouth; ὁδαῖος, pertaining to a way: *pl.*, *Stomodæa*]. In biology, the primitive mouth-cavity of embryos, larvæ, and young transition-stages. That part of the enteric tube formed at the oral pole by a depression of the ectoderm connecting the permanent mouth with the archenteric cavity.

Stomodæal (*sto-mo'-de-al*) [στόμα, mouth; ὁδαῖος, by the way]. Having the character of a stomodæum.

Stomoschisis (*sto-mos'-kis-is*) [στόμα, mouth; σχίσις, fissure]. Fissure of the mouth, particularly of the soft palate.

Stomostaurus (*sto-mo-staw'-rus*) [στόμα, mouth; σταυρός, cross]. In biology, the cross-shaped mouth of *Medusæ*.

Stomostyla (*sto-mo-sti'-lah*) [στόμα, mouth; στῦλος, a pillar: *pl.*, *Stomostylæ*]. In biology, one of the oral styles of the *Anthomedusæ*.

Stomoticous (*sto-mot'-ik-us*) [στόμα, mouth]. Relating or pertaining to the mouth.

Stomotosyrinx (*sto-mo-to-si'-rinks*) [στόμα, mouth; οὖς, the ear; συρυγξ, tube]. The Eustachian tube.

Stomuria (*sto-mu'-re-ah*). See *Stomaturia*.

Stone (*stōn*) [ME., *stoon*, stone]. 1. A hardened mass of mineral matter. 2. An English weight of 14 lbs. See also *Calculus*. **S., Blue**, copper-sulphate crystals. **S., Break**, a member of the genus *Saxifraga*, so called because of the belief that the hard bulbs were of virtue against calculus. See *Signatures, Doctrine of*. **S.-crusher.** See *Lithotrite*. **S.-fruit**, the same as *Drupe*, *q. v.* **S., Gall.** See *Biliary Calculus*. **S., Liver**, a mixture of bitumen and barium sulphate. **S.-masons' Neurosis**, loss of control of the hand in the use of the chisel, sometimes observed in stone-masons, as a result of over-use. Both spasm and weakness are likely to be present, and painful points often exist. **S.-m. Phthisis.** See *Grinders' Asthma*. **S.-oil.** See *Petroleum*. **S., Philosopher's**, a hypothetic substance believed to transmute the baser metals into gold and silver, and to be a panacea against all evils as well. **S.-pock, S.-pox.** See *Acne vulgaris*. **S.-root.** See *Collinsonia canadensis*.

Stool [ME., *stool*, stool]. The feces. The evacuation of the bowels. A chair or seat. **Ss., Bilious**, the discharges in bilious diarrhea, as after large doses of calomel. **Ss., Caddy**, yellow-fever stools which resemble fine, dark, sandy mud. **Ss., Fatty**, stools in which fat is present; due to pancreatic disease. **S., Insulated**, in electricity, a stool provided with insulated legs. **Ss., Mucous**, stools consisting of or containing mucus. They indicate the existence of intestinal inflammation. **Ss., Pea-soup**, the peculiar liquid evacuation of typhoid fever. **Ss., Rice-water**, the stools of cholera, in which there is a copious serous exudation containing detached epithelium.

Stop [ME., *stoppen*, to stop]. To plug up; to hold back; to hinder. **S.-cock**, a turning cock, connected with a pipe, for regulating the flow of gases or liquids. **S.-needle**, a lance-pointed needle used in the operation of discission, having an enlargement or shoulder upon the shank to prevent too deep penetration.

Stoppage (*stop'-āj*) [ME., *stoppen*, to stop]. Cessation of flow or action; closure or stegnosis.

Stopper, Stopple (*stop'-er, stop'-l*) [ME., *stoppen*, to stop]. A plug or other closure for a bottle, commonly made of cork, rubber, or glass. **S.-Dropper**, a combination of stopper and medicine pipet in one piece.

Stopping (*stop'-ing*). See *Filling*.

Storax (*stō'-raks*). See *Styrax*.

Storesin (*sto-rez'-in*) [στύραξ, storax]. An amorphous resin forming the largest ingredient of storax.

Stoughton, Stoughton's Elixir (*stō'-ton*). Tinctura absinthii composita; a tincture of wormwood, germander, gentian, rhubarb, orange-peel, cascarilla, and aloes; used as a flavor in alcoholic drinks and as a general tonic. Unof.

Stout (*stowt*) [ME., *stout*, stout]. 1. Hardy, sturdy, corpulent. 2. A heavy beer or porter.

Strabilismus (*stra-bil-iz'-mus*). See *Strabismus*.

Strabismal, Strabismic (*stra-biz'-mal, stra-biz'-mik*) [στραβισμός, a squint]. Relating to or affected with strabismus.

Strabismometer (*stra-biz-mom'-et-er*). See *Strabometer*.

Strabismometry (*stra-biz-mom'-et-re*) [στραβισμός, a squint; μέτρον, measure]. The measurement of the degree of strabismus.

Strabismus (*stra-biz'-mus*) [στραβίζειν, to squint]. That abnormality of the eyes in which the visual axes do not meet at the desired objective point, in consequence of incoördinate action of the external ocular muscles. Stevens has devised the following terms to express the deviations of the visual lines in strabismus: *Heterotropia*, a general term for deviation of any kind; *Hypertropia*, for one visual line above another; *Esotropia*, deviation inward; *Exotropia*, deviation outward. **S., Alternating**, when either eye fixes alternately. **S., Apparent**, due to a large angle alpha. **S., Concomitant**, the squinting eye has full range of movement. **S., Constant**, when the condition is a permanent one. **S., Convergent**, when the squinting eye is turned to the nasal side. **S. deorsumvergens**, the axis of vision is directed downward. **S., Divergent**, when the squinting eye is turned to the temporal side. **S., Downward**, strabismus in which the squinting eye turns downward below the point of fixation of the other eye. **S., Dynamic.** See *Insufficiency*. **S., External.** See *S., Divergent*. **S., Intermittent**, that disappearing without apparent cause and returning at regular intervals. It is usually seen in children, and is probably of nervous origin. **S., Internal.** See *S., Convergent*. **S., Latent.** See *Insufficiency*. **S., Monocular**, or **Unilateral**, when the same eye always deviates. **S., Paralytic**, due to paralysis of one or more muscles. **S., Periodic**, strabismus occurring sometimes on fixation for near but not for far points. **S., Spastic**, strabismus due to a spastic contraction of an ocular muscle. It occurs in connection with central nervous disease. **S. sursumvergens**, the visual axis is directed upward. **S., Upward**, strabismus in which the squinting eye turns upward beyond the point of fixation of the other eye.

Strabometer (*stra-bom'-et-er*) [στραβός, squinting; μέτρον, measure]. An instrument for the measurement of the deviation of the eyes in strabismus.

Straboscopic (*stra-bo-skop'-ik*) [στραβός, crooked; σκοπεῖν, to see]. Pertaining to the appearance of objects as seen by one with strabismus. **S. Disc**, an instrument producing distortion of objects.

Strabositas (*stra-bos'-it-as*). See *Strabismus*.

Strabotomy (*stra-bot'-o-me*) [στραβός, crooked; τέμνειν, to cut]. An operation for the correction of strabismus. See *Tenotomy*.

Straddling Disease. See *Quebrabunda*.

Stragular (*strag'-u-lar*) [*stragulum*, a cover]. Pertaining to the mantle; pallial.

Stragulum (*strag'-u-lum*) [L.]. The mantle; the pallium.

Strain (*strān*) [ME., *straynen*, to strain]. In pharmacy, to separate insoluble substances from the liquid in which they occur. To filter. In pathology, any

abnormal tension put on an organ or part. See, also, *Eye strain.*

trainer (*stra'-ner*) [ME., *streynour*, strainer]. In pharmacy, a sieve for filtration.

trait (*strāt*) [ME., *strait*, narrow]. 1. Narrow. 2. A narrow or constricted place. **S.-jacket**, a strong coat especially designed to prevent injury of self or others by the delirious or violent patient; camisole. **Ss. of Pelvis.** See *Pelvis.* **S.-waistcoat.** See *S.-jacket.*

tramineous (*stra-min'-e-us*) [*stramen*, straw]. Straw-colored or straw-like.

tramonium (*stra-mo'-ne-um*) [L., *gen.*, *Stramonii*]. Thorn-apple. The seeds and leaves of *Datura S.*, the well-known Jamestown or "jimson" weed. Its properties are due to an alkaloid, daturin, $C_{17}H_{23}NO_3$, identical with atropin (see *Belladonna*). It has the general properties of belladonna, but is more powerful. **S., Ext.** Dose gr. ⅙–½. **S., Fld. Ext.** Dose ♏j–v. **S., Tinct.**, 15 per cent. strong. Dose ♏v–xxx. **S., Ung.**, contains of the extract 10, water 5, benzoinated lard 85 parts. **Daturin**, the alkaloid. Dose gr. $\frac{1}{120}$–$\frac{1}{20}$.

trangalesthesia (*stran-gal-es-the'-ze-ah*). See *Zonesthesia.*

trangalis (*strang'-al-is*) [στραγγαλίς]. A small, hard induration of the breast.

trangers' Cold. See *Saint Kilda Cold.*

trangles (*strang'-lz*) [στραγγάλη, a halter]. An infectious catarrh of the upper air-passages, especially of the nasal cavity, of the horse, ass, and mule, associated with suppuration of the submaxillary and other lymphatic glands.

trangling (*strang'-ling*). See *Strangulation.*

trangulate (*strang'-u-lāt*) [*strangulare*, to strangle]. Irregularly expanded and contracted.

trangulated (*strang'-gu-la-ted*) [*strangulare*, to strangle]. So compressed that the normal function ceases, or is seriously interfered with. **S. Hernia.** See *Hernia.*

trangulatio (*strang-gu-la'-she-o*) [L.]. Strangulation. **S. uterina.** Synonym of *Hysteria.*

trangulation (*strang-gu-la'-shun*) [*strangulatio; strangulare*, to choke]. Choking. Constriction produced by a ligature, stricture, etc. Pressure round the neck, whereby the entrance of air into the lungs is prevented, the constricting force being either a ligature, the hands, or some power other than the weight of the body itself.

trangury (*strang'-gu-re*) [στράγξ, a drop; οὖρον, urine]. Painful urination, drop by drop. It occurs in poisoning by turpentine and by cantharides, and in inflammatory affections of the bladder and prostate.

trap, Strapper (*strap'-er*) [ME., *stropp*, strap]. A flat thong, or flexible band, often of adhesive plaster. Straps of various kinds are much used in surgery.

trapping (*strap'-ing*) [ME., *stroppe*, strap]. The compression of a part (as the mamma, or testis) by means of adhesive straps.

trassburg's Test. A test for biliary acids in the urine: Dip filter-paper into the urine, to which a little cane-sugar has been added; dry the paper and apply a drop of sulphuric acid; a violet color is obtained after a short time if biliary acids are present. See *Tests, Table of.*

trassburger's Cell-plate. The equatorial plate produced in karyokinesis.

tratification (*strat-if-ik-a'-shun*) [*stratum*, a layer; *facere*, to make]. Arrangement in layers; the thickening of a cell-wall by successive layers of formed material.

tratiform (*strat'-if-orm*) [*stratum*, stratum; *forma*, form]. Formed into a layer. **S. Fibro-cartilage.** Fibro-cartilage that lines those bony grooves through which the tendons of muscles pass. See *Fibro-cartilage.*

Stratum (*stra'-tum*) [*stratum*, a spread for a bed, a pavement: *pl.*, *Strata*]. In biology, a layer, lamina, or lamella; a membrane. **S. bowmani**, the anterior elastic layer of the cornea. **S. cinereum**, the second layer of the anterior lobes of the corpora quadrigemina, consisting of gray matter and small cells in a network of nerves. **S. corneum**, the epidermis. **S., Flesh**, the *Parietal Mesoblast.* **S. lucidum**, one of the layers of the skin. **S. malpighii.** See *Rete mucosum.* **S. of Oehl**, a translucent layer of the epidermis consisting of irregular transparent cells with traces of a nucleus. **S. opticum**, a mass of gray matter forming the third layer of the anterior lobes of the corpora quadrigemina. **S. of Remak**, a layer of medullated nerve-fibers beneath the first layer of the cerebral cortex. **S. of Visual Cells**, a layer of cells in the retina.

Straw [ME., *straw*, straw]. The stalk, or stem, of certain species of grain. **S., In the**, in childbed; lying-in; parturient. **S.-berry Mark.** Same as *Nævus maternus.* **S.-berry Tongue**, the characteristic tongue of scarlet fever. The vessels of the fungiform papillæ become turgid, causing the papillæ to stand out as red points, in marked contrast with the thick coating of fur on the filiform papillæ.

Streak (*strēk*) [Dan., *streg*, AS., *strica*, a streak, a line]. In biology, a furrow, line, band, stripe, or color-mark. **S.-culture.** See *Culture.* **S., Germinal.** See *S., Primitive.* **S., Medullary.** See *Medullary Groove.* **S., Primitive**, an opaque band extending some distance forward from the posterior margin of the *area pellucida* and forming the first noticeable sign of incubation in the blastoderm of the amniota. The accumulation of cells lying immediately behind the blastopore and representing the fusion of the lips of the blastoderm. In amphibia this accumulation is known as the *Anus of Rusconi*, *q. v.* In mammals the front end of the primitive streak is marked by the *Knot of Hensen*, *q. v.* **S., Reflex**, a shining, white streak running along the center of the vessels in the retina. It is due to the reflection of the light from the anterior surface of the column of blood.

Streamless (*strēm'-les*) [ME., *streem*, stream]. Lacking in electric activity.

Streblosis (*streb-lo'-sis*). See *Dislocation.*

Street (*strēt*) [ME., *streete*, street]. Any highway (not a turnpike road), and any public bridge (not being a county bridge), and any road, lane, footway, square, court, alley, or passage, whether a thoroughfare or not. (British Public Health Act, 1876.)

Stremma (*strem'-ah*). Synonym of *Sprain.*

Strength [ME., *strengthe*, strength]. Physical power.

Strengthen (*streng'-then*) [ME., *strengthen*, to strengthen]. To make strong.

Strengthening (*streng'-then-ing*) [ME., *strengthen*, to strengthen]. Making stronger. **S. Plaster**, emplastrum roborans. See *Ferrum.*

Strephotome (*stref'-o-tōm*) [στρέφειν, to twist; τέμνειν, to cut]. A cork-screw-like instrument used by Spanton to secure union in the operation for hernia.

Strepitus (*strep'-it-us*) [L., noise]. A sound; a noise. **S. aurium.** See *Tinnitus aurium.* **S. coriaceus**, an auscultatory sound resembling the creaking of leather. **S. uteri.** See *Uterine Souffle.* **S. uterinus**, the *Uterine Bruit*, *q. v.*

Strepsis (*strep'-sis*). See *Torsion.*

Streptobacteria (*strep-to-bak-te'-re-ah*) [στρεπτός, twisted; βακτηρία, a stick, a staff]. In biology, short, rod-shaped bacteria associated in chains.

Streptococcus (*strep-to-kok'-kus*) [*στρεπτός*, twisted; *κόκκος*, a kernel: *pl.*, *Streptococci*]. A genus of coccaceous schizomycetes, of which the cocci are arranged in strings or chaplets. Many of the species are believed to be pathogenic. See *Bacteria*, *Synonymatic Table of*.

Streptostylic (*strep-to-stil'-lik*) [*στρεπτός*, twisted; *στυλός*, a pillar]. Having the quadrate bone freely articulated with the skull, as in ophidian and saurian reptiles.

Streptothrix (*strep-toth'-riks*) [*στρεπτός*, twisted; *θρίξ*, the hair]. In biology, a genus of *Schizomycetes*, the cells uniting into simple or branching threads. See *Cladothrix*, under *Bacteria*, *Synonymatic Table of*.

Stretch [ME., *strecchen*, to stretch]. To draw out to full length. **S.-walk**, a position in walking for physical development, with the arms stretched upward.

Stretcher (*strech'-er*) [ME., *strecchen*, to stretch]. A portable cot or litter for carrying the sick.

Stria (*stri'-ah*) [L. a streak: *pl.*, *Striæ*]. A streak or line. **S., Acoustic, S., Auditory,** transverse white lines, on the lower part of the floor of the fourth ventricle, which unite with the auditory nerve-roots. **S. atrophicæ**, whitish, cicatricial lines of the skin caused by the contractions of skin that have been stretched by fat, pregnancy, etc. **S., Callosal.** See *S. longitudinales et laterales.* **S. Cornea**, a narrow, white streak interpolated between the thalamus and the caudatum, on the ventricular floor. In color it resembles translucent, bluish horn, owing to a vein which passes along and under it. **S. gravidarum**, the atrophic striæ observed upon the abdomen in pregnant women. **S. of Heidenhain.** See *Rods of Heidenhain.* **S. longitudinales et laterales**, appearances of part of the corpus callosum. **S., Pineal**, the habena or habenula. **S. of Retzius**, brown stripes on a tooth, parallel to its edge. They are the indications of enamel-formation. **S. vascularis**, the vascular layer of the cochlea. **Corpora striata.** See *Corpus.*

Striate (*stri'-āt*) [*stria*, a furrow]. Marked with minute ridges or furrows. **S. Body.** See *Corpora striata.* **S.-plicate**, in biology, having minute folds that form striæ. **S.-punctate**, having parallel rows of spots or dots that form striæ. **S.-sulcate**, in biology, striate with little furrows.

Striated (*stri'-a-ted*) [*stria*, a furrow]. Marked with furrows. **S. Hair.** See *Ringed Hair.*

Striation (*stri-a'-shun*) [*stria*, furrow]. An arrangement of lines. A striated structure. **S. of Heidenhain.** See *Rods of Heidenhain.*

Striatum (*stri-a'-tum*) [L.]. Same as *Corpus striatum.*

Striature (*stri'-at-ūr*) [*striare*, to furrow]. 1. Mode of striation. 2. A stria.

Strichcultur (*strich'-kŭl-tūr*) [Ger.]. See *Culture.*

Strictura (*strik-tu'-rah*). See *Stricture.*

Stricture (*strik'-tūr*) [*strictura : stringere*, to compress]. The abnormal narrowing or contraction of the lumen of a canal or duct from external pressure, or as a result of inflammatory or other changes. The most constricted part of the opening through which a hernia protrudes. **S., Annular**, a ring-like obstruction produced by a fold of mucous membrane or constriction all around the urethra, gut, etc. **S., Bridle**, a fold of mucous membrane forming a crescentic obstruction, or perforated in its center; called, also, **S., Linear, S., Pack-thread, S., Valvular** and **S., Hour-glass**, according to the peculiar appearances. **S., Cicatricial**, a stricture due to cicatricial tissue. **S., Congestive**, a temporary obstruction of the urethra from subacute prostatitis or other passing inflammation. **S.-cutter**, an instrument for dividing a stricture. **S.-fever**, the constitutional disturbances sometimes the result of acute stricture. **S., Functional.** See *S., Spasmodic.* **S., Impermeable**, or **S., Impassable**, one not permitting the passage of a bougie or catheter. **S., Irregular**, or **S., Tortuous**, so named from the complications or peculiarities. **S., Irritable**, one in which the passage of the instrument causes great pain. **S., Organic**, narrowing of a canal due to tissue change, to deposits, or to pressure from without. **S. Permeable** or **Passable**, one permitting the passage of an instrument. **S., Recurrent** or **Contractile**, one in which the constriction returns after dilatation. **S. Simple**, one that produces no interruption of function, pain, etc. **S., Spasmodic**, a stricture due to muscular spasm and not to organic change.

Strictureotome (*strik'-tūr-o-tōm*). See *Stricturotome.*

Strictureotomy (*strik-tūr-ot'-o-me*) [*strictura*, stricture; *τέμνειν*, to cut]. See *Stricturotomy.*

Stricturotome (*strik'-tū-ro-tōm*) [*strictura*, stricture; *τέμνειν*, to cut]. A cutting instrument for use in dividing a stricture.

Stricturotomy (*strik-tūr-ot'-o-me*) [*strictura*, stricture; *τέμνειν*, to cut]. A cutting operation for the relief of stricture.

Stridor (*stri'-dor*) [*stridere*, to make a creaking sound]. A peculiar, harsh vibrating sound arising from some obstruction in the throat or larger respiratory tubes. It is most commonly due to compression of the trachea by some extraneous growth, or to spasm or paralysis of the vocal bands. **S. dentium.** See *Odontoprisis.* **S., Inspiratory**, the sound heard in inspiration through a spasmodically closed glottis. **S., Laryngeal**, stridor due to laryngeal stenosis. **S. serratus**, a sound like that of sharpening a saw, sometimes produced by expiration through a tracheotomy tube.

Stridulate (*strid'-u-lāt*) [*stridulus*, creaking]. To make a stridulous noise, as an insect.

Stridulation (*strid-u-la'-shun*) [*stridulare*, to stridulate]. The act or function of making a stridulous sound.

Stridulous (*strid'-u-lus*) [*stridere*, to make a creaking sound]. Making a creaking or grating sound. **S. Laryngismus.** See *Laryngismus.*

Striga (*stri'-gah*) [*striga*, a swath, furrow: *pl.*, *Strigæ*]. In biology: (*a*) a bristle-like scale; (*b*) a streak.

Strigate (*stri'-gāt*). Same as *Strigose.*

Strigil (*strij'-il*) [*strigilis*, a scraper]. A flesh-brush.

Strigilate (*strij'-il-āt*) [*strigilis*, a scraper]. Provided with a strigilis.

Strigilation (*strij-il-a'-shun*) [*strigilatus*]. Friction by means of a brush.

Strigilis (*strij'-il-is*) [*strigilis*, a scraper: *pl.*, *Strigiles*]. In biology, a comb-like organ on the first tarsal joint of the fore leg of the bee, employed to clean the antennæ and to clear from the eye-hairs all pollen grains or foreign bodies; the eye-brush, eye-comb.

Strigilose (*strij'-il-ōz*) [*striga*, a furrow]. In biology, minutely strigose.

Strigmentum (*strig-men'-tum*) [L., a scraping]. The rolls of dirt and epithelium rubbed off the moist skin. **S. capitis.** See *Pityriasis.*

Strigose, Strigous (*stri'-gōz, stri'-gus*) [*striga*, a furrow]. Covered with bristles; armed with sharp and stout hairs.

Striking (*stri'-king*). See *Black Leg.*

String Method. See *Treatment, Methods of.*

Stringhalt (*string'-hawlt*) [a corruption of *Springhalt*]. A popular name for a nervous affection manifested by involuntary, convulsive movements of one or both hind legs of a horse. See *Springhalt.*

Striola (*stri'-o-lah*) [L., a little furrow]. A delicate stria.

riolate, Striolated (*strī'-o-lāt, strī'-o-la-ted*) [*striola*, a little furrow]. Having striolæ.

ripe (*strīp*) [ME., *stripe*, stripe]. A streak; a discolored mark. **Ss. of Retzius,** dark lines extending more or less parallel to the free surface of the tooth, due to inequalities in growth and density of the enamel.

riped Maple (*strīpt*). See *Acer*.

ripping (*strip'-ing*) [ME., *stripen*, to rob]. Uncovering; unsheathing. In the plural, the last and richest milk given at any one milking; so called because it is slowly removed by the milker, who strips the teat between the fingers. **S. of the Pleura,** removal of the lining membrane of the thorax of an animal used for food, to remove the traces of pleurisy and of tuberculosis.

robic (*strob'-ik*) [στρόβος, a top]. Resembling or pertaining to a top. **S. Discs,** discs drawn with concentric circles, so as to produce an illusory impression as if they were revolving.

robila (*strob-ī'-lah*) [στρόβιλος, a pine-cone: *pl.*, *Strobilæ*]. In biology, a form of development occurring in the *Cnidaria* and *Cestoda*, in which the products of asexual generation by a sort of fission remain attached to the proliferating organism or to each other. A name given to a tape-worm as a whole. **S., Monodisc,** the simplest form of strobilation, in which the disc (*Scyphistoma*) separates from its peduncle. **S., Polydisc,** that form in which successively formed discs remain attached.

robilation (*strob-il-a'-shun*) [στρόβιλος, a pine-cone]. In biology, the formation of zoöids, discs or joints by metameric division, gemmation, or fission.

robile (*strob'-il*) [στρόβιλος, a pine-cone]. (*a*) A multiple fruit in which the seeds are enclosed by prominent scales, as a pine-cone; (*b*) a *strobila*.

robiliferous (*strob-il-if'-er-us*) [*strobilus*, a pine-cone; *ferre*, to bear]. In biology, producing *Strobilæ*.

robiliform (*stro-bil'-if-orm*) [*strobilus*, a pine-cone; *forma*, form]. Having the form of a strobile.

robilization (*strob-il-iz-a'-shun*). Same as *Strobilation*.

robiloid (*stro'-bil-oid*) [στρόβιλος, a pine-cone; εἶδος, like]. Like a strobile.

robilophagous (*stro-bil-off'-ag-us*) [στρόβιλος, pine-cone; φαγεῖν, to eat]. Living on pine-cones, as a bird.

roboscope (*stro'-bo-skōp*). See *Zoescope*.

roboscopic (*stro-bo-skop'-ik*) [στρόβος, a twisting; σκοπεῖν, to view]. 1. Pertaining to the stroboscope. 2. A term applied to a plate used in the study of the contractions of striated muscular fiber.

roke (*strōk*) [ME., *strook*, a stroke; *stroken*, to stroke]. 1. In pathology, a sudden and severe seizure or fit of disease. 2. A popular term for apoplexy. 3. To pass the hands gently over the body. **S., Apoplectic.** See *Apoplexy*. **S., Back, of the Heart,** the supposed "reaction-impulse," or recoil of the ventricles at the moment the blood is discharged into the aorta. **S., Heat.** See *Hyperpyrexia*. **S., Paralytic,** sudden loss of muscular power from lesion of the brain or spinal cord.

roma (*stro'-mah*) [στρῶμα, a bed: *pl.*, *Stromata*]. 1. The tissue forming the substratum or framework upon which the essential structures of an organ rest. 2. In biology, a body composed of compactly arranged hyphæ, on which sporocarps are borne. **S.-fibrin,** Landois' term for fibrin formed directly from stroma, as distinguished from *plasma-fibrin* or that formed in the usual way. **S.-plexus,** a plexus of axis-cylinders formed by the corneal nerves.

romatic (*stro-mat'-ik*) [στρῶμα, a coverlet]. Resembling a stroma.

Stromatiform (*stro-mat'-if-orm*) [στρῶμα, stroma; *forma*, form]. Having the form of a stroma.

Stromatous (*stro'-mat-us*) [στρῶμα, stroma]. Pertaining to a stroma.

Strombuliform (*strom'-bu-lif-orm*) [*strombulus*, a little top; *forma*, form]. In biology, twisted into a spiral form.

Stromuhr (*strōm'-ūr*) [Ger.]. See *Rheometer*.

Strongle (*strong'-gl*) [στρογγύλος, globose]. A worm of the genus *Strongylus*.

Strongyl (*stron'-jil*). See *Strongle*.

Strongylus (*stron'-jil-us*) [στρογγύλος, globose: *pl.*, *Strongyli*]. A genus of nematode entozoa. See *Parasites* (*Animal*), *Table of*.

Strontian Yellow. See *Pigments, Conspectus of*.

Strontium (*stron'-she-um*) [after *Strontian*, in Scotland]. A metal somewhat resembling barium in its chemic relations. Symbol, Sr.; at. wt., 87.37; sp. gr., 2.54. See *Elements, Table of*. **S. Bromid,** a sedative remedy reported to be free from many of the objectionable qualities of potassium bromid. **S. Iodid, S. Lactate,** used as a diuretic and as a teniacide.

Strophanthein (*strof-an'-the-in*) [στρόφος, a cord; ἄνθος, flower]. An insoluble substance produced by the decomposition of strophanthin by acids.

Strophanthin (*strof-an'-thin*) [στρόφος, a cord; ἄνθος, flower], $C_{20}H_{34}O_{10}$. A toxic alkaloid, soluble in water and alcohol, derived from strophanthus.

Strophanthus (*strof-an'-thus*) [στόφος, twisted; ἄνθος, flower]. 1. A genus of apocynaceous trees and shrubs, or climbers, of Africa and Asia, often with poisonous seeds. Some 20 species are described. 2. The seeds of a tropical plant, *S. hispidus*, or *Kombé*, yielding an arrow-poison. Its properties are due to strophanthin, $C_{20}H_{34}O_{10}$, a glucosid, and inein, an alkaloid. In medical properties it closely resembles digitalis, producing loss of reflex sensibility and voluntary motion, but not to the same degree causing contraction of the arteries. Dose of the tincture gtt. v–x, of strophanthin, dose gr. $\frac{1}{120}$–$\frac{1}{60}$, hypodermatically. Unof.

Strophium (*strof'-e-um*) [στρόφος, a cord]. A bandage.

Strophocephalus (*strof-o-sef'-al-us*) [στρόφος, twisted; κεφαλή, head]. A monster having displacement of the parts forming the head and face.

Strophocephaly (*strof-o-sef'-al-e*) [στρόφος, twisted; κεφαλή, head]. Distortion of the head; the condition of having a distorted head.

Strophos (*strof'-os*) [στρόφος, a cord]. Synonym of *Volvulus*.

Strophulus (*strof'-u-lus*) [στρόφος, a twisted band]. *Red Gum;* a form of miliaria occurring in infants. It generally results from too much wrapping up. **S. albidus.** See *Milium*. **S. confertus.** See *S. intertinctus*. **S. intertinctus,** *S. confertus*, a papular dermatitis of more or less acute form, a variety of eczema common in infants. **S. pruriginosus,** an eruption, occurring in the young, of erythematous disseminated papules, accompanied by great itching. **S. volaticus,** an acute skin-disease, a typical erythema papulatum, characterized by slight maculæ.

Structural (*struk'-tu-ral*) [*structura*, structure]. Pertaining to or involving tissue or structure. In biology, relating to the form, arrangement, and development of parts of organisms.

Structure (*struk'-tūr*) [*structura; struere*, to build]. In biology, the manner or method of the building up, arrangement, and formation of the different tissues and organs of the body or of a complete organism. Also, an organ, a part, or a complete organic body.

Structureless (*struk'-tūr-les*) [*structure*, structure]. Having no histologic differentiation; amorphous or homogeneous; having no distinctions of internal organization and no distinct parts.

Struma (*stru'-mah*) [*struma*, a scrofulous tumor]. Scrofula. Also, a scrofulous swelling or tumor; a goiter. Also, *Bronchocele*. **S. lipomatodes aberratæ renis,** small, fatty tumors found beneath the renal capsule. **S. maligna,** carcinoma of the thyroid gland. **S. pulsans, S. vasculosa,** pulsating goiter.

Strumatic, Strumatous (*stru-mat'-ik, stru'-mat-us*) [*struma*, struma]. Strumous; scrofulous.

Strumectomy (*stru-mek'-to-me*) [*struma*, struma; ἐκτομή, excision]. Excision of an enlarged or strumous gland, or of a goiter.

Strumiferous (*stru-mif'-er-us*) [*struma*, struma; *ferre*, to bear]. Strumose.

Strumiform (*stru'-mif-orm*) [*struma*, struma; *forma*, form]. Having the appearance of struma.

Strumipriva, Cachexia (*stru-mip-re'-vah*). See *Cachexia*.

Strumitis (*stru-mi'-tis*) [*struma*, struma; ιτις, inflammation]. Inflammation of the thyroid gland.

Strumoderma (*stru-mo-der'-mah*). See *Scrofuloderma*.

Strumose (*stru'-mōz*) [*struma*, struma]. Swollen on one side; possessing a wen-like protuberance.

Strumosis (*stru-mo'-sis*). See *Strumositas*.

Strumositas (*stru-mos'-it-as*) [*struma*, struma]. The tendency toward, or diathesis of, goiter or of scrofula.

Strumous (*stru'-mus*) [*strumosus*]. Scrofulous. Having the nature of scrofula. **S. Inguinal Lymphadenitis, S. Bubo,** hyperplastic lymphadenitis of the inguinal glands.

Strümpell's Disease. Acute primary hemorrhagic encephalitis. See *Diseases, Table of.*

Strumulose (*stru'-mu-lōz*) [*struma*, struma]. Furnished with a small struma.

Struthin (*stru'-thin*). See *Saponin*.

Struve's Lotion. A lotion recommended as a counter-irritant in whooping-cough, and composed of tartar emetic ʒj, tr. cantharides ℥j, water ℥ij. **S.'s Method,** a method of preparing hemin crystals. Add to a dilute solution of hemoglobin, ammonia, tannic acid, and afterward glacial acetic acid until it is acid; a black precipitate of tannate of hematin is thrown down. This is isolated, washed, dried on a glass slide, two or three drops of glacial acetic acid and a granule of ammonium chlorid added; gentle heat is applied, and, on cooling, the crystals appear.

Strychnin, Strychnina (*strik'-nin, strik-ni'-nah*) [στρύχνος, strychnin], $C_{21}H_{22}N_2O_2$. A poisonous alkaloid in the fruit of *Strychnos nux vomica* and found in St. Ignatius' bean. It crystallizes in four-sided prisms, melting at 284° C., and possessing an extremely bitter taste. See *Nux vomica*.

Strychninism (*strik'-nin-izm*) [στρύχνος, strychnin]. The condition of one under the influence of strychnin or nux vomica, or affected by either.

Strychninization (*strik-nin-iz-a'-shun*) [στρύχνος, strychnin]. The condition produced by large doses of strychnin or nux vomica.

Strychninomania (*strik-nin-o-ma'-ne-ah*) [στρύχνος, night-shade; μανία, madness]. Delirium from the use of strychnin or nux vomica.

Strychnos (*strik'-nos*). See *Nux vomica*.

Stubb (*stub*). See *Phenanthrene*.

Stuffed Meat. Any veal or lamb upon which or to which masses of fat from other animals have been affixed for the purpose of giving lean flesh the appearance of being in good condition.

Stultitia (*stul-tish'-e-ah*) [*stultus*, a fool]. Foolishness; dulness of intellect.

Stump [ME., *stumpe*, stump]. The extremity, pedicle, or basis of the part left after surgical amputation, excision, or ablation. **S. of Eyeball,** the remainder of the globe after excision of an anterior staphyloma or after other capital operation on the globe that deprives it of vision. **S.-foot.** Synonym of *Club-foot*. **S., Sugar-loaf,** a conic stump due to undue retraction of the muscles; called, also, **S., Conical. S. of Tooth,** that part remaining after removal or destruction of the corona.

Stun [AS., *stunian*, to make a din]. To confuse and render one temporarily insensible or unconscious, as by a blow.

Stunt [ME., *stunt*, dull]. A stunted or undeveloped state. See *Cram-stunt*.

Stunted (*stun'-ted*) [ME., *stunt*, dull]. Undeveloped by reason of underfeeding, overwork, or other un toward condition.

Stupe (*stūp*) [*stupa*: *gen.* and *pl.*, *Stupæ*; στύππη, tow]. A fomentation. Also, the cloth used.

Stupefacient, Stupefactive (*stu-pe-fa'-shent, stu-pe-fak'-tiv*) [*stupere*, to be stunned; *facere*, to make]. 1. Narcotic, or deadening the senses. 2. A narcotic agent.

Stupefaction (*stu-pe-fak'-shun*) [*stupere*, to be stunned]. Stupor, and the process of reaching it.

Stupemania (*stu-pe-ma'-ne-ah*) [*stupor*, stupor; μανία, mania]. Mental stupor with insanity.

Stupeous (*stu'-pe-us*) [*stupa*, tow]. In biology, applied to the palpi of some insects which are covered with loose scales like tow.

Stupiditas (*stu-pid'-it-as*). Synonym of *Idiocy*.

Stupor (*stu'-por*) [L.]. The condition of being be partly conscious or sensible. Also, a condition of in sensibility. **S., Anergic,** acute dementia. **S., Delusional,** melancholic dulness of mind, with delusions it is sometimes a kind of auto-hypnotism. **S., Epileptic, S., Post-convulsive,** the stupor following a epileptic convulsion. **S. formicans,** formication **S., Lethargic.** See *Trance*. **S. melancholicus** the stupor found in association with melancholia. **S. miliaris,** paresthesia of the fingers and toes in connection with miliary fever. **S. vigilans,** catalepsy.

Stuporous (*stu'-por-us*) [*stupor*, stupor]. In a condition of or attended with stupor. **S. Insanity.** See *Insanity, Confusional*.

Stupose (*stu'-pōz*) [*stupa*, tow]. Like tow; covered with mats of long hairs, resembling tow.

Stupration, Stuprum (*stu-pra'-shun, stu'-prum*) [*stuprum*, defilement]. Rape.

Stupulose (*stu'-pu-lōz*) [*stupa*, tow]. In biology, covered with short, fine hairs.

Sturdy (*stur'-de*) [ME., *sturdy*, sturdy]. 1. Vigorous hardy. 2. See *Gid* and *Staggers*.

Stutter (*stut'-er*) [Ger., *stottern*, to stutter]. To hesitate or make repeated efforts to articulate a syllabl Stuttering is a variety of stammering. See *Stammering*. **S.-spasm.** See *Lalophobia*.

Stycerin (*stis'-er-in*), $C_9H_{12}O_3$. *Phenyl glycerol*; a substance obtained from the bromid of cinnamic alcoh by long boiling with water. It is a gummy mas easily soluble in water and alcohol.

Stye (*sti*). See *Hordeolum*.

Stylamblys (*sti-lam'-blis*) [στῦλος, a pillar; ἀμβλύς, blunt]. In biology, a small process attached to t inner branch of the pleopod of a crustacean. (Bate

Stylar (*sti'-lar*) [στῦλος, pillar]. Pertaining to or r sembling a style.

Stylate (*sti'-lāt*) [*stilus*, a stake]. Having a persiste style.

Style (*stil*) [στῦλος, pillar]. In biology, that portion of the pistil which connects the ovary with the stigma. **S.-branch**, in biology, a division of the style. **S., Lacrymal.** See *Lacrymal.*

Stylet (*sti-let'*) [*stilus*, stake]. A probe; a probe or wire inserted into a catheter or trocar, in order to stiffen the instrument or to perforate the tissues. See *Stilet.*

Styletiform (*sti-let'-if-orm*) [*stilus*, stake; *forma*, form]. Shaped like a stylet.

Styliferous (*sti-lif'-er-us*) [*stilus*, stake; *ferre*, to bear]. In biology, bearing a style.

Styliform (*sti'-lif-orm*) [*stilus*, stake; *forma*, form]. Shaped like a style.

Styline (*sti'-lin*) [*stilus*, stake]. Pertaining or relating to a style.

Styliscus (*sti-lis'-kus*) [στυλίσκος, dim. of στῦλος, a pillar: *pl.*, *Stylisci*]. 1. A slender cylindric tent. 2. In biology, the passage leading from the stigma to the ovary through the style.

Stylo- (*sti'-lo-*) [στύλος, pillar]. A prefix used to denote connection with or relation to the styloid process of the temporal bone.

Stylocerite (*sti-los'-er-īt*) [στύλος, a pillar; κέρας, a horn]. In biology, a style or large spine on the outer margin of the first joint of the first pair of antennæ of crustaceans (Bate).

Stylo-glossal (*sti-lo-glos'-al*) [στῦλος, pillar; γλῶσσα, tongue]. Connected with or relating to the styloid process of the temporal bone and the tongue.

Styloglossus (*sti-lo-glos'-us*). See *Muscles, Table of.*

Stylogonidium (*sti-lo-go-nid'-e-um*) [στῦλος, a pillar; γονή, generation]. In biology, a gonidium formed by abstriction on the ends of special branches of the thallus in certain fungi.

Stylohyal (*sti-lo-hi'-al*) [*stilus*, stile; *hyoid*]. One of the bones of the hyoid arch of vertebrates.

Stylohyoid (*sti-lo-hi'-oid*). See *Muscles, Table of*, and *Nerves, Table of.*

Styloid (*sti'-loid*) [στῦλος, pillar]. Resembling a stylus or slender, cylindric column.

Stylo-mastoid (*sti-lo-mas'-toid*) [στῦλος, pillar; *mastoid*]. Pertaining conjointly to the styloid and mastoid processes. **S.-m. Foramen**, a foramen on the inferior surface of the petrous portion of the temporal bone. It transmits the facial nerve. See *Foramina, Table of.*

Stylo-maxillary (*sti-lo-maks'-il-a-re*) [στῦλος, pillar; *maxilla*, maxilla]. Pertaining to the styloid process and the maxilla.

Stylo-pharyngeus (*sti-lo-far-in-je'-us*). See *Muscles, Table of.*

Stylopod (*sti'-lo-pod*) [στῦλος, a pillar; πούς, foot]. Same as *Stylopodium.*

Stylopodium (*sti-lo-po'-de-um*) [στῦλος, pillar; πούς, foot: *pl.*, *Stylopodia*]. In biology, a disc-like enlargement occurring at the base of the style in some flowers, *e. g.*, *Umbelliferæ.*

Stylosanthes (*sti-lo-san'-thēz*) [στῦλος, pillar; ἄνθος, flower]. A genus of leguminous plants including the *Pencil Flower*; the herb *S. elatior*, which is of repute in relieving the irritability of the uterus during gestation. Dose of the fld. ext. ♏x–xx.

Stylospore (*sti'-lo-spōr*) [στῦλος, a pillar; σπορά, seed]. Same as *Pycnospore.*

Stylosporous (*sti-los'-po-rus*) [στῦλος, a pillar; σπορά, seed]. Of the nature of a stylospore.

Stylo-staphylin (*sti-lo-staf'-il-in*) [στῦλος, pillar; σταφυλή, a bunch of grapes]. Connected with or relating to the styloid process of the temporal bone and the velum palati.

Stylostegium (*sti-lo-ste'-je-um*) [στῦλος, a pillar; στέγος, cover: *pl.*, *Stylostegia*]. In biology, the corona covering the style peculiar to asclepiads.

Stylostemon (*sti-lo-ste'-mon*) [στῦλος, pillar; στήμων, stamen]. An epigynous stamen.

Stylosteophyte (*sti-los'-te-o-fīt*) [στῦλος, pillar; φυτόν, plant]. A style-shaped exostosis.

Stylostixis (*sti-lo-stiks'-is*). See *Acupuncture.*

Stylus (*sti'-lus*) [*stilus*, a pen]. A pointed instrument formerly used for writing on wax tablets. An instrument for writing on manifolding paper. In surgery, a sound.

Styma (*sti'-mah*). See *Priapism.*

Stymatosis (*sti-mat-o'-sis*) [στῦμα, stiffness]. A violent erection of the penis attended with hemorrhage.

Stypage (*ste-pahzh'*) [Fr.]. The production of local anesthesia by an application made with a stype.

Stype (*stēp*, or *sti'-pe*) [Fr.; στύπη, tow]. A tampon or pledget, especially such as is used in producing local anesthesia.

Stypsis (*stip'-sis*) [στυπτικός, astringent]. 1. Constipation. 2. The use of a styptic.

Styptic (*stip'-tik*) [στυπτικός, astringent]. 1. Having the property of checking hemorrhage. 2. A medicine or agent that causes vascular contraction of the blood-vessels. A hemostatic.

Stypticity (*stip-tis'-it-e*) [στυπτικός, astringent]. The quality of being styptic.

Styracin (*stir'-as-in*) [στύραξ, storax], $C_{18}H_{16}O_2$. The cinnamic ester of cinnamyl-alcohol. A substance present in storax. It crystallizes from hot alcohol in fine needles, melting at 44° C., and is odorless and tasteless.

Styracol (*stir'-ak-ol*) (στύραξ, storax], $C_5H_5.CH:CH.COOC_6H_4OCH_3$. The cinnamate of guaiacol, introduced as a tasteless substitute for guaiacol in gastro-intestinal and genito-urinary catarrh. Dose gr. v. Unof.

Styrax (*stī'-raks*) [στύραξ, storax]. Storax. A balsam obtained from the inner bark of *Liquidambar orientalis*, or oriental sweet gum. It contains a volatile oil, styrol, several resins and cinnamic acid. It is stimulant, expectorant and antiseptic, acting like benzoin and tolu, and is used in bronchial affections and catarrh of the urinary passages. Externally it is an antiseptic and parasiticide. It is a constituent of Friar's balsam. Dose gr. v–xx.

Styrene (*stī'-rēn*) [στύραξ, storax], $C_8H_{10}O$. *Styryl-alcohol, Cinnamyl-alcohol;* a substance obtained by saponifying styracin, its cinnamic ester, with potassium hydroxid. It crystallizes in shining needles, is sparingly soluble in water, possesses a hyacinth-like odor, melts at 33° C., and distils at 250° C.

Styrogallol (*sti-ro-gal'-ol*). See *Pigments, Conspectus of.*

Styrol (*stī'-rōl*) [στύραξ, storax], C_8H_8. *Cinnamene, Phenylethylene.* A colorless, strongly refractive liquid hydrocarbon, with an odor like that of benzine, and obtained by heating styracin with calcium hydrate. It boils at 144–145° C.; sp. gr. at 0° C. is 0.925.

Styrolene (*stī'-ro-lēn*). Same as *Styrol, q. v.*

Styrone (*stī'-rōn*) [στύραξ, storax]. A compound of balsam of Peru and styrax. It occurs usually in the form of a brown, syrupy liquid, of a pleasantly aromatic odor, and a pungent, biting, persistent taste; it also crystallizes. It is antiseptic, deodorant, analgesic, and makes a pleasant deodorizer, in solution, used as a spray, likewise an agreeable mouth-wash, to neutralize tobacco and other odors, and is used as an antiseptic in dental practice. In from 1 to 5 per cent. solutions it furnishes a strong antiseptic for surgical use, dissolved in olive-oil, or mixed with ointment-bases; it has also been recommended in the treatment

of otorrhea. **S. Method,** a method of bleaching microscopic preparations of parasitic fungi by the use of styrone.

Styryl-alcohol (*sti'-ril-al'-ko-hol*). See *Styrene.*

Sub- [*sub*, under]. A Latin preposition. Used as a prefix it denotes *under, beneath, ventrad, lower,* or *moderate in degree.*

Subabdominal (*sub-ab-dom'-in-al*) [*sub*, under; *abdomen*, abdomen]. Beneath the abdomen.

Subacetas (*sub-as'-et-as*). See *Subacetate.*

Subacetate (*sub-as'-et-āt*) [*sub*, under; *acetum*, vinegar]. A basic acetate.

Subacid (*sub-as'-id*) [*sub*, under; *acidum*, acid]. Moderately acid or sour.

Subacrid (*sub-ak'-rid*) [*sub*, under; *acer*, sharp]. Moderately acrid.

Subacromial (*sub-ak-ro'-me-al*) [*sub*, under; *acromial*]. Lying below the acromion.

Subacuminate (*sub-ak-u'-min-āt*) [*sub*, under; *acuminate*]. Moderately acuminate.

Subacute (*sub'-ak-ūt*) [*sub*, under; *acutus*, sharp]. Moderately acute or severe. Also, the stage of a disease when it is intermediate between an acute and a chronic form.

Subanal (*sub-a'-nal*) [*sub*, under; *anus*, anus]. Situated below the anus.

Subanconeal (*sub-an-ko-ne'-al*) [*sub*, under; *anconeus*]. Beneath the anconeus muscle.

Subanconeus (*sub-an-ko-ne'-us*). See *Muscles, Table of.*

Subapical (*sub-a'-pik-al*) [*sub*, under; *apex*, apex]. Beneath the apex.

Subaponeurotic (*sub-ap-on-u-rot'-ik*) [*sub*, under; *aponeurosis*]. Situated, or occurring beneath an aponeurosis.

Subaqueous (*sub-a'-kwe-us*) [*sub*, under; *aqua*, water]. Living beneath the water.

Subarachnoid (*sub-ar-ak'-noid*) [*sub*, under; *arachnoid*]. That lying directly beneath the arachnoid membrane, as the subarachnoid space, subarachnoid fluid, etc. See *Space.*

Subarcuate (*sub-ar'-ku-āt*) [*sub*, under; *arcus*, an arc]. Slightly arcuate.

Subareolar (*sub-ar-e'-o-lar*) [*sub*, under; *areola*, areola]. Situated, or occurring beneath the mammary areola.

Subastragalar (*sub-as-trag'-al-ar*) [*sub*, under; *astragalus*]. Under the astragalus. **S. Amputation,** a partial removal of the foot, in which only the astragalus is left.

Subastragaloid (*sub-as-trag'-al-oid*) [*sub*, under; *astragalus*, astragalus]. Occupying a position beneath the astragalus.

Subastringent (*sub-as-trin'-jent*) [*sub*, under; *astringens*, astringent]. Only slightly astringent.

Subaural (*sub-aw'-ral*) [*sub*, under; *aura*, ear]. Beneath the ear.

Subaxial (*sub-aks'-e-al*) [*sub*, under; *axis*, axis]. Lying below the axis.

Subaxillary (*sub-aks'-il-a-re*) [*sub*, under; *axilla*, axilla]. Situated below the axilla.

Subbasal (*sub-ba'-zal*) [*sub*, under; *βάσις*, base]. Situated near the base.

Subbrachial, Subbrachiate (*sub-bra'-ke-al, sub-bra'-ke-āt*) [*sub*, under; *βράχιον*, arm]. Under the pectoral muscles.

Subcalcareous (*sub-kal-ka'-re-us*) [*sub*, under; *calx*, lime]. Somewhat calcareous.

Subcalcarine (*sub-kal'-kar-in*) [*sub*, under; *calcar*, the calcaneum]. Situated ventrad of the calcarine fissure of the brain.

Subcapsular (*sub-kap'-su-lar*) [*sub*, under; *capsula*, capsule]. Beneath the capsule.

Subcarbonas (*sub-kar'-bon-as*) [*sub*, under; *carbo*, charcoal]. See *Subcarbonate.*

Subcarbonate (*sub-kar'-bon-āt*) [*sub*, under; *carbo*, charcoal]. A neutral or basic carbonate.

Subcartilaginous (*sub-kar-til-aj'-in-us*) [*sub*, under; *cartilago*, cartilage]. 1. Situated beneath cartilage. 2. Partly cartilaginous.

Subcaudal (*sub-kaw'-dal*) [*sub*, under; *cauda*, tail]. Situated under the tail.

Subcaudate (*sub-kaw'-dāt*). Same as *Subcaudal.*

Subcecal (*sub-se'-kal*) [*sub*, under; *cæcum*, cecum]. Lying below the cecum.

Subcentral (*sub-sen'-tral*) [*sub*, under; *κέντρον*, center]. 1. Situated near the center. 2. Ventrad of the central fissure of the brain.

Subcerebellar (*sub-ser-e-bel'-ar*) [*sub*, under; *cerebellum*, cerebellum]. Situated beneath the cerebellum.

Subcerebral (*sub-ser'-e-bral*) [*sub*, under; *cerebrum*, cerebrum]. Situated beneath the cerebrum.

Subchondral (*sub-kon'-dral*) [*sub*, under; *χόνδρος*, cartilage]. Lying beneath cartilage.

Subchordal (*sub-kor'-dal*) [*sub*, under; *chorda*, cord]. Beneath the notochord.

Subchorionic (*sub-ko-re-on'-ik*) [*sub*, under; *χόριον*, chorion]. Lying beneath the chorion.

Subchoroidal (*sub-ko-roid'-al*) [*sub*, under; *χόριον*, chorion; *εἶδος*, like]. Situated or occurring under the choroid.

Subchronic (*sub-kron'-ik*) [*sub*, under; *χρόνος*, time]. More nearly chronic than is indicated by the term *subacute.*

Subclavian (*sub-kla'-ve-an*) [*sub*, under; *clavis*, collar-bone]. Situated under the collar-bone. **S. Artery.** See *Arteries, Table of.* **S. Groove.** See *Groove.* **S. Triangle.** See *Triangles, Table of.*

Subclavicular (*sub-kla-vik'-u-lar*) [*sub*, under; *clavis*, collar-bone]. Pertaining to the subclavicular bone or the first rib.

Subclavius (*sub-kla'-ve-us*). See *Muscles, Table of.*

Subcollateral (*sub-kol-at'-er-al*) [*sub*, under; *con* together; *lateralis*, lateral]. Ventrad of the collateral fissure of the brain.

Subconchoidal (*sub-kong-koi'-dal*) [*sub*, under; *κόγχη* shell; *εἶδος*, like]. Imperfectly conchoidal.

Subconical (*sub-kon'-ik-al*) [*sub*, under; *κωνικός*, conical]. Conoidal.

Subconjunctival (*sub-kon-jungk-ti'-val*) [*sub*, under *conjunctivus*, uniting]. Situated beneath the conjunctiva.

Subconsciousness (*sub-kon'-shus-nes*) [*sub*, under *conscius*, knowing]. Imperfect consciousness; the state in which mental processes take place without the mind being distinctly conscious of its own activity.

Subcoracoid (*sub-kor'-ak-oid*) [*sub*, under; *κόραξ*, crow; *εἶδος*, like]. Situated below the coracoid process.

Subcordate (*sub-kor'-dāt*) [*sub*, under; *cor*, heart]. Having nearly the shape of a heart.

Subcordiform (*sub-kor'-dif-orm*) [*sub*, under; *cor* heart]. See *Subcordate.*

Subcorneous (*sub-kor'-ne-us*) [*sub*, under; *corneus* horny]. Somewhat horny.

Subcortical (*sub-kor'-tik-al*) [*sub*, under; *cortex*, cortex]. Beneath the cortex.

Subcosta (*sub-kos'-tah*) [*sub*, under; *costa*, rib]. The subcostal vein of the wing of some insects.

Subcostal (*sub-kos'-tal*) [*sub*, under; *costa*, rib]. Lying beneath a rib or the ribs.

Subcranial (*sub-kra'-ne-al*) [*sub*, under; *κρανίον* cranium]. Situated below the skull.

Subcrepitant (*sub-krep'-it-ant*) [*sub*, under; *crepitare* to make a crackling noise]. Applied to a sibilant ra

tle, or to râles produced by the bubbling of air through a slightly viscous liquid, as the mucus of the bronchi.

ıbcrureus (*sub-kru-re'-us*). See *Muscles, Table of.*

ıbculture (*sub-kul'-tūr*) [*sub*, under; *cultura*, culture]. In bacteriology, a part of a culture set aside for special treatment or observation.

ıbcuneus (*sub-ku-ne'-us*) [*sub*, under; *cuneus*, a wedge]. An area of the occipital lobe ventrad of the cuneus, and caudad of the collateral fissure.

ıbcutaneous (*sub-ku-ta'-ne-us*) [*sub*, under; *cutis*, the skin]. Under the skin. Hypodermatic.

ıbcuticular (*sub-ku-tik'-u-lar*). See *Subepidermal.*

ıbcutis (*sub-ku'-tis*) [*sub*, under; *cutis*, skin]. The deeper portion or layer of the true skin.

ıbdelirium (*sub-de-lir'-e-um*) [*sub*, under; *delirium*, delirium]. A muttering delirium, with lethargic features.

ıbdental (*sub-den'-tal*) [*sub*, under; *dens*, a tooth]. Situated beneath the teeth.

ıbdermal (*sub-der'-mal*). See *Subcutaneous.*

ıbdiaphragmatic (*sub-di-af-rag-mat'-ik*) [*sub*, under; διάφραγμα, diaphragm]. Under the diaphragm.

ıbdivided (*sub'-div-i-ded*) [*sub*, under; *dividere*, to divide]. Re-divided; making secondary or smaller divisions.

ıbdolichocephalic (*sub-dol-ik-o-sef-al'-ik*) [*sub*, under; δολιχός, long; κεφαλή, head]. Somewhat dolichocephalic; having the cephalic index above 75° and below 77°.

ıbdorsal (*sub-dor'-sal*) [*sub*, under; *dorsum*, back]. In biology, situated on the side of the dorsal surface of the body.

ıbdural (*sub-du'-ral*) [*sub*, under; *dura*, dura]. Beneath the dura. **S. Space**, the space between the dura and the arachnoid.

ıbectodermal (*sub-ek-to-der'-mal*) [*sub*, under; ἐκτος, outside; δέρμα, skin]. Beneath the ectoderm.

ıbectopic (*sub-ek-top'-ik*) [*sub*, under; ἐκτοπος, displaced]. Almost ectopic; applied to gestation in which the ovum is implanted in the lower zone of the inner surface of the uterus.

ıbencephalon (*sub-en-sef'-al-on*) [*sub*, under; ἐγκέφαλον, brain]. The oblongata, pons and corpora quadrigemina taken together.

ıbendocardial (*sub-en-do-kar'-de-al*) [*sub*, under; ἔνδον, within; καρδία, heart]. Beneath the endocardium.

ıbendothelial (*sub-en-do-the'-le-al*) [*sub*, under; ἔνδον, within; θηλή, nipple]. Situated or occurring under an endothelial structure.

ıbepidermal, Subepidermatic, Subepidermic (*sub-ep-id-er'-mal, sub-ep-id-er-mat'-ik, sub-ep-id'-er-mik*) [*sub*, under; ἐπί, upon; δέρμα, skin]. Situated beneath the epidermis.

ıbepithelial (*sub-ep-ith-e'-le-al*) [*sub*, under; ἐπί, upon; θηλή, nipple]. Situated, or occurring, under an epithelial surface.

ıber (*su'-ber*) [L., gen. *Suberis*]. Cork.

ıbereous (*su-be'-re-us*) [*suber*, cork]. In biology, corky.

ıberic Acid (*su-ber'-ik*). See *Acid.*

ıberiferous (*su-ber-if'-er-us*) [*suber*, cork; *ferre*, to bear]. Bearing suberin.

ıberification (*su-ber-if-ik-a'-shun*) [*suber*, cork; *facere*, to make]. Same as *Suberization.*

ıberin (*su'-ber-in*) [*suber*, cork]. 1. Pulverized cork; used as a dressing for wounds. 2. In biology, the impure cellulose forming the cellular tissue of cork. Its reactions are essentially those of cutin. It forms yellowish drops with potassa.

ıberization (*su-ber-iz-a'-shun*) [*suber*, cork]. In biology, the change of a plant-tissue into suberin or cork.

Suberone (*su'-ber-ōn*) [*suber*, cork], $C_7H_{12}O$. A liquid obtained from cork by boiling it at 180° C. Its odor resembles that of peppermint.

Suberose (*sub'-er-ōs*) [*sub*, under; *erodere*, to gnaw, to consume]. In biology, slightly gnawed on the margin.

Subesophageal (*sub-e-so-faj'-e-al*) [*sub*, under; οἰσόφαγος, esophagus]. Beneath the esophagus.

Subfalcial (*sub-fal'-se-al*) [*sub*, under; *falx*, falx]. At the free edge of the falx cerebri.

Subfascial (*sub-fash'-e-al*) [*sub*, under; *fascia*, fascia]. Beneath the fascia.

Subfebrile (*sub-feb'-ril*) [*sub*, under; *febris*, fever]. Slightly febrile.

Subfemoralis (*sub-fem-o-ra'-lis*). Same as *Subcrureus.*

Subfissure (*sub-fish'-ūr*) [*sub*, under; *fissura*, fissure]. A fissure of the brain which is concealed by a supergyre, and invisible until the lips of the superfissure are divaricated.

Subflavous (*sub-fla'-vus*) [*sub*, under; *flavus*, yellow]. Somewhat yellow. **S. Ligament**, the ligament of yellowish, elastic material, found between the laminæ of adjacent vertebræ.

Subfoliar (*sub-fo'-le-ar*) [*sub*, under; *folium*, leaf]. Having the character of a subfolium.

Subfolium (*sub-fo'-le-um*) [*sub*, under; *folium*, leaf]. A leaflet going to make up a part of any folium of the cerebellum.

Subfornical (*sub-for'-nik-al*) [*sub*, under; *fornix*, fornix]. Beneath the fornix of the brain.

Subfrontal (*sub-frun'-tal*) [*sub*, under; *frons*, forehead]. Applied to a fissure and gyre (Broca's) in the ventral region of the frontal lobe of the brain.

Subgelatinous (*sub-jel-at'-in-us*) [*sub*, under; *gelatina*, gelatin]. Partly gelatinous.

Subgenital (*sub-jen'-it-al*) [*sub*, under; *genitalis*, genital]. Situated under the genital organs. **S. Vestibule** (*porticus subgenitalis*). See *Syndemnium.*

Subgerminal (*sub-jer'-min-al*) [*sub*, under; *germen*, a germ]. Situated beneath a germinal structure.

Subglabrous (*sub-gla'-brus*) [*sub*, under; *glaber*, smooth]. In biology, almost devoid of hairs or other like covering.

Subglenoid (*sub-gle'-noid*). See *Infraglenoid.*

Subglossitis (*sub-glos-i'-tis*) [*sub*, under; γλῶσσα, tongue; ιτις, inflammation]. Inflammation of the tissues under the tongue. See *Ranula.*

Subglottic (*sub-glot'-ik*). See *Infraglottic.*

Subgrundation (*sub-grun-da'-shun*) [Fr., *subgrondation*]. The intrusion of one part of a cranial bone beneath another.

Subgular (*sub-gu'-lar*) [*sub*, under; *gula*, throat]. Same as *Subjugular.*

Subgyre (*sub-jīr'*) [*sub*, under; γῦρος, gyrus]. A gyre that is encroached upon or covered by another or *supergyre* (covering-gyre).

Subhepatic (*sub-he-pat'-ik*) [*sub*, under; ἧπαρ, liver]. Situated beneath or on the under surface of the liver.

Subhumeral (*sub-hu'-mer-al*) [*sub*, under; *humerus*, humerus]. Below the humerus.

Subhymenial (*sub-hi-me'-ne-al*) [*sub*, under; *hymenium*, hymenium]. Below the hymenium.

Subhyoid (*sub-hi'-oid*) [*sub*, under; ὑοειδής, hyoid]. Beneath the hyoid bone.

Subicteric (*sub-ik-ter'-ik*) [*sub*, under; ἱκτερος, jaundice]. Moderately or slightly icteric.

Subiculum (*sub-ik'-u-lum*) [*subex*, a layer]. 1. In biology, the thickened part of the leaf or stem of a host bearing the mycelium of a parasitic fungus. 2. The uncinate gyrus.

Subiliac (*sub-il'-e-ak*) [*sub*, under; *ilium*, ilium]. Pertaining to the subilium.

Subilium (*sub-il'-e-um*) [*sub*, under; *ilium*, ilium]. The lowest portion of the ilium.

Subimaginal (*sub-im-aj'-in-al*) [*sub*, under; *imago*, imago]. Having the character of a subimago.

Subimago (*sub-im-a'-go*) [*sub*, under; *imago*, image: *pl.*, *Subimagos* or *Subimagines*]. See *Pseudimago.*

Subinflammation (*sub-in-flam-a'-shun*) [*sub*, under; *inflammatio*, inflammation]. A slight degree of inflammation.

Subinflammatory (*sub-in-flam'-at-or-e*) [*sub*, under; *inflammatio*, a burning]. Of the nature of a slight inflammation.

Subintegumentary (*sub-in-teg-u-men'-tar-e*) [*sub*, under; *integumentum*, integument]. Situated beneath the integument.

Subintestinal (*sub-in-tes'-tin-al*) [*sub*, under; *intestinum*, intestine]. Situated beneath the intestines.

Subintrant (*sub-in'-trant*) [*subintrare*, to enter secretly]. A qualification applied to malarial fevers in which a new paroxysm begins before the termination of the preceding one.

Subinvolution (*sub-in-vo-lu'-shun*) [*sub*, under; *involutio*, a rolling up]. Imperfect involution. **S., Menstrual,** subinvolution of the mucous membrane of the uterus after menstruation. **S. of the Uterus,** the incomplete contraction of the womb after delivery.

Subjacent (*sub-ja'-sent*) [*sub*, under; *jacere*, to lie]. Underlying; lying beneath.

Subject (*sub'-jekt*) [*subjicere*, to throw or bring under]. 1. An individual that serves for purposes of experiment or study, or that is under observation or treatment. 2. In anatomy, a body for dissection.

Subjective (*sub-jek'-tiv*) [*sub*, under; *jacere*, to throw]. 1. Pertaining to the individual himself. 2. Of symptoms, experienced by the patient himself, and not amenable to physical exploration. **S. Sensations,** those not caused by external stimuli.

Subjectivism (*sub-jek'-tiv-izm*). See *Passivism.*

Subjugal (*sub-ju'-gal*) [*sub*, under; *jugum*, yoke]. Below the malar bone.

Sublanceolate (*sub-lan'-se-o-lāt*) [*sub*, under; *lanceola*, a little lance]. Somewhat tapering and pointed.

Sublaryngeal (*sub-lar-in'-je-al*) [*sub*, under; λάρυγξ, the larynx]. Situated below the larynx.

Sublatio, Sublation (*sub-la'-she-o, sub-la'-shun*) [*sublatio*, removal]. 1. Removal; ablation. 2. Depression, or couching, of the lens in cataract. **S., Retinal,** detachment of the retina.

Subligamen (*sub-li-ga'-men*) [*sub*, under; *ligare*, to bind]. A form of truss used in hernia.

Sublimate (*sub'-lim-āt*) [*sublimare*, to lift up high]. 1. A substance which, under the action of heat, passes at once from a solid to a gaseous state, and again condenses in a solid form without intermediate liquefaction. 2. The product of sublimation. **S., Corrosive,** mercuric chlorid. See *Hydrargyrum.*

Sublimation (*sub-lim-a'-shun*) [*sublimare*, to lift up high]. The vaporization and condensation of a volatile solid. The distilled product is called a sublimate.

Sublime (*sub-līm'*) [*sublimare*, to lift up high]. 1. To subject to sublimation. 2. To undergo sublimation.

Sublimed (*sub-līmd'*) [*sublimare*, to lift up high]. Distilled, prepared, or purified by sublimation.

Subliminal (*sub-lim'-in-al*) [*sub*, under; *limen*, threshold]. Below the threshold of consciousness, or of sensation. See *Threshold.*

Sublimis (*sub'-lim-is*) [L.]. Elevated; superficial, a qualification applied to certain muscles.

Sublingua (*sub-ling'-gwah*) [*sub*, under; *lingua*, the tongue: *pl.*, *Sublinguæ*]. In biology, a process of the mucous membrane, below the tongue of many *Prosimii* and *Chiroptera.*

Sublingual (*sub-ling'-gwal*) [*sub*, beneath; *lingua*, tongue]. Lying beneath the tongue. **S. Artery.** See *Arteries, Table of.* **S. Fossa.** See *Fossa.* **S. Gland.** See *Glands and Saliva.* **S. Triangle.** See *Triangles, Table of.*

Sublinguitis (*sub-ling-gwi'-tis*) [*sub*, under; *lingua*, tongue; ιτις, inflammation]. Inflammation of the sublingual gland.

Sublobular (*sub-lob'-u-lar*) [*sub*, under; *lobulus*, a lobule]. Situated or occurring beneath a lobule. **S. Veins,** the radicles of the hepatic veins, situated at the base of a cluster of lobules.

Sublumbar (*sub-lum'-bar*) [*sub*, under; *lumbus*, loin]. Situated under the loins.

Subluxation (*sub-luks-a'-shun*) [*sub*, under; *luxatio*, luxation]. Incomplete luxation.

Submalleolar (*sub-mal-e'-o-lar*) [*sub*, under; *malleolus*, malleolus]. Under the malleoli. **S. Amputation,** removal of the foot at the ankle-joint.

Submammary (*sub-mam'-ar-e*) [*sub*, under; *mamma*, breast]. Situated beneath the breast.

Submarginal (*sub-mar'-jin-al*) [*sub*, under; *margo*, margin]. Situated near the border or margin.

Submarginate (*sub-mar'-jin-āt*) [*sub*, under; *margo*, margin]. Bordered with a mark which is slightly separated from the edge.

Submaxillary (*sub-maks'-il-a-re*) [*sub*, under; *maxilla*, maxilla]. Lying beneath the lower maxilla. **S. Fossa.** See *Fossa.* **S. Gland.** See *Glands* and *Saliva.* **S. Triangle.** See *Triangle.*

Submedial (*sub-me'-de-al*) [*sub*, under; *medius*, middle]. Situated beneath or near the middle.

Submembranous (*sub-mem'-bra-nus*) [*sub*, under; *membrana*, a membrane]. Somewhat membranous.

Submental (*sub-men'-tal*) [*sub*, under; *mentum*, chin]. Situated under the chin.

Submentum (*sub-men'-tum*) [*sub*, under; *mentum*, the chin: *pl.*, *Submenta*]. In biology, the basal part of the labium of an insect, immediately in front of and joining the gula. Also applied to the basal part of the second maxilla.

Submerge (*sub-merj'*) [*sub*, under; *mergere*, to dip]. To immerse. To place under the surface of a liquid.

Submersion (*sub-mer'-shun*) [*sub*, under; *mergere*, dip]. The condition of being under the surface of liquid.

Submetallic (*sub-met-al'-ik*) [*sub*, under; *metallum*, metal]. To a certain extent metallic.

Submissio (*sub-mis'-e-o*) [L.]. A lowering. **S. cordis,** the systole of the heart.

Submucosa (*sub-mu-ko'-sah*) [*sub*, under; *mucosa*, mucous]. The layer of fibrous connective tissue that attaches the mucous membrane to the subjacent parts.

Submucous (*sub-mu'-kus*) [*sub*, under; *mucosus*, mucous]. Situated beneath the mucous membrane.

Submuscular (*sub-mus'-ku-lar*) [*sub*, under; *musculus*, muscle]. Beneath a muscle.

Subnarcotic (*sub-nar-kot'-ik*) [*sub*, under; ναρκωτικός, narcotic]. Moderately narcotic.

Subnasal (*sub-na'-zal*) [*sub*, under; *nasus*, nose]. Situated beneath the nose. **S. Point.** See *Craniometric Points.*

Subneural (*sub-nu'-ral*) [*sub*, under; νεῦρον, nerve]. Situated under the neuron or under a nerve. **Gland,** the homologue in the amphioxus of the hypophysis of higher vertebrates.

Subnitrate (*sub-ni'-trāt*) [*sub*, under; *nitrum*, nitre]. A basic nitrate.

Subnodal (*sub-no'-dal*) [*sub*, under; *nodus*, node]. Behind or under a node.

Subnormal (*sub-nor'-mal*) [*sub*, under; *norma*, rule]. Below the normal.

ubnucleus (*sub-nu'-kle-us*) [*sub*, under; *nucleus*, nucleus]. Any one of the subdivisions into which a group of nerve-cells is divided by the passage through it of intersecting nerve-bundles. [Spitzka.]

ubnude (*sub-nūd'*) [*sub*, under; *nudus*, naked]. In biology, almost naked or bare of leaves.

uboccipital (*sub-ok-sip'-it-al*) [*sub*, under; *occiput*, occiput]. Situated beneath the occiput. **S. Triangle.** See *Triangles, Table of.*

uboccipito-bregmatic (*sub-ok-sip'-it-o-breg-mat'-ik*) [*sub*, under; *occiput*, occiput; βρεγμα, bregma]. Situated in the region extending from the bregma to beneath the occiput.

ubocellate (*sub-os'-el-āt*) [*sub*, under; *ocellus*, eye]. In biology, applied to the spots on the wings of butterflies which resemble ocelli.

ubocular (*sub-ok'-u-lar*) [*sub*, under; *oculus*, eye]. Beneath the eye.

ubopercular (*sub-o-per'-ku-lar*) [*sub*, under; *operculum*, lid]. Pertaining to a suboperculum.

uboperculum (*sub-o-per'-ku-lum*) [*sub*, under; *operculum*, lid]. A gyrus of the brain between the presylvian and subsylvian fissures; the orbital operculum.

uboptic (*sub-op'-tik*) [*sub*, under; ὀπτικός, from ὀπᾶν, to see]. Same as *Suborbital.*

uboral (*sub-o'-ral*) [*sub*, under; *os*, *oris*, mouth]. Beneath the mouth.

uborbicular, Suborbiculate (*sub-or-bik'-u-lar, sub-or-bik'-u-lāt*) [*sub*, under; *orbicularis*, orbicular]. Almost orbicular.

uborbital (*sub-or'-bit-al*) [*sub*, under; *orbita*, orbit]. Beneath the orbit. Synonym of *Infraorbital.*

ubordination (*sub-or-din-a'-shun*) [*sub*, under; *ordo*, order]. The condition of being under subjection or control; the condition of organs that depend upon or are controlled by other organs.

uboxid (*sub-oks'-id*) [*sub*, under; ὀξύς, acid]. An oxid containing less oxygen than a protoxid.

ubpallial (*sub-pal'-e-al*) [*sub*, under; *pallium*, a mantle]. Beneath the pallium.

ubparalytic (*sub-par-al-it'-ik*) [*sub*, under; παράλυσις, paralysis]. Slightly paralytic.

ubparietal (*sub-par-i'-et-al*) [*sub*, under; *paries*, wall]. Situated beneath the parietal bone, convolution, or fissure.

ubpatellar (*sub-pat-el'-ar*) [*sub*, under; *patella*, knee-cap]. Situated beneath or below the patella.

ubpectinate (*sub-pek'-tin-āt*) [*sub*, under; *pecten*, a comb]. Imperfectly pectinate.

ubpectoral (*sub-pek'-tor-al*) [*sub*, under; *pectus*, chest]. Situated beneath the chest.

ubpeduncular (*sub-pe-dung'-ku-lar*) [*sub*, under; *pedunculus*, peduncle]. Situated beneath a peduncle.

ubpedunculate (*sub-pe-dung'-ku-lāt*) [*sub*, under; *pedunculus*, peduncle]. Slightly pedunculated.

ubpericardial (*sub-per-ik-ar'-de-al*) [*sub*, under; περί, around; καρδία, heart]. Situated beneath the pericardium.

ubperiosteal (*sub-per-e-os'-te-al*) [*sub*, under; περί, around; ὀστέον, bone]. Situated beneath the periosteum. **S. Amputation,** the removal of a limb in which the immediate covering of the cut end of the bone consists of periosteum dissected up in the form of flaps before the section is made.

ubperitoneal (*sub-per-it-o-ne'-al*) [*sub*, under; περιτόναιον, peritoneum]. Situated beneath the peritoneum.

ubpetiolar (*sub-pet'-e-o-lar*) [*sub*, under; *petiolus*, a petiole]. Beneath the petiole.

ubpetiolate (*sub-pet'-e-o-lāt*) [*sub*, under; *petiolus*, a petiole]. Having a very short petiole.

Subpharyngeal (*sub-far-in'-je-al*) [*sub*, under; φάρυγξ, pharynx]. Beneath the pharynx.

Subphrenic (*sub-fren'-ik*). Synonym of *Subdiaphragmatic.*

Subpial (*sub-pi'-al*) [*sub*, under; *pia*, pia]. Situated or occurring beneath the pia.

Subpilose (*sub-pi'-lōz*) [*sub*, under; *pilus*, hair]. Thinly pilose.

Subpleural (*sub-plu'-ral*) [*sub*, under; πλευρά, side]. Situated beneath the pleura.

Subplexal (*sub-pleks'-al*) [*sub*, under; *plexus*, plexus]. Lying under a plexus of the brain.

Subpontile (*sub-pon'-til*) [*sub*, under; *pons*, pons]. Situated or occurring beneath the pons.

Subpreputial (*sub-pre-pu'-shal*) [*sub*, under; *præputium*, prepuce]. Beneath the prepuce.

Subprostatic (*sub-pros-tat'-ik*) [*sub*, under; προστάτης, prostate]. Beneath the prostate gland.

Subpubescent (*sub-pu-bes'-ent*) [*sub*, under; *pubes*, downy]. Slightly pubescent.

Subpubic (*sub-pu'-bik*) [*sub*, under; *pubes*, pubis]. Situated beneath the pubic arch or symphysis. **S. Ligament.** See *Ligament.*

Subpulmonary (*sub-pul'-mo-na-re*) [*sub*, under; *pulmo*, the lung]. Ventrad of the lungs.

Subpyramidal (*sub-pir-am'-id-al*) [*sub*, under; *pyramis*, pyramid]. Approximately pyramidal.

Subradular (*sub-rad'-u-lar*) [*sub*, under; *radula*, a scraper]. Situated beneath the radula.

Subramose, Subramous (*sub-ra'-mōz, sub-ra'-mus*) [*sub*, under; *ramus*, branch]. Slightly ramose.

Subreniform (*sub-ren'-if-orm*) [*sub*, under; *ren*, kidney; *forma*, form]. Shaped somewhat like a kidney.

Subresin (*sub-rez'-in*) [*sub*, under; *resina*, resin]. That ingredient of a resin which is soluble in boiling alcohol, but is precipitated on cooling.

Subretinal (*sub-ret'-in-al*) [*sub*, under; *retina*, retina]. Situated beneath the retina.

Subsacral (*sub-sa'-kral*) [*sub*, under; *sacrum*, sacrum]. Situated or occurring ventrad of the sacrum.

Subsalt (*sub'-sawlt*). Synonym of *Salt, Basic.*

Subscapular (*sub-skap'-u-lar*) [*sub*, under; *scapula*, the shoulder-blade]. Under the shoulder-blade. **S. Artery.** See *Arteries, Table of.* **S. Nerve.** See *Nerves, Table of.*

Subscapularis (*sub-skap-u-la'-ris*). See *Muscles, Table of.*

Subsclerotic (*sub-skle-rot'-ik*) [*sub*, under; σκληρός, hard]. Beneath the sclerotic.

Subscriptio (*sub-skrip'-she-o*) [*subscribere*, to write beneath]. That part of a prescription which contains the directions to the pharmacist, indicating how the ingredients are to be mixed and prepared.

Subserous (*sub-se'-rus*) [*sub*, under; *serosus*, serous]. Lying beneath a serous membrane.

Subsessile (*sub-ses'-il*) [*sub*, under; *sessilis*, sessile]. Not quite sessile.

Subsidence (*sub'-sid-ens*, or *sub-si'-dens*) [*sub*, under; *sedere*, to sit]. The gradual cessation and disappearance of an attack of disease.

Subsigmoid (*sub-sig'-moid*) [*sub*, under; σίγμα, sigma; εἶδος, like]. Under the sigmoid cavity or flexure. **S. Fossa,** a fossa bounded in the median line by the attached mesentery of the sigmoid flexure, and above by the limit of the attachment of the mesentery of the descending colon. It may be seen by lifting the sigmoid flexure of the large intestine, and varies much in size in different individuals.

Subsistence (*sub-sis'-tens*) [*sub*, under; *sistere*, to stand]. That which nourishes or gives support. Food.

Subsoil (*sub'-soil*) [*sub*, under; ME., *soile*, soil]. The under-soil. **S. Water**, water which has penetrated the soil, and is found immediately above the first impervious stratum.

Subspinous (*sub-spi'-nus*) [*sub*, under; *spina*, spine], 1. Situated beneath or ventrad of the spinal column. 2. Beneath a spine.

Subspiral (*sub-spi'-ral*) [*sub*, under; *spira*, a coil]. Somewhat spiral.

Subsplenial (*sub-sple'-ne-al*) [*sub*, under; σπληνίον, a bandage]. Beneath the splenium.

Substage (*sub'-stāj*) [*sub*, under; ME., *stage*, a stage]. The arrangement beneath the stage of a microscope for the diaphragms, condenser, illuminator, and other accessories.

Substance (*sub'-stans*) [*substantia*, substance]. 1. The material of which anything is composed. 2. A tissue. See *Substantia*. **S., Adamantine.** Synonym of *Enamel*. **S., Alible**, the portion of the chyme which is utilized for nourishing the body. **S., Alimentary**, an article of food. **S., Basis**, the intercellular or ground substance. **S., Cell**, cell-protoplasm. **S., Central Gelatinous.** Synonym of *Substantia gelatinosa*. **S., Contractile:** 1. Living protoplasm which has the property of contracting. 2. The contractile portion of a muscle-fiber. **S., Cortical**, the peripheral portion of an organ, situated just beneath the capsule. **S., Fibrinoplastic.** Synonym of *Paraglobulin*. **S., Gelatinous.** See *Substantia gelatinosa*. **S., Germinal.** See *Germ-plasma*. **S., Ground**, the homogeneous matrix or intercellular substance of a tissue in which the cellular elements and fibers are embedded. **S., Hyaline.** Synonym of *Cytoblastema*. **S., Hyaloid.** Synonym of *Vitreous Humor*. **S., Intercellular.** See *S., Ground*. **S., Interstitial:** 1. The connective tissue of an organ. 2. Achromatin. **S., Intertubular**, the matrix of dentine in which the dentinal canals are placed. **S., Intervertebral**, the intervertebral cartilages. **S., Living**, protoplasm. **S., Medullary:** 1. The part of an organ constituting its central in contradistinction to its peripheral or cortical portion. 2. The tissue forming the medulla, as in bone. **S., Nuclear:** 1. See *Heredity*. 2. Chromatin; mitome. **S., Parietal**, the matrix of cartilage. **S., Proteic.** Synonym of *Proteid*. **S., Reticular.** Synonym of *Formation, Reticular*. **S. of Schwann, White**, the medullary sheath of a nerve-fiber. **S., Supporting**, a supporting tissue, as the neuroglia and connective tissue.

Substantia (*sub-stan'-she-ah*) [L.]. Substance. **S. adamantina dentium**, the enamel of the teeth. **S. cinerea**, the gray matter of the nervous system. **S. ferruginea.** Synonym of *Locus cæruleus*. **S. filamentosa dentium**, a name given by Malpighi to the enamel of the teeth. **S. fusca.** See *Locus niger*. **S. gelatinosa rolandi**, a jelly-like substance found in the spinal cord near the tip of the posterior horn. **S. grisea**, the gray matter of the spinal cord. **S. hyalina**, Leydig's term for the inter-reticular portion of protoplasm. **S. intermedia**, the portion of the cerebellar substance situated between the cortical and the central gray matter. **S. medullaris**, the medullary substance of the kidney; also, of a hair. **S. nigra.** See *Intercalatum*. **S. opaca**, Leydig's term for the reticulum of protoplasm. **S. ossea dentium**, a name given by Malpighi to dentine. **S. parenchymatosa**, parenchyma. **S. perforata.** See *Space, Perforated*. **S. primaria**, the medullary portion of the central nervous system. **S. propria**, the true or most important tissue of an organ. **S. reticularis.** Synonym of *Formation, Reticular*. **S. rolandi.** Synonym of *S. gelatinosa rolandi*. **S. rubra** (*lienis*), the splenic pulp. **S. sœmmerringi.** Synonym of *Locus niger*. **S. striata.** Synonym of *Enamel*. **S. vasculosa**, the pulp of the spleen.

Substantive Coloring-matter. See *Pigments, Colors, and Dye-stuffs*.

Substernal (*sub-ster'-nal*) [*sub*, under; στέρνον, breast-bone]. Situated or occurring beneath the sternum. **S. Tenderness**, a tenderness to pressure in the lower portion of the sternum, sometimes thought to be an evidence of constitutional syphilis.

Substitution (*sub-stit-u'-shun*) [*sub*, under; *statuere*, to place]. The replacement of one thing by another. *a*. In chemistry, the replacing of one or more elements or radicles in a compound by other elements or radicles. Substitution is the principal method employed in examining the chemic structure of organic bodies. It is also called *metalepsy*. *b*. In medicine, the action of the unaffected hemisphere of the brain in taking up the function of the diseased opposite hemisphere. In general, the vicarious action of organs. In pharmacy, the supplying of another drug or compound instead of the one ordered or called for.

Substratum (*sub-stra'-tum*) [*sub*, under; *stratum*, a layer]. An under layer or stratum.

Substriate (*sub-stri'-āt*) [*sub*, under; *stria*, stria]. Having imperfect striæ.

Subsulphate (*sub-sul'-fāt*) [*sub*, under; *sulphur*, sulphur]. A basic sulphate. **S. of Iron.** See *Salt, Monsel's*.

Subsultus (*sub-sul'-tus*) [*sub*, under; *saltire*, to leap]. Any jerking or twitching. **S. tendinum**, involuntary twitching of the muscles, especially of the hands and feet, seen in low fevers.

Subsynovial (*sub-si-no'-ve-al*) [*sub*, under; *synovia*, synovia]. Situated within a synovial sac.

Subtegmen (*sub-teg'-men*) [*subtexere*, to weave under]. Weft. **S. fornicis**, in the fornix, the layer of nerve-fibers situated beneath the superficial longitudinal bundles.

Subtegumental (*sub-teg-u-men'-tal*) [*sub*, under; *tegumentum*, a cover]. Subcutaneous.

Subtemporal (*sub-tem'-por-al*) [*sub*, under; *tempus*, temple]. Situated beneath the temporal bone or muscle or below the temple.

Subtentacular (*sub-ten-tak'-u-lar*) [*sub*, under; *tentaculum*, a tentacle]. Beneath the tentacles of a crinoid.

Subterranean, Subterraneous (*sub-ter-a'-ne-an, sub-ter-a'-ne-us*) [*sub*, under; *terra*, earth]. Situated or growing beneath the surface of the earth.

Subthalamic (*sub-thal'-am-ik*) [*sub*, under; θάλαμος, thalamus]. Situated beneath the optic thalamus.

Subthoracic (*sub-tho-ras'-ik*) [*sub*, under; θώραξ, thorax]. Situated below the thorax.

Subtrochanteric (*sub-tro-kan-ter'-ik*) [*sub*, under; τροχαντήρ, trochanter]. Situated below the trochanter. **S. Amputation**, the removal of a leg by amputation just below the trochanters.

Subtrochlear (*sub-trok'-le-ar*) [*sub*, under; τροχιλία, pulley]. Beneath the trochlea.

Subtropical (*sub-trop'-ik-al*) [*sub*, under; τροπικός, of the solstice]. Pertaining to regions almost tropical in climate.

Sububeres (*sub-u'-ber-ēz*) [*sub*, under; *ubera*, the breasts]. Children at the breast. Suckling children.

Subulate (*sub'-u-lāt*) [*subula*, an awl]. In biology, awl-shaped.

Subuliform (*sub'-u-lif-orm*). Synonym of *Subulate*.

Subumbrella (*sub-um-brel'-ah*) [*sub*, under; *umbra*, shade]. In biology, the concave inner surface of the umbrella in *Medusæ*.

Subungual, Subungial (*sub-ung'-gwal, sub-ung'-ge-al*) [*sub*, under; *unguis*, nail]. Situated beneath the nail

Subvaginal (*sub-vaj'-in-al*). Synonym of *Infravaginal*.

Subvertebral (*sub-ver'-te-bral*) [*sub*, under; *vertebra*, vertebra]. Placed beneath a vertebra.

Subvirile (*sub-vīr'-il*). [*sub*, under; *virilis*, virile]. Deficient in virility.

Subvola (*sub-vo'-lah*) [*sub*, under; *vola*, the palm of the hand]. 1. The space between the second and fifth fingers. 2. See *Hypothenar*.

Subvolution (*sub-vo-lu'-shun*) [*sub*, under; *volvere*, to roll]. A method of treatment recommended by Boerne Bettmann for pterygium. The pterygium is gathered up by the two branches of a fine forceps serrated at the extremities. A knife is passed beneath it close to the cornea and the triangular membrane is dissected off toward the apex. A suture, with a needle at either extremity, is passed through the apex. Both needles are introduced from above downward, thus leaving a loop of thread on the outer surface. The needles are now passed through the base from below outward, the points of puncture being the ends of parallel lines drawn from the punctures in the apex and just far enough back so that when the flap is turned upon itself beneath the base the roll will correspond with the corneo-scleral margin. The two extremities of the suture are now firmly tied.

Subzonal (*sub-zo'-nal*) [*sub*, under; *ζώνη*, zone]. Situated within the zona pellucida.

Subzygomatic (*sub-zi-go-mat'-ik*) [*sub*, under; *ζύγωμα*, zygoma]. Situated below the zygoma.

Succedaneum (*suk-se-da'-ne-um*) [*succedere*, to take the place of]. A medicine that may be substituted for another. **S., Caput.** See *Caput*.

Succenturiate (*suk-sen-tu'-re-āt*) [*succenturiare*, to receive as a substitute]. Accessory. **S. Placenta.** See *Placenta*.

Succi (*suk'-ī*) [L.]. Genitive and plural of *Succus*, *q. v.*

Succiferous (*suk-sif'-er-us*) [*succus*, juice; *ferre*, to bear]. Producing sap.

Succinamic Acid (*suk-sin-am'-ik*) [*succinum*, amber], $C_4H_7NO_3$. A crystalline monobasic acid, of pleasant acid taste.

Succinamid (*suk-sin'-am-id*) [*succinum*, amber; *amid*], $C_4H_8N_2O_2$. A substance produced by shaking succinic ester with aqueous ammonia. It is a white powder, insoluble in water and in alcohol; it crystallizes from hot water in needles.

Succinate (*suk'-sin-āt*) [*succinum*, amber]. A salt of succinic acid. **S. of Ammonium**, a salt sometimes prescribed in delirium tremens.

Succinctum (*suk-singk'-tum*). Synonym of *Diaphragm*.

Succinic Acid (*suk-sin'-ik*). See *Acid*.

Succinimid (*suk-sin'-im-id*) [*succinum*, amber], $C_4H_5NO_2$. A crystalline substance produced by gentle ignition of the anhydrid in a current of dry ammonia. It crystallizes from acetone in rhombic octahedra without any water; when anhydrous, it melts at 126° C. and boils at 288° C.

Succinin (*suk'-sin-in*) [*succinum*, amber], $C_7H_{10}O_2$. 1. A dark-brown substance produced when equal parts of succinic acid and glycerin are heated together to about 230° C. 2. The insoluble portion of amber.

Succinone (*suk'-sin-ōn*) [*succinum*, amber]. An oily liquid obtained in the dry distillation of calcium succinate. It has a decided empyreumatic odor.

Succinum (*suk-si'-num*) [L.: *gen.*, *Succini*]. Amber. A fossil resin found in the alluvial deposits of Central Europe. It is thought to be derived from an extinct species of pine. Its properties are due to a volatile oil which may be obtained by destructive distillation. **Succini, Ol.**, is an antispasmodic. It has been used in hysteria, etc. Externally, it is employed as a rubefacient in rheumatic affections and in bronchitis. Dose gtt. v–x.

Succise (*suk-sīz'*) [*succidere*, to cut off]. In biology, appearing as if cut off at the lower end.

Succivorous (*suk-siv'-o-rus*) [*succus*, juice; *vorare*, to devour]. In biology, feeding upon plant-juices.

Succuba (*suk'-u-bah*) [*sub*, under; *cumbere* to lie: *pl.*, *Succubæ*]. A female demon formerly believed to consort with men in their sleep. Cf. *Incubus*.

Succubate (*suk'-u-bāt*) [*succubare*, to lie under]. To have carnal knowledge of a man.

Succubous (*suk'-u-bus*) [*succumbere*, to lie under]. In biology, having the basal margin of each leaf overlapping the apex of the preceding leaf, as distinguished from *incubous*.

Succubus (*suk'-u-bus*) [L.: *pl.*, *Succubī*]. A male demon, once considered to be the counterpart of the succuba.

Succulent (*suk'-u-lent*) [*succus*, a juice]. In biology, thickened and juicy.

Succursal (*suk-ur'-sal*) [*succursalis*, subsidiary]. Subsidiary. **S. Hospital, or Asylum**, a branch provincial hospital, usually for mild cases.

Succus (*suk'-us*) [L.: *gen. and pl. Succi*]. Juice, as **S. belladonnæ, S. conii, S. hyoscyami, S. limonis, S. mori, S. scoparii, S. taraxaci,** all official in the B. P. **S. alterans,** a proprietary remedy composed of roots and herbs and much exploited in the treatment of syphilis. It consists as follows: fluid extracts of smilax, sarsaparilla, stillingia sylvatica, and kappa minor, each 2 ounces; extract. phytolaccæ decandræ 2 ounces, and tinct. xanthoxyli carolin. 1 ounce. Of this a dram is taken in water three times daily, gradually increasing the dose to a half-ounce. **S. entericus,** the intestinal juice, secreted by the glands that are found embedded in the intestinal mucosa. It is thin, opalescent, alkaline, and has a specific gravity of 1011. Its chief function is probably to act as a diluent. It contains an amylolytic and a proteolytic ferment. **S. gastricus,** the gastric juice. **S. spissatus,** any extract prepared by evaporation of the natural juice of a plant.

Succussion (*suk-ush'-un*) [*succutere*, to shake]. The shaking of the individual from side to side for the purpose of determining the presence of fluid in a cavity or hollow organ of the body. **S.-sound,** or **Splash,** the peculiar splashing sound heard in hydropneumo-thorax or pyo-pneumo-thorax when the patient's chest is slightly shaken. It is due to the combined presence of air and fluid in a closed cavity. It was first described by Hippocrates, and hence is also known as the *Hippocratic Sound*. The sound may also be obtained in the presence of a dilated stomach partly filled with fluid.

Suck (*suk*) [*sugere*, to draw in]. To take nourishment, as a babe, at the breast; to draw in with the aid of the mouth.

Sucker (*suk'-er*) [AS., *sucan*, also *sugere*, to suck]. In biology, an organ adapted for suction; a sprout, shoot, or haustorium. Cf. *Propagulum*.

Sucking (*suk'-ing*) [*sugere*, to suck]. Giving suck; nursing; drawing with the mouth. **S.-bottle,** a nursing-bottle. **S.-stomach,** an old and misleading term for the honey-sac of the hive-bee.

Suckle (*suk'-l*) [*sugere*, to suck]. To give suck. To nurse at the breast.

Sucrose (*su'-krōz*). See *Saccharum*.

Suction (*suk'-shun*) [*suctio*, a sucking]. The act of sucking. **S. of Cataract,** removal, by means of a syringe, of the fragments of lens-substance after discission.

Suctorial (*suk-to'-re-al*) [*sugere*, to suck]. Suitable for sucking.

Sudamen, Sudamina (*su-da'-men, su-dam'-in-ah*). See *Miliaria*. **S. crystallina.** See *Miliaria crystallina*.

Sudaminal (*su-dam'-in-al*) [*sudare*, to sweat]. Of the nature of sudamina.

Sudation (*su-da'-shun*) [*sudare*, to sweat]. The act of sweating.

Sudatoria (*su-dat-o'-re-ah*). See *Hyperidrosis* and *Miliaria*.

Sudatorium (*su-dat-o'-re-um*) [*sudor*, sweat]. A room or apartment for the administration of a sweat-bath.

Sudolorrhea (*su-do-lor-e'-ah*) [*sudare*, to sweat; *oleum*, oil; *ῥοία*, a flow]. Synonym of *Eczema seborrhœicum*.

Sudor (*su'-dōr*) [L.]. Sweat. **S. anglicus.** See *Miliaria*. **S. cruentus.** Synonym of *Hematidrosis*. **S. nocturnus**, night-sweat. **S. sabulosus.** Synonym of *Uridrosis crystallina*. **S. sanguinosus.** See *Hematidrosis*. **S. urinosus.** See *Uridrosis*.

Sudoral (*su'-dor-al*) [*sudor*, sweat]. Pertaining to sweat, or to active diaphoresis. **S. Typhoid Fever**, a form of typhoid fever characterized by chills, fever, and sweats, and which may be mistaken for intermittent fever.

Sudoriferous (*su-dor-if'-er-us*) [*sudor*, sweat; *ferre*, to bear]. Sweat-bearing; sweat-producing. **S. Glands.** See *Sweat-glands*.

Sudorific (*su-dor-if'-ik*) [*sudor*, sweat; *facere*, to make]. 1. Production of copious sweating. 2. A medicine or agent inducing profuse sweating.

Sudoriparous (*su-dor-ip'-ar-us*) [*sudor*, sweat; *parere*, to beget]. Producing or secreting sweat. **S. Glands.** See *Sweat-glands*.

Sudorous (*su'-dor-us*) [*sudorus*, sweaty]. Sweaty; of the nature of sweat. [Rare.]

Suet (*su'-et*). See *Tallow and Tallow-oil;* also *Sevum*.

Suffocation (*suf-o-ka'-shun*) [*suffocare*, to choke]. Interference with the entrance of air into the lungs by means other than by external pressure on the trachea; asphyxia.

Suffocative (*suf'-o-ka-tiv*) [*suffocare*, to suffocate]. Tending to choke or suffocate. **S. Catarrh,** Laënnec's term for capillary bronchitis.

Suffraginis (*suf-raj'-in-is*) [*suffrago*, hock]. The large pastern-bone, a very compact bone in the foot of a horse, set in an oblique direction downward and forward, and extending from the cannon-bone to the coronet.

Suffraginous (*suf-raj'-in-us*) [*suffrago*, hock]. Pertaining to the suffrago of the horse.

Suffrago (*suf-ra'-gō*) [L.: *gen.*, *Suffraginis: pl.*, *Suffragines*]. The hock of a horse's hind leg, whose convexity is backward. It corresponds to the human heel.

Suffrutescent (*suf-ru-tes'-ent*) [*sub*, under; *frutex*, a shrub]. In biology, applied to a stem which is slightly shrubby at the base only.

Suffrutex (*suf'-ru-teks*) [*sub*, under; *frutex*, a shrub]. In biology, an under-shrub.

Suffruticose (*suf-fru'-tik-ōz*) [*sub*, under; *frutex*, a shrub]. Applied to an under-shrub, or low shrub. Same as *Suffrutescent*.

Suffumigation (*suf-u-mig-a'-shun*) [*suffumigatio*]. A fumigation; also, a disinfectant used in fumigation.

Suffumigium (*suf-u-mij'-e-um*) [L.: *pl.*, *Suffumigia*]. A medicinal smoke, vapor, or fumigation.

Suffusio (*suf-u'-ze-o*) [L.]. Suffusion. **S. dimidians** [L., "a halving suffusion"]. Hemicrania with hemianopsia.

Suffusion (*suf-u'-zhun*) [*sub*, under; *fundere*, to pour]. 1. A spreading or flow of any fluid of the body into surrounding tissue; an extensive superficial extravasation of blood. 2. The pouring of water upon a patient as a remedial measure.

Sugar (*shoog'-ar*) [ME., *suger*, sugar]. The general name of a class of compounds belonging to the group of carbohydrates. See *Saccharum*. Chemically, sugars are divided as follows: *Cane-sugar*, $C_{12}H_{22}O_{11}$, the ordinary sugar of commerce and pharmacy; *glucose* (grape-sugar or starch-sugar), $C_6H_{12}O_6$; *lactose*, sugar of milk; and *inosite*, a variety found in certain muscular tissues and in the juice of asparagus. Closely allied to sugar are *starch*, *cellulose*, *glycogen*, and *dextrin*, *q. v.* See *Carbohydrate*. The following table from Sadtler's "Industrial Organic Chemistry" contains the composition of a variety of raw cane-sugars and beet-sugars:—

Description of Sugar.	Sucrose.	Glucose.	Organic Non-sugar.	Ash.	Water.	Authority.
Cane, Cuba (centrif.), . .	91.90	2.98	2.70	0.72	1.70	Wigner and Harland.
Cane, Cuba (muscovado),	92.35	3.38	0.66	0.77	2.84	Wallace.
Cane, Jamaica, .	90.40	3.47	1.55	0.36	4.22	Wigner and Harland.
Cane, Trinidad,	88.00	5.14	1.67	0.96	4.23	Wigner and Harland.
Cane, Porto Rico,	87.50	4.84	2.60	0.81	4.25	Wigner and Harland.
Cane, St. Vincent,	92.50	3.61	2.45	0.63	0.81	Wigner and Harland.
Cane, Demarara,	90.80	4.11	0.77	1.12	3.20	Wallace
Cane, Benares, .	94.50	2.63	0.39	1.50	0.98	Wigner and Harland.
Cane, Unclayed Manila, . . .	82.00	6.79	3.24	2.00	5.97	Wigner and Harland.
Cane, Concrete, .	84.20	8.45	1.70	1.10	4.55	Wallace.
Cane, Melada, .	67.00	11.36	1.93	0.91	18.80	Wallace.
Cane, Bastards, .	68.30	15.00	1.20	1.50	14.00	Wallace.
Palm, East Indian, ...	86.00	2.19	2.89	2.88	6.04	Wigner and Harland.
Beet, first product, ...	94.17	. . .	2.14	1.48	2.21	Bodenbender.
Beet, second product, . .	91.68	. . .	2.49	2.92	2.91	Bodenbender.

S., Beet, saccharose obtained from the species of *Beta*, especially the common beet, *Beta vulgaris*. It is now employed extensively as a substitute for cane-sugar. **S., Brown,** an impure cane-sugar. **S.-cane,** *Saccharum officinarum* and other species, a source of saccharose. See *Sugar*. **S., Cellulose,** sugar derived from cellulose; it has the same formula and properties as glucose. **S., Chestnut,** glucose. **S.-coated,** coated with sugar, as some pills. **S., Diabetic,** glucose. **S., Fruit,** levulose. **S., Grape,** glucose in the solid state. **S., Gum,** arabinose. **S., Honey,** glucose. **S.-house Eczema,** an eczema sometimes observed in laborers employed in sugar-refineries. **S., Invert.** See *Invert*. **S., Liver,** another name for glucose which is derived from the liver; glycogen. **S., Manna.** Synonym of *Mannite*. **S., Maple,** saccharose obtained from the sugar-maple. See *Acer*. **S. of Milk.** See *Lactose*. **S.-mite,** an acarid of the genus *Glyciphagus* that

infests certain unrefined commercial sugar, and is said to be a cause of grocers' itch. **S., Muscle,** inosite. **S., Refined,** purified cane-sugar. **S., Starch,** glucose. **S.-teat,** a nipple-shaped linen rag containing a lump of sugar. It is given to an infant to quiet it. **S., Uncrystallizable,** levulose. **S.-vinegar.** See *Vinegar.* **S., White.** Synonym of *S., Refined.*

uggestible (*sug-jes'-tib-l*) [*suggerere*, to convey, to excite]. Amenable to suggestion; said of hypnotized persons.

uggestion (*sug-jes'-chun*) [*suggerere*, to lay under]. 1. The artificial production of a certain psychic state in which the individual experiences such sensations as are suggested to him or ceases to experience those which he is instructed not to feel. 2. The thing suggested. **S., Hypnotic.** See *Hypnotism.* **S., Post-hypnotic,** the command to do certain acts given the subject while in the somnambulic stage, and which are executed by him after his return to his normal condition. **S.-therapy,** treatment of disordered states by means of suggestion.

uggillation, Sugillation (*suj-il-a'-shun*) [*sugillare*, to beat black and blue]. An ecchymosis or bruise. A diffuse accumulation of blood in the interstices of the tissues.

uicidal (*su'-is-i-dal*) [*sui*, of himself; *cædere*, to kill]. Self-destroying; having a tendency to suicide.

uicide (*su'-is-id*) [*sui*, of himself; *cædere*, to kill]. 1. The intentional taking of one's own life; self-murder. 2. One who takes his own life.

uilla (*swil'-ah*). Synonym of *Scrofula.*

uint (*swint*) [Fr.]. A soapy substance rich in potash and cholesterin, derivable from sheeps' wool. Lanolin, agnin, and potash-salts are obtained from it.

ukha Pakla (*su'-kah pak'-lah*). Synonym of *Ainhum.*

ulcate (*sul'-kāt*) [*sulcus*, a furrow]. In biology, having straight, longitudinal furrows, grooves, or channels; fluted.

ulcated (*sul'-ka-ted*) [*sulcus*, a furrow]. Grooved or furrowed.

ulcation (*sul-ka'-shūn*) [*sulcus*, furrow]. A furrow or set of furrows or sulci; the state or quality of being furrowed.

ulcature (*sul'-kat-ūr*). See *Sulcation.*

ulciform (*sul'-sif-orm*) [*sulcus*, a furrow; *forma*, form]. Like a groove or sulcus.

ulciorales (*sul-se-o-ra'-lēz*) [*sulcus*, a furrow; *os*, the mouth]. The oral grooves of the *Medusæ.* **S. palatini,** the palatine grooves of *Hydropolypes.*

ulcus (*sul'-kus*) [L.: *pl.*, *Sulci*]. A furrow or groove; applied especially to the fissures of the brain. For sub-headings see *Fissures.* **S., Choroid.** See *Schwalbe, Fissure of.* **S., Harrison's.** See *Harrison.* **S., Intraparietal,** the sulcus dividing the superior from the inferior parietal lobule. **S., Precentral,** a fissure situated in front of the fissure of Rolando and running nearly parallel with it. **S. spiralis,** the grooved extremity of the lamina spiralis of the cochlea. **S., Vertical.** Same as *S., Precentral.*

ulfate (*sul-fāt*). See *Sulphate.*

ulfonal (*sul'-fo-nal*). See *Sulphonal.*

ulfur (*sul'-fer*) [L.]. See *Sulphur.*

ulph- (*sulf-*). See *Sulpho-.*

ulph-aldehyd (*sulf-al'-de-hīd*) [*sulphur*, sulphur; *aldehya*]. A substance produced by the action of hydrogen sulphid on ethylic aldehyd. It occurs in the form of an oleaginous liquid of a repulsive odor, solidifying at a temperature slightly below the freezing-point. It is a hypnotic, and is said to produce tranquil sleep without any phenomena of excitation.

ulphamid (*sul'-fam-id*) [*sulphur*, sulphur; *amid*]. One of several compounds formed by the action of sulphuryl chlorid upon the free secondary amins.

Sulphaminol (*sul-fam'-in-ōl*) [*sulphur*, sulphur; *amin*], $C_{12}H_9S_2NO$. Thioxydiphenylamin. An antiseptic substance obtained by the action of sulphur on the salts of methoxydiphenylamin. It is used by insufflation in diseases of the antrum and frontal sinuses. It has been used with success by insufflation in the treatment of laryngeal tuberculosis. Dose in cystitis gr. ij–v.

Sulphanilic Acid (*sul-fan-il'-ik*) [*sulphur*, sulphur]. See *Acid.* This is used in Ehrlich's diazo-reaction. See *Tests, Table of.*

Sulpharsin (*sul-far'-sin*) [*sulphur*, sulphur; *arsenicum*, arsenic]. Cacodyl sulphid, a colorless, inflammable liquid, with an intensely disagreeable odor.

Sulphate (*sul'-fāt*) [*sulphur*, sulphur]. A salt of sulphuric acid. Sulphuric acid being dibasic, there are acid and basic salts. **Ss., Test for, in Urine;** acidify with hydrochloric acid; then add a solution of barium chlorid, and if soluble sulphates be present, a white, crystalline precipitate falls. Compare with that from healthy urine as to abnormality of amount. See *Tests, Table of.*

Sulphatid (*sul'-fat-id*) [*sulphur*, sulphur]. Any organic compound, of the type of a phosphatid, in which all, or a part, of the phosphorus is replaced by sulphur.

Sulphichthyolic Acid (*sulf-ik-thē-ol'-ik*). See *Acid.*

Sulphid (*sul'-fid*) [*sulphidum*]. A direct compound of sulphur with an element or radicle. It may be considered a salt of hydrogen sulphid. The alkaline sulphids are soluble in water, the others are generally insoluble. **S., Hydrogen,** H_2S, unof., a gas having the odor of rotten eggs; highly poisonous. It is used as a precipitant for certain metals in solution; it has also been used in the treatment of tuberculosis. **Sulphidum, Calcii,** CaS, unof., the "hepar sulphuris" of homeopathy, used mainly in the preparation of other compounds. Locally, a specific for itch. **Sulphurata, Calx,** CaS+$CaSO_4$, sulphurated lime, a variable mixture containing about 36 per cent. of calcium sulphid and sulphate. It is used in furunculosis. Dose gr. $\frac{1}{10}$–$\frac{1}{2}$. **S., Potassa,** prepared by heating 2 parts of potassium carbonate with 1 of sulphur. Narcotic and irritant. Dose gr. ij–x. **Sulphuris iodidum,** I_2S_2, used in ointment, gr. xxx to ℥j.

Sulphins (*sul'-finz*) [*sulphur*, sulphur]. One of several crystalline compounds resulting from the combination of the thio-ethers with the iodids, bromids, and chlorids of the alcohol radicles at ordinary temperatures, but more rapidly on the application of heat.

Sulphite (*sul'-fīt*) [*sulphis*]. Any salt of sulphurous acid. Being a dibasic acid, there are acid and basic sulphites.

Sulpho- (*sul'-fo*) [*sulphur*, sulphur]. A prefix denoting chemic combination with sulphur, or a sulphur radicle.

Sulphocarbamid (*sul-fo-kar'-bam-id*). See *Thio-urea.*

Sulphocarbolate (*sul-fo-kar'-bo-lāt*) [*sulphur*, sulphur; *carbolic*]. A salt of sulphocarbolic acid. **Sulphocarbolate of Zinc** is antiseptic and disinfectant. It is used as an intestinal antiseptic; sometimes also in small doses for fetor of the breath.

Sulphocarbolic Acid (*sul-fo-kar-bol'-ik*). See *Aseptol.*

Sulpholeic Acid, Sulpholinic Acid (*sul-fo-le'-ik, sul-fo-lin'-ik*) [*sulphur*, sulphur; *oleic*]. A yellowish, neutral liquid prepared by treating vegetable oils with sulphuric acid. It is recommended as a good solvent and has been used externally instead of vaselin and glycerin.

Sulpholein (*sul-fo'-le-in*). See *Sulphoricineolic Acid.*

Sulphonal (*sul''-fo-nal'*) [*sulphur*, sulphur], $C_7H_{16}S_2O_4$. Acetone-diethylsulphone. It is soluble in 100 parts of water at 16° C., in 20 parts at 100° C., and readily soluble in alcohol; it crystallizes in colorless leaflets or plates that melt at 126° C., and is odorless and tasteless; in doses of from 8 to 45 grains it is used as an hypnotic. Unof.

Sulphone (*sul''-fōn*) [*sulphur*, sulphur]. One of the products of the union of two oxygen atoms with an alkyl sulphid.

Sulphoricinoleic Acid (*sul-fo-ri-sin-o-le'-ik*). See *Acid.*

Sulpho-salt (*sul''-fo-sawlt*) [*sulphur*, sulphur; ME., *salt*, salt]. A salt in which sulphur takes the place of oxygen in the acid radicle.

Sulphoxid (*sul-foks'-id*) [*sulphur*, sulphur; ὀξύς, acid]. One of the products of the union of one oxygen atom with an alkyl sulphid.

Sulphur (*sul''-fer*) [L.: *gen.*, *Sulphuris*]. Brimstone. S = 32; quantivalence II, IV, VI. A non-metallic element distinguished by its yellow color and crystalline properties. It is one of the acid elements, and unites with oxygen to form the most powerful acid radicles. It is laxative and diaphoretic, and, long administered, causes emaciation and anemia. See *Elements, Table of.* **S., Confectio** (B.P.). Dose gr. x–℥ij. **S. Dioxid**, SO_2, a colorless gas, of irritating odor, formed by the combustion of sulphur, and in the presence of moisture acting as a powerful bleaching and disinfecting agent. **S., Flowers of**, sublimed sulphur obtained in the form of light-yellow, powdery flakes. **S. iodidum**, I_2S_2, used as an ointment, gr. xxx–℥j. **S. iodid, Ung.** (B. P.), contains melted and hard paraffin and iodid of sulphur. **S., Liver of**, potassa sulphurata, a mixture of potassium trisulphid and potassium trisulphate. **S. lotum**, washed sulphur, prepared by digesting sublimed sulphur with water of ammonia, and afterward washing. **S. præcipitatum**, lac sulphur, "milk of sulphur;" a white, amorphous powder, devoid of taste and odor, prepared by decomposing calcium sulphid with hydrochloric acid. Dose gr. x–℥j. **S. rotundum**, roll sulphur, sublimed sulphur cast into rolls. **S. sublimatum**, sublimed sulphur. Dose gr. x–lx. **S., Trochisci** (B. P.), each contains grs. v of sulphur. Dose 1 to 6. **S., Ung.**, sublimed sulphur 30, benzoinated lard 70 parts. **S., Ung., Alkalinum**, washed sulphur 20, potassium carbonate 10, water 5, benzoinated lard 65 parts.

Sulphurain (*sul''-fu-rān*). See *Glairin.*

Sulphurate (*sul''-fu-rāt*) [*sulphur*, sulphur]. To impregnate with sulphur.

Sulphurated (*sul''-fu-ra-ted*) [*sulphur*, sulphur]. A term applied to substances which contain or are combined with sulphur.

Sulphuration (*sul-fu-ra'-shun*) [*sulphur*, sulphur]. The act of dressing, anointing, or impregnating with sulphur.

Sulphur-bath. See *Bath.*

Sulphuret (*sul''-fu-ret*) [*sulphur*, sulphur]. A sulphid.

Sulphureted (*sul''-fu-ret-ed*) [*sulphur*, sulphur]. Having sulphur in combination. **S. Hydrogen.** See *Acid, Hydrosulphuric.*

Sulphuretum (*sul-fu-re'-tum*) [*sulphur*, sulphur: *gen.*, *Sulphureti*]. A sulphid.

Sulphuric (*sul-fu'-rik*) [*sulphur*, sulphur]. In chemistry, a technical name given to the anhydrid and derived acid of sulphur trioxjd, SO_3. See *Acid, Sulphuric.* **S. Acid** (*Nordhausen*), sulphuric acid containing more or less sulphur trioxid (SO_3). It has a specific gravity of 1.860 to 1.9, and is obtained by the distillation of dried ferrous sulphate.

Sulphuring (*sul''-fer-ing*) [*sulphur*, sulphur]. Bleaching (*e. g.*, dried fruit) with sulphurous acid.

Sulphurous (*sul-fu'-rus*, or *sul''-fu-rus*) [*sulphur*, sulphur]. Of the nature of sulphur. In chemistry, a technical name applied to the acids and anhydrid derived from sulphur dioxid, SO_2. See *Acid, Sulphurous.* **S.-acid Bath.** See *Bath.*

Sulphydrate (*sulf-hi'-drāt*) [*sulphur*, sulphur; *ὕδωρ*, water]. One of the so-called salts of sulphydric acid. A compound of a metal with the univalent radicle SH.

Sulphydric (*sulf-hi'-drik*). See *Acid, Hydrosulphuric.* **S. Acid.** Same as *Sulphureted.*

Sumac, Sumach (*su'-mak*) [Ar., *summoq*, sumac]. The powdered leaves, peduncles, and young branches of *Rhus coriaria*, *R. cotinus*, and other species of *Rhus*, used in the manufacture of leather. Sumac contains from 16 to 24 per cent. of a tannin that seems to be identical with gallotannic acid. See *Rhus.*

Sumbul (*sum'-bul*) [Hind., *sumbul*, spikenard]. Musk root; the root of *Ferula sumbul*, which is distinguished by a musk-like odor and a bitter, balsamic taste. It contains angelic and valerianic acids, and is an excellent nerve-tonic, much used in Russia. It is useful as a substitute for musk in nervous affections, typhoid fever, etc. Dose gr. xxx–℥j. **S., Tinctura** (B.P.) 10 per cent. Dose ℥j–iv. **S., Tinctura** (B.P.) Dose ♏x–xxx.

Summation (*sum-a'-shun*) [*summatio*]. The accumulation of effects, especially of those of muscular, sensory or mental stimuli. **S. of Stimuli**, if a stimulus in itself insufficient to cause contraction of a muscle be repeatedly applied in proper tempo and strength, contraction will finally be produced. Similar summation occurs in nervous tissue, and the cardiac contractions exhibit a rhythm of increased force, called **Staircase** or **Treppe Rhythm.**

Summational (*sum-a'-shun-al*) [*summatio*, a summing up]. Produced by summation. **S. Tones**, supposed production of new tones by the summation or addition of the number of vibrations of existing tones.

Summer (*sum'-er*) [ME., *somer*, summer]. The season of greatest heat. Also, applied to things connected with that season. **S. Catarrh.** See *Hay-fever.* **S. Complaint.** See *Cholera infantum.* **S. Granulations.** See *Trachoma.* **S. Prurigo.** See *Prurigo æstivalis.* **S. Rash**, same as *Lichen tropicus.* **S. Savory**, the leaves of *Satureia hortensis*, stimulant carminative, and emmenagogue. Dose of the fld. ext. ℥j–iv. Unof.

Sun [ME., *sunne*, sun]. The central body of the solar system. **S.-bath.** See *Bath.* **S.-burn**, superficial inflammation of the skin caused by exposure to the sun. Also, the bronzing of the skin from long exposure to the sun or heat. **S.-dew.** See *Drosera.* **S.-fever.** 1. A name loosely applied to severe forms of various fevers of the tropical regions, as dengue. 2. A synonym for *Simple Continued Fever.* 3. See *Insolation.* **S.-flower**, the seeds of the common sunflower, *Helianthus annuus.* They contain a fixed oil and other extractive matters. The oil is not inferior in taste to olive-oil. The plant is expectorant and diuretic. Dose of the decoction *ad lib.*; of the fld. ext. ℥j–ij. Unof. **S.-flower Retina** (or *Macula*). **S.-flower Appearance**, a rare condition of the macular region in which there is some likeness to the appearance of the petals of the sunflower. **S.-flower Wild.** See *Grindelia.* **S.-gold.** See *Pigment, Conspectus of.* **S.-pain**, a form of brow-ague appearing in the morning and disappearing at night, and aggravated by sunlight. **S.-star.** See *Solaster.* **S.-stricken.** Same as *S.-struck.* **S.-stroke**, a popular term for insolation.

lation or heat-stroke. See *Heat-stroke.* **S.-stroke, Electric,** an illogical term for the symptoms, somewhat similar to those of heat-stroke, produced by too close and unprotected proximity to the intense light emitted in welding metals by electricity. **S.-struck,** overcome by the heat of the sun. **S.-yellow.** See *Maize.*

Sunn Hemp. See *Hemp.*

Super- (*su'-per-*) [L., above or upon]. A prefix denoting *above, upon, dorsad, upper,* or *excessive in degree.*

Superabduction (*su-per-ab-duk'-shun*) [*super,* over; *abduction*]. Excessive abduction.

Superacidity (*su-per-as-id'-it-e*). See *Hyperacidity.*

Superacromial (*su-per-ak-ro'-me-al*) [*super,* above; *acromium*]. Situated or occurring above or upon the acromion.

Superacute (*su'-per-ak-ūt'*) [*super,* over; *acutus,* pointed]. Extremely acute.

Superalbuminosis (*su-per-al-bu-min-o'-sis*) [*super,* over; *albumen,* albumin]. The over-production of albumin.

Superalimentation (*su-per-al-im-en-ta'-shun*) [*super,* over; *alimentation*]. Excessive nourishment.

Superambulacral (*su-per-am-bu-la'-kral*) [*super,* above; *ambulacrum*]. Above the ambulacra.

Superanal (*su-per-a'-nal*). Same as *Supra-anal.*

Superbus (*su-per'-bus*) [L., superb]. A term applied to the rectus oculi superioris muscle, and sometimes to the levator menti, because their action gives to the face a proud and haughty expression.

Supercallosal (*su-per-kal-o'-sal*) [*super,* over; *callosum*]. Situated above or occurring above the callosum.

Supercalorinesis (*su-per-kal-o-rin-e'-sis*) [*super,* over; *calor,* heat: *pl., Supercalorineses*]. Any disease caused by increase of the animal heat.

Superciliary (*su-per-sil'-e-a-re*) [*super,* above; *cilium,* eyelash]. Pertaining to the eyebrow. **S. Ridges,** the projecting apophyses at the anterior surface of the frontal bone.

Supercilium (*su-per-sil'-e-um*) [L.]. The eyebrow.

Superconception (*su-per-kon-sep'-shun*). Same as *Superfetation.*

Superdentate (*su-per-den'-tāt*) [*super,* over; *dens,* tooth]. Having teeth only in the upper jaw.

Superdistention (*su-per-dis-ten'-shun*) [*super,* above; *distendere,* to distend]. Excessive distention.

Superextension (*su-per-eks-ten'-shun*) [*super,* above; *extendere,* to extend]. Excessive extension.

Superfecundation (*su-per-fe-kun-da'-shun*) [*super,* over; *fecundus,* fertile]. The fertilization of more than one ovum of the same ovulation resulting from separate acts of coitus.

Superfecundity (*su-per-fe-kun'-dit-e*) [*super,* over; *fecundus,* fertile]. Superabundant fecundity.

Superfetate (*su-per-fe'-tāt*) [*superfœtare,* to conceive anew when already pregnant]. To conceive after a prior conception.

Superfetation (*su-per-fe-ta'-shun*) [*superfœtatio; super, fœtus*]. A supposed fertilization of an ovum when there is another from a previous ovulation in utero-gestation. This is now considered impossible.

Superfibrination (*su-per-fib-rin-a'-shun*) [*super,* over; *fibrin,* fibrin]. Excessive formation of fibrin in the blood.

Superficial (*su-per-fish'-al*) [*superficialis; super,* over; *facies,* face]. Confined to the surface. Not extending below the surface; shallow. **S. Reflexes.** See *Reflexes, Table of.*

Superficies (*su'-per-fish'-ēz*) [L.]. The surface or outside.

Superfissure (*su'-per-fish'-er*) [*super,* over; *fissura,* fissure]. The lines of overlapping of a supergyre. Also, the lines of junction of two supergyres meeting from opposite directions.

Superflexion (*su-per-flek'-shun*) [*super,* over; *flexio,* a flexion]. Excessive flexion.

Superfoliation (*su-per-fo-le-a'-shun*) [*super,* over; *folium,* leaf]. In biology, excess of leaves.

Superfrontal (*su-per-frun'-tal*) [*super,* over; *frons,* forehead]. Superior or upper, as a fissure of the frontal lobe of the brain.

Superfunctive (*su-per-funk'-tiv*) [*super,* over; *functio,* function]. Excessive functional activity.

Supergenual (*su-per-jen'-u-al*) [*super,* above; *genu,* knee]. Situated above the knee.

Supergyre (*su'-per-jīr*). See *Subgyre.*

Superimposed (*su-per-im-pōzd'*) [*super,* over; *imposed*]. Placed one upon another.

Superimpregnation (*su-per-im-preg-na'-shun*) [*super,* over; *impregnation*]. The development of more than one ovule at one time, as in plural pregnancy.

Superinduce (*su-per-in-dūs'*) [*superinducere,* to bring upon]. To bring on as a complication of a condition already existing.

Superinduced (*su-per-in-dūst'*) [*super,* upon; *inducere,* to bring in]. Superimposed. **S. Segmentation.** See *Homoplasis.*

Superinvolution (*su-per-in-vo-lu'-shun*) [*super,* over; *involutere,* to involute]. Hyperinvolution; excessive rolling up.

Superior (*su-pe'-re-or*) [comparative of *superus,* high]. Higher; noting the upper of two organs or parts occupying a relatively high position. In biology, applied to an ovary that is not at all adherent to the calyx. Also applied to a calyx whose tube closely adheres to the ovary, so that its limb, or spreading portion, appears to spring from the top of the latter. **S. Bulbar Palsy,** ophthalmoplegia externa. **S. Vermiform Process,** the upper part of the median lobe of the cerebellum. It is divided into three lobes, the *lobulus centralis, monticulus cerebelli,* and *commissura simplex.*

Superlactation (*su-per-lak-ta'-shun*) [*super,* over; *lac,* milk]. Excess of the secretion of milk.

Superligula (*su-per-lig'-u-lah*). See *Epiglottis.*

Supermedial (*su-per-me'-de-al*) [*super,* over; *medius,* middle]. Lying above the middle.

Supernasolabialis (*su-per-na-zo-la-be-a'-lis*) [*super,* over; *nasus,* nose; *labium,* lip]. A muscle found in many of the lower animals, the analogue of the levator labii superioris alæque nasi of man.

Supernatant (*su-per-na'-tant*) [*super,* over; *natans,* swimming]. Floating upon the surface of a liquid.

Supernidation (*su-per-nid-a'-shun*) [*super,* over; *nidus,* nest]. Excessive proliferation of the menstrual decidua, resulting sometimes in membranous dysmenorrhea.

Supernumerary (*su-per-nu'-mer-a-re*) [*super,* over; *numerus,* a number]. More than the usual or normal number.

Supernutrition (*su-per-nu-trish'-un*) [*super,* over; *nutrire,* to nourish]. Excessive nourishment. See *Hypertrophy.*

Superoccipital (*su-per-ok-sip'-it-al*) [*super,* over; *occiput,* occiput]. Situated at or near the upper part of the occiput.

Superoxidized (*su-per-oks'-id-īzd*) [*super,* over; ὀξύς, acid]. Having an excess of oxygen above the usual amount which satisfies the combining capacities of the other elements of a body.

Superparasite (*su-per-par'-as-īt*) [*super,* over; *parasite*]. In biology, a parasite of parasites.

Superparasitic (*su-per-par-as-it'-ik*) [*super,* over; *parasite*]. Pertaining to superparasitism.

Superparasitism (*su-per-par'-as-i-tizm*) [*super*, over; *parasite*]. The infestation of parasites by other parasites.

Superposed (*su-per-pōzd'*) [*super*, over; *ponere*, to place]. Stationed above anything.

Superpurgation (*su-per-pur-ga'-shun*) [*super*, over; *purgation*]. Over-purgation. A term applied in farriery to a diarrhea or flux from the bowels that, at times, is induced by and follows the action of a physic. It is accompanied by much irritation or even inflammation of the bowels, and is always serious.

Supersacral (*su-per-sa'-kral*) [*super*, over; *sacrum*, sacrum]. Situated over the sacrum.

Supersalt (*su'-per-sawlt*) [*super*, over; ME., *salt*, salt]. In chemistry, any salt containing an excess of acid. An acid, as distinguished from a basic salt.

Supersaturate (*su-per-sat'-u-rāt*) [*super*, over; *saturare*, to saturate]. To saturate to excess.

Supersaturated (*su-per-sat'-u-ra-ted*) [*super*, over; *saturare*, to saturate]. A condition in which there is more of a substance dissolved in a liquid than would suffice to saturate it under ordinary conditions.

Supersaturation (*su-per-sat-u-ra'-shun*) [*super*, over; *saturare*, to saturate]. The operation of saturating to excess.

Superscapular (*su-per-skap'-u-lar*). Same as *Supra-scapular*.

Supersecretion (*su-per-se-kre'-shun*) [*super*, over; *secernere*, to secrete]. Excessive secretion.

Supersphenoid (*su-per-sfen'-oid*) [*super*, over; *sphenoid*]. Situated cephalad or dorsad of the sphenoid bone.

Supersquamosal (*su-per-skwa-mo'-zal*) [*super*, over; *squama*, scale]. A bone of the skull of ichthyosaurus, behind the postfrontal and postorbital.

Supertemporal (*su-per-tem'-po-ral*) [*super*, over; *temporal*]. Situated high up in the temporal region.

Supervenosity (*su-per-ve-nos'-it-e*) [*super*, over; *venosus*, venous]. The condition in which the blood has become venous to a high degree.

Supervention (*su-per-ven'-shun*) [*super*, over; *venire*, to come]. That which is added; an extraneous, or unexpected condition added to another, as the supervention of septicemia, or other complication in disease.

Supervolute (*su'-per-vo-lūt*) [*super*, above; *volvere*, to roll]. In biology, that form of estivation in which the gamophyllous calyx or corolla is both plicate and twisted, as in the corollas of stramonium and morning-glory.

Supination (*su-pin-a'-shun*) [*supinatio; supinus*, on the back]. The attitude of one lying upon the back; the act of turning or lying upon the back; the turning of the palm of the hand upward. In medicine, the condition of being supine.

Supinator (*su'-pin-a-tor*). See *Muscles, Table of*.

Supine (*su'-pīn*) [*supinus*, back]. Lying on the back face upward, or palm upward.

Suppage (*sup'-āj*) [*sup*, age]. A food that may be supplied.

Suppedaneous (*sup-ed-a'-ne-us*) [*suppedaneus; sub*, under; *pes*, foot]. Pertaining to the sole of the foot.

Supple (*sup'-l*) [ME., *souple*, pliant]. Pliant, flexible. **S.-back**, a term applied in the neighborhood of Aberdeen to caries of the vertebræ in lambs.

Supplemental (*sup-le-men'-tal*) [*supplementum*]. Additional. **S. Air.** See *Air*. **S. Bags.** See *Anesthetic*.

Support (*sup-ort'*) [*supportare*, to carry]. 1. The act of holding anything in its position. 2. Any appliance acting as a supporter.

Supporter (*sup-or'-ter*) [*supportare*, to carry]. An apparatus intended to aid in supporting a prolapsed organ (as the uterus), or a pendulous abdomen.

Suppositious (*sup-oz-it-ish'-us*) [*suppositicius*, substituted]. Spurious; not genuine. **S. Children**, pretension by a woman, for purposes of extortion, of having given birth to a child.

Suppositorium (*su-poz-it-o'-re-um*) [*supponere*, to place under: *gen.*, *Suppositorii; pl.*, *Suppositoria*]. See *Suppository*.

Suppository (*sup-oz'-it-o-re*) [*suppositorium*]. A solid medicated compound designed to be introduced into the rectum, urethra, or vagina. Its consistency is such that while retaining its shape at ordinary temperatures it readily melts at the temperature of the body. The basis of most suppositories is oil of theobroma. For urethral suppositories a mixture of gelatin and glycerin is used. It is generally molded into a conic shape, but is sometimes cylindric or spheric. There is one official suppository.

Suppressed (*sup-prest'*) [*suppressus*, concealed]. Overpowered; subdued. **S. Breathing.** See *Breath-sounds*.

Suppression (*sup-resh'-un*) [*suppressio; sub*, under; *primere*, to press]. A condition of being concealed or retained; applied to the natural excreta of the body. **S. of Menses**, the abnormal abstention of the menses beyond their usual time of appearance. See *Amenorrhea*. **S. of Urine**, a condition due to a renal disorder, with interference with the secretion of urine.

Suppurant (*sup'-u-rant*) [*suppuratio*, suppuration]. 1. Suppurating, or promoting suppuration. 2. An agent which promotes suppuration.

Suppuration (*sup-u-ra'-shun*) [*suppuratio; sub*, beneath; *πῦον*, pus]. The formation of pus. The process following inflammation, whereby the white blood-corpuscles or leucocytes, together with other cells, become the distinctive corpuscles of pus, and thus form an abscess. In this process microörganisms play an important rôle. See, also, *Theories of Inflammation*, under *Theory*.

Suppurative (*sup'-u-ra-tiv*) [*suppuratio*, a suppuration]. 1. Promoting suppuration; producing pus. 2. An agent, medicine, or application that favors suppuration.

Supra- (*su'-prah*) [*supra*, above]. A prefix signifying upon or above. **S.-acromial,** situated above the acromion. **S.-anal,** above the anus, or above the top of the abdomen. **S.-axillary,** above the axilla or above the axil.

Supra-auricular (*su-prah-aw-rik'-u-lar*). Situated or occurring above the external ear. **S. Point.** See *Craniometric Points*.

Suprabranchial (*su-prah-brang'-ke-al*) [*supra*, above; *branchiæ*, gills]. Above the gills.

Suprabuccal (*su-prah-buk'-al*) [*supra*, above; *bucca*, mouth]. Above the buccal region.

Supracephalic (*su-prah-sef-al'-ik*) [*supra*, above; *κεφαλή*, head]. Placed on the head.

Suprachoroid (*su-prah-ko'-roid*) [*supra*, above; *choroid*]. Situated above the choroid or the choroid plexus.

Supraciliary (*su-prah-sil'-e-a-re*). Same as *Supra-ciliary*.

Supraclavicle (*su-prah-klav'-ik-l*) [*supra*, above; *clavis*, key]. In biology, a distinct portion of the scapular arch of certain fishes (Dory, Sturgeon).

Supraclavicular (*su-prah-kla-vik'-u-lar*) [*supra*, above; *clavis*, collar-bone]. Above or upon the clavicle.

Supracommissure (*su-prah-kom'-ish-ūr*) [*supra*, above; *commissura*, commissure]. The commissure of the brain just in front of the stalk of the epiphysis.

Supracondylar (*su-prah-kon'-dil-ar*) [*supra*, above; *condyle*]. Situated above the condyles. **S. Foramen**, (1) the posterior condyloid foramen of the occipital bone; (2) a constant foramen in the inner condyloid ridge of the humerus. **S. Ridges**, ridges on the shaft of the humerus extending upward from the condyles.

Supracondyloid (*su-prah-kon'-dil-oid*). Same as *Supracondylar*.

Supracostal (*su-prah-kos'-tal*) [*supra*, above; *costa*, rib]. Situated above a rib or above the ribs.

Supradiaphragmatic (*su-prah-di-af-rag-mat'-ik*) [*supra*, above; *diaphragm*]. Situated above the diaphragm.

Supradorsal (*su-prah-dor'-sal*) [*supra*, above; *dorsum*, back]. Dorsal; placed dorsally.

Supraesophageal (*su-prah-e-so-faj'-e-al*) [*supra*, above; *οισοφάγος*, esophagus]. Situated above the gullet.

Suprafoliaceous (*su-prah-fo-le-a'-shus*) [*supra*, above; *folium*, leaf]. In biology, inserted upon the stem above the axil of a leaf.

Suprafoliar (*su-prah-fo'-le-ar*) [*supra*, above; *folium*, leaf]. In biology, growing upon a leaf.

Supraglottic (*su-prah-glot'-ik*) [*supra*, above; *γλοττις*, glottis]. Situated within the larynx and above the vocal bands.

Suprahyoid (*su-prah-hi'-oid*) [*supra*, above; *hyoid*]. Situated above the hyoid bone.

Supra-iliac (*su'-prah-il'-e-ak*) [*supra*, above; *ilium*, ilium]. Above or at the upper end of the ilium.

Supra-ilium (*su-prah-il'-e-um*) [*supra*, above; *ilium*, ilium]. A proximal epiphysis of the sacral end of the ilium of some animals.

Supra-intestinal (*su-prah-in-test'-tin-al*) [*supra*, above; *intestine*]. Above the intestine.

Supralabial (*su-prah-la'-be-al*) [*supra*, above; *labium*, lip]. Pertaining to or situated above the upper lip.

Supramalleolar (*su-pra-mal-e'-o-lar*) [*supra*, above; *malleolus*, malleolus]. Above the malleoli. **S. Amputation**, removal of the leg at the lower portion above the malleoli.

Supramammary (*su-prah-mam'-ar-e*) [*supra*, above; *mamma*, breast]. Above the mammæ.

Supramarginal (*su-prah-mar'-jin-al*) [*supra*, above; *marginal*]. Bounding the Sylvian fissure on the upper side, as the supramarginal convolution.

Supramaxilla (*su-prah-maks-il'-ah*) [*supra*, above; *maxilla*, maxilla]. The supramaxillary bone.

Supramaxillary (*su-prah-maks'-il-a-re*) [*supra*, above; *maxilla*, maxilla]. Relating to the superior maxilla.

Supranasal (*su-prah-na'-zal*) [*supra*, above; *nasus*, nose]. Above the nose. **S. Point.** See *Craniometric Points*.

Supraneural (*su-prah-nu'-ral*) [*supra*, above; *νεῦρον*, nerve]. Over or above the neural axis.

Supra-occipital (*su-prah-ok-sip'-it-al*) [*supra*, above; *occiput*, occipital bone]. Situated above the occipital bone; also, the upper part of the occipital bone.

Supra-orbital (*su-prah-or'-bit-al*) [*supra*, above; *orbita*, orbit]. Situated above the orbit of the eye. **S. Arch or Ridge**, the curved prominent margin forming the upper boundary of the orbit. **S. Foramen**, a foramen at the inner third of the orbit. It transmits the supraorbital artery, vein, and nerve. Sometimes it is incomplete, being but a notch or groove, and then is called the *S. Notch*. **S. Point.** See *Craniometric Points*.

Suprapatellar (*su-prah-pat-el'-ar*) [*supra*, above; *patella*, patella]. Over or above the patella.

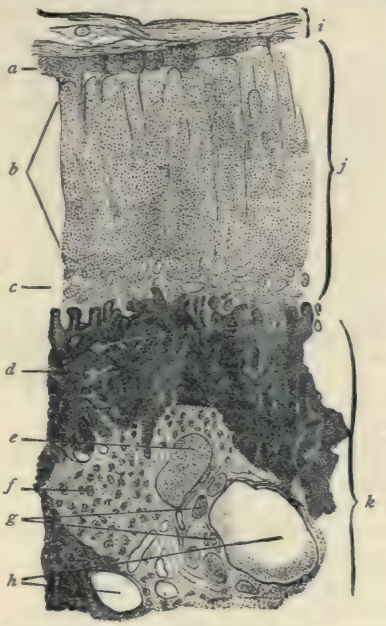
Suprapedal (*su-prah-ped'-al*) [*supra*, over; *pes*, foot]. Above the foot.

Suprapharyngeal (*su-prah-far-in'-je-al*) [*supra*, above; *φάρυγξ*, pharynx]. Above the pharynx.

Supraplex (*su'-prah-pleks*) [*supra*, above; *plexus*, plexus]. One of the plexuses of the brain of some animals.

Supraplexal (*su-prah-pleks'-al*) [*supra*, above; *plexus*, plexus]. Pertaining to the supraplex.

Suprapontile (*su-prah-pon'-til*) [*supra*, above; *pons*, bridge]. Situated or occurring above the pons.



Suprapromontorence (*su-prah-prom-on'-to-rens*) [*supra*, above; *promontorence*]. The convex eminence caused by the course of the facial canal over the oval window and inferior semicircular canal above. Called, also, *Petro-mastoidean Canal*.

Suprapubic (*su-prah-pu'-bik*) [*supra*, above; *pubis*, pubis]. Situated or occurring above the pubes, as a suprapubic operation.

Suprapygal (*su-prah-pi'-gal*) [*supra*, above; *pyga*, rump]. Above or over the rump.

Suprarectus (*su-prah-rek'-tus*) [*supra*, above; *rectus*, straight]. The rectus superior muscle of the eye.

Suprarenal (*su-prah-re'-nal*) [*supra*, above; *ren*, the kidney]. Above the kidney; applied especially to the suprarenal capsules or bodies. **S. Bodies**

TRANSVERSE SECTION OF THE HUMAN SUPRARENAL CAPSULE. × 50. (*From Stirling.*)

a. Zona glomerulosa. *b*. Z. fasciculata. *c*. Z. reticularis. *d*. Strands of cells of the medulla. *e*. Transverse section of a nerve. *f*. Ganglionic cells. *g*. Transverse section of bundles of smooth muscle. *h*. Transverse section of a vein. *i*. Capsule. *j*. Cortex. *k*. Medulla.

or **Capsules**, small, flattened, ductless bodies, the adrenals, somewhat glandular in appearance, situated just above the kidneys. Their function is not known.

Suprascapula (*su-prah-skap'-u-lah*) [*supra*, over; *scapula*, scapula]. A bone of the shoulder-girdle in certain fishes.

Suprascapular (*su-prah-skap'-u-lar*) [*supra*, above; *scapula*, the shoulder-blade]. Situated above the shoulder-blade. **S. Notch.** See *Notch*.

Supraseptal (*su-prah-sep'-tal*) [*supra*, above; *septum*, septum]. Situated above a septum.

Supraserratus (*su-prah-ser-a'-tus*) [*supra*, above; *serra*, saw]. The serratus posticus superior muscle.

Supraspinal (*su-prah-spi'-nal*) [*supra*, above; *spina*, the spine]. Situated on the spine or above its origin.

Supraspinales (*su-prah-spi-na'-lēz*). See *Muscles, Table of.*

Supraspinate (*su-prah-spi'-nāt*). See *Supraspinous.*

Supraspinatus (*su-prah-spi-na'-tus*) [*supra*, above; *spina*, spine]. A name given to various organs situated upon the spine or above its origin.

Supraspinous (*su-prah-spi'-nus*) [*supra*, above; *spina*, spine]. Situated over the spinous process of a vertebra. **S. Fossa,** the triangular depression above the spine of the shoulder-blade. **S. Muscle.** See *Muscles, Table of.*

Suprastapedial (*su-prah-sta-pe'-de-al*) [*supra*, above; *stapes*, stapes]. Above the stapes.

Suprasternal (*su-prah-ster'-nal*) [*supra*, above; στέρνον, sternum]. Cephalad of the sternum.

Supratemporal (*su-prah-tem'-po-ral*) [*supra*, over; *tempus*, time]. Over the temporal region.

Suprathoracic (*su-prah-tho-ras'-ik*) [*supra*, over; θώραξ, thorax]. Above the thorax.

Supratrochlear (*su-prah-trok'-le-ar*) [*supra*, above; *trochlea*, pulley]. Situated or occurring above any trochlear part, but particularly above the trochlea of the humerus. See *Trochlea.*

Supratympanic (*su-prah-tim-pan'-ik*) [*supra*, over; *tympanum*, tympanum]. Above the tympanum.

Supravaginal (*su-prah-vaj'-in-al*) [*supra*, over; *vagina*, vagina]. Above the vagina.

Sura (*su'-rah*) [*sura*]. The calf of the leg. The prominence formed by the gastrocnemius muscle.

Sural (*su'-ral*) [*suralis; sura*, calf]. Pertaining to the calf of the leg. **S. Nerve, Superficial,** that formed by the junction of the external cutaneous of the peroneal and the communicantes fibulares. **S. Vein,** one situated just beneath the skin of the calf; it opens into the popliteal vein.

Suralimentation (*sur-al-im-en-ta'-shun*) [*super*, over; *alimentation*]. The method of forced feeding or over-alimentation sometimes employed in pulmonary tuberculosis and other diseases.

Suranal (*sur-a'-nal*). Same as *Supra-anal.*

Surcingle (*sur'-sin-gl*) [*super*, over; *cingulum*, a belt]. The tail, or narrow end, of the corpus striatum.

Surculigerous (*sur-ku-lij'-er-us*) [*surculus*, a sucker; *gerere*, to bear]. Producing a sucker.

Surculose, Surculous (*sur'-ku-lōz, sur'-ku-lus*) [*surculus*, a sucker]. Producing suckers.

Surculus (*sur'-ku-lus*) [L., a twig, shoot: *pl.*, *Surculi*]. In biology, a sucker.

Surcurrent (*sur-kur'-ent*) [*sub*, under; *currere*, to run]. In biology, denoting a leafy expansion running up the stem.

Surditas (*sur'-dit-as*). Synonym of *Deafness.* **S. verbalis.** See *Aphasia.*

Surdity (*sur'-dit-e*). See *Deafness.*

Surdomute (*sur'-do-mūt*) [*surdus*, deaf; *mutus*, mute]. A deaf and dumb person.

Surdomutitas (*sur-do-mu'-tit-as*) [*surdus*, deaf; *mutus*, mute]. Deaf-muteness; deaf-mutism.

Surdus (*sur'-dus*). See *Deaf.*

Suren (*su'-ren*) [Ger.]. The old German name for the pustules of scabies; later *Sarcoptes* were named *Suren*, which was finally Latinized by Hildegard and others into *surones, suriones.*

Surface (*sur'-fās*) [Fr., *surface*]. 1. The exterior of a body. 2. The face or faces of a body; a term frequently used in anatomy in the description of bones. **S.-wells,** those which obtain their supply from the subsoil water.

Surfeit (*sur'-fit*) [Fr., *surfait*, excessive]. A sense of fulness approaching nausea, arising from excess i eating or drinking. More than enough.

Surgeon (*sur'-jun*) [ME., *sourgeon*, surgeon]. On who practises surgery. See *Chirurgeon.* **S.s' Agaric** See *Agaricus.* **S.-apothecary,** in England, on who is licensed to practise by the Royal College o Surgeons and by the Apothecaries' Society. **S. aurist,** an otologist. **S.-dentist,** a dentist who pra tises the surgical as well as the mechanical parts of h profession. **S.-general,** the title of certain surgeo of high rank, chiefly in the military and naval service **S.-generalship,** the office of a surgeon-genera **S.-ship,** the office of a surgeon. **S., Veterinary** one who treats diseases of the domestic animals.

Surgeoncy (*sur'-jun-se*) [ME., *sourgeon*, surgeon The office of surgeon, military or naval.

Surgery (*sur'-jer-e*) [ME., *surgerie*, surgery]. S *Chirurgery.* Formerly that branch of medicine co cerned with manual operations under the direction the physician. The scope of the word is no widened, and is so bound up with general medici that a strict and succinct definition is impossible. T strumental and manual operative work is still t chief idea, and, so far as it is related to diseases co monly or possibly requiring operative procedure, su gery usually includes the treatment of systemic abno malities. The term, as limited to a special bran of medical science, as *obstetric, gynecologic, aura ophthalmic,* etc., is growing into disuse, while, at t same time, the division of these specialties has na rowed the field of work of surgery as now common understood. The surgeon has recouped himself the inclusion in his department of many subjects n strictly requiring operative treatment, such as infla mation, fever, microbiology, syphilis, etc., etc. **S Antiseptic,** the application of antiseptic methods the treatment of wounds. **S., Conservative,** me ures directed to the preservation rather than to t removal of a part. **S., Military,** that pertaining gunshot wounds and other injuries peculiar to milita life. **S., Minor,** includes the lesser surgical ope tions, bandaging, the making and application of splin dressings and sutures, counter-irritation, cauterizatio blood-letting, vaccination, etc. **S., Operative,** ref to the performance of operations. **S., Orthoped** the remedy of deformities by manual and instrumen measures. **S., Plastic,** repair of absent or defecti tissue by transference of tissue from another part person. See *Transplantation, Autoplasty, Rhi plasty,* etc. **S., Railway,** deals with injuries receiv on railways. **S., Veterinary,** the surgery of domes animals.

Surgical (*sur'-jik-al*) [ME., *surgerie*, surgery]. Perta ing to surgery. **S. Fever.** See *Traumatic Fever.* **Insanity.** See *Insanity, Confusional.* **S. Kidn** suppurative disease of the kidney. **S. Knot.** S *Knot.* **S. Sore-throat,** sore-throat due to the abso tion of septic matters in hospitals; it sometimes tacks interne surgeons and nurses. **S. Tuberculos** tuberculous disease that may be reached by operat treatment, *e. g.*, that involving glands, joints, bo and the like.

Surprise (*sur-prīz'*) [ME., *surprisen*, to surprise]. strike with sudden astonishment; to come upon s denly. **S. Bath.** See *Bath.* **S., Cerebral,** insta taneous and temporary stupor caused by mental sh or by a sudden lesion of the brain.

Surra, or Surrah Disease (*soor'-rah*) [native name India]. The name given by English army veterin surgeons to an epizoötic pernicious anemia in hor mules, and camels, associated with the presence of infusorian (*Trypanosoma evansi*, Balbiani). It has

times incapacitated the English cavalry service in India, killing 50 per cent. of the horses. See *Parasites (Animal)*, *Table of*.

surrogate (*sur'-o-gāt*) [*surrogatus*, substituted]. Any medicine or ingredient used as a substitute for another and more expensive ingredient, or one to which there is a special objection in any particular case.

sursumduction (*sur'-sum-duk'-shun*) [*sursum*, upon; *ducere*, to lead]. The power of the two eyes of fusing two images when one eye has a prism vertically before it.

survival (*sur-vi'-val*) [*super*, over; *vivere*, to live]. In biology, the persistence of an individual or race, after the general extinction of related forms. **S. of the Fittest.** See *Selection, Natural*, and *Evolution*.

susceptible (*sus-sep'-tib-l*) [*suscipere*, to undertake]. Sensitive to an influence. In pathology, liable to become affected with a disease.

suspended (*sus-pen'-ded*) [*suspendere*, to hang up]. 1. Hanging; applied to an ovule hanging from the ovarian wall, or a seed from the summit of a cell. 2. Interrupted. **S. Animation,** a term sometimes applied to the temporary cessation of the vital functions. It may be due to asphyxia, to syncope, or to the trance-like condition that closely simulates death, in which the patient may remain for some hours or even days. **S. Matter,** undissolved particles diffused throughout a liquid.

suspension (*sus-pen'-shun*) [*suspensio; sub*, under; *pendere*, to hang]. The act or condition of hanging, as applied to an organ or part. Also, a mode of treatment of certain diseases, especially tabes dorsalis, in which the patient is so placed that the whole weight of the body hangs upon the neck, the head being supported at the chin and the occiput. The stretching of the spinal cord sometimes removes the morbid process in a manner at present not well understood; also, that condition of a finely divided solid in which it is held undissolved in a liquid. **S.-treatment.** See under *Suspension*.

suspensor (*sus-pen'-sor*) [*suspendere*, to suspend]. In biology, a term applied to the chain of cells formed by division of the germ cell in the embryo-sac previous to the formation of the embryo. A *Suspensorium*. See *Pro-embryo*.

suspensorium (*sus-pen-so'-re-um*) [*sub*, under; *pendere*, to hang]. That upon which anything hangs for support. **S. hepatis,** the suspensory ligament of the liver. **S. testis,** the cremaster muscle. **S. vesicæ,** the superior false ligament of the urinary bladder.

suspensory (*sus-pen'-so-re*) [*sub*, under; *pendere*, to hang]. Designed or useful for suspension. Suspending. **S. Bandage,** a supporting bandage for the scrotum. **S. Ligament.** See *Ligament* and *Zona ciliaris*. **S. Ligament of the Lens.** See *Zonula of Zinn*. **S. Triangle.** See *Triangle*.

suspiral (*sus'-pir-al*) [*suspirare*, to breathe out]. A breathing-hole.

suspiration (*sus-pi-ra'-shun*) [*suspiratio*]. A sigh, *q. v.*; the act of sighing.

suspirious (*sus-pi'-re-us*) [*suspiriosus*]. Characterized by sighing.

suspirium (*sus-pi'-re-um*) [L.: *pl.*, *Suspiria*]. A sigh.

sustentacular (*sus-ten-tak'-u-lar*) [*sustentaculum*, *sustentare*, to support]. Pertaining to or serving as a sustentaculum. **S. Cells,** a name given to certain supporting cells in the testicle. **S. Tissue,** supporting tissue.

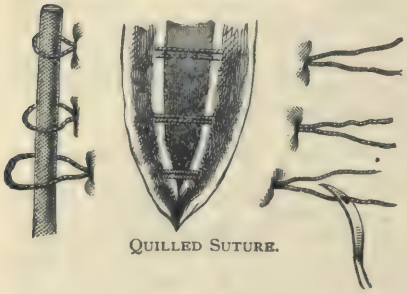
sustentaculum (*sus-ten-tak'-u-lum*) [*sustentare*, to support]. A support. **S. lienis,** the suspensory ligament of the spleen. **S. tali,** a process of the os calcis supporting the astragalus.

Susurration (*sus-u-ra'-shun*) [*susurratio*]. A murmur, or susurrus.

Susurrus (*su-su'-rus*) [L.]. A soft murmur in aneurysm, cardiac diseases, contracting muscle, etc. **S. aurium.** See *Tinnitus aurium*.

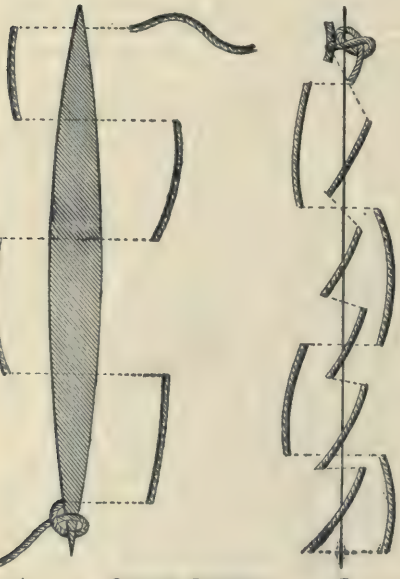
Sutela (*su-te'-lah*) [L.]. To sew. See *Suture*.

Sütügin's Method. A method of dressing the umbilical cord. The navel, funis, and stump are powdered with pure gypsum, and the cord is wrapped in hygroscopic cotton-wool sprinkled with the same powder. The dressing is changed twice daily. The cord in a short time becomes mummified.



Sutura (*su-tu'-rah*) [L.]. See *Suture*.

Sutural (*su'-tu-ral*) [*sutura*, suture]. Pertaining to or having the nature of a suture.



Suture (*su'-tūr*) [*sutura*, suture]. 1. A line of joining or closure; a seam, raphe. 2. A stitch used in closing the lips of a wound. **S., Antiseptic,** the material used has been made aseptic by boiling, or by some other germicidal measure. **S., Appolito's,** a continued Gély's suture. **S. of Apposition,** a superficial suture, including only the skin, and employed to secure accurate apposition of the margins of the latter. **S. of Approximation,** one which is passed deeply through the lips of a wound to secure apposition of the deeper tissues. **S., Base-ball,** a continuous suture all around the wound. It has been employed in complete division of the intestine. **S., Béclard's,** a modification of *S., Bertrandi's*. The needle is threaded with a white and a colored thread; in withdrawing the suture the white thread is withdrawn from one end and the colored thread from the other. **S., Bell's** (*B.*), a modification of the glovers' suture, in which the needle is passed from within out alternately on the two sides of the wound. **S., Bertrandi's,** *à points passés;* a continuous suture passed through and through, back and forth. **S., Bishop's,** an interrupted intestinal suture introduced on the mucous surface of the bowel, and the knots tied alternately on each side of the wound. **S., Bouisson's** (*intestinal*), five pins are passed in and out on each side of the wound, which is closed by drawing the pins together by sutures introduced in the intervals. **S., Bozeman's,** or **Bozeman's Button.** See *S., Button*. **S., Breidenbach's,** Lembert sutures tied in the lumen of the bowel. **S., Buried,** a suture employed to approximate structures in the depths of wounds, the superficial tissues being brought together over them. Buried sutures are completely covered by skin and do not involve this structure at all. **S., Button,** the use of button-like discs to prevent the thread from cutting through the tissues and to bring large masses in better apposition. **S., Catgut,** a suture in which the material employed is catgut. **S., Circular,** one that is applied to the entire circumference of a divided organ, as the intestine. **S., Circumvoluted.** See *S., Twisted*. **S., Clamp,** the shotted suture of Sims. **S., Clavate.** See *S., Quilled*. **S. of Coaptation.** See *S. of Apposition*. **S., Cobblers',** a suture made by arming a needle with two threads. **S., Compound.** See *S., Quilled*. **S., Connell's,** one for uniting intestine after circular resection. About half the lumen of the bowel is united by stitching through all the coats of both ends, from the mucous surface, back and forth. The remaining portion is closed by continuous sutures, which are passed parallel with the margins of the wound and carried across the latter. **S., Continued,** or **Glovers',** one composed of a number of interrupted sutures, which are not cut apart. **S., Cranial,** the line of union of two or more cranial bones. There are three sets of cranial sutures: those at the base of the skull, those at the

SUTURES FOR IMMEDIATE GASTROSTOMY.

side, and those at the vertex. These are as follows: *S., Basilar*, the junction between the basilar surface of the occipital bone and the posterior surface of the body of the sphenoid. *S., Coronal* (fronto-parietal), the union of the frontal with the parietal bones transversely across the vertex of the skull. *S., Dentate*, an irregular tooth-suture, as between the parietal bones. *S., Ethmoido-frontal*, the union between the frontal and ethmoid bones. *S., Ethmo-lacrymal*, the union between the lacrymal and ethmoid bones. *S., Ethmo-sphenoid*, the union between the sphenoid and ethmoid bones. *S., False*, any suture in which there is interlocking of the bones without serration. *S., Frontal*, a suture which at birth joins the two frontal bones from the vertex to the root of the nose. The bones afterward become one by its obliteration. *S., Fronto-malar*, the union between the malar and frontal bones. *S., Fronto-maxillary*, the union between the superior maxillary and frontal bones. *S., Fronto-nasal*, the union between the nasal and frontal bones. *S., Fronto-parietal.* See *Coronal Suture.* *S., Fronto-sphenoid*, the union between the alæ of the sphenoid bone and the frontal bone. *S., Fronto-temporal*, the union between the frontal and temporal bones. *S., Infra-orbital*, a suture sometimes found in the line of the infra-orbital canal. *S., Intermaxillary*, the union between the superior maxillary bones. *S., Internasal*, the union between the nasal bones. *S., Interparietal.* See *S., Sagittal.* *S., Jugal.* See *S., Sagittal.* *S., Lambdoid*, the union between the two superior borders of the occipital bone and the parietal bones. *S., Lepidoid.* See *S., Squamo-parietal.* *S., Longitudinal.* See *S., Sagittal.* *S., Masto-occipital.* See *S., Occipito-mastoid.* *S., Masto-parietal.* See *S., Parieto-mastoid.* *S., Maxillo-lacrymal*, the union between the lacrymal and superior maxillary bones. *S., Maxillo-premaxillary*, the union of the premaxillary portion of the superior maxillary with the rest of the bone. *S., Medio-frontal.* See *S., Frontal.* *S., Metopic.* See *S., Frontal.* *S., Naso-maxillary*, the union between the superior maxillary and nasal bones. *S., Neurocentral*, the cartilages between the bodies of the dorsal vertebræ, posterior to the points of articulation of the ribs with the main portion. *S., Occipital.* See *S., Lambdoid.* *S., Occipito-mastoid*, the union between the mastoid portion of the temporal bone and the occipital bone. *S., Occipito-parietal.* See *S., Lambdoid.* *S., Palatine*, the union between the palate bones. *S., Palatine, Transverse*, the union between the superior maxilla and the palatine processes of the palate bone. *S., Parieto-mastoid*, the union between the mastoid portion of the temporal bone and the parietal bone. *S., Petro-occipital*, the union between the occipital bone and the petrous portion of the temporal. *S., Petro-sphenoid*, the union between the ala magna of the sphenoid bone and the petrous portion of the temporal. *S., Sagittal*, the union between the medial margins of the parietal bones. *S., Scaly.* See *S., Squamo-parietal.* *S., Serrated*, a suture in which the interlocking indentations and projections are finer than those of a dentate suture. *S., Spheno-malar*, the union between the malar bone and the ala magna of the sphenoid. *S., Spheno-parietal*, the union between the ala magna of the sphenoid bone and the parietal bone. *S., Spheno-petrosal.* See *S., Petro-sphenoid.* *S., Spheno-squamous.* See *S., Squamo-sphenoid.* *S., Spheno-temporal*, the union between the temporal bones and the sphenoid. *S., Squamo-parietal, S., Squamosal*, the union between the squamous portion of the temporal bone and the parietal bone. *S., Squamo-sphenoid*, the union between the great wing of the sphenoid and the squamous portion of the temporal bone. *S., Squamous.* See *S., Squamo-parietal.* *S., Temporo-occipital.* See *S., Occipito-mastoid.* *S., Temporo-parietal*, the union between the parietal and temporal bones, made up of the parieto-mastoid and squamosal sutures. *S., Transverse* (*frontal*). See *S., Coronal.* *S., True*, a union between bones by the interlocking of projections and indentations. *S., Zygomatic*, a union between the temporal bone and the zygomatic process of the superior maxilla. **S., Cushing's Right-angled Continuous Intestinal,** the needle is introduced parallel with the wound on the serous surface and carried back and forth across the wound in this way. **S., Czerny's** (*intestinal*), the needle is passed from the serous surface through the wound, down to, but not including, the mucous membrane, and through the wound on the opposite side and out on the serous surface. **S., Czerny-Lembert,** the application of Lembert sutures after the Czerny sutures are in place. **S., Deep.** See *S., Buried.* **S., Distance,** a suture used in uniting tendons, nerves, etc. **S., Dry,** adhesive-plaster strips are applied to the lips of the wound, and these are drawn together by suturing the selvaged edge of the strips. **S., Duplay's Tendon.** See *S., Tillaux and Duplay's.* **S., Dupuytren's,** a continued Lembert suture. See *Illustration.* **S., Duverger's,** a suture of the intestine in which the trachea of a calf is used as the basis of support. **S., Emmert's,** a suture for intestinal wounds. It consists of a series of double Lembert sutures. See *Illustration.* **S., Furriers'.** See *S., Glovers'.* **S., Gaillard's,** a suture for entropion. A threaded needle is passed in the lid near its free margin and at the junction of its middle and outer thirds and brought out about a thumb's breadth from the margin; the other end of the thread is passed parallel to and near the first, and the ends are tied over a roll of lint. A similar suture is passed at the junction of the middle and inner thirds. **S., Garengeot's,** the glovers' suture of the intestine, in which the stitches are placed farther apart than usual. **S. for Gastrostomy,** a suture is made to surround the proposed opening in the stomach, with loops left at convenient intervals. By means of a needle supplied with a hook these loops are drawn through the abdominal wall around the incision, and quills introduced through the loops, after which the suture is drawn tight. This approximates the stomach firmly to the abdominal wall. See *Illustration.* **S., Gély's,** an intestinal suture applied by a thread with a needle at each end. The wound is closed by a series of cross-stitches. See *Illustration.* **S., Glovers',** a continued suture in which the needle is passed through the loop of the preceding stitch each time. **S., Gussenbauer's,** a figure-of-8 suture for the intestine, intended to accomplish the same result as the Czerny-Lembert suture. **S., Halstead's,** a plain quilt-suture, a modification of Lembert's suture. See *Illustration.* **S., Hare-lip, or Twisted,** the edges of the wound are transfixed with pins and approximation secured by twisting or wrapping the ends of the pins with thread. See *Illustration.* **S., Harris's,** a suture for intestinal wounds. The mucous membrane of the distal end is denuded with a curet for one or two lines and the upper end invaginated, and sutures passed. **S., Horse-hair,** the strong hairs of the mane or tail of the horse, prepared as sutures. **S., Implanted** hare-lip pins are passed through the skin on each side of the wound and parallel with it, which is then approximated by twisting thread around the exposed extremities of the pins. **S., India-rubber** the same as S., *Twisted*, except that small rubber rings are used instead of string. **S., Interrupted** a series of sutures passed through the margins of

he wound, and each of which is knotted. See *Illustration*. **S., Jobert's,** a suture for intestinal wounds. This author has described three different forms of suture, which have been called after his name. See *Illustration*. **S., Knotted.** See *S., Interrupted*. **S., Lace,** a suture in which a small curved needle is repeatedly introduced around the wound, forming a continuous suture encircling the deficiency (fistula). **S., Lapeyronie's,** a modification of *S., Palfyn's*, the thread being passed through the mesentery. **S., Lead-plate,** a suture the ends of which are attached on either side of the wound to lead-plates. **S., Le Dentu's** (*tendon*). See *Illustration*. **S., Ledran's,** intestinal sutures passed through the wound one-fourth inch apart; the threads are tied separately on each side, forming two bundles. **S., Le Fort's** (*tendon*). See *Illustration*. **S., Lembert's,** an intestinal suture in which the needle is passed transversely to the wound through the peritoneal and muscular coats and out again on one side of the wound, and then carried across the wound and made to penetrate the two outer coats as before. See *Illustration*. **S., Littré's,** in cases of gangrene of the intestine, the inferior end is obliterated by ligation and the upper end is attached to the inguinal ring to form an artificial anus. **S., Löffler's,** a suture for intestinal wounds. Interrupted metallic sutures are crossed once and attached to the abdominal wound. **S., Loop.** See *S., Interrupted*. **S., Mansell's,** a suture for complete transverse section of the intestine. The two ends are drawn through a longitudinal slit made for the purpose in one end, and the two sections accurately united by interrupted sutures; the invaginated portion is withdrawn, and the longitudinal slit closed. **S., Mattress,** a continuous suture which is made back and forth through both lips of the wound. **S., Metallic-plate.** See *S., Button*. **S., Nerve,** a suture of fine thread or catgut uniting the divided ends of a nerve. **S., Noose.** See *S., Interrupted*. **S., Palfyn's,** a loop of thread is passed through the intestinal wound, and the ends of which are then secured to the integument. **S., Pancoast's.** See *S., Tongue and Groove*. **S., Pe-rit's,** a suture for intestinal wounds. As many stitches as are required are passed three lines apart, the ends on each side are tied together and then twisted into two bundles. **S., Pin.** See *S., Hare-lip*. **S., Plastic,** a suture devised by J. Pancoast, and used by him for superficial wounds, the extent of the approximated surfaces being enlarged to increase the chance of union. The cut surface of one lip of the wound is beveled to fit into a groove in the other lip. The thread is carried from without inward, first through the outer lip of the groove; then, the beveled lip, and then the deep lip of the groove; then forming a loop on the deep surface of this lip, it is carried again through the same structures in inverse order and at a different place. The free ends are tied over a little roll of adhesive plaster placed on the skin-surface of the grooved lip. **S., Primary,** one that is used to effect immediate closure of the wound. **S., Primo-secondary,** the insertion of sutures at the time of operation, then tamponing the wound. The tampon is removed in from 12 to 48 hours and the sutures tied. **S., Quilled,** a doubled thread passed and tied over quills or a soft catheter; usually employed as sutures of relaxation. See *Illustration*. **S., Quilt,** one similar to *S., Mattress*. **S., Ramdohr,** invagination of the upper portion of the intestine into the lower, followed by suture. **S., Rat-tail,** a material obtained from the rat's tail. **S. of Relaxation,** one that is introduced some distance from the wound-margin, carried through its depths, and made to emerge at some distance on the opposite side. The intention is to relieve the tension of the wound-sutures. **S., Relief.** See *S. of Relaxation*. **S., Reybard,** the employment of thin, oval plates of deal carrying threaded sutures, to unite the divided intestine. **S., Richter's,** a suture for intestinal wounds. Interrupted metallic sutures that are twisted and brought out of the external wound. **S., Rigal's.** See *S., India Rubber*. **S., Ritisch's,** a suture for intestinal anastomosis. The suture is passed through the bowel and lumen from side to side, the ends twisted, and brought out of the external wound. **S., Robinson's,** a suture for uniting the ends of a divided intestine. A rubber tube is inserted in the proximal end and the mucous membrane is denuded for one-half inch to receive the proximal end. A row of sutures is introduced around the circumference. **S., Royal.** See *Royal*. **S., Sabatier's,** the employment of a piece of playing-card saturated with turpentine for the approximation of intestinal wounds. **S., Sailors'.** See *S., Reef*. **S., Sänger's,** in the Cesarean operation the insertion of 8 or 10 deep sutures of silver wire through the uterine incision, followed by 20 or more superficial sutures through the peritoneum. **S., Secondary,** one that is introduced at a period subsequent to the operation, as in cases in which the wound has been tamponed. **S., Sero-serous,** one that brings two serous surfaces together. **S., Shotted,** both ends of the suture are passed through a perforated shot, which is then tightly compressed. **S., Silk-worm Gut,** a suture-material prepared from the "silk-guts" of the silk-worm. **S., Simon's,** a suture for lacerated perineum involving the sphincter ani, in which the rectal mucous membrane, the vaginal mucous membrane, and the skin are sutured separately. **S., Sims'.** See *S., Clamp*. **S., Spiral.** See *S., Glovers'*. **S., Spiroidal,** a continuous spiral intestinal suture. **S., Staple,** a sharpened wire, bent like a staple, is passed through both lips of the wound and secured. **S., Subcuticular,** a buried, continuous suture in which the needle is passed horizontally into the true skin back and forth until the whole wound is closed. **S., Sunk.** See *S., Buried*. **S., Superficial,** one which includes the skin only. **S. of Support.** See *S. of Relaxation*. **S., Symperitoneal,** a sero-serous suture of the peritoneum. **S., Taylors',** the cobbler-stitch used to bring together the flaps after amputation of the cervix uteri. **S. Tendon.** See *S., Le Dentu's, Le Fort's,* and *Wölfler's*. **S., Tobacco-bag.** See *Stoltz's Operation* in *Operations, Table of*. **S., Tongue and Groove,** one margin of the wound is beveled on each side and a V-shaped section is taken from the thickness of the other flap along its free margin, longitudinally, to receive the first. This gives a greater extent of raw surface in apposition. See *Illustration*. **S., Triangular** (*of Simon*), a suture for laceration of the perineum through the sphincter ani; the skin, vaginal mucous membrane, and rectal mucous membrane are separately stitched. **S., Twisted.** See *S., Hare-lip*. **S., Uninterrupted.** See *S., Continuous*. **S., Utero-parietal,** suturing of the uterus to the inner surface of the abdominal incision after Cesarean section. **S., Viscero-parietal,** a suture used in the operation of stitching a wounded organ to the abdominal incision. **S., Wölfler's,** an interrupted intestinal suture in which the knots of the stitches in the mucous membrane are tied in the lumen of the bowel in three-fourths of the circumference, and on the outside in the remaining portion. The serous surfaces are then united by Lembert sutures. **S., Wölfler's** (*tendon*). See *Illustration*.

Suzanne's Gland. A pea-sized glandular body found

near the alveolo-lingual sulcus of the mouth close to the median line. It is distinct from the sublingual gland.

Svapnia (*svap'-ne-ah*). Denarcotized opium.

Swab (*swob*) [MD., *swabber*, splash]. A piece of cloth or sponge upon the end of a stick, used in feeding the sick, making applications to the throat, cleansing the mouth and teeth, etc. **S.-stick**, a rod or shaft, one extremity of which is to be wound with cotton.

Swaddle (*swod'-l*) [ME., *swathilen*, to swaddle]. To swathe; to wrap in cloths, as a new-born child.

Swaddling (*swod'-ling*) [ME., *swadling*]. The act of wrapping in a swaddle. **S.-cloth, S.-clout**, a cloth wrapped about a new-born child.

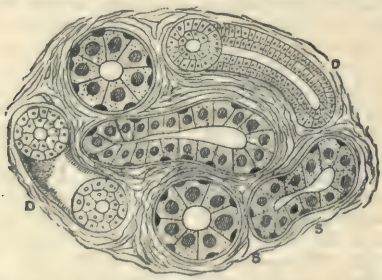
Swallow (*swol'-o*) [ME., *swolowen*, to swallow]. 1. To take into the stomach through the throat. The cavity of the throat and gullet; the esophagus. 2. A fissirostral oscine passerine bird, of the genus *Hirundo*. **S.'s-nest**, the *nidus hirundinis;* a deep fossa of the cerebellum between the commissure of the flocculus and uvula. **S.-tails**, notches on the teeth of a horse.

Swallowing (*swol'-o-ing*) [ME., *swolowen*, to swallow]. Taking into the stomach through the throat and esophagus.

Swamp (*swomp*) [origin obscure]. A piece of low, wet, marshy land. **S.-apple**, a parasitic growth found on swamp-azalea. **S.-dogwood:** 1. Button-bush. 2. A plant allied to *Cornus florida; Cornus sericea*. **S.-fever**, a malarial fever. **S.-itch.** Same as *Army Itch*. **S.-laurel**, *Kalmia glauca*. **S.-milk-weed**, *Asclepias incarnata*. **S.-pine**, *Pinus australis;* broom-pine. **S.-sassafras**, magnolia. **S. Yellow-fever.** See *Hematuria, Malarial*.

Swan Alley Sore. Synonym of *Chancre, Phagedenic*.

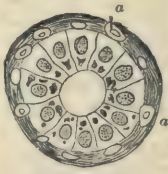
Swarm [ME., *swarm*, a swarm]. A cluster of insects, as bees. **S.-cell.** See *Zoöspore*. **S.-spore.** See *Zoöspore*.



Swarming [ME., *swarmen*, to swarm]. 1. Moving in a swarm. 2. Breeding multitudes. A form of endogenous cell-formation noted in certain algæ (*Confervaceæ, Desmidiaceæ*).

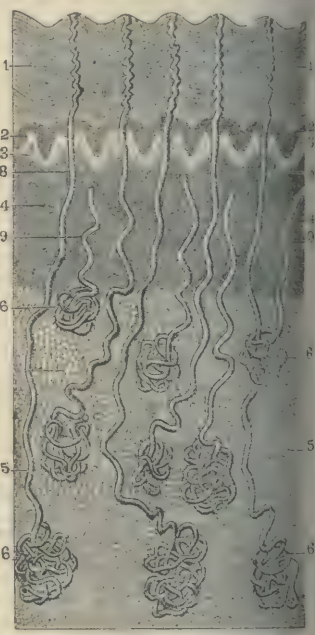
Swarthiness (*swawr'-the-nes*) [ME., *swarty*]. The state of being swarthy.

Swarthy (*swawr'-the*) [ME., *swarthy*]. Dark; tawny.



Swartzia (*swawrt'-se-ah*). See *Panococco*.

Sweat (*swet*) [ME., *swette*, sweat]. The secretion of the sudoriferous glands. It consists of a transparent and normally colorless, aqueous fluid, holding in solution neutral fats, volatile fatty acids, cholesterin, traces of albumin and urea, free lactic acid, sodium lactate, sodium and potassium chlorids, and traces of



SECTION OF PART OF COIL OF A SWEAT-GLAND.
D. Duct. S. Secretory part. × 300. (*From Stirling.*)

alkaline phosphates. **S., Bloody**, purpura affecting the sweat-glands. See *Hematidrosis*. **S., Blue**, perspiration which has a blue color; it is thought by some to be due to oxidation of the colorless indican secreted in the sweat. **S., Cold**, perspiration accompanied by coldness of the surface of the body. **S., Colored.** See *Chromidrosis*. **S., Critical**, the profuse perspiration which occurs at the crisis of a febrile disease. **S., Diaphoretic.** See *S., Cold*. **S.-eczema**, eczema seborrhoicum. **S.-glands**, the small, lobular, reddish bodies situated in the true skin and subcutaneous areolar tissue. Each consists of a convoluted tube from which the excretory duct passes outward through the skin. In its passage through the epidermis the duct is more or less spiral. **S., Green**, sweat having a bluish or green-

TRANSVERSE SECTION OF THE SECRETORY PART OF A SWEAT-GLAND FROM THE AXILLA. *Magnific.*
a. Nuclei of unstriated muscle. (*From Stirling.*)

SWEAT-GLANDS FROM THE PALM OF THE HAND × 20.
1. Horny layer of epidermis. 2. Rete mucosum. 3 Papillary layer. 4. Derma, or true skin. 5. Subcutaneous cellular tissue. 6, 8, 9. Sudoriparous or sweat-glands.

ish color, seen mainly in copper-workers, and due to copper taken into the system by the inhalation of particles or fumes, or with food and drink (*Crocker*). **S.-house**, a room or inclosure furnished with apparatus for subjecting the occupant to the sudorific effects of steam; achicolum. **S., Night**, drenching perspiration occurring at night or whenever the patient sleeps, as in the course of pulmonary tuberculosis. **S., Phosphorescent**, a very rare peculiarity of the sweat, in which it becomes phosphorescent; it has been observed in some cases of miliaria and after eating phosphorescent fish. The phosphorescence is thought to be due to bacilli (*Crocker*). **S., Red**, a peculiar, red perspiration noted in the axillas and genital region, and due to microorganisms which have developed in the hairs of these warm, moist parts.

Sweating (*swet'-ing*) [ME., *swette*, sweat]. The excretion of the contents of the sudoriferous glands in sensible quantities. **S. Fever**, or **S. Sickness.** See *Miliaria* and *Fever, Miliary*. **S., Morbid**, hyperidrosis. **S., Unilateral**, sweating on one side of the body, due usually to disease of the nervous system and often to the pressure of thoracic growths upon the sympathetic.

Swedish (*swe'-dish*) [D., *Zweedsch*, Swedish]. Pertaining to Sweden. **S. Green.** Same as *Rinmann's Green*. **S. Movements**, certain scientific movements intended to exercise and develop the human body. They were originated by Ling, a Swede, in the early part of the nineteenth century. *Passive movements* are such as are applied to the patient without his assistance; *active movements* are performed by the patient

concentric movements are performed by the patient, while the operator or some other power resists; *excentric movements* are performed by some power outside of the patient while he resists. **S. System.** See *Ling's System.*

Sweeny (*swē'-ne*) [origin obscure]. A wasting, or lumbago, of the shoulder-muscles of the horse, generally due to some lameness of the foot or foreleg; it is also called *swinney.*

Sweet (*swēt*) [ME., *swete*, sweet]. A quality of taste of which sugar and honey furnish examples. **S.-bread,** the true sweet-bread, regarded by gourmets as a great delicacy, is the thymus gland of the calf, found occasionally persistent, but as a rule only present in the fetus and young calf, at the ventral side of the trachea, partly without and partly within the chest, between the layers of the anterior mediastinum. It is elongated, of a grayish-white color, and lobulated on its surface. It is commonly known amongst butchers as the "throat-bread." The pancreas is vulgarly termed the "gut-bread" or "belly sweet-bread," and is the article which would be supplied in the great majority of cases by butchers asked for the sweet-bread. See *Pancreas.* **S. Centaury.** See *Cacalia.* **S.-b., Chest,** the thymus gland. **S. Cicely,** the root of *Osmorrhiza longistylis.* An aromatic stomachic, carminative, and expectorant. Dose of the fld. ext. ʒj–ij. Unof. **S. Fern,** the leaves and tops of *Comptonia asplenifolia.* It is astringent, carminative, and alterative. Dose of the fld. ext. ʒss–ij. Unof. **S. Flag.** See *Calamus.* **S. Gale,** the bark of *Myrica gale.* Astringent and stimulant. Dose of the fld. ext. ʒj–ʒss. Unof. **S. Gum,** the bark of *Liquidambar styraciflua.* Tonic and astringent. A popular domestic remedy in diarrhea. Dose of the fld. ext. ʒss–j. The balsam exuding from the tree is much used as a corrigent of fetid breath. Unof. **S. Niter,** sweet spirit of niter, spiritus ætheris nitrosi. **S.-oil.** See *Olive, Oleum.* **S.-scented Water-lily.** See *Nymphæa odorata.* **S. Shrub.** See *Calycanthus.* **S. Sumach.** See *Rhus aromatica.* **S. Wine.** See *Wines.*

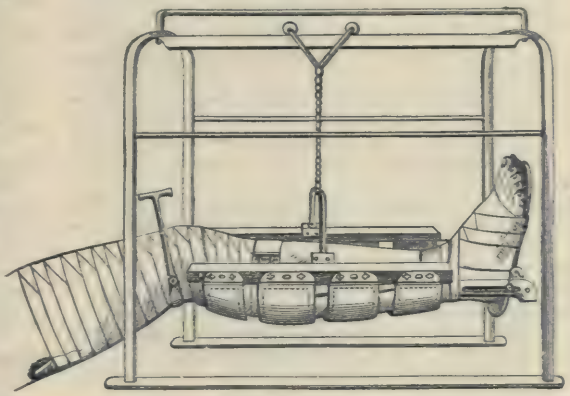
Swell (*swel*) [ME., *swellen*, to swell]. To grow in bulk; to puff out. **S.-bodies** (*Schwellkörper*), Zuckerkandl's term for the venous plexuses found over the turbinated bodies.

Swelled (*sweld*) [ME., *swellen*, to swell]. Swollen. **S. Head.** Synonym of *Actinomycosis.*

Swelling (*swel'-ing*) [ME., *swellen*, to swell]. Any morbid enlargement, inflation, tumor, or protuberance. **S., Albuminous,** cloudy swelling. **S., Blennorrhagic** (*of the knee*), the enlargement of the knee which occurs in gonorrheal synovitis. **S., Cloudy,** swelling of cells due to disturbed nutrition (Virchow). **S., Glassy,** amyloid degeneration. **S., Lacteal,** a swelling of the breast due to obstruction of the lacteal ducts. **S., White,** a disease of the bones which causes them to dilate as if distended by pressure from within. A tumor, usually of the wrist or ankle, due to caries; hydrarthrosis.

Sertia (*swer'-te-ah*). See *Chirata.*

Swim-bladder, or Swimming-bladder. See *Pneumatophore.*



Swimmeret (*swim-er-et'*) [AS., *swimman*, to swim]. In biology, one of the abdominal or swimming limbs of a crustacean.

Swimmers' Cramp. See *Cramp.*

Swimming-bell (*swim'-ing-bel*). See *Nectophore.*

Swine (*swīn*) [ME., *swine*, a pig]. A pig. **S.-bread,** *Tuber cibarium*, an edible plant allied to lycoperdon or puff-ball. **S.-cress,** nasturtium, or water-cress. **S.-fever.** See *Hog-cholera.* **S.-plague,** an infectious disease of swine, appearing in more or less extensive epizoötics, in which usually most of the animals exposed to the infection succumb. It is due to specific bacteria, and is localized in the lungs, giving rise to pneumonia and pleurisy, with secondary involvement of the digestive tract; hence, it is not readily distinguished from hog-cholera. See *Bacillus of Swine-plague*, under *Bacteria, Synonymatic Table of.* **S.-pox,** a disease of swine characterized by inflammatory tubercles on the legs and thighs.

Swing, Salter's, an apparatus consisting of a cradle that moves on wheels along a horizontal bar on an iron framework; it is used in the treatment of fractures of the lower extremity.

SALTER'S SWING.

Swinney (*swin'-e*). See *Sweeny.*

Swiss Tapeworm. The Bothriocephalus latus. See *Parasites* (*Animal*), *Table of.*

Swoon. See *Syncope.*

Sycephalus (*si-sef'-al-us*) [σύν, with; κεφαλή, head]. A double monster having two incomplete heads joined together.

Sychnocarpous (*sik-no-kar'-pus*) [συχνός, many; καρπός, fruit]. In biology, capable of producing fruit many times without perishing.

Sychnuresis (*sik-nu-re'-sis*) [συχνός, long; οὖρον, urine]. Preternaturally slow discharge of urine.

Sycoma (*si-ko'-mah*) [σῦκον, a fig: *pl.*, *Sycomata*]. A condyloma, or wart; a condition characterized by warty or fig-like excrescences on the soft tissues of the body, as the eyelids, tongue, anus, or genitals.

Syconium (*si-ko'-ne-um*) [σῦκον, a fig: *pl.*, *Syconia*]. In biology, the peculiar multiple fruit of the fig, which consists of a fleshy, hollow receptacle containing numerous achenium-like fruits.

Sycosis (*si-ko'-sis*) [σῦκον, a fig]. *Lichen menti; Sycosis non-parasitica; Mentagra; Folliculitis barbæ; Ficosis; Acne mentagra;* an inflammatory, generally chronic, disease, which affects the hair-follicles, particularly of the beard, and due to microbic infection. It is characterized by papules, pustules, and tubercles, perforated by hairs, together with infiltration of the skin and with crusting. More or less scarring and permanent baldness result in long-continued cases. **S., Bacillogenic,** a variety of so-called "non-parasitic" sycosis, ascribed by Tommasoli to the *Bacillus sycosiferus fœtidus.* See *Bacteria, Synonymatic Table of.* **S. barbæ.** Sycosis of the beard. **S. capillitii:** 1. Dermatitis papillaris capillitii, of Kaposi; S. framboesiformis, of Hebra; acne kœloid, of Bazin. 2. Kerion. 3. Pustular eczema of the scalp. **S.,**

Coccogenic, which is caus... the so-called "non-parasitic" sycosis ...ed by an organism belonging to the schizomycetes (... (Unna). **S. contagiosa.** See *S. parasitaria.* **S. ...frambœsiformis.** See *Dermatitis papillaris capillitii.* **S., Hypertrophic.** See *S., Keloid.* **S., Hypho...nic, S., Hyphomycetous,** *S. parasitaria,* of Unna; ... tinea sycosis, the inflammation excited by the *Tric...trophyton tonsurans.* **S., Keloid,** sycosis in which kel...oid degeneration occurs in the cicatrices resulting fr...om the follicular inflammation (Milton). Also calle...d *Ulerythema sycosiforme* (Unna). **S., Lupoid.** See ... *S., Keloid.* **S. mentagra.** See *S. barbæ.* **S., ... Non-parasitic,** sycosis due to the presence of coccoge...nic organisms. See *S., Coccogenic.* **S. non-parasitica.** ... See *S., Coccogenic.* **S. palpebræ marginalis,** syco...sis affecting the edge of the eyelids. **S. parasitaria, S. parasitica,** barbers' itch; a disease of the hair-folli...cles, usually affecting the region covered by the beard, a...nd due to the presence of the *Trichophyton tonsurans.* ... See *S., Hyphogenic.* **S., Parasitic.** See *S. parasita...ria.* **S., Schizomycetic.** See *S., Coccogenic.*

Sycum (*si'-kum*). See *Ficus.*

Sydenham's Chorea. See *Chorea* and *Diseases, Table of.* **S.'s Disease,** chorea. **S.'s Laudanum.** See *Opii* (*Vinum*).

Syderatio (*sid-er-a'-she-o*). See *Sideratio.*

Syfilis (*sif'-il is*). A mode of spelling *Syphilis, q. v.*

Syggignoscism (*sig-jig'-no-sizm*) [σύν, together; γιγνώσκειν, to know]. The agreeing of one mind with another mind. A synonym of *Hypnotism.*

Syggignosticism (*sig-jig-nos'-tis-izm*). See *Syggignoscism.*

Syllabic Utterance. Scanning speech, observed in insular sclerosis; the words are enunciated slowly and separately, and there may be a staccato accentuation of individual syllables.

Syllable-stumbling (*sil'-ab-l-stum'-bling*). A form of dysphasia wherein each sound and syllable can be distinctly uttered, but the word as a whole is spoken with difficulty. It occurs in paretic dementia.

Syllabus (*sil'-ab-us*) [σύλλαβος, a collection]. A compendium containing the heads of a discourse; the main propositions of a course of lectures; an abstract.

Syllepsiology (*sil-lep-se-ol'-o-je*) [σύλληψις, a putting together; λόγος, science]. The physiology of conception.

Syllepsis (*sil-ep'-sis*) [σύλληψις]. Conception, or impregnation.

Sylvester's Method. See *Artificial Respiration.*

Sylvestrene (*sil-ves'-trēn*) [*silvestris,* belonging to a wood], $C_{10}H_{16}$. A substance that occurs in Swedish and Russian turpentine-oil, and may be obtained pure by digesting its hydrochlorid with anilin. It boils at 175–178° C.

Sylvestris (*sil-ves'-tris*). See *Silvestris.*

Sylvian (*sil'-ve-an*) [after *Sylvius*]. Relating to the anatomist Jacques Dubois, Latinized *Sylvius* (1478–1555). **S. Artery,** the middle cerebral artery, lying in the fissure of Sylvius. **S. Convolution.** See *Convolutions, Table of.* **S. Fossa,** the depression at the side of the fetal cerebrum where the insula is subsequently formed.

Sylvius, Aqueduct of. See *Aqueduct.* **S., Fissure of.** See *Fissures, Table of.*

Sym- (*sim-*). An euphonic form of *Syn.*

Symbion, Symbiont (*sim'-be-on, sim'-be-ont*) [σύν, along with; βίος, a life]. In biology, either of two organisms living in intimate association; a commensal.

Symbiosis (*sim-bi-o'-sis*) [σύν, along with; βίος, a life]. In biology, the intimate association of two living organisms, not parent and offspring, male and female, or parasite and host. Commensalism.

Symblepharon (*sim-blef'-ar-on*) [σύν, together; βλέφαρον, the eyelid]. The abnormal adhesion of the eyelids to the eyeball in consequence of burns, wounds, etc. **S., Anterior,** symblepharon of the anterior part of the conjunctival sac, in which the adhesion extends from the lid to the eyeball in such a manner as to admit of the passage of a sound between the two parts. **S., Posterior,** symblepharon of the peripheral part of the conjunctival sac. **S., Total,** symblepharon affecting the entire extent of the eyelid.

Symblepharosis (*sim-blef-ar-o'-sis*) [σύν, with; βλέφαρον, eyelid]. Adhesion of the eyelids to the globe of the eye or to each other.

Symbol (*sim'-bol*) [σύμβολον, a pledge]. A sign or character denoting an idea. The following are commonly employed in medicine: ℞, Recipe, take of; ℈, Scruple; ʒ, Dram; fʒ, Fluidram; ℥, Ounce; f℥, Fluidounce; ♏, Minim. See, also, List of Abbreviations, p. x.

Symboleusis (*sim-bo-lu'-sis*). Synonym of *Consultation.*

Symbolism (*sim'-bol-izm*) [σῦμβολον, a symbol]. The delusional or hallucinational interpretation of all events or objects as having a mystic significance; a habit not uncommon in certain forms of insanity.

Syme's Operation. Amputation at the ankle-joint, the malleoli being sawn through, and a flap made with the skin of the heel. See *Operations, Table of.*

Symele (*sim'-el*). See *Symelus.*

Symelus or **Symmelus** (*sim'-el-us*) [σύν, together; μέλος, limb]. A species of single autositic monster "characterized by imperfect development of the pelvis and lower extremities; by *atresia ani et urethræ;* more or less intimate fusion of the lower extremities and by a twisting of the lower limbs so that the femora are united by the external condyles, the legs by the fibulæ, and the feet, if they exist, by the fibular edge, and little toes, so that the heels look forward."

Symmelic (*sim-el-a'-ik*) [σύν, together; μέλος, limb]. Characterized by ... ate coalition of the limbs.

Symmelus (*sim'-el-us*). See *Symelus.*

Symmetric, Symmetrical (*sim-et'-rik, sim-et'-rik-al*) [σῦν, together; μέτρον, a measure]. Pertaining to, governed by, or exhibiting symmetry. **S. Gangrene.** See *Sphaceloderma.*

Symmetry (*sim'-et-re*) [σύν, together; μέτρον, measure]. In anatomy, a harmonious correspondence of parts; also the relation of homologous parts at opposite sides or ends of the body. In pathology, the theory that constitutional diseases affect both lateral halves of the body impartially.

Sympatheoneuritis (*sim-path-e-o-nu-ri'-tis*) [συμπάθεια, sympathy; νεῦρον, nerve; ῖτις, inflammation]. Inflammation of the sympathetic nerve.

Sympathetic (*sim-path-et'-ik*) [συμπαθητικός, sympathetic]. Effecting consensual or spontaneous activity or sympathy. **S. Bubo.** See *Bubo.* **S. Inflammation, Irritation,** affection of an organ arising by reflex action, infection, or other unknown way, synchronously or following similar affections of other organs. **S. Nerve or Nervous System,** a series of ganglia connected by commissural fibers, upon each side of the vertebral column from the base of the skull to the coccyx. It may be also traced into the head. It gives origin also to numerous plexuses, ganglia, etc. See *Plexus, Ganglia;* also *p. 848.* **S. Ophthalmitis,** inflammation of the uveal tract of an eye arising subsequent to some injury or affection of the other eye. The eye affected is called the exciting eye, or *excitor,* the other the *sympathizer.* The inflammatory period may

preceded by *sympathetic irritation*, in which there is lacrymation, photophobia, etc. Removal of the excitor is the treatment usually prescribed.

ympathetic (*sim-path-et'-ik-us*). See *Sympathetic Nerve.*

ympathetiplex (*sim-path-et'-ip-leks*) [συμπάθεια, sympathy; *plexus*, plexus]. A sympathetic plexus.

ympathic (*sim-path'-ik*). Synonym of *Sympathetic.*

ympathizer (*sim'-path-i-zer*). See *Sympathetic Ophthalmitis.*

ympathy (*sim'-path-e*) [σύν, together; πάθος, suffering]. In pathology, the mutual relation between parts or organs more or less distant, shown in the translation of a morbid condition from an affected to an unaffected organ. A meaningless term for the facts of reflex neuroses, metastasis, secondary infection, etc.

mpelmous (*sim-pel'-mus*) [σύν, together; πέλμα, the sole of the foot]. In biology, having the deep plantar tendons united.

mpetalous (*sim-pet'-al-us*) [σύν, together; πέταλον, leaf]. In biology, the same as gamopetalous.

mpexion (*sim-peks'-e-on*) [augmented form of *Sympexis: pl., Sympexia*]. A sympexis.

mpexis (*sim-peks'-is*) [σύμπηξις]. A concretion found in the vessels or crypts of certain glands, especially the thyroid and lymphatic, the prostate, and in the vesiculæ seminales.

mphora (*sim'-fōr-ah*). Synonym of *Congestion.*

mphorema (*sim-for-e'-mah*) [σύν, together; φορεῖν, to bear]. The state of being congested.

mphoresis (*sim-fo-re'-sis*) [σύν, together; φορεῖν, to bear]. Congestion, or a congestive process.

mphoricarpous (*sim-for-ik-ar'-pus*) [σύν, together; φορεῖν, to bear; καρπός, fruit]. In biology, bearing clustered fruits.

mphyantherous (*sim-fe-an'-ther-us*) [σύν, together; φυεσθαι, grow; ἀνθηρ, flower]. Same as *Synantherous.*

mphycarpous (*sim-fik-ar'-pus*) [συμφύειν, to grow together; κάρπος, fruit]. In biology, having confluent fruits.

mphynote (*sim'-fi-nōt*) [συμφύειν, to grow together; νῶτον, the back]. In biology, applied to such bivalve molluscs (*Unio*) as have the valves soldered together at the hinge.

mphyogenesis (*sim-fe-o-jen'-es-is*) [συμφύειν, to grow together; γένεσις, generation]. In biology, the union of previously separated parts.

mphyogenetic (*sim-fe-o-jen-et'-ik*) [συμφύειν, to grow together; γένεσις, generation]. Pertaining to symphyogenesis.

mphyostemonous (*sim-fe-o-stem'-o-nus*) [συμφύειν, to grow together; στήμων, a thread]. See *Monadelphous.*

mphyseal (*sim-fiz'-e-al*) [σύμφυσις, symphysis]. Pertaining to a symphysis.

mphyseotomy (*sim-fiz-e-ot'-o-me*). See *Symphysiotomy.*

mphysial (*sim-fiz'-e-al*). Same as *Symphyseal.*

mphysic (*sim-fiz'-ik*). Same as *Symphyseal.* See also *Teratism.*

mphysion (*sim-fiz'-e-on*) [σύμφυσις]. See *Craniometric Points.*

mphysiotome (*sim-fiz'-e-o-tōm*) [σύμφυσις, symphysis; τομή, cutting]. A cutting instrument used in pubic symphysiotomy.

mphysiotomy (*sim-fiz-e-ot'-o-me*) [σύμφυσις, symphysis; τομή, a cutting]. The operation of separating the bones forming a symphysis by division of the connecting tissues. Synonymous with *S., Pubic.* **S., Pubic,** the operation of cutting through the pubic symphysis for the purpose of increasing the conjugate diameters of the pelvic canal.

Symphysis (*sim'-fiz-is*) [σύν, together; φύειν, to grow]. The coalescence or junction of bones, usually of symmetric bones in the median line, as *S. pubis* and *S. of the Jaw.* **S., Pubic,** the line of union of the two pubic bones. **S., Sacro-coccygeal,** the sacrococcygeal articulation. **S., Sacro-iliac,** the union between the sacrum and the ilium.

Symphysodactylia (*sim-fiz-o-dak-til'-e-ah*). Synonym of *Syndactylism.*

Symphysopsia (*sim-fiz-ops'-e-ah*). Synonym of *Cyclopia.*

Symphysoskelia (*sim-fiz-o-ske'-le-ah*) [σύν, together; φύειν, to grow; σκελός, leg]. The condition in which the lower extremities are united.

Symphysotomy (*sim-fiz-ot'-o-me*). Synonym of *Symphysiotomy.*

Symphytrotomy (*sim-fit-rot'-o-me*) [σύμφυσις, symphysis; ἤτρον, pelvis; τομή, section]. Pelvic section through the symphysis pubis; pubic symphysiotomy.

Sympiesis (*sim-pi-e'-sis*) [σύν, together; πίεσις, a squeezing]. A pressing together of parts.

Symplast (*sim'-plast*). Synonym of *Plasmodium.*

Symplectic (*sim-plek'-tik*) [σύν, together; πλέκειν, to twine, weave]. A bone connecting the hyo-mandibular bone above with the quadrate bone below in certain vertebrates (*fishes*); also called *mesotympanic.*

Symplectomeres (*sim-plek'-to-mērs*) [σύμπλοκος, entwined together; μέρος, a part]. In biology, the collective name applied by Dujardin to sarcode organisms.

Symplocium (*sim-plo'-se-um*) [σύμπλοκος, entwined]. In biology, the band of thick-walled cells in the sporangium of most ferns; the *annulus.*

Sympode (*sim'-pōd*). Same as *Sympodium.*

Sympodia (*sim-po'-de-ah*) [σύν, together; πούς, foot]. The condition in which the lower extremities are united.

Sympodial (*sim-po'-de-al*) [σύν, with; πούς, foot]. Pertaining to a sympodium.

Sympodium (*sim-po'-de-um*) [σύν, with; πόυς, foot: *pl., Sympodia*]. In biology, a stem which consists of a series of secondary stems or axes which have arisen as branches one from another, as in the grape-vine, the tomato, the linden, etc. See *Pseudaxis.*

Symptom (*simp'-tom*) [σύμπτωμα, a coincident happening]. That change or phase which occurs synchronously with a disease and serves to point out its nature and location. See *Signs and Symptoms, Table of.* **S.-complex,** the *ensemble* of symptoms of a disease. **S., Direct,** one depending directly upon disease. **S., Dissociation.** See *Dissociation-symptom.* **S.-grouping.** Same as *S.-complex.* **S., Indirect,** one only indirectly due to disease. **Ss., Labyrinthine,** a group of symptoms due to lesion or disease of the internal ear. **S., Negatively Pathognomonic,** one which never occurs in a certain disease and therefore by its presence shows the absence of that disease. **S., Objective,** one observed by the physician. **S., Passive.** See *S., Static.* **S., Pathognomonic,** a symptom which exhibits itself only in a certain disease and therefore undeniably proves its presence. **Ss., Physical,** the physical signs of morbid conditions. **S., Rosenbach's,** loss of the abdominal reflex. **S., Static,** a symptom which indicates the condition in a single organ without reference to the rest of the body. **S., Subjective,** that observed only by the patient. **Ss., Sympathetic,** symptoms for which no adequate cause can be given other than so-called sympathy.

Symptomatiatria (*simp-to-mat-e-a'-tre-ah*) [σύμπτωμα, symptom; ἰατρεῖα, treatment]. Treatment directed solely to the symptoms.

Symptomatic (*simp-to-mat'-ik*) [συμπτωματικός, *symp-*

tomatic]. Having the nature of a symptom; that which may be interpreted as a symptom. That which may be a symptom of another affection; opposed to idiopathic. **S. Anthrax,** an epidemic, infectious disease of cattle, also called "Black-leg" and "Quarter-evil." See *Bacillus chauvæi* in *Table of Bacteria*, and *Black-leg*. **S. Fever,** the febrile symptoms of a disease.

Symptomatize (*simp'-to-mat-īz*) [σύμπτωμα, symptom]. To show symptoms of.

Symptomatography (*simp-to-mat-og'-ra-fe*) [σύμπτωμα, symptom; γράφειν, to write]. A written or printed description of symptoms.

Symptomatologic (*simp-to-mat-o-loj'-ik*) [σύμπτωμα, symptom; λόγος, science]. Pertaining to symptomatology.

Symptomatology (*simp-to-mat-ol'-o-je*) [σύμπτωμα, symptom; λόγος, treatise]. The sum of what is known of the nature, purport, and interpretation of symptoms.

Symptomology (*simp-to-mol'-o-je*). Same as *Symptomatology*.

Symptosis (*simp-to'-sis*) [συμπίπτειν, to fall together]. Wasting; emaciation; collapse.

Sympus (*sim'-pus*) [σύν, together; πούς, foot]. A vice of development consisting in coalescence of the lower limbs; a siren monster. There may be but one foot (*S. monopus*), or two (*S. dipus*), or the feet may be represented only by toes (*S. apus*).

Syn- (*sin-*) [σύν, together]. A prefix, signifying *with* or *together*.

Synacmic (*sin-ak'-mik*) [σύν, with; ακμή, prime]. Pertaining to synacmy.

Synacmy (*sin-ak'-me*) [σύν, with; ακμή, prime]. In biology, having the stamens and pistils ripen at the same time, as distinguished from *heteracmy*. Cf. *proterandry*, and *proterogyny*. Also called *synanthesis*.

Synactic (*sin-ak'-tik*) [συνακτικός, brought together]. Accumulative.

Synadelphus (*sin-ad-el'-fus*) [σύν, with; ἀδελφός, brother]. A monster having eight limbs with but one head and trunk.

Synæsthesia (*sin-es-the'-ze-ah*). See *Synesthesia*.

Synagogue (*sin'-ag-og*). Synonym of *Contraction*.

Synalgia (*sin-al'-je-ah*) [σύν, together; ἄλγος, pain]. Pain felt in a distant part from an injury or stimulus to another part of the body.

Synanastomosis (*sin-an-as-to-mo'-sis*) [σύν, with; *anastomosis*]. The joining of several blood-vessels.

Synanche (*si-nang'-ke*). Synonym of *Diphtheria*.

Synangium (*sin-an-je'-um*) [σύν, together; ἀγγεῖον, vessel: *pl.*, *Synangia*]. An arterial axis, or trunk.

Synanthema (*sin-an'-them-ah*) [συνανθεῖν, to blossom together]. In dermatology, a group of efflorescences on the skin.

Synantherous (*sin-an'-ther-us*) [σύν, together; *anthera*, anther; from ἀνθειν, to bloom]. In biology, the same as syngenesious. Stamens coalescent by their anthers.

Synanthesis (*sin-an-the'-sis*) [σύν, with; ἄνθησις, the full bloom of a flower]. See *Synacmy*.

Synanthous (*sin-an'-thus*) [σύν, with; ἄνθος, a flower]. In biology, (*a*) exhibiting synanthy; (*b*) having flowers and leaves at the same time, as distinguished from *proteranthous* and *hysteranthous*.

Synanthrose (*sin-an'-thrōz*) [σύν, together; ἄνθηρ, anther], $C_{12}H_{22}O_{11}$. A sucrose found in rye and the roots of certain plants. It has no action on polarized light.

Synanthy (*sin-an'-the*) [σύν, with; ἄνθηρ, an anther]. In biology, the abnormal coalescence of two or more flowers.

Synaphipod (*sin-af'-ip-od*) [συναφής, continuous, connected; πούς, foot]. In biology, Bates' term for the *palp* of a crustacean.

Synaphymenitis (*sin-af-i-men-i'-tis*) [συναφή, connection; ὑμήν, a membrane; ιτις, inflammation]. A former synonym for conjunctivitis.

Synaptase (*sin-ap'-tāz*). See *Emulsin* and *Amygdalin*.

Synapticula (*sin-ap-tik'-u-lah*) [συναπτός, joined together: *pl.*, *Synapticulæ*]. In biology, one of the cross-bars connecting the septa in certain corals.

Synarthrodia (*sin-ar-thro'-de-ah*). See *Synarthrosis*.

Synarthrodial (*sin-ar-thro'-de-al*) [σύν, together; ἄρθρον, a joint]. Of the nature of a synarthrosis; belonging to a synarthrosis.

Synarthrœsis (*sin-ar-thre'-sis*). Synonym of *Congestion*.

Synarthrosis (*sin-ar-thro'-sis*) [σύν, together; ἄρθρον, joint]. A form of articulation in which the bones are immovably bound together (without any intervening synovial cavity). The various forms are: *Sutura*, in which the processes are interlocked; *Schindylesis*, in which a thin plate of one bone is inserted into a cleft of another, and *Gomphosis*, in which a conic process is held by a socket.

Syncampe (*sin-kam'-pe*) [συγκαμπή]. A freely movable joint.

Syncanthus (*sin-kan'-thus*) [σύν, with; κανθός, canthus]. An obsolete term for abnormal union of the orbital margin and the ocular conjunctiva.

Syncarp (*sin'-karp*) [σύν, together; καρπός, fruit]. In biology, a multiple fruit.

Syncarpium (*sin-kar'-pe-um*). Same as *Syncarp*.

Syncarpous (*sin-kar'-pus*) [σύν, together; καρπός, fruit]. Having the character of a syncarp.

Syncausis (*sin-kaw'-sis*). Synonym of *Combustion*.

Syncephalus (*sin-sef'-al-us*) [σύν, together; κεφαλή, head]. A double monstrosity with the two heads fused into one.

Syncerebral (*sin-ser'-e-bral*) [σύν, together; *cerebrum*, cerebrum]. Pertaining to a syncerebrum.

Syncerebrum (*sin-ser'-e-brum*) [σύν, together; *cerebrum*, cerebrum]. A compound brain.

Synchilia, Syncheilia (*sin-ki'-le-ah*) [σύν, together; χεῖλος, lip]. Atresia of the lips.

Synchiral (*sin-ki'-ral*) [σύν, with; χείρ, hand]. Harrison Allen's term for the movement in which the right and left foot of a single pair move together, as in the gallop of a horse.

Synchisis (*sin'-kis-is*). See *Synchysis*.

Synchiton (*sin'-kit-on*). Synonym of *Conjunctiva*.

Synchitonitis (*sin-kit-on-i'-tis*). Synonym of *Conjunctivitis*.

Synchondrosial (*sin-kon-dro'-ze-al*) [σύν, with; χόνδρος, cartilage]. Pertaining to a synchondrosis.

Synchondrosis (*sin-kon-dro'-sis*) [σύν, together; χόνδρος, a cartilage]. A union by an intervening growth of cartilage. **S., Pubic.** See *Symphysis, Pubic*. **S., Sacro-coccygeal.** See *Symphysis, Sacro-coccygeal*. **S., Sacro-iliac.** See *Symphysis, Sacro-iliac*.

Synchondrotomy (*sin-kon-drot'-o-me*) [σύν, together; χόνδρος, cartilage; τέμνειν, to cut]. A division of the cartilage uniting bones, especially of the symphysis pubis.

Synchopexia (*sin-ko-peks'-e-ah*). Same as *Tachycardia*.

Synchronism (*sin'-kro-nizm*) [σύν, with; χρόνος, time]. Concurrence in time of two or more events.

Synchronous (*sin'-kro-nus*) [σύν, together; χρόνος, time]. Occurring contemporaneously, or at the same interval.

Synchysis (*sin'-kis-is*) [σύγχυσις, a mixing together]. *Synchysis scintillans;* the presence of clouds of bright, shining particles in the vitreous humor of the eye.

As the eye moves from side to side these particles (crystals of tyrosin or cholesterin) look like showers of bright, shining gold or silver scales, which move with the eye. They occur more frequently in persons beyond middle life.

yncleisis (*sin-kli'-sis*). Synonym of *Occlusion.*

ynclinal (*sin-kli'-nal*) [σύν, together; κλίνειν, to bend]. Bending or inclining in the same direction.

ynclisis (*sin'-klis-is*). Same as *Synclitism.*

ynclitic (*sin-klit'-ik*) [συγκλίτης, leaning together]. Exhibiting or characterized by synclitism.

ynclitism (*sin'-klit-izm*) [συγκλίτης, bending together]. A condition marked by parallelism or similarity of inclination; parallelism between the pelvic planes and those of the fetal head.

ynclonus (*sin'-klo-nus*) [συν, with; κλονος, great agitation]. A genus of diseases, including those characterized by tremulous motion. Also, any abnormal, tremulous, muscular motion, as that of chorea. **S. ballismus,** paralysis agitans. **S. tremens,** general tremor.

yncopal (*sin'-ko-pal*) [συγκοπή, a cutting short]. Pertaining to, characterized by, or of the nature of syncope.

yncope (*sin'-ko-pe*) [συγκοπή, a cutting short]. A swooning or fainting. A partial or complete temporary suspension of the functions of respiration and circulation. **S. anginosa.** Synonym of *Angina pectoris.* **S., Laryngeal,** laryngeal vertigo. **S., Local,** sudden pallor and insensibility of a part.

yncopic (*sin-kop'-ik*) [συγκοπή, a cutting short]. Of the nature of syncope; syncopal.

yncoptic (*sin-kop'-tik*) [συγκοπτικός, cut short]. Pertaining to, having the nature of, or causing syncope.

yncotyledonous (*sin-kot-il-e'-do-nus*) [σύν, together; κοτυληδών, any cup-shaped hollow]. In biology, charterized by coalescent cotyledons.

yncranius (*sin-kra'-ne-us*) [σύν, with; κρανίον, skull]. The superior maxilla.

yncranterian (*sing-kran-te'-re-an*) [σύν,-together; κραντῆρες, the wisdom-teeth]. In biology, applied to such serpents as have the posterior teeth forming a continuous row with the anterior.

yncretism (*sin'-kre-tizm*) [συγκρητίζειν, to combine]. The blending of various tenets or theories into one.

yncrisis (*sin'-kris-is*) [συγκρίνειν, to coagulate]. Coagulation or solidification of one or more liquids.

yncritic (*sin-krit'-ik*). Synonym of *Astringent.*

yncytial (*sin-sit'-e-al*) [σύν, together; κύτος, a hollow]. Pertaining to a syncytium.

yncytium (*sin-sit'-e-um*) [σύν, together; κύτος, a cell: *pl.*, *Syncytia*]. In biology, a tissue in which no cell-boundaries can be recognized; a mass of protoplasm with nuclei scattered throughout.

yndactyl (*sin-dak'-til*) [σύν, together; δάκτυλος, a digit]. Having the adjoining fingers or toes bound together.

yndactylia (*sin-dak-til'-e-ah*). Same as *Syndactylism.*

yndactylism (*sin-dak'-til-izm*) [σύν, together; δάκτυλος, finger]. Adhesion between fingers or toes; webbed fingers.

yndactylous (*sin-dak'-til-us*). Same as *Syndactyl.*

yndectomy (*sin-dek'-to-me*) [σύνδεσμος, ligament; ἐκτομή, a cutting out]. See *Peritomy.*

yndelphus (*sin-del'-fus*) [σύν, together; ἀδελφός, brother]. A monocephalic double monstrosity with a single pelvis, united thoraces, four upper and four lower extremities.

yndemnium (*sin-dem'-ne-um*) [σύν, together; δέμνιον, couch, bed]. A peculiar, remarkable, hollow space in the middle of the subumbrella, the "porticus subgenitalis," the "subgenital vestibule," found only in two families of the *Rhizostomæ* (*i. e.*, *Versuridæ* and *Crambessidæ*).

Syndendrium (*sin-den'-dre-um*) [σύν, together; δένδριον, a little tree]. In biology, the thick, flat, quadrate disc, suspended from four stout pillars (*dendrostyles*) and formed of the united trunks of the polypiferous tree of the *Rhizostomæ.*

Syndesis (*sin-de'-sis*) [συνδεῖν, to bind together]. The state of being bound together.

Syndesmectopia (*sin-dez-mek-to'-pe-ah*) [σύνδεσμος, a bond; ἐκτόπιος, out of place]. Ligamentous displacement.

Syndesmitis (*sin-dez-mi'-tis*) [σύνδεσμος, a ligament; ιτις, inflammation]. Inflammation of one or more ligaments. **S. catarrhalis.** Synonym of *Conjunctivitis, Catarrhal.*

Syndesmodiastasis (*sin-dez-mo-di-as'-tas-is*) [σύνδεσμος, ligament; διάστασις, separation]. Separation of the ligaments.

Syndesmodontoid (*sin-dez-mo-don'-toid*) [συνδεσμος, ligament; *odontoid*]. Formed by the transverse ligament of the atlas and the odontoid process of the axis.

Syndesmography (*sin-dez-mog'-ra-fe*) [σύνδεσμος, ligament; γράφειν, to write]. The structure and descriptive anatomy of the ligaments.

Syndesmology (*sin-dez-mol'-o-je*) [σύνδεσμος, ligament; λόγος, treatise]. The sum of what is known regarding the nature, functions, and diseases of ligaments.

Syndesmoma (*sin-dez-mōm'-ah*) [σύνδεσμος, ligament; ὄμα, tumor]. A new growth containing a large amount of connective tissue.

Syndesmopathia (*sin-dez-mo-pa'-the-ah*). Synonym of *Desmopathy.*

Syndesmosis (*sin-dez-mo'-sis*) [σύνδεσμος, ligament]. The articulation of two or more bones by ligaments.

Syndesmotic (*sin-dez-mot'-ik*) [σύνδεσμος, ligament]. Bound together.

Syndesmotomy (*sin-dez-mot'-o-me*) [σύνδεσμος, ligament; τέμνειν, to cut]. Dissection or section of the ligaments.

Syndesmus (*sin-dez'-mus*) [σύνδεσμος, ligament]. A ligament.

Syndrome (*sin'-drōm*) [σύν, together; δρόμος, a running]. A word denoting the aggregate symptoms of a disease. See, also, *Symptom-complex.* **S. of Weber,** paralysis of the oculo-motor nerves of one side (that of the cerebral lesion) and of the members, the face, and the hypoglossal nerve of the other side. It is usually due to a lesion limited to the inferior and inner part of the one cerebral peduncle.

Syndyasmus (*sin-di-as'-mus*). Synonym of *Copulation.*

Synechia (*sin-e-ki'-ah* or *si-ne'-ke-ah*) [συνέχεια; σύν, together; ἔχειν, to hold: *pl.*, *Synechiæ*]. A morbid union of parts. See *Iris.* **Synechiæ pericardii,** adhesions of the pericardium.

Synechotome (*sin-ek'-o-tōm*) [συνέχειν, to hold together; τέμνειν, to cut]. An instrument for the division of adhesions, particularly of the membrana tympani.

Synechotomy (*sin-ek-ot'-o-me*) [συνέχειν, to hold together; τέμνειν, to cut]. The division of synechiæ between the membrana tympani and the inner wall of the tympanum.

Synedral (*sin-e'-dral*) [σύν, together; ἕδρα, seat]. In biology, growing upon the angle of the stem.

Synedrous (*sin-e'-drus*) [σύν, together; ἕδρα, a seat]. Same as *Synedral.*

Synema (*sin-e'-mah*) [σύν, with; νῆμα, a thread: *pl.*, *Synemata*]. In biology, the column formed by the united filaments of monodelphous stamens.

Synencephalia (*sin-en-sef-a'-le-ah*) [σύν, with; ἐγκέφαλος, the brain]. The condition of a synencephalus.

Synencephalocele (*sin-en-sef'-al-o-sēl*) [*σύν*, with; *ἐγκέφαλος*, brain; *κήλη*, a tumor]. An encephalocele arising from abnormal adhesions, probably the result of some intra-uterine inflammation.

Synencephalus (*sin-en-sef'-al-us*) [*σύν*, with; *ἐγκέφαλος*, brain]. A monster having two bodies with but a single head.

Synenergia (*sin-en-ur'-je-ah*). See *Synergy*.

Synergetic (*sin-er-jet'-ik*) [*συνεργός*, working together]. Exhibiting synergy; working together.

Synergic (*sin-ur'-jik*) [*συνεργός*, working together]. Exhibiting or pertaining to synergy.

Synergida (*sin-ur'-jid-ah*) [*σύνεργος*, working together: *pl.*, *Synergidæ*]. In biology, a term applied to the two cells of the egg-apparatus that are associated with the germ-cell in the embryo-sac.

Synergist (*sin'-ur-jist*) [*συνεργός*, working together]. A thing or drug which co-operates with another.

Synergy (*sin'-ur-je*) [*σύν*, together; *ἔργειν*, work: *pl.*, *Synergies*]. In biology, the simultaneous or sympathetic action of different organs.

Synesthesia (*sin-es-the'-ze-ah*) [*σύν*, with; *αἴσθησις*, sensation]. A phenomenon consisting in a sensation being felt or located in one part of the body, as the result of an irritation at some remote or distant point.

Syneurosis (*sin-u-ro'-sis*). See *Synneurosis*.

Syngenesious (*sin-jen-e'-ze-us*) [*σύν*, together; *γένεσις*, generation]. In biology, a term applied to stamens which are united by their anthers.

Syngenesis (*sin-jen'-es-is*) [*σύν*, together; *γένεσις*, generation]. In biology, generation by means of the combined qualities of both the male and female reproductive bodies, as a doctrine distinguished from *spermism* or the theory of *incasement*, as well as from *epigenesis*.

Syngenic (*sin-jen'-ik*). Synonym of *Congenital*.

Syngignoscism (*sin-gig'-no-sizm*) [*σύν*, together; *γιγνώσειν*, to know]. A term proposed as a synonym of hypnotism, from a prominent symptom, "the agreeing of one mind with another mind."

Syngonidium (*sing-go-nid'-e-um*) [*σύν*, together; *γόνος*, generation, seed]. In biology, an aggregation of gonidia.

Synidrosis (*sin-id-ro'-sis*) [*σύν*, together; *ἱδρώς*, sweat]. Concurrent sweating. The association of perspiration with another condition.

Synizesis (*sin-iz-e'-sis*) [*συνίζησις*]. Closure or obliteration of the pupil.

Synkinesis (*sin-kin-e'-sis*) [*σύν*, together; *κίνησις*, movement]. Involuntary movement taking place in one part of the body synchronously with or in consequence of a voluntary or reflex movement in another part.

Synneurosis (*sin-nu-ro'-sis*). See *Syndesmosis*.

Synocha (*sin'-o-kah*). See *Synochus*.

Synochal (*sin'-o-kal*) [*σύνοχος*, continued]. Pertaining to synocha.

Synochoid (*sin'-o-koid*) [*σύνοχος*, continued]. Resembling synochus.

Synochus (*sin'-o-kus*) [*σύνοχος*, continuous: *pl.*, *Synochi*]. A fever continuing at a uniform degree for a considerable period. **S. anniversaria**, a fever that returns annually at the same time for several years. **S. ardens**, **S. putris**, typhoid fever. **S. scorbutica**, a fever caused by scurvy.

Synocil (*sin'-o-sil*) [*σύν*, with; *cilium*, lash]. In biology, a cylindric or conic bundle of sensory filaments in certain sponges, possibly having a visual function.

Synœcious, Synecious (*sin-e'-shus*) [*σύν*, together; *οἰκεῖν*, to live]. In biology, having male and female flowers or organs in one cluster.

Synonym (*sin'-o-nim*) [*σύν*, together; *ὄνομα*, a name]. A word which can replace another word without alteration of meaning. In medicine, any variant name by which a disease, an organ, or a part of the body may be known.

Synonymatic (*sin-on-im-at'-ik*) [*σύν*, together; *ὄνομα*, a name]. A purer form of *Synonymic*, or *synonymical*, and applied by naturalists to lists of technical names or *onyms*, including the synonyms.

Synophthalmia (*sin-off-thal'-me-ah*) [*σύν*, together; *ὀφθαλμός*, eye]. A malformation in which the orbits form a single, continuous cavity. This condition is called, also, *Cyclopia*.

Synophthalmos (*sin-off-thal'-mos*). Synonym of *Cyclops*.

Synophyty (*sin-off'-it-e*) [*σύν*, together; *φυτόν*, plant]. In biology, the cohesion of two or more embryos in a seed.

Synopsia (*sin-ops'-e-ah*) [*σύν*, together; *ὄψ*, eye]. Congenital union of the eyes.

Synopsis (*sin-op'-sis*) [*σύν*, together; *ὄψις*, a seeing]. A classified collation. A general view.

Synorchism (*sin-or'-kizm*) [*σύν*, together; *ὄρχις*, testicle]. Adhesion or fusion of the two testicles.

Synoscheos (*sin-os'-ke-os*) [*σύν*, with; *ὀσχεος*, scrotum]. A condition of adherence between the skin of the penis and that of the scrotum.

Synosteography (*sin-os-te-og'-ra-fe*) [*σύν*, together; *ὀστέον*, bone; *γράφειν*, to write]. The descriptive anatomy of the joints.

Synosteology (*sin-os-te-ol'-o-je*) [*σύν*, together; *ὀστέον*, bone; *λόγος*, knowledge]. The sum of what is known regarding the joints.

Synosteosis (*sin-os-te-o'-sis*). See *Synostosis*.

Synosteotomy (*sin-os-te-ot'-o-me*) [*σύν*, together; *ὀστέον*, bone; *τομή*, a cutting]. The dissection of the articulations of bones; anatomy of the joints.

Synostosed (*sin'-os-tōzd*) [*σύν*, together; *ὀστέον*, bone]. Joined in bony union.

Synostosis (*sin-os-to'-sis*) [*σύν*, together; *ὀστέον*, bone]. Union of fractures or bones by osseous material.

Synostotic (*sin-os-tot'-ik*) [*σύν*, together; *ὀστέον*, bone]. Pertaining to or of the nature of synostosis.

Synotia (*sin-o'-she-ah*) [*σύν*, together; *οὖς*, ear]. Union of the ears, as in certain monsters.

Synotus (*sin-o'-tus*) [*σύν*, together; *οὖς*, ear]. A syncephalic monstrosity having the ears fused.

Synovectomy (*sin-o-vek'-to-me*). See *Arthrectomy*.

Synovia (*sin-o'-ve-ah*) [*σύν*, with; *ᾠόν*, an egg]. The lubricating fluid secreted within synovial membranes.

Synovial (*sin-o'-ve-al*) [*synovialis*; *σύν*, together; *ᾠόν*, egg]. Pertaining to the synovia. **S. Membrane.** See *Membrane*.

Synovin (*sin'-o-vin*) [*σύν*, with; *ᾠόν*, egg]. The form of mucin found in synovia.

Synoviparous (*sin-o-vip'-ar-us*) [*synovia*, synovia; *parere*, to produce]. Producing or secreting synovia.

Synovitis (*sin-o-vi'-tis*) [*synovia*, synovia; *ιτις*, inflammation]. Inflammation of a synovial membrane. **S., Chronic Purulent.** Synonym of *Fungous Arthritis*. **S., Chronic Serous.** Synonym of *Hydrarthrosis*. **S., Dry**, synovitis with little if any exudate. **S., Exanthematous**, synovitis produced by the exanthemata. **S., Fibrinous.** See *S., Dry*. **S., Fungous.** Synonym of *Fungous Arthritis*. **S., Gonorrheal.** Synonym of *Rheumatism, Gonorrheal*. **S., Lipomatous**, synovitis in which the new-formation undergoes fatty degeneration. **S., Metritic**, a synovitis secondary to uterine infection. **S., Puerperal** synovitis occurring after childbirth, and due to septic infection. **S., Purulent**, synovitis with suppuration. **S., Scarlatinal**, synovitis occurring in an attack of scarlet fever. **S., Syphilitic**, synovitis due to syph

ilitic inflammation. **S., Tendinous,** inflammation of the synovial sheath surrounding a tendon. **S., Tuberculous,** synovitis with deposits of tubercle. **S., Urethral.** Synonym of *Gonorrheal Synovitis.*

Synplast (*sin'-plast*) [σύν, together; πλάσσειν, to form, mold]. In biology, a unit or group of protoplasts.

Synsepalous (*sin-sep'-al-us*) [σύν, together; *sepalum*, a sepal]. Same as *Gamosepalous.*

Synspermy (*sin-sper'-me*) [σύν, together; σπέρμα, seed]. In biology, the union of two or more seeds.

Syntagma (*sin-tag'-mah*) [σύνταγμα, that which is put together]. In biology, Pfeiffer's term for a body or aggregation of tagmata. See *Tagma.*

Syntasis (*sin'-tas-is*) [σύντασις; συντείνειν, to stretch together]. A stretching, or tension.

Syntatic (*sin-tat'-ik*) [συντείνειν, to stretch together]. Pertaining to or characterized by syntasis.

Syntaxis (*sin-taks'-is*) [συντάσσειν, to arrange]. 1. Articulation. 2. Reduction, taxis. 3. A suture.

Syntecopyra (*sin-tek-op'-ir-ah*) [συντήκειν, to waste away; πῦρ, fire]. Colliquative fever.

Syntectic (*sin-tek'-tik*) [συντηκτικός]. Pertaining to or characterized by syntexis; wasting.

Syntenosis (*sin-ten-o'-sis*) [σύν, together; τένων, tendon]. Articulation by means of tendons, as in the human digits.

Synteresis (*sin-ter-e'-sis*) [συντήρησις; συντηρεῖν, to guard with]. Preventive treatment, or hygiene; prophylaxis.

Synteretic (*sin-ter-et'-ik*) [συντηρητικός, preservative]. Pertaining to prophylaxis, or synteresis; hygienic; preventive.

Syntexis (*sin-teks'-is*) [σύντεξις; συντήκειν, to melt together]. A wasting; tabes; phthisis.

Synthermal (*sin-ther'-mal*). Same as *Isothermal.*

Synthesis (*sin'-the-sis*) [σύνθεσις; σύν, with; τιθῆναι, to place]. In chemistry, the formation, artificially, of a compound by combining its proximate parts.

Synthetic (*sin-thet'-ik*) [σύν, with; τιθῆναι, to place]. Pertaining to synthesis. Compounded.

Synthorax (*sin-tho'-raks*). Synonym of *Thoracopagus.*

Syntonin (*sin'-to-nin*) [σύντονος, contracted]. An acid-albumin obtained by the prolonged action of dilute hydrochloric acid upon minced muscle. It is also formed in the stomach during digestion.

Syntrimma, Syntripsis (*sin-trim'-ah, sin-trip'-sis*). Synonym of *Comminution.*

Syntrope (*sin'-trōp*) [σύν, together; τρέπειν, to turn]. One of a set of *syntropic* parts (opposed to *antitrope*).

Syntropic (*sin-trop'-ik*) [σύν, together; τρέπειν, to turn]. Similar, and turned in the same direction (thus the ribs of either side are *syntropic;* those of opposite sides are *antitropic*).

Syntropy (*sin'-tro-pe*) [σύν, together; τρέπειν, to turn]. In biology, Wilder's term for the morphotropic relation between parts upon the same side of a structural plane.

Synulosis (*sin-u-lo'-sis*) [συνούλωσις; οὐλή, scar]. Cicatrization; cicatrix.

Synulotic (*sin-u-lot'-ik*) [συνουλωτικός, healing]. Promoting cicatrization.

Synymensis (*sin-im-en'-sis*). Synonym of *Syndesmosis.*

Synzygia (*sin-zij'-e-ah*) [συζυγία, a junction; σύν, together; ζυγόν, a yoke, any means of joining together]. See *Syzygy.*

Syphilelcos, Syphilelcus (*sif-il-el'-kos, sif-il-el'-kus*) [*syphilis*, syphilis; ἕλκος, ulcer]. Syphilitic ulcer. Chancre.

Syphilelcosis (*sif-il-el-ko'-sis*) [*syphilis*, syphilis; ἕλκος, ulcer]. The condition or progress of syphilitic ulceration; the condition of having a chancre.

Syphilid, Syphilide (*sif'-il-id*) [ME., *syphilis*, syphilis]. Any disease of the skin due to syphilis. **S., Acneiform,** one of the early and rare forms of the cutaneous manifestations of syphilis. Its favorite positions are the face and shoulders. It is marked by the formation of flat pustules, about the eighth of an inch in diameter, on a dark-red, raised base, with a narrow areola. **S., Annular.** See *Syphiloderma circinatum.* **S., Bullous,** a syphilitic skin-ulceration that occurs in two forms, the *rupial* and "*pemphigoid.*" They differ from the other vesicular and pustular syphilids in not being placed on a raised, red base, and the areola is often pink, and not the usual raw-ham color. **S., Circinate.** See *Syphiloderma circinatum.* **S., Ecthymatous,** a form occurring only in the cachectic, and characterized by the presence of large pustules, which may be superficial or deep, the former occurring mainly in the early stage, the deep in the third period. The lesion commences around a hair-follicle, is about a third or a quarter of an inch in diameter, dries into a greenish scab on a raised, red base, develops slowly, and lasts for a few weeks. It is most common on the lower limbs. **S., Erythematous.** See *Roseola, Syphilitic.* **S., Follicular,** *Miliary Syphilid; Syphilitic Lichen;* a variety of papular syphilid in which the hair-follicles are the seat of the lesion. The lesion may be large or small. The *larger* occurs in the first six months of the disease, in irregular groups of from three or four to twenty, on the extensor aspect of the limbs and the back. The papules are about the size of a large pin's head or millet-seed, bright-red at first, soon changing to brownish-red, and crowned with a small scale. They appear in crops. The *small* form is very rare, is most common in women, and occurs in the first or second year of the disease. The papules are the size of a large or small pin's head, pink at first, then fawn-colored, thickly crowded together in groups. **S., Herpetiform.** See *S., Vesicular.* **S., Impetiginous,** *Syphilitic Impetigo;* small pustules, single or aggregated, appearing on the scalp, and covered by yellowish-gray or brown crusts, forming patches around a single hair-group. **S., Lenticular,** one of the common, early eruptions, often following closely upon or mixed up with the erythematous lesion. The papules are few or many, but not closely packed, and only grouped around the mouth and genitals. The usual sites are the forehead, lower part of the face, the nape and back, the flexor aspect of the limbs, and about the genito-anal passages. The lesions are from an eighth to half an inch in diameter, distinctly raised, sharply defined, flatly convex, of a deep-red tint (though they may be pale), firm and smooth. **S., Macular.** See *Roseola, Syphilitic.* **S., Miliary.** See *S., Follicular.* **S., Nodular,** *Tubercular Syphilid;* convex projections of the skin, too large to be called papules. They are most common in the tertiary period, but may also be an early manifestation. They vary from a quarter to a half an inch in diameter, are sharply defined, considerably raised, of the characteristic coppery color, occasionally breaking down and ulcerating, with thick scabs, and much inflammation around, accompanied with much pain, and followed by white, depressed scars. They are solitary or few on the face, limbs, and trunk, but are not grouped, save in the tertiary stage. **S., Nummular.** See *Syphiloderma papulo-squamosum.* **S., Orbicular.** See *Syphiloderma circinatum.* **S., Papular,** a papular, syphilitic eruption on the skin or mucous membrane. **S., Pemphigoid,** *Syphilitic Pemphigus;* a rare eruption in acquired syphilis and occurring almost exclusively in the congenital form. It is usually

limited to the palms and soles, but may be widely spread. The contents seldom remain clear long. **S., Pigmentary,** *Syphilitic Leukoderma;* most common from the sixth to the twelfth month of the disease. It is rather a rare condition, but is seen much more frequently in women than in men, and in brunets than in fair women. Its seat is chiefly on the neck, especially at the sides and back; it may occasionally be seen on the face, chest, or flank. The lesions are irregularly margined, round or oval spots, from an eighth to one inch in diameter, well-defined or ill-defined, with a yellowish-brown color. They may be discrete or confluent. They last from two months to several years, or may be permanent. **S., Pustular,** the termination occasionally of the vesicular syphilid. The contents become purulent, a crust forms, ulceration may go on under it, and a pigmented depression or scar is left. **S., Rupial,** one of the most characteristic syphilids occurring in the second and third years of the disease, and associated with profound cachexia. The lesion is the characteristic stratified, conic, limpet-shell crust, which on removal leaves a sharply punched-out ulcer, shelving toward the center. These lesions are usually few in number, and on the limbs. **S., Squamous.** See *Syphiloderma papulo-squamosum.* **S., Tubercular.** See *S., Nodular.* **S., Varicelliform,** a form of vesicular syphilid in which the vesicles may be either convex or umbilicated, and their contents cloudy. They are situated on a slightly raised plateau, of the usual dull-red color. After a few days the vesicles dry into thick, adherent crusts of a greenish-black color. The course is slow. **S., Varioliform,** a slight modification of the varicelliform, causing the lesion to resemble the variolous eruption. **S., Vesicular,** an early skin-eruption of syphilis, appearing in the first six months. It may be *small* (very rare) or *large.* The lesions of the latter are grouped (*herpetiform syphilid*) in irregular, circinate, or serpiginous forms. The vesicles have a deep-red base, rupture at the end of a week, and dry up. They are common on the face, limbs, and trunk.

Syphilidiatria (*sif-il-id-e-a'-tre-ah*) [*syphilis*, syphilis; *ἰατρεία*, treatment]. The medicinal treatment of syphilis.

Syphilidocolpitis (*sif-il-id-o-kol-pi'-tis*) [*syphilis*, syphilis; *κόλπος*, vagina; *ιτις*, inflammation]. Syphilitic inflammation of the vagina.

Syphilidography (*sif-il-id-og'-ra-fe*). See *Syphilography.*

Syphilidology (*sif-il-id-ol'-o-je*). See *Syphilology.*

Syphilidomania (*sif-il-id-o-ma'-ne-ah*). See *Syphilomania.*

Syphilidophobia (*sif-il-id-o-fo'-be-ah*). See *Syphilophobia.*

Syphilidophthalmia (*sif-il-id-off-thal'-me-ah*) [*syphilis*, syphilis: *ὀφθαλμός*, eye]. Syphilitic ophthalmia.

Syphilifer (*sif'-il-if-er*) [*syphilis*, syphilis]. One who conveys syphilis.

Syphiliphobia (*sif-il-if-o'-be-ah*). See *Syphilophobia.*

Syphilis (*sif'-il-is*) [*syphilis*, syphilis]. A chronic, infectious disease believed to be due to a specific organism and characterized by a variety of structural lesions of which the chancre, the mucous patch, and the gumma are the most distinctive. A bacillus has been found in the lesions by Lustgarten and others, but whether it is the real cause or not has not been definitely determined. The disease is generally acquired in sexual congress, hence its earliest manifestations appear upon the genital organs, but any abraded surface of the body, if brought in contact with the syphilitic poison, may give entrance to the infection. The earliest lesion of acquired syphilis is the *chancre, initial sclerosis*, or *primary sore*, which appears after a period of incubation varying from two to three weeks. It is usually a reddish-brown papule with an ulcerated central spot, and has a slight serous or purulent discharge. Taken between the fingers, it is found to have a peculiar cartilaginous hardness. Microscopically it consists of an accumulation of round cells, epithelioid cells, with, perhaps, a giant-cell here and there. The blood-vessels present a hyperplasia of the intima, to which in part the induration of the chancre is due. Very soon after the appearance of the chancre the nearest lymphatic glands become enlarged and indurated—the *indolent buboes* of syphilis. The chancre is generally solitary and is not auto-inoculable. The *mucous patch, condyloma latum, moist papule*, or *mucous tubercle* is located upon mucous membranes, at muco-cutaneous junctions, or where two skin-surfaces are in habitual contact. It is a flat, scarcely elevated patch, on mucous membranes generally covered by a whitish pellicle. Under the microscope we find a round-cell infiltration of the upper layers of the corium, some of the round cells penetrating between the cells of the epidermis. There is also a considerable quantity of fluid exudate, which infiltrates and loosens the epithelial elements. The *gumma* or *gummy tumor* is a rounded nodule, varying in size from the dimensions of a pea to those of a small apple. Its favorite seats are the periosteum of flat bones, the membranes of the brain, the liver, spleen, and testicle. It is usually soft and contains in its interior a gelatinous "gummy" material. Radiating from and into it are bands of connective tissue; sometimes the latter forms a distinct capsule about the gumma. Histologically, it presents a cellular accumulation and some new blood-vessels, which, however, are inadequate for the nutrition of the newly formed tissue, hence its degeneration. In the viscera gummata are, as a rule, absorbed, their former sites being marked by stellate cicatrices. Another important though not distinctive lesion produced by syphilis is a diffuse sclerosis of the blood-vessels, especially of the parenchymatous organs. The cutaneous eruptions have histologically nothing peculiar—they are inflammatory lesions. The clinical course of syphilis is generally divided into three stages: the *primary*, characterized by the presence of the chancre and the indolent bubo; the *secondary*, by the mucous patch, cutaneous eruptions, sore throat, and general enlargement of the lymphatic glands; the *tertiary*, by the gumma and by severe skin-lesions. Between the appearance of the chancre and the secondary manifestations a period of six weeks usually elapses. The tertiary phenomena follow the secondary after a stage of quiescence of variable length. The tertiary lesions are the most destructive, but are, fortunately, rarer now than in former times. Syphilis also bears an important, but as yet obscure, relation to certain diseases of the nervous system, such as locomotor ataxy and paretic dementia. Although very wide-spread, syphilis is not contagious in the ordinary sense of the word. Infection generally proceeds from a chancre or from a mucous patch; it may be conveyed by the blood. One attack as a rule confers immunity. **S., Benign,** syphilis in which the symptoms are mild. **S. brephotrophica,** syphilis spread among infants and those engaged in their care (Bulkley). **S., Congenital,** syphilis present at birth. **S., Constitutional,** syphilis characterized by general manifestations. See *S., Secondary.* **S., Cutaneous.** See *Syphiloderma.* **S. e coitu illicito.** See *S. pravorum.* **S. e coitu legitimo.** See *S., Marital.* **S., Encephalic,** syphilis of the brain. **S. endemica.** See *S. pandemica.* **S. epidermica.** See *S. pandemica.* **S., Equine,**

an infectious disease of horses characterized by inflammatory lesions of the genital organs, enlargement of the lymphatic glands, and motor weakness, sometimes going on to complete paralysis of the hind limbs. The disease may be fatal. **S., Extra-genital,** syphilis in which the first lesion is situated elsewhere than on the genital organs. **S., Gonorrheal,** a chancre of the urethra producing a discharge resembling that of gonorrhea. **S. hereditaria, S., Hereditary, S., Inherited,** the syphilitic poison can traverse the placenta in either direction—as a rule, it is the mother who infects the child. Abortion is frequent, but if a living child is born it will develop symptoms of the inherited disease in from two weeks to three or four months after birth. These symptoms belong in part to the secondary stage, in part are peculiar. A hyperplasia of the connective tissue of the lung, liver, spleen, and pancreas is a common lesion. In the case of the first-named organ the condition is known as white pneumonia. The spleen and liver may be greatly enlarged. **S. ingenita.** See *S., Hereditary.* **S. innocentium.** Synonym of *S. insontium.* **S. insontium,** syphilis of the innocent, *i. e.*, syphilis acquired in an innocent manner, or non-venereal syphilis. **S. insontium sine coitu,** non-venereal syphilis acquired otherwise than by sexual intercourse. **S., Intra-uterine,** syphilis acquired during intra-uterine existence. It is generally considered as a form of hereditary syphilis. **S. inveterata.** Synonym of *S., Tertiary.* **S., Latent,** syphilis in which the symptoms are in abeyance. **S., Malignant,** syphilis characterized by very destructive lesions, especially by gummata that appear early and degenerate rapidly. **S., Marital,** syphilis acquired in lawful wedlock. **S. modificata.** Synonym of *Syphiloid.* **S., Non-venereal.** Synonym of *S. insontium.* **S. occulta,** syphilis appearing in persons who give no history of primary or secondary lesions. **S., œconomica,** a form of syphilis insontium, in which the disease is acquired through eating and drinking or other household utensils, or by incidental contact with syphilitic persons (Bulkley). **S. pandemica,** syphilis which has extended widely after the manner of other contagious diseases. It may appear in an epidemic or an endemic form. In the former, the disease spreads with great rapidity and affects many persons; in the latter, it spreads more slowly and limits itself to a tribe or nation for a long time (Bulkley). **S. pravorum,** syphilis acquired in illegitimate sexual intercourse. **S., Primary,** syphilis during the period intervening between the appearance of the chancre and that of the secondary phenomena. **S., Secondary,** syphilis during the period in which the secondary phenomena are present. See *Syphilis.* **S. sine coitu,** syphilis not acquired by sexual contact. **S. sporadica,** syphilis insontium occurring in an isolated or sporadic manner (Bulkley). **S. technica,** syphilis acquired in following one's occupation, as by physicians, midwives, nurses. **S., Tertiary.** See *Syphilis.* **S. universalis,** syphilis affecting the entire body. **S., Vaccination,** syphilis acquired at the time of vaccination by the use of vaccine-lymph from a syphilitic subject, or subsequently by the inoculation of the wound. **S., Venereal,** syphilis acquired in illegitimate sexual intercourse. **S., Visceral,** syphilis of the viscera—the lesions are either inflammatory or in the form of gummata.

Syphilismus (*sif-il-iz'-mus*). Synonym of *Syphilis.*

Syphilitic (*sif-il-it'-ic*) [*syphilis*, syphilis]. Pertaining to or affected with syphilis.

Syphilization (*sif-il-iz-a'-shun*) [*syphilis*, syphilis]. Inoculation with the pus of a chancre. The term is also used to express a sort of immunity against fresh inoculation of syphilis, from the fact of previous inoculation.

Syphilized (*sif'-il-izd*) [*syphilis*, syphilis]. Affected with hereditary syphilis.

Syphiloderma (*sif-il-o-der'-mah*) [*syphilis*, syphilis; δέρμα, skin]. *Dermatosyphilis; Syphilis cutanea;* a term including the various manifestations upon the skin due to syphilis. The early lesions are manifold, of a reddish-brown, coppery color and leave pigment-stains; they are symmetric, polymorphous, show a tendency to circular grouping, seldom itch or cause subjective symptoms, and develop slowly. The *tertiary* rashes are always ulcerative and result from the breaking down of gummata; they occur on any part of the body, are unsymmetrically distributed, extend centrifugally while healing in the center and leave flat, white scars. They are usually seen on the palms and soles. **S. circinatum,** *circinate, orbicular,* or *annular syphilid; lepra syphilitica;* a form of squamous syphilitic skin-eruption of the secondary period. It occurs during the first year of the disease and may be quite early. The favorite positions are the nape and other parts of the neck, forehead, and around the chin and mouth. It occurs in circles from half an inch to an inch in diameter, which may form gyrate figures with clear centers and sharply defined, distinctly raised borders, with some scales. **S., Papulo-squamosum,** *nummular syphilid; squamous syphilid; syphilitic psoriasis;* a papular skin-eruption seen at any period of the first, and occasionally in the second year of syphilis, followed by desquamation, the scales ranging in size from a quarter to three-quarters of an inch in diameter. They are usually scanty and dirty-looking, but may be abundant and silvery. The lesions are seen all over the body, and may persist for months.

Syphilodermia (*sif-il-o-der'-me-ah*). Same as *Syphiloderma.*

Syphilographer (*sif-il-og'-ra-fer*) [*syphilis*, syphilis; γράφειν, to write]. One who writes on syphilis.

Syphilography (*sif-il-og'-ra-fe*) [*syphilis*, syphilis; γράφειν, to write]. A descriptive treatise on syphilis, its forms, distribution, etc.

Syphiloid (*sif'-il-oid*) [*syphilis*, syphilis; εἶδος, resemblance]. An endemic disease of Lithuania, Poland, and other regions, and which is probably identical with syphilis. Also known as *Syphilis modificata.* **S., Canadian,** a disease which in some respects resembled syphilis, and prevailed in Canada during part of the eighteenth century. **S. of Courland,** a disease observed at Courland, Russia, having many of the symptoms of syphilis. **S., Hessian,** a form of disease resembling syphilis, at one time prevalent in Hesse. **S., Jutland,** a disease resembling syphilis observed in Jutland, Denmark.

Syphilolepis (*sif-il-ol'-ep-is*) [*syphilis*, syphilis; λεπίς, scale]. A scaly or furfuraceous eruption of syphilitic origin.

Syphilology (*sif-il-ol'-o-je*) [*syphilis*, syphilis; λόγος, science]. The sum of knowledge regarding the origin, nature, and treatment of syphilis.

Syphiloma (*sif-il-o'-mah*) [*syphilis*, syphilis; ὄμα, tumor: *pl.*, *Syphilomata*]. A gummatous tumor of syphilitic origin.

Syphilomania (*sif-il-o-ma'-ne-ah*) [*syphilis*, syphilis; μανία, mania]. The inclination to attribute diseases to syphilis. The morbid belief in the presence of syphilis.

Syphilomatous (*sif-il-o'-mat-us*) [*syphilis*, syphilis; ὄμα, tumor]. Pertaining to syphiloma.

Syphilonychia (*sif-il-o-nik'-e-ah*) [*syphilis*, syphilis; ὄνυξ, nail]. An onychia of syphilitic origin. **S.**

exulcerans, syphilitic onychia with ulceration. **S. sicca**, syphilitic onychia without ulceration.

Syphilopathy (*sif'-il-op'-ath-e*) [*syphilis*, syphilis; *πάθος*, disease]. Any syphilitic disease.

Syphilopemphis (*sif-il-o-pem'-fis*) [*syphilis*, syphilis; *πεμφίς*, a blister]. Pemphigus of syphilitic origin.

Syphilophobe (*sif'-il-o-fōb*) [*syphilis*, syphilis; *φόβος*, fear]. One affected with syphilophobia.

Syphilophobia (*sif-il-o-fo'-be-ah*) [*syphilis*, syphilis; *φόβος*, dread]. A morbid condition in which the patient imagines himself to be diseased with syphilis. Also an intense dread of syphilitic infection.

Syphilophyma (*sif-il-o-fi'-mah*) [*syphilis*, syphilis; *φῦμα*, growth]. Syphiloma of the skin.

Syphiloscleroma (*sif-il-o-skle-ro'-mah*). Synonym of *Chancre*.

Syphilosis (*sif-il-o'-sis*) [*syphilis*, syphilis]. Syphilitic disease.

Syphilous (*sif'-il-us*). Same as *Syphilitic*.

Syphionthus (*sif-e-on'-thus*) [*syphilis*, syphilis; *ἰονθος*, an eruption on the face]. The copper-colored eruptions or fawn-colored, furfuraceous patches of syphilitic origin.

Syphon (*si'-fon*). Synonym of *Siphon*.

Syphonage (*si'-fon-āj*). See *Siphonage*.

Syphonoma (*si-fon-o'-mah*). Synonym of *Siphonoma*.

Syriac Ulcer. Synonym of *Diphtheria*.

Syrigmophonia (*sir-ig-mo-fo'-ne-ah*) [*συρίσσειν*, to hiss; *φωνή*, voice]. A piping or whistling state of the voice.

Syrigmus (*sir-ig'-mus*) [*συρίσσειν*, to hiss]. Any subjective hissing, murmuring or tinkling sound heard in the ear.

Syringe (*sir'-inj*) [*σῦριγξ*, a pipe]. An apparatus for the injection of a liquid into a cavity of the body.

Syringeal (*sir-in'-je-al*) [*σῦριγξ*, a pipe]. Relating or belonging to the syrinx.

Syringin (*sir-in'-jin*) [*σῦριγξ*, tube]. A crystalline glucosid obtained from *Syringa vulgaris*.

Syringitis (*sir-in-ji'-tis*) [*σῦριγξ*, tube; *ιτις*, inflammation]. Inflammation of the Eustachian tube.

Syringium (*si-rin'-je-um*) [*σῦριγξ*, a pipe: *pl.*, *Syringia*]. In biology, a tubular repugnatorial organ on certain caterpillars.

Syringocele, Syringocœlia (*sir-ing'-go-sēl*, *sir-ing-go-se'-le-ah*) [*σῦριγξ*, tube; *κοιλία*, hollow]. The cavity or central canal of the myelon or spinal cord.

Syringo-cystadenoma (*sir-ing'-go-sis-tad-en-o'-mah*) [*σῦριγξ*, a pipe; *κύστις*, a cyst; *ἀδήν*, gland; *ὄμα*, tumor]. A peculiar disease of the skin that probably begins in embryonic sweat-glands. The eruption consists in a number of small, round, hard, raised papules of the color of the skin, which tend to grow larger and become of a bluish-red color. There are no subjective symptoms.

Syringoid (*sir-ing'-goid*). Synonym of *Fistulous*.

Syringomeningocele (*sir-ing'-go-men-in'-go-sēl*) [*σῦριγξ*, pipe; *μῆνιγξ*, membrane; *κήλη*, tumor]. A meningocele resembling a syringo-myelocele.

Syringomyelia (*sir-ing'-go-mi-e'-le-ah*) [*σῦριγξ*, tube; *μυελός*, marrow]. The morbid condition caused by the presence of an adventitious cavity in the spinal cord or by the dilatation of the central canal.

Syringomyelitis (*sir-ing'-go-mi-el-i'-tis*) [*σῦριγξ*, tube; *μυελός*, marrow; *ιτις*, inflammation]. The inflammation coincident with or preceding syringomyelus.

Syringo-myelocele (*sir-ing'-go-mi'-el-o-sēl*) [*σῦριγξ*, tube; *μυελός*, marrow; *κοιλός*, hollow]. Synonym of *spina bifida*.

Syringomyelus (*sir-ing'-go-mi'-el-us*) [*σῦριγξ*, tube; *μυελός*, marrow]. An abnormal dilatation of the central canal of the spinal cord in which the central gray column is converted into connective tissue, the interior softening and forming a cavity. A disease similar to this in children is called *hydromyelia*.

Syringomyon (*sir-ing-go-mi'-on*) [*σῦριγξ*, a pipe; *μυών*, a muscle]. In biology, one of the intrinsic muscles of the syrinx in birds.

Syringotome (*sir-ing'-go-tōm*) [*σῦριγξ*, tube; *τέμνειν*, to cut]. An instrument for incision of a tube or fistula; a canaliculus-knife; it is also used by anatomists.

Syringotomy (*sir-ing-got'-o-me*) [*σῦριγξ*, tube; *τομή*, a cutting]. The operation of laying open a fistula *in ano* by incision.

Syrinx (*sir'-inks*) [*σῦριγξ*, tube: *pl.*, *Syringes*]. A tube, a fistula. In biology, the lower larynx or voice-organ of a bird. It is especially developed in the *Oscines*, or singing birds. See *Syringe*.

Syrup, Sirup (*sir'-up*) [*siropus*, syrup]. A syrup. In *pharmacy*, a concentrated solution of sugar in an aqueous fluid. Syrups may be simple (consisting of sugar and water only), flavored, or medicated. There are thirty-one syrups official in the U. S. Pharmacopeia besides 37 in the N. F. **S., Eaton's**, syrup of the phosphates of iron, quinin, and strychnin. **S., Hive**, compound syrup of squills. **S., Simple**, the aqueous solution of sugar without other ingredients.

Syrupy (*sir'-up-e*) [*siropus*, syrup]. Of the nature or consistence of a syrup.

Sysoma (*si-so'-mah*) [*σύν*, together; *σῶμα*, body: *pl.*, *Sysomata*]. A double monstrosity with two separate heads, but with the bodies fused in more or less intimate union.

Sysomic (*si-so'-mik*) [*σύν*, together; *σῶμα*, body]. Of the nature of a sysoma.

Syspasia (*sis-pa'-ze-ah*). Synonym of *Convulsion*.

Syssarcosic (*sis-ar-ko'-sik*) [*σύν*, together; *σάρξ*, flesh]. Of the nature of or relating to a syssarcosis.

Syssarcosis (*sis-ar-ko'-sis*) [*σύν*, together; *σάρξ*, flesh]. The union of bone by the interposition of muscular tissue.

Systalsis (*sis-tal'-sis*). Synonym of *Systole*.

Systaltic (*sis-tal'-tik*) [*συσταλτικός*; *σύν*, with; *στέλλειν*, to set]. Pulsatory; contracting; having a systole.

Systasis (*sis'-tas-is*) [*σύστασις*]. Consistency, density.

System (*sis'-tem*) [*σύστημα*, system]. A methodic arrangement of parts. A combination of parts into a whole. In biology, an assemblage of parts or organs of the same or similar tissues. In microscopy, there may be found from one to five systems in a single objective. Each system may consist of one, two, or three lenses. When more than one they are cemented together. The systems are called in their order: *anterior* or *front*, *middle*, and *posterior*. **S., Anterior, or Front,** in the microscope, the system of lenses nearest the object. **S., Brunonian.** See *Brunonian*. **S., Cerebro-spinal,** the brain, spinal cord, and their various branches. **S., Circulatory,** the blood-vessel system. **S., Dermoid,** Bichat's term for the skin and its derivatives. **S.-disease,** a disease of the cerebro-spinal axis affecting a tract of nerve-fibers or nerve-cells having common anatomic relations and physiologic properties. **S., Glandular,** the glandular organs of the body considered as a whole. **S., Human,** the human body and its organs. **S., Ling's.** See *Ling*. **S., Middle,** the lenses of the microscope between the anterior and posterior systems. **S., Muscular,** the muscles, their mechanism, etc. **S., Nervous,** the nerves of the body, cerebral, spinal, and ganglionic. **S., Osseous,** the skeleton. **S., Posterior,** in the microscope the system of lenses farthest from the object. **S., Vascular,** the heart and blood-vessels.

Systema (*sis-te′-mah*). See *System.*

Systematic (*sis-tem-at′-ik*) [συστηματικός, systematic]. Methodic; taxonomic; classificatory.

Systematology (*sis-tem-at-ol′-o-je*) [σύστημα, system; λογος, science]. The science of arrangement and classification.

Systemic (*sis-tem′-ik*) [σύστημα, system]. Having the nature of or pertaining to a system. Generalized, or pertaining to the whole organism. Applied to the circulation in the body generally, as distinguished from that in the lungs.

Systemoid (*sis′-tem-oid*) [σύστημα, system; εἶδος, form]. A term applied to tumors composed of a number of tissues resembling a system of organs; teratoid.

Systole (*sis′-to-le*) [συστολή, contraction]. The contraction of the heart and arteries. **S., Aborted,** a cardiac systole which, on account of insufficient energy or mitral regurgitation, does not increase the arterial pressure. **S., Anticipated,** an aborted systole due to an imperfectly filled ventricle. **S., Arterial,** the arterial retraction following cardiac systole. **S., Auricular,** auricular contraction. **S., Ventricular,** the contraction of the ventricles.

Systolic (*sis-tol′-ik*) [σύστολη, systole]. Pertaining to systole.

Systolometer (*sis-to-lom′-et-er*) [σύστολη, systole; μέτρον, measure]. An instrument for estimating the intensity and quality of cardiac sounds and murmurs, and the length of the pauses.

Systremma (*sis-trem′-ah*) [σύστρεμμα, a swelling: *pl.*, *Systremmata*]. Cramp in the muscles of the leg.

Systrophe (*sis′-tro-fe*) [συστροφή; σύν, together; στρέφειν, to turn]. A wrench, and the subsequent inflammation. In biology, the massing of the chlorophyl-bodies of a cell under intense light. Cf. *Apostrophe*, *Epistrophe.*

Systylous (*sis′-til-us*) [σύστυλος, with columns standing close]. In biology, applied (*a*) to flowers in which the styles cohere to form a single column; (*b*) to mosses in which the lid is fixed to the columella.

Syzygial (*siz-ij′-e-al*) [σύζυγος, yoked together]. Pertaining to syzygy.

Syzygium (*si-zij′-e-um*) [συζύγιος, yoked]. A genus of E. Indian myrtaceous trees. **S. jambolanum** affords an astringent bark, which is asserted to be useful in diabetes. Same as *Syzygy.* Unof.

Syzygy (*sis′-ij-e*) [σύζυγος, yoked together; σύν, together; ζευγνύναι, to yoke, to join: *pl.*, *Syzygies*]. In biology: 1. A fusion of two bodies, without loss of identity. 2. A zygote or conjugate body, formed by the union or conjugation of two similar gametes, and usually followed by encapsulation and later by sporulation; a syzygium.

Szydlowski's Method. A method of estimating CO_2 in the air. See *Ventilation.*

T

T. The abbreviation of Tension, referring to the intraocular pressure. See *Tension.*

T.-bandage. See *Bandage.*

T.-bone. See *Tau-bone.*

Tabacosis (*tab-ak-o′-sis*) [*tabacum*, tobacco]. Zenker's term for disease of the lungs arising from inhalation of vegetable fibers, especially of cotton. Properly, that form of pneumonokoniosis due to the inhalation of tobacco-dust.

Tabacum (*tab-ak′-um*) [L.: *gen.*, *Tabaci*]. Tobacco. The dried leaves of *Nicotiana tabacum*, native to America. Its properties are mainly due to an alkaloid, nicotin, $C_{10}H_{14}N_2$, which, next to prussic acid, is the most rapidly fatal poison known. Tobacco is a powerful depressant, nauseant, emetic, diaphoretic, and antispasmodic; it is also narcotic and sedative, lowering arterial tension. In toxic doses death occurs by paralysis of the respiratory centers. It is used chiefly as an antispasmodic, and is said to be effectual in tetanus. **T., Enema,** gr. xx in ℥ viij hot water for each enema. **T., Ol.,** obtained by distillation; violently poisonous. **T., Vinum,** ℥j to Oj. Dose ♏v–℥j. **Nicotin,** the alkaloid, efficient in strychnin-poisoning. Dose $♏\frac{1}{20}$–$\frac{1}{10}$ and up to ♏ij in two hours. Preparations unof.

Tabanid (*tab′-an-id*) [*tabanus*, a gad-fly]. Any horse-fly or gad-fly of the family *Tabanidæ*, of which the genus *Tabanus* is the type. More than 1300 species are known, the females of many of them being capable of inflicting a severe and painful bite. See under *Parasites* (*Animal*), *Table of.*

Tabasheer (*tab′-a-shēr*) [Hind., *tabāshēr*]. A corruption of *Tabixir.* An opal-like substance formed abnormally in the joints of certain species of bamboos. This is probably the substance called *Oculus mundi, and Lapis mutabilis* by 17th century writers. It played a great part in medieval therapeutics as a supposed remedy for all sorts of physical and mental ills. It is used locally as a tonic, aphrodisiac, pectoral, astringent, and anti-spasmodic. Unof.

Tabatière anatomique (*tab-at′-e-ār an-at-om′-ēk*) [Fr.]. The depression at the base of the thumb on its radial aspect between the second and third extensor tendons.

Tabaxir (*tab′-aks-ēr*). See *Tabasheer.*

Tabby-cat Striation. Peculiar markings occurring on muscles that have undergone extreme fatty degeneration. The condition is especially seen in the musculi papillares of the heart in pernicious anemia.

Tabebuia (*tab-e-bu′-e-ah*) [a native Braz. name]. A genus of bignoniaceous trees and shrubs of tropical America, of some 60 species. **T. impetiginosa** is mucilaginous and highly astringent, and is locally valued as a medicine. Unof.

Tabefaction (*tab-e-fak′-shun*) [*tabefacere*, to melt]. Wasting; emaciation.

Tabella (*ta-bel′-ah*) [L.: *pl.*, *Tabellæ*]. A table. A troche. A tablet.

Tabellary (*tab′-el-ar-e*). Same as *Tabular.*

Tabes (*ta′-bēz*) [L., a wasting]. Formerly used as a synonym of wasting, shrinking, or consumption. Now used as a synonym of *Tabes dorsalis* or *Locomotor Ataxy*, a disease dependent upon degeneration and sclerosis of the posterior columns of the spinal cord. Its most pronounced symptom, incoördination of the

muscles of locomotion, has served to establish the term *Locomotor Ataxy* as the common designation of the affection. The anatomic changes consist of atrophy and degeneration of the nerve-fibers, with hypertrophy of the connective tissue, and extend from the lumbar region to the calamus scriptorius. The symptoms are numerous, but the chief are "lightning-pains;" unsteadiness and incoördination of locomotor and other voluntary movements, extending even to the upper extremities; disorders of vision, among others the valuable *Argyll-Robertson Pupil, q. v.;* cutaneous anesthesia; girdle-sense; abolition of the patellar reflex; diminution of sexual desire; peculiar "crises," etc. The disease is a very chronic one, but is not always progressive. It occurs most frequently in males, and usually between the ages of thirty and fifty. The most common cause, by some authorities said to be the only cause, is syphilis. Other predisposing, exciting or adjuvant causes are prolonged exposure to cold and wet, alcoholism, mental strain and traumatism of the spine. **T. coxaria,** wasting from hip-joint disease. **T. ergotica,** a toxemia resulting from the use of ergot; its symptomatology closely simulates that of locomotor ataxia. **T. glandularis.** Synonym of *T. mesenterica.* **T., Hereditary.** See *Friedreich's Ataxia.* **T., Lacteal.** See *Hyperlactation.* **T. mesentericus** and **T. scrofulosa,** old terms descriptive of diseases of the digestive and assimilative organs, sometimes tuberculous, sometimes syphilitic, and attended with wasting. **T. neurasthenica,** neurasthenia with the symptoms of locomotor ataxia. **T. pulmonalis,** pulmonary tuberculosis. **T. saturnina,** the general disability due to lead-poisoning. **T. scrofulosa.** Synonym of *T. mesenterica.* **T., Suspension Treatment of,** see *Suspension.* **T. urinalis.** Synonym of *Diabetes mellitus.*

Tabescence (*tab-es'-ens*) [*tabes*, wasting]. Wasting; marasmus; emaciation.

Tabescent (*tab-es'-ent*) [*tabescere, tabescens*, to waste]. Wasting, or becoming wasted, or emaciated.

Tabetic (*tab-et'-ik*) [*tabes*, wasting]. Pertaining to or affected with tabes.

Tabic (*tab'-ik*) [*tabes*, wasting]. Affected with tabes; of the nature of or pertaining to tabes.

Tabid (*tab'-id*) [*tabes*, wasting]. Wasted, by disease; emaciated; affected with tabes.

Tabidness (*tab'-id-nes*) [*tabes*, wasting]. The state of being reduced by disease.

Tabific (*tab-if'-ik*) [*tabes*, wasting; *facere*, to make]. Tending to produce tabes or emaciation.

Tabitude (*tab'-it-ūd*) [*tabes*, a wasting]. Emaciation; wasting of the body.

Tablature (*tab'-lat-ūr*) [*tabula*, a table]. Separation into tables, as exemplified in the frontal, parietal, and occipital bones.

Table (*ta'-bl*) [*tabula*, a table]. A flat-topped piece of furniture. Either one of the two layers, the outer and inner, of the cranial bones; the inner, from its brittleness, is also called the vitreous table. **T., Bed,** a small, portable table arranged to go across the bed. **T., Operating,** a table used in surgical operations. **T.-spoon, T.-spoonful.** See *Cochleare magnum.* **T., Vitreous** (*of the skull*), the inner cranial table.

Tablet (*tab'-let*) [*tabula*, a table]. 1. A lozenge, a troche. 2. A table, as of a cranial bone. See *Table.* **T.-triturates,** in pharmacy, small, disc-shaped bodies, prepared by moistening medicated powders with a highly volatile liquid, then molding the moistened powder, ejecting the tablet, and allowing the liquid to evaporate, when the tablets retain their shape. The basis of tablet-triturates is mostly finely-powdered sugar. They disintegrate in the alimentary canal.

Tabophobia (*tab-o-fo'-be-ah*) [*tabes; φόβος*, fear]. A morbid fear of becoming affected with tabes; it is a frequent symptom in neurasthenia.

Tabula (*tab'-u-lah*). See *Table.* **T. cathamnales,** the septal plates of *Medusæ.*

Tabular (*tab'-u-lar*) [*tabula*, table]. Having the form of a table.

Tabulet (*tab'-u-let*) [*tabula*, a table]. A lozenge; a tablet.

Tabum (*ta'-bum*). Synonym of *Ichor.*

Tac (*tak*) [Fr., rot]. Synonym of *Influenza.*

Tacahout (*tak'-a-howt*) [nat. Indian]. A kind of gall produced upon the *Tamarisk, q. v.;* astringent. Unof.

Tacamahac, Tacamahaca (*tak'-am-a-hak, tak-am-a-hak'-ah*) [Mexican]. A resin produced by various trees of the genera *Bursera, Protium,* and *Calophyllum;* also, the resin of the buds of *Populus balsamifera,* the Balm of Gilead poplar of N. America. These resins are now little used in medicine. Unof.

Tacca (*tak'-ah*) [Malay]. A genus of large-leaved tropical plants. **T. pinnatifida,** Forst, yields a kind of arrow-root. Unof.

Tache (*tahsh*) [Fr.]. A spot, a coloration. **T. blanches,** certain white spots described by Hanot as occurring on the liver, especially on its convex surface, in infectious diseases. Microscopically they present a leukocytic infiltration with bacteria. **T., bleuâtre,** a spot of a delicate-blue tint, sometimes observed on the skin of typhoid-fever patients. The spots are of an irregularly rounded form, and from three to eight lines in diameter; not elevated above the skin, nor affected by pressure. They are most common on abdomen, back, and thighs. They usually precede the characteristic eruption of typhoid fever. **Ts. cérébrales,** irregular, red, angio-paralytic patches upon the skin, noticed in some cases of epilepsy; also, the spot on the blastoderm about the end of the first week, which becomes the center of embryonic development. **T. méningéale,** the red line made when the finger-nail is drawn over the skin. It was thought to be distinctive of meningeal irritation, but may be observed in other conditions of vaso-motor paresis.

Tachistoscope (*tak-is'-to-skōp*) [*ταχύς*, swift; *σκοπεῖν*, to view]. A form of stereoscope giving rapid impressions by means of a movable diaphragm.

Tachometer (*tak-om'-et-er*). See *Hemotachometer.*

Tachycardia (*tak-ik-ar'-de-ah*) [*ταχύς*, quick; *καρδία*, heart]. Abnormal paroxysmal rapidity of cardiac action. The pulse may rise as high as 200 per minute. It is a comparatively rare affection, due to paralysis of the inhibitory nerve of the heart or to stimulation of the cardiac accelerator nerves. **T., Essential Paroxysmal,** tachycardia occurring in paroxysms and due to functional disturbance of the cardiac nerves. **T., Paroxysmal,** tachycardia occurring periodically in paroxysms. **T. strumosa exophthalmica.** See *Exophthalmic Goiter.*

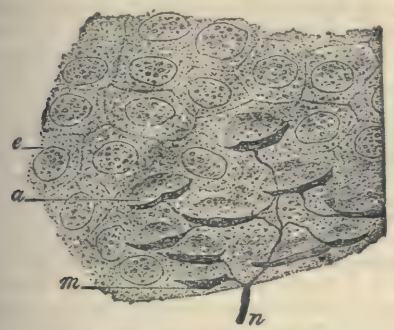
Tachygraph (*tak'-ig-raf*) [*ταχύς*, swift; *γράφειν*, to write]. Synonym of *Hemotachometer.*

Tachyiatria (*tak-e-e-a'-tre-ah*) [*ταχύς*, swift; *ἰατρεία*, treatment]. The art of curing quickly.

Tachyotomy (*tak-e-ot'-o-me*) [*ταχύς*, swift; *τομή*, section]. Rapid dissection.

Tachyphrasia (*tak-if-ra'-ze-ah*) [*ταχύς*, swift; *φράσις*, speech]. Morbid rapidity or volubility of speech.

Tachypnea (*tak-ip-ne'-ah*) [*ταχύς*, swift; *πνοή*, breath]. Abnormal frequency of respiration.



Tachythanatous (*tak-ith-an'-at-us*) [*ταχύς*, swift; *θάνατος*, death]. Rapidly fatal.

Tachytomy (*tak-it'-o-me*) [*ταχύς*, swift; *τομή*, a cutting]. The art of operating quickly.

Taciturn (*tas'-it-urn*) [*taciturnus*, silent]. Habitually silent or reserved.

Tact (*takt*) [*tactus; tangere*, to touch]. Delicacy of discrimination, judgment, and act. **T., Medical,** skill in the diagnosis and treatment of disease. See *Tactus.*

Tactile (*tak'-til*) [*tactilis*]. Pertaining to the sense of touch. **T. Cells,** cells representing special sensory nerve-endings, "found in the deeper layers of the epidermis, or the adjacent stratum of corium. They are, (1) **simple,** oval, nucleated elements 5–12 μ in size, resembling ganglion-cells; (2) **compound,** in which two or more cells are associated to receive the nerve-

TACTILE CELLS, SNOUT OF PIG.

a. Tactile cells. *m.* Tactile disc. *n.* Nerve-fiber. (*From Stirling.*)

fiber; the *corpuscles of Grandry* and *of Merkel* found respectively in the epidermis of birds and of mammals are examples of such structures" (Piersol). **T. Corpuscles,** special sensory nerve-endings exhibiting more complexity of structure than compound tactile cells. Cf. *End-bulbs.* **T. C. of Grandry,** see under *T. Cells.* **T. C. of Meissner,** oval or elliptic bodies, 45–140 μ long and 35–55 μ wide, situated usually at the apices of the papillæ of the corium, in the skin of the palmar surfaces of the fingers and toes. Each corpuscle is supplied with one or two, sometimes three or four, medullated nerve-fibers. **T. C. of Merkel,** see under *T. Cells.* **T. Disc,** the flattened terminal expansion of the axis cylinder in a special sensory nerve-ending, or tactile corpuscle. **T. Meniscus,** a peculiar crescentic expansion of a nerve-fiber over the ental surface of a tactile cell. **T. Papillæ.** See *Papilla.* **T. Reflexes,** reflex movements from stimulation of the tactile corpuscles.

TACTILE CORPUSCLE OF MEISSNER, FROM THE SKIN OF A HUMAN TOE.

N. The nerve entering the complicated group of tactile cells composing the corpuscle. Bl. Blood-vessel accompanying the nerve-fiber. (*From Piersol, after Schieffer-decker.*)

Tactus (*tak'-tus*) [*tangere*, to touch]. Touch. Delicacy of tactile sensation. **T. eruditus,** or **T. expertus,** especial sensitiveness of touch acquired by long experience.

Tædium vitæ (*te'-de-um vi'-te*) [L.]. Disgust, or weariness of life, a symptom witnessed in many cases of insanity; it is sometimes a precursor of suicide.

Tænia (*te'-ne-ah*). See *Tenia.*

Tæniacide (*te'-ne-as-id*). See *Teniacide.*

Tæniafuge (*te'-ne-af-ūj*). See *Teniafuge.*

Tænidium (*te-nid'-e-um*) [*ταινία*, a band, fillet: *pl.*, *Tænidia*]. In biology, the spiral thread of the respiratory tracheæ of an insect.

Tafia (*taf'-e-ah* or *ta-fe'-ah*) [Malay, *tāfia*, rum]. Rum.

Tag Alder (*tag' awl'-der*). See *Alnus.*

Tagliacotian (*tal-e-ak-o'-she-an*) [after *Tagliacozzi*, an Italian surgeon]. Pertaining to Tagliacozzi. **T. Operation,** a rhinoplastic operation by which, in case of destruction of the natural tissue, a part or the whole of a new nose is formed by a flap from the forehead or other part.

Tagma (*tag'-mah*) [*τάγμα*, that which has been ordered or arranged]. In biology, a general term applied by Pfeiffer to all aggregates of molecules. Cf. *Inotagmata micella, pleon, syntagma.*

Tail (*tāl*) [ME., *tail*, tail]. The caudal extremity of an animal. Applied to tail-like parts of an organ of the human body; *e.g.*, the tail of the epididymis or of the pancreas. **T.-coverts,** the most posterior feathers of the body of a bird, or those which immediately cover the basal portion of the tail. **T.-fold,** an embryonic infolding or hollow, enclosing the hind-gut. See *Head-fold.*

Tailors' Cramp or **Spasm.** See *Cramp.* **T.s' Muscle.** See *Sartorius* (in *Muscles, Table of*).

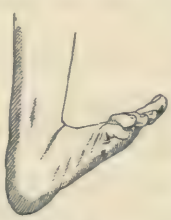
Taint (*tānt*) [ME., *teint*, taint]. An infection, or pathogenic influence; as a syphilitic *taint.* A spot or blemish.

Tait's Knot. A peculiar method of ligating the pedicle in the operation of ovariotomy. See *Knot, Staffordshire.* **T.'s Law.** See *Law.* **T.'s Method.** See *Perineorrhaphy.*

Talalgia (*tal-al'-je-ah*) [*talus*, heel; *ἄλγος*, pain]. Pain in the heel.

Talc, Talcum (*talk*) [*gen.*, *Talci*]. A silicate of magnesium, a white, unctuous, neutral powder; sometimes used in insufflating-powders, and as a remedy in diarrhea.

Taliacotian (*tal-e-ak-o'-she-an*). See *Tagliacotian.*



Taliped (*tal'-ip-ed*) [*talus*, ankle; *pes*, foot]. A person affected with talipes; club-footed.

Talipedic (*tal-ip-e'-dik*) [*talus*, ankle; *pes*, foot]. Belonging or relating to talipes.

Talipes (*tal'-ip-ēz*) [*talus*, ankle; *pes*, foot]. The deformity commonly called club-foot, depending upon

TALIPES EQUINUS.

TALIPES CALCANEOUS.

TALIPES CAVUS OR ARCUATUS.

TALIPES VARUS.

TALIPES EQUINOVARUS.

TALIPES CALCANEOVARUS.

contraction of muscles or tendons, either congenital or

acquired. **T. arcuatus.** See *T. cavus.* **T. calcaneus,** the patient walks upon the heel alone. **T. cavus,** an increased curvature of the arch of the foot. **T. equinus,** the heel is elevated and the weight thrown upon the anterior portion of the foot. **T. planus,** flat-foot. **T., Spasmodic,** non-congenital talipes due to muscular spasm. **T. valgus** ("flat" or "splay" foot), the foot is everted or distorted outward. **T. varus,** the reverse of the last, the foot being bent inward. Combinations of these occur, called *equino-varus, equino-valgus, calcaneo-varus, calcaneo-valgus,* etc.

TALIPES VALGUS. TALIPES CALCANEO-VALGUS. TALIPES EQUINO-VALGUS.

Talipomanus (*tal-ip-o-ma'-nus*) [*talus,* ankle; *pes,* foot; *manus,* hand]. Deformity of the hand, analogous to club-foot, club-hand.

Tallow (*tal'-o*) [ME., *talowe,* tallow]. The solid fat of neat cattle, consisting mainly of stearic, palmitic, and oleic acids. Tallow is the name given to the fat extracted from "suet," the solid fat of oxen, sheep, and other ruminants. The quality of the tallow varies according to the food of the cattle and other circumstances, dry fodder inducing the formation of a hard tallow. Its melting-point varies from 115° to 121° F. The best qualities are whitish, but tallow has in general a yellowish tint. Beef-tallow contains about 66 per cent. of solid fat and 34 per cent. of olein or tallow-oil; mutton-tallow contains about 70 per cent. of solid fat and 30 per cent. of tallow-oil. The oil is used chiefly in the manufacture of soaps and the harder tallow for candle-making.

Talo- (*ta'-lo*) [*talus,* ankle]. A prefix denoting connection with or relation to the heel, as talo-calcaneal, talo-fibular, talo-tibial, etc.

Talon (*tal'-on*) [*talus,* ankle, heel]. In biology: (1) a claw, as of a bird of prey; (2) a posterior prolongation on the sectorial teeth of mammals. **T.-toe.** See *Hammer-toe.*

Talpa (*tal'-pah*) [L.]. A mole or wen.

Talus (*ta'-lus*) [L.]. The astragalus. Also, the ankle.

Tamarac (*tam'-ar-ak*) [Am. Ind.]. The bark of *Larix americana,* a tonic and mild astringent acting on mucous membranes. Dose of the fld. ext. ʒss–j. Unof.

Tamarind (*tam'-ar-ind*) [Ar., *tamr ul Hind,* the Indian date]. The pulp of the fruit of *Tamarindus indica.* It contains various fruit-acids, sugar, etc. It is laxative and refrigerant. It is usually prescribed with other laxatives. Dose indefinite. Also the fruit itself and the tree that produces it. **T.-water,** an infusion of tamarind in cold water. It is used as a cooling drink in fevers.

Tamar indien. See *Senna.*

Tamarindus (*tam-ar-in'-dus*) [L.]. A genus of old-world leguminous trees. **T. indica.** See *Tamarind.*

Tamarisk (*tam'-ar-isk*) [L.]. A shrub or tree of the genus *Tamarix.* **T. gallica** and **T. articulata** yield tamarisk galls. See *Tacahout.* **T. mammifera** affords a kind of manna. Unof.

Tambor-oil (*tam'-bor-oil*). A purgative oil from the seeds of *Omphalea oleifera,* a plant of tropical America. Unof.

Tambour (*tam'-bor,* or *tam'-boor*) [Fr., *tambour,* a drum]. A drum-like instrument used in physiologic experiments. It consists of a shallow cup of metal over which is stretched an elastic membrane and from which or to which passes a tube for transmitting a current of air. It is set into movement by the phenomena under observation.

Tampon (*tam'-pon*) [Fr.]. A portion of cotton, sponge, or other material, medicated or not, and used to plug the vagina, nose, etc., in cases of hemorrhage or for other therapeutic purpose. **T., Kite-tail,** a tampon consisting of a number of pledgets tied at intervals to a string. **T., Trendelenburg's,** an inflatable rubber bag surrounding a tracheotomy-tube. It prevents the oozing of blood along the sides of the tube.

Tamponade, Tamponage, Tamponnement (*tam-pon-ād', tam'-pon-ahj, tam'-pon-ment*) [Fr., *tampon*]. The act or operation of plugging with a tampon.

Tamponing (*tam-pon'-ing*) [Fr., *tampon*]. The operation of using or introducing a tampon.

Tamus (*ta'-mus*) [*tamnus,* wild-grape vine]. A genus of dioscoreaceous old-world plants. The pulp of the bulb of **T. communis** (black bryony) is discutient, vulnerary, diuretic, and laxative. Unof.

Tanacetin (*tan-as'-e-tin*) [OF., *tanasie,* tansy]. An amorphous, hygroscopic, bitter substance derived from *Tansy,* soluble in alcohol and water, but not in ether.

Tanacetum (*tan-as-e'-tum*) [OF., *tanasie,* tansy]. Tansy. The leaves and tops of *T. vulgare.* It contains a volatile oil and a bitter principle and is useful in amenorrhea and as an anthelmintic. **T., Ext., Fld.** Unof. Dose of the fld. ext. ♏x–ʒj; of an ʒj to Oj infus. ʒj–ij; of the volatile oil gtt j–iij. All unof.

Tanalum (*tan-al'-um*) [*tannin,* tannin; *alum*]. Aluminum tanno-tartrate, employed in the treatment of diseases of the nose and throat.

Tangent (*tan'-jent*) [*tangere,* to touch]. Touching.

Tanghin (*tang'-gin*) [*Malagasy*]. A poisonous extractive obtained from Madagascar. See *Tanghinia.*

Tanghinia (*tan-gin'-e-ah*) [*Malagasy*]. The seeds of the plant *T. venenifera,* or ordeal bean, native to Madagascar. Its properties are due to tanghin, an extractive closely resembling curare in its medicinal properties.

Tangle (*tang'-gl*) [ME., *tangel,* seaweed]. See *Laminaria.* **T.-tent.** See *Sea-tangle.*

Tannal (*tan'-al*) [*tannin,* tannin; *alum*]. Aluminum tannate, employed in the treatment of diseases of the nose and throat.

Tannas (*tan'-as*). Synonym of *Tannate.*

Tannate (*tan'-āt*) [*tannin,* tan]. Any salt of tannic acid. Tannates of bismuth, iron, lead, quinin, etc., are used to some extent as remedies.

Tannic (*tan'-ik*) [*tannin,* tannin]. Obtained from or containing tannic acid. **T. Acid.** See *Acid* (*Tannic*).

Tannin (*tan'-in*). See *Acid* (*Tannic*).

Tanret's Test (*for albumin*). The reagent is composed of mercuric chlorid 1.35 gms., potassium iodid 3.32 gms., acetic acid 20 c.c., distilled water to make 100 c.c. By contact it gives an opacity with all proteids. See *Tests, Table of.*

Tansy (*tan'-ze*). See *Tanacetum.*

Tantalum (*tan'-tal-um*) [*Tantalus,* father of Niobe]. A rare metal, allied in properties to antimony and bismuth; symbol Ta, at. wt. 192. Its medicinal qualities are unknown. See *Elements, Table of.*

Tape (*tāp*) [ME., *tape,* tape]. 1. A band of linen.

2. A tape-worm. **T.-worm.** See *Tenia*, *Bothriocephalus*, and *Parasites* (*Animal*), *Table of*.

Tapeinocephalus (*tap-in-o-sef'-al-us*) [ταπεινός, low; κεφαλή, head]. See *Tapinocephaly*.

Tapeinocephaly (*tap-in-o-sef'-al-e*). See *Tapinocephaly*.

Tapesium (*ta-pe'-ze-um*) [ταπης, figured cloth, tapestry: *pl.*, *Tapesia*]. In biology, a layer formed of the mycelium of a fungus.

Tapetal (*tap'-e-tal*) [τάπης, carpet]. Pertaining to the tapetum.

Tapetum (*ta-pe'-tum*) [τάπης, a mat, or rug]. 1. The layer forming the roof of the posterior and middle cornua of the lateral ventricles of the brain; it is composed of fibers from the corpus callosum. 2. In biology, a term applied to the lining membrane of the pollen-sac. **T. cellulosum.** See *T. fibrosum*. **T. fibrosum,** a shining structure in the choroid of the eye. It takes the place of the *T. cellulosum* of the carnivora, the iridescent portion of the choroid in these animals. **T. lucidum,** the brilliant, greenish, reflecting layer or membrana versicolor of the eyes of many of the lower animals. **T. nigrum,** the pigmentary layer of the retina. See *Pigmentary Layer*. **T. ventriculi,** a bundle of white fibers of the brain uniting the cortex of the frontal with that of the occipital lobe.

Taphephobia, Taphiphobia (*taf-e-fo'-be-ah*) [τάφος, burial; φόβος, fear]. Morbid fear of burial alive.

Taphrenchyma (*taf-reng'-kim-ah*) [ταφος, pit; ἔγχυμα, an infusion]. In biology, a vegetal tissue composed of pitted ducts. Also called *Bothrenchyma* and *Pitted Tissue*.

Tapinocephalic (*tap-in-o-sef-al'-ik*) [ταπεινός, low; κεφαλή, head]. Affected with tapinocephaly.

Tapinocephalus (*tap-in-o-sef'-al-us*) [ταπεινός, low; κεφαλή, head]. A subject of tapinocephaly.

Tapinocephaly (*tap-in-o-sef'-al-e*) [ταπεινός, low; κεφαλή, head]. Flatness of the top of the cranium.

Tapinocranius (*tap-in-o-kra'-ne-us*) [ταπεινός, low; κρανίον, skull]. Lissauer's term for a skull in which the greatest height of the cranial cavity is from 74.5 to 82.5 per cent. of its greatest length.

Tapinopisthius (*tap-in-o-pis'-the-us*) [ταπεινός, low; ὀπισθεν, behind]. Lissauer's term for a skull in which the angle formed between the radius fixus and the line joining the occipital point and the punctum alæ vomeris is between 24.5° and 33°.

Tapioca (*tap-e-o'-kah*) [Sp.]. A variety of starch obtained from the cassava or manioc plant, *Jatropha manihot*. It is an excellent food for invalids.

Tapir Mouth (*ta'-pēr mouth*). A separation and thickening of the lips, with disease of the orbicularis oris muscle, causing the lips to resemble those of the tapir. It is sometimes seen in facial muscular atrophy of the Landouzy-Déjérine type.

Tapotement (*tap-ōt'-mong*) [Fr.]. In massage, the percussing manipulation always performed by the operator's wrists, the hands striking quickly. There are four kinds of percussion: 1. *Clapping*, performed with the palms of the hands. It is used to act upon the skin and the superficial nerves and vessels. 2. *Hacking*, performed with the ulnar border of the hand. It is used around nerve-centers and upon the muscles. 3. *Punctation*, performed with the tips of the fingers. It is used upon the head and in circles around the heart. 4. *Beating*, performed by the clenched hand. It is used upon the glutei, and upon the lower extremities over the sciatic nerve.

Tapping (*tap'-ing*). See *Paracentesis*.

Tap-root (*tap'-rūt*). The main root, or downward continuation of the plant-axis.

Tar (*tahr*) [ME., *tar*, tar]. A material obtained by the destructive distillation of various substances, particularly wood and coal. The name is commonly applied to wood-tar. See *Pix liquida*. **T.-acne.** See *Acne picealis*. **T., Coal,** a dark, highly complex, semi-liquid substance obtained by the destructive distillation of coal. **T.-colors.** See *Pigments, Conspectus of*. **T., Gas.** See *T., Coal*. **T., Juniper.** Synonym of *Oil of Cade*. **T., Oil of,** a highly complex, volatile, oily liquid obtained in the distillation of wood-tar. **T.-ointment,** a mixture of equal parts of tar and suet. *Unguentum picis liquidæ*. **T.-water,** an infusion containing one part of tar to four of water. **T., Wood,** a thick, shining, black liquid obtained by the distillation of the wood of various species of conifers.

Tarantism (*tar'-an-tizm*) [*tarantismus*]. A choreic affection, largely a play of the imagination and often feigned, ascribed to the bite of a tarantula. It is perpetuated by force of tradition along certain parts of the Mediterranean coast. According to popular fancy, the affection was cured by music and dancing.

Tarantula (*tar-an'-tu-lah*) [Τάρας, Tarentum]. A species of spider, *Lycosa tarantula*, closely resembling the trap-door spider, *Mygale henzii*, with which it is often confounded. Its bite is poisonous. See *Tarantism*.

Tarantulism (*tar-an'-tu-lizm*). Same as *Tarantism*.

Tarassis (*tar-as'-is*) [ταράσσειν, to trouble]. Hysteria in the male.

Taraxacerin (*tar-aks-as-e'-rin*) [Ar., *tarasacon*, a kind of succory; *cera*, wax]. A waxy substance found in dandelion.

Taraxacin (*tar-aks'-as-in*) [Ar., *tarasacon*, a kind of succory]. A crystallizable material derivable from the common dandelion; said to be tonic and diuretic.

Taraxacum (*tar-aks'-ak-um*) [Ar., *tarasacon*, a kind of succory: *gen.*, *Taraxaci*]. Dandelion. The root of *T. dens leonis*. Its properties are due to a bitter extractive principle; it is tonic, diuretic, and aperient. It is of reputed use in dyspepsia. **T., Decoct.** (B.P.) Dose ʒij–iv. **T., Ext.** Dose gr. v–xxx. **T., Ext., Fld.** Dose ʒj–iij. **T., Succus** (B.P.) Dose ʒj–ij.

Taraxis (*tar-aks'-is*) [τάραξις, trouble]. A slight conjunctivitis, or eye-trouble.

Tardieu's Spots. Ecchymotic stains of the lung-tissue indicative of death from asphyxia.

Tared (*tārd*) [Ar., *tarha*, that which is thrown away]. Allowed for as a tare or deduction; having the weight previously ascertained, as a *Tared* Filter. The term is used in pharmacy and chemistry.

Tarichentæ (*tar-ik-en'-te*). See *Paraschistes*.

Tarinus, Horny Band of. See *Band*. **T., Foramen of.** See *Foramina*, *Table of*. **T., Pons of.** See *Pons*. **T., Space of,** the posterior perforated space at the base of the brain.

Tarnier, Sign of. A sign of inevitable abortion. It consists in the effacement of the angle between the upper and lower uterine segments. This angle always exists in the pregnant uterus from an acute anteflexion, but as the escaping ovum descends the pressure thus produced causes the uterus to straighten out, and the angle disappears.

Tarropetrolin (*tar-o-pet'-ro-lin*) [ME., *tar*, tar; πετρος, sick; *oleum*, oil]. A compound of wood-tar and petroleum, recommended as a salve in various skin-diseases. Unof.

Tarry (*tar'-e*) [ME., *tar*, tar]. Of the nature of tar. **T. Stools.** See *Melena*.

Tarsal (*tar'-sal*) [ταρσός, instep]. Pertaining to the bones of the instep. **T. Amputation,** partial removal of the foot through the tarsus. **T. Cartilage,**

the cartilaginous layers in the free edge of each eyelid. **T. Cyst.** See *Chalazion.* **T. Ophthalmia.** See *Blepharitis.*

Tarsalgia (*tar-sal'-je-ah*) [ταρσός, tarsus; ἄλγος, a pain]. Any pain, especially one of gouty character, in the tarsus.

Tarsectomy (*tar-sek'-to-me*) [ταρσός, tarsus; ἐκτομή, excision]. Excision of tarsal bones.

Tarsectopia (*tar-sek-to'-pe-ah*) [ταρσός, tarsus; ἔκτοπος, displaced]. Tarsal displacement.

Tarsen (*tar'-sen*) [ταρσός, tarsus]. Belonging to the tarsus in itself.

Tarsitis (*tars-i'-tis*). See *Blepharitis.*

Tarso- (*tar'-so-*) [ταρσός, tarsus]. A prefix denoting connection with or relation to the tarsus, as tarsometatarsal (articulation), etc.

Tarsocace (*tar-sok'-as-e*). Synonym of *Podarthrocace.*

Tarsocheiloplastic (*tar-so-ki-lo-plas'-tik*) [ταρσός, tarsus; χεῖλος, edge; πλάσσειν, to shape]. Pertaining to a plastic operation on the edge of the eyelid.

Tarsoclasis (*tar-sok'-las-is*) [ταρσός, tarsus; κλάσις, rupture]. Rupture of the tarsal cartilages.

Tarsomalacia (*tar-so-mal-a'-se-ah*) [ταρσός, tarsus; μαλακία, softening]. Softening of the tarsal or palpebral cartilages.

Tarsometatarsal (*tar-so-met-at-ar'-sal*) [ταρσός, tarsus; *metatarsus*]. 1. Both tarsal and metatarsal; relating to the tarsus and the metatarsus. 2. In biology, a bone that unites the metatarsal and the tarsal bones in itself. **T. Amputation,** partial removal of the foot, as in *Lisfranc's Amputation.*

Tarsophalangeal (*tar-so-fa-lan'-je-al*) [ταρσός, tarsus; φάλαγξ, phalanx]. Pertaining to the tarsus and the phalanges.

Tarsophyma (*tar-so-fi'-mah*) [ταρσός, tarsus; φῦμα, growth]. Any morbid growth or tumor of the tarsus.

Tarsoplasia (*tar-so-pla'-ze-ah*) [ταρσός, tarsus; πλάσσειν, to form]. Same as *Tarsoplasty.*

Tarsoplasty (*tar'-so-plas-te*) [ταρσός, tarsus; πλάσσειν, to form]. Plastic surgery of the eyelid.

Tarsorrhaphy (*tar-sor'-af-e*) [ταρσός, tarsus; ῥαφή, suture]. An operation upon the eyelids to diminish the palpebral opening, for ectropion, lagophthalmos, etc.

Tarsotarsal (*tar-so-tar'-sal*) [ταρσός, tarsus]. Between the tarsal bones; as an amputation through the foot—Chopart's amputation.

Tarsotibial (*tar-so-tib'-e-al*). Same as *Tibiotarsal.*

Tarsotomy (*tar-sot'-o-me*) [ταρσός, tarsus; τομή, section]. 1. Operation upon the tarsal cartilage in cases of entropion. 2. Operation on the tarsus of the foot. **T., Cuneiform,** removal of a wedge-shaped piece of any of the tarsal bones.

Tarsus (*tar'-sus*) [ταρσός, tarsus]. The instep, consisting of the calcaneum, or os calcis, the astragalus, cuboid, scaphoid, internal, middle, and external cuneiform bones. Also, the cartilage of the eyelid called the tarsal cartilage, which properly is dense connective tissue forming the support of the lid and giving it firmness and shape. In biology, the shank of a bird; the foot of an insect.

Tartar (*tar'-tar*) [τάρταρον, tartar]. 1. Argol. A popular name given to the acid potassium tartrate, which is a natural product of certain fruits, especially the grape, being deposited on the inside of wine-casks as a whitish or reddish crystalline crust, the impure super-tartrate of potassium. 2. The deposit of earthy or calcareous matter sometimes seen upon the teeth. **T., Cream of,** purified argol or acid potassium tartrate. **T. Emetic,** the tartrate of antimony and potassium. See *Antimony.*

Tartareous (*tar-tar'-e-us*) [τάρταρον, tartar]. Having a rough, crumbling surface.

Tartaric (*tar-tar'-ik*) [τάρταρον, tartar]. Having the nature of tartar. Also, applied to the acid derived from tartar. **T. Acid.** See *Acid, Tartaric.*

Tartarized (*tar'-tar-īzd*) [τάρταρον, tartar]. Impregnated with tartar, or with tartaric acid. **T. Antimony,** tartrate of antimony and potassa. **T. Iron,** iron tartrate.

Tartrate (*tar'-trāt*) [τάρταρον, tartar]. The generic name of salts formed by the action of tartaric acid upon a base. **T. of Antimony and Potassium.** See *Antimony.* **T. of Potash and Soda.** See *Potassium.*

Tartrazin (*tar-tra'-zin*). See *Pigments, Conspectus of.*

Tartronic Acid (*tar-tron'-ik*). See *Acid.*

Tasajos (*taz'-azh-o*) [Sp.]. A preserved meat prepared in South America by cutting the meat in thin slices, then dipping it in brine and partially drying.

Taste (*tāst*) [ME., *tasten,* to taste]. The sense by which savors are perceived and discriminated. The glosso-pharyngeal nerve and the lingual branch of the fifth pair are the nerves mainly connected with this sense, of which the tongue is the chief organ. The lips, the inside of the cheeks, the palate, and the pharynx also receive impressions from sapid substances. **T., After,** a secondary taste perceived after the immediate taste has ceased. **T.-bud,** an oval, flask-shaped body, embedded in the epithelium of the tongue. It consists of an enveloping layer of greatly elongated epithelial cells, the cortical or tegmental cells, within which is a group of highly specialized neuro-epithelial elements, the *gustatory cells.* It is also called *T.-bulb.* **T.-bulb.** See *T.-bud.* **T.-cell,** one of a number of peculiarly shaped, flask-like bodies found between the epithelial cells covering the slopes of the circumvallate papillæ. They are the terminal end-organs of the gustatory nerve. **T.-center,** the gustatory nervous center. Its position is not determined. Ferrier places it close to that of smell, but even the course of the impulse is disputed. Gowers believes that taste-impressions reach the brain solely by the roots of the fifth nerve. **T.-end.** See *T.-cell.* **T.-goblets,** flask-like bodies on the sides and base of the tongue enclosing the gustatory cells. See *T.-cell.* **T.-pore,** the minute canal connecting the interior of a taste-bud with the surface of the mucous membrane.

TASTE-BUD FROM CIRCUMVALLATE PAPILLA OF CHILD.

The oval structure is limited to the epithelium lining the furrow, encroaching slightly upon the adjacent connective tissue (*f*); *o*, taste-pore through which the taste-cells communicate with the mucous surface. (*After Piersol.*)

Tasteless (*tāst'-les*) [ME., *tasten,* to taste]. Without taste. **T. Ague-drop,** a solution of a soluble salt of arsenic, formerly used as a remedy for intermittent malarial fevers.

Tattooing (*tat-too'-ing*) [Tahitian, *tatu,* tattooing]. The operation of producing permanent colors in the skin by the introduction of foreign substances, such as carbon, India ink, and vermilion. It is a common practice among sailors, the color being introduced into the true skin by pricking it with needles. **Tattooing as a Therapeutic Measure,** to restore the natural color in parts which are pigmented, is occasion-

ally resorted to. For white, use baryta white, and for other colors, the earth-colors (ochers; yellow, brown, red). To assist these cinnabar and ultramarine may be used. Mix the colors on a glass plate and impregnate the needles. Electrolysis followed by tattooing is useful in cases of vascular nevi. **T. of Cornea,** an operation to diminish the unpleasant appearance of leukoma of the cornea by tattooing the same so as to simulate the appearance of the normal pupil and iris.

Taubenzecke (*tou-ben-zek'-eh*) [Ger.]. The German name for an insect, *Argas reflexa*, whose sting produces local, and in some cases general edema. See under *Parasites* (*Animal*), *Table of.*

Tau-bone (*taw'-bōn*) [ταῦ, a Greek letter T; ME., *bone*, bone]. A T-shaped bone, such as the episternum. It is also called *T.-bone.*

Taurin (*taw'-rin*) [*taurus*, bull], $C_2H_7NSO_3$. Amidoethyl-sulphonic acid. A decomposition-product of bile; a stable compound that crystallizes in large colorless monoclinic prisms, insoluble in alcohol, but readily dissolved by hot water. It melts and decomposes at about 240° C. It occurs in combination with cholalic acic and as taurocholic acid in bile. Traces are present in the juices of muscles and of the lungs.

Taurocholic Acid (*taw-ro-kol'-ik*). See *Acid.*

Tautomeric (*taw-to-mer'-ik*) [ταυτό, same; μέρος, part]. Exhibiting tautomerism; a qualification applied to compounds to which two different structural formulæ may be rightly attributed.

Tautomerism (*taw-tom'-er-izm*) [ταυτό, same; μέρος, share]. 1. The attribution of two different formulæ to one compound. 2. The quality exhibited by those cases in which two structural formulæ are possible, while but one compound appears to be obtainable. It is assumed that in such bodies the formulæ are susceptible of change from one arrangement to the other. The phenomenon has also been called desmotropy.

Tawed Leather (*tawd*). See *Leather.*

Taxidermic (*taks-id-er'-mik*) [τάξις, arrangement; δέρμα, skin]. Belonging to taxidermy.

Taxidermy (*taks'-id-er-me*) [τάξις, arrangement; δέρμα, skin]. The art of preserving and stuffing the skins of animals, so as to represent the appearance, habits and attitudes during life.

Taxinomy (*taks-in'-o-me*) [τάξις, arrangement; νόμος, law]. The science of systematic classification.

Taxin (*taks'-in*) [τάξος, yew-tree]. The resin of the leaves of the yew-tree, *Taxus baccata;* also, a poisonous alkaloid reported to have been found in the leaves and seeds of the same tree.

Taxiology (*taks-e-ol'-o-je*) [τάξις, arrangement; λόγος, treatise]. The science of classification.

Taxis (*taks'-is*) [τάξις, order; τάσσειν, to arrange]. Arranging. A reduction of a prolapsed structure, as a hernia or a uterus, by methodic manipulation without instruments.

Taxodium (*taks-o'-de-um*) [τάξος, yew-tree; εἶδος, form]. The common bald or black cypress of the southern U. S. and Mexico, said to destroy malarial germs. The leaves and seeds are used internally in hepatic diseases. Unof.

Taxonomic (*taks-o-nom'-ik*) [τάξις, arrangement; νόμος, law]. Pertaining to systematic classification.

Taxonomy (*taks-on'-o-me*) [τάξις, orderly arrangement; νόμος, a law]. That portion of a science which treats of classification and nomenclature.

Taxus (*taks'-us*) [τάξος, yew-tree]. A genus of cone-bearing trees, the yews. **T. baccata,** the common European yew-tree. Its leaves and seeds are poisonous and have sedative qualities. Unof.

Tay's Choroiditis, a form of central choroiditis seen in persons in advanced years. Its course is chronic and there occur changes which resemble those observed in albuminuric retinitis.

Taya (*ta'-yah*) [S. America]. A S. American species of plants said to be exceedingly poisonous, and to be an ingredient of some kinds of *curare.*

Tayuya (*ta-u'-yah*) [S. America]. The root of certain South American plants (*Dermophylla pendulina, Trianospermia ficifolia*, etc.) used in the treatment of syphilis and of certain cutaneous diseases. Dose of tinct., gtt. v–xv. Unof.

Tea (*te*) [Chinese *ts'a*, tea]. Thea. The leaves of *Camellia thea*, a Chinese evergreen shrub. Tea contains an alkaloid, thein, and tannic acid, boheic acid, gallic acid, gluten, coloring-matter, etc. A decoction of the leaves is a popular astringent, restorative beverage, which produces an exhilarating effect upon the nervous system. Its excessive use causes dyspepsia and various nervous derangements. The properties of tea are due to thein ($C_8H_{10}N_4O_2$), a substance identical with caffein and a mild cerebral stimulant. Dose of the fld. ext. ♏x–℥j. Unof. Thein is also given hypodermatically in doses of gr. ⅙–j several times a day, for the relief of pain. **T.-berry.** See *Gaultheria.* **T.-leaf Eye,** a muco-purulent conjunctivitis caused by the prolonged application of tea-leaves to the eye for their supposed therapeutic effect in ocular disease—chiefly among the negroes of the southern United States. **Tea, Substitute for,** a decoction of pearl-barley. **T., Teamsters'.** See *Tepopote.*

Teale's Amputation. A form of amputation in which two rectangular flaps are made; the long flap, folding over the end of the bone, is formed of parts free from large blood-vessels and nerves, those structures being left in the short flap. The length and breadth of the long flap are equal, being one-half the circumference of the limb at the point of amputation. The short flap is one-fourth as long. See *Operations, Table of.*

Tears (*tērz*) [ME., *teer*, tear]. 1. The secretion of the lacrymal gland. 2. Hardened lumps, or drops, of any resinous or gummy drug.

Teasing (*tēz'-ing*) [ME., *tesen*, to tease]. The shredding or arranging of a minute object, with a needle or other suitable instrument, with a view of preparing it for microscopic study.

Teat (*tēt*) [ME., *tete*, a teat]. The nipple: a part of the excretory duct of the mammary gland; the mammilla, or papilla.

Technic, Technique (*tek'-nēk*) [τέχνη, art]. A systematic series of manipulative procedures. A formula of operation.

Technical (*tek'-nik-al*) [τέχνη, art]. Pertaining to any art.

Technocausis (*tek-no-kaw'-sis*) [τέχνη, art; καῦσις, a burning]. Mechanical cauterization, such as electrocauterization, moxa, etc., in distinction from the cauterization produced by chemicals.

Technology (*tek-nol'-o-je*) [τέχνη, art; λόγος, a treatise]. The science or explanation of the terms used in science or art.

Tecnology (*tek-nol'-o-je*) [τέκνον, child; λόγος, study]. The study or scientific knowledge of childhood, its hygiene, diseases, etc.

Tecnotonia (*tek-no-to'-ne-ah*) [τέκνον, child; κτείνειν, to kill]. Child-murder. Infanticide.

Tecoma (*tek-o'-mah*) [Aztec, *tecoma vochitl*, the name of *Solandra guttata*]. A genus of bignoniaceous plants, mostly climbers, with showy, trumpet-like flowers. **T. impetiginosa,** the bark is used in lotions for inflamed joints. **T. ipé,** a Brazilian species; the leaves are used in ophthalmia. **T. radicans,** common in the United States; is said to be vulnerary and sudorific. Leaves

and branches used as dyes. **T. subvernicosa**, of S. America, is diuretic; others are actively astringent.

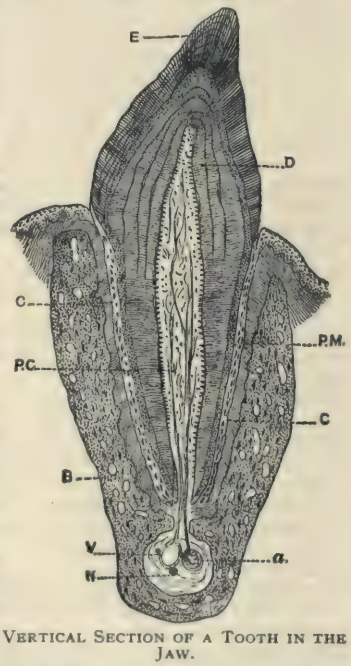
Tectiform (*tek'-tif-orm*) [*tectum*, a roof; *forma*, form]. In biology, like a roof or lid.

Tectocephalic (*tek-to-sef-al'-ik*) [*tectum*, a cover; κεφαλή, head]. Pertaining to a roof-shaped skull.

Tectochrysin (*tek-to-kris'-in*) [τέκτων, a carpenter; χρυσός, gold]. A coloring-matter obtained from *Poplar Buds*.

Tectology (*tek-tol'-o-je*) [τέκτων, a builder; λόγος, science]. In biology, structural morphology.

Tectona (*tek-to'-nah*) [τεκτωνία, carpentery]. Teak, a tree of the natural order *Verbenaceæ*, the East Indian oak. Its wood is valuable for ship-building. Its leaves are astringent and the flowers and seeds diuretic.

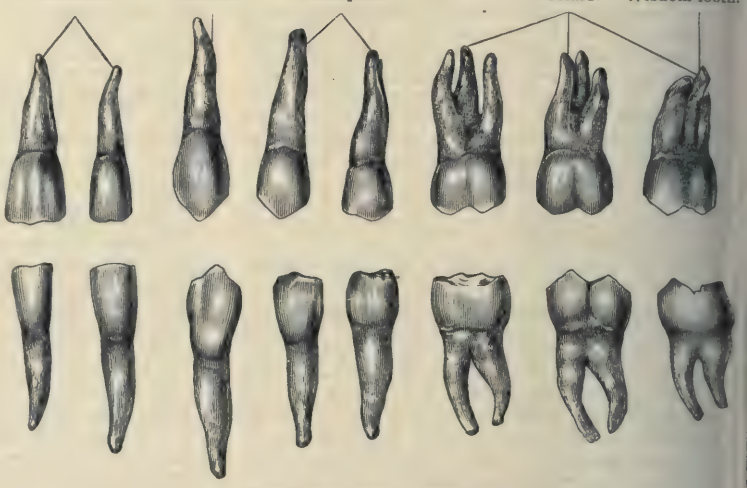


Tectorium (*tek-to'-re-um*) [*tegere*, to cover: *pl.*, *Tectoria*]. In biology, a covering, as the coverts of a bird; also applied to the membrane of Corti.

Tectorial (*tek-to'-re-al*) [*tectorium*, a cover]. Serving as a tectorium, or covering. **T. Membrane.** See *Membrane of Corti*.

Tectrices (*tek'-tris-ēz*) [*tegere*, cover, conceal]. Plural of *Tectrix*. In biology, the feathers of the wing-coverts or tail-coverts of a bird, as distinguished from *remiges*, and *rectrices*.

Tectrix (*tek'-triks*) [L., a cover: *pl.*, *Tectrices*]. Covering or hiding. Tectrices, the plural, applies to the smaller feathers that cover the quill-feathers, wings, or tail of a bird.



Tedium vitæ (*te'-de-um vi'-te*). See *Tædium*.

Vertical Section of a Tooth in the Jaw.

E. Enamel. D. Dentine. P. M. Periodontal membrane. P. C. Pulp-cavity. C. Cement. B. Bone of the Lower Jaw. V. Vein. *a*. Artery. N. Nerve. (*From Stirling.*)

Teeth (*tēth*) [Plural of *tooth*, *q. v.*]. In man, the hard bodies which occupy the alveolar cavities of the upper and lower jaws. They are the hardest portions of the body and the principal organs of mastication. The first set of teeth in childhood, 20 in number, are called *milk*, *temporary*, or *deciduous* teeth. In the adult the permanent teeth consist of 2

The Teeth of an Adult.

The upper section of the illustration represents the upper set, and the lower the lower set.

incisors, 1 *cuspid* or *canine*, 2 *premolars* or *bicuspids*, and 3 *molars* in each lateral half of each jaw. The last molar of each half-jaw is cut at an age of from 20–25 years, and is therefore called a *wisdom-tooth*. In popular parlance the upper canine teeth are called *eye-teeth;* the lower canines, *stomach-teeth*. The upper central incisors are sometimes called *butter-teeth*. In structure the tooth consists of a hard *enamel*, encasing the crown; the *dentine*, within the enamel, constituting the whole of the root and interior of the crown; and the *pulp*, a bulbous prolongation of the mucosa of the gums, which is traversed by blood-vessels and nerve-filaments. The dentine of the root is surrounded by the cement or *crusta petrosa*. The exposed part of the tooth is the *crown*, the middle part the *neck*, and the part within the alveoli the *fang* or *root*. **T., Auditory,** the tooth-like projections on the edge of the limbus laminæ spiralis of the ear. They extend between the epithelial cells and give the limbus an uneven, highly refracting surface. They are composed of the osteogenous tissue of the crista. **T., Numbering of the,** in numbering the teeth, the incisor next the symphysis menti or meson is first, the wisdom-tooth last, or eighth. The first incisor is also said to be central, mesal, or proximal, and the last or wisdom-tooth, distal. In numbering the groups of teeth, as incisors, bicuspids or premolars, molars, the one nearest the symphysis is number one of the particular group. **T., Temporary,** the teeth of the first dentition; milk-teeth; deciduous teeth; also, a provisional set of artificial teeth.

Teething (*te'-thing*) [ME., *teethe*, to cut the teeth]. The development and appearance of the first teeth in an infant. Dentition.

Teetotalism (*te-to'-tal-izm*) [redup. of *total*]. The practice of entire abstinence from alcoholic beverages.

Tegmen (*teg'-men*) [*tegmen*, a cover: *pl.*, *Tegmina*]. In biology, a covering, as the coat of a seed, the coverts of a bird, or the elytrum of a beetle. **T. tympani**, the roof of the tympanic cavity.

Tegmentum (*teg-men'-tum*) [*tegere*, to cover]. A covering. The dorsal portion of the crus cerebri, forme

by the deep longitudinal fibers, interlaced with transverse and arched fibers. In biology, an outer covering, as of a bud or a mollusc.

Tegminal (*teg'-min-al*) [*tegmen*, a covering]. In biology, integumentary.

Tegminalia (*teg-min-a'-le-ah*) [*tegmen*, a covering]. Plural of *Tegminalium*. In biology, the plates of a tessellated crinoid or other similarly protected animal.

Tegula (*teg'-u-lah*) [*tegula*, a tile: *pl.*, *Tegulæ*]. In biology, a sclerite covering the base of the fore-wing or the metathoracic spiracle of certain insects.

Tegumen (*teg'-u-men*). Same as *tegmen*.

Tegument (*teg'-u-ment*) [*tegere*, cover, conceal]. In biology, an enveloping or protective coat; a tegmen, or tegmentum.

Teichmann's Crystals. See *Hemïn*.

Teichmann-Neumann Test. See *Tests, Table of.*

Teichopsia (*ti-kop'-se-ah*) [τεῖχος, wall; ὄψις, vision]. A temporary amblyopia, with subjective visual images like fortification-angles; probably due to vasomotor disturbances of the visual center.

Teigne [Fr.]. See *Tinea*. **T. pelade.** Synonym of *Alopecia areata*.

Teinodynia (*ti-no-din'-e-ah*). See *Tenodynia*.

Teissier's Method. See *Phosphates*.

Tela (*te'-lah*) [L.]. A web or web-like tissue; a plexus. **T. adiposa,** adipose tissue. **T. araneæ.** See *Spiders' Web*. **T. cellulosa,** areolar tissue. **T. choroidea,** the membranous roof of the parts of the third and fourth ventricles of the brain. See *Diatela* and *Metatela*. **T. epithelialis,** epithelial tissue. **T. flava,** elastic tissue. **T. hæmelis,** lymph-cells and blood-corpuscles, and, also, splenic tissue. **T. vasculosa,** the choroid plexus.

Telæsthesia (*tel-es-the'-ze-ah*). See *Telepathy*.

Telangiectasia (*tel-an-je-ek-ta'-ze-ah*) [τέλος, end; ἀγγεῖον, vessel; ἔκτασις, a stretching]. Dilatation of capillaries, or of the smaller blood-vessels.

Telangiectasis (*tel-an-je-ek'-tas-is*). See *Telangiectasia* and *Nævus vascularis*. **T. faciei.** See *Acne rosacea*.

Telangiectasy (*tel-an-je-ek'-tas-e*). Same as *Telangiectasia*.

Telangiectatic (*tel-an-je-ek-tat'-ik*) [τέλος, end; ἀγγεῖον, vessel; ἔκτασις, a stretching]. Relating to or characterized by telangiectasia. **T. Warts.** See *Angiokeratoma*.

Telangioma (*tel-an-je-o'-mah*) [τέλος, end; ἀγγεῖον, vessel; ὄμα, tumor]. A tumor composed of dilated capillaries.

Telangiosis (*tel-an-je-o'-sis*) [τέλος, end; ἀγγεῖον, vessel]. Disease of the capillaries or minute blood-vessels.

Telar (*te'-lar*) [*tela*, a web]. Pertaining to a tela; of the nature of a tela.

Telarian (*te-la'-re-an*) [*tela*, a web]. In biology, web-making or tissue-making, as a spinning spider.

Teledactyl (*tel-e-dak'-til*) [τῆλε, far; δάκτυλος, finger]. A device to avoid stooping when wishing to pick up things from the floor (in disease of the spine, injuries, etc.). It consists of six spring-forceps at the end of a cane, operated by a cord passing to the handle and provided with a ring for the index finger.

Telegony (*tel-eg'-o-ne*) [τῆλε, afar; γονή, offspring]. The influence of a previous husband on the children of a subsequent one through the same woman.

Telegraph (*tel'-e-graf*) [τῆλε, far; γράφειν, to write]. An electric apparatus for conveying information to a distance with great rapidity. **T., Muscle,** an apparatus for recording the contraction of muscles.

Telegraphers' Cramp. See *Cramp*.

Telekinesis (*tel-ek-in-e'-sis*) [τῆλε, far; κίνησις, movement]. The power claimed for some wonder-workers of causing objects to move without touching them.

Telekinetic (*tel-ek-in-et'-ik*) [τῆλε, far; κίνησις, movement]. Pertaining to or characterized by telekinesis.

Teleocephalous (*tel-e-o-sef'-al-us*) [τέλεος, complete; κεφαλή, head]. Having the full number of bones in the skull.

Teleology (*tel-e-ol'-o-je*) [τέλος, end; λόγος, treatise]. The doctrine of final causes.

Teleophore (*tel'-e-o-for*) [τέλεος, complete; φόρος, bear]. See *Gonotheca*.

Teleophyte (*tel'-e-o-fīt*) [*tela*, a web or tissue; φυτόν, plant]. In biology, a plant exhibiting well differentiated tissues.

Teleosis (*tel-e-o'-sis*) [τέλεος, τελειος, complete]. In biology, progressive development.

Teleozoön (*tel-e-o-zo'-on*) [*tela*, a web or tissue; ζῷον, an animal: *pl.*, *Teleozoa*]. In biology, an animal exhibiting well differentiated tissues; a metazoan.

Telepathic (*tel-ep-ath'-ik*) [τῆλε, far; πάθος, disease]. Pertaining to telepathy.

Telepathist (*tel'-ep-ath-ist*, or *te-lep'-ath-ist*) [τῆλη, far; πάθος, disease]. One who is versed in telepathy.

Telepathy (*tel'-ep-ath-e*, or *te-lep'-ath-e*) [τῆλε, far; πάθος, disease]. Formerly an empiric form of treatment whereby cures were guaranteed by the exhibition of the remedy at a distance from the seat of disease. The term is now applied to a certain form of clairvoyance in which one is supposed to become conscious by dream or vision of distant events; the action of one mind upon another when the two persons are sundered by a considerable distance, and there is no communication by means of the senses; thought-reading; thought-transfer.

Telephone (*tel'-ef-ōn*) [τῆλε, far; φωνή, voice]. An apparatus which transmits the human voice or other sounds to a great distance. **T.-tinnitus,** a professional neurosis of the auditory mechanism said to be caused by constant use of the telephone.

Telescope (*tel'-es-kōp*) [τῆλε, far; σκοπεῖν, to examine]. An instrument for observing objects situated at a great distance, especially the heavenly bodies. **T.-eye,** an abnormalism of the orbit said to be caused by the constant use of optic instruments, like the telescope, microscope, etc.

Telescopic (*tel-es-kop'-ik*) [τῆλε, far; σκοπεῖν, to view]. Pertaining to the telescope. **T. Catheterism,** the passage of several catheters, each smaller than the one before it, one within another, until one is passed through a urethral stricture.

Telestereoscope (*tel-es-ter'-e-o-skōp*) [τῆλε, afar; στερεός, solid; σκοπεῖν, to view]. An instrument for obtaining a stereoscopic view of distant objects, by which such objects obtain a relief like that of near objects.

Teleutogonidium (*tel-u'-to-go-nid'-e-um*) [τελευτή, completion; γονός, generation: *pl.*, *Teleutogonidia*]. See *Teleutospore*.

Teleutospore (*tel-u'-to-spōr*) [τελευτή, completion; σπορά, seed]. In biology, a peculiar, thick-walled, often compound spore, produced by the *Uredineæ* or *Rusts* late in the season; a brand-spore; pseudospore.

Telluric (*tel-u'-rik*) [*tellus*, earth]. Derived from the earth or soil; as a *telluric miasm*.

Tellurism (*tel'-u-rizm*) [*tellus*, earth]. Telluric miasm; influence of the soil as a cause of disease.

Tellurist (*tel'-u-rist*) [*tellus*, earth]. One who believes in the telluric origin of any disease (*e.g.*, of tetanus).

Tellurium (*tel-u'-re-um*) [*tellus*, the earth]. Te=128; sp. gr. 6.24, quantivalence II, IV, and VI. A non-metallic element of bluish-white color, brittle, brilliant, easily fusible, and resembling sulphur in chemic pro-

perties. None of the preparations are used in medicine. The element itself, like selenium, imparts an extremely fetid odor to the exhalations and excreta of the body. See *Elements, Table of.*

Teloblast (*tel'-o-blast*) [τέλος, end; βλαστός, germ]. A segmentation-sphere at the extremity of the germ-band, which becomes elongated by cells arising from the mesoblast.

Teloblastic (*tel-o-blas'-tik*) [τέλος, end; βλαστός, germ]. Pertaining to the teloblast.

Telodendron (*tel-o-den'-dron*) [τέλος, end; δένδρον, tree]. The terminal arborization of an axis-cylinder process.

Telolecithal (*tel-o-les'-ith-al*) [τέλος, end; λέκιθος, yolk]. Having a relatively large mass of food-yolk, eccentrically placed; said of certain meroblastic eggs.

Telolemma (*tel-o-lem'-ah*) [τέλος, end; λέμμα, husk]. The membrane covering the eminence of Doyère, or the point of entrance of a motor nerve into muscular fiber.

Telomalacia (*tel-o-mal-a'-se-ah*) [τέλος, surface; μαλακία, softness]. Phlegmonous erysipelas.

Telopore, (*tel'-o-pōr*) [τέλος, end; πόρος, pore]. A terminal pore in the embryos of certain insects.

Telotroch, Telotrocha (*tel'-o-trok, tel-ot'-ro-kah*) [τέλος, end; τροχός, a wheel: *pl.*, *Telotrochæ*]. A chætopod larva in which there is present a preoral and a postoral (*i. e.*, a perianal) ring of cilia; the latter sometimes has the form of a perianal patch. Cf. *Atrocha, Monotrocha, Polytrocha, Nototrocha, Gasterotrocha, Amphitrocha, Actinotrocha, Trochophora.*

Telson (*tel'-son*) [τέλσον, a limit]. In biology, the terminal somite of the pleon of a crustacean.

Temper (*tem'-per*) [*temperare*, to regulate]. That mixture of mental and emotional qualities that produces a predominant quality of disposition or character. The *temper* is one of the points to be carefully noted in cases of insanity or other central nervous disorder. Moderation; equipoise of mind; also, as a verb, to mingle, modify.

Temperament (*tem'-per-am-ent*) [*temperamentum*]. A term vaguely applied to the predominance of one group or order of constitutional functions over others in an individual. The various divisions of temperament were based on the former doctrine of the four humors of the body—blood, lymph, bile, and atrabilis or black bile; the predominance of any one resulting respectively in a sanguine, lymphatic, bilious, or melancholic temperament. Although the doctrine of the temperaments has long since lost its significance, it is generally admitted that an individual may have a predisposition to types of mental action not improperly classed as nervous, phlegmatic, lymphatic, etc. **T., Bilious,** that marked by a predominance of bile; persons of this type having sallow complexions, dark hair, sluggish circulations. They have great firmness and endurance. **T., Lymphatic,** that characterized by fair complexion, light hair, flabby muscles, slight force of character, and slightly developed passions. **T., Nervous,** that characterized by great activity and sensitiveness of the nervous system. **T., Sanguineous,** that characterized by fair or ruddy complexion, rapid pulse, a hopeful disposition, and strong passions.

Temperance (*tem'-per-ans*) [*temperantia*]. Moderation in satisfying desire; especially as regards the use of alcoholic beverages.

Temperate (*tem'-per-at*) [*temperatus*, moderated]. Moderate, without excess. **T. Zone,** the zone of climate situated between the isotherms of 30° and 70°.

Temperature (*tem'-per-a-tūr*) [*temperatura*]. The degree of intensity of heat or molecular vibration. **T., Absolute,** that reckoned from the absolute zero of temperature, estimated at 273° below the zero of the Centigrade thermometer. **T., Conversion,** that at which the decomposition of artificially inactive, asymmetric compounds takes place. **T., Morbid,** any considerable variation from the normal temperature of the body. **T., Normal,** the temperature of the body in a state of health—98.6° F., as estimated by the clinical thermometer. See *Thermometer.* **T.-spots,** variations of the heat of the skin, showing a specific end-apparatus arranged in a punctated manner connected with the temperature-sense. Temperature-spots are arranged in a linear manner or in chains, usually slightly curved. *Cold-spots,* spots where only the sensation of cold will be felt. *Hot-spots,* where only heat will be felt. Both are anesthetic toward pain and pressure. The cold-spots are the more abundant.

Temple (*tem'-pl*) [*tempus*, time; from the throbbing of the temporal artery, or from belief that the hair first turns gray at this place]. The flat or depressed portion of the head between the eye and ear and neighboring parts.

Templin-oil (*tem'-plin-oil*) [*Templin*, a town of Prussia]. Oil of pine-cones, from *Pinus pumilio;* it resembles ordinary oil of turpentine.

Temporal (*tem'-po-ral*) [*temporalis; tempora*, temples]. Pertaining to the temples. **T. Artery.** See *Artery.* **T. Bone,** the bone situated at the side and base of the skull. It is divided into a squamous, a mastoid, and a petrous portion. **T. Diplopia.** Same as *Homonymous Diplopia.* **T. Fossa.** See *Fossa.* **T. Muscle.** See *Muscles, Table of.* **T. Operculum.** See *Post-operculum.* **T. Ridge.** See *Ridge.*

Temporarii, Dentes (*tem-po-ra'-re-i den'-tēz*) [L.]. The temporary, or milk, teeth.

Temporary (*tem'-po-ra-re*) [*temporarius*, lasting but for a time]. Not permanent. **T. Stopping,** a preparation consisting principally of bleached gutta-percha, carbonate of lime, and quartz, for filling teeth. **T. Teeth.** See *Teeth.*

Temporen (*tem'-po-ren*) [*tempora*, the temples]. Belonging to the temporal bone in itself.

Temporization (*tem-po-riz-a'-shun*) [*tempus*, time]. The expectant treatment of disease. See *Expectant.*

Temporo- (*tem'-po-ro-*) [*tempus*, time]. A prefix denoting connection with the temple, as, *e. g.*, temporofacial, temporo-malar, temporo-occipital, etc.

Temporo-auricular (*tem-po-ro-aw-rik'-u-lar*) [*tempus*, time; *auricularis*, of the ear]. Pertaining to the temporal and auricular regions of the head.

Temporo-occipital (*tem-por-o-ok-sip'-it-al*) [*tempus*, time; *occiput*, occiput]. Pertaining to the temple and back of the head.

Temporo-facial (*tem-po-ro-fa'-shal*) [*tempus*, time; *facies*, face]. The larger of the main branches of the facial nerve.

Temporo-hyoid (*tem-po-ro-hi'-oid*) [*tempus*, time; *hyoid*]. Pertaining to the temporal and hyoid bones.

Temporo-malar (*tem-po-ro-ma'-lar*) [*tempus*, time; *mala*, cheek]. Pertaining to the temporal and malar bones, or to the temple and the cheek.

Temporo-mandibular (*tem-po-ro-man-dib'-u-lar*) [*tempus*, time; *mandible*]. Pertaining to the temporal bone and the mandible.

Temporo-mastoid (*tem-po-ro-mas'-toid*) [*tempus*, time; *mastoid*]. Pertaining to the temporal and mastoid regions of the skull.

Temporo-maxillary (*tem-po-ro-maks'-il-a-re*) [*tempus*, time; *maxilla*, maxilla]. Pertaining to the temporal region and the upper jaw.

Temporo-parietal (*tem-po-ro-par-i'-et-al*) [*tempus*, time; *paries*, wall]. Pertaining to the temporal and parietal bones.

Temporo-sphenoid (*tem-po-ro-sfe'-noid*) [*tempus*, time; *sphenoid*]. Same as *Sphenotemporal.*

Temulence (*tem'-u-lens*) [*temulentia*]. Inebriety; drunkenness.

Temulentia (*tem-u-len'-she-ah*). Synonym of *Alcoholism.*

Tenacious (*te-na'-shus*) [*tenax*, tough]. Having the quality of toughness or ability to resist mechanical strain or dissolution.

Tenacity (*te-nas'-it-e*) [*tenacitas*]. Toughness; resistance to fracture or dissolution.

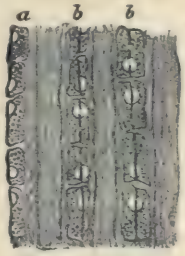
Tenaculum (*ten-ak'-u-lum*) [*tenere*, to hold: *pl.*, *Tenacula*]. 1. An instrument, usually hook-shaped, for seizing and holding divided vessels, etc. 2. One of a pair of processes on the abdomen of certain insects (*Poduridæ*, spring-tails) serving to hold the elater in place. **T.-forceps.** See *Forceps.*

Tenalgia (*ten-al'-je-ah*) [τένων, tendon; ἄλγος, pain]. Same as *Tenodynia.*

Tenax (*te'-naks*) [L.]. Oakum especially prepared for surgeons' use.

Tench's Mouth. The os uteri (*os tincæ*). **T.'s Nose.** Same as *T. Mouth.*

Tendency (*ten'-den-se*) [*tendere*, to stretch]. The inclination or aim toward a given state or condition.



Tender (*ten'-der*) [*tener*, soft; Fr., *tendre*]. 1. Sensitive to impressions, especially to touch; soft, and readily yielding to the knife. 2. Delicate, easily destroyed.

Tenderness (*ten'-der-nes*) [*tener*, soft]. The condition of abnormal sensitiveness to touch; soreness.

Tendinosus (*ten-din-o'-sus*) [L.]. Same as *Semitendinosus.* See *Muscles, Table of.*

Tendinous (*ten'-din-us*) [*tendinosus*]. Pertaining to or having the nature of tendon.

Tendo, Tendon (*ten'-do, ten'-don*) [*tendo, tendinis*, a tendon: *pl.*, *Tendines, Tendons*]. A tendon; the white, glistening, fibrous cord connecting the body of a muscle with its point of insertion. **T. Achillis**, the Achilles tendon or common tendon of the gastrocnemius and soleus muscles, the thickest and strongest of the body. **T. Achillis Reflex.** See *Reflexes, Table of.* **T. calcaneus.** Same as *T. Achillis.* **T., Central**, the trifoliate aponeurosis in the center of the diaphragmatic vault. **T., Cordiform.** See *T., Central.* **T., Hamstring.** See *Hamstring.* **T.-reflex.** See *Reflexes, Table of.* **T.-spindle**, a peculiar nerve-ending in tendons described by Golgi as being found in the immediate vicinity of the union with the muscle, also called Golgi's corpuscle. **T. of Zinn**, the ligament of Zinn.

TENDON, TAIL OF RAT.
a. Tendon-cells seen on edge and embracing a fiber; *bb*. On the flat, the cells with a ridge.

Tendophony (*ten-doff'-o-ne*) [*tendo*, tendon; φωνή, voice]. Auscultatory sounds supposed to be caused by the chordæ tendineæ.

Tendoplasty (*ten'-do-plas-te*) [*tendo*, tendon; πλάσσειν, to form]. A plastic operation on tendons.

Tendo-synovitis (*ten'-do-si-no-vi'-tis*) [*tendo*, tendon; *synovia*, synovia]. The "compound ganglion" of older text-books, now recognized as a local tuberculosis.

Tendotome (*ten'-do-tōm*). See *Tenotome.*

Tendo-vaginitis granulosa (*ten-do-vaj-in-i'-tis granu-lo'-sah*) [L.]. Hueter's term for tuberculosis of tendon-sheaths, the sheaths being filled with granulation or fungous tissue.

Tendril (*ten'-dril*) [*tener*, soft, delicate]. In biology, a leaf, a portion of a leaf, or a branch so modified as to serve the purpose of a climbing organ.

Tenesmic (*te-nez'-mik*) [τεινεσμός; τείνειν, to strain] Of the nature of or affected with tenesmus.

Tenesmus (*te-nez'-mus*) [τεινεσμός; τείνειν, to strain]. Rectal or vesical pain, with spasmodic contraction of the sphincter ani or sphincter vesicæ. The painful desire to empty the bowels or bladder without the evacuation of feces or urine.

Tenia, Tænia (*te'-ne-ah*) [ταινία, a band, fillet, ribbon]. In biology, a genus of parasitic platode worms of the Class *Cestoda* (tapeworms) and Order *Polyzoa.* They form ribbon-like stocks, composed chiefly of a row of consecutive segments progressively increasing in size posteriorly (*proglottides*) and arising by strobilation from the knob-like head (*scolex*), which is provided with organs of adhesion. Over 300 species are recognized, having for their hosts very widely separated animals, with correspondingly wide geographic distribution. Cf. *Parasites* (*Animal*), *Table of*, also *Cysticercus, Echinococcus, Measles.* **T.-chain**, the chain formed by the proglottides or joints of a tapeworm. **T.-head.** See *Scolex.* **T. hippocampi**, the corpus fimbriatum of the hippocampus major. See *Fimbria.* **T. semicircularis**, a whitish band along the caudatum forming one of the margins of the rima; also called tenia. **T. thalami**, the habena or habenula. **T. tubæ**, the name given by F. B. Robinson to a band forming a thickening of the upper border of the perisalpinx or peritoneum covering the upper border of the Fallopian tube; being shorter than the tube, it aids in sacculating it, which is detrimental to the facility of transmitting ova, leads to ectopic gestation by allowing the ovum to slip into portions of the tube which are not in the main stream of the menstrual fluid. The women possessing this band have usually premenstrual pain or tubal colic, and are either sterile or have few children. This band is considered a relic of embryonic life. **T. violacea**, a part of the fourth ventricle.

Teniacide, Tæniacide (*te'-ne-as-īd*) [*tænia*, tapeworm; *cædere*, to kill]. Destructive of tapeworms; a remedy that destroys tapeworms.

Teniafuge, Tæniafuge (*te'-ne-af-ūj*) [*tænia*, tape worm; *fugare*, to drive]. An agent that expels, without necessarily killing, tenia.

Teniasis (*te-ni'-as-is*) [*tænia*, tenia]. The *ensemble* of symptoms resulting from the presence of tenia in the body.

Teniate (*te'-ne-āt*) [*tænia*, tapeworm]. Ribbon-like in shape.

Tenicide (*ten'-is-īd*). See *Teniacide.*

Tenifuge (*ten'-if-ūj*). See *Teniafuge.*

Tenioid (*te'-ne-oid*) [ταινία, a band, ribbon; εἶδος, form]. In biology, ribbon-like, or resembling a tapeworm.

Teniola (*ten-i'-o-lah*) [L.]. A small ribbon. **T. cinerea.** 1. A thin, grayish ridge separating the striæ of the floor of the fourth ventricle from the cochlear division of the acoustic nerve. 2. In biology, one of the four ridges developed on the exumbrellar gastric wall of certain *Medusæ* (*Scyphopolyps*), also called gastral teniola, gastric ridges, tenioles. Cf. *Phacelli.*

Teniophobia (*te-ne-o-fo'-be-ah*) [*tænia*, tapeworm; φόβος, dread]. Morbid dread of becoming the host of a tapeworm.

Tennant's Powder. See *Powder.*

Tennis-arm. Same as *T.-elbow.* **T.-elbow**, a strain of the elbow, said to be frequent in tennis-players.

Tennysin (*ten'-is-in*). A certain alkaloid occurring in brain-tissue.

Tenodynia (*ten-o-din'-e-ah*) [τένων, tendon; ὀδύνη, pain]. Pain in a tendon.

Tenography (*ten-og'-ra-fe*). See *Tenontography.*

Tenology (*ten-ol'-o-je*). See *Tenontology.*

Tenon, Capsule of. A fibro-elastic membrane or fascia separating the eyeball from the surrounding tissues within the orbit. It is covered by a continuous layer of endothelial plates, and corresponds to a synovial sac, whose lubricated surfaces of contact facilitate the movements of the eyeball. (Piersol.) **T.'s Membrane.** See *T.'s Capsule.* **T.'s Space,** a lymph-space separating the sclera from Tenon's capsule.

Tenonitis (*ten-on-i'-tis*) [*Tenon*, an anatomist; ιτις, inflammation]. Inflammation of Tenon's capsule.

Tenontagra (*ten-on-ta'-grah*) [τένων, tendon; ἀγρα, seizure]. Gout in tendons.

Tenontodynia (*ten-on-to-din'-e-ah*). See *Tenodynia.*

Tenontography (*ten-on-tog'-ra-fe*) [τένων, tendon; γράφειν, to write]. The descriptive anatomy of the tendons.

Tenontology (*ten-on-tol'-o-je*) [τένων, tendon; λόγος, treatise]. The sum of what is known regarding the nature, etc., of tendons.

Tenontomia (*ten-on-to'-me-ah*). Synonym of *Tenotomy.*

Tenontophyma (*ten-on-to-fi'-mah*) [τένων, tendon; φῦμα, growth]. A tumor growing on a tendon.

Tenontophyte (*ten-on'-to-fit*) [τένων, tendon; φυτον, plant]. A new formation upon a tendon.

Tenontostoma (*ten-on-tos'-to-mah*) [τένων, tendon; ὀστέον, bone]. Bony change in a tendon.

Tenophyte (*ten'-o-fit*) [τένων, tendon; φυτόν, growth]. An osseous or cartilaginous growth on a tendon.

Tenorrhaphy (*ten-or'-af-e*) [τένων, tendon; ῥαφή, suture]. The uniting of a divided tendon by sutures.

Tenositis (*ten-o-si'-tis*) [τένων, tendon; ιτις, inflammation]. Inflammation of a tendon.

Tenostosis (*ten-os-to'-sis*) [τένων, tendon; ὀστέον, bone]. Ossification of a tendon.

Tenosuture (*ten-o-su'-tūr*). Same as *Tenorrhaphy.*

Tenosynitis (*ten-o-sin-i'-tis*). See *Tenosynovitis.*

Tenosynovitis (*ten-o-si-no-vi'-tis*) [τένων, tendon; *synovia*, synovia; ιτις, inflammation]. Combined inflammation of a tendon and of its sheath. See *Thecitis.*

Tenotome (*ten'-o-tōm*) [τένων, tendon; τομός, cutting]. A tenotomy-knife.

Tenotomize (*ten-ot'-o-mīz*) [τένων, tendon; τομή, a cutting]. To perform tenotomy.

Tenotomomania (*ten-ot-o-mo-ma'-ne-ah*) [τένων, tendon; τομή, a cutting; μανια, mania]. A morbid desire to perform tenotomy.

Tenotomy (*ten-ot'-o-me*) [τένων, tendon; τέμνειν, to cut]. The operation of cutting a tendon to correct deficiencies, inequalities, derangements, or disorders due to muscular contractions or imbalance, and for the correction of heterophoria or strabismus. See *Strabotomy.* **T., Graduated,** cutting a part of the fibers of the tendon of an ocular muscle for heterophoria or slight degrees of strabismus. **T., Tarsal,** division of the peroneal tendon for the relief of spavin.

Tension (*ten'-shun*) [*tensio; tendere*, to stretch]. In physics, that force apparent in mutual repulsion of the molecules of gases. It disappears when the repulsion is balanced by gravitation. The tendency of electricity to overcome resistance. In physiology, the condition of an organ when under a strain. **T., Elastic,** stretching by means of an elastic material. **T., Intraocular,** the pressure of the intraocular contents upon the sclerotic. Abnormal increase of tension is characteristic of glaucoma. Accurate measurement of tension is made by means of instruments called tonometers; for practical purposes it is estimated by palpation with the fingers. The registration of tension is indicated by the following terms: *Tn.* = Tension normal; the varying degrees of subnormality by the sign —, prefixed to the figures, 1, 2, 3, the last denoting extreme flaccidity; hypertension is indicated by the sign +, prefixed to 1, 2, 3, the last indicating the extreme hardness of the highest glaucomatous pressure. **T., Muscular,** the state of moderate contraction which occurs when muscles are passively stretched.

Tensor (*ten'-sor*) [*tendere*, to stretch]. An organ or part whose function is to make tense. **T. Muscles.** See *Muscles, Table of.*

Tent [*tenta*, a tent: *pl.*, *Tentæ*]. An instrument made of compressed sponge, laminaria, tupelo, or other material that increases in volume by the absorption of water; it is used chiefly for dilating the cervix of the uterus. **T., Cornstalk,** a tent made of dried cornstalk pith. **T., Laminaria,** a tent made of dried Laminaria stems. **T., Sponge,** a tent made of compressed dry sponge. **T.-wine** [*vinum tinctum*, colored wine], a Spanish wine of dark-red color.

Tentacle (*ten'-tak-l*) [*tentare*, handle, touch, feel]. In biology, loosely applied to any slender, tactile or prehensile organ, as a feeler, horn, proboscis, antenna, vibrissa, ray, or arm.

Tentacula (*ten-tak'-u-lah*). Same as *Tentacle.*

Tentaculate (*ten-tak'-u-lāt*) [*tentaculum*, a tentacle]. Having tentacles.

Tentaculicyst (*ten-tak'-u-lis-ist*) [*tentaculum*, a tentacle; κύστις, a cyst]. In biology, one of the auditory tentacles of certain *Cnidaria.* "They are short transformed tentacles in which the solid endoderma axis, or the peripheral distal end-cells of the hollow tentacle-canal form one or more otoliths." Also spelled *tentaculocyst.*

Tentaculiferous (*ten-tak-u-lif'-er-us*) [*tentaculum*, tentacle; *ferre*, to bear]. Bearing tentacles.

Tentaculiform (*ten-tak'-u-lif-orm*) [*tentaculum*, tentacle; *forma*, form]. Tentacular.

Tentaculigerous (*ten-tak-u-lij'-er-us*). Same as *Tentaculiferous.*

Tentaculocyst. See *Tentaculicyst.*

Tentaculum (*ten-tak'-u-lum*) [*tentare*, feel, touch, handle: *pl.*, *Tentacula*]. In biology, a tentacle.

Tentigo (*ten-ti'-go*) [L.]. Lust; satyriasis. **T. prava** Synonym of *Lupus.* **T. venerea.** Synonym of *Nymphomania.*

Tentorial (*ten-to'-re-al*) [*tentorium*]. Pertaining to the tentorium.

Tentorium (*ten-to'-re-um*) [*tentorium*, a tent: *pl.*, *Tentoria*]. In biology: (*a*) the endocranium; (*b*) the partition between the cerebrum and the cerebellum formed by an extension of the dura; it is sometimes ossified.

Tenuifolious (*ten-u-if-o'-le-us*) [*tenuis*, thin; *folium*, leaf]. In biology, having slender leaves.

Tephromyelitis (*tef-ro-mi-el-i'-tis*). Synonym of *Paralysis, Infantile.* See also *Poliomyelitis.*

Tephrosia (*tef-ro'-ze-ah*) [τεφρός, ashen]. A genus of some 125 species of leguminous plants, a few of which are N. American. **T. apollinea, T. senna, T. leptostachya,** and other tropical or subtropical species have purgative leaves. Unof. **T. virginiana** (vegetable gut, hoary pea, goat's rue, turkey-pea, devil's shoestrings) is tonic and anthelmintic.

Tephrosis (*tef-ro'-sis*). See *Incineration.*

Tephrylometer (*tef-ril-om'-et-er*) [τέφρα, ashes; μέτρον, measure]. A graduated glass tube for measuring the thickness of the gray matter of the brain by means of the segment or core removed.

Tepid (*tep'-id*) [*tepidus*, warm]. About blood heat. **T. Bath.** See *Bath.*

Tepidarium (*tep-id-a'-re-um*) [*tepidus*, warm]. A warm bath. See *Bath*.

Tepopote (*te-po'-po-te*). Teamsters' Tea. The twigs of *Ephedra antisyphilitica*, commonly known in the Southwestern U. S. as *canutillo*, or whorehouse tea. It is said to be serviceable in venereal diseases. Dose of the fld. ext. ʒj–ij. Unof.

Ter- [L., three times]. A common prefix meaning three, or threefold. In chemistry, a prefix joined to the names of certain compounds containing three acid atoms or radicles.

Terabdelle (*ter-ab'-del*) [τρεειν, to bore; βδάλλειν, suck]. An instrument employed by Damoiseau to supersede the leech.

Teracrylic Acid (*ter-ak-ril'-ik*). See *Acid*.

Teras (*te'-ras*) [τέρας, a monster: *pl.*, *Terata*]. A monster. **Terata anadidyma**, an order of double autositic monsters in which there is an upward cleavage of the cerebro-spinal axes. Fusion has occurred at the cephalic extremity, with divergence of the caudal, and, as the result, a double monster is produced, single above and double below. **T. anakatadidyma**, an order of double autositic monsters in which there is both upward and downward cleavage of the cerebro-spinal axes. The two primitive traces approach at points in their continuity only, while the two extremities diverge. As a result, a double being is formed, double above and below, with union between. **T. katadidyma**, an order of double autositic monsters in which there is a cleft of the cerebro-spinal axes from above downward; that is, the primitive traces have fused at their caudal extremity, and diverge in varying degrees as they ascend. The result is a double being, separated above and joined below.

Teratic (*ter-at'-ik*) [τερατικός, monstrous]. Of the nature of a teratism; monstrous.

Teratism (*ter'-at-izm*) [τέρας, a wonder, marvel, monster]. Any anomaly of conformation, whether congenital or acquired through disease or injury. Gouley classifies monstrosities as follows: A. *Congenital monstrosities*, or vices of primary conformation, grouped as follows: 1. The *ectrogenic*. Those monstrosities in which are absent or defective certain parts belonging to the normal body; for example, the absence of one kidney, of one or both testicles, of the external urogenital organs, etc. 2. The *symphysic*. Those monstrosities produced by fusion or coalition of organs, such as the kidneys. 3. The *ceasmic*. Those monstrosities in which the parts that should be united remain in their primitive, fissured state, as in hypospadias and epispadias. 4. The *atresic*. Those monstrosities in which natural openings are occluded, as in imperforate urethra. 5. The *hypergenetic*. Those monstrosities in which certain parts are disproportionately large, such as the penis, the testicles, etc. 6. The *ectopic*. Those monstrosities in which one or more than one part may be abnormally placed, such as a kidney or both kidneys, etc. 7. The *hermaphroditic*. Those monstrosities in which organs of both sexes exist. B. *Acquired monstrosities*, or those that are the outcome of disease, of violence, or of operations necessitated by diseased conditions or injuries. They may be grouped as follows: 1. The *ectrogenic*. Those monstrosities caused by the loss of some part from disease, injury, or operation. 2. The *symphysic*. Those monstrosities produced by the fusion of parts from disease, injury, or operation. 3. The *ceasmic*. Those monstrosities in which a cleft results through disease, injury, or operation. 4. The *atresic*. Those monstrosities in which natural openings are occluded through disease, injury, or operation. 5. The *hypergenetic*. Those monstrosities in which certain parts are inordinately enlarged through disease. 6. The *ectopic*. Those monstrosities in which a part is displaced through disease or injury. Other classifications of monstrosities have been given by Ahlfeld, Bischoff, Blumenbach, Breschet, Buffon, Fisher, Licetus, Meckel, and Otto. See *Monstrosities, Table of Classification of*, according to Geoffroy Saint-Hilaire, altered by Hirst and Piersol, under *Monster*.

Teratogenic (*ter-at-o-jen'-ik*) [τέρας, monster; γεννᾶν, to produce]. Giving rise to teratism, or monstrosity.

Teratogeny (*ter-at-oj'-en-e*) [τέρας, a monster; γεννάν, to beget]. The formation or bringing forth of monstrosities.

Teratoid (*ter'-at-oid*) [τέρας, monster; εἶδος, resemblance]. Resembling a monster, or anomalous organization.

Teratology (*ter-at-ol'-o-je*) [τέρας, monster; λόγος, science]. In biology, the science of malformations and monstrosities in the vegetable or animal kingdom.

Teratoma (*ter-at-o'-mah*) [τέρας, monster; ὄμα, tumor: *pl.*, *Teratomata*]. A congenital tumor, which may contain various concretions of organic tissue, as teeth, hair, and other erratic material. Dermoid cyst.

Teratomatous (*ter-at-o'-mat-us*) [τέρας, monster; ὄμα, tumor]. Of the nature of or resembling a teratoma.

Teratophobia (*ter-at-o-fo'-be-ah*) [τέρας, tumor; φόβος, dread]. Morbid fear of monsters, or of deformed or peculiar individuals.

Teratosis (*ter-at-o'-sis*) [τέρας, monster]. A congenital deformity.

Terbasic (*ter-ba'-sik*). Synonym of *Tribasic*.

Terbium (*tur'-be-um*) [*Ytterby*, in Sweden]. A supposed metallic element, as yet not isolated. See *Elements, Table of*.

Terchlorid (*ter-klo'-rid*) [*ter*, three; χλωρός, green]. Synonym for *Trichlorid*.

Terebella (*ter-e-bel'-ah*) [L., dim. of *terebra*: *gen.*, *Terebellæ*]. A trephine or trepan.

Terebellum (*ter-e-bel'-um*) [L.]. An instrument used in craniotomy to perforate the skull.

Terebene (*ter'-e-ben*) [τερέβινθος, terebinth], $C_{10}H_{16}$. A hydrocarbon obtained by the oxidation of oil of turpentine by means of sulphuric acid. It is soluble in alcohol and is recommended for winter cough as an expectorant, and for inhalation in bronchitis. Dose ♏v–xx on sugar or suspended in water.

Terebic Acid (*ter-eb'-ik*). See *Acid*.

Terebilen (*ter-eb'-il-en*) [τερέβινθος, terebinth]. A camphoraceous liquid produced by the action of hydrochloric acid upon a terpene or oil of turpentine.

Terebinth (*ter'-e-binth*) [τερέβινθος, terebinth]. 1. The turpentine tree, *Pistacia terebinthus*, which yields Chian turpentine. 2. Turpentine; terebinthina.

Terebinthina (*ter-e-bin'-thin-ah*) [τερέβινθος, terebinth: *gen.*, *Terebinthinæ*]. Turpentine. The oleoresin obtained from yellow pine, *Pinus australis*, and other species. Its properties are due to an essential, volatile oil, which is the form mainly used. It is stimulant, antispasmodic, diuretic, and anthelmintic, and externally a rubefacient. It is useful in intestinal hemorrhage, as a cardiac stimulant, and in various zymotic fevers, and externally in neuralgia, gangrene, and rheumatism. Dose of the oil ♏v–xv (of the oleoresin gr. v–ʒj). **T. canadensis**, "balsam of fir," a liquid oleoresin. Dose gr. v–xxx. **Turpentine, Chian**, clear, yellowish-white turpentine produced from the *Pistacia terebinthus*, of reputed benefit in carcinoma. Dose gr. iij–v. **T., Confectio** (B.P.). Dose ʒj–ij. **T., Enema** (B.P.), contains oil of turpentine and mucilage of starch. **T., Liniment.**, resin cerate 65, oil of turpentine 35

parts. **T., Lin., Aceticum** (B.P.), oil of turpentine, glacial acetic acid, camphor-liniment. **T., Oleum, Rectificatum**, rectified oil of turpentine. Dose ℥v–℥ss. **T., Ung.** (B.P.), oil of turpentine, resin, yellow wax, prepared oil. **Turpentine, Venice**, a solution of resin in oil of turpentine. **Terebene**, prepared by the action of sulphuric acid on turpentine. Dose gtt. v.

Terebinthinate (*ter-e-bin'-thin-āt*) [τερέβινθος, terebinth]. A member or derivative of the turpentine group.

Terebinthine (*ter-e-bin'-thin*) [τερέβινθος, terebinth]. Of the nature or having the qualities of turpentine.

Terebration (*ter-e-bra'-shun*) [*terebrare*, to bore]. The operation of boring or trephining; also, a boring pain.

Teres (*te'-rēz*) [*terere*, to rub]. A name given to various organs and parts characterized by a round, smooth appearance. **T. Muscle** (*major and minor*). See *Muscles, Table of.* See also *Ligamentum teres.*

Terete (*ter-ēt'*) [*teres*, round, smooth]. In biology, nearly cylindric. A term descriptive of certain stems, leaves, pistils, etc.

Teretipronator (*te-re-tip-ro-na'-tor*) [L.]. The pronator radii teres. See *Muscles, Table of.*

Teretiscapularis (*te-re-tis-kap-u-la'-ris*) [L.]. The teres major muscle. See *Muscles, Table of.*

Tergal (*ter'-gal*) [*tergum*, back]. In biology, of or pertaining to the dorsal surface or aspect.

Tergeminate (*ter-jem'-in-āt*) [*ter*, thrice; *geminatus*, doubled]. In biology, having three pairs of parts, appendages, or organs.

Tergite (*ter'-jīt*) [*tergum*, the back]. In biology, the dorsal piece of an arthropodan somite.

Tergolateral (*ter-go-lat'-er-al*) [*tergum*, back; *latus*, side]. Pertaining to the back and the side.

Tergum (*ter'-gum*) [*tergum*, back: *pl.*, *Terga*]. In biology, the back or dorsum, or the dorsal piece of an arthropodan somite.

Terhydrid (*ter-hi'-drid*) [*ter*, three; ὑδωρ, water]. A combination of three atoms of hydrogen with an element or radicle.

Teriodid (*ter-i'-o-did*) [*ter*, three; ἰωδης, like a violet]. A triiodid.

Term [τέρμα, a limit]. The time during which anything lasts; the time of expected delivery; monthly course.

Terma (*ter'-mah*) [τέρμα, limit]. The lamina terminalis or lamina cinerea of the brain; the cephalic boundary of the mesal, encephalic cavities.

Termatic (*ter-mat'-ik*) [τέρμα, limit]. Pertaining to the terma; as the *termatic artery.*

Terminal (*ter'-min-al*) [*terminalis*; τέρμα, limit]. Pertaining to the end; placed at the end. In the plural, a name sometimes applied to the poles of a battery or other electric source, or to the ends of the conductors or wires connected thereto. **T. Artery.** See *Artery.* **T. Carbon Atoms**, those combined with three hydrogen atoms. **T. Genital Corpuscles**, Krause's name for the round dilatations terminating the nerves in the dermis covering the extremity of the penis in horses. **T. Neuritis.** See *Erythromelalgia.*

Terminalia (*ter-min-a'-le-ah*) [L.]. A genus of combretaceous tropical trees. See *Myrobalan.*

Termination (*ter-min-a'-shun*). 1. An ending. 2. An issue. **T., Nerve**, a nerve-ending.

Terminology (*ter-min-ol'-o-je*) [*terminus*, a name; λόγος, science]. Nomenclature; a system of technical names or terms.

Terminthus (*ter-min'-thus*) [τέρμινθος, terebinth-tree]. An old name for a carbuncle or sore, said to resemble the fruit of the terebinth in its figure and its black-green color.

Ternary (*ter'-na-re*) [*ter*, three times]. Pertaining to the number three.

Ternate (*ter'-nāt*) [*ternatus*, arranged in threes]. In biology, applied to radiately compound leaves that have three leaflets.

Teroxid (*ter-oks'-id*) [*ter*, three; ὀξύς, acid]. A trioxid.

Terpene (*ter'-pēn*) [a modified form of *terebene*]. One of a number of hydrocarbons analogous to turpentine-oil. They have the formula $C_{10}H_{16}$ or $(C_5H_8)_0$, and are contained in the *volatile* or *ethereal* oils obtained in the distillation of various plants (chiefly *Coniferæ* and *Citrus* species). The terpenes that have been thus isolated are very numerous.

Terpin (*ter'-pin*) [see *Terebene*], $C_{10}H_{16}(H_2O)_2H_2O$. A terpin hydrate derived from turpentine. Useful in bronchial and pulmonary diseases to loosen and facilitate the expectoration of mucus. Dose gr. v–x.

Terpinene (*ter'-pin-ēn*) [modified from *terebene*], $C_{10}H_{16}$. A substance that results from shaking pinene with concentrated H_2SO_4. It occurs already formed in cardamom-oil, and is very similar to dipentene; it boils at about 180° C.

Terpineol, Terpinol (*ter-pin'-e-ol, ter'-pin-ol*) [*terpin; oleum*, oil], $C_{10}H_{18}O$. A substance formed by boiling terpin and terpin hydrate with aqueous mineral acids. It is a thick liquid, with a peculiar odor, boiling at 215–218° C. Its uses are similar to those of terpin. Dose gr. viij–xv daily.

Terpinolene (*ter-pin'-o-lēn*) [*terpin; oleum*, oil], $C_{10}H_{15}$. A substance produced when terpin hydrate, terpineol, and cineol are boiled with dilute H_2SO_4. It boils at 185–190° C.

Terra (*ter'-ah*) [*gen.*, *Terræ*]. Earth. **T. alba**, white clay. **T. cariosa**, rotten-stone. **T. japonica.** Same as *Gambier.* **T., Oleum**, petroleum. **T. ponderosa**, baryta or barium sulphate. See *Bole, Fullers' Earth, Lemnian Earth, Cimolian Earth*, etc. **T. di sienna.** Same as *Ocher.*

Terracing a Suture. A term indicating the closure of a wound by means of the insertion of successive tiers of sutures.

Terrain-cure (*ter'-ān-kūr*) [Fr.]. A therapeutic method consisting in mountain-climbing, dietetics, etc., for plethora, corpulence, neurasthenia, chlorosis, incipient pulmonary tuberculosis.

Terraline (*ter'-al-in*) [*terra*, earth]. A (proprietary) tasteless preparation of petroleum, recommended as a substitute for cod-liver oil.

Terraqueous (*ter-a'-kwe-us*) [*terra*, land; *aqua*, water]. Pertaining to or consisting of both land and water.

Terrene (*ter'-ēn*) [*terrenus*]. Terrestrial.

Territory (*ter'-it-o-re*) [*territorium*, territory]. An extent of land. **T. of a Cell**, the extent of tissue supposed to be under the influence or control of any individual cell.

Terror (*ter'-or*) [L.]. Intense fear. See *Night-terrors, Day-terrors.*

Tersion (*ter'-shun*) [*tergere, tersus*, to wipe]. The act of cleaning by friction, or dry rubbing.

Tersulphate (*ter-sul'-fāt*) [*ter*, three; *sulphur*, sulphur]. A salt containing three molecules of the sulphuric-acid radicle.

Tersulphid (*ter-sul'-fid*) [*ter*, three; *sulphur*, sulphur]. Synonym of *Trisulphid.*

Tertian (*ter'-shan*) [*tertius*, third]. *Tertianus; febris tertiana.* Applied to a variety of intermittent fever the paroxysms of which recur every third day.

Tertiarism (*ter'-she-ar-izm*) [Fr., *tertiarisme*]. Tertiary syphilis.

Tertiary (*ter'-she-a-re*) [*tertiarius; tertius*, third]. Third in order. **T. Syphilis.** See *Syphilis.* **T. Union**, or

Structure, the union of carbon atoms with three other carbon atoms.

Tervalence (*ter-va'-lens*). Synonym of *Trivalence.*

Tessellated (*tes'-el-a-ted*) [*tessellatus; tessera,* a square]. Formed into little squares. Chequered. Having quadrangular arrangement. **T. Cells,** the flattened cells of pavement-epithelium.

Tessera (*tes'-er-ah*) [L.]. The cuboid bone.

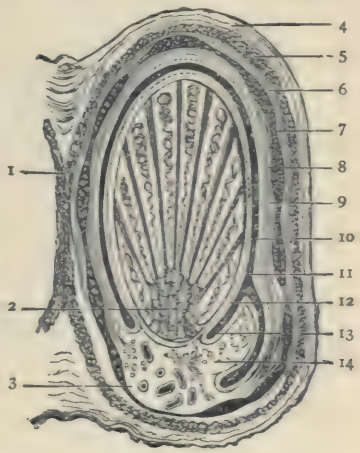
Test [*testum,* crucible, trial]. In chemistry, a characteristic reaction which distinguishes any one body from all others. Also, the reagent for producing a test. A Table of Tests is appended, see pages 1468–1506. In biology, a shell or hard, outer covering. See *Testa.* **T.-breakfast, Ewald's,** consists of one roll and one glass of water or a cup of weak tea, without milk or sugar. **T.-glass,** a small, glass vessel used in the chemic laboratory for purposes of experimentation and investigation. **T.-meal,** a meal given in order to test the action of the gastric juices. **T.-m., Jaworski's,** the whites of two, hard-boiled eggs and 100 c.c. of water. **T.-paper,** paper impregnated with a chemic reagent, as litmus, and used for detecting the presence of certain substances or conditions which cause a change in the color of the paper. See *Litmus.* **T.-spoon,** a small spoon with a spatula-shaped handle, used in chemic experiments. **T.-tube,** a cylinder of thin glass closed at one end, used in various chemic procedures. **T.-types,** letters or figures of different sizes to test acuteness of vision. Those most in use are Snellen's test-types, which, at proper distances, subtend an angle of five minutes.

Testa (*tes'-tah*) [L.: *gen., Testæ*]. A shell. In biology, the outer coat or covering of the seed; a test. **T. ovi,** egg-shell; **T. præparata,** prepared oyster-shell; both antacid. See *Calcium.*

Testaceous (*tes-ta'-shus*) [*testa,* a tile, a shell]. In biology: (*a*) of or pertaining to a shell; shelly; (*b*) the color of unglazed pottery, brick-red to orange-yellow.

Testectomy (*tes-tek'-to-me*) [*testis,* testis; *ἐκτομή,* excision]. See *Orchidectomy.*

Testes (*test'-ēz*) [L.]. The two glandular bodies, situated in the scrotum, that secrete the semen. They lie in the abdominal cavity in early fetal life, and descend into the scrotum about the time of birth. **T. of Brain.** See *Corpora quadrigemina.* **T., Descent of,** passage of the testes through the inguinal canal into the scrotum. **T., Female,** the ovaries. **T. muliebris.** See *Ovaries.*



LEFT TESTICLE WITH VESSELS AND DUCT. (*After Sappey.*)

1. Spermatic artery. 2 Spermatic veins. 3. Branch of spermatic artery. 4. Globus major of epididymis. 5. Hydatid of Morgagni. 6. Outer wall of body of testis. 7. Vas deferens, with deferential artery. 8. Vein. 9. Vas deferens. 10. Body of epididymis. 11. Digital fossa. 12. Vessels of epididymis. 13. Globus minor.

Testibrachial (*tes-tib-ra'-ke-al*) [*testis,* testicle; *brachium,* arm]. Pertaining to the testibrachium.

Testibrachium (*tes-tib-ra'-ke-um*) [*testis,* testicle; *brachium,* arm]. The process connecting the cerebellum with the testis of the brain; the prepeduncle or superior crus of the cerebellum.

Testicle (*tes'-tik-l*). See *Testes.* **T., Displaced,** a testicle in an abnormal situation, as in the pelvic cavity. **T., Inverted,** a testicle which is so placed in the scrotum that the epididymis is attached to the anterior part of the gland. **T., Irritable,** neuralgia of the testicle, due to some demonstrable pathologic condition in or about the testicle, or to a spasmodic contraction of the cremaster muscle. **T., Pulpy,** medullary sarcoma of the testicle. **T., Scrofulous.** Synonym of *Tuberculous Orchitis.* **T., Swelled.** Synonym of *Epididymitis.* **T., Syphilitic.** Synonym of *Syphilitic Orchitis.* **T., Undescended,** the condition in which one or both testicles remain in either the pelvis or the inguinal canal. Cf. *Monorchid,* and *Cryptorchid.*

SECTION OF THE SCROTUM AND TESTICLE. Diagrammatic. (*After Sappey.*)

1. Septum scroti. 2. Mediastinum testis. 3. Vas deferens. 4. Skin. 5. Dartos. 6. External spermatic fascia. 7. Cremasteric fascia. 8. Parietal layer of tunica vaginalis. 9. Internal spermatic fascia and subperitoneal fascia. 10. Cavity of tunica vaginalis. 11. Visceral layer of tunica vaginalis. 12. Tunica albuginea. 13. Digital fossa. 14. Epididymis.

Testicond (*tes'-tik-ond*) [*testis,* testicle; *condere,* to hide]. Having the testes undescended.

Testicular (*tes-tik'-u-lar*) [*testiculus,* a testicle]. Pertaining to a testicle. **T., Therapy,** the therapeutic employment of an extract from the testicles. See *Organotherapy.*

Testiculate (*tes-tik'-u-lāt*) [*testiculus,* a testicle]. Having testicles, or having the shape of a testicle.

Testiculus (*tes-tik'-u-lus*) [L.: *gen.* and *pl., Testiculi*]. A testicle.

Testill (*tes'-til*) [*testa,* shell, tile]. See *Frustule.*

TABLE OF TESTS.

ABBREVIATIONS: R.=Reagent. Vol.=Volume. Sol.=Solution; soluble. Sat. sol.=Saturated solution. Concent.=Concentrated. Dil.=Diluted. Aq.=Aqueous. P.=Phosphorus. Ppt.=Precipitate. Eq.=Equal. c.c.=Cubic centimeter. gm.=Gram āā=Of each. HNO_3.=Nitric acid. $HgCl_2$.=Mercuric chlorid. The small italicized letters *a*, *b*, *c*, *d*, *e*, refer to the reagents in column III which have corresponding letters prefixed in parenthesis.

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Acetic-acid test.	Albumin in urine.	Acetic acid.	White ppt.	To boiled urine add few drops R., or add R., and then boil upper portion of liquid in test-tube.	Avoid excess of R.
Adamkiewicz' test.	Albumins and proteids.	(*a*) Strong sulphuric acid. (*b*) Glacial acetic acid.	Violet color and fluorescence.	Add mixture of 1 vol. of *a* and 2 vol. of *b*, and boil.	
Alfraise's test.	Iodin.	Add 1 drop hydrochloric acid to water 100, starch 1, potass. nitrate 1. Boil.	Blue color.	Add one drop of R. to small quantity of suspected fluid.	
Alkaline copper test.	Glucose.	See *Trommer's test.*			
Allen's test.	Carbolic acid.	(*a*) Hydrochloric acid. (*b*) Nitric acid.	Purple-crimson color.	Few drops of *a* to 1 or 2 drops of liquid; then 1 drop *b*.	
Allen's test.	Glucose in urine in doubtful cases.	Fehling's solution.	Turbidity.	Boil 10 c.c. of R., add equal quantity of urine; heat; then allow to cool.	No reaction means absence of sugar or less than $\frac{1}{10}$ per cent.
Allen's test.	Strychnin.	(*a*) Ether. (*b*) Sulphuric acid. (*c*) Manganese dioxid.	Violet color.	Extract with *a*; let fall (drop by drop) into warmed porcelain capsule; let cool; add *b* and *c*.	
Allen's test.	Zinc in solution.	Potassium ferrocyanid.	White ppt.	Few drops of R. to boiling solution, slightly alkaline.	
Almén's test.	Albumin in urine.	2 per cent sol. of tannin in dilute alcohol.	Cloudiness.	One part R. to 6 of urine.	
Almén's test.	Blood.	Tr. guaiaci and oil of turpentine shaken into an emulsion.	Blue color.	Add liquid to R.	
Almén's test.	Blood.	(*a*) Tr. guaiaci. (*b*) 15 per cent. sol. hydrogen dioxid in ether.	Blue color.	Add 2 or 3 drops *a* to liquid; shake; add 20 drops *b*.	Other substances respond; absence of reaction proves absence of blood.
Almén's test.	Carbolic acid.	(*a*) Ammonia. (*b*) Chlorinated soda.	Blue color.	Add *a* and *b* to solution.	
Almén's test.	Carbolic acid.	Mercury 1, nitric acid 1; dilute with twice bulk of water.	Yellow ppt., dissolving with a red color.	5 to 10 drops R. to 20 c.c. of liquid.	
Almén's test.	Glucose in urine.	Caustic soda 8, water 100. Add sodic potassium tartrate 4, bismuth subnitrate 2.	Ppt. of metallic bismuth.	Remove albumin, add R. 1 to urine 10.	Very delicate.
Almén and Nylander's test.	Glucose in urine.	See *Almén's test.*			
Alpha-naphthol or α-Naphthol test.	Glucose.	See *Molisch's test.*			
Ammoniated-copper test.	Glucose.	See *Pavy's test.*			
Ammonium-molybdenate test.	Albumin in urine.	See *Jaworowski's test.*			
André's test.	Quinin.	(*a*) Chlorin. (*b*) Ammonia.	Green color, turning blue on saturation with an acid; with excess of acid, violet or bright-red; turns green on addition of ammonia.	Add *a* and *b* to solution.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Andreasch's test.	Iron.	(*a*) Ammonia. (*b*) Sulphoglycolic acid.	Dark purplish-red, soon fading, but restored on shaking with air.	Add *a* and *b* to liquid.	
Anstie's test.	Alcohol in urine.	Potassium bichromate 1, strong sulphuric acid 300.	Emerald-green color.	To R. add urine, drop by drop.	Reaction signifies presence of toxic amount of alcohol.
Antipyrin-test.	Antipyrin in urine, etc.	See *Ferric-chlorid test.*			
Austen and Chamberlain's test.	Nitric acid.	Ammonio-sulphate of iron 200, water 1000, sulphuric acid 20.	Rose-red color.	Add R. to solution.	
Autenrieth and Hinsberg's test.	Phenacetin.	Nitric acid.	Yellow substance, crystallizing out in needles.	To finely powdered phenacetin add 10 to 12 per cent. R.; heat to boiling.	Antipyrin and acetanilid do not respond.
Axenfeld's test.	Albumin in urine.	(*a*) Formic acid. (*b*) Sol. $HgCl_2$ (1:1000).	Rose or purple color.	Acidulate with *a*; add a few drops *b*.	Not reliable.
Bachmeier's test.	Alkalies.	Sol. of tannin.	Red to reddish-brown, turning into dirty-green.	Add R. to the liquid.	
Baeyer's test.	Eosin.	(*a*) Sodium-amalgam. (*b*) Sol. of potass. permanganate.	Opaque-green color in reflected light.	Shake substance with water and *a*, heating gently; dilute with water; add drop of *b*.	
Bailey's test.	Nitric acid.	Cyanhydrargyrate of potass. iodid (one equivalent each mercuric cyanid and potass. iodid).	Crystal of R. turns black; red in other acids.	Introduce crystal of R. into liquid.	
Bailey's test.	Sulphur.	(*a*) Sodium carbonate. (*b*) Sol. sodium nitroprussid.	Blood-red color.	Heat substance with *a*, dissolve in water, and add *b*.	
Barbsche's test.	Glycerin.	(*a*) Water 20 vol., carbolic acid one drop. (*b*) Sol. ferric chlorid.	Blue color *not* developed.	Add to liquid *a*, then one drop *b*.	
Bareswils' test.	Glucose.	Potass. hydrate 60, potass. tartrate 40, water 200. Mix with copper sulphate 65, water 500.	Red precipitate.	Boil liquid with R.	
Barford's test.	Glucose.	Sol. neutral copper acetate 200, 38 per cent. acetic acid 5.	Red precipitate.	Add a few drops R. to liquid and boil.	
Barium-chlorid test.	Ether-sulphuric acids in urine.	(*a*) Sol. barium chlorid. (*b*) Hydrochloric acid.	Ppt. of barium sulphate.	Add *a* in excess; filter; boil filtrate with *b*.	
Barium-chlorid test.	Sulphates in urine.	Barium chlorid (or nitrate).	White precipitate.	Acidulate urine; add R.	Creamy ppt.: sulphates increased; milky: normal; translucent: diminished.
Barry's test.	Hydrocyanic acid.	(*a*) Acetic acid. (*b*) Silver nitrate.	Cloudiness.	Two or three drops of sol. acidified with *a*, in watch-glass. Cover with another watch-glass containing 2 or 3 drops *b*.	
Basham's test.	Bile-pigment.	(*a*) Chloroform. (*b*) Nitric acid.	Play of colors, finally ruby-red.	Shake liquid with *a*; decant; allow to evaporate; add drop of *b*.	Very delicate.
Bastelaer's test.	Phosphorus in tissues and ejecta.	(*a*) Ether. (*b*) Strong ammonia. (*c*) Dil. sulphuric acid.	Pure phosphorus; recognized by its properties.	Dissolve out P. with *a*, by repeated shaking; allow to evaporate, adding water toward end of evaporation; warm to 50° or 60° C. Shake with *b*; wash with *c*, then with water.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Baumann's test.	Carbohydrates.	(*a*) Potass. hydrate. (*b*) Benzoyl chlorid.	Precipitation of all carbohydrates.	Alkalinize with *a*, and treat with *b*.	
Baumann and Preusse's test.	Hydrochinon.		Violet fumes, which condense as an indigo-blue sublimate.	Heat rapidly in an open test-tube.	
Bayer's test. (Syn. Drewsen's, Penzoldt's, Indigo test.)	Acetone in urine.	Nitrobenzaldehyd in water.	Indigo-blue.	R. and urine (or distillate) eq. vol.; make alkaline.	One part in 2500. May dissolve out indigo-blue with chloroform—renders test more delicate.
Bechamps' test.	Nitrobenzol in oil of bitter almonds.	(*a*) Iron acetate. (*b*) Chlorinated lime.	Blue color.	Distil with *a*; test distillate with *b*.	
Becquerel's test.	Glucose.	See *Trommer's test.*			
Bedson's test.	Apomorphin in sol. of morphin.	Sol. potass. hydrate.	Brown color.	Boil with R.	
Beilstein's test.	Chlorin; bromin; iodin in organic substances.	Cupric oxid.	Green or blue color.	Make a bead with R., dip into substance; heat in lower part of Bunsen flame.	
Bellamy's test.	Copper; iron.	Tincture of logwood.	Blue color.	Add R.	
Benzo-purpurin test.	Free hydrochloric acid in gastric juice.	See *von Jaksch's test.*			
Bernouilly's test.	Alcohol in essential oils.	Dry potass. acetate.	Dense solution.	Add R.	
Berthelot's test.	Alcohol.	Benzoyl chlorid.	Formation of benzoic ether: characteristic odor.	Add R.	
Bertoni and Raymondi's test.	Nitrous acid in blood.	(*a*) Hot alcohol. (*b*) Starch-paste and potass. iodid.	Blue color.	Dialyze, and evaporate dialysate to dryness. Take up with *a*; test with *b*.	
Berzelius's test.	Arsenic.	Charcoal.	Mirror and alliaceous odor.	Heat in test-tube with R.	
Bettendorff's test.	Arsenic.	(*a*) Fresh stannous chlorid in concent. hydrochloric acid. (*b*) Tin-foil.	Brown color or brown ppt.	To liquid containing a good deal hydrochloric acid add equal vol. *a*, and piece of *b*.	Gentle heat accelerates reaction.
Bill's test.	Bromids.	(*a*) Hydrochloric acid. (*b*) Sol. gold chlorid.	Yellow to dark orange-red color.	Add to liquid 1 drop *a*, then 1 drop *b*.	
Bismuth-test.	Glucose.	See *Bœttger's test.*			
Biuret-test.	Proteids.	See *Ritthausen's test.*			
Blachez' test.	Alcohol in chloroform.	(*a*) Potass. hydrate. (*b*) Sol. copper sulphate.	Precipitate.	Add small piece *a*, agitate; pour off chloroform after 5 minutes, and shake with equal vol. water; pour off water, and add *b*.	
Bloxam's test.	Alkaloids.	(*a*) Dil. hydrochloric acid. (*b*) Bromin-water.	Color-reactions.	Dissolve in *a*; add *b*, drop by drop.	
Blythe's test.	Lead in potable water.	Alcoholic tincture of cochineal.	Precipitate.	Add 1 per cent. R.	
Boas's test.	Hydrochloric acid in gastric juice.	Resorcin 5, sugar 3, dil. alcohol 100.	Red color.	Add R. to a few drops liquid in evaporating-dish.	As delicate as Günzburg's test; not affected by free organic acids, and only slightly by acid-albumins.
Boedeker's test.	Albumin.	See *Hilger's test.*			
Boedeker's test.	Sulphurous acid.	Sol. potass. ferrocyanid.	Purple ppt.	Add R. to neutral liquid.	
Boedeker's test.	Sulphurous acid.	(*a*) Sol. zinc sulphate. (*b*) Sodium nitroprussid.	Rose to dark-red color.	To neutral liquid add *a* and *b*.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Bœttcher's test.	Glucose.	See *Bœttger's test.*			
Bœttger's test.	Alcohol.	Sol. molybdic acid in sulphuric acid.	Blue color.	Add R.	
Bœttger's test.	Alkalimetry.	Alcoholic tincture of petals of *Coleus Verschaeffeltii.*	Red color is turned green.		
Bœttger's test.	Gaseousammonia.	Alkannin paper.	Red color turns blue.	Expose strip of R. to the gas.	
Bœttger's test.	Ergot in rye-flour.	(*a*) Ether. (*b*) Oxalic acid.	Reddish color.	Heat for several minutes with an equal bulk of *a* and a few crystals of *b*.	
Bœttger's test.	Glucose.	(*a*) Bismuth. (*b*) Strong sol. sodium hydrate.	Black ppt.	To urine add pinch of *a* and a little *b*; boil.	Very delicate; albumin must be removed.
Bœttger's test.	Hydrogen dioxid.	(*a*) Cadmium iodid starch-paste. (*b*) Ferrous sulphate.	Deep ultramarine-blue color.	Add *a* and a little *b*.	
Bœttger's test.	Hydrogen dioxid.	Ammoniacal sol. silver nitrate (not containing free ammonia).	Cloudiness and reduction of silver.	Heat liquid with a few drops R.	
Bœttger's test.	Nitric acid in potable water.	(*a*) Sol. of brucin. (*b*) Sulphuric acid.	Red to brownish-red color.	Mix 3 drops of water, 2 of *a*, and 3 or 4 of *b*.	
Bœttger's test.	Nitrous acid.	(*a*) Diluted sulphuric acid. (*b*) Cadmium iodid starch-paste.	Blue color.	Add *a* and *b*.	
Bœttger's test.	Ozone.	Strip filter-paper moistened with acid-free sol. of gold chlorid.	Violet color.	Expose R. to gas.	
Bœttger's test.	Ozone.	Strip filtering paper dipped into a sol. of thallium protoxid.	Brown color.	Expose R. to gas.	
Bœttger's test.	Safranin.	Sulphuric acid.	Blue color.	Add R. If water is added color becomes green.	
Bœttger's test.	Sulphocyanates (Rhodanates).	(*a*) Tr. guaiaci. (*b*) Dil. sol. copper sulphate.	Blue color.	Dip strip filter-paper in *a*; let dry; moisten with *b*; place on it a drop of liquid.	
Bœttger's test.	Water in ether.	Carbon disulphid.	Milkiness.	Agitate gently with equal bulk R.	
Bolas's test.	Nitric acid.	Sulphuric acid 10, sol. ferrous sulphate 1.	Brown zone.	Heat R., and pour liquid cautiously on top.	
Borntraeger's test.	Acidimetry; alkalimetry.	Concentrated tincture orange-peel.	Colorless with acids, lemon-yellow with alkalies.	Add R., and shake up with ether.	
Bouchardat's test.	Alkaloids.	Potass. iodo-iodid=iodin 10, potass. iodid 20, water 500.	Brown ppt.	Add R. to liquid.	
Bourgoin's test.	Nitrobenzol in oil of bitter almonds.	Sol. potass. hydrate.	Green color.	Shake 15 drops oil with 8 of R.	If 20 drops water are added, two layers are formed, upper green, lower yellow.
Boussingault's test.	Nitric acid.	(*a*) Hydrochloric acid. (*b*) Indigo-solution.	Decolorization.	Acidify with *a*, and add drop of *b*.	
Brandberg's test.	Benzol; benzine.	Pitch.	R. dissolves in benzol, not in benzin.		
Brandes' test.	Quinin.	(*a*) Chlorin-water. (*b*) Ammonia.	Green color.	Treat liquid with *a* and *b*.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Braun's test.	Glucose.	(*a*) Sol. picric acid. (*b*) Sol. sodium hydrate.	Blood-red color.	Alkalinize with *b*, warm to 90°, add *a*, and boil.	
Brautlecht's test.	Organic impurities in potable water.	(*a*) Aluminum sulphate 1, hydrochloric acid 1, water 8. (*b*) Ammonia.	Examine under microscope before and after addition of safranin.	Treat 100 c.c. water with 5 c.c. *a* and add 1 or 2 drops *b*. Filter off ppt., redissolve in 10-15 drops dilute acetic acid.	
Brazil-wood test.	Acidimetry; alkalimetry.	Sol. of coloring-matter of Brazil-wood (Peltophorum dubium).	Turns purplish-red with alkalies; yellow with acids.		
Brieger's test.	Strychnin.	Pure chromic acid.	Violet color.	Add R. to liquid.	
Brine-test.	Albumin in urine.	(*a*) Saturated sol. sodium chlorid, acidulated with 5 per cent. sol. dilute hydrochloric acid.	White ring.	Overlay R. with urine.	Very delicate.
Brouardel and Boutmy's test.	Ptomaïns from plant-alkaloids.	(*a*) Potass. ferricyanid. (*b*) Ferric chlorid.	Blue color.	Apply *a*, then *b*.	
Bruecke's test.	Bile-pigments.	(*a*) Nitric acid. (*b*) Sulphuric acid.	Color-reactions.	Add *a* to urine, shake; let *b* flow to bottom.	
Bruecke's test.	Glucose.	Boil fresh bismuth subnitrate with potass. iodid 30, water 150, and after 10 minutes add 5 c.c. 25 per cent. sol. hydrochloric acid.	Reduction.		
Bruecke's test.	Proteids.	(*a*) Hydrochloric acid. (*b*) Potassio-mercuric iodid.	Precipitate.	Acidulate with *a*, and add *b*.	
Bruecke's test.	Urea.	(*a*) Fusel-oil. (*b*) Sol. oxalic acid in fusel-oil.	Crystalline deposit.	Heat alcoholic extract with *a*, filter, and add *b*.	
Brunner's test.	Glucosids.	Pettenkofer's test for bile-acids.	Red color.		
Buckingham's test.	Alkaloids.	Fresh sol. of ammonium molybdate 8 grains, in sulphuric acid 2 drams; heat till clear.	Color-reactions.	Add R.	
Bujwid and Dunham's reaction.	Products of bacillus choleræ asiaticæ.	See *Poehl's reaction.*			
Burchard's test.	Cholesterin and cholesterin-fats.	(*a*) Chloroform. (*b*) Acetic acid anhydrid. (*c*) Sulphuric acid.	Violet to green color.	Dissolve substance in *a*, add *b*, and a few drops *c*.	Modification of Liebermann's test.
Cadet's test.	Arsenic.	Sodium acetate.	Kakodyl (characteristic odor).	Heat with R.	
Caillan's test.	Glucose in urine.	Chloroform.	Apply tests for glucose.	Shake 2 vol. urine with one R.; allow to settle; upper layer contains all the glucose.	
Calcium-carbonate test.	Free acids and acid salts in gastric juice.	See *Leo's test.*			
Campani's test.	Glucose.	Mix concent. sol. lead subacetate with dil. sol. copper acetate.	Yellow to orange-red ppt.	Add R. to sol.	0.5 per cent. gives red, 0.1 per cent. yellow color.
Cappazuoli's test.	Glucose.	Sol. copper hydroxid in potass. hydrate.	Blue color.	Add R. to liquid.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
apranica's test.	Guanin.	(*a*) Aq. sol. picric acid. (*b*) Concent. sol. potass. bichromate. (*c*) Concent. sol. potass. ferricyanid.	With *a* yellow, crystalline ppt.; with *b* orange-colored, crystalline ppt.; with *c* prismatic, yellowish-brown crystals.	Add R. to solution.	
arbolic-acid test.	Albumin in urine.	See *Mêhn's test.*			
aro-Fischer's test.	Hydrogen sulphid.	See *Fischer's test.*			
arter's test.	Indican in urine.	Nitric acid.	Play of colors as in bile-test.	Overlay acid with urine, or allow the two to come in contact on porcelain plate.	Bile gives same reaction; if a deep-blue or purple ppt. forms on addition of sulphuric acid—play of colors due to excess of indican.
asali's test.	Biliary matter.	(*a*) Lead acetate. (*b*) Ammonia. (*c*) Ether and hydrochloric acid.	Yellow, red, violet, blue color.	Precipitate urine with *a* and *b* and extract with *c*. Let ethereal layer evaporate, and test with oxidizing agents.	
asamajor's test.	Glucose.	Methylic alcohol.	Cloudiness.	Shake liquid with R.	
asoria's test.	Water in absolute alcohol.	Dehydrated copper sulphate.	R. turns blue.	Pour liquid over R.	
atin and Gaultier de Claubry's test.	Iodin.	Nitric acid 1, sulphuric acid 6, starch.	Blue to violet color.	Add R.	
autard's test A.	Acetone in urine.	(*a*) Aq. sol. magenta. (*b*) Sulphurous acid.	Violet color.	To a drop of *a*, decolorized by *b* add urine.	Delicacy; 0.01 acetone; reaction may appear after 4 or 5 minutes.
autard's test B.	Acetone.	(*a*) Fuchsin 0.25, water 500. (*b*) Sulphurous acid.	Red-violet color.	Add *b* to *a* until *a* is decolorized. Add mixture to the liquid.	
evreul's test.	Ammonia.	Hematoxylin-paper.	Red color turns violet.	Expose paper to fumes.	
loroform-test.	Potass. iodid in urine, etc.	(*a*) Fumingnitric acid. (*b*) Chloroform.	Violet-red color.	Add a little *a* and ¼ *b*; shake.	Delicate and reliable.
olera-red reaction.	Products of bacillus choleræ asiaticæ.	See *Poehl's test.*			
olestol reaction.	Cholesterin and cholesterin-fats.	See *Liebermann's test.*			
romic-acid test.	Albumin in urine.	See *Rosenbach's test.*			
ric-acid test.	Mucin.	See *Mucin-test.*			
rk's test.	Creasote; carbolic acid.	(*a*) Nitric acid. (*b*) Potass. hydrate.	Creasote, no crystalline ppt.; carbolic acid, yellow crystals.	Boil with excess of *a* until red fumes are no longer evolved; neutralize with *b*.	
us's test.	Water in absolute alcohol.	Anthrachinon and sodium amalgam.	Red color; absolute alcohol causes a green color.	R. is moistened with the alcohol.	
chineal-test.	Acidimetry; alkalimetry.	Cochineal 1 gm., macerated for four days in alcohol 20, water 60; filtered.	Turns violet with alkalies, yellowish-red with acids.		
asanti's test.	Sulpho-cyanic acid.	Sol. of gold chlorid (1:1000-10,000) in potass. hydrate, or in sat. sol. sodium bicarb.	Violet color on heating, metallic gold deposited on cooling.	Warm R. with dilute solution of the substance.	
go-red test.	Free hydrochloric acid.	See *Riegel's test.*			

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Contejean's test.	Hydrochloric acid in gastric juice.	Cobalt oxid (freshly precipitated).	Blue cobalt chlorid.	Evaporate drop of liquid on watch-glass with R.	
Cotton's test.	Brucin.	Sol. sodium sulph-hydrate.	Violet to green color.	Add excess of R. to brucin in nitric acid.	
Cunisset's test.	Biliary matter in urine.	Chloroform.	Yellow color.	Shake urine with R.	
Curdling-ferment test.	Curdling ferment in gastric juice.	(*a*) $\frac{1}{10}$ normal sodium hydratesol. (*b*) Neutral or amphoteric milk.	Curdling.	Neutralize 5 to 10 c.c. filtered gastric juice with *a*; mix with equal quantity of *b*, warm to 37° or 40° C.	Reaction takes place in 10–15 min.
Davy's test.	Alcohol.	Molybdic acid 1, sulphuric acid 2.	Blue color.	Essential oils first shaken with water, which is separated; urine is distilled. Test with R.	
Davy's test.	Carbolic acid.	Molybdic acid 1, sulphuric acid 10.	Dark olive-green to blue and violet color.	Add 3 to 4 drops R. to 1 to 2 drops of liquid.	
Davy's test.	Strychnin.	(*a*) Sulphuric acid. (*b*) Potass. ferricyanid.	Deep-violet color.	Add *a*, then *b*.	
Day's test.	Pus.	Alcoholic sol. of guaiac exposed to light until it turns green in contact with potass. iodid.	Blue color.	To watery sol. of pus add a few drops of R.	Inert when applied to dried pus.
Debrunner's test.	Water in absolute alcohol.	Potass. permanganate.	Purple discoloration indicates water.	R. insoluble in absolute alcohol, sol. in water.	
Degener's test.	Alkalimetry.	Phenacetolin, a brown substance obtained by heating for several hours carbolic, sulphuric, and glacial acetic acids āā 1.	Alkalies turn it red.		
Delff's test.	Caffein.	Sol. red mercuric oxid in potass. iodid.	Crystalline ppt.	Add R. to liquid.	Other alkaloids yield amorphous ppt.
Diazobenzol-sulphuric-acid test.	Glucose in urine.	(*a*) Sol. potass. hydrate. (*b*) Sol. diazobenzolsulphuric acid (1:50), made faintly alkaline with *a*.	Yellowish-red, changing to dark-red; froth carmin-red.	Alkalinize 20 c.c. of urine with *a*; add equal volume *b*.	Not very reliable.
Diazo-reaction.	Aromatic compounds in urine in typhoid fever, etc.	See *Ehrlich's test.*			
Diphenylamin test.	Nitric acid.	(*a*) Sol. of diphenylamin. (*b*) Concent. sulphuric acid.	Deep-blue color at zone of contact.	Add 1 or 2 drops *a*; pour in *b* to form a layer beneath the liquid.	
Donath and Mayrhofer's test.	Glycerin.	(*a*) Carbolic acid. (*b*) Sulphuric acid. (*c*) Ammonia.	Carmin-red color.	Evaporate to dryness; heat to 120° C. with two drops of *a* and *b*. Extract with water, and add to residue *c*.	
Donné's test.	Pus.	Liquor potassæ.	Tenacious, gelatiniform substance, resembling white of egg.	To deposit of pus add R.	
Dragendorff's test.	Brucin.	(*a*) Sulphuric acid 1, water 9. (*b*) Very dilute sol. potass. bichromate.	Raspberry-red to brownish-orange color.	Dissolve in *a*, and add with a glass rod small quantity of *b*.	
Dragendorff's test.	Carbolic acid in urine.	Petroleum-naphtha.		Take up with R. and test as usual.	
Dragendorff's test.	Strychnin.	Iodic acid.	Red to reddish-brown color.	Add R.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
rechsel's test.	Biliary matter.	(*a*) Syrupy phosphoric acid. (*b*) Cane-sugar.	Red to reddish-brown color.	Add to concent. liquid *a* and *b*, and heat on a water-bath.	
rechsel's test.	Xanthin-bodies.	Copper chlorid.	Mud-colored ppt., becoming white.	Add R. to ammoniacal solution of substance.	
rewsen's test.	Acetone in urine.	See *Bayer's test.*			
adley's test.	Gallic acid.	Sol. of ammon. picrate.	Reddish color, changing to green.	Add R.	
adley's test.	Glucose.	Bismuth nitrate, dissolved in a little nitric acid; add equal bulk acetic acid, and dilute to 10 vol. with water.	Gray or black ppt.	Add to urine (rendered strongly alkaline by sol. of sodium hydrate) 1 or 2 drops of R., and boil.	
iflos' test.	Picrotoxin.	Potass. bichromate.	Green color.	Add sol. R.	
isart-Blondlot's est.	Phosphorus in tissues.	Alcohol, ether, and carbon bisulphid, containing ½ per cent. sulphur in sol.	Place copper phosphid in flask, and proceed as in Marsh's test for arsenic.	Treat substance with R., allow to stand 24 hours, decant, and treat residue a second and a third time in same manner. Mix the liquids, filter into retort, and warm mixture with portions of metallic copper, until latter remains bright. Allow to stand 24 hours, distil off carbon disulphid mixture, collect copper on filter, wash with alcohol, then with ether.	
rthy-phosphates est.	Earthy phosphates in urine.	Any alkali.	White ppt.		
efsen's test.	Naphthalin.	(*a*) Sol. calcium chlorid. (*b*) Concent. hydrochloric acid. (*c*) Ether. (*d*) 1 per cent. aq. sol. resorcin.	On addition of *a* and *b* lemon-yellow color; *d* overlaid with ethereal extract bluish-green; cherry-red on addition of HNO_3.	Add 3 to 4 drops *a* and a few drops *b*. Extract with *c*, and overlay *d* with the extract, adding a little ammonia.	Reliable but complicated.
efsen's test.	Naphthalin.	Ammonium or sodium hydrate.	Fluorescence.	Add a few drops R. to liquid.	Delicate.
lich's test.	Aromatic compounds in urine of typhoid-fever patients.	(*a*) Sulphanilic acid 5.0, hydrochloric acid 50 c.c., distilled water 1000.0. (*b*) Sodium nitrite 0.5, distilled water 100.	Orange-red ring; rose-red foam.	Mix 40 c.c. of *a* and 1 c.c. of *b*; mix with equal quantity of urine; allow ammonia to flow down the tube. Shake to produce the foam	Of considerable diagnostic value; obtained also in carcinoma, septicemia, and perhaps other conditions.
lich's test.	Bilirubin.	(*a*) Dil. acetic acid. (*b*) Sulphanilic acid 1 gm., hydrochloric acid 15 c.c., sodium nitrite 0.1 gm.	Dark color, becoming violet on addition of glacial acetic or other acid.	Add equal vol. *a*, and drop by drop *b*.	
rodt's test.	Ammonia.	(*a*) Sol. ammon. chlorid. (*b*) Sol. potass. hydrate. (*c*) Sol. mercuric chlorid.	White opalescence.	To 100 c.c. of liquid add 1 drop each of *a*, of *b*, and of *c*.	
iemann and ochazka's test.	Copper.	Hydrobromic acid.	Rose-red to reddish-brown or blackish color.	To 1 drop liquid add 1 drop R.; let evaporate slowly.	
in-test.	Acidimetry; alkalimetry.	Eosin 1 gm. in 30 c.c. of water.	Acids destroy fluorescence; alkalies restore it.		
ech's test.	Proteids in urine.	Picric acid 10, citric acid 20. Distilled water 1000.	Precipitate; quantity indicated on graduated tube.		

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Eschka's test.	Mercury.		White stain.	Heat substance in crucible, and condense vapor on cold gold plate (as lid).	
Everitt's test.	Opium.	(*a*) Sol. ferric chlorid. (*b*) Sol. mercuric chlorid.	Red color with *a*, not altered by *b*.	Add *a*.	
Ewald's test.	Free hydrochloric acid in gastric juice.	Similar to *Mohr's test* B.			
Ewald's test.	Motor activity of stomach.	See *Siewer's test*.			
Eyckmann's test.	Carbolic acid.	(*a*) Spirit of nitrous ether. (*b*) Sulphuric acid.	Red color.	Add to 1 c.c. of liquid 1 to 3 drops *a* and an equal vol. *b*.	Salicylic acid and albumin show same color, but not so intensely.
Fairthorne's test.	Chloral.	(*a*) Concent. sol. of potass. bichromate. (*b*) Nitric acid.	Blue color.	Heat with *a*, then add *b*.	
Fairthorne's test.	Morphin.	(*a*) Sodium hypochlorite (chlorinated soda). (*b*) Ammonia.	Dark-red color.	Add *a*, then *b*.	
Fat-test.	Fat.	See *Osmic-acid test*.			
Fehling's test.	Albumin in urine.	Fehling's sol. (See *Fehling's test for glucose*.)	Brownish-red or mauve color.	Heat R., and slowly add urine.	
Fehling's test.	Glucose in urine.	(*a*) 34.652 gm. crystallized copper sulphate, water 200. (*b*) 173 gm. sodic potassium tartrate, 480 c.c. sol. sodium hydrate. Mix *a* and *b* while stirring, and dilute to 1000 c.c.	Ppt. of red cuprous oxid or yellow cuprous hydroxid.	Dilute 1 c.c. of R. with 4 c.c. of water, and boil. Add urine, drop or two at a time, and boil.	Delicacy 0.001 per cent.
Fehling's test.	Peptone and propeptone in urine.	Fehling's sol. (See *Fehling's test for glucose*.)	Rose-colored halo above ppt. of phosphates.	Heat 15 c.c. of R.; add filtered urine slowly.	
Fenton's test.	Tartaric acid.	(*a*) Sol. of ferrous chlorid or ferrous sulphate. (*b*) Hydrogen dioxid. (*c*) An alkali.	Violet color.	Add *a*, 1 or 2 drops *b*, and excess *c*.	
Fermentation-test.	Glucose in urine.	See *Roberts' test*.			
Ferric-chlorid test.	Antipyrin.	Sol. ferric chlorid.	Dark-red color.	Add dilute R. to liquid.	Unreliable. The red color in diacetic-acid reaction disappears on heating; that of antipyrin does not.
Ferric-chlorid test.	Salicylic-acid compounds.	Sol. ferric chlorid.	Violet-blue color.	Add R. to liquid; or acidulate with H_2SO_4, shake with ether, and test ethereal extract with R.	Delicate, especially by shaking with ether. Other substances less common, also respond.
Ferric-chlorid test.	Tannic acid.	Ferric chlorid.	Grayish-green or blackish color.	Add R.	
Filhol's test.	Alkalies.	(*a*) Sol. sodium nitroprussid. (*b*) Hydrogen sulphid.	Blue color.	Treat liquid with *a* in the presence of *b*.	
Filhol's test.	Iodin.	(*a*) Potass. hydrate. (*b*) Alcohol. (*c*) Hydrochloric acid. (*d*) Chromic acid. (*e*) Carbon disulphid.	Violet color of *e*.	Extract iodin; evaporate to dryness with *a*, take up with *b*, evaporate; dissolve in water, add a few drops *c*, then *d*, then *e*.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Fischer's test.	Glucose in urine.	(*a*) Phenylhydrazin hydrochlorid. (*b*) Sodium acetate.	Yellow, crystalline precipitate.	Place in test-tube 2 gm. *a* and 1.5 gm. *b*; fill tube ⅓ with water, and add equal quantity urine. Stand tube in boiling water 15–20 minutes; then in cold water.	Detects traces.
Fischer's test.	Hydrogen sulphid.	(*a*) Hydrochloric acid. (*b*) Paramido-dimethylamin sulphate. (*c*) Dil. sol. ferric chlorid.	Blue color.	To 50 c.c. liquid add 1 c.c. *a*; then a few grains *b*, and 1 or 2 drops *c*.	
Fittig's test.	Alkalimetry.	Ethereal sol. mesitylchinon.	R. is yellow; alkalies turn it violet.	Add liquid to R.	
Fleitmann's test.	Arsenic.	(*a*) Strong potassium hydrate. (*b*) Pure zinc. (*c*) Paper wet with silver nitrate.	Staining of paper (*c*).	Put a little *a* and *b* in a test-tube with the substance; clasp *c* over it and boil.	Marsh's method, except that *a* is substituted for the acid.
Flückiger's test.	Acetanilid.	(*a*) Sol. potass hydrate. (*b*) Chloroform.	Disagreeable odor of isocyanphenyl.	Add *a* and *b*; shake; heat.	
Flückiger's test.	Brucin.	Mercurous nitrate (free from excess of acid).	Crimson color.	An aqueous sol. mixed with R. is heated.	
Flückiger's test.	Creasote; carbolic acid.	(*a*) Sol. ferric chlorid. (*b*) 85 per cent. alcohol.	Green color.	Mix *a* 1 part, creasote 9, *b* 5. Green color. Add 60 water: cloudy-brownish color.	Carbolic acid gives brown color with alcohol, blue with water.
Flückiger's test.	Creasote; carbolic acid.	(*a*) Ammonia. (*b*) Bromin-vapor.	Blue color: carbolic acid; brown or dirty-green; creasote.	Add ¼ vol. *a*, and expose to *b*.	
Flückiger's test.	Digitalin.	Chloral alcoholate.	Yellowish-green color, turning violet, then blackish-green on heating.	Dissolve in R.; then heat.	
Flückiger's test.	Free mineral acids.	Mixture in sol., of ferrous sulphate, gallic acid, sodium acetate.	Decolorization.	Add a drop of R. to liquid.	
Flückiger's test.	Gallic acid.	(*a*) Fresh sol ferrous sulphate 1, water 100. (*b*) Sol. sodium acetate.	Violet color.	Add *a*: sol colorless; then add *b*.	
Fluorescein test.	Alkalimetry.	Fluorescein 1 gm., agitated with 100 c.c. dilute alcohol; filter.	Green fluorescence by reflected light, in presence of least excess of an alkali.		
Fourcroy's test.	Phosphoric acid.	(*a*) Ammon. chlorid. (*b*) Ammon. hydrate. (*c*) Sol. magnes. sulphate.	White, crystalline ppt.	Add *a* and *b*, and then *c*.	
Francis' test.	Biliary acids in urine.	Glucose (dried over water-bath) 2 gm., in sulphuric acid 15 gm.	Purple color.	Place 4 c.c. of R. in test-tube and float equal quantity urine on top.	
Franqui and Van de Vyvere's test.	Glucose in urine.	Bismuth hydrate in potass. hydrate.	Gray or black ppt.	Boil urine with R.	
Frerich's test.	Leucin and tyrosin in urine.	(*a*) Basic lead acetate. (*b*) Hydrogen sulphid.	Crystals of tyrosin in 24 hours; leucin appears later.	Ppt. urine with *a*; remove excess of *a* with *b*: evaporate fluid on water-bath to small vol.	
Fresenius' test.	Nitrites.	(*a*) Starch-paste. (*b*) Sol. potass. iodid. (*c*) Sulphuric acid.	Blue color.	Add *a*, *b*, *c*.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Freund's test.	Sulphates in urine.	(*a*) 1 per cent. sol. alizarin. (*b*) 5 per cent. acetic acid. (*c*) Sol. barium acetate (11.22 to 1000).	1 c.c. *c* = 3 mg. sulphur trioxid.	To 50 c.c. urine add 10 drops each *a* and *b* till mixture shows orange color. Triturate with *c* till ppt. becomes distinctly red.	If urine dark-colored, decolorize with acetic acid and zinc powder.
Frœhde's test.	Alkaloids.	Sol. of sodium molybdate 0.01 gm. in sulphuric acid 10 c.c.	Color-reactions.		
Fürbringer's test.	Albumin in urine.	Capsules (Stütz's) containing sodio-mercuric chlorid, sodium chlorid, and citric acid.	Cloudiness or flocculent ppt.	Open capsule at both ends and introduce into urine.	Delicate and convenient.
Fürbringer's test.	Albumin in urine.	(*a*) Mercuric chlorid. (*b*) Sodium chlorid.	Precipitate.	Add sol. of *a* and of *b*.	
Furfurol-test.	Carbohydrates.	See *Schiff's* and *Molisch's tests.*			
Furfurol-test.	Glucose.	See *Molisch's test.*			
Galipe's test.	Albumin in urine.	Sat. sol. picric acid.	White turbidity.	Place a little R. in test-tube, add a few drops of urine, or overlay with urine.	Prevents mistaking of phosphates or urates.
Gallois' test.	Inosite.	2 per cent. sol. mercuric nitrate or Liebig's sol. for estimation of urea.	Yellow residue, turning red on heating.	Heat sol. with a few drops of R.	Proteids, tyrosin, and sugar must be absent.
Garrod's test.	Uric acid in blood.	Acetic acid.	The thread becomes incrusted with uric-acid crystals.	To 30 c.c. of serum add 0.5 c.c. of R. and immerse a fine thread.	Obtained especially in gout, but also in leukemia and chlorosis.
Gauthier's reagent.	Egg-albumin.	Sol. sodium hydrate 250, copper sulphate, 1 % sol. 50, glacial acetic acid 700.	Precipitate.	To 2 c.c. liquid add 10 c.c. R.	Serum-albumin will not be precipitated.
Geissler's test.	Albumin in urine.	(*a*) Citric acid. (*b*) $HgCl_2$, 3 % sol., containing 12–15 % potass. iodid.	Precipitate.	Add to urine test-paper dipped in *a* and dried, then one dipped in *b* and dried.	Very delicate.
Gentele's test.	Glucose.	Sol. potass. ferricyanid in potass. or sodium hydrate.	Decolorization.	Add liquid to R. and warm.	Uric acid gives same reaction, even in the cold.
Gentian-violet test.	Amyloid degeneration.	(*a*) 5 per cent. aq. sol. gentian-violet (*b*) 10–15 per cent. sol. acetic acid.	Pink color.	Treat section ½ to 1 minute with *a*; wash in *b*; examine under microscope.	
Gerhardt's test.	Acetone in urine.	Sol. ferric chlorid.	Red color.	Add R. to urine.	Not very reliable; other substances respond.
Gerhardt's test.	Biliary pigments in urine.	(*a*) Chloroform (*b*) Tr. iodi. (*c*) Sol. potass. hydrate.	Yellow to brownish color, with green fluorescence.	Shake equal parts urine and *a*; allow to settle; add *b* and *c* to extract.	
Gerhardt's test.	Diacetic acid in urine.	Sol. ferric chlorid.	Bordeaux-red color; foam violet-red.	To urine add a few drops of R. to precipitate phosphates; then add a few more drops of R.; or filter, and then add.	Color disappears on addition of sulphuric acid.
Gerhardt's test.	Urobilin in urine (in excess).	(*a*) Potass. hydrate. (*b*) Chloroform. (*c*) Tr. iodi.	Green fluorescence.	To chloroform extract of urine add *a* and *b*.	
Glacial-phosphoric-acid test.	Albumin in urine.	See *Hindenlang's test.*			
Gmelin-Heintz's test.	Biliary pigments in urine.	Fuming nitric acid.	Play of colors beginning with green and passing through blue, violet, and red to yellow.	Bring urine and R. in contact on porcelain plate or overlay R. with urine in test-tube.	Very delicate; 1 in 70,000 to 80,000.

TABLE OF TESTS.—*Continued.*

Name.	Use.	Reagents.	Reaction.	Application.	Remarks.
Griess' test.	Nitrites in saliva.	(*a*) Sulphuric acid. (*b*) Metadiamido-benzol.	Intense, yellow color.	Dilute saliva with 5 vols. water; add a few drops *a* and *b*.	
Grismer's test.	Glucose in urine.	(*a*) 1:1000 sol. safranin. (*b*) Potass. hydrate.	Decolorization denotes glucose.	Boil 1 c.c. urine with 5 c.c. *a* and 2 c.c. *b*.	Not reliable.
Guaiac-test.	Blood.	See *Van Deen's test, Almén's test, and Huehnerfeld's test.*			
Guaiac-test.	Hydrocyanic acid.	See *Schönbein's test.*			
Guareschi's test.	Phenol.	Chloroform.	Red ppt. sol. in alcohol.	Treat warm alkaline sol. of phenyl with R.	
Günzburg's test.	Hydrochloric acid in gastric juice.	Phloroglucin-vanillin sol.: Phloroglucin 2, vanillin 1, absolute alcohol 30.	Red color; cherry-red crystals.	To a few drops of juice in evaporating dish add a drop of R. and warm gently.	1 in 15,000; very delicate.
Gutzeit's test.	Arsenic.	(*a*) Zinc. (*b*) Sulphuric acid 10, water 190. (*c*) Sol. lead acetate. (*d*) Sat. sol. silver nitrate acidulated with nitric acid.	Bright-yellow stain, becoming black or brown on addition of water.	Place a piece of *a* in test-tube with 5 c.c. of *b*; add liquid, not exceeding 1 c.c. About 1 cm. below open end of test-tube insert a glass-wool or cotton plug moistened with 0.5 *c*. Cover tube with 3 thicknesses filter-paper, applying to upper one a drop of *d*. Stand aside in a dark place.	
Guyot's test.	Ammonia.	To acid sol. of mercuric nitrate add sol. potass. bromid until first ppt. is redissolved; then add potass. hydrate till orange-yellow ppt. appears. Filter.	White precipitate.	Mix R. and liquid.	
Guyot's test.	Iodoform.	Starch.	Blue color.	Heat in flask, and pass vapor through a heated tube over R.	
Hagen's test.	Strychnin.	(*a*) Sulphuric acid. (*b*) Lead dioxid.	Bluish-violet color.	Mix *a* and *b* with liquid.	
Hager's test.	Alkaloids.	Sol. picric acid (1:1000).	Yellow ppt.	Add R. to liquid.	
Hager's test.	Ammonia.	Mercurous nitrate.	Black ppt. or brown coloration.	Add R. to liquid.	
Hager's test.	Arsenic.	(*a*) Potass. hydrate. (*b*) Zinc. (*c*) Ribbon of magnesium.	Evolution of arsin, which is tested in any convenient way.	Heat liquid with *a* in excess, *b*, and small piece of *c*.	
Hager's test.	Arsenic.	(*a*) Hydrochloric acid. (*b*) Tinfoil.	Steel-colored to brown stain.	Acidify with *a*, drop in *b*, heat to 90° C.	
Hager's test.	Dextrin.	(*b*) Ammonium molybdate. (*b*) Citric acid.	Blue color.	Boil liquid with *a* and *b*.	
Hager's test.	Glucose.	Mercuric oxid (red) 30, sodium acetate 30, glac. acetic acid 25, sodium chlorid 50, water 400. After solution dilute up to 1000.	Ppt. of mercurous chlorid.	Add excess of R. to liquid.	
Hager's test.	Nitric acid.	(*a*) Molybdic acid. (*b*) Sugar.	Blue color.	Add *a* and *b*.	
Hager's test.	Nitrobenzol in oil of bitter almonds.	45 per cent. alcohol.	Cloudiness.	Dissolve 10 drops oil in 10 c.c. R.	
Hager's test.	Nitrous acid.	Carbolic acid.	Red, then brown and green coloration.	Add R. to liquid.	
Hager's test.	Phosphorus.	(*a*) Ether or benzine. (*b*) Strip of silver-nitrate paper.	Black stain.	Dissolve in *a*, heat to 30–40° C., and expose *b* to vapors.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Hager's test.	Purity of quinin.	Sol. of sodium salicylate (1:5).	Cloudiness indicates other cinchona alkaloids.	Shake 2 gm. quinin sulph. with 20 c.c. cold water; filter. Dilute filtrate with equal bulk water, add 10 to 12 drops R., and shake.	
Hager's test.	Strychnin in santonin.	Sat. sol. picric acid.	Cloudiness or ppt.	Shake 2 gm. santonin with 6 c.c. water, filter; to filtrate add 1 to 2 c.c. R.	In case of reactio strychnin ma be present, an should be furth tested for.
Hager's test.	Sugar in glycerin.	(*a*) Ammon. molybdate. (*b*) 25 per cent. sol. nitric acid.	Blue color.	Boil 5 drops glycerin, 100 drops water, 3 to 4 cg. *a*, and 1 drop *b*.	
Hager's test.	Tannic acid.	Ammonium molybdate.	Reddish-yellow color.		
Haines' solution.	Glucose in urine.	Copper sulphate 3, potass. hydrate 9, glycerin 100, water 600.	Red ppt.	Use as in Fehling's test.	
Hammersten's test.	Indican in urine.	(*a*) Chloroform. (*b*) Fuming hydrochloric acid. (*c*) Sat. sol calcium hypochlorite.	Blue color of chloroform.	Mix 10 of urine with 3 to 5 *a*, 10 *b*, and 1 drop *c*. Agitate gently.	Too much or t strong *c* chang color to green.
Hammersten's test.	Metalbumin.	(*a*) Concent. sulphuric acid. (*b*) Acetic acid.	Violet color.	Add *a* and *b*.	
Hammersten's test.	Milk-curdling ferment.	See *Curdling-ferment test*.			
Harley's test A.	Urohematin.	Nitric acid.	Pink, crimson, or purple color indicates excess.	Dilute 24 hours' urine to 60 oz., or concent. if amount greater. To 2 drams add ½ dram R.; allow to stand.	
Harley's test B.	Urohematin.	(*a*) Nitric acid. (*b*) Ether.	Red color of *b* indicates excess.	Boil 4 oz. urine; add *a*; when cool heat in 6 oz. bottle with 1 oz. *b*; shake; stand aside 24 hours.	
Harnack's test.	Iodin in urine.	(*a*) Starch-paste. (*b*) Carbon disulphid.	Purple color of *b*.	Shake with *a* and *b*.	
Haslam's test.	Albumin.	(*a*) Sol. sodium chlorid. (*b*) Sol. ferric chlorid.	Whitish zone.	Mix urine with few drops *a*, and pour *b* cautiously on top.	
Hassalt's test.	Aconitin.	Syrupy phosphoric acid.	Violet color.	Dissolve in R., and evaporate gently.	
Hauck's test.	Hyposulphites.	Sol. potass. permanganate.	Color changed to bluish-green.	Mix.	
Hay's test.	Biliary acids.	Sulphur.	R. sinks in fluid containing biliary acids.	Throw a little R. on surface of liquid.	
Heat-test.	Albumin in urine.	Nitric acid.	Cloudiness or white ppt.	Heat upper third of urine contained in a test-tube. To ppt. add drop of R.; albumin is not dissolved.	Delicate. Alkali urine may throw down p until acid added.
Heinrich's test.	Albumin.	(*a*) Dilute acetic acid. (*b*) Sol. sodium chlorid.	Precipitate.	To 5–10 c.c. liquid add 2 drops *a*, and boil. Add enough *b* to make 4 per cent sol.	
Heinrich's test.	Glucose.	Mercuric iodid 18, potass. iodid 25. Dissolve; add potass. hydrate 10, water to 1000.	Reduction.	Heat R. and add liquid.	40 c.c. = 0.1342 g cose.
Heintz's test.	Potassium in urine.	(*a*) Hydrochloric acid. (*b*) A little platinum chlorid dissolved in eq. vol. alcohol and ether.	Octahedral crystals.	To 100 c.c. urine add a little *a*; then 2 vols. *b*.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Heller's test or method.	Albumin in urine.	Nitric acid.	White ring or disc.	Place about 30 drops R. in test-tube, and overlay with equal quantity of urine.	Delicacy 0.0025 per cent.
Heller's test.	Biliary pigments.	(*a*) Hydrochloric acid. (*b*) Nitric acid.	Play of colors.	In a beaker-glass mix 6 c.c. of *a* with enough urine to color. Allow *b* to trickle down the side and form a layer underneath.	
Heller's test.	Blood in urine.	Liquor potassæ.	Reddish-brown ppt. of phosphates and blood coloring-matter.	Render urine alkaline with R. and boil.	
Heller's test.	Glucose.	See *Moore's test.*			
Heller's test.	Urophain in urine.	Sulphuric acid.	Black or opaque color indicates excess; pale garnet-red, diminution.	From height of about 4 inches pour 4 c.c. urine upon 2 c.c. R. in beaker-glass, so that they mix intimately.	
Heller's test A.	Indican in urine.	Strong hydrochloric acid.	Violet or blue color.	To 4 c.c. R. in small beaker-glass add 20 drops of urine while stirring. Allow to stand.	If bile is present, remove by precipitation with lead acetate and filtration.
Heller's test B.	Indican in urine.	Strong hydrochloric or nitric acid.	Violet or blue ring.	Gently heat 4 c.c. R. in test-tube; overlay with equal quantity of urine freed from albumin.	
Hempel's test.	Iodids.	(*a*) Sol. ferric chlorid. (*b*) Sulphuric acid. (*c*) Starch-paste.	Rose-red color.	Add *a* and *b*, then *c*.	
Henry's test.	Iodin.	Sol. potass. permanganate.		Liberate iodin with R.	
Heppe's test.	Chlorates.	Sol. anilin sulphate 1, sulphuric acid 2.	Intensely blue color.	Add R.	
Herbst's test.	Aconitin.	Phosphoric acid.	Violet color.	Evaporate with R.	
Herbst's test.	Atropin.	(*a*) Sulphuric acid. (*b*) Potass. bichromate.	Odor of oil of bitter almonds.	Add *a*, *b*, and a little water.	
Herse's test.	Codein.	(*a*) Sulphuric acid. (*b*) Sol. ferric chlorid.	Blue color.	Dissolve in *a*, add *b*.	
Herzberg's test.	Free hydrochloric acid.	See *Congo-red test.*			
Heynsius' test.	Albumin.	(*a*) Acetic acid. (*b*) Sat. sol. sodium chlorid.	Flocculent ppt.	Add *a* and a few c.c. of *b*; boil.	
Hilger's test.	Albumin in urine.	(*a*) Acetic acid. (*b*) Sol. potass. ferrocyanid.	Turbidity or ppt.	To 1 vol. urine add ¼ vol. *a*; then add 3 or 4 drops *b*.	Extremely delicate; 0.0025 per cent. albumin. Serum-albumin, globulin, and albumose respond; peptone does not.
Hindenlang's test.	Albumin in urine.	Metaphosphoric acid.	White cloud around R.	Drop pellet of R. into filtered urine and allow tube to stand. Do not boil.	Delicate; R. does not keep well.
Hinterberger's test.	Atropin.	Cyanogen.	Blood-red color.	Pass current of R. into alcoholic sol.	
Hirsch's test.	Carbolic acid.	Tr. ferri chlorid.	Purple color.	Add R. to aqueous sol.	
Hlasiwetz's test.	Hydrocyanic acid.	Picric acid.	Blood-red color.	Heat alkaline sol. with R.	
Hoffmann's test.	Alkalimetry.	Eupittonic acid.	Orange color, turned blue by alkalies.		Delicacy, 1:60,000.

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Hoffmann's test.	Carbolic acid.	(*a*) Sulphuric acid. (*b*) Potass. nitrate.	Violet color or streaks.	To 2 c.c. *a* add 2 c.c. liquid, and a little *b*.	0.001 gm.
Hoffmann's test.	Chloroform.	(*a*) Anilin. (*b*) Alcohol. (*c*) Sodium hydrate.	Odor of isonitril.	Add *a*, *b*, *c*.	
Hoffmann's test.	Tyrosin.	Neutral sol. of mercuric nitrate.	Crimson or pink coloration or ppt.	Heat solution with R.	Ppt. occurs if much tyrosin is present.
Hoffmann and Ultzmann's test.	Altered biliary coloring-matters (bilifuscin).		Brown color.	Dip piece of clean, white linen in urine, and allow to dry.	
Hofmeister's test.	Peptone in urine.	(*a*) Concent. sol. sodium acetate. (*b*) Concent. sol ferric chlorid. (*c*) Sol. potass. hydrate. (*d*) 1 per cent. sol. copper sulphate.	Beautiful, red color (Biuret-reaction).	To 500 c.cm. urine add 50 c.cm. *a*; then *b* guttatim until liquid is red; neutralize with *c*; boil; filter. If filtrate free from albumin, add few drops *c* and *d*.	
Hoppe-Seyler's test.	Santonin in urine.	(*a*) Sodium hydrate. (*b*) Amylic alcohol.	Red color with *a*, which is decolorized by *b*.	Treat urine with *a*; extract with *b*.	Distinction from chrysophanic acid; urine not decolorized by *b*.
Hoppe-Seyler's test.	Glucose in urine.	o-Nitrophenylpropionic acid 5.76 gm. with 100 c.c. 10 per cent. sol. sodium hydrate, dissolved in water and diluted to 1150 c.c.	Dark-blue color (indicates 0.5 per cent. glucose or reducing substance).	Boil 5 c.c. R. with 10 drops urine ¼ minute.	
Hoppe-Seyler's test.	Xanthin.	Sol. sodium hydrate mixed with chlorinated lime.	Dark-green ring, turning brown, then disappearing, around each particle of xanthin.	Drop xanthin into R.	
Horsford's test.	Glycocoll.	Sol. potass. hydrate.	Bright-red color.	Boil with R.	
Horsley's test.	Glucose.	Copper sulph. 30, water 1440, tartaric acid 30; let cool; add potass. hydrate 90, potass. carbonate 90.	Reduction of copper sulphate.	As in Fehling's test.	
Horsley's test.	Morphin.	Sol. potass. ferricyanid.	Red color after several hours.	Add R.	
Horsley's test.	Morphin.	(*a*) Sol. silver nitrate. (*b*) Nitric acid.	Reduction of silver; blood-red color with *b*.	Add *a*; filter; to filtrate add *b*.	
Horsley's test.	Strychnin.	(*a*) Sol. potass. bichromate. (*b*) Sulphuric acid.	Purple-violet to red color.	Add *a*; to crystals which form add *b*.	
Huber's test.	Free mineral acids.	Mixture of sol. ammon. molybdate and sol. potass. ferrocyanid.	Red cloudiness, which disappears on adding the smallest excess of alkali.	Add R.	
Huchard's test.	Hepatic insufficiency.	Sugar 150–200 gms.	Appearance of sugar in urine.	R. is introduced into stomach; normally destroyed in a few hours; if liver insufficient, appears in urine.	
Huehnerfeld's test.	Blood.	(*a*) Tr. guaiaci. (*b*) Mixture of glacial acetic acid 2, distilled water 2, oil of turpentine 100, absol. alcohol 100, chloroform 100.	Blue color.	Treat liquid with *a* and a little of *b*.	A modification of Van Deen's test
Huizinga's test.	Glucose.	(*a*) Potass. hydrate. (*b*) Ammonium molybdate or tungstate. (*c*) Hydrochloric acid.	Blue color.	Alkalinize with *a*, add *b*; boil, and acidulate with *c*.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Hume's test.	Arsenic.	Ammoniacal sol. silver nitrate.	Black color.	Pass arseniuretted hydrogen into R.	
Huppert's test.	Bile-pigments.	(*a*) Milk of lime (1 per cent. sol.). (*b*) Acid alcohol (containing hydrochloric acid).	Green color.	Precipitate with *a*; extract with *b*. Warm extract.	
Husemann's test.	Morphin.	(*a*) Sulphuric acid. (*b*) Nitric acid.	Blue-violet to red color.	Heat for half hour with *a*; after cooling add one drop *b*.	$\frac{1}{10}$ mgm.
Hydrochloric-acid test.	Balsam of copaiba.	Hydrochloric acid.	Red color.	Add R. to urine. Calcium chlorid or tr. iodi facilitates reaction.	Reliable.
Ihl and Pechmann's test A.	Levulose.	Concent. alcoholic sol. resorcin with a little hydrochloric acid.	Red color.	Warm R., and add substance to it.	
Ihl and Pechmann's test B.	Levulose.	(*a*) Concent. sol. diphenylamin. (*b*) Hydrochloric acid.	Yellowish-green, then dark-blue color.	Boil with *a* and a little *b*.	
Ilimow's test.	Albumin.	(*a*) Acid sodium phosphate. (*b*) Carbolic acid (1:20).	Cloudiness and precipitate.	Acidulate with *a*; filter; add *b*.	
Indigo-test.	Acetone.	See *Bayer's test.*			
Indigo, or indigo-carmin, test.	Glucose.	See *Mulder's test.*			
Indol-reaction.	Products of bacillus cholerae asiaticæ.	See *Poehl's test.*			
Iodin-test.	Amyloid degeneration.	Lugol's solution.	Mahagony-red color.	Treat freshly cut surface of organ with diluted R.	Glycogen and cholesterin give same reaction.
Iodin-test.	Starch.	Iodin 1 gm., potass. iodid 3 gm., water 50 c.c.	Deep-blue color.	Add R.	
Iodoform-test.	Acetone in urine.	See *Lieben's test.*			
Isocyanphenyl-test.	Nitrobenzol (anilin).	See *Flückiger's test for Acetanilid.*			
Ittner's test.	Hydrocyanic acid in tissues.	(*a*) Dil. sol. potass. hydrate. (*b*) Sol. ferrous sulphate (which has become yellow by exposure to air). (*c*) Hydrochloric acid.	Blue or green color; flocculent, dark-blue ppt.	Render liquid alkaline with *a*; add a few drops *b*, agitate, and let stand 10 minutes. Now add *c* in slight excess; warm slightly. Allow to stand several hours if necessary.	Large quantities, immediate, blue color and precipitate. Delicacy 1:50,000.
Jacquemart's test.	Alcohol.	(*a*) Sol. mercuric nitrate. (*b*) Ammonia.	Reduction of *a*; black precipitate on adding *b*.	Add *a*, then *b*.	
Jacquemin's test.	Alkalies.	Sol. pyrogallic acid, with trace of ferric chlorid.	Change of color to blue.	Add R to liquid.	
Jacquemin's test.	Carbolic acid.	(*a*) Anilin. (*b*) Sodium hypochlorite.	Blue color.	Add eq. vol. *a*; then add *b*.	Acids color sol. red, alkalies blue.
Jaffe's test.	Indigo in urine.	(*a*) Hydrochloric acid. (*b*) Sat. sol. calcium hypochlorite (bleaching powder). (*c*) Chloroform.	Blue color.	Mix equal parts urine and *a*; add a few drops *b* until maximum color appears. Agitate with *c*: evaporate *c* extract, and weigh to get approximate quantity.	Albumin must first be removed.
Jaffe's test.	Kreatinin.	(*a*) Sol. of picric acid. (*b*) Sodium hydrate.	Intense red color.	Add *a* and a few drops of *b*.	1:5000
Jon Jaksch's test.	Bilirubin in blood.		Yellow froth.	Abstract some blood with cupping-glass; place in a test-tube in refrigerator; after coagulation, withdraw serum into another test-tube; shake.	Serum becomes green if placed in a warm chamber three or four hours.

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Von Jaksch's test.	Diacetic acid.	(*a*) Sol. ferric chlorid. (*b*) Sulphuric acid. (*c*) Ether.	Burgundy red color.	Add *a*, filter; add more *a*; boil portion of mixture; red color should persist.	To other portion of urine add *b* and *c* and perform test with *a* on the ethereal extract.
Von Jaksch's test.	Free hydrochloric acid in gastric juice.	Sol. benzo-purpurin 6 B.	Dark-blue color.	Add R. or saturate filter-paper with R. dry, and dip in gastric juice.	
Von Jaksch's test.	Glucose in urine.	(*a*) Phenyl-hydrazin hydrochlorate. (*b*) Sodium acetate.	Same as *Fischer's test.*	To 6–8 c.c. urine add 2 parts *a* and 3 parts *b*; warm; place tube in boiling water 20–30 minutes, then into cold water.	Modified *Fischer's test.*
Von Jaksch's test.	Kresol (Para-).	(*a*) Sodium nitro-prussid. (*b*) Potass.-hydrate. (*c*) Acetic acid.	Reddish-yellow color; light pink when *c* is added.	Add *a* and *b*; add excess *c*.	
Von Jaksch's test.	Melanin.	Sol. ferric chlorid.	Black color; also black by transmitted light.	Add R.	
Von Jaksch's test.	Thallin.	(*a*) Ferric chlorid. (*b*) Ether.	Dark-green color.	Shake urine with *b*; to *b* extract add one drop *a*.	Urine on addition of *a* alone, red. Many substances give red color therefore extract with *b*.
Jaworowski's test.	Albumin in urine.	Ammon. molybdenate 1, heated with water 40; mix with tartaric acid 5. Filter if not clear.	Precipitate.	Urine must be transparent and acid (acidify with tartaric acid if necessary). Add R. a few drops at a time; filter.	Said to detect 1 in 300,000.
Johnson's test.	Glucose.	(*a*) Sat. sol. picric acid. (*b*) Sol. sodium hydrate.	Claret-red color.	Add a few drops *a*, alkalinize with *b*; warm.	Delicacy 0.01 per cent.
Johnson's test (quantitative).	Sugar in urine.	Standard claret color prepared by boiling 40 minims cold, sat. sol. picric acid with f℥j sol. containing gr. j glucose to f℥j, mixed with f℥ss potass. hydrate; water is added to make f℥iv. (*a*) Sat. sol. picric acid. (*b*) Sol. potass. hydrate.	If color same as standard, urine contains gr. j glucose to f℥j. If darker, dilute to standard tint. Number of dilutions equals number of grains per ounce.	Boil f℥j of dilute urine 1 minute, with 40 minims *a* and f℥ss *b*; dilute to f℥iv. Cool by immersing in cold water.	
Jolles' test.	Albumin in urine.	(*a*) Hydrochloric acid. (*b*) Sat. sol. calcium chlorid.	White turbidity.	Treat urine with equal volume *a*; overlay with 2 or 3 drops *b*.	0.01 per cent.
Kæmmerer's test.	Nitric and nitrous acids in potable water.	(*a*) Potass.-iodid-starch-paste. (*b*) Acetic acid. (*c*) Sulphuric acid. (*d*) Zinc-dust.	Blue color.	To one portion add *a* and *b*; blue color indicates nitrous acid. To another portion add *a*, *c*, *d*; blue color indicates nitric acid.	
Kauder's test.	Globulin.	See *Pohl's test.*			
Klemperer's test.	Zymogen of rennet.	(*a*) Milk 10 c.c., 3 per cent. sol. calcium chlorid 2 c.c. (*b*) 1 per cent. sol. sodium carbonate.	Curdling of milk.	To 2 c.c. filtered gastric juice add *a* and excess of *b*; place in incubator.	
Knapp's test.	Glucose in urine.	Alkaline sol. mercuric cyanid.	Reduction to metallic mercury.	Boil a few c.c. R., and add urine.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Knapp's method.	Volumetric test for sugar in urine.	Standard alkaline sol. mercuric cyanid (mercuric cyanid 10, sodium hydrate [1.14] 100, water up to 7000). 40 c.c. = 0.1 sugar.	Absence of mercury in sol. is indicated by filter-paper moistened with 1 drop sol., no longer being blackened by vapor of ammonium sulphid.	Run sugar sol. from buret into hot, standard sol.	
Kossel's test.	Hypoxanthin.	(*a*) Hydrochloric acid. (*b*) Zinc. (*c*) Sodium hydrate.	Ruby-red color.	Treat with *a* and *b*, and add excess of *c*.	
Kost's test.	Free hydrochloric acid in gastric juice.	(*a*) 10 per cent. sol. tannin. (*b*) Sol. methyl-violet.	Change from violet to blue or green.	Add *a*, then *b*.	Modification of *Maly's test*; *a* precipitates the interfering peptones.
Kuehne's test.	Syntonin.	Lime-water.	Soluble in R.; sol. coagulated, though imperfectly, by boiling.	Dissolve in R. and boil.	Reaction distinguishes it from other acid-albumins and from alkali-albumins.
Kuelz's test.	Biliary acids.	(*a*) Dil. sol. cane-sugar. (*b*) Concent. sulphuric acid.	Red, then violet color.	Evaporate substance; add one drop *a*, and a few drops *b*.	
Kuelz's test.	Hydrogen sulphocyanid in urine.	Dil. sol. ferric chlorid, with a little hydrochloric acid.	Red color.	Dilute R. until same color as urine, then add.	Not reliable.
Landoldt's test.	Carbolic acid.	Bromin-water.	White or yellowish-white cloudiness or ppt.	Add excess of R.	1 : 40,000.
Langley's test.	Pepsinogen and pepsin.	Sodium carbonate.	R. destroys pepsin, but has no action on pepsinogen.		
Lassaigne's test.	Semen.	Sol. of lead oxid in liquor potassæ.	No yellow color, as would occur in albuminous fluids.	Moisten stain with R., and dry at 68° F.	If semen diluted with an albuminous secretion, yellow color develops.
Latschenberger's test.	Ammonia in urine.	(*a*) Sat. sol. copper sulphate. (*b*) Barium hydrate.	Apply to filtrate Nessler's test, *q. v.*	Treat urine with equal vol. *a*; neutralize with *b*; filter.	
Lea's (Carey) test.	Gelatin.	Acid sol. mercuric nitrate.	Red color.	Add R. to liquid.	
Lea's (Carey) test.	Hydrocyanic acid.	Ammonio-sulphate of iron 1, uranium nitrate 1, water 240.	Purplish-red color or ppt.	Add 2 drops of liquid on a porcelain slab to 2 drops R.	
Leffmann's test.	Urine in potable water.	Sol. silver nitrate.	Brown color.	Add R.	
Legal's test.	Acetone in urine.	(*a*) Hydrochloric acid. (*b*) Sodium nitroprussid. (*c*) Liq. potassæ.	Red color, which rapidly disappears, and gives place to purple on the addition of acetic acid.	Acidulate with *a*, distil. To distillate add a few drops each *b* and *c*.	Kreatinin strikes similar color, which disappears when acetic acid is added.
Leo's test.	Free acids and acid salts in gastric juice.	Pure calcium carbonate.	Change of litmus-test paper.	Mix filtrate in watch-glass with R.; test with blue litmus; if latter not reddened, acid salts absent; if red less intense than before, both present; if red color not altered, free acids absent or much diminished.	Very delicate; .002 free hydrochloric, 0.01 lactic acid.
Lieben's test.	Acetone in urine.	Liq. potassæ 3.7 c.c., potass. iodid 1.2; place in test-tube and boil.	Crystals of iodoform.	To R. add 3.7 c.c. urine, distil, and acidulate with hydrochlor. acid. Ring of phosphates is formed first; upon this the iodoform is deposited, later sinking to bottom.	Alcohol, lactic acid, aldehyd, and certain fatty acids also respond.

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Liebermann's test.	Cholesterin and cholesterin-fats.	(*a*) Acetic acid anhydrid. (*b*) Sulphuric acid.	Violet to green color.	Add *a* and a few drops *b*.	
Liebermann's test.	Lanolin.	(*a*) Acetic acid anhydrid. (*b*) Sulphuric acid.	Rose-red color, changing to green or blue.	Dissolve 0.1–0.2 gm. lanolin in 4 c.c. *a*, and add *b*.	Glycerin-fats do not give this color.
Liebermann's test.	Proteids.	Concent. hydrochloric acid.	Violet-red color.	Boil substance with R.	
Liebig's test.	Hydrocyanic acid in tissues.	(*a*) Dil. sol. sodium hydrate. (*b*) Ammonium sulphid. (*c*) Sol. ferric chlorid. (*d*) Hydrochloric acid.	Red color.	Place liquid in porcelain capsule; add *a* and *b*; evaporate to dryness over water-bath; add water; acidulate with *d*, and add 2 or 3 drops *c*.	Most delicate test—1 : 4,000,000.
Liebreich's test.	Cholesterin and cholesterin-fats.	See *Burchard's test.*			
Lindo's test.	Glucose.	Sol. in sodium or potass. hydrate of yellow substance obtained by action of nitric acid on brucin.	Yellow, then intensely blue.	Treat R. with substance.	
Lipowitz' test.	Phosphorus in organic matter.	(*a*) Sulphuric acid. (*b*) Sulphur. (*c*) Nitric acid.	Luminosity; odor; tests for phosphoric acid.	Acidulate with *a*, boil ½ hour in retort with *b*; collect distillate. Wash pieces of sulphur and examine for luminosity and odor. Add *c*, and test for phosphoric acid.	
Luck's test.	Acidimetry, alkalimetry.	Phenolphthalein.	With acids colorless; with alkalies purplish-red.	Add 1 drop R. to 100 c.c. of liquid.	1 : 100,000.
Ludwig's test.	Alcohol (ethylic).	See *Otto's test.*			
Ludwig's test.	Anilin.	(*a*) Sol. carbolic acid. (*b*) Sol. sodium hypochlorite. (*c*) Hydrochloric acid.	Dark-blue; red on addition of *c*.	To watery sol. of substance add *a* and *b*.	
Ludwig's test.	Potassium chlorate in vomit.	(*a*) Acetic acid. (*b*) Dil. hydrochloric acid.	Crystals liberating chlorin-gas with *b*.	Acidulate with *a*; boil for one minute; filter; evaporate filtrate to small bulk; stand aside. Dry crystals between blotting-paper; add *b*; warm.	
Luecke's test.	Hippuric acid.	Nitric acid.	Odor of nitrobenzol.	Add R. at boiling temperature; evaporate; introduce residue into small glass tube; heat.	
Lunge's test.	Alkalimetry.	Tropeolin (methyl-orange).	Mineral acids change yellow to crimson.	Add R.	Carbon dioxid has no action.
Lunge's test.	Alkalimetry.	Phenacetolin (brown substance obtained by heating for several hours carbolic, sulphuric, and glacial acetic acids, each 1 part).	Alkalies turn it red.		
Lustgarten's test.	Chloroform.	(*a*) Alpha-naphthol. (*b*) Sol. potass. hydrate.	Blue color.	Dissolve *a* in *b*, and add to fluid.	
Lustgarten's test.	Chloroform.	Alpha-naphthol or beta-naphthol in potass. hydrate.	Transient blue color.	Warm R. and mix with substance.	Chloral gives same reaction.
Luttke's test.	Free hydrochloric acid in gastric juice.	Tropeolin O O.	Yellow color of R. changes to red.	Same as *Riegel's test*, *q. v.*	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
MacMunn's test.	Indigo in urine.	(*a*) Hydrochloric acid. (*b*) Nitric acid. (*c*) Chloroform.	*c* becomes violet, and shows absorption-bands before and after D., due to indigo-blue.	Boil equal parts urine and *a*, and a few drops *b*; cool, and agitate with *c*.	
MacWilliams' test.	Albumin.	Sat. sol. salicyl-sulphonic acid.	Cloudiness or ppt.	Mix drop or two of R. with 20 c.c. of liquid.	
Magnesia-mixture-test.	Phosphates in urine.	Magnes. sulphate, ammon. chlorid, ammonia, each 1, water 8.	Precipitate.	Add R. to urine.	If ppt. thick, phosphates increased; if milky, normal; if translucent, diminished.
Magnesium-nitric-test.	Albumin in urine.	See *Roberts' test*.			
Magnesium-sulphate-test.	Paraglobulin in urine.	Magnes. sulphate.	Precipitate.	Saturate urine with R.; remove paraglobulin by filtration	
Magnier de la Source's test.	Uric acid.	(*a*) Bromin water. (*b*) Sol. potass. hydrate. (*c*) Ammon. hydrate.	Brick-red color; blue with *b*; purple with *c*.	Rub up sediment with water, add *a*, evaporate. Add *b* or *c*.	
Mahomed's test.	Small quantities of hemoglobin in urine, unaccompanied by albumin.	(*a*) Tr. guaiaci. (*b*) Ozonic ether.	Blue color.	Dip slip blotting-paper in urine; dry over spirit-lamp; drop on 2 drops *a*, and after alcohol has evaporated, a drop of *b*.	
Maly's test.	Free hydrochloric acid in gastric juice.	Sol. methylene-blue.	Change from violet to blue or green.	Add R.	
Maréchal's test.	Bile-pigments in urine.	Tr. iodi.	Delicate green color at line of contact.	Float a few drops of urine on surface of R. in test-tube.	Dilute urine if very dark.
Marsh's test.	Arsenic.	(*a*) Dil. sulphuric acid. (*b*) Zinc.	Steel-white mirror of metallic arsenic.	Introduce substance into flask with *a* and *b*. Light jet and permit to impinge on cold porcelain, or heat delivery-tube, when mirror is deposited in it.	Distinguished from similar deposit of antimony by solubility of arsenical mirror in potassium hypochlorite.
Martin's test.	Peptones in urine.	(*a*) Ammonium sulphate. (*b*) Sol. copper sulphate. (*c*) Sodium hydrate.	Rose-red color.	Precipitate proteids with *a*; filter; to filtrate add *b* and considerable *c*.	
Maschke's test.	Nitrous acid in potable water.	(*a*) Dil. acetic acid. (*b*) Blue molybdic-acid-solution.	Bluish color disappears within one hour.	Add 6 to 10 drops *a*, then 1 or 2 drops *b*.	
Masset's test.	Biliary coloring matter.	(*a*) Sulphuric acid. (*b*) Potass. nitrite.	Grass-green color.	To 2 c.c. urine add 2 or 3 drops *a* and crystal of *b*.	Not very delicate.
Maumené's test A.	Glucose.	Stannous chlorid.	Black-brown "caramel"-like ppt.	Heat glucose-sol. with R.	
Maumené's test B.	Glucose.	Strips of woolen soaked in 33½ per cent. sol. of stannous chlorid, and dried.	Strip turns brown to blackish-brown.	Boil strip in glucose-solution.	
Mayer's reagent or test.	Alkaloids.	$HgCl_2$ 13.546, potass. iodid 49.8, water. 1000.	White ppt.	Add R.	
Mazzara's test.	Glucose in urine.	(*a*) Nickel chlorid. (*b*) Sol. potass. hydrate	Green ppt.	Heat urine with *a* and a little *b*.	
Méhu's test.	Albumin in urine.	(*a*) Nitric acid. (*b*) Carbol. and acetic acids each 1, 90 per cent. alcohol 2.	Precipitate.	Treat urine with 2–3 per cent. of its vol. of *a*, add 10 per cent. *b*; shake and allow to stand.	Not very reliable; normal urine may give ppt.
Menthoi-test.	Glucose in urine.	Used like Thymol in	*Molisch's test, q.v.*		

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Mercuric-oxid-test.	Acetone in urine.	See *Reynold-Gunning's test.*			
Metaphosphoric-acid-test.	Albumin in urine.	See *Hindenlang's test.*			
Michailow's test.	Proteids.	(*a*) Sol. ferrous sulphate. (*b*) Sulphuric acid. (*c*) Nitric acid.	Red ring.	Add *a*; underlay with *b*; add a little *c*.	
Millard's test.	Albumin in urine.	Mix glacial phenic acid (95 per cent.) 2 drams, acetic acid 7 drams; add liq. potassæ 2 oz. 6 drams.	Precipitate.	Overlay R. with urine.	
Miller's test.	Alkalimetry.	Same as *Lunge's test*,	*q. v.*		
Von Miller's test.	Free hydrochloric acid in gastric juice.	See *Luttke's test.*			
Millon's test.	Albumin; urea.	Metallic mercury 1, HNO_3 (1.42) 1; water twice bulk; filter in 24 hours.	Yellow, then red color on heating.	Add R.	
Mitscherlich's test.	Phosphorus in tissues.	Dil. sulphuric acid.	Luminosity.	Acidulate watery sol. with R. and distil, conducting vapors through glass tube surrounded by a condenser. Dark room.	If alcohol, ether, or oil of turpentine is present luminosity does not appear until it is removed. Salts of mercury, iodin, metallicsulphids, etc., interfere with luminosity also.
Mohr's test A.	Free hydrochloric acid in gastric juice. (Free mineral acids.)	(*a*) Potass. iodid starch-paste. (*b*) Dil. sol. ferric acetate.	Blue color.	To gastric juice add *a* and a few drops *b*.	Not very reliable; phosphoric acid and phosphates prevent reaction.
Mohr's test B.	Free hydrochloric acid in gastric juice. (Free mineral acids.)	(*a*) Dil. sol. ferric acetate. (*b*) Sol. potass. sulphocyanate.	Deep-blue color.	Mixture of *a* and *b* yellow; in presence of mineral acid turns blue.	
Moleschott's test.	Cholesterin.	Concent. sulphuric acid, diluted with ⅓ vol. water.	Solution of substance with red color.	On glass slide, under microscope, add R. to substance.	On addition of iodin, violet color.
Molisch's test.	Glucose in urine.	(*a*) α-Naphthol. (*b*) Thymol. (*c*) Strong sulphuric acid.	Deep-violet color with *a*, deep-red with *b*.	To 2 c.c. urine add 2 drops 15 to 20 per cent. sol. *a* or *b*; mix, and add equal vol. *c*.	Very delicate, but not very reliable; unknown substances give same reaction.
Moore's test.	Glucose in urine.	Sodium or potass. hydrate.	Yellow, brown, or brownish-black color. If nitric acid is added—odor of burnt sugar and formic acid.	Add R. and boil upper stratum of mixture.	Delicacy 0.3 per cent.; normal urine may respond.
Mucin-test.	Mucin.	(*a*) Acetic acid. (*b*) Nitric acid.	Cloudiness on addition of *a*, disappearing when *b* is added.	Add *a*, then *b*.	If cloudiness increases instead of disappearing, it is due to albumin or urates; the latter dissolve on heating.
Mucin-test.	Mucin.	Citric or acetic acid.	Cloud-like coagulum above line of contact.	Overlay R. with the liquid.	
Mulder's test.	Glucose in urine.	(*a*) Sodium carbonate. (*b*) Indigo. (Sodium sulpho-indigotate.)	Blue color changes to violet-red, finally to yellow or white. On shaking, blue color is restored.	Alkalinize with *a*, add a few drops *b*, and heat without boiling or shaking.	May use test-papers instead of solutions. Test not very reliable

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Müller's test.	Acetanilid (antifebrin).	(*a*) Hydrochloric acid. (*b*) 3 per cent. sol. carbolic acid. (*c*) Sol. chromic acid, or calcium chlorid, or ferric chlorid.	Red color, turning blue with ammonia.	Boil urine with ¼ *a*; allow to cool; add a few c.c. *b*, and a drop *c*.	Paramidophenol reaction. Reliable but not very delicate.
Müller's test A.	Hydrogen sulphid in urine.	Alkaline sol. lead acetate.	Blackening.	Pass current of air through urine, and against filter-paper dipped in R.	
Müller's test B.	Hydrogen sulphid in urine.	Mix hydrochloric acid, paramido-dimethylamin, and 1 or 2 drops dil. sol. ferric chlorid.	Blue ring.	Overlay R. with urine.	Modification of *Fischer's test.*
Munk's test.	Hydrogen sulphocyanid in urine.	(*a*) Nitric acid. (*b*) Sol. silver nitrate. (*c*) Hydrogen sulphid. (*d*) Ferrous sulphid (containing iron oxid). (*e*) Sodium hydrate (*f*) Hydrochloric acid.	Prussian blue.	Acidify 200 c.c. urine with *a*; add *b*; filter; decompose filtrate with *c*. Distil. Add *d* and *e*; warm; add *f*.	
Murexid-test.	Uric acid.	(*a*) Nitric acid. (*b*) Ammonia.	Beautiful red color.	Cover substance or residue on evaporation with *a*; evaporate to dryness on water-bath; add *b*.	
Musculus' test.	Urea.	Filter putrescent urine, wash filter-paper, stain with turmeric and dry.	Brown stain.	Turns brown on being dipped into a sol. of urea, and allowed to dry.	
Naphthol-test.	Sugar in urine.	See *Molisch's test.*			
Nessler's reagent.	Ammonium salts.	Potass. iodid 5 gm., hot water 5 c.c. Add mercuric chlorid 2.5 gm. in water 10 c.c. To mixture add potass. hydrate 16 gm. in water 40 c.c.; dilute up to 100 c.c.	Yellow or reddish-brown coloration.		
Neukomm's test.	Biliary coloring-matter.	(*a*) Dilute sulphuric acid. (*b*) Sol. of sugar.	Violet color.	Extract with alcohol, evaporate to small bulk. To one drop in porcelain dish add one drop *a* and trace *b*; warm.	
Nägeli's test.	Lignin.	(*a*) Aq. sol. of indol. (*b*) Sulphuric acid. (Spec. grav. 1.2.)	Red color.	Subject specimen to *a* for a few minutes; transfer to *b*.	
Nigrosin-test.	Water.	Nigrosin.	Black color.	Add piece of R.	
Nitric-acid-test.	Albumin in urine.	See *Heller's test.*			
Nitric-acid-test.	Urea.	(*a*) Alcohol (*b*) Concent. nitric acid.	Six-sided crystals of urea nitrate.	Evaporate liquid to syrupy consistence; extract with *a*; distil *a* off; dissolve residue in water; add *b*, preferably under microscope.	
Nitroprussid-test.	Hydrocyanic acid.	See *Vortmann's test.*			
Nobel's test.	Acetone in urine.	(*a*) Sol. sodium nitroprussid. (*b*) Strong ammonia.	Rose-violet color.	To 30 c.c. urine add 4 to 7 c.c. *a* and a few drops *b*.	Dilution may be necessary to bring out color.
Oehl's test.	Biliary coloring-matter.	Nitric acid.	Play of colors.	Dip filter-paper in liquid; dry, and add R.	
Oehler's test.	Glucose in urine.	Bismuth subnitrate 2, sodic potass. tartrate 4, dissolved in sol. sodium hydrate (10 gm. in 90 c.c. water).	Black color of liquid or of the ppt. of phosphates.	To 10 parts urine add 1 part R., and boil.	Delicacy 0.1 per cent.; very reliable. Albumin must be removed.

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Oliver's test.	Albumin in urine.	(*a*) Sodium tungstate. (*b*) Citric acid.	Precipitate.	Mix equal parts *a* and *b*, and add to urine.	
Oliver's test.	Biliary acids.	Meat-peptone 30 grains, salicylic acid 4 grains, acetic acid 30 minims, water 8 ounces.	Precipitate.	Dilute urine to sp. gr. 1008. Mix 20 minims with a dram of R.	
O'Shaughnessy's test.	Opium.	Persalts of iron.	Red color.	Add R.	Color not acted upon by alkalies.
Osmic-acid-test.	Fat in tissues.	Weak sol. of osmic acid.	Black color.	Stain tissue with R.	
Otto's test.	Alcohol (ethylic).	(*a*) Concent sulphuric acid. (*b*) Sodium acetate	Odor of acetic ether.	Add equal vol. *a* and a little of *b*.	
Otto's test.	Strychnin.	(*a*) Sulphuric acid. (*b*) Potass. bichromate.	Violet color.	Add *a* and *b*.	
Pagenstecher's test.	Hydrocyanic acid.	(*a*) Tr. guaiaci. (*b*) ¼ per cent. sol. of copper sulphate.	Blue color.	Soak filter-paper in *a*, moisten with *b*, then with liquid.	1:300,000.
Paraglobulin-test.	Paraglobulin.	See *Magnesium-sulphate-test.*			
Paton's test.	Globulin in urine.	Sat. sol. magnesium sulphate.	White ring.	Alkalinize urine, and underlay with R.	
Paul's test.	Biliary coloring-matter.	Sol. of methylanilin-violet.	Red color.	Add R. to urine.	
Pavy's test.	Albumin in urine.	Potass. or sodium ferrocyanid and citric acid in tablets.	Precipitate.	Pulverize tablets and add urine.	Not very reliable.
Pavy's test.	Glucose in urine.	Copper sulph. 4.158, dissolve in water with slight heat. In another bottle dissolve Rochelle salts 20.4 and a little potass. hydrate. Mix; cool, and add 300 c.c. strong ammonia (0.880); dilute to 1 liter.	Yellow or red ppt.	Use as in *Fehling's test.*	
Penzoldt's test.	Acetone in urine.	See *Baeyer's test.*			
Penzoldt's test.	Bile-pigment.	Acetic acid.	Green color.	Filter large quantity through double filter; allow paper to dry, and pour on a few c.c. R. Warming accelerates formation of green color.	Very delicate.
Penzoldt's test.	Bile-pigment.	(*a*) Chloroform. (*b*) Sol. ferric chlorid.	Green color.	Acidify urine with acetic acid; shake with *a*; pour off urine; add *b*.	Not very delicate
Penzoldt's test.	Glucose in urine.	(*a*) Weakly alkaline sol. diazobenzol-sulphonic acid. (*b*) Potassium hydrate.	Yellowish-red or light Bordeaux-red color; red foam.	To a few c.c. urine add *b*, and as much *a* as urine. Shake in ¼-½ hour to produce foam.	Very reliable. Control-test with normal urine should always be employed.
Penzoldt's test.	Naphthalin.	Concentrated sulphuric acid.	Dark-green color.	Pour a little urine into test-tube; empty so that only a drop remains; then add 1 c.c. R.	Delicate and reliable.
Penzoldt's test.	Thallin.	(*a*) Ferric chlorid. (*b*) Chloroform.	Dark-green color.	Shake liquid with *b*; to *b* extract add one drop *a*.	
Peptone-test.	For peptone.	See *Hofmeister's test*	and *Biuret-test.*		
Petri's test.	Kairin in urine.	(*a*) Acetic acid. (*b*) Sol. calcium chlorid.	Fuchsin-red color.	Add *a* and *b*.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
etri's test.	Proteids.	(*a*) Diazobenzol-sulphonic acid. (*b*) Sodium hydrate.	Orange-yellow to brownish-red; foam red.	Add *a* and *b*.	
ettenkofer's test.	Biliary acids.	Fresh sol. of sugar and dilute sulphuric acid.	Yellowish-red color, passing into crimson.	Add a few drops of liquid to R.	Albumin must be removed; excess of indican, and albumin give similar reaction.
henic-acid-test.	Albumin.	See *Millard's test*.			
henyl-hydrazin-test.	Glucose in urine.	See *Fischer's test*.			
iloroglucin-vanillin-test.	Hydrochloric acid in gastric juice.	See *Günzburg's test*.			
icric-acid-test.	Albumin.	See *Galipe's test*.			
icric-acid-test.	Glucose.	See *Braun's test* and	*Johnson's test*.		
iotrowski's reaction.	Proteids.	See *Ritthausen's test*.			
iria's test.	Tyrosin.	(*a*) Concentrated sulphuric acid. (*b*) Barium carbonate. (*c*) Dil. sol. ferric chlorid.	Violet color.	Moisten on watch-glass with *a*, warm 5–10 minutes on water-bath. Dilute with water, warm, neutralize with *b*, filter while warm. Add *c* to filtrate.	Excess of *c* destroys color.
œhl's test.	Products of bacillus choleræ asiaticæ.	Concentrated sulphuric acid.	Rose color deepening into purple.	Add 10 drops R. to 7 c.c. pure culture of the comma-bacillus.	This is the indol-reaction; other bacteria elaborate indol, but the comma-bacillus and one or two others elaborate nitrous acid also, which is necessary for the reaction.
ohl's test.	Globulin.	(*a*) Ammonium hydrate. (*b*) Sat. sol. ammonium sulphate.	Precipitate.	Alkalinize with *a*; filter after several hours; add equal part *b* to filtrate.	
ohl's test.	Picric acid.		Yellow color.	Soak woolen thread in the liquid and rinse in water.	
illacci's test.	Glucose.	(*a*) Sol. ferric chlorid. (*b*) Sol. sodium hydrate. (*c*) Sulphuric acid. (*d*) Fresh sol. potass. ferricyanid.	Blue color.	Shake liquid with 4 c.c. water, 1 drop *a*, and 6 drops *b*; boil; add 2 drops *c*. Let cool; add *d*.	
olak's test.	Melanin.	See *Von Jaksch's test*.			
otassium-bromid-test.	Potass. bromid in urine, etc.	(*a*) Chlorin-water. (*b*) Chloroform or carbon disulphid.	Yellow color.	Add *a* and *b*.	Reliable but not delicate.
otassium-ferrocyanid-test.	Albumin in urine.	See *Hilger's test*.			
otassium-hydrate-test.	Chrysophanic acid (rhubarb, senna) in urine.	Potassium hydrate.	Red color.	Add R. to urine, or, better, to ethereal extract (*Penzoldt*).	
otassium-hydrate-test.	Santonin (its derivatives).	Potassium hydrate.	Red color.	Add R. to urine.	Distinguished from chrysophanic acid by reaction not being obtained with ethereal extract.
otesi's test.	Glucose in urine.	Potass. hydrate 2.5, liquid potass. silicate (concent.) 60, potass. bichrom. 2. Allow 5 drops of this mixture to dry on strip of tin.	Green color.	Heat tin, R. turns yellow: add urine: green color if glucose present.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Price's test.	Iodin.	(*a*) Starch. (*b*) Hydrochloric acid. (*c*) Sol. potassium nitrite.	Blue color.	Mix liquid with *a*, *b*, *c*.	
Propeptone-test.	Propeptone.	See *Sodium-chlorid test.*			
Propeptone-test.	Propeptone in urine.	Acetic or nitric acid.	Cloudy precipitate, disappearing on heating.	Boil urine, allow to cool, add R. If ppt. occurs, re-heat.	
Prussian-blue test.	Hydrocyanic acid in tissues.	See *Ittner's test.*			
Purdy's reagent.	Glucose in urine.	Copper sulphate 4.15 gm., mannite 10 gm., glycerin 50 c.c.; dissolve in water. Add potass. hydrate 20.4 gm. dissolved in water. Mix the solutions, and when cold, add ammonia 300 c.c., and water to make 1 liter.	Reduction.		25 c. c. of R. = ½ grain glucose.
Raabe's test.	Albumin in urine.	Trichloracetic acid.	White precipitate.	Place crystal of R. in filtered urine.	See under *Urine, Tests for Serum-albumin in.*
Rabourdin's test.	Iodin.	(*a*) Nitric acid. (*b*) Sulphuric acid. (*c*) Chloroform.	Violet color of *c*.	Add 2 drops *a*, 15 *b*, and a little *c*.	
Rabuteau's test.	Hydrochloric acid in urine.	(*a*) Indigo-sulphuric acid. (*b*) Sulphurous acid.	Decolorization.	Add a little *a* and sufficient *b* to decompose the hydrochloric acid.	
Ralfe's test.	Acetone in urine.	(*a*) Liq. potassæ. (*b*) Potassium iodid.	Yellow ring studded with specks of iodoform at line of contact.	Boil 4 c.c. of *a* containing 1.5 gm. *b*; overlay with 4 c.c. urine.	Lactic acid and some other substances respond
Ralfe's test.	Peptones in urine.	Fehling's solution. (See *Fehling's test*).	Rose-colored halo above zone of phosphates.	Place 4 c.c. R. in test-tube; overlay with equal bulk of urine.	
Randolph's test.	Peptones in urine.	(*a*) Millon's reagent (see *Millon's test*). (*b*) Sat. sol. potass. iodid.	Yellow precipitate.	To 5 c.c. of cold, faintly acid urine add 2 drops *b* and 3 or 4 *a*.	Bile-acids respond Delicacy 1:17,000
Read's test.	Carbolic acid; creasote.	Stronger ammonia.	Carbolic acid soluble; creasote insoluble in R.		
Rees' test.	Albumin.	See *Almén's test.*			
Reichardt's test.	Nitric acid in potable water.	(*a*) Sol. brucin. (*b*) Sulphuric acid.	Red color.	To one drop of water add 3 drops *a*, a few of *b*.	
Reiche's test.	Gum-arabic.	Sol. of orcin in hydrochloric acid.	Red to violet color and blue precipitate, dissolving in alcohol with greenish-blue color.	Boil with R.	Alkalies turn la color into viole with greenis fluorescence.
Reichl's test. A.	Glycerin.	(*a*) Carbolic acid. (*b*) Sulphuric acid.	Brownish-yellow ppt., turning crimson on addition of water.	Heat cautiously equal parts of liquid, *a*, and *b*.	
Reichl's test. B.	Glycerin.	(*a*) Pyrogallic acid. (*b*) Sulphuric acid. (*c*) Stannic chlorid.	Violet-red color.	Boil with *a* and *b*; dilute with equal volume of water, and add *c*.	
Reinsch's test.	Arsenic.	(*a*) Hydrochloric acid. (*b*) Clean slip of copper.	Bluish spots.	Boil liquid with few drops *a* and with *b*.	
Reinsch's test.	Sulphurous acid.	(*a*) Bright strip of copper. (*b*) Hydrochloric acid.	Brown to black stain.	Moisten *a* with liquid in presence of *b*.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Reissner's test.	Nucleo-albumin in urine.	Acetic acid.	Turbidity.	Filter urine; dilute, and add excess of R.	
Renzone's test.	Kairin in urine.	(*a*) Sol. ferric chlorid. (*b*) Sulphuric acid.	Dark-violet or reddish-brown color.	Add *a*. Subsequent addition of *b*, light-red color.	
Resorcin-sugar test.	Hydrochloric acid in gastric juice.	See *Boas' test.*			
Reuss' test.	Atropin.	(*a*) Sulphuric acid. (*b*) An oxidizing agent.	Odor of blossoms.	Heat with *a* and *b*.	
Reynold's test.	Acetone.	See *Reynold-Gunning's test.*			
Reynold-Gunning's test.	Acetone in urine.	(*a*) Mercuric oxid (fresh yellow precipitate). (*b*) Ammonium sulphid.	Black ring of mercuric sulphid.	To urine add small quantity of *a*. If acetone present, some *a* is dissolved. Filter and overlay filtrate with *b*.	Black ring shows that *a* has been dissolved, thus indicating acetone. Very delicate; less so than *Lieben's test.*
Reynoso's test.	Iodin.	(*a*) Barium oxid. (*b*) Starch-paste. (*c*) Hydrochloric acid.	Blue color.	Mix *a*, *b*, and *c* in water; when evolution of gas begins, add liquid.	
Rhien's test.	Fixed oils in essential oils.	(*a*) Steam. (*b*) Ether.	Fatty matter contained in *b*.	Pass *a* through oil until it distils over; shake residue with *b*.	
Rice's test.	Carbolic acid.	(*a*) Potass. chlorate. (*b*) Hydrochloric acid. (*c*) Ammonia.	Brown to rose-red color.	Put 10 gm. *a* into test-tube, add 1 inch *b*, and 1½ vol. of water. Remove gas by blowing through a glass tube; pour *c* on top, and a few drops of the liquid.	1:1200.
Richmont's test.	Nitric acid.	(*a*) Sulphuric acid. (*b*) Sol. ferrous sulphate.	Red color changing to violet and brown.	Add *a*, then *b*.	
Riegel's test.	Free hydrochloric acid in gastric juice.	Either Congo-red paper or solution.	Blue.	Moisten paper with drop of filtered gastric juice, or add drop of R. to latter.	Very delicate.
Righini's test.	Purity of myrrh.	Ammonium chlorid.	Should dissolve completely.	Add equal weight of R. in 15 times as much water.	
Lily's test.	Chlorin.	(*a*) Potass. bichromate. (*b*) Sulphuric acid. (*c*) Ammonia. (*d*) Acetic acid. (*e*) Sol. lead subacetate.	Yellow to orange color.	Mix *a* and substance āā 1, and *b* 3, in beaker-glass, and suspend in it small beaker containing ice. To condensed crystals add *c*, *d*, and *e*.	
Litthausen's test.	Proteids.	(*a*) Dilute sol. of copper sulphate. (*b*) Sol. potass. hydrate.	Violet-red color.	Alkalinize with *b*, add *a*, and shake.	Delicacy .01 per cent.
Roberts' test.	Albumin in urine.	Strong nitric acid 1, sat. sol. magnes. sulphate 5.	White ring or disc.	Overlay R. with urine.	
Roberts' test.	Albumin in urine.	Sat. sol. sodium chlorid in dilute hydrochloric acid (5 to 100 of water).	White ring or disc.	Overlay R. with urine.	
Roberts' test.	Glucose in urine.	German yeast.	Difference in specific gravity between fermented and unfermented urine.	Add a little yeast to 60–70 c.c. of urine; allow to ferment for 24 hours, and compare specific gravity with that of same urine unfermented.	Every degree lost represents 1 grain of glucose per ounce, or 0.23 per cent.
Robin's test.	Alkaloids.	(*a*) Sugar. (*b*) Sulphuric acid.	Color-reactions.	Mix with twice its weight of *a*, add 2 drops *b*; stir.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Robiquet's test.	Morphin.	Sol. of a persalt of iron.	Blue color.		
Roch's test.	Albumin in urine.	Salicylsulphonic acid.	Turbidity or precipitate.	Add 20 per cent. sol. or a few crystals of R. to urine.	
Rochleder's test.	Caffein.	(*a*) Hydrochloric acid. (*b*) Potass. chlorate. (*c*) Ammonia.	Yellowish-red color, turning violet on addition of *c*.	Heat with *a* and *b*, and evaporate gently; add *c*.	
Romei's test.	Fuchsin in fruit-syrups.	Fusel-oil.	R. takes up only the fuchsin.	Shake with R.	
Romei's test.	Water in ether.	Potass. carbolate.	Dense solution in presence of water.	R. insoluble in pure ether.	
Rosenbach's test.	Albumin in urine.	5 per cent. sol. of chromic acid.	Yellow precipitate.	A few drops of R. added to acidulated urine.	
Rosenbach's test.	Bile-pigment in urine.	Fuming nitric acid.	Play of colors.	Filter urine, and pour R. over the inner surface of the filter-paper.	Modification of *Gmelin's test*, but more delicate.
Rosenbach's test.	Indigo-red in urine.	Nitric acid.	Deep-red color; foam violet; color soluble in chloroform or ether.	Boil urine; add R. drop by drop.	
Rosenstiehl's test.	Paratoluidin.	(*a*) Sulphuric acid. (*b*) Nitric acid.	Blue to violet, then red, finally brown.	To solution in *a* add *b*.	
Rosin's test.	Bile-pigment in urine.	Tr. iodi 1, alcohol 10.	Grass-green ring.	Overlay urine with R.	In the absence of bile urine is decolorized at line of contact.
Rosolic-acid test.	Acidimetry, alkalimetry.	Rosolic acid 1 gm., dilute alcohol 10 c.c., water to make 100 c.c.	Turns violet-red with alkalies, yellow with acids.		
Ross' test.	Phosphoric acid.	(*a*) Borax. (*b*) Sodium tungstate.	Blue color in reduction-flame.	Dissolve in bead of *a*, add *b*; heat in reduction-flame.	
Roth's test.	Purity of olive-oil.	Sulphuric acid sat. with nitrous-acid vapors.	Color-reactions.	Mix.	
Ruber's test.	Glucose in urine.	See *Rubner's test.*			
Rubner's test.	Glucose in urine.	(*a*) Sol. lead acetate. (*b*) Ammonium hydrate.	Rosy to flesh color.	Add to urine excess of *a*, filter, add to filtrate *b*, and warm.	Delicacy 0.25 per cent.
Rubner's test.	Milk-sugar.	(*a*) Sol. lead acetate. (*b*) Ammonium hydrate.	With *a* yellowish-brown; when *b* is added, brick-red color and cherry-red ppt.	Boil with excess of *a*; add *b* as long as ppt. is dissolved.	
Ruempler's test.	Free acids in fixed oils.	Sodium carbonate (C. P.).	Emulsion.	Shake liquid with R.	
Runge's test.	Anilin.	Sol. chlorinated lime.	Purple-violet color.	Add R.	
Runge's test.	Anilin.		Pine-wood stained yellow even by dilute sol. of anilin hydrochlorate.		
Runge's test.	Cane-sugar.	Dilute sulphuric acid.	Blackening on evaporating with R.	Evaporate substance with R.	
Runge's test.	Carbolic acid.	Hydrochloric acid.	Blue color of a pine shaving moistened with R.	Dip shaving moistened with R into carbolic acid.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Rust's test.	Carbolic acid; creasote.	Collodion.	Carbolic acid forms a jelly with R.: creasote does not.		
Sabanin and Laskowski's test.	Citric acid.	Ammonia.	Yellow color.	Heat with R. in sealed tube at 120° C. 6 hours; yellow color.	Blue color when poured out and allowed to stand.
Sachse's test (Quantitative).	Glucose in urine.	Mercuric iodid 18 gm., potass. iodid 25 gm., potass. hydrate 80 gm., water up to 1000 c.c.	Reduction.	End of reaction ascertained by means of sol. of stannous chlorid, supersaturated with sodium hydrate.	40 c.c. = 0.1342 glucose.
Salicylic-acid test.	For salicylic-acid derivatives in urine.	See *Ferric-chlorid test.*			
Saliphonic-test.	Albumin.	See *MacWilliams' test.*			
Salkowski's test.	Carbolic acid.	(*a*) Ammonia. (*b*) Sol. chlorinated lime (1:20).	Blue or greenish color.	Add ¼ volume *a* and a few drops *b*; warm.	1:4000.
Salkowski's test.	Cholesterin.	(*a*) Chloroform. (*b*) Sulphuric acid.	Blood-red color of *a*; green fluorescence with *b*.	Dissolve in *a*; add equal volume *b*.	
Salkowski's test.	Hematoporphyrin.	(*a*) Sol. barium hydrate and barium chlorid. (*b*) Acid alcohol (alcohol containing 1 per cent. hydrochloric acid).	In spectroscope 2 characteristic bands.	Precipitate urine with *a*, wash precipitate, and extract with *b*.	
Salkowski's test.	Oxalic acid.	(*a*) Calcium hydrate. (*b*) Calcium chlorid. (*c*) Alcohol. (*d*) Dil. hydrochloric acid. (*e*) Ammonium hydrate. (*f*) Acetic acid.	Octahedral crystals of calcium oxalate.	Alkalinize 100 c.c. urine with *a*; add *b*, evaporate partially; add *c*; wash with *c* and hot water; dissolve in *d*; add *e* and *f*.	
Salkowski's test.	Potassium in urine.	Concent. sol. tartaric acid.	Crystals of acid potass. tartrate.	Evaporate 100–150 c.c. urine to ⅛ vol.; filter in the cold; add R.	
Salkowski's test.	Sulphurous acid in urine.	Hydrochloric acid (spec. grav. 1.12).	Bluish or yellowish-white ppt. on upper portion of cooling tube.	Distil 100 c.c. urine and 10 c.c. R. to ⅓ or ¼ vol.	
Salomon's test.	Xanthin, paraxanthin, heteroxanthin.	Sodium or potass. hydrate.	R. precipitates paraxanthin and heteroxanthin.		Paraxanthin — right-angled planes and prisms. Heteroxanthin — acute-angled or obtuse-angled, often double, crystals.
Salzer's test.	Alcohol in essential oils.	Fuchsin.	Alcohol evaporates first and dissolves R.	Dust R. on upper part of inside of a test-tube; drop oil on bottom without touching sides of tube; heat.	
Schaal's test.	Acidimetry, alkalimetry.	Alizarin.	Acids color it yellow; alkalies rose-red.		1:300,000 alkali.
Schack's test.	Oil of peppermint.	Fused salicylic acid.	Blue-green color. Dissolved in alcohol, blue by transmitted, red by reflected light.	Mix liquid and R.	
Scherer's test.	Inosite.	(*a*) Nitric acid. (*b*) Ammonia. (*c*) Sol. calcium chlorid.	Rose-red residue.	Evaporate to dryness with *a*; add *b*, one drop *c*, and evaporate.	Of value only with pure solutions.

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Scherer's test.	Leucin.	(*a*) Nitric acid. (*b*) Sodium hydrate.	Transparent residue, turning brown on addition of *b*.	Evaporate to dryness with *a* on platinum; add *b*. Re-evaporation produces an oily drop.	Only applicable to very pure leucin.
Scherer's test.	Phosphorus in tissues.	(*a*) Basic lead acetate. (*b*) Ether. (*c*) Paper moistened with silver-nitrate sol.	Blackening of paper; test for phosphoric acid.	Mix with *a*, shake in flask with *b*; close with cork, to under surface of which *c* is attached.	Digest blackened *c* with hot water; separate silver by hydrochloric acid and filtration; test filtrate for phosphoric acid.
Scherer's test.	Phosphorus.	Slip of silver-nitrate paper.	Black stain.	Heat substance to 30–40° C., and expose R. to vapor.	
Schering's test.	Iodates in iodids.	Crystal of tartaric acid.	Yellow zone.	Add R. to solution.	
Schiff's test.	Carbohydrates in urine.	(*a*) Sulphuric acid. (*b*) Xylidin and glacial acetic acid, eq. vol., with a little alcohol.	Red color.	Warm urine with *a*; expose paper dipped in *b* and dried to the fumes of the urine.	
Schiff's test.	Cholesterin.	Sulphuric acid 2, dilute sol. ferric chlorid 1.	Violet color.	Add R.	
Schiff's test.	Cholesterin.	(*a*) Nitric acid. (*b*) Ammonia.	Red color (not altered by fixed alkalies).	Evaporate with *a*; add *b*.	
Schiff's test.	Sulphurous acid.	Mercurous-nitrate paper.	Gray stain.	Expose R. to the vapors of the substance.	
Schiff's test.	Urea.	(*a*) Sol. of furfurol. (*b*) Hydrochloric acid.	Purple color, turning brownish-black.	Add *a* and *b*.	
Schiff's test.	Uric acid.	Silver-nitrate paper.	Brown stain.	Treat R. with alkaline solution of substance.	
Schlagdenhauffen's test.	Magnesium salts.	Sol. of iodin in 2 per cent. sol. of potass. or sodium hydrate, till solution golden-yellow.	Brownish-red color or precipitate.	Add R.	
Schlienkamp's test.	Nux vomica.	Sulphuric acid.	Crimson color; disappears on cooling.	Add R. and evaporate.	
Schmid's test.	Metallic salts.	Sol. of phosphorus in carbon disulphid.	Colored precipitate.	Shake R. with aqueous solution of the salt.	
Schmidt's test.	Glucose.	Ammoniacal sol. of lead acetate.	Red color.	Boil with R.	
Schmiedeberg's solution.	Glucose.	Copper sulph. 34.634, water 200; mannite 15, water 100; sodium hydrate (1.145) 400; water to 1000.	Reduction.	Use as in *Fehling's test.*	
Schneider's test.	Alkaloids.	(*a*) Sugar. (*b*) Sulphuric acid.	Color-reactions.	Mix with 6 *a*, and add 1 drop *b* on top.	
Schneider's test.	Bismuth.	Tartaric acid 3, stannous chlorid 1, in sufficient sol. potass. hydrate.	Blackish-brown precipitate.	Heat with R.	
Schœnbein's test.	Blood.	(*a*) Tr. guaiaci. (*b*) Ol. terebinth. (French).	Blue color.	Add *a*, then *b*.	
Schœnbein's test.	Copper.	(*a*) Potass. cyanid. (*b*) Tr. guaiaci	Blue color.	Add *a*, then *b*.	
Schœnbein's test.	Hydrocyanic acid.	(*a*) Fresh, defibrinated blood 5, water 45. (*b*) Hydrogen dioxid.	Red color changed to brown.	Mix *a*, *b*, and liquid, and add a little *c*.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Schœnbein's test.	Hydrocyanic acid.	Strip of filter-paper moistened with 3 % alcohol. sol. guaiac; dry; moisten with drop of 0.05 % sol. copper sulphate.	Blue color.	Moisten R. with drop or two of the liquid.	Very delicate, but many substances respond: ammonia, tobacco-smoke, ozone, etc.
Schœnbein's test.	Hydrogen dioxid.	(*a*) Cadmium iodid and starch-solution. (*b*) Sol. ferrous sulphate.	Blue color.	Add *a* and *b*.	
Schœnbein's test.	Hydrogen dioxid.	(*a*) Tr. of guaiac (fresh). (*b*) Cold infusion of malt.	Blue color.	Add *a* and a few drops *b*.	1 : 2,000,000.
Schœnbein's test.	Hydrogen dioxid.	Sol. ferric chlorid and potassium ferricyanid (red).	Blue color.	Add R.	1 to 10,000,000.
Schœnbein's test.	Nitrous acid in potable water.	(*a*) Sol. pyrogallic acid. (*b*) Dilute sulphuric acid.	Brown color.	Add *a* and *b*.	
Schœnbein's test.	Nitrous acid in potable water.	Indigo-sol. to water to render it blue; add hydrochloric acid; stir, and add potassium pentasulphid till blue color disappears; filter	Blue color.	Add suspected water to R.	
Schœnn's test.	Cobalt.	Neutral sol. sodium sulphocyanid.	Blue color.	Add R.	
Schœnn's test.	Hydrogen dioxid.	Sol. titanic acid.	Yellow to deep-red color.	Add R.	
Schœnn's test.	Molybdic acid.	Sulphuric acid.	Blue color.	Heat with R.	
Schœnn's test.	Phosphorus.	Magnesium ribbon.	Evolution of phosphin.	Heat with R.; then add a little water.	
Schœnn's test.	Sulphur.	(*a*) Sodium. (*b*) Sol. sodium nitroprussid.	Red color.	Heat with *a*; dissolve in water; add *b*.	
Schreiter's test.	Glucose.	Mixture of sodium salicylate 2, copper sulphate 2, sodium hydrate 10, water 40.	Red precipitate.	Heat with R.	
Schuetzenberger's test.	Anthrachinon.	Alkaline sol. sodium hyposulphite	Red color.	Heat with R.	
Schultz's test.	Cellulose.	Dissolve 25 parts zinc chlorid, 8 potass. iodid, in 8½ water; filter through asbestos, and add iodin to saturation.	Turns cellulose cell-walls blue to purple.	Add R.	
Schultz's test.	Cellulose.	Dissolve zinc in pure hydrochloric acid; evaporate in presence of metallic zinc to syrupy consistence; saturate with potass. iodid and iodin.	Turns cellulose cell-walls blue to purple.	Add R.	
Schultze's test.	Alkaloids.	Mixture of sat sol. sodium phosphate 4, antimony chlorid 1.	White precipitate.	Add R.	
Schultze's test.	Alkaloids.	Mixture of antimony chlorid and phosphoric acid.	White precipitate.	Add R.	
Sulz's test.	Salicylic acid.	Sol. copper sulphate.	Green color.	Add R. to neutral solution of a salicylate.	
Sulze's test.	Ammonia.	Sol. chlorinated lime and carbolic acid.	Green color.	Add R.	
Sulze's test.	Guanidin salts.	Nessler's reagent. See *Nessler's test*.	White or pale-yellow precipitate, flocculent, but later becoming dense.	Add R.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Schulze's test.	Nitric acid in urine.	(*a*) Sol. ferric chlorid. (*b*) Hydrochloric acid.	Formation of nitrous oxid.	Add *a* and *b*.	
Schwabe's test.	Quinin.	Sol. potass. cyanid.	Crimson color.	Add R.	
Schwarzenberg's test.	Alkaloids.	(*a*) Nitric acid. (*b*) Ammonia.	Color-reactions.	Treat with *a* and *b*.	
Schweitzer's test.	Textile fibers.	Copper sulphate 10, water 100. Add potass. hydrate 5, in water 50. Wash ppt. and dissolve in 20 per cent. sol. ammonia 20.	Dissolves silk, cotton, linen.		
Scivoletto's test.	Hydriodic acid in urine.	(*a*) Starch-paste. (*b*) Fuming nitric acid.	Blue color.	Dip filter-paper in *a* and dry; sprinkle with urine; hang in upper portion of a flask containing *b*.	
Seidel's test.	Inosite.	(*a*) Nitric acid. (*b*) Ammonia. (*c*) Sol. strontium acetate.	Greenish color and violet ppt.	Evaporate 0.03 of substance in platinum crucible to dryness with *a*; treat residue with *b* and *c*.	
Seliwanoff's test.	Levulose.	(*a*) Resorcin. (*b*) Hydrochloric acid.	Ppt. soluble with red color in alcohol.	Warm substance with *a* and *b*.	
Selle's test.	Ammonia.	Tincture of the petals of blue hyacinth.	Green color.	Dip filter-paper in R., dry, and expose to vapors.	
Selmi's test.	Alkaloids.	Sat. sol. iodic acid in sulphuric acid, diluted with 6 volumes of same acid.	Color-reactions.		
Selmi's test.	Free phosphoric acid.		Green color.	Hold substance on platinum loop close to lower part of hydrogen flame.	
Selmi's test.	Morphin.	Stir red lead oxid in glacial acetic acid 15 minutes; filter.	Slightly yellow to bright-yellow, dark-yellow, violet color.	To 1 drop R. add 2 drops morphin-sol.	
Selmi's test.	Morphin.	(*a*) Sulphuric acid. (*b*) Sodium bicarbonate. (*c*) Tincture of iodin.	Violet dissolved in *a*; with *b* and *c*, green color.	Dissolve in *a*, then saturate with *b*, and add *c*.	
Selmi's test.	Strychnin.	Sol. iodic acid in sulphuric acid.	Yellow, brick-red, and violet-red color.	Moisten with R.	
Senier's test.	Glycerin.	Borax bead.	Green color.	Dip R. in alkaline liquid and test in Bunsen flame.	
Serullas' test.	Morphin.	Iodic acid.	Red color.	Add R.	
Siebold's test.	Albumin.	(*a*) Ammonia. (*b*) Dilute acetic acid.	Cloudiness.	Add small excess *a* and *b*; heat to boiling.	
Siebold's test.	Alcohol in chloroform.	Iodin.	Reddish brown.	R. in pure chloroform, purple color; in presence of alcohol, reddish-brown.	
Siebold's test.	Morphin.	(*a*) Sulphuric acid. (*b*) Potass. perchlorate.	Brown color.	Heat with *a*, add *b*.	
Siebold and Bradbury's test.	Salicylic acid in urine.	(*a*) Potassium carbonate. (*b*) Sol. lead nitrate. (*c*) Dilute sol. ferric chlorid.	Violet color.	Alkalinize with *a*, add excess *b*, shake, filter; add *c*.	
Siewer's test (also known as Ewald's test).	Motor activity of stomach.	Salol 2 grams in capsule or wafer.	Salicyluric-acid reaction in urine. (See *Ferric-chlorid test for salicylic acid.*)	Administer R. with the meal; reaction in ¾ to 1 hour normally.	Salol is decomposed in the intestines.

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Siewert's test.	Molybdic acid.	Aqueous sol. potassium xanthogenate (ethylsulpho-carbonate).	Yellow to flesh-colored ppt., turning to violet.	Add R. to solution of acid in nitric acid.	
Silver-test.	Glucose in urine.	(*a*) Ammonia. (*b*) Sol. silver nitrate.	Metallic silver.	Add *a* in excess to *b*; add urine and boil.	Aldehyd and tartaric acid give same reaction.
Silver-nitrate test.	Chlorids.	(*a*) 10 per cent. sol. silver nitrate. (*b*) Nitric acid.	White ppt.	Add a few drops *b* to prevent precipitation of phosphates; then add *a*.	In case of urine, if curdy masses, chlorids not diminished; if milkiness only, diminished; if no cloudiness, chlorids are absent.
Simon's test.	Cinnamic acid.	(*a*) Potass. bichromate. (*b*) Sulphuric acid.	Formation of oil of bitter almonds.	Add *a* and *b*.	
Simon's test.	Xanthin.	Sodium chlorid or calcium chlorid.	Evolution of nitrogen, and a blue, then a brown, finally a yellow color.	To substance dissolved in a fixed alkali add R.	
Sjöqvist's method.	Quantitative estimation of hydrochloric acid in gastric juice.	Barium carbonate.	Ascertain quantity of barium chlorid.	Evaporate gastric contents to dryness with R. and incinerate. Extract barium chlorid formed with water.	Quantity of barium chlorid is a measure of the hydrochloric acid.
Skey's test.	Cobalt.	(*a*) Citric (or tartaric) acid. (*b*) Ammonia. (*c*) Potass. ferricyanid.	Dark-red color.	Add *a*, *b* in excess, and *c*.	1 : 60,000.
Slater's test.	Strychnin.	(*a*) Sulphuric acid. (*b*) Potass. chlorate.	Maroon-red color.	Add *a* and *b*.	
Smith's test.	Biliary coloring-matter.	Tincture of iodin.	Green color.	Add R.	
Smith's test.	Free acids.	Fresh silver chlorid dissolved in ammonia.	Ppt. of silver chlorid.	Add R.	
Smith's test.	Santonin.	(*a*) Nitric acid. (*b*) An alkali.	Greenish-yellow.	Heat with *a*.	With *b* turns deep-red.
Snelling's test.	Emetin.	(*a*) Hydrochloric acid. (*b*) Potass. chlorate.	Orange-red color, turning violet.	Drop *a* on *b*; then drop on liquid.	
Sodium-chlorid test.	Propeptone.	(*a*) Acetic acid. (*b*) Concentrated sol. sodium chlorid.	Precipitate on cooling of filtrate.	Acidulate urine with *a*, add equal volume *b*; boil; filter quickly.	
Sodium-sulphate and acetic-acid test.	Albumin in urine.	(*a*) Sat. sol. sodium sulphate. (*b*) Acetic acid.	White precipitate.	Acidulate urine with *b*, add equal part *a*, and boil.	Reliable, but not very delicate.
Soldaini's test.	Glucose.	Copper carbonate 15 gm., in water; add sol. potass. bicarbonate 416 gm.; add water up to 1400.	Reduction.		
Sonnenschein's test.	Alkaloids.	(*a*) Ceroso-ceric oxid. (*b*) Sulphuric acid.	Color-reactions.	Dissolve alkaloid in *b*, and add trace *a*.	
Sonnenschein's test.	Alkaloids.	Phospho-molybdic acid.	Yellowish precipitate.		
Sonnenschein's test.	Blood.	(*a*) Sol. sodium tungstate, acidified with acetic acid. (*b*) Ammonia.	Reddish-green (fluorescence).	Extract stains with distilled water, precipitate with *a*; add *b*.	
Sonnenschein's test.	Proteids.	Sat. sol. sodium tungstate, strongly acidified with acetic or phosphoric acid.	Precipitate.	Add R.	
Spirnstadt's test.	Calcium salts.	Sodium tungstate.	Precipitate.	Add R.	
Source's test.	Uric acid.	See *Magnier de la Source's test.*			

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Southey's test.	Opium.	Sulpho-molybdic acid.	Blue color.	Add R.	
Spence and Esilman's test.	Free mineral acids.	Dil. sol. ferric chlorid.	Yellow color of R. is discharged.	Add substance to R.	
Spiegler's test, A.	Albumin in urine.	Mercuric chlorid 8, tartaric acid 4, sugar 20, distilled water 200.	White ring.	Place R. in test-tube and overlay with urine acidulated with acetic acid.	Very delicate.
Spiegler's test, B.	Albumin in urine.	Tartaric acid 1, mercuric chlorid 2, glycerin 20, water 50.	White ring.	Acidulate urine with acetic acid, filter if necessary, and overlay R. with it.	
Sprengel's test.	Nitric acid.	Sol. of carbolic acid 1, sulphuric acid 4, water 2.	Reddish-brown color.	Add R. to dry nitrate.	
Stadthagen's test.	Uric acid.	(*a*) Arsenious acid in alkaline sol. (*b*) Sol. copper sulphate.	Red cuprous oxid or white copper urate.	Warm substance with *a*; add *b*.	
Stædeler's test.	Purity of chloroform.	Bilirubin.	Green color if decomposed.		R. dissolves with a yellow color in pure chloroform.
Stanford's test.	Iodin.	(*a*) Carbon disulphid. (*b*) Nitrosulphuric acid (sulphuric acid saturated with gaseous nitrous anhydrid).	Violet color.	Add *a* and one drop *b*.	
Starch-test.	Starch.	See *Iodin-test*.			
Steffanelli's test.	Alcohol in ether.	Anilin-violet.	R. insoluble in pure ether.	Add R.	
Stein's test.	Narcein.	(*a*) Sol. zinc iodid and potass. iodid. (*b*) Aq. sol. iodin.	Blue color.	Add *a* and one drop *b*.	
Stein's test.	Nitric acid.	(*a*) Litharge. (*b*) Filter-paper moistened with sol. ferrous sulphate.	Yellow to brown color.	Heat salt with *a*; expose *b* to the gas evolved.	
Stevenin's test.	Acidimetry, alkalimetry.	Glycerin-extract of petals of violet or mallow flowers.	Acids turn color red; alkalies green.		
Stevenson's test.	Small quantities of hemoglobin in the urine, unaccompanied by albumin.	(*a*) Tr. guaiaci. (*b*) Ozonic ether.	Blue color of *b*.	To a drop or two of urine add one drop *a* and a few drops *b*; agitate, then let *b* settle.	Modification o *Mahomed's test*
Stolba's test.	Potassium salts.	Sodium or ammonium fluoborid.	Crystalline precipitate coloring flame green to violet.		
Storer's test.	Chromic acid.	Ethereal sol. hydrogen dioxid.	Intensely blue color.	Add R.	
Strassburg's test.	Bile-acids.	(*a*) Cane-sugar. (*b*) Sulphuric acid.	Violet color.	Dip filter-paper into urine to which *a* has been added; dry and apply drop of *b*.	
Strecker's test.	Xanthin.	(*a*) Nitric acid. (*b*) Sodium or potassium hydrate.	Yellow residue, turning reddish-yellow on addition of *b*; reddish-violet on subsequent warming.	Evaporate to dryness with *a*; add *b*.	Reaction not ol tained with am monia — distin tion from uri acid.
Streng's test.	Sodium salts.	Sol. uranium acetate.	Minute, yellow crystals; examine by polarized light under microscope.	Add R.	
Strohl's test.	Free mineral acids in vinegar.	(*a*) Sol. ammonium oxalate. (*b*) Calcium chlorid.	No ppt. in presence of mineral acid.	Add *a* and *b*.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
truve's test.	Hydrogen dioxid.	(*a*) Alkaline sol. litharge. (*b*) Dilute sol. lead subacetate.	Blue color.	Add *a* and *b*, and test with potass.-iodid starch-paste and acetic acid.	
tuart's test.	Alcohol in essential oils.	(*a*) Compound tincture of iodin. (*b*) Sol. potassium hydrate.	Formation of iodoform.	Distil off the alcohol; add *a* and *b*.	
ütz's test.	Albumin in urine.	See *Fürbringer's test.*			
lphocyanid-test.	Hydrocyanic acid in tissues.	See *Liebig's test.*			
lzer's test.	Alcohol in essential oils.	See *Salzer's test.*			
anberg's test.	Phosphoric acid.	Sol. ammonium molybdate.	Yellow precipitate.	Add R. in excess.	
ntonin-test.	Syntonin.	Any alkali.	Precipitate.	Neutralize the acid sol. with R.	
nret's test.	Albumin in urine.	Mercuric chlorid 1.35; potass. iodid 3.32; glacial acetic acid 20; water to 1000.	White precipitate.	Add R. to urine. If precipitate occurs, boil to dissolve peptones, alkaloids, and urates, which R. also precipitates.	Very delicate. Mucus in excess is precipitated and not dissolved by heat.
assinari and Piazza's test.	Nitric acid.	(*a*) Potassium hydrate. (*b*) Zinc dust.	Formation of ammonia.	Add *a* and *b*.	
ttersall's test.	Cobalt.	(*a*) Sol. potassium cyanid. (*b*) Ammonium sulphid.	Blood-red color.	Add *a* till ppt. is redissolved; then *b*.	
ttersall's test.	Codein.	(*a*) Sulphuric acid. (*b*) Sodium arseniate. (*c*) Sodium hydrate.	Dark-blue. On addition of water and excess *c* turns orange.	Dissolve in *a*; add *b*; heat.	
ttersall's test.	Delphinin.	(*a*) Malic acid. (*b*) Sulphuric acid.	Orange color, turning pink, then violet.	Rub with *a*, then with a few drops *b*.	
ttersall's test.	Morphin.	(*a*) Sulphuric acid. (*b*) Sodium arseniate.	Dirty-violet, becoming sea-green.	Dissolve in *a*; add *b*.	
ttersall's test.	Papaverin.	(*a*) Sulphuric acid. (*b*) Sodium arseniate. (*c*) Sodium hydrate.	Red to violet; black on addition of water and excess *c*.	Dissolve in *a*; add *b*.	
ichmann's test.	Blood.	(*a*) Glacial acetic acid. (*b*) Sodium chlorid.	Hemin-crystals.	Dissolve blood in 2 to 3 c.c. water; add *a*, and 0.01 *b*. Spread on slide, let evaporate; examine under microscope.	
chmann-Neumann's test.	Blood.	See *Teichmann's test.*			
reill's test.	Cellulose.	(*a*) Potass. iodid, 1 per cent. sol. (*b*) Sulphuric acid.	Blue color.	Dip into *a*, then into *b*; rinse in water.	
sier's test.	Iodin in presence of tannin.	Tincture of ferric chlorid.	Blue color.	Liberate by adding R.; test with starch-paper.	
mas' test.	Strychnin in the presence of morphin.		Potassium hydrate dissolves morphin; chloroform, strychnin.	After separation, apply customary tests.	
mpson's test.	Thein.	Hypochlorous acid (euchlorin).	Blood-red residue.	Pass R. through sol. and evaporate.	
mson's test.	Iodin.	(*a*) Chlorin. (*b*) Starch-paste.	Blue color.	Pass *a* through solution; test with *b*.	
rmählen's test.	Melanin.	(*a*) Sol. sodium nitroprussid. (*b*) Sol. potass. hydrate. (*c*) Acetic acid.	Deep-blue color.	Add *a*, *b*, *c*.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Thresh's test.	Alcohol.	(*a*) Sat. sol. potassium bichromate. (*b*) Dil. sulphuric acid (1 : 1). (*c*) Sol. sod. hydrate.	Yellow color.	Add 2 *a*, 8 *b*, to 100 c.c. of liquid; distil off 20; add 3 *c*; boil; let cool.	
Thresh's test.	Alkaloids.	(*a*) Bismuth oxid 4.68, dissolved in 80 hydrochloric acid, water to 300. (*b*) Potass. iodid 20, in water 700.	Reddish-brown precipitate.	Mix *a* and *b*; add drop by drop to solution of alkaloid.	
Thresh's test.	Bismuth.	(*a*) Hydrochloric acid. (*b*) Potass. iodid.	Orange-red to yellow color.	Add *a* and *b*.	1 : 100,000.
Thudichum's test.	Kreatinin.	Dilute sol. ferric chlorid.	Dark-red color, increased by warming.	Add substance to R.	
Thymol-test.	Glucose in urine.	See *Molisch's test*.			
Tidy's test.	Albumin.	Equal volumes carbolic acid and glacial acetic acid. (If drop mixes turbidly with water, add more acetic acid.)	White precipitate.	Add R.	1 : 15,000.
Tidy's test.	Albumin.	(*a*) Alcohol. (*b*) Carbolic acid.	White precipitate.	Add to urine 15 drops *a*, and then 15 drops *b*.	
Tiedemann and Gmelin's test.	Bile-pigments.	See *Gmelin-Heintz's test*.			
Tilden's test.	Iodin.	Potass. permanganate.	Test as most convenient.	Liberate by means of R.	
Tizzoni's test.	Iron in tissues.	(*a*) 2 per cent. sol. potass. ferrocyanid. (*b*) ½ per cent. sol. hydrochloric acid.	Blue color.	Treat section of tissue with *a*, then with *b*.	
Tollen's test.	Glucose.	Hydrochloric acid.	Levulinic acid and formic acid.	Heat liquid with R.	
Tommasi's test.	Carbolic acid.	Hydrochloric acid 50, water 50, potass. chlorate 0.2.	Blue color.	Dip pine-shaving into liquid, then into R.; then expose to sun's rays.	
Trapp's test.	Veratrin.	Hydrochloric acid.	Dark-red to dark-violet color.	Heat with R.	
Traube's test.	Hydrogen dioxid.	(*a*) Sulphuric acid and zinc-iodid starch-paste. (*b*) 2 per cent. sol. copper sulphate. (*c*) ½ per cent. sol. ferrous sulphate.	Blue color.	To 6 c.c. *a* add 2 drops *b*, a little *c*. Mix with liquid.	
Treumann's test.	Theobromin.	(*a*) Chlorin-water. (*b*) Ammonia.	Purple color.	Evaporate to dryness with *a*; add *b*.	
Trichloracetic-acid test.	Albumin in urine.	See *Raabe's test*, and	under *Urine, Tests*	*for Serum-Albumin in.*	
Trommer's test.	Glucose in urine.	(*a*) Sodium or potass. hydrate. (*b*) 10 per cent. sol. copper sulphate.	Orange-red precipitate.	Add to urine ⅓ *a*, and drop in *b* until it ceases to be dissolved; boil.	Delicacy 0.01 per cent. Salicylic acid, chloral, uric acid, give similar reaction.
Trommsdorff's test.	Nitrous acid.	(*a*) Sulphuric acid. (*b*) Potassium-iodid starch-paste.	Blue color.	Mix *a*, *b*, and substance.	
Trotarelli's test.	Ptomains.	(*a*) Sol. sodium nitroprussid. (*b*) Palladium nitrate.	Color-reactions.	Add *a* and then *b* to the sulphate of the ptomain.	
Trousseau and Dumontpallier's test.	Bile-pigment.	See *Marêchal's test*.			
Von Udránsky's test.	Bile-acids.	(*a*) 0.1 per cent. sol. furfurol. (*b*) Concent. sulphuric acid.	Red, then violet color.	To 1 c.c. of sol. of substance add 1 drop *a*, and underlay with 1 c.c. *b*; cool.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Von Udránsky's test.	Carbohydrates.	See *Molisch's tests for*	*glucose.*		
Von Udránsky's test.	Tyrosin.	(*a*) 0.5 per cent. sol. furfurol. (*b*) Concent. sulphuric acid.	Pink color.	To 1 c.c. sol. of substance add 1 drop *a*, and underlay with 1 c.c. *b*.	
Von Udránsky and Baumann's test.	Urea.	(*a*) Benzoyl-chlorid. (*b*) Sodium hydrate.	Benzoyl-urea.	To concent. sol. of substance add *a* and excess of *b*.	
Uffelmann's test.	Free hydrochloric acid in gastric juice.	Extract of bilberries in amylic alcohol.	Color changes from grayish-blue to rose-tint.	Dip filter-paper, saturated with R. and dried, into gastric juice.	
Uffelmann's test.	Hydrochloric and lactic acids in gastric juice.	Sol. ferric chlorid 3 drops, concent. sol. carbol. acid 3 drops, water 20 c.c.	Sol. of hydrochloric acid decolorizes or produces steel-gray color; lactic-acid sol. a yellow color.	Add liquid to R.	0.05 per cent. lactic acid. R. must be fresh.
Uffelmann's test.	Nitric acid.	(*a*) Diphenylamin. (*b*) Sulphuric acid.	Blue color.	To *a* add 1.5 c.c. *b*, stir; then add 3 or 4 drops of the liquid.	
Ultzmann's test.	Bile-pigments in urine.	(*a*) Sol. potass. hydrate (1 to 3). (*b*) Hydrochloric acid.	Emerald-green color.	To 10 c.c. urine add 3 or 4 c.c. *a*, and then excess of *b*.	
Urate-test.	Urates in urine.		Are dissolved on heating.		
Urea-test.	Urea.	See *Nitric-acid test.*			
Urobilin-test.	Urobilin in urine.	(*a*) Ammonia. (*b*) 10 per cent. sol. zinc chlorid.	Filtrate green by reflected, rose-red by transmitted light.	Alkalinize urine with *a*, add 8-10 drops *b*; filter rapidly.	
Valser's test.	Alkaloids.	Mercuric iodid and potassium iodid.	Precipitate.		
Van Deen's test.	Blood in urine, etc.	(*a*) Tr. guaiaci. (*b*) Ozonized (old) turpentine (French best).	Blue color.	To urine add 2 c.c. *a*, and 2 c.c. *b*; shake.	Delicate; other substances respond: pus, urine containing potass. iodid, and saliva.
van der Velden's test.	Free hydrochloric acid in gastric juice.	See *Maly's test.*			
Vaughan and Novy's test.	Tyrotoxicon.	(*a*) Sulphuric acid. (*b*) Carbolic acid.	Yellow to orange-red color.	Place on porcelain surface 2 or 3 drops each of *a* and *b*; add a few drops of aqueous sol. of ethereal residue of substance.	Is only to be regarded as a preliminary test; the physiologic test should always be made.
Vidan's test.	Sugar.	Equal volume sesame-oil and hydrochloric acid.	Pink color.	Heat R. to boiling; add liquid.	
Violette's test.	Glucose.	Similar to *Fehling's*	*test.*		
Vitali's test.	Alkaloids.	(*a*) Fuming nitric acid. (*b*) Alcoholic sol. potass. hydrate.	Color-reactions.	Evaporate to dryness with *a*; add 1 drop *b*.	
Vitali's test.	Alkaloids.	(*a*) Sulphuric acid. (*b*) Potass. chlorate. (*c*) An alkaline sulphid.	Color-reactions in presence of *c*.		
Vitali's test.	Atropin.	(*a*) Fuming nitric acid. (*b*) Alcoholic sol. potass. hydrate.	Violet color, turning red.	Evaporate with *a*: when cold add 1 drop *b*.	Delicacy 0.000001 gram.
Vitali's test.	Biliary coloring-matter.	(*a*) Sol. quinin bisulphate. (*b*) Ammonia. (*c*) Sulphuric acid. (*d*) Sugar. (*e*) Alcohol.	Violet color.	Add *a*, neutralize with *b*; add *c*, crystal of *d*, and *e*.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Vitali's test.	Chloroform.	(*a*) Hydrogen sulphid. (*b*) Piece copper wire.	Intense-blue color.	Pass current of *a* through liquid, then through glass tube; ignite; hold *b* in flame.	
Vitali's test.	Chloroform.	(*a*) Hydrogen sulphid. (*b*) Solution potass. hydrate and thymol.	Red color.	Pass current of *a* through liquid, then into *b*.	
Vitali's test.	Fusel-oil.	Sulphuric acid.	Red, changing finally to green.	Pour liquid on top of R.; stir gently.	
Vitali's test.	Morphin.	(*a*) Sulphuric acid. (*b*) Sol. sodium sulphid.	Flesh color, violet, dark-green.	Dissolve in *a*; add 2 drops *b*; heat cautiously.	
Vitali's test.	Thymol.	Mixture of chloroform and sol. potassium hydrate.	Red color.	Distil off, passing vapor into R.	
Vogel's test.	Carbon disulphid.	(*a*) Alcohol. sol. potass. hydrate. (*b*) Sol. copper sulphate.	Lemon-yellow precipitate.	Add *a*, then *b*.	
Vogel's test.	Ferric salts.	Sol. salicylic acid.	Violet color.	Add R.	
Vogel's test.	Glucose.	Litmus-solution.	Decolorization.	Boil with a few drops of R.	
Vogel's test.	Nitric acid in potable water.	(*a*) Gold-leaf. (*b*) Hydrochloric acid. (*c*) Stannous chlorid.	Reddish-violet color.	To 15 c.c. water add a little *a* and *b*; boil; filter; add *c*.	
Vogel's test.	Quinin.	(*a*) Chlorin-water. (*b*) Powdered potass. ferrocyanid.	Pink to deep-red color.	Mix with *a*, and add *b*.	
Vogel's test.	Free sulphuric acid in vinegar.	Potassium chlorate.	Evolution of chlorin.	Add R.	
Vogel's test.	Tannin.	(*a*) Chlorin-water. (*b*) Ammonia.	Blood-red color.	Add *a* and *b*.	
Vohl's test.	Sulphur.	Mix water 1 with glycerin 2; saturate with slaked lime and fresh lead hydrate; decant.	Black color.	Heat R. with the substance.	
Vortmann's test.	Hydrocyanic acid.	(*a*) Sol. potass. nitrite. (*b*) Sol. ferric chlorid. (*c*) Dil. sulphuric acid. (*d*) Ammonia. (*e*) Ammon. sulphid.	Bluish-green to violet-red color.	Add a few drops *a*; 2–4 drops *b*; *c* until color light-yellow; heat to boiling; allow to cool; add *d*; filter; to filtrate add *e*.	
De Vrij's test.	Alkaloids.	Phosphomolybdic acid.	Precipitates.		
Vulpius' test.	Sulphonal.	Potass. cyanid.	Repulsive odor of mercaptan.	Heat substance with R.	
Wagner's test.	Eosin.	Collodium.	Color discharged by R.		
Warren's test.	Glucose.	Similar to *Trommer's test*, *q.v.*			
Wartha's test.	Anthrachinon.	(*a*) Sol. potass. hydrate. (*b*) Alcohol.	Green to bluish-purple color.	Heat with *a* and *b*.	
Water-test.	Water.	See *Nigrosin-test*.			
Watson's test.	Gallic acid.	(*a*) Ammonia. (*b*) Hydrochloric acid.	Red color.	Dissolve in water; add *a* and *b*.	
Watson's test.	Pyrogallic acid.	Ammonia.	Lemon-yellow color.	Dissolve in water; add R.	
Watson's test.	Tannin.	(*a*) Ammonia. (*b*) Nitric acid.	Purple color.	Dissolve in water; add *a* and *b*.	
Weber's test.	Indican in urine.	(*a*) Hydrochloric acid. (*b*) Ether.	Blue foam; red color of the ether.	Heat 30 c.c. of urine to boiling with 30 c.c. *a*; let cool; shake with *b*.	

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Veidel's test.	Xanthin.	(*a*) Freshly prepared chlorin-water. (*b*) Nitric acid. (*c*) Ammonia-vapor.	Pink or purplish-red color.	Warm substance with *a* and trace *b* as long as gas is evolved; then evaporate to dryness and bring in contact with *c*.	
Veidel's test.	Xanthin bodies.	(*a*) Chlorin-water. (*b*) Ammonia. (*c*) Potass. or sodium hydrate.	Dark-pink or purple; violet on final addition of *c*.	Dissolve in the warm in *a*; evaporate on water-bath; treat under bell-jar with *b*.	Reaction obtained with xanthin, heteroxanthin, paraxanthin, and carnin.
Vellcome's test.	Morphin.	Chlorinated lime.	Red color.	Add R.	
Veltzien's test.	Hydrogen dioxid.	Mixture of sol. of ferric chlorid and potass. ferricyanid.	Blue color.	Add R.	
Venzell's test.	Strychnin.	Sol. potass. permanganate 1 in sulphuric acid 2000.	Color-reaction.		Delicacy 1:900,000.
Veppen's test.	Morphin.	(*a*) Sugar. (*b*) Sulphuric acid. (*c*) Bromin.	Red color.	Add *a*, *b*, *c*.	
Veppen's test.	Veratrin.	(*a*) Sugar. (*b*) Sulphuric acid.	Light-yellow to dark-green and dark-blue color.	Add *a* and *b*.	
Verber's test.	Nitroglycerin.	(*a*) Ether or chloroform. (*b*) Anilin. (*c*) Sulphuric acid.	Purple to dark-green color.	Extract with *a*, add two drops *b*, evaporate; add *c*.	
Weyl's test.	Kreatinin.	(*a*) Dil. sol. sodium nitroprussid. (*b*) Dil. sodium hydrate. (*c*) Acetic acid.	Transient ruby-red color; if *c* is added greenish, then blue color.	Add a few drops *a*, then drop by drop *b* —gives ruby-red color. Add *c* and warm.	Very delicate; .0287 per cent. pure, .066 in urine.
Weyl's test A.	Nitric acid in urine.	(*a*) Hydrochloric or sulphuric acid. (*b*) Potass. hydrate. (*c*) Meta-phenyldiamin.	Yellow color.	Distil 200 c.c. urine with ¼–½ vol. *a*, receiving distillate in *b*; add *c* to distillate.	
Weyl's test B.	Nitric acid in urine.	(*a*) Hydrochloric or sulphuric acid. (*b*) Potass. hydrate. (*c*) Aq. sol. pyrogallic acid with a little sulphuric acid.	Yellowish-brown color.	See *Weyl's test A*.	
Weyl's test C.	Nitric acid in urine.	(*a*) Hydrochloric or sulphuric acid. (*b*) Potass. hydrate. (*c*) Sol. sulphanilic acid. (*d*) Naphthylamin hydrochlorate.	Red color.	Distil as in Weyl's test A; treat distillate with dilute sulphuric acid; add at once *c*; in 8–10 minutes *d*.	
Wesner's test.	Cellulose.	(*a*) ½ per cent. sol. phloroglucin. (*b*) Hydrochloric acid.	Red or violet color.	Moisten with *a*; add *b*.	
Winckler's test.	Alkaloids.	Sol. mercuric chlorid in excess of potass. iodid.	White precipitate.	Add R.	
Winckler's test.	Iodin.	(*a*) Sodium nitrite. (*b*) Starch-paste.	Blue color.	Mix with *a* and *b*.	
Winckler's test.	Water in alcohol.	Cobalt chlorid.	Blue color turns red.	Add R.	
Wittstein's test.	Foreign starch in chocolate.	Iodin.	Blue color.	Boil; filter; test filtrate with R. Natural starch does not pass through filter.	
Wurz's test.	Hydrochloric acid in gastric juice.	Aqueous sol. methyl-violet, strength 0.025 per cent.	Violet color changed to blue; hydrochloric acid in strong sol. gives greenish tint.	Add liquid to R.	Lactic acid in strong sol. gives similar but less distinct reaction.

TABLE OF TESTS.—*Continued.*

NAME.	USE.	REAGENTS.	REACTION.	APPLICATION.	REMARKS.
Witz's test.	Mineral acids in vinegar.	Methyl-violet.	Violet color turned blue or green.	Add 2 drops R. to 25 c.c. vinegar.	Delicacy 1 : 10,000
Woehler's test.	Phosphorus.		Green color of flame.	Place liquid in Marsh's apparatus, ignite the hydrogen phosphid, and let flame strike against a porcelain plate.	
Woodbury's test.	Alcohol in urine.	(*a*) Sulphuric acid. (*b*) Potass. bichromate.	Green color.	To 1 gm. *a* add 2 gm. urine; drop in crystal of *b*; mix.	Delicacy 2 to 3 in 1000.
Worm-Müller's test.	Glucose in urine.	(*a*) 2.5 per cent. sol. copper sulphate. (*b*) Sodic potassium tartrate 10, 4 per cent. sol. sodium hydrate 100.	Yellowish-red or red precipitate.	Boil in one test-tube 5 c.c. urine, in another 1–3 c.c. *a* and 2.5 c.c. *b*; discontinue boiling of both at same moment; wait 20–25 sec., then mix.	
Wormley's test.	Alkaloids.	Alcohol. sol. picric acid.	Yellow, amorphous or crystalline ppt.		
Wormley's test.	Alkaloids.	Sol. iodin 1, potass. iodid 2, water 60.	Colored precipitate.		
Wormley's test.	Free sulphuric acid.	Veratrin.	Crimson color.	Add R., and evaporate to dryness on water-bath.	
Wurster's test.	Tyrosin (pure).	Chinon.	Ruby-red color, changing to brown after 24 hours.	Dissolve crystals in boiling water and add a little R.	
Xanthoproteic test.	Proteids.	(*a*) Strong nitric acid. (*b*) An alkaline hydrate.	Yellow color with *a*, turning to deep-orange with *b*.	Heat substance with *a*; add *b*.	
Xylidin-test.	Carbohydrates.	See *Schiff's test.*			
Young's test.	Gallic acid.	Sol. potass. cyanid.	Red color which soon disappears; on shaking reappears.	Add R.	
Yvon's test.	Acetanilid (antifebrin) in urine.	(*a*) Chloroform. (*b*) Mercurous nitrate.	Green color.	Extract urine with *a*; heat residue of extract with *b*.	
Yvon's test.	Alkaloids.	Bismuth subnitrate 3 gm., water 40 gm., boil; add potass. iodid 14 gm., hydrochloric acid 40 drops.	Red color.	Add R.	
Yvon's test.	Purity of chloroform.	Sol. potass. permanganate 1, potass. hydrate 10, water 250.	Green color indicates impurity.	Add R.	
Zeise's test.	Carbon disulphid.	See *Vogel's test.*			
Zeisel's test.	Colchicin.	(*a*) Hydrochloric acid. (*b*) Ferric chlorid. (*c*) Chloroform.	Boiled with *b*, green color; *c* extract, brownish, granite-red, or dark.	Boil sol. in *a* with *b*; agitate with *c*.	
Zeller's test.	Melanin in urine.	Bromin-water.	Yellow ppt. gradually blackening.	Add R.	
Zouchlos' test A.	Albumin in urine.	Acetic acid 1, mercuric chlorid, 1 per cent. sol., 6.	Precipitate.	Add R.	0.014 per cent.
Zouchlos' test B.	Albumin in urine.	Potass. sulphocyanid, 10 per cent. sol., 100, acetic acid 20.	Precipitate.	Add R.	Delicacy 0.007 Precipitates als propeptone.
Zouchlos' test C.	Albumin in urine.	Potass. sulphocyanid, succinic acid equal parts, in solid form.	Precipitate.	Add R.	Not as delicate Zouchlos' test

Testis (*tes'-tis*) [L.]. 1. See *Testes*. 2. Any organ fancied to have the shape of a testicle. **T., Caput,** the epididymis. **T. cerebri,** testis of the brain, the postgeminum; either of the posterior pair of the corpora quadrigemina.

Testitis (*tes-ti'-tis*). See *Orchitis*.

Testudo (*tes-tu'-do*) [L., a tortoise-shell]. A figure-of-eight bandage about an articulation, the turns crossing on the flexor surface and the spirals overlapping, so as to cover the extensor surface of the joint.

Testule (*test'-ūl*) [*testa*, a shell]. In biology, the frustule, or silicious skeleton, of a diatom.

Tetanic (*tet-an'-ik*) [τέτανος, tetanus]. Pertaining to tetanus.

Tetaniform (*tet'-an-if-orm*) [τέτανος, tetanus; *forma*, form]. Resembling tetanus.

Tetanigenous (*tet-an-ij'-en-us*) [τέτανος, tetanus; γενεία, to produce]. Productive of tetanus.

Tetanilla (*tet-an-il'-ah*) [τέτανος, tetanus]. A form of tetanic spasm affecting the fingers and toes. It is observed mainly among children, and is a concomitant of rachitis.

Tetanin (*tet'-an-in*) [τέτανος, tetanus], $C_{14}H_{30}N_2O_4$. A toxin present in the blood in tetanus; a ptomain obtained by cultivating tetanus-microbes in beef-broth. It has been obtained from the amputated arm of a tetanus-patient by Brieger, who thus demonstrated the presence of tetanin in tetanus-patients during life. Nevertheless, it has not been found in the brain and nerve-tissue of persons dead from tetanus. The base produces the characteristic symptoms of tetanus, though probably not all, as three other toxins, including spasmotoxin, occur with tetanin in cultures of the tetanus-microbe. See *Ptomains, Table of.*

Tetanium (*tet-an'-e-um*). Synonym of *Strychnin*.

Tetanization (*tet-an-iz-a'-shun*) [τέτανος, tetanus]. The production of tetanus, or of tetanic spasms. The induction of a protracted contraction in a nerve by an electric current.

Tetano-cannabin (*tet'-an-o-kan'-ab-in*) [τέτανος, tetanus; *cannabis*]. A basic substance found in some samples of *cannabis*, or hemp. Its action on the system resembles that of strychnin. Unof.

Tetanoid (*tet'-an-oid*) [τέτανος, tetanus; εἶδος, resemblance]. Resembling tetanus.

Tetanomotor (*tet-an-o-mo'-tor*) [τέτανος, tetanus; *motor*, a mover]. An instrument (usually a rapidly vibrating hammer) for stimulating a nerve mechanically.

Tetanotoxin (*tet-an-o-toks'-in*) [τέτανος, tetanus; τοξικόν, poison], $C_5H_{11}N$. A poisonous ptomain obtained by Brieger as one of the products of the culture of the tetanus-microbe. It is tetanizing in its action, producing first tremor, then paralysis and violent convulsions. See *Ptomains, Table of.*

Tetanus (*tet'-an-us*) [τέτανος, τείνειν, to stretch]. A spasmodic and continuous contraction of muscles, causing rigidity of the parts to which they are attached. See *Trismus, Opisthotonos, Emprosthotonos, Pleurosthotonos*. Brieger has isolated four toxic ptomain-substances from cultivations of so-called tetanus-bacilli: *Tetanin*, which produced symptoms of tetanus (in mice); *Tetatoxin*, which caused tremor, paralysis, and convulsions; *Muriate of Toxin*, which produced tetanus and salivation; *Spasmotoxin*, which prostrated quickly, with clonic and tonic spasms. **T., Acoustic.** See *Acoustic*. **T., Cephalic, T., Cerebral, T., Hydrophobic, T., Kopf-,** a special form of tetanus that has sometimes been observed to follow injuries of the head, especially those in the neighborhood of the eyebrow. Trismus and facial paralysis occur upon the side of the injury. There is dysphagia, and death frequently results. **T. dolorificus.** Synonym of *Cramp*. **T., Extensor,** a form of tetanus in which the extensors act more powerfully than the flexors. **T., Hydrophobic.** See *T., Cerebral*. **T., Imitative,** hysteria which simulates tetanus. **T. infantum.** See *T. neonatorum*. **T., Localized,** tetanic spasm of a part. **T., Post-operative,** that following operation. *Chvostek's Sign*, a diagnostic and pathognomonic sign of post-operative tetany. A slight tap upon the side of the face, over the point where the facial nerve emerges from the parotid, suffices to call forth a sudden spasm of that side of the face. **T., Ritter's,** the series of contractions, or apparent tetanus, observed on the opening or interrupting of an electric current which has been passing through the nerve for some time. Opening tetanus. **T., Toxic,** tetanus produced by an overdose of nux vomica or its alkaloids. **T., Traumatic,** tetanus following an injury.

Tetany (*tet'-an-e*) [τέτᾰνος, tetanus]. A tonic spasm of the extremities occurring chiefly in rickety infants and lasting a variable time. The fingers, hands, and wrists are the portions mainly affected. It occasionally occurs in nursing women also. See *Tetanilla*. **T., Epidemic,** *T., Rheumatic;* a form occurring over large portions of Europe, especially in the winter season. It is acute, lasting only two or three weeks, and rarely proving fatal. **T., Gutturo-,** a stammering due to tetanoid spasm of the laryngeal muscles. **T., Rheumatic.** See *T., Epidemic*.

Tetartophya, Tetartophyia (*tet-ar-toff'-e-ah, tet-ar-to-fi'-e-ah*) [τέταρτος, fourth; φύειν, to increase]. A quartan remittent malarial fever.

Tetatoxin (*tet-at-oks'-in*). See *Tetanus*.

Tetra- (*tet'-rah-*) [τέτρα, four]. A Greek numeral used as a prefix and denoting four.

Tetrabasic (*tet'-rab-a'-sik*) [τέτρα, four; βάσις, base]. Having a basicity of four; having four atoms of replaceable hydrogen.

Tetrablastic (*tet-rab-las'-tik*) [τέτρα, four; βλαστός, a germ]. In biology, applied to an embryo having four germ-layers, *i. e.*, an ectoderm, entoderm, somatopleure, and a splanchnopleure.

Tetrabrachius (*tet-rab-ra'-ke-us*) [τέτρα, four; βραχίων, arm]. A monstrosity having four arms.

Tetracamarous (*tet-rak-am'-ar-us*) [τέτρα, four; καμάρα, a vault]. In biology, having four chambers, as a fruit of four carpels.

Tetracarpellary (*tet-rak-ar'-pel-ar-e*) [τέτρα, four; καρπός, fruit]. In biology, having four carpels.

Tetracheirus (*tet-rak-i'-rus*) [τέτρα, four; χειρ, hand]. A monster with four hands.

Tetracoccus (*tet-rak-ok'-us*) [τέτρα, four; κοκκος, berry]. 1. A micrococcus occurring in clusters and forming groups of four. 2. In biology, a fruit of four carpels.

Tetract (*tet'-rakt*) [τέτρα, four; ἀκτίς, ray, a beam]. In biology, having four rays.

Tetractinal (*tet-rak'-tin-al*) [τέτρα, four; ἀκτίς, ray]. Having four rays.

Tetracyclic (*tet-ras-i'-klik*) [τέτρα, four; κύκλος, ring]. In biology, applied to a flower possessing four whorls of floral organs.

Tetrad (*tet'-rad*) [τέτρα, four]. An element having an atomicity of four.

Tetradactyl, Tetradactyle (*tet-rad-ak'-til*) [τέτρα, four; δάκτυλος, a finger, toe]. In biology, an animal having four digits on each limb.

Tetradymous (*tet-rad'-im-us*) [τετράδυμος, fourfold]. In biology, in sets of four each.

Tetradynamous (*tet-rad-in'-am-us*) [τέτρα, four; δύναμις, power]. In biology, applied to stamens when there are six in the flower, four of them longer than the other two.

Tetra-ethyl-ammonium (*tet-rah-eth-il-am-o′-ne-um*). A proposed solvent for uric acid and urea. It is best used in a 10 per cent. solution, the dose being 10 to 20 minims. It is obtained by decomposing its iodid by moist $AgNO_3$ or its sulphate by baryta. It occurs in deliquescent, hair-like needles, as bitter as quinin. It is strongly alkaline and caustic.

Tetragenous (*tet-raj′-en-us*) [τέτρα, four; γίγνεσθαι, to be born]. In biology, applied to bacteria and other organisms which produce square groups of four as the result of fission.

Tetragonal (*tet-rag′-o-nal*) [τέτρα, four, γωνία, angle, corner]. Four-angled.

Tetragynous (*tet-raj′-in-us*) [τέτρα, four; γυνή, a female]. Having a gynecium of four carpels.

Tetrahydrobetanaphthylamin (*tet-rah-hi-dro-be-tan-aff-thil′-am-in*). See *Hydronaphthylamin.*

Tetramasthous (*tet-ram-as′-thus*) [τέτρα, four; μασθός, breast]. Having four breasts.

Tetramastigate (*tet-ram-as′-tig-āt*) [τέτρα, four; μάστιξ, a whip]. In biology, applied to micro-organisms having four flagella.

Tetramazia (*tet-ram-a′-ze-ah*) [τέτρα, four; μαζός, breast]. The presence, normal or abnormal, of four teats or mammary glands.

Tetramerism (*tet-ram′-er-izm*) [τέτρα, four; μέρος, part]. In biology, division into four parts.

Tetramerous (*tet-ram′-er-us*) [τέτρα, four; μέρος, part]. In biology, having the parts or organs arranged in fours or multiples of four.

Tetramethylalloxantin (*tet-ram-eth-il-al-oks-an′-tin*). See *Acid, Amalic.*

Tetramethylenediamin (*tet-ram-eth′-il-ĕn-di′-am-in*), $C_4H_8(NH_2)_2$. A substance identical with putrescin, which has been isolated from decaying animal matter. It is a liquid with a peculiar odor. It fumes in the air and boils at from 156° to 160° C. On cooling, it solidifies to a crystalline mass.

Tetrandrous (*tet-ran′-drus*) [τέτρα, four; ἀνήρ, male]. Having four stamens.

Tetranerythrin (*tet-ran-er′-ith-rin*) [τέτρα, four; ἐρυθρος, red]. See *Tetronerythrin.*

Tetranopsia (*tet-ran-op′-se-ah*) [τέτρα, four; ὄψις, vision]. A contraction of the field of vision limited to one quadrant.

Tetra-ophthalmus (*tet-rah-off-thal′-mus*) [τέτρα, four; ὀφθαλμος, eye]. A form of monster having four eyes.

Tetrapous (*tet′-rap-us*) [τέτρα, four; πούς, foot]. Having four feet.

Tetrapterous (*tet-rap′-ter-us*) [τέτρα, four; πτερόν, wing]. In biology, having four wings; said of a fruit or stem.

Tetrapyrenous (*tet-rap-i-re′-nus*) [τέτρα, four; πυρήν, the stone of a fruit]. In biology, characterized by four stones, or *pyrenes.*

Tetrarch (*tet′-rark*) [τέτρα, four; ἄρχειν, to rule]. A term descriptive of radial fibro-vascular bundles having four rays.

Tetrascelus (*tet-ras′-el-us*) [τέτρα, four; σκέλος, leg]. A monster with four legs.

Tetraschistic (*tet-ras-kis′-tik*) [τέτρα, four; σχίσμα, a cleft, division]. In biology, dividing into four similar parts.

Tetraselenodont (*tet-ras-e-le′-no-dont*) [τέτρα, four; σελήνη, moon; ὀδόυς, tooth]. In biology, applied to an animal with molar teeth exhibiting four crescentic ridges.

Tetrasepalous (*tet-ras-ep′-al-us*) [τέτρα, four; *sepalum*, sepal]. In biology, having four sepals.

Tetraspermous (*tet-ras-per′-mus*) [τέτρα, four; σπέρμα, seed]. In biology, having four seeds.

Tetrasporangium (*tet-ras-po-ran′-je-um*) [τέτρα, four; σπορά, a spore; αγγεῖον, vessel: *pl.*, *Tetrasporangia*]. In biology, a cell in which tetraspores are produced.

Tetraspore (*tet′-ras-pōr*) [τέτρα, four; σπορά, a spore]. In biology, one of four spores produced in a single mother-cell or sporangium, as in the *Red Marine Algæ* (*Florideæ*).

Tetrasporic (*tet-ras-pōr′-ik*) [τέτρα, four; σπορά, spore]. Composed of tetraspores.

Tetrasporous (*tet-ras-po′-rus*) [τέτρα, four; σπορά, spore]. Of the nature of tetraspores.

Tetraster (*tet-ras′-ter*) [τέτρα, four; ἀστήρ, star]. The karyokinetic figure when there is a fourfold division of the nucleus and four centers of radiation.

Tetrastichiasis (*tet-ras-tik-i′-as-is*) [τέτρα, four; στίχος, row]. Anomalous arrangement of the eyelashes in four rows.

Tetrastichous (*tet-ras′-tik-us*) [τέτρα, four; στίχος, row, line]. In biology, in four perpendicular rows. Applied to phyllotaxy.

Tetrastoma (*tet-ras′-to-mah*) [τὲτρα, four; στόμα, a mouth]. A genus of entozoa. See *T. renalis*, under *Parasites* (*Animal*), *Table of.*

Tetrathecal (*tet-rath-e′-kal*) [τέτρα, four; θήκη, case]. In biology, applied to a four-chambered ovary.

Tetratomic (*tet-rat-om′-ik*) [τέτρα, four; ἄτομος, atom]. Containing four atoms; having four atoms of replaceable hydrogen.

Tetravalent (*tet-rav′-al-ent*). Synonym of *Quadrivalent.*

Tetraxial (*tet-raks′-e-al*) [τέτρα, four; *axii*, axis]. Having four axes.

Tetrazone (*tet′-raz-ōn*) [*tæter*, foul; δζη, smell], $(C_2H_5)_2N.N : N.N(C_2H_5)_2$. A basic liquid of alliaceous odor.

Tetrol (*tet′-rol*). See *Furan.*

Tetronal (*tet′-ro-nal*) [τέτρα, four]. Diethylsulphondiethylmethane. A disulphone of the ethyl and methyl groups, harmless in ordinary doses, and having marked hypnotic properties. Dose gr. x–xx, as with sulphonal. Unof.

Tetronerythrin (*tet-ron-er′-ith-rin*) [τέτρα, four; ἐρυθρός, red]. In biology, the name applied by Merejkowsky to a group of lipochrome pigments found in animals, and formerly supposed to have a respiratory function. See *Pigments, Conspectus of.*

Tetrophthalmus (*tet-roff-thal′-mus*). See *Diprosopus.*

Tetrose (*tet′-rōz*). See *Erythrose.*

Tetrotus (*tet-ro′-tus*). See *Diprosopus.*

Tetter (*tet′-er*) [ME., *teter*, tetter]. A common name for various skin-eruptions, particularly herpes and eczema. See *Herpes.* **T., Brawny,** seborrhœa capitis. **T., Dry,** dry or squamous eczema. **T., Humid.** See *Eczema.* **T., Milky.** See *Crusta lactea.* **T., Moist.** See *Eczema.* **T., Running,** includes various forms of eczema. **T., Scaly,** psoriasis and squamous eczema.

Tety (*tet′-e*) [Madagascar]. A skin-disease peculiar to Madagascar, and characterized by a pustular or squamous eruption in the neighborhood of the mouth and nostrils.

Teucrium (*tu′-kre-um*) [τεύκριον]. Germander, a genus of the *Ajugeæ.* **T. maritimum,** cat-thyme, has errhine and antispasmodic properties, and was formerly used in coughs and nervous affections. **T. scordium,** water-germander, or garlic-germander, formerly used as a tonic, diaphoretic and anthelmintic.

Texan Fever. See *Texas Fever.*

Texas Fever. A specific fever communicated by apparently healthy cattle living within a certain permanently infected area in the Southern United States to cattle north of this area, when the former are taken north

during the warm season of the year. The period of incubation varies from ten to fifty days or more. There is high fever, hemoglobinuria, and occasionally jaundice. The infected cattle frequently die within a week. See *Bacillus of Southern Cattle-plague*, under *Bacteria, Synonymatic Table of.* **T. Mange.** Same as *Army Itch.*

Textural (*teks'-tu-ral*) [*textura*, texture]. Pertaining to any tissue.

Texture (*teks'-tūr*) [*textura; textere*, to weave]. In physiology, any organized substance or tissue of which the body is composed. Also, and more correctly, the arrangement of the elementary parts of tissue.

Thalamencephal (*thal-am-en'-sef-al*). See *Thalamencephalon.*

Thalamencephalic (*thal-am-en-sef-al'-ik*) [θάλαμος, chamber; κεφαλή, head]. Pertaining to the thalamencephalon.

Thalamencephalon (*thal-am-en-sĕf'-al-on*) [θάλαμος, thalamus; ἐγκεφαλον, the brain]. In embryology, the posterior portion of the anterior brain-vesicle; in anatomy, that part of the brain that is derived from this portion of the anterior vesicle; the diencephalon or interbrain.

Thalamic (*thal'-am-ik*) [θάλαμος, thalamus]. Pertaining to a thalamus.

Thalamifloral (*thal-am-if-lo'-ral*) [θάλαμος, chamber; *flos*, flower]. In biology, having the petals and stamens arising immediately from the thalamus.

Thalamiflorous (*thal-am-if-lo'-rus*). Same as *Thalamifloral.*

Thalamium (*thal-a'-me-um*) [θάλαμος, an inner chamber, a bedroom: *pl.*, *Thalamia*]. In biology, applied to various fruit-bearing organs in cryptogams.

Thalamocele, Thalamocelia (*thal-am-o-sēl, thal-am-o-sē'-le-ah*) [θάλαμος, thalamus; κοιλία, hollow]. The third ventricle, so called, as the cavity of the diacele or thalamencephalon.

Thalamocrural (*thal-am-o-kru'-ral*) [θάλαμος, chamber; *crus*, leg]. Pertaining to the thalamus and the crus cerebri.

Thalamophorous (*thal-am-off'-or-us*). See *Polythalamic.*

Thalamus (*thal'-am-us*) [θάλαμος, bed: *pl.*, *Thalami*]. *Thalamus opticus.* Either one (right or left) of two masses at the base of the brain, the origin, in part, of the optic nerves; they are the developed sides of the third ventricle. In biology, the receptacle, or torus. **T. corporum cavernosorum.** See *Crus penis.* **T. regalis.** See *Pericardium.*

Thalassotherapy (*thal-as-o-ther'-ap-e*) [θάλασσα, sea; θεραπεία, treatment]. Treatment of disease by sea-voyages, sea-bathing, etc.

Thallic (*thal'-ik*) [θαλλός, a green shoot]. Pertaining to the metal, thallium.

Thallin (*thal'-in*) [θαλλός, a green shoot], $C_{10}H_{13}ON$. A synthetic chemic product and a derivative of coal-tar. It is a powerful antipyretic, but its effects are not so lasting as those of antipyrin. It is likely to produce collapse. Dose gr. iv. Unof.

Thallina (*thal-i'-nah*) [θαλλός, a green shoot: *gen.*, *Thallinæ*]. The pharmaceutic name of thallin.

Thallium (*thal'-e-um*) [θαλλός, green shoot]. A rare metallic element, having some features in common with lead, discovered by Crookes, in England, and one year later by Lamy, in France. Symbol Tl; at. wt., 204.2. Glass containing it is singularly brilliant and refractive. Its salts are active poisons. See *Elements, Table of.*

Thallome (*thal'-ōm*) [θαλλός, a young shoot]. A thallus.

Thallophyta (*thal-off'-it-ah*) [θαλλός, a green shoot; φυτόν, a plant]. Plural of *Thallophytum.* A comprehensive term for the lower cryptogams, in which there is no well-defined differentiation of root, stem, or leaf.

Thallophyte (*thal'-o-fīt*) [θαλλός, a green shoot; φυτόν, a plant]. One of the lower cryptogams.

Thallus (*thal'-us*) [θαλλός, a young shoot]. In biology, applied to a plant-body in which there is no differentiation into root, stem, and leaves.

Thamnium (*tham'-ne-um*) [θαμνίον, dim. of θάμνος, a bush]. In biology, a bushy thallus.

Thanato-biologic (*than-at-o-bi-o-loj'-ik*) [θάνατος, death; βιος, life]. Pertaining to life and death.

Thanatodes (*than-at-o'-dēz*) [θάνατος, death; εἶδος, like]. Mortal. Lethal.

Thanatognomonic (*than-at-og-no-mon'-ik*) [θάνατος, death; γνώμων, sign]. Indicative of death.

Thanatoid (*than'-at-oid*) [θάνατος, death; εἶδος, resemblance]. Resembling or having the appearance of death.

Thanatology (*than-at-ol'-o-je*) [θάνατος, death; λόγος, science]. The sum of scientific knowledge regarding death.

Thanatomania (*than-at-o-ma'-ne-ah*) [θάνατος, death; μανία, mania]. Suicidal mania.

Thanatometer (*than-at-om'-et-er*) [θάνατος, death; μέτρον, measure]. A thermometer introduced into the stomach or rectum to determine if the depression of temperature is so great as to be a sign of death.

Thanatophidia (*than-at-o-fid'-e-ah*) [θάνατος, death; ὄφις, a serpent]. Those serpents whose bite produces toxic symptoms or death.

Thanatophobia (*than-at-o-fo'-be-ah*) [θάνατος, death; φόβος, dread]. A morbid fear of death.

Thanatosis (*than-at-o'-sis*). See *Mortification.*

Thane's Method. A method of finding the fissure of Rolando. The upper end of the fissure is half an inch behind the mid-point of a line drawn from the glabella to the inion. Its lower end is close to the posterior limb, and about an inch behind the bifurcation of the fissure of Sylvius. The bifurcation of the latter corresponds to a point one-and-a-quarter inches behind and one-quarter inch above the level of the external angular process of the frontal bone.

Thapsia (*thap'-se-ah*) [θαψία]. A genus of old-world umbelliferous plants. Thapsia resin (*resina thapsiæ*) is the product of *T. garganica*, *T. silphium*, and *T. villosa*. The resin is strongly counter-irritant. The root of *T. garganica* is used by the natives of N. Africa as a counter-irritant. Internally a tonic. Dose of the fld. ext. ♏x–xxx. Unof. The root of *T. villosa* (deadly carrot) is purgative. Unof.

Tharandt Normal Culture-solution. A solution employed at the Foret Academie Experiment Station of Tharandt, Saxony, for the study of the life-history of plants by "water-culture." The formula given by Knop is: Calcic nitrate 4 parts by weight, potassic nitrate 1 part by weight, magnesic sulphate (crystallized) 1 part by weight, potassic phosphate 1 part by weight. These salts are to be thoroughly mixed and the mixture used in the proportion of 1 : 2000, 1 : 1000, 1 : 500 parts of water. To the solutions when ready for use a drop or two of a solution of some iron-salt, or a decigram of ferric phosphate, must be added.

Thaumatropy (*thaw-mat'-ro-pe*) [θαῦμα, wonder; τροπή, change]. The extraordinary transformation of one organ or part into another.

Thea (*the'-ah*). A former genus of plants now included as a section under *Camellia.* See *Tea.* **T. nigra**, black tea, is less pungent and less fragrant than green tea and is made from leaves that have undergone fermentation and are then slowly dried. **T. viridis**, green tea,

is prepared from leaves that have been dried quickly, having undergone no fermentation. The poorer grades are frequently colored with gypsum, Prussian blue, etc.

Thebain (*the'-ba-in*) [Θῆβαι, Thebes], $C_{19}H_{21}NO_3$. Called also *paramorphin*—a poisonous alkaloid found in opium, consisting of silvery plates, melting at 193° C., with an acrid taste and analogous to strychnin in its physiologic effects. It is a powerful tetanizer, exalting the activity of the cerebro-spinal centers. Unof.

Thebaism (*the'-ba-izm*) [Θῆβαι, Thebes]. The condition induced by thebain or paramorphin.

Thebesius, Foramina of. See *Foramina, Table of.*

Thebolactic Acid (*theb-o-lak'-tik*). See *Acid.*

Theca (*the'-kah*) [θήκη, a case, box: *pl.*, *Thecæ*]. In biology, a case, sac, capsule, or sheath, as a sporangium or anther-cell. **T. cerebri**, the cranium. **T. cordis**, the pericardium. **T. vertebralis**, the investing membranes of the vertebral cord, with tubular processes to each of the spinal nerves.

Thecal (*the'-kal*) [θήκη, a case]. Pertaining to the theca. **T. Abscess**, tenosynovitis, paronychia, or whitlow.

Thecaphore (*the'-kaf-or*) [θήκη, case; φόρος, bear]. See *Gynophore.*

Thecasporal (*the-kas-po'-ral*) [θήκη, case; σπορά, spore]. Thecasporous.

Thecaspore (*the'-kas-pōr*) [θήκη, case; σπορά, spore]. In biology, a spore formed in the interior of a sac-like cell; the theca or ascus; an ascospore.

Thecasporous (*the-kas-po'-rus*) [θήκη, case; σπορά, spore]. Having thecaspores.

Thecate (*the'-kāt*) [θήκη, a case]. In biology, sheathed; held within a theca, or furnished with a theca.

Theciferous (*the-sif'-er-us*) [θήκη, case; *ferre*, to bear]. Bearing thecæ.

Theciform (*the'-sif-orm*) [θήκη, case; *forma*, form]. Resembling a theca.

Thecitis (*the-si'-tis*) [θήκη, case; ιτις, inflammation]. Inflammation of tendons and their sheaths, or of any fibrous sheath.

Thecodont (*the'-ko-dont*) [θήκη, case; ὀδούς, tooth]. Having the teeth covered or sheathed in alveoli.

Thecostegnosis (*the-ko-steg-no'-sis*) [θηκή, sheath; στεγνόειν, to contract]. The shrinking or contraction of the sheath of a tendon.

Theden's Bandage. See *Bandage.*

Theic (*the'-ik*) [*thea*, tea]. A tea-drunkard; an immoderate user of tea.

Thein (*the'-in*). See *Tea.*

Theism (*the'-izm*) [*thea*, tea]. The morbid condition due to the excessive use of tea. It is characterized by headache, palpitation of the heart, tremor, insomnia, cachexia, etc.

Thelalgia (*the-lal'-je-ah*) [θηλή, nipple; ἄλγος, a pain]. Pain in the nipples.

Thelasis, Thelasmus (*thel'-as-is, thel-az'-mus*) [θήλασμός, a sucking]. The act of sucking.

Thelitis (*the-li'-tis*) [θηλή, nipple; ιτις, inflammation]. Inflammation of the nipple.

Thelium (*the'-le-um*) [θηλή, nipple]. A papilla; also, a layer of cells.

Theloncus (*the-long'-kus*) [θηλή, nipple; ὄγκος, tumor]. Tumor of the nipple.

Thelothism (*the'-lo-thizm*) [θηλή, nipple; ὠθέειν, to push]. Projection of the nipple, caused by contraction of the transverse muscular fibers.

Thelyblast (*thel'-ib-last*) [θῆλυς, female; βλαστός, germ]. In biology, the female element of the bisexual nucleus (or *genoblast*) of a cell; a mother-cell. Cf. *Arsenoblast.*

Thelycum (*thel'-ik-um*) [θῆλυς, female: *pl.*, *Thelyca*]. In biology, a structure on the ventral surface of the perion of certain crustaceans; peculiar to the females.

Thelygonia (*thel-ig-o'-ne-ah*). See *Nymphomania.*

Thelymania (*thel-im-a'-ne-ah*) [θῆλυς, woman; μανία, madness]. Satyriasis.

Thelytocous (*the-lit'-o-kus*) [θῆλυς, female; τεκεῖν, to bear]. In biology, producing females only.

Thelytoky (*the-lit'-o-ke*) [θῆλυς, female; τεκεῖν, to bear, produce]. In biology, caused and conditioned by an over-supply of females.

Thenad (*the'-nad*) [θέναρ, palm]. Toward the thenal side or aspect.

Thenal (*the'-nal*) [θέναρ, the palm]. Pertaining to the palm or the sole; also, toward the palm.

Thenar (*the'-nar*) [θέναρ, palm]. The palm of the hand; also, the sole of the foot.

Thenard's Blue. Same as *Cobalt Blue.*

Thenen (*the'-nen*) [θέναρ, palm]. Belonging to the thenar aspect in itself.

Theobroma (*the-o-bro'-mah*) [θεός, a god; βρῶμα, food]. A genus of sterculiaceous plants of tropical America. **T. cacao** is the cacao-plant, or chocolate-tree. See *Chocolate, Cacao.* **T., Ceratum**, "red lip-salve," cacao-butter, white wax, āā 35; oil of almond 30; oil of rose, to flavor, and carmin to color, āā *q. s.* **T., Oleum**, butter of cacao. The fixed oil of the seed of the chocolate-tree, *T. cacao.* It consists mainly of stearin with a little olein, and is demulcent, not becoming rancid. It is used in making suppositories.

Theobromin, Theobromina (*the-o-bro'-min, the-o-bro-mi'-nah*) [θεός, a god; βρῶμα, food: *gen.*, *Theobrominæ*], $C_7H_8N_4O_2$. A feeble alkaloid obtained from *Cacao-butter.* It is a white, crystalline powder, with a bitter taste, but no odor. It is insoluble in water, alcohol, ether, chloroform, etc., when cold. It is said to have about the same effect upon the system as caffein and thein.

Theolin (*the'-o-lin*). Same as *Heptane.*

Theomania (*the-o-ma'-ne-ah*) [θεός, a god; μανία, madness]. Religious mania; insanity in which the patient believes himself to be a divine being.

Theomaniac (*the-o-ma'-ne-ak*) [θεός, a god; μανία, madness]. One who is affected with theomania.

Theopathy (*the-op'-ath-e*) [θεός, a god; πάθος, disease]. Cure by prayer.

Theophyllin (*the-o-fil'-in*) [*thea*, tea, φύλλον, leaf], $C_7H_8N_4O_2$. An alkaloid discovered in tea. It is isomeric with the base obtained from cacao (theobromin) and with paraxanthin, but differs from them in its reactions.

Theoretic, Theoretical (*the-o-ret'-ik, the-o-ret'-ik-al*) [θεωρητικός]. Based on theory; speculative.

Theory (*the'-o-re*) [θεωρία, a view]. The abstract principles of a science. Also, a reasonable supposition or assumption, generally one that is better developed and more probable than a mere hypothesis. **T., Cohnheim's** (*of Inflammation*). See *T., Samuel's.* **T., Darwin's.** See *Darwinism, Neo-Darwinism, Evolution.* **T., Fluss'** (*of Inflammation*). See *T., Landerer's.* **T., Hammarsten's**; that the coagulation of the blood is due to the decomposition of a substance called fibrinogen, which is dissolved in the blood-plasma. This decomposition is brought about by the agency of the fibrin-ferment, which is the product of the disintegration of the colorless corpuscles. The most important product of this action is the comparatively insoluble material called fibrin. **T., Lamarckian**; the doctrines based upon the teachings of the French naturalist, J. B. P. A. de Monet de Lamarck (1744–1829), who attempted to explain the progressive evolution of nature by virtue of an inheren-

tendency to development and the efforts excited by change of conditions. **T., Landerer's** (*of Inflammation*); that the tension of the tissues (*Gewebspannung*) during inflammation is much lower than under normal conditions. The capillaries surrounded by these inflamed tissues are unable to withstand the pressure of the blood and, therefore, dilate. The immediate effect of this dilatation is an acceleration of the movement of the blood, which rushes in to fill the widened capillaries. But after a certain lapse of time, as the surrounding tissues lose their elasticity more and more, the blood-stream slows, thus producing the condition of the circulation typical of inflammation. (Metschnikoff.) **T., Metschnikoff's Biologic or Comparative** (*of Inflammation*); "inflammation generally must be regarded as a phagocytic reaction on the part of the organism against irritants. This reaction is carried out by the mobile phagocytes, sometimes alone, sometimes with the aid of the vascular phagocytes or of the nervous system. The essential phenomena of inflammation represent an actual struggle between the phagocytes and the irritant agent." **T., Paralytic** (*of Inflammation*); the doctrine that regards hyperemia as the most essential act in inflammation, and caused by paralysis of the vasomotor nerves. **T. of Peptogeny and Peptogenous Substances of Schiff and Corvisart**; this theory adduces the noteworthy peculiarity whereby the secretory tissues of the stomach yield gastric juice only when in contact with certain alimentary substances, because these substances furnish an indispensable element in the production of pepsin. **T., Podwyssozki's** (*of Inflammation*); "inflammation is a local reaction, often beneficial, of the living tissues against the irritant substance. This reaction is chiefly produced by a phagocytic activity of the mesodermic cells. This reaction, however, may precipitate not only changes in the vascular system, but also the chemic action of the blood-plasma and tissue-fluids in liquefying and dissolving the irritant agent." **T. of Preformation.** See *Preformation* and *Incasement.* **T., Recapitulation**; according to which each animal in its own development repeats the history of its ancestry, "climbs up its own genealogical tree." This theory was first clearly enunciated by Fritz Müller, and has since been elaborated by many, notably by Balfour and Ernst Hæckel. **T., Rokitansky's** (*of Inflammation*); the theory that inflammation is an abnormal process of nutrition in which, as a result of stasis, exudation takes place. The stasis is the most important factor. Its cause is to be found in the commingling and adhesion of the red cells, the condensation of the plasma by transudation of serum, and the accumulation of white cells. The exudation is explained, aside from molecular attraction, by the continued pressure under which the plasma in the area of stasis exists. **T., Roser's** (*of Inflammation*); according to this theory inflammation is a true disease, due to infection by microbes, the reparatory phenomena constituting its cure. **T., Sachs'** (*of Inflammation*); is that a single process represents a salutary reaction against some injurious influence; that regeneration, cicatrization, and the primary processes of inflammation, such as emigration and the alteration in the vessel-walls, are reparatory acts serving to counteract the damage brought about by the irritant, *i. e.*, true inflammation never occurs except where there has been a primary lesion of the tissues. This theory has been accepted and developed by Buchner and Neumann. **T., Samuel's** (*of Inflammation*); according to this theory the main factor in all inflammatory states consists in a lesion of the vessels, which are attacked by the irritating cause. The inflamed vessels, being more permeable, allow the fluid and corpuscular elements of the blood to flow through them in a purely passive manner. These exuded products collect in a situation where they meet with least resistance and there produce the inflammatory tumor. **T., Schimper's** (*of the Arrangement of Leaves*); according to which all relations of position are referred to a single principle. "This principle lies in the idea that growth in a stem has an upward direction in a spiral line, and that the formation of leaves is a local exaggeration of this spiral growth." (Sachs.) **T., Schwann's** (*of Inflammation*). Same as *Rokitansky's Theory, q. v.* **T. of Schwendener.** See *Schwendenerism.* **T., Spasmodic** (*of Inflammation*); the doctrine that hyperemia is the most essential phenomenon in inflammation, and holds it to be caused by a spasmodic contraction of the affected arteries, accompanied by an afflux of blood to the neighboring part. **T., Stricker's** (*of Inflammation*); the theory that the tissue-cells, under the influence of the inflammatory irritant, return to their former undifferentiated embryonic condition, and then rapidly proliferate, forming similar cells. **T., Virchow's Nutritional** (*of Parenchymatous Inflammation*); according to Virchow, hyperemia is but a subordinate process and entirely secondary to an increased nutritive and reproductive activity of the cells at the seat of inflammation, which gives rise to the formation of a large quantity of exudation-cells at the expense of the cells of the damaged tissue.

Therapeia (*ther-ap-i'-ah*). See *Therapeutics.*

Therapeutic (*ther-ap-u'-tik*) [θεραπευτική]. Pertaining to therapeutics; curative. **T. Test,** a method of diagnosis by administering certain remedies which are known to influence a given disease, *e. g.*, quinin in malaria, potassic iodid and mercury in syphilis.

Therapeutics (*ther-ap-u'-tiks*) [θεραπευτική]. That branch of medical science which considers the application of remedies as a means of cure. **T., Mediate,** medicating a child through its mother's milk. **T., Suggestive,** hypnotic suggestion in the treatment of disease.

Therapeutist (*ther-ap'-u-tist*) [θεραπεία, therapy]. One skilled in therapeutics.

Therapic (*ther-ap'-ik*) [θεραπεία, therapy]. Pertaining to therapy; therapeutic.

Therapol (*ther'-ap-ol*) [θεραπεία, cure; *oleum*, oil]. A vegetable oil containing ozone. It has been used in diphtheria.

Therapy, Therapeia (*ther'-ap-e, ther-ap-i'-ah*) [θεραπεία, therapy]. Therapeutics—now used chiefly as a suffix, *e. g.*, serotherapy, aërotherapeutics.

Therg's Fistula. See *Fistula.*

Theriac (*the'-re-ak*). See *Theriaca.*

Theriaca (*the-ri'-ak-ah*) [θηριακή; θηρίον, beast, serpent; it was at first the name of a medicine used for snake-bite]. Treacle; molasses. The non-crystallizing residue of the juice of the cane, left after the process of evaporation. It consists of cane-sugar-solution, caramel, and various impurities. It was formerly used in pharmacy and also as the name of an antidote to the bites of venomous snakes or insects. **T. andromachi,** Venice treacle, a compound (no longer official) of some seventy or more drugs mixed with honey, and given as an antidote in cases of snake-bite.

Theriacal (*the-ri'-ak-al*) [θηριακή; θηρίον, beast]. Having the virtues ascribed to theriaca; useful as an antidote for venomous bites.

Theriodic (*the-re-od'-ik*) [θηρίον, a wild beast]. Malignant.

Therioma (*the-re-o'-mah*) [θηριόειν, to make or be wild: *pl.*, *Theriomata*]. A rare name for a malignant ulcer; a tumor.

Theriotomy (*the-re-ot'-o-me*) [θηρίον, beast; τομή, a cut]. Zoötomy; the anatomy or dissection of animals.

Therm [θέρμη, heat]. The amount of heat required to raise the temperature of one gram of water from 0° C. to 1° C. It is equal to 1000 calories. See *Unit.*

Thermæ (*thur'-me*) [θέρμη, heat]. Hot baths; hot springs.

Thermæsthesia (*thur-mes-the'-ze-ah*). See *Thermesthesia.*

Thermal (*thur'-mal*) [θέρμη, heat]. Pertaining to heat. **T. Ataxia.** See *Ataxia.* **T. Springs,** warm, or hot springs.

Thermality (*thur-mal'-it-e*) [θέρμη, heat]. Exaggerated generation of heat, symptomatic of infection.

Thermanesthesia (*thur-man-es-the'-ze-ah*). See *Thermo-anesthesia.*

Thermantidote (*thur-man'-tid-ōt*) [θέρμη, heat; *antidote*]. An apparatus for cooling the air, much used in some hot regions, as India.

Thermasma (*thur-maz'-mah*) [θέρμασμα]. A warm fomentation.

Thermatology (*thur-mat-ol'-o-je*) [θέρμη, heat; λόγος, science]. The scientific use or understanding of the waters of thermal springs in the cure of disease.

Thermesthesia (*thur-mes-the'-ze-ah*) [θέρμη, heat; αἴσθησις, sensation]. The sensation of heat or of the temperature of bodies.

Thermesthesiometer (*thur-mes-the-ze-om'-et-er*) [θέρμη, heat; αἴσθησις, sensation; μέτρον, measure]. An instrument for measuring the sensibility to heat of different regions of the skin.

Thermic (*thur'-mik*) [θέρμη, heat]. Pertaining to heat. **T. Fever,** sunstroke; heat-fever.

Thermifugin (*thur-mif'-u-jin*) [θέρμη, heat; *fugare,* to expel], $C_9H_8(CH_3)NCOONa$. Sodium carbamate, recommended as an antipyretic. Unof.

Thermo- (*thur'-mo-*) [θέρμη, heat]. A prefix used to denote connection with or relation to heat or temperature.

Thermo-anesthesia (*thur-mo-an-es-the'-ze-ah*) [θέρμη, heat; *anesthesia*]. Loss of the perception of thermal impressions.

Thermo-cautery (*thur-mo-kaw'-ter-e*). See *Cautery.*

Thermo-chemic (*thur-mo-kem'-ik*) [θέρμη, heat; χεμεια, chemistry]. Pertaining to thermo-chemistry.

Thermo-chemist (*thur-mo-kem'-ist*) [θέρμη, heat; χεμεια, chemistry]. One versed in thermo-chemistry.

Thermo-chemistry (*thur-mo-kem'-is-tre*) [θέρμη, heat; χεμεία, chemistry]. That branch of chemic science embracing the mutual relations of heat and chemic changes.

Thermochroic (*thur-mo-kro'-ik*) [θέρμη, heat; χρώς, surface]. Pertaining to a quality of certain substances that transmit some thermal radiations, but absorb or change others.

Thermo-current (*thur-mo-kur'-ent*) [θέρμη, heat; *currere,* to run]. An electric current produced by heat.

Thermo-diffusion (*thur-mo-dif-u'-zhun*) [θέρμη, heat; *diffusion*]. Diffusion of a gas by inequalities in temperature.

Thermodin (*thur'-mo-din*) [θέρμη, heat],

$$C_6H_4\begin{matrix}O.C_2H_5\\ N.CO.CH_3.COO.C_2H_5\end{matrix}.$$

Acetyl-ethoxyphenylurethan; acetyl-ethoxyphenylcarbamate ethyl ester. A hydrocarbon that crystallizes in white needles, which are odorless and almost tasteless, melt at 86°–88° C., and are slightly soluble in water. The drug is antipyretic. The dose is from 7.5 to 10 grains. Unof.

Thermo-electricity (*thur-mo-e-lek-tris'-it-e*) [θέρμη, heat; ἤλεκτρον, amber]. Electricity generated by heat.

Thermo-excitory (*thur-mo-ek-si'-to-re*) [θέρμη, heat; *excitor,* excitor]. Having the function of exciting the production of heat (opposed to *thermo-inhibitory*).

Thermogenesis (*thur-mo-jen'-es-is*) [θέρμη, heat; γεννᾶν, to produce]. The production of heat.

Thermogenetic (*thur-mo-jen-et'-ik*). Same as *Thermogenic.*

Thermogenic (*thur-mo-jen'-ik*) [θέρμη, heat; γεννᾶν, to produce]. Pertaining to thermogenesis; producing heat.

Thermogenous (*thur-moj'-en-us*) [θέρμη, heat; γένης, producing]. Producing heat.

Thermogram (*thur'-mo-gram*) [θέρμη, heat; γράμμα, a mark]. The record of a thermograph.

Thermograph (*thur'-mo-graf*) [θέρμη, heat; γράφειν, to write]. Any automatic device for registering variations of temperature.

Thermography (*thur-mog'-ra-fe*) [θέρμη, heat; γράφειν, to write]. Writing by means of heat. The use of the thermograph.

Thermohemia (*thur-mo-hem'-e-ah*). See *Insolation.*

Thermo-inhibitory (*thur-mo-in-hib'-it-o-re*) [θέρμη, heat; *inhibitory*]. Having the function of inhibiting or controlling the production of heat; as thermo-inhibitory nerves or centers.

Thermology (*thur-mol'-o-je*) [θέρμη, heat; λόγος, science]. A treatise on heat.

Thermolysis (*thur-mol'-is-is*) [θέρμη, heat; λύσις, a loosening]. The dissipation of heat. This is mainly accomplished by means of the skin and lungs. It is regulated by nervous influence.

Thermolytic (*thur-mo-lit'-ik*) [θέρμη, heat; λύσις, a loosening]. 1. Pertaining to or promoting thermolysis. 2. An agent that promotes the discharge of heat from the body.

Thermomagnetism (*thur-mo-mag'-net-izm*) [θέρμη, heat; μαγνετης, magnet]. Magnetism produced by heat.

Thermometer (*thur-mom'-et-er*) [θέρμη, heat; μέτρον, measure]. An instrument for measuring the intensity of heat, consisting of a reservoir of mercury (or alcohol) expanding into a vacuous capillary tube, the intensity being measured by the length of the column of mercury. **T., Centigrade,** one in which the freezing-point is at 0° and the boiling-point at 100°. **T., Clinical,** a thin-bulbed, self-registering thermometer for ascertaining the bodily temperature. **T. Fahrenheit,** one in which the interval between freezing and boiling is divided into 180 equal parts, each called a degree, the zero-point being 32 degrees of divisions below the freezing of water. **T., Reaumur,** one in which the freezing-point is 0°, and the boiling-point 80°. To convert the registration of one thermometer into that of another the following formulæ are useful:—

Let F = No. of degrees Fahrenheit.
" C = " " Centigrade.
" R = " " Reaumur.

Then to convert	
Fahr. into Cent.	Fahr. into Reaum.
$\frac{5(F-32)}{9}=C.$	$\frac{4(F-32)}{9}=R.$
Cent. into Fahr.	Reaum. into Fahr.
$\frac{9C}{5}+32=F.$	$\frac{9R}{4}+32=F.$

T., Surface, a thermometer for registering the surface temperature of any portion of the body. See next page for *Table of Comparison of Thermometers.*

COMPARISON OF THERMOMETERS.

FAHR.	CENT.	REAU.	FAHR.	CENT.	REAU.	FAHR.	CENT.	REAU.

hermometric (*thur-mo-met'-rik*) [θέρμη, heat; μέτρον, measure]. Pertaining to the thermometer or to thermometry.

hermometry (*thur-mom'-et-re*) [θέρμη, heat; μέτρον, measure]. The scientific use of the thermometer, and the facts and theories relating thereto.

hermonanesthesia (*thur-mo-nan-es-the'-ze-ah*). See *Thermo-anesthesia.*

hermoneurosis (*thur-mo-nu-ro'-sis*) [θέρμη, heat; νεῦρον, nerve]. Pyrexia of vasomotor origin.

hermopalpation (*thur-mo-pal-pa'-shun*) [θέρμη, heat; *palpare*, to palpate]. Palpation of the surface of the body with a view to the determination of variations of temperature, and the diagnosis of local or visceral inflammations.

hermophagy (*thur-moff'-aj-e*) [θέρμη, heat; φαγεῖν, to eat]. The habit of swallowing very hot food.

hermoplegia (*ther-mo-ple'-je-ah*) [θέρμη, heat; πληγή, a stroke]. Insolation; heat-stroke.

hermopolypnea (*thur-mo-pol-ip-ne'-ah*) [θέρμη, heat; πολύς, many; πνεῖν, to breathe]. Rapid respiration due to high temperature.

hermoposia (*thur-mo-po'-ze-ah*) [θέρμη, heat; πόσις, a drinking]. The practice of swallowing excessively hot drinks.

hermo-regulator (*thur-mo-reg'-ū-la-tor*). See *Thermostat.*

hermoscope (*thur'-mo-skōp*) [θέρμη, heat; σκοπεῖν, to view]. An instrument for measuring minute differences of temperature without registering the degree or amount of heat.

Thermostat (*thur'-mo-stat*) [θέρμη, heat; στατός, standing]. Any automatic device for regulating and maintaining a constant temperature.

Thermosteresis (*thur-mo-ster-e'-sis*) [θέρμη, heat; στέρησις, deprivation]. Depriving of heat.

Thermosystaltic (*thur-mo-sis-tal'-tik*) [θέρμη, heat; συστέλλειν, to contract]. Muscular contraction due to heat.

Thermotactic (*thur-mo-tak'-tik*) [θέρμη, heat; τάσσειν, to regulate]. Regulating the heat of the body; as a thermotactic center.

Thermotaxic (*thur-mo-taks'-ik*) [θέρμη, heat; τάξις, arrangement]. Pertaining to regulation of the temperature of the body; thermotactic.

Thermotaxis (*thur-mo-taks'-is*) [θέρμη, heat; τάξις, arrangement]. The regulation and correlation of heat-production and heat-dissipation.

Thermoterion (*ther-mo-te'-re-on*) [θερμότης, heat]. An apparatus for keeping food warm, consisting in a glass case surrounded by a hot water chamber and an air-space to prevent the radiation of heat.

Thermotherapy (*thur-mo-ther'-ap-e*) [θέρμη, heat; θεραπεία, cure]. The treatment of disease by heat.

Thermotoxin (*thur-mo-toks'-in*) [θέρμη, heat; τοξικόν, poison]. A poison produced by heat in the body.

Thermotropism (*thur-mot'-ro-pizm*) [θέρμη, heat; τρόπος, a turn]. In biology, that property possessed by some organs of bending toward or away from a source of heat.

Theromorphia (*thur-o-mōr'-fe-ah*) [θήρ, a beast; μορφή, form]. A monstrosity resembling a lower animal.

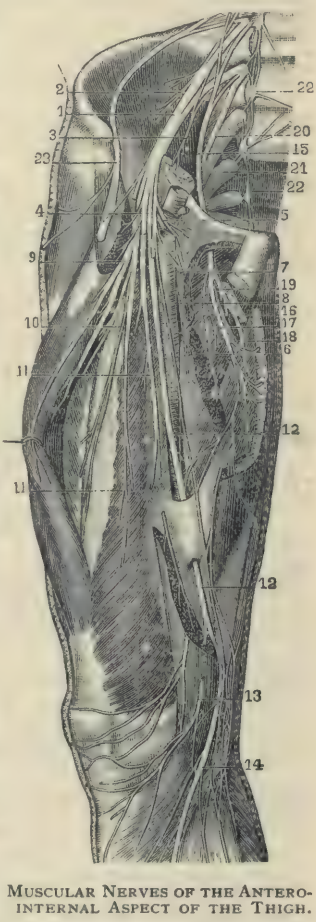
Theromorphism (*thur-o-mōr'-fizm*) [θήρ, beast; μορφή, form]. Apparent reversion, in a human subject, to an animal form of lower type.

Thesis (*the'-sis*) [θέσις, a proposition]. A dissertation. Usually, the essay presented by an undergraduate at the time of his candidature for a degree.

Thesocyte (*thes'-o-sīt*) [θες, from τίθημι, to lay up; κυτός, cell]. One of certain reserve cells found in several sponges.

Thetismus (*the-tiz'-mus*). Synonym of *Lisping.*

Thevetia (*the-ve'-she-ah*) [after André *Thevet*, a French monk and traveler]. A genus of tropical apocynaceous shrubs and trees. *T. iccotli* and *T. neriifolia*, of tropical America, and Asia, are poisonous, febrifugal, and emeto-cathartic. Unof.



Thevetin (*thev'-et-in*) [after André *Thevet*, a French monk and traveler]. A poisonous glucosid from certain species of *Thevetia.*

Thiazole (*thi'-az-ōl*), C_3H_3NS. A substance produced by exchanging hydrogen for the amido-group in amidothiazole. It is a colorless liquid, boiling at 117° C.; it closely resembles pyridin.

Thick Wind. A colloquial term for impeded respiration in the horse, somewhat louder and less free than normal breathing.

Thiersch's Method of Skin-grafting. The part to be grafted is made aseptic and then washed with a salt-solution (6 : 1000). The granulations are removed with a sharp curet; the bleeding surface is covered with protective and compressed, to check all bleeding. From a portion of the arm or leg, free from fat and previously sterilized, broad strips of the upper layers of the skin are removed by a to-and-fro movement of a razor continually flooded with salt-solution. These grafts are then placed upon the prepared surface, covering it completely. Lattice-work protective strips are applied, then a compress moist with salt-solution, the whole being covered with protective and dry cotton and bandaged. An antiseptic dressing should be placed upon the surface from which the grafts were removed.

Thigh (*thi*) [ME., *thigh*, thigh]. The femur. The part of the lower limb extending from the pelvis to the knee. **T.-bone,** the femur or *os femoris*. **T.-joint,** the hip-joint; the articulation between the innominate bone and the femur.

MUSCULAR NERVES OF THE ANTERO-INTERNAL ASPECT OF THE THIGH.

1. Anterior crural nerve. 2. Branches to iliacus muscle. 3. Branch to inner part of psoas. 4. Large cutaneous branch. 5, 6. Muscular filaments of small musculo-cutaneous branch. 7. Cutaneous branches. 8. Deep, or anastomotic filament of internal cutaneous branch. 9. Branches to rectus femoris. 10. Branches to vastus externus. 11, 11. Branches to vastus internus. 12, 12. Internal saphenous nerve. 13. Its patellar branch. 14. Vertical, or tibial branch. 15. Obturator nerve. 16. Branch to adductor longus. 17. Branch to adductor brevis. 18. Branch to gracilis. 19. Branch to adductor magnus. 20. Lumbo-sacral trunk. 21. Union of this trunk and the first sacral nerve. 22, 22. Lumbar and sacral portions of sympathetic. 23. External inguino-cutaneous branch.

Thilanin (*thil'-an-in*), a sulphuretted lanolin designed to replace ichthyol and thiol in the treatment of itching skin-diseases.

Thillaye's Bandage. See *Bandage*.

Thimbleweed (*thim'-bl-wēd*). The herb *Rudbeckia lanciniata*; diuretic and tonic. It has balsamic properties. Dose of the fld. ext. ♏xv-℥j. Unof.

Thin [ME., *thinne*, thin]. Slender; meager; lean; spare.

Thio- (*thi'-o-*) [θεῖον, sulphur]. A prefix denoting the presence of sulphur, or a sulphur radicle.

Thio-acetals (*thi-o-as'-et-alz*). See *Mercaptals*.

Thio-acid (*thi'-o-as'-id*). One of the acids derived from others by the substitution of sulphur for oxygen, generally but not always in the hydroxyl group. They are liquids of disagreeable odor, less soluble in water and possessing a lower boiling-temperature than the corresponding oxygen acids.

Thio-alcohols (*thi-o-al'-ko-hols*). See *Mercaptans*.

Thiocamph (*thi'-o-kamf*) [θεῖον, sulphur, *camphor*]. A fluid disinfectant, used for fumigation. It is formed by the action of sulphurous acid on camphor and is used in the strength of one ounce to a pint or quart. Unof.

Thio-ethers (*thi'-o-e'-therz*). See *Alkyl-sulphids*.

Thiol (*thi'-ol*) [θεῖον, sulphur]. *German Ichthyol*; prepared from gas-oil by heating with sulphur. It occurs in two forms, the *dry* and the *liquid*. It has been used largely in gynecic practice. Dose of *dry* thiol, gr. ij–x. Unof.

Thionin (*thi'-o-nin*). Same as *Lauth's Violet*.

Thiophen, Thiophene (*thi'-o-fen, thi'-o-fēn*) [θεῖον, sulphur], C_4H_4S. A hydrocarbon of the aromatic series; a colorless, limpid oil, of faint odor, and miscible with water in all proportions. The sodium salt, $C_4H_3CNaS_2$, is a white powder, precipitated in the form of scales; it contains 33 per cent. of sulphur and has a disagreeable odor. It is used in a 5–10 per cent. ointment in prurigo. The biniodid, $C_4H_2I_2S$, has been used as a substitute for iodoform. It crystallizes in beautiful plates, insoluble in water, but very soluble in ether, alcohol, and chloroform. Its odor is characteristic, but not disagreeable. It is a vigorous disinfectant and deodorant, superior to iodoform. Unof. **T., diiodid,** has been recommended as an antiseptic.

Thiophen Iodid (*thi-o-fen-i'-o-did*). Iodothiophen, a halogen compound of thiophen, a substance obtained from benzene. The experiments of Spiegler have shown it to be an antiseptic possessing varying degrees of power in retarding the development of bacteria in culture-media. It is preferable to iodoform in having a faint, agreeable, aromatic odor.

Thiophenol (*thi-o-fen'-ol*) [θεῖον, sulphur; *phenyl*], $C_6H_5.SH$. *Phenyl mercaptan*; obtained by the action of phosphorus pentasulphid on phenol. It is a mobile, ill-smelling liquid, boiling at 168° C.; its specific gravity at 14° C. is 1.078; it dissolves readily in alcohol and ether.

Thiophtene (*thi-of'-tēn*) [θεῖον, sulphur], $C_6H_4S_2$. A substance produced when citric acid is heated with phosphorus pentasulphid. It is an oil, boiling at 225° C.

Thioresorcin (*thi-o-rez-or'-sin*) [θεῖον, sulphur; *resorcin*], $C_6H_4(SH)_2$. Bisulphydrate of phenyl. It possesses the therapeutic properties of iodoform, and is harmless and odorless. It is used either as a powder or as an ointment, ℥ss–j in ℥v of lard. Unof.

Thiosinamin (*thi-o-sin'-am-in*) [θεῖον, sulphur; *sinapis* mustard], $C_4H_8N_2S$. A body prepared from allyl mustard-oil, alcohol, or ammonia. It is useful in cutaneous affections, lupus, glandular enlargements, night-sweats. It is used by hypodermatic injection in doses of from 3 to 30 minims of a 15 per cent. alcoholic solution. Unof.

Thiourea (*thi-o-u-re'-ah*) [θεῖον, sulphur; *ouron* urine], $CS(NH_2)_2$. *Sulphocarbamid*; a substance obtained from urea. It crystallizes in fine, silky needles or in thick, rhombic prisms, which dissolve easily in water and in alcohol, but with difficulty in ether. They possess a bitter taste and have a neutral reaction. They melt at 169° C. and decompose at higher temperatures.

Thiourethane (*thi-o-u'-re-thān*) [θεῖον, sulphur; *ouron* urine]. Any one of the crystalline esters of sulphocarbamic acid.

Thioxanthone (*thi-o-zan'-thōn*) [θεῖον, sulphur; ξανθός, yellow], $C_{13}H_8SO$. A substance produced by the condensation of diphenyl-sulphido-carboxylic acid effected by H_2SO_4. It consists of yellow needles that become colorless upon distillation; it melts at 207° C. and boils at 372° C.

Third (*thurd*) [ME., *thirde*, third]. Next after the second. **T. Eye.** See *Pineal Eye*. **T. Intention.** See *Healing*. **T. Tonsil.** See *Luschka's Tonsils*. **T. Ventricle.** See *Ventricle*.

Thirst (*thurst*) [ME., *thurst*]. The state manifested by a desire for drink. It is marked by dryness of the mouth and fauces, together with constriction of the pharynx and esophagus. See *Dipsosis* and *Polydipsia*. **T.-cure.** See *Schroth's Cure*.

Thistle, Barnaby's. See *Centaurea*.

Thiuret (*thi'-u-ret*) [θεῖον, sulphur], $C_8H_7N_3S_3$. An antiseptic which readily yields its sulphur in a nascent condition. On this property depends its antiseptic action. It is a crystalline powder, practically insoluble in water, and is best used in combination as the borate, or perhaps best as the parasulphophenate.

Thlipsencephalon (*thlip-sen-sef'-al-on*). See *Thlipsencephalus*.

Thlipsencephalus (*thlip-sen-sef'-al-us*) [θλῖψις, pressure; ἐγκέφαλος, brain]. A variety of single autositic monsters of the species pseudencephalus, in which there is extensive exposure of the base of the skull from non-development of the occipital bone and even of the upper vertebræ.

Thlipsis (*thlip'-sis*) [θλῖψις, pressure]. Compression, especially of blood-vessels.

Thoka-Losi (*tho-kah-lo'-se*). An Australian and Fijian form of mutilation, consisting in the incision of the urethra at the membranous portion. The object is supposed to be a superstitious method of treating rheumatism and sundry fevers. Another similar method of mutilation for supposed similar reasons is called **Targangalengale,** incision of the urethra from the meatus to the frenum. Similar mutilations are practised by some of the Arabs and by certain African tribes.

Thomas's Decalcifying Solution. See under *Stains, Table of.* **T.'s Operation.** See *Cesarean Operation.*

Thompson's Line. See *Lines, Table of.* **T.'s Sounds.** Graduated metal bougies, employed to dilate urethral strictures in the male.

Thomsen's Disease. *Myotonia congenita;* a disease commonly congenital and occurring in families, and characterized by tonic spasm or rigidity of the muscles, coming on when they are first put in action after a period of rest. As the muscles are used the stiffness gradually wears off. The disease usually appears first in childhood at about the age of eight or nine years. The etiology is obscure; the duration indefinite. No treatment is of any avail. The *Myotonic Reaction* is characterized as follows: The contraction of the muscles upon mechanical stimulation of the motor nerves is normal. Mechanical stimulation of the muscles easily induces contraction lasting from five to thirty seconds. The galvanic current applied to the muscle shows that opening contractions are very difficult to obtain, that the closing contractions are of very long duration, and that upon stabile application well-formed, wave-like contractions may be seen to pass from the kathode to the anode. The reflexes are normal. See *Diseases, Table of.*

Thomsonianism (*tom-so'-ne-an-izm*) [after Dr. Samuel *Thomson*]. A form of empiric medicine introduced by one Samuel Thomson (1769–1843) of Massachusetts. Sweating, lobelia, and capsicum were the principle curative agents relied upon in this school.

Thöid (*tho'-oid*) [θώς, a beast of prey of the wolf kind; εἶδος, form]. In biology, lupine, resembling or related to a wolf.

Thoracaorta (*tho-rak-a-or'-tah*) [θώραξ, thorax; ἀορτή, aorta]. The thoracic aorta.

Thoracentesis (*tho-ras-en-te'-sis*) [θώραξ, chest; κέντησις, a piercing]. The piercing of the thorax for the removal of any abnormal collection of matter.

Thoracetron (*tho-ras-e'-tron*) [θώραξ, thorax; ἤτρον, the abdomen: *pl.*, *Thoracetra*]. In biology, the second division of the body of the king-crab (*Limulus*). Cf. *Cephaletron, Pleon.*

Thoracic (*tho-ras'-ik*) [θώραξ, thorax]. Pertaining to the chest or thorax, and also to certain of its organs. **Aorta.** See *Arteries, Table of.* **T. Choke,** in the horse, the lodgment of a foreign body in the thoracic portion of the esophagus. **T. Duct.** See *Duct.* **T. Index.** See *Index.* **T. Nerve.** See *Nerves, Table of.*

Thoracico-abdominal (*tho-ras'-ik-o-ab-dom'-i-nal*) [θώραξ, thorax; *abdomen*, abdomen]. Pertaining to the thorax and the abdomen.

Thoracico-lumbar (*tho-ras-ik-o-lum'-bar*) [θώραξ, thorax; *lumbus*, the loin]. Pertaining to the thoracic and lumbar regions.

Thoraciform (*tho-ras'-if-orm*) [θώραξ, thorax; *forma*, form]. Shaped like a thorax, as the mesonotum.

Thoracispinal (*tho-ras-is-pi'-nal*) [θώραξ, thorax; *spina*, spine]. Relating to the thoracic portion of the spinal column.

Thoracocentesis (*tho-rak-o-sen-te'-sis*). See *Thoracentesis.*

Thoracocyllosis (*tho-rak-o-sil-o'-sis*) [θώραξ, thorax; κύλλωσις, curvation]. Deformity of the thorax.

Thoracocymechos (*tho-rak-o-sim-ek'-os*) [θώραξ, thorax; κῦμα, a wave; ἦχος, a sound]. A splashing sound heard in the chest on succussion.

Thoracodidymus (*tho-rak-o-did'-im-us*) [θώραξ, chest; δίδυμος, double]. A double monster joined by the thoraces.

Thoracodynia (*tho-rak-o-din'-e-ah*) [θώραξ, thorax; ὀδύνη, pain]. Pain in the chest.

Thoracometer (*tho-rak-om'-et-er*) [θώραξ, thorax; μέτρον, a measure]. A stethometer, an instrument for measuring the movements of the walls of the chest.

Thoracomyodynia (*tho-rak-o-mi-o-din'-e-ah*) [θώραξ, thorax; μῦς, muscle; ὀδύνη, pain]. Pain in the muscles of the chest.

Thoracopagus (*tho-rak-op'-ag-us*) [θώραξ, thorax; πηγνύναι, to join]. A double monster with portions of the thorax or abdomen coalescent. **T. tribrachius,** with two of the upper limbs coalescent. **T. tripus,** with two of the lower limbs coalescent. **Prosopothoracopagus,** with the heads, breasts, and bellies coalesced; it is also called *Cephalo-thoracopagus,* or *Syncephalus.*

Thoracopathia (*tho-rak-o-pa'-the-ah*) [θώραξ, thorax; πάθος, disease]. A disease of the thorax.

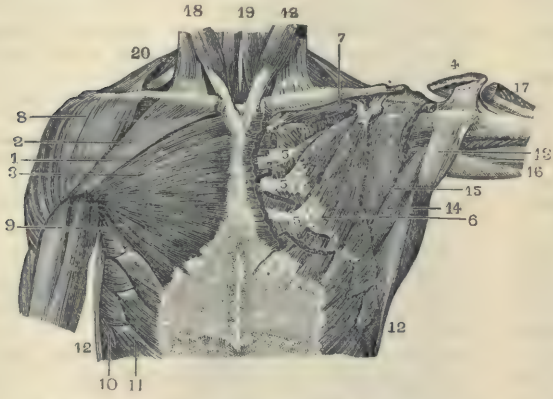
Thoracoplasty (*tho-rak'-o-plas-te*) [θώραξ, thorax; πλάσσειν, to form]. Plastic operation upon the thorax.

Thoracopneumoplasty (*tho-rak-o-nu'-mo-plas-te*) [θώραξ, thorax; πνεύμων, lung; πλάσσειν, to form]. Plastic operation upon the lung and chest.

Thoracoscopy (*tho-rak-os'-ko-pe*) [θώραξ, thorax; σκοπεῖν, to examine]. Examination of the chest for diagnostic purposes, especially by the stethoscope.

Thoracostenosis (*tho-rak-o-sten-o'-sis*) [θώραξ, thorax; stenosis]. Contraction or coarctation of the chest.

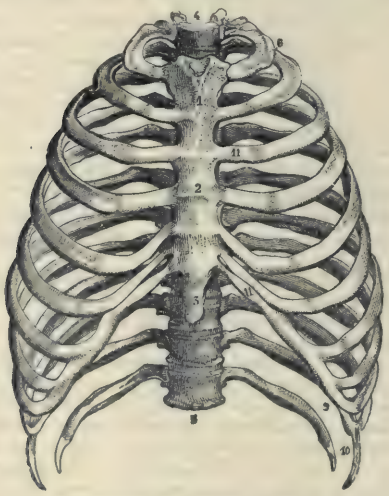
Thoracotheca (*tho-rak-o-the'-kah*) [θώραξ, the thorax; θήκη, a case: *pl.*, *Thoracothecæ*]. In biology, that portion of the pupa-case which covers the thoracic region of the pupa.



Thoracotomy (*tho-rak-ot'-o-me*) [θώραξ, thorax; τέμνειν, to cut]. Incision of the thorax. The same as *Thoracentesis.*

Thoracotromus (*tho-rak-ot'-ro-mus*) [θώραξ, thorax; τρόμος, tremor]. Tremor, or thrill, of the chest, or chest-wall.

Thoradelphus (*tho-rad-el'-fus*) [θώραξ, thorax; ἀδελφός, brother]. A monocephalic dual monstrosity with the bodies united above the umbilicus, and with four lower and two upper extremities



Thorax (*tho'-raks*) [θώραξ]. The chest, or the conic framework of bones and soft tissues, is bounded by the diaphragm below, the ribs and sternum in front, the ribs and corresponding portion of the vertebral column

behind and above by the structures in the lower part of the neck; it contains the heart inclosed in the pericardium and the lungs invested by the pleura, etc. **T., Regions of.** See *Regions.*

MUSCLES OF VENTRAL ASPECT OF THORAX.

1. Pectoralis major. 2. Its clavicular portion. 3. Its sterno-costal portion. 4. Its humeral attachment, divided and displaced upward. 5, 5, 5. Its fasciculi of attachment to ribs. 6. Pectoralis minor. 7. Subclavius. 8. Deltoid. 9. Inferior border of pectoralis minor. 10. Digitations of serratus magnus. 11. Corresponding digitations of the external oblique. 12, 12. Ventral border of latissimus dorsi. 13. Its tendon of attachment to humerus. 14. Teres major. 15. Subscapularis. 16. Long head of triceps. 17. Lower portion of deltoid. 18. Sterno-mastoid. 19. Lower portion of sterno-hyoid. 20. Trapezius.

THORAX, ANTERIOR VIEW.

1. Manubrium sterni. 2. Gladiolus. 3. Ensiform cartilage of xiphoid appendix. 4. Circumference of apex of thorax. 5. Circumference of base. 6. 1st rib. 7. 2d rib. 8, 8. 3d, 4th, 5th, 6th and 7th ribs. 9. 8th, 9th and 10th ribs. 10. 11th and 12th ribs. 11, 11. Costal cartilages.

Thorium (*thō'-re-um*) [Icel., *Thōrr*]. A rare metal discovered by Berzelius in 1828; symbol Th, at. wt. 231.9. It is chemically related to tin. Its medicinal qualities are unknown. See *Elements, Table of.*

Thorn [ME., *thorn*, thorn]. A sharp excrescence on a plant. **T.-apple.** See *Datura* and *Stramonium.* **T.-apple Crystals.** See *Hedgehog Crystals.* **T.-headed Worms.** See *Acanthocephala.* See under *Parasites* (*Animal*), *Table of.*

Thorncliffe Disinfectant. See *Izal.*

Thornwaldt's Bursitis, or Disease. *Thornwaldt's* A form of naso-laryngeal stenosis associated with t abnormal formation of a cyst-like cavity in the mi of the pharyngeal gland, containing pus or mu pus. See *Diseases, Table of.*

Thorough (*thur'-o*) [ME., *thorou*, through Through, complete. **T.-joint.** Same as *Arth dia* or *Diarthrosis.* **T.-pin,** a swelling in t hollow of the hock of the horse, on both in and outer aspects, caused by distention of t synovial sheath of the flexor perforans pedis te don. **T.-wort.** See *Eupatorium.*

Thorter-ill (*thor'-ter-il*). Same as *Louping-ill*, q.

Thought-transference See *Telepathy.*

Thread (*thred*) [ME., *threed*, thread]. The sp and twisted fibers of cotton, linen, or silk. T last, uncolored, is preferable for sutures. T **Mycelial,** the hyphæ of the mycelium. T **Nuclear,** chromatin fibrils of the cell-nucle **T.-worm,** applied loosely to any nematode wor also specifically to *Oxyuris vermicularis.* S under *Parasites* (*Animal*), *Table of.*

Thready (*thred'-e*) [ME., *threed*, thread]. Like thread. See *Pulse.*

Thremmatology (*threm-at-ol'-o-je*) [*θρέμμα*, a nurslin *λόγος*, science]. In biology, experimental or artific evolution.

Threpsology (*threp-sol'-o-je*) [*θρέψις*, nutrition; *λόγ* treatise]. The sum of knowledge regarding t nature and processes of nutrition. The science trophic phenomena and conditions.

Threshold (*thresh'-old*) [ME., *threshold*, threshol The limit of perceptibility of a stimulus. *Schwelle*, also *Fechner's Law.*

Thridacium (*thri-da'-se-um*) [*θρίδαξ*, lettuce]. T expressed and inspissated juice of the lettuce variety of lactucarium.

Thrift [ME., *thrift*, thrift]. A plumbagineous pla *Armeria vulgaris*, native of both continents. T flowers are diuretic. Unof.

Thrill (*thril*) [ME., *thrillen*, to thrill]. Fremitus. sort of quiver or shiver of the arteries or other org in certain cases of cardiac disease, aneurysm, or ot arterial disease. Varieties are purring thrill, q. and hydatid thrill, obtained over a hydatid cyst.

Throat (*thrōt*) [ME., *throte*, throat]. A term for fauces, pharynx, larynx, etc.; the ventral part of neck; jugulum. In biology, the opening or go of a monopetalous corolla, where the border and tube join, and a little below. See *Faux.* **T.-cough** cough due to irritation of the pharynx apart from eases of the respiratory tract, as from an elonga uvula. **T.-mirror.** See *Laryngeal Mirror.* **wort,** the genera *Trachelium* and *Liatris*; also sp of *Campanula*, the *Digitalis purpurea* and *Scro laria nodosa.*

Throaty (*thrōt'-e*) [ME., *throte*, throat]. Havin peculiar guttural sound, as a *throaty* voice.

Throb (*throb*) [ME., *throbben*, to throb]. A pulsa or beat.

Throbbing (*throb'-ing*) [ME., *throbben*, to throb]. rhythmic beating, as in an inflamed part. **T. Ao** a characteristic symptom of hysteria and neurasthe it is an epigastric pulsation, often very forcible suggesting abdominal aneurysm.

Thrombin (*throm'-bin*) [*θρόμβος*, thrombus]. Fib ferment.

Thrombo-arteritis (*throm'-bo-ar-ter-i'-tis*) [*θρο* thrombus; *ἀρτηρία*, artery; *ῖτις*, inflammati Acute arteritis with thrombosis. Either proces be primary.

hrombogen (*throm'-bo-jen*) [θρόμβος, a clot; γεννᾶν, to produce]. In biology, producing or giving rise to clots.

hrombogenic (*throm-bo-jen'-ik*) [θρόμβος, thrombus; γεννᾶν, to produce]. Producing thrombi. **T. Enzyme,** an unorganized ferment having power to form a curd, clot, or coagulum by enzymosis or hydrolysis; *e. g.* rennet (Armstrong).

hromboid (*throm'-boid*) [θρόμβος, thrombus; εἶδος, like]. Resembling or having the nature of a thrombus.

hrombolymphangitis (*throm-bo-lim-fan-ji'-tis*) [θρόμβος, thrombus; *lympha*, lymph; ιτις, inflammation]. Lymphangitis, with thrombosis.

hrombophlebitis (*throm-bo-fle-bi'-tis*) [θρόμβος, thrombus; φλέψ, vein; ιτίς, inflammation]. Phlebitis with thrombosis.

hrombosis (*throm-bo'-sis*) [θρόμβος, thrombus]. The formation of a thrombus. **T., Cardiac,** thrombosis of the heart. **T., Marantic.** See *Marantic.* **T., Puerperal Venous,** puerperal thrombosis of the uterine veins.

hrombotic (*throm-bot'-ik*) [θρόμβος, thrombus]. Pertaining to or of the nature of thrombosis.

hrombus (*throm'-bus*) [θρόμβος, clot: *pl.*, *Thrombi*]. A clot of blood formed within the heart or blood-vessels, due usually to some impediment to the circulation or to alteration of the blood or vessel-walls. See *Embolus.* **T., Ante-mortem,** the white thrombi in the heart and large vessels formed before death. **T., Ball,** a small or large, rounded, ante-mortem clot found in the heart, especially in the auricles. **T., Currant-jelly,** a soft, reddish, post-mortem clot. **T., Lateral,** a clot attached to the vessel-wall, and not obstructing the lumen completely. **T., Obstructing,** one completely obstructing the lumen of the vessel. **T., Progressive,** one that grows into the lumen of the vessel. **T., Stratified,** one in which there are successive layers of fibrinous deposit and of varying color. **T., White.** See *T., Ante-mortem.*

hrottle (*throt'-l*) [ME., *throtel*, throat; *throtten*, to choke]. 1. The throat. 2. To choke; to suffocate.

hrough Illumination. See *Voltolini's Method.*

hrush [ME., *thrushe*, thrush]. 1. Mycotic stomatitis, a form characterized by the presence of diffuse, white patches. It occurs especially in weakly children, but may affect adults depressed by some form of wasting disease. It is also called *Parasitic Stomatitis* and *Aphtha*, but the latter is more frequently reserved for a vesicular form of stomatitis. The cause is not definitely known; according to some it is the oidium or saccharomyces albicans. 2. A diseased condition of the frog of the horse's foot, with a foul-smelling discharge.

hrust-culture (*thrust kul'-tūr*). A culture of bacteria in a solid culture-medium, inoculated by thrusting the infected oese into the sterilized gelatin; a *Stab-culture* or *Stick-culture.*

huja (*thu'-jah*) [θυία: *gen.*, *Thujæ*]. 1. A genus of coniferous trees, the arbor vitæ. 2. The pharmacopeial name for *T. occidentalis*, a tree of N. America, *Arbor vitæ.* The leaves and twigs are diuretic, sudorific, and stimulant. **T., Oleum,** a volatile oil of camphoraceous odor, composed of thujol and terpene. Dose ♏j–v.

hujol (*thu-jol*) $C_{10}H_{16}O$. An oily liquid, the chief constituent of *Thuja occidentalis.* It increases the blood-pressure and has antipyretic qualities.

humb (*thum*) [ME., *thoumbe*, thumb]. The first finger or toe; pollex or hallux. It differs from the other digits in having but two phalanges and in that its metacarpal bone is separately movable. **T.-method of Palpation.** See *Palpation, Glénard's Method of.* **T.-pad,** a pad-like formation over the inner metacarpal bone of some batrachians.

Thumb (*thum*) [corruption of *thrum*]. Palpitation of the heart in the horse.

Thumps [origin obscure]. An affection in the horse identical with hiccough in man, due to spasmodic action of the diaphragm.

Thunbergia (*thun-ber'-je-ah*) [after K. P. *Thunberg*, 1743–1828, a Swedish botanist]. *Thunbergia fragrans*, a native plant of East India, is cultivated in the West Indies and used as an aromatic tonic.

Thunder-struck Disease. Synonym of *Apoplexy.*

Thus [L., *thus, tus: gen.*, *Thuris* or *Turis*]. 1. True frankincense, or olibanum. 2. Turpentine of pine-trees.

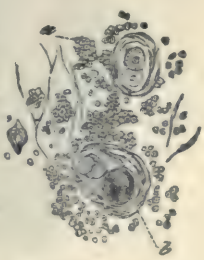
Thymacetin (*thi-mas'-e-tin*) [θύμον, thyme; *acetum*, vinegar], $C_6H_2CH_3C_3H_7 < \begin{matrix} OC_2H_3 \\ NH(C_2H_3O) \end{matrix}$. A derivative of thymol introduced as an anti-neuralgic. Dose gr. iij-xv. Unof.

Thymasthma (*thi-maz'-mah*). See *Thymic Asthma.*

Thyme (*tīm*) [θύμον, thyme]. Thymus, a genus of plants. **T., Oil of.** A stimulant and antiseptic oil containing thymol, chiefly used topically in veterinary practice.

Thymelcosis (*thi-mel-ko'-sis*) [θύμος, thymus; ἕλκωσις, ulceration]. Ulceration of the thymus gland.

Thymene (*thi'-mēn*) [θύμος, thyme]. An eleopten existing in oil of thyme, along with thymol, *q. v.*



Thymic (*thi'-mik*) [θύμος, thymus]. Pertaining to the thymus gland. Also, pertaining to thyme. **T. Asthma,** *Laryngismus stridulus*, popularly known as "crowing breath," "holding the breath." It consists in a temporary suspension or difficulty of respiration from laryngeal spasm. It has been attributed to enlargement of the thymus, and also to reflex spasm; the latter is now the accepted view.

Thymitis (*thi-mi'-tis*) [θύμος, thymus; ιτις, inflammation]. Inflammation of the thymus gland, a rare condition.

Thymol (*thi'-mol*) [θύμος, thyme; *oleum*, oil], $C_{10}H_{13}HO$. A stearoptene, with active antiseptic and anesthetic properties. It exists in oil of thyme and other vegetable oils. It occurs in large, colorless plates, melting at 44° C. and boiling at 230° C. It has a thyme-like odor and is slightly soluble in water, but readily soluble in alcohol. It forms thymates with metallic bases. It is used chiefly as an antiseptic, and is as efficient as and more agreeable than carbolic acid. Dose gr. ss–ij. **T.-gauze,** contains 1 per cent. of thymol. **T.-inhalation,** thymol gr. xx, alcohol ʒ iij, magnesium carbonate gr. x, water ad ʒ iij; add a teaspoonful to a pint of water. **T.-solution,** for spraying, 1 : 1000. **T., Ung.,** contains gr. v to ʒ j. **Volkmann's Thymol-solution,** thymol 1, alcohol 20, glycerin 20; dissolve and add to water 1000. It is used as a spray and antiseptic lotion; it does not produce eczema, as carbolic lotions do.

Thymopathia (*thi-mo-pa'-the-ah*) [θυμός, mind; πάθος, illness]. Mental disorder.

Thymus (*thi'-mus*) [θύμος, thymus: *gen.*, *Thymi*]. 1. The *T. Gland*, a body of glandular appearance situated in the anterior superior mediastinum. In fetal life it is doubtless functional, and it is probably a true lymph-gland. After the second year of life it undergoes fatty metamorpho-

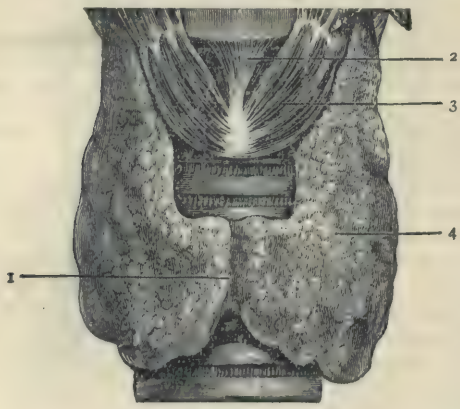
ELEMENTS OF THE THYMUS GLAND.

a. Leukocytes. *b.* Concentric corpuscles. × 300. (*From Stirling.*)

sis and atrophy and in the adult is completely vestigial. See *Sweetbread*. 2. An old term for condyloma. A genus of labiate plants; thyme. **T. vulgaris** affords the official *Thymi Oleum*. **Thymi Oleum**, the volatile oil of garden thyme; it is important as a source of thymol. It has the general properties of the terpenes and mints; it is often sold as *Oil of Marjoram*, which it resembles.

INJECTED LOBULES OF THYMUS OF A CAT.
a. Cortex. *b*. Medulla. *c*. Blood-vessels. *d*. Septum of connective tissue. (*From Stirling*.)

Thyro-. See *Thyreo-*, the more correct form.



Thyreo- (*thi'-re-o-*) [*θυρεός*, a shield, and hence, from similarity of shape and function, the thyreoid gland or cartilage]. A prefix signifying relationship to the thyreoid gland. **T.-arytenoid**, pertaining conjointly to the thyreoid and arytenoid cartilages. Also applied to a muscle. **T.-epiglottideus**. See *Muscles, Table of*. **T.-hyoid**, pertaining conjointly to the thyreoid cartilage and the hyoid bone. Also, the name of a muscle.

Thyreoadenitis (*thi-re-o-ad-en-i'-tis*) [*θυρεός*, shield; *ἀδήν*, gland; *ιτις*, inflammation]. Inflammation of the thyreoid gland.

Thyreocele (*thi'-re-o-sēl*) [*θυρεός*, thyreoid; *κηλή*, a tumor]. A tumor affecting the thyreoid gland. Goiter.

Thyreo-cricotomy (*thi-re-o-kri-kot'-o-me*) [*θυρεός*, thyreoid; *cricotomy*]. Tracheotomy performed through the crico-thyreoid membrane alone.

Thyreoid (*thi'-re-oid*) [*θυρεός*, shield; *εἶδος*, form]. 1. Shield-shaped. 2. Pertaining to the thyreoid gland. 3. The lobes called "kernels" or "glands" in myxedema. **T. Axis**. See *Arteries, Table of*. **T. Body**. See *T. Gland*. **T. Cartilage**, the largest of the laryngeal cartilages, united at an angle in front called the *pomum adami*. **T.-extract**, a glycerin extract of the sheep's thyreoid gland, used in the treatment of myxedema, cretinism, psoriasis, and other diseases. It may be given dry, in powder, or in liquid form, in quantities corresponding to an eighth or a quarter of an entire thyreoid from the sheep, every day or on alternate days. See *Organotherapy*. **T. Foramen**. See *Foramen, Obturator*. **T. Gland**, a ductless, gland-like body of unknown function, on the anterior aspect of the upper part of the trachea, consisting of two lateral lobes, one upon either side, connected centrally by an isthmus. See *Cachexia* and *Myxedema*. **T. therapy**, the treatment of disease by the administration of thyreoid-extract. See *Organotherapy*.

VIEW OF THYREOID BODY.
1. Thyreoid isthmus. 2. Median portion of crico-thyreoid membrane. 3. Crico-thyreoid muscle. 4. Lateral lobe of thyreoid body.

Thyreoidectomy (*thi-re-oi-dek'-to-me*) [*θυρεός*, shield *ἐκτομή*, excision]. Excision of the thyreoïd gland.

Thyreoidin (*thi-re-oi'-din*) [*θυρεός*, shield; *εἶδος*, like]. The extract of thyreoid gland. See *Organotherapy*.

Thyreoiditis (*thi-re-oi-di'-tis*) [*θυρεός*, shield; *ιτις*, inflammation]. Inflammation of the thyreoid gland.

Thyreoidotomy (*thi-re-oi-dot'-o-me*) [*θυρεός*, shield *τομή*, incision]. Incision of the thyreoid gland.

Thyreoitis (*thi-re-o-i'-tis*) [*θυρεός*, shield; *ιτις*, inflammation]. Inflammation of the thyreoid gland.

Thyreoncus (*thi-re-ong'-kus*) [*θυρεός*, shield; *ὄγκος*, tumor]. Same as *Thyreocele*.

Thyreo-œsophageus (*thi-re-o-e-sof-aj-e'-us*) [*θυρεός*, shield; *οἰσοφάγος*, esophagus]. Muscular fibers passing between the esophagus and the thyreoid cartilage.

Thyreopalatine (*thi-rē-o-pal'-at-in*) [*θυρεός*, thyreoid; *palatine*]. Pertaining to the thyreoid gland and the palate. **T. Muscle**, the palato-pharyngeus. See *Muscles, Table of*.

Thyreophraxia (*thi-re-o-fraks'-e-ah*). Synonym of *Goiter*.

Thyreophyma (*thi-re-o-fi'-mah*) [*θυρεός*, shield; *φῦμα*, a tumor]. Enlargement of the thyreoid gland.

Thyreoprotein (*thi-re-o-pro'-te-in*) [*θυρεός*, shield; *πρῶτος*, first]. An albumin isolated by Bubnoff from the thyreoid gland.

Thyreotomy (*thi-re-ot'-o-me*). See *Thyreoidotomy*.

Thyroid (*thi'-roid*). See *Thyreoid*, the preferable form.

Thyrse (*thurz*) [*θύρσος*, a stalk, stem]. In biology, a compact panicle like that of the grape, lilac, or horse-chestnut.

Thyrsiform (*thur'-sif-orm*) [*θύρσος*, a stalk; *forma*, form]. Having the form of a thyrse.

Thyrsoid (*thur'-soid*) [*θύρσος*, stalk; *εἶδος*, form]. Having the form of a thyrse.

TIBIA AND FIBULA, ANTERIO VIEW.
1. Shaft of tibia. 2. Interna tuberosity. 3. External tu berosity. 4. Spine. 5. Tub cle. 6. Crest. 7. Interior e tremity. 8. Internal malle lus. 9. Shaft of fibula. 1 Superior extremity. 11. In ferior extremity and exte nal malleolus.

Tibia (*tib'-e-ah*) [L., shin; also, flute or pipe]. The larger of the two bones of the leg, commonly called the shin-bone, articulating with the femur, fibula, and astragalus.

Tibiad (*tib'-e-ad*) [*tibia*, tibia]. Toward the tibial aspect.

Tibial (*tib'-e-al*) [*tibialis*, tibiale; *tibia*, tibia]. Pertaining or belonging to the tibia. **T. Artery.** See *Arteries, Table of.* **T. Muscle.** See *Muscles, Table of.* **T. Nerve.** See *Nerves, Table of.*

Tibiale (*tib-e-a'-le*) [*tibia*, tibia]. One of the bones of the tarsus.

Tibien (*tib'-e-en*) [*tibia*, tibia]. Belonging to the tibia in itself.

Tibio-calcanean (*tib-e-o-kal-ka-ne'-an*) [*tibia*, tibia; *calcaneum*, the heel-bone]. Pertaining to the tibia and the calcaneus.

Tibio-femoral (*tib-e-o-fem'-o-ral*) [*tibia*, tibia; *femur*, femur]. Pertaining to the tibia and the femur. **T. Amputation,** removal of the leg at the knee-joint.

Tibio-fibular (*tib-e-o-fib'-u-lar*) [*tibia*, tibia; *fibula*, fibula]. Pertaining to the tibia and the fibula.

Tibio-peroneal (*tib-e-o-per-o-ne'-al*). Same as *Tibiofibular.*

Tibio-tarsal (*tib-e-o-tar'-sal*) [*tibia*, tibia; ταρσός, tarsus]. Pertaining to both the tibia and the tarsus. **T. Amputation,** removal of the foot at the ankle-joint.

Tibiotarsus (*tib-e-o-tar'-sus*) [*tibia*, tibia; ταρσός, tarsus]. In biology, the tibia.

Tic (*tik*) [Fr., a twitching, a vicious habit]. A twitching, especially of the facial muscles. **T. douloureux** [Fr., "painful twitch"]. Neuralgia of one or more branches of the fifth nerve. The term has been applied to painless, spasmodic twitchings or distortions of muscles supplied by the seventh nerve. These affections have been called *antalgia dolorosa, dolor crucians faciei, neuralgia faciei, prosopalgia trismus dolorificus,* and *trismus maxillaris.* **T. non-douloureux** (*of Trousseau*). Synonym of *Myoclonus.* **T. rotatoire,** or **T. giratoire,** *spasmodic torticollis, spinal accessory spasm;* a spasm of certain muscles by which the head and neck are forcibly rotated to one side or from one side to the other.

Tick (*tik*) [ME., *tike*, tick]. A name applied indiscriminately to several species of acarids; also, to various parasitic insects of low type, some of which occasionally attach themselves to man. See *Parasites* (*Animal*), *Table of.* **T., Lone-star.** See *Argas americanus* in *Parasites* (*Animal*), *Table of.*

Tickle (*tik'-l*) [ME., *tiklen*, to touch lightly]. To cause a spasmodic muscular contraction, with a sense of peculiar distress, by a slight irritation of peripheral nerve-fibers of the skin. See *Titillatio.*

Ticklishness (*tik'-lish-nes*) [ME., *tiklen*, to touch lightly]. Proneness to muscular contraction, with a sense of peculiar distress, due to slight irritation of the skin; its exercise may or may not be accompanied by involuntary laughter.

Ticorea (*ti-ko'-re-ah*) [from the native Guiana name]. A genus of rutaceous S. American plants. The bark of **T. febrifuga** is prized in fevers; other species also are medicinal. Unof.

Ticuna Poison (*ti-ku'-nah*) [S. Amer.]. A powerfully convulsant arrow-poison of S. American origin and of unknown derivation. It probably contains picrotoxin.

Tidal Air (*ti'-dal ār*). See *Air.*

Tide (*tid*) [ME., *tide*, tide]. A definite period of time. **T., Acid,** a transient condition of increased acidity of the urine, sometimes seen after fasting. **T., Alkaline,** the transient condition of alkalinity of the urine, occurring during digestion, when by reason of the determination of acid to the stomach there is a diminution of the acid salts secreted by the kidney.

Tidy's Method. A method of estimating the quantity of organic matter present in water. It is done by means of the following solutions: 1. Dilute H_2SO_4 (1 part of pure H_2SO_4 with 3 parts of distilled water). 2. Solution of potassium permanganate, 0.286 gram per liter, 10 c.c.=.714 milligram of available oxygen. 3. Solution of potassium iodid, free from iodate, 1 part in 10 of water. 4. Sodium thiosulphate (hyposulphite), 0.77 gram in 1 liter of distilled water. 5. Starch-solution carefully prepared, about 1½ gram in 100 c.c. of water.

Tigella (*ti-jel'-ah*) [L.]. Same as *Tigelle.*

Tigellate (*tij'-el-āt*) [*tigella*, a stalk]. In biology, having or bearing a tigelle.

Tigelle (*ti-jel'*) [*tigella*, a tigella]. In biology, the radicle or caulicle.

Tigellus (*ti-jel'-us*). Same as *Tigelle.*

Tiglium (*tig'-le-um*). See *Croton.* **Tiglii, Oleum.** *Croton-oil.* The fixed oil of the seed of *Croton tiglium*, native to India. Externally it is a powerful irritant, producing pustular eruptions. It is useful as a counter-irritant in various chronic inflammatory conditions, *e.g.*, ovaritis, bronchitis, rheumatism, glandular swellings, etc. Internally, it is a drastic, hydragogue cathartic; its use is indicated when prompt evacuation of the bowels is required. Dose ♏½-ij. **Linimentum crotonis** (B.P.), a counter-irritant for sprains and in muscular rheumatism.

Til (*til*) [Hind.]. The plant *Sesamum*, *q. v.*, and its seed.

Tilia (*til'-e-ah*) [L.]. A genus of exogenous trees—linn, linden, or basswood. **T. americana,** a N. American species; a mucilage from its inner bark is said to be a good application for burns. **T. europœa** affords flowers used in dyspepsia and hysteria. Unof.

Tillandsia (*til-and''-se-ah*) [after *Tillands*, a Swedish botanist]. A genus of bromeliaceous plants, of some 220 species, mostly epiphytic. **T. usneoides,** growing in the Southern United States and Central America, called Spanish moss, is astringent, and is used as a cure for piles. Unof.

Tilletia (*til-e'-she-ah*) [L.]. A genus of ustilagineous fungi. See *Smut.*

Tilmus (*til'-mus*) [τιλμός, a pulling]. Carphologia, or floccitation; the picking of the bedclothes by a delirious patient.

Timbre (*tam'-ber*) [Fr.; Ger., *Klang*]. The peculiar quality of a tone, other than pitch and intensity, that makes it distinctive. It depends upon the overtones of the vibrating body.

Time (*tim*) [ME., *time*, time]. The duration of an event or phenomenon. **T., Inertia,** in the stimulation of a muscle or sense-organ, the latent time required to overcome the inertia of the muscle or organ after the reception of the stimulus through the nerve. **T., Reaction,** that required for the conduction of a sensory impulse to the center, combined with that of the duration of the perception, of the direction of attention (apperception), of the voluntary impulse, and of the return of a motor impulse to the muscles, with their consequent activity. The *reaction-time* varies according to the part and sense, etc., stimulated. Dolley and Cattell found, by experiments upon themselves, that the sensory reactions of electric stimuli were the shortest when the stimulus was applied to the upper arm and the movement made with the hand. They were about ⅛ or ⅙ second. See, also, *Dilemma.* **T., Recogition,** the time required for the recognition of the kind of stimulus after its application. **T.-sense,** the perception of the lapse of time.

Tin (*tin*) [ME., *tin*, tin]. Stannum. Sn = 118; quantivalence II, IV. A silvery-white metallic element

known from the remotest antiquity, harder than lead and very malleable. When exposed to the air it becomes superficially oxidized. Tin is a constituent of a number of alloys: bronze, bell-metal, pewter, solder, gun-metal, britannia, speculum-metal, etc. See *Elements, Table of.* **T.-amalgam,** tin 3 parts and mercury 1 part. It is used for filling teeth and as a vermifuge. **T.-block,** a thin plate of iron coated with tin. **T. Chlorid,** stannous chlorid, a disinfectant. **T.-foil,** tin in thin sheets, or layers; used in pharmacy, chiefly as a material for wrapping various drugs. **T., Powdered,** *Pulvis Stanni;* formerly used as an anthelmintic. All unof.

Tinagmus (*tin-ag'-mus*) [τιναγμός; τινάσσειν, to shake]. A concussion. See *Rectal Tenesmus.*

Tinca (*tin'-kah*) [L.]. A tench; a small fish.

Tincæ, Os. The tench's mouth; an old name for the os uteri.

Tincal (*ting'-kal*) [Malay, *tingkal*]. An oriental name for crude borax.

Tinction (*tingk'-shun*) [*tingere*, to dye]. A staining material. A tint. The process of staining.

Tinctorial (*tingk-to'-re-al*) [*tingere, p.p., tinctus*, to dye]. Pertaining to staining or dyeing.

Tincturation (*tingk-tu-ra'-shun*) [*tinctura*, tincture]. The preparation of a tincture; the treatment of a substance in such a way as to make a tincture from it.

Tincture, Tinctura (*tingk'-tūr, tingk-tu'-rah*)[L.: *gen., Tincturæ; tingere*, to tinge]. A tincture. In pharmacy, an alcoholic solution of the medicinal principles of a drug, and, excepting the tincture of iodin, of non-volatile bases. The strength of tinctures varies from $\frac{4}{10}$ per cent. to 65 per cent. of the active principles of the drug. There are 72 official *tincturæ*, besides 31 in the National Formulary. **T. amara.** See *Bitter Tincture.* **T., Ammoniated,** a solution of a medicinal substance in spirit of ammonia. **T. antacrida.** See *Guaiac-mixture, Fenner's.* **T. capsici et myrrhæ.** (N. F.) Same as *Hot Drops.* **T., Ethereal,** the solution of a drug in ethereal spirit. **T., Huxham's.** See *T. cinchonæ composita.* **T., Warburg's.** See *Warburg's Tincture.*

Tinder, German. See *Amadon.*

Tinea (*tin'-e-ah*) [*tinea*, a moth-worm]. A generic term applied to a class of skin-diseases caused by the presence of filamentous fungi. **T. amiantacea.** Synonym of *Seborrhea.* **T. asbestina.** Synonym of *Seborrhea.* **T. axillaris,** ringworm of the axilla. **T. barbæ.** Same as *T. sycosis.* **T. ciliorum.** Same as *Eczema tarsi.* **T. circinata,** *T. corporis; Herpes circinatus;* ringworm of parts devoid of hair. It is of frequent occurrence in children with ringworm of the scalp, but is seen especially in adults. The patches are most commonly situated on the neck, face, and hands, but may occur anywhere. They are at first sharply defined, circular, slightly raised, pinkish, and covered with fine gray scales. They form rings and gyrate patches. Itching is seldom marked. **T. corporis.** See *T. circinata.* **T. cruris,** a variety of ringworm occurring upon the inner surface of the thighs, and accompanied by a considerable degree of inflammation. **T. decalvans.** See *Alopecia areata.* **T. favosa.** See *Favus.* **T. imbricata,** *Tokelau Ringworm; Bowditch Island Ringworm; Le Pita; Gune; Cascadöe; Herpes desquamans;* a tropical, vegetable-parasitic, contagious disease, characterized by the formation of patches of concentric, scaly rings. It attacks any part of the body except the head. The scales vary in size up to half an inch square and are free at their edges, which are slightly curled, or in old cases large, thick, and horny. Intense itching is the only other symptom. **T. kerion,** a suppurative form of *T. tonsurans.* **T. lupinosa.** Synonym of *Favus.* **T. nodosa,** *Paxton's Disease;* a nodose condition of the hair of the moustache, accompanied by thickening, roughness, and some fragility. **T. sycosis,** *Mentagra parasitica; Sycosis parasitica; Barbers' Itch;* ringworm of the beard; a common affection the result of the irritating effect of tricophyton upon the follicles of the hairy portions of the face. It consists of circular, scaly, itchy patches or rings in the beard, very rarely on the upper lip, extending at the periphery and coalescing to form gyrate areas. If allowed to go on a pustular folliculitis is produced. **T. tarsi.** See *Eczema palpebrarum.* **T. tondens.** Synonym of *T. tonsurans.* **T. tonsurans,** *Herpes tonsurans;* ringworm of the scalp, a common and troublesome disease among children. It appears as single or multiple, circular or oval, irregularly distributed, reddish or grayish, scurfy spots on the scalp, attended with slight itching. A slight vesication may be present at the spreading edge. The hairs over the spots are scanty, lusterless, stumpy, swollen at the root, with fringed or twisted ends, and are often pigmented. Gradually these patches coalesce to form irregular patches over the scalp. In some cases smooth, bald, shining white patches are produced (*bald ringworm*). The affection is a chronic one. **T. trichophytina,** *Ringworm;* a contagious disease of the skin due to the presence of a vegetable parasite. **T. vera.** Synonym of *Favus.* **T. versicolor,** *Pityriasis versicolor;* a common disease of the skin due to the presence of a vegetable parasite (*microsporon furfur*). It is characterized by the existence of fawn-colored or brown, slightly scaly patches, usually confined to the trunk. It is essentially a disease of middle life (between fifteen and forty-five years), runs a chronic course, and produces slight or no subjective symptoms. The favorite seats of the disease are the front of the chest, the abdomen, and the interscapular region. The lesions consist, at first, of small, circular, discrete spots, which soon coalesce to cover extensive, irregular areas, or even the whole trunk. These patches are sharply defined, and their surface is finely scaly. They may become inflamed.

Tingible (*tinj'-ib-l*) [*tingere*, to tinge]. That which may be tinged; stainable.

Tingle (*ting'-gl*) [ME., *tinglen*, to tingle]. A pricking or stinging sensation; the feeling of a slight, sharp, and sudden thrill, as of pain.

Tingling (*ting'-gling*). See *Pins* and *Needles.*

Tinker's Weed. See *Triosteum.*

Tinkling (*tingk'-ling*) [ME., *tinklen*, to tinkle]. A sharp sound, like that caused by striking one piece of metal lightly by another. **T., Metallic,** an auscultatory chinking sound, heard mainly in pneumothorax.

Tinnitus (*tin-i'-tus* or *tin'-it-us*) [*tinnire*, to tinkle]. Any subjective tinkling or ringing sound. **T. aurium,** the subjective ringing, roaring, or hissing sound heard in the ears in various affections of the tympanum and internal ear, and also after the administration of certain drugs in large doses, notably quinin. **T., Telephone,** a professional neurosis or abnormal nervous condition of the auditory apparatus, believed to be caused by the continual use of the telephone.

Tip [ME., *tip*, tip]. The point or summit of anything. **T.-foot,** talipes equinus; a variety of club-foot.

Tire (*tīr*) [ME., *tiren*, to tire]. A sense of weariness and exhaustion; fag.

Tire-balle (*tēr-bal'*) [Fr.]. An instrument for extracting bullets from a part.

Tire-fond (*tēr-fon(g)*) [Fr.]. An instrument for penetrating a cavity or tissue, transfixing and withdrawing foreign bodies, and usually made in the form of a gimlet.

Tisane (*te-zahn'*) [see *Ptisan*]. Any decoction or beverage having slight curative or restorative qualities.

Tissue (*tish'-u*) [ME., *tissue*, tissue]. Any web-like structure. Applied generally to the organic elements of a part or organ. "In the widest sense of the term, every aggregate of cells which obeys a common law of growth (usually, however, not uniform in its action) may be termed a tissue." "The term tissue may be applied *par excellence* to aggregations of similar cells, which, without any well-defined external form, consist, in whatever direction the section be made, of numbers of cells." **T., Adenoid,** or **Lymphoid,** a modified form of retiform connective tissue in which the reticular meshes contain lymphoid cells, which closely resemble pale blood-corpuscles or lymph-corpuscles, but have a larger nucleus and less protoplasm. This tissue composes the greater part of the lymphatic glands, and is found in the spleen, the tonsils, and the alimentary mucosa. **T., Adipose,** fatty tissue; it consists of numerous nucleated vesicles of an average diameter of $\frac{1}{500}$ of an inch, which are composed of oily matter inclosed in a delicate, structureless membrane, and are lodged in the meshes of the areolar tissue, which, with the blood-vessels, serve to bind the vesicles or fat-cells into round or irregular masses visible to the naked eye. Adipose tissue is copiously supplied with blood-vessels and lymphatics, but no nerves have been seen to terminate therein. This tissue is distributed very generally throughout the body where areolar tissue is found, but is absent from the subcutaneous tissue of the eyelids, the penis and scrotum, the nymphæ, and the cavity of the cranium. **T., Animal,** a general name for any of the textures which form the elementary structures of the body, and of which there are four classes: *Epithelial* tissues, *Connective* tissues, *Muscular* tissues, and *Nervous* tissues. **T., Areolar,** a form of fibrous connective tissue which consists of delicate, soft, elastic threads or fibers interlacing in every direction, and quite colorless, like spun glass. These are intermixed with fine, transparent films, leaving interstices or areolæ between them. It is one of the most generally distributed of the tissues, and is continuous throughout the body. **T., Basement,** the tissue of the basement-membrane. **T., Cancellous,** the spongy tissue of bones. **T., Cartilaginous.** See *Cartilage*. **T., Cellular,** texture composed of rounded (or dodecahedral) cells. **T., Conducting,** in biology, the inner tissue of the stigma and style of a pistil. **T., Connective,** a general term for all those tissues of the body that support and connect the tissues of the frame. They are divided into three groups: fibrous connective tissue, cartilage, and bone. The fibrous connective tissue is soft, while cartilage and bone are hard and dense. All are derived from the mesoderm. **T., Corneous,** tissue found in the nails, hair, epidermis, etc. **T., Dental.** See *Dentine*. **T., Embryonal Connective.** See *T., Mucoid*. **T., Endothelial,** the endothelia of the body. **T., Epithelial,** the epithelia of the body. See *Epithelium*. **T., Erectile,** tissue of a spongy nature, which is expanded when turgid with blood or other fluid. **T., Fibro-cellular,** tissue in the form of long fibers. **T., Fibrous Connective,** there are three varieties: white fibrous, yellow elastic, and areolar, the variety depending upon the character of the fibers. The fibers are imbedded in a matrix or a soft, homogeneous material that contains mucin. The matrix is clouded by acetic acid, and when treated with nitrate of silver and exposed to the light takes a brownish stain. **T., Gelatinous,** a variety of connective tissue, very abundant in *Medusæ* and *Ctenophoræ*. It is secreted by the epithelium, and contains many migrated cells. **T., Germinal,** the tissue that gives rise to the ova and the spermatozoids. **T., Granulation.** See *Granulation Tissue*. **T., Inflammatory,** tissue formed during inflammation. **T., Interstitial Connective.** See *T., Areolar*. **T., Mucoid, Mucous,** or **Gelatinous,** connective tissue such as is present in the umbilical cord of the fetus. **T., Muscular.** See *Muscle*. **T., Nervous.** See *Nerve*. **T., Osseous.** See *Bone*. **T., Osteogenic.** See *Bone*. **T., Parenchymal,** the areolar tissues that accompany vessels and nerves into the interior of organs and glands, giving them protection. **T., Pitted.** See *Bothrenchyma; Taphrenchyma*. **T., Simple,** that having but one or two structural elements, *e. g.* blood, lymph, epithelium, connective tissue of cartilage and bone, and nervous and muscular tissues. **T., Tubular,** or **Vascular,** tissue in the form of long, cylindric tubes. **T., Vegetable,** a term used to distinguish the web-like substance which composes vegetable structure. **T., White Fibrous,** a form of fibrous, connective tissue which is made up of fine, inelastic, transparent, homogeneous filaments, about $\frac{1}{5000}$ to $\frac{1}{2500}$ of an inch in thickness. These are usually united in bundles and lamina by the matrix and appear as white threads or films. White, fibrous tissue forms the greater part of ligaments, tendons, fascia or sheaths of muscles, periosteum, etc. **T., Woody,** tissue composing the woody fibers of plants. **T., Yellow Elastic,** tissue of a yellowish color and possessing great elasticity, predominating in the ligamentum subflava, vocal bands, the inner coats of the blood-vessels, and the longitudinal coats of the trachea and bronchi. Viewed with the microscope, it is seen to consist of straight, well-defined, homogeneous, highly-refracting, elastic fibers, and, especially at the broken ends, having a decided tendency to curl up.

Tit [ME., *tit*, tit]. The nipple. See *Teat*.

Titanium (*tit-a'-ne-um*) [Τιτάν, Titan]. A metal having a certain relationship to iron, chromium, and tin. It is extremely infusible and will scratch glass. Symbol Ti, at. wt. 48.1. Its medicinal properties are not well understood. See *Elements, Table of*.

Titillation (*tit-il-a'-shun*) [*titillatio; titillare*, to tickle]. The act of tickling; a momentary or transient excitation.

Titration (*tit-ra'-shun*) [Fr., *titre*, standard of fineness]. Volumetric analysis by the aid of standard solutions.

Titubating (*tit'-u-ba-ting*) [*titubare*, to stagger]. A term applied to the gently swaying ataxia of cerebellar disease and posterior spinal sclerosis.

Titubation (*tit-u-ba'-shun*) [*titubatio; tibubare*, to stagger]. 1. The staggering gait and incoördination of motion accompanying certain diseases of the spine and cerebellum; also, the staggering gait of the drunkard. 2. Restlessness, or inquietude. 3. In biology, Dujardin's name for *pedesis*, more commonly known as Brownian motion, or molecular motion.

Tizwin (*tiz'-win*) [Am. Ind.]. An intoxicating drink made by the Apaches and other Indians from some species of yucca.

Tlalsahuate (*tlal-sa-hwa'-te*) [Mex. Ind.]. See *Tetranychus tlalsahuate*, Lemaire, under *Parasites* (*Animal*), *Table of*.

Toad (*tōd*) [ME., *tode*, toad]. A tailless, terrestrial batrachian or amphibian. **T.-flax.** See *Antirrhinum linaria* and *Linaria*.

To-and-fro Sound. See *Auscultatory Sounds*.

Toast (*tōst*) [ME., *tosten*, to toast]. Bread browned by the fire. **T.-water,** water in which toasted bread has been steeped; it is used as a beverage by invalids.

Tobacco (*to-bak'-o*) [Sp., *tabaco*, tobacco]. See *Taba-*

cum. **T.-bag Suture.** See *Stoltz's Operation* in *Table of Operations*. **T.-dyspepsia.** See *Dyspepsia*. **T.-habit,** a term employed to designate the custom of using tobacco in any form; it is also used to indicate overindulgence in tobacco. **T.-heart,** functional heart-disorder due to the misuse or excessive use of tobacco. **T.-poisoning.** See *Nicotinism*. **T.-pouch Operation.** Same as *Stoltz's Operation*.

Tobin's Tubes. A method of ventilation of rooms by the introduction of air through tubes placed in the walls. See *Ventilation*.

Tobold's Apparatus. An illuminating apparatus with a movable reflector for use with the laryngoscope.

Tocarexis (*tok-ar-eks'-is*) [τόκος, labor; ἀρηξις, help]. Assistance rendered to a woman in child-bed.

Tocodynamometer (*tok-o-di-nam-om'-et-er*) [τόκος, labor; δύναμις, power; μέτρον, measure]. See *Tokodynamometer*.

Tocograph (*tok'-o-graf*). See *Tokograph*.

Tocology (*tok-ol'-o-je*) [τόκος, childbirth; λόγος, science]. The science of obstetrics.

Tocometer (*tok-om'-et-er*). See *Tocodynamometer*.

Toddalia (*tod-a'-le-ah*) [Malabar]. A genus of rutaceous plants. **T. aculeata,** of S. Asia, is a useful aromatic stimulant and tonic. Unof.

Toddy (*tod'-e*) [Hind., *tadi*, a palm tree]. The fermented juice of the cocoa-nut palm, obtained by incision of the palm, and collected in pots hung to the tree under the cuts. It is then fermented and distilled. See *Punch*.

Toe (*to*) [ME., *to*, toe]. A finger or digit of the foot. **T.-drop,** inability to lift the toes, or the anterior part of the foot, due to a local paralysis, usually from peripheral neuritis. **T., Great,** the innermost and largest of the toes. **Ts., Numbering of.** See *Fingers and Toes, Numbering of*. **T.-reflex.** See *Reflexes, Table of*.

Toilet (*toi'-let*) [OF., *toilette*, a cloth]. In surgery, the cleansing, washing, and dressing that follows an operation, especially of the abdominal cavity.

Tokelau (*to'-kel-o*) [native name]. A cutaneous disease peculiar to Oceanica, the Fiji Islands, and the Society Islands. It is due to a parasitic fungus, and is characterized by scaliness of the skin, to which the early navigators, Dampier, Dentracastaux, Marsden, Cook, Wielhies, etc., refer in speaking of "*des hommes poissons*." **T. Ringworm.** See *Tinea imbricata*.

Tokodynamometer (*tok-o-di-nam-om'-et-er*) [τόκος, birth; *dynamometer*]. An instrument for measuring the force of the expulsive efforts in childbirth.

Tokograph (*tok'-o-graf*) [τόκος, birth; γράφειν, to record]. A recording tokodynamometer.

Tokology (*tok-ol'-o-je*). See *Tocology*.

Tolane (*to'-lān*), $C_{14}H_{10}$. A substance produced from boiling stilbene bromid with alcoholic potash. It is easily soluble in alcohol and ether, and consists of large crystals, melting at 60° C.

Tolerance (*tol'-er-ans*) [*tolerantia; tolerare*, to bear]. The capacity of a patient to withstand certain drugs or certain doses of drugs without injurious consequences, particularly when acquired by a continued use of the drug.

Tolerant (*tol'-er-ant*) [*tolerare*, to bear]. Withstanding the action of a medicine without injury.

Tolu (*to-lu'*). See *Balsam*.

Toluene (*tol'-u-ēn*) [*Tolu*], C_7H_8. Methyl-benzene. See *Balsam of Tolutan*. A hydrocarbon obtained from coal-tar and also produced in the dry distillation of tolu-balsam and many resins. It is very similar to benzene, is fluid at ordinary temperatures, boils at 110.3° C., and has a specific gravity at 0° of 0.882. It is employed in the production of nitrotoluene, toluidin, benzylchlorid, benzalchlorid, and benzaldehyd.

Toluidin (*tol-u'-id-in*) [*Tolu*], $C_7H_7.NH_2$. A methylated homologue of anilin, prepared by heating dimethylanilin to 300° C.

Toluol (*tol'-u-ol*). Same as *Toluene*.

Tolutan (*tol'-u-tan*). See *Balsam*.

Toluylene (*tol-u'-il-ēn*). See *Stilbene*. **T.-blue.** See *Pigments, Conspectus of*. **T.-red,** $C_{15}H_{16}N_4$, *dimethyl diamidotoluphenazin;* a substance that crystallizes in orange-red needles. It is applied in dyeing under the name *Neutral Red*. See *Pigments, Conspectus of*.

Tolysal (*tol'-is-al*), $C_{12}H_{14}N_2O.C_7H_6O_3$. Tolyl methylpyrazolon salicylate; it occurs in colorless crystals that melt between 101° and 102° C. It is scarcely soluble in water, but readily soluble in alcohol.

Tomato (*to-ma'-to*, or *to-mah'-to*) [Sp., *tomate*]. The ripe fruit of the common tomato, *Lycopersicum esculentum*. It is claimed to be useful in canker of the mouth, nurse's sore-mouth, etc. Dose of the fluid extract ʒss–j. Unof.

Tomentose, Tomentous (*to-men'-tōz, to-men'-tus*) [*tomentum*, a stuffing of wool, hair, feathers]. In biology, applied to surfaces that are covered with matted hairs.

Tomentum (*to-men'-tum*) [L.]. A lock of wool. A flocculent pubescence; specifically applied to the entire surface of the pia; the *tomentum cerebri*. **T. cerebri** the numerous small blood-vessels of the pia penetrating the cortex of the brain. When detached they have a fanciful resemblance to a lock of wool.

Tomes, Fibers of. See *Fibers of Tomes*.

Tomium (*to'-me-um*) [τομος, cutting, sharp: *pl., Tomia*]. In biology, the edge of a bird's beak.

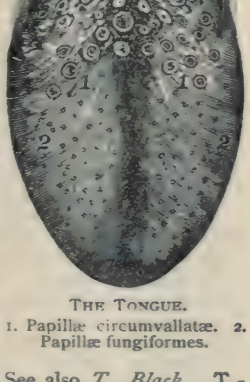
Tommasoli, Bacillus of. See *Bacteria, Synonymy, Table of*.

Tomomania (*tom-o-ma'-ne-ah*) [τομός, cutting; μανία, madness]. An excessive desire or habit on the part of a surgeon to use the knife to perform unnecessary operations.

Tone (*tōn*) [τόνος, from τείνειν, to stretch]. 1. A distinct sound. 2. The normal activity, strength, and excitability of the various organs and functions as observed in a state of health.

Tonga (*tong'-gah*) [native name]. A drug obtained in the Fiji Islands, consisting of a mixture of bark, roots, and leaves of *Raphidophora vitiensis* and *Premna taitensis*. It is of reputed service in neuralgia. Dose of the proprietary fld. ext. ♏xxx–ʒj. Unof.

Tongue (*tung*) [ME., *tonge*, tongue]. The muscular organ in the cavity, and attached to the floor, of the mouth. It is very movable and can be protruded from the mouth. It aids in mastication, in sucking, and in articulation, and contains, in its mucous membrane, the peripheral organs of taste. **T., Adherent,** one which is abnormally attached to the floor of the mouth by folds of mucosa. **T., Base of,** that portion of the dorsum of the tongue which lies between the circumvallate papillæ and the frenum. **T., Bifid,** a tongue the anterior portion of which is cleft in the median line. **T., Black,** a condition in which the dorsal surface of the tongue is covered with a black coating. Various causes have been assigned for this condition. Ciaglinski and Hewelke found a fungus allied to the *Mucor rhizopodipinus*. Mason inclines to the view that it is not parasitic, but is a benign hyperplastic condition. **T.-bone.** See *Hyoid*. **T., Cleft.** Synonym of *T., Bifid*. **T., Coated,** a tongue covered with a coating which is usually white, but often yellowish and dirty. It seems to be related to gas-



intestinal disorders. The coating consists of desquamated epithelium, fungi, bacteria, and debris of these. **T.-compressor**, a clamp for holding down the tongue during dental operations. **T.-depressor**, a spatula

Muscles of Tongue, Superficial Layer.

Stylo-glossus. 2. Inferior fibers of stylo-glossus. 3. Anterior fibers of hyo-glossus or basio-glossus. 4. Posterior fibers. 5. Accessory fibers. 6. Genio-hyoid. 7. Genio-glossus. 8. Inferior lingual. 9. Palato-glossus. 10. Upper portion of pharyngo-glossus (from superior constrictor of pharynx). 11, 11. Inferior portion. 12, 12. Middle constrictor of pharynx. 13. Stylo-pharyngeus. 14. Stylo-hyoid ligament and stylo-hyoid muscle.

for pushing down the tongue during the examination, or in the surgery, of the mouth and throat. **T., Dotted.** See *T., Stippled*. **T., Dry**, one the surface of which is dry. The condition is seen in the low fevers. **T., Earthy**, a tongue upon which dry, rough layers of calcareous matter are deposited. **T., Fern-leaf Pattern**, a name given by Hutchinson to a tongue presenting a well-marked central furrow (midrib) with lateral branches. The condition is due to hypertrophy of the papillæ. **T., Filmy**, one with whitish symmetrical patches on both sides of the tongue, but usually larger on one side than on the other. These are slightly firmer than the surrounding tissue, and consist of rounded, filiform papillæ, which are glued together by a filmy, white material. **T., Furred**, a coated tongue of which the papillæ are prominent, giving the mucous membrane the appearance of a whitish fur. **T., Geographic**, one with localized thickening of the epithelium of the lingual mucous membrane. This is seen in leukoplakia and gives to the surface of the tongue the appearance of a geographic chart. **T., Hairy**, one with a hyperplasia of its papillæ, giving rise to hair-like projections from their tips. See also *T., Black*. **T.-holder.** See *T.-depressor*. **T., Parrot**, a shriveled, dry tongue that cannot be protruded; it is seen especially in typhus fever. **T., Plastered**, a tongue

The Tongue.

1. Papillæ circumvallatæ. 2. Papillæ fungiformes.

covered by an abundant, thick coat. **T., Post-tip of**, that portion of the dorsum of the tongue which extends from the tip for about an inch, and is usually distinguished by a median, linear depression when the tongue is at rest. **T., Pre-base of**, that region of the dorsum of the tongue which lies in advance of the base and is included between the circumvallate papillæ and the end of the linear groove of the post-tip. It is often furnished in the center with an oval clump of coarse papillæ. **T., Shaggy**, a furred tongue of which the papillæ are much elongated. **T., Split**, Synonym of *T., Bifid*. **T., Stippled**, one the papillæ of which are distinct and separate and covered by a whitish patch of epithelium. **T., Strawberry**, a hyperemic tongue of which the fungiform papillæ are very prominent; it is seen especially in scarlet fever. **T.-swallowing**, a condition in which there is an abnormal mobility of the tongue, so that it will slip or fall backward, giving rise to the danger of suffocation. **T.-tie**, a congenital shortening of the frenum of the tongue, interfering with its mobility; ankyloglossia. **T.-tied**, affected with tongue-tie. **T., Tip of**, the hem which unites the two borders. It extends from the anterior end of the tongue only a short distance backward. **T., Triangle**, the triangular or wedge-shaped red arch at the tip of the otherwise coated tongue in typhoid fever. **T., Wooden**, one the seat of actinomycosis.

Tonguelet (*tung'-let*). Same as *Pentastoma*.

Tonic (*ton'-ik*) [τονικός; τόνος, tone]. 1. Invigorating, or strengthening the economy; bracing, or strengthening. 2. Characterized by continuous tension; not clonic. 3. A medicine or agent which promotes nutrition and gives tone to the system. **T. Spasm**, the continued, rigid contraction of a muscle or muscles. **T. Treatment**: 1. Treatment of diseases by tonics, as, *e.g.*, of rheumatism, by iron and remedies of the group of tonics. 2. The continuous treatment of syphilis by the use of the protoiodid of mercury for two or three years. The dose is ⅙ grain after each meal, gradually increased until there are positive evidences of intestinal irritation, when the dose is cut down to the initial one, and that maintained for a time.

Tonicity (*ton-is'-it-e*) [τόνος, tone]. The condition of tissues or organs in regard to tone or tension.

Tonka, or **Tonka Bean** (*tong'-kah*) [*tonca*, the name of the bean in Guiana]. The fragrant seed of *Dipteryx odorata*, a tree of S. America; it abounds in coumarin.

Tonogram (*ton'-o-gram*) [τόνος, tone; γράφειν, to write]. A record made by a tonograph.

Tonograph (*ton'-o-graf*) [τόνος, tension; γράφειν, to write]. A machine for recording the tension of the arterial blood-current.

Tonometer (*ton-om'-et-er*) [τόνος, tone, tension; μέτρον, measure]. An instrument to measure the tension of the eyeball.

Tonomittor (*ton-o-mit'-or*) [τόνος, tone; *mittere*, to send]. An instrument to improve the hearing.

Tonopsychagogia (*ton-o-si-kag-o'-je-ah*) [τόνος, vigor; ψυχή, mind; ἀγωγός, leading]. Restoration of mental vigor.

Tonsil (*ton'-sil*) [*tonsilla*, tonsil]. A small, almond-shaped body, situated one on each side of the fauces, between the anterior and posterior pillars of the soft palate. It is a compound lymphatic gland, consisting of an aggregation of from ten to eighteen lymph-follicles. It is covered by epithelium, which also dips into the depressions or crypts. **T. of Cerebellum.** See *Tonsilla* and *Amygdala*. **T., Faucial.** See *Tonsil*. **T.-guillotine.** See *Guillotine*. **T., Lingual**, an

accumulation of lymphadenoid tissue at the base of the tongue. **T., Luschka's.** See *Luschka.* **T., Palatine.** See *Tonsil.* **T., Pharyngeal,** a mass of lymphadenoid tissue in the pharynx, between the Eustachian tubes; *Luschka's tonsil, q. v.*

Tonsilla (*ton-sil'-ah*) [L.]. One of the five lobes of the hemisphere of the cerebellum, situated on the mesal side of the hemisphere, by the vallicula. Called also *Amygdala.* **T. tubulis gerlachii.** Synonym of *Tonsil, Pharyngeal.*

Tonsillar, Tonsillary (*ton'-sil-ar, ton'-sil-a-re*) [*tonsilla*, tonsil]. Pertaining to a tonsil. **T. Artery.** See *Arteries, Table of.*

Tonsillitic (*ton-sil-it'-ik*) [*tonsilla*, tonsil; ιτις, inflammation]. Pertaining to or affected with tonsillitis.

Tonsillitis (*ton-sil-i'-tis*) [*tonsilla*, tonsil; ιτις, inflammation]. Inflammation of the tonsils. **T., Follicular,** inflammation of the tonsils, with special involvement of the follicles. **T., Herpetic,** a form of inflammation of the mucosa of the palate, tonsils, uvula, and pharynx, characterized by an eruption of herpetic vessels, which soon rupture, leaving little, circular ulcers that coalesce and become covered with a fibrinous exudation. The disease has an acute onset, a continuous fever, and a critical decline; its course is not unlike that of pneumonia. It affects especially those subject to herpes elsewhere, and tends to recur. **T., Lacunar.** Same as *T., Follicular.* **T., Mycotic,** that form due to fungous parasites. **T., Pustular,** one characterized by the formation of pustules, as in smallpox. **T., Suppurative.** Synonym of *Quinsy.*

Tonsillotome (*ton-sil'-o-tōm*) [*tonsilla*, tonsil; τομή, a cutting]. An instrument for abscission of the tonsils.

Tonsillotomy (*ton-sil-ot'-o-me*) [*tonsilla*, tonsil; τομή, a cutting]. Ablation of the tonsils.

Tonsure (*ton'-sūr*) [*tondere*, to clip]. The shaving or removal of the hair from any part.

Tonus (*to'-nus*) [τόνος, tone]. The quality of tension or tonicity of an organ or part.

Toohutia (*too'-hu-she-ah*). Synonym of *Dengue.*

Toot-poison (*toot'-poi-zn*). See *Coriaria.*

Tooth (*tooth*) [ME., *toth*, tooth]. See *Teeth.* **T.-ache,** any pain in or about the teeth. See *Odontalgia.* **T.-ache Tree.** See *Prickly Ash* and *Xanthoxylum fraxineum.* **T.-cough,** reflex cough due to dental irritation. **T.-paste.** See *Dentifrice.* **T.-plugger,** a dental instrument for filling teeth. **T.-pulp.** See *Pulp.* **T.-rash,** a skin-eruption sometimes occurring during dentition; strophulus. **T.-sac,** in the fetus the connective tissue surrounding the germ of a tooth.

Toothed (*toothd*) [ME., *toth*, tooth]. Provided with teeth or indentations; dentate.

Topalgia (*top-al'-je-ah*) [τόπος, place; ἄλγος, pain]. Pain in a circumscribed area not referable to the distribution of any nerve.

Topazine (*to'-paz-in*) [τοπάζιον, the yellow topaz]. In biology, resembling yellow topaz in color and luster, as the ocelli and eyes of certain insects.

Topesthesia (*top-es-the'-ze-ah*) [τόπος, place; αἴσθησις, sense]. Local sensibility to touch.

Toph (*tof*). See *Tophus.*

Tophaceous (*tof-a'-shus*) [τόφος, stone]. Of the nature of tophus; sandy, or gritty.

Tophi (*to'-fi*). Plural of *Tophus.*

Tophus (*to'-fus*) [τόφος, stone]. 1. The hard, stone-like deposit occurring in gout, especially about the knuckles and the cartilages of the ear. It consists of sodium urate. 2. Concretion in the kidneys. 3. The tartar of the teeth.

Tophyperidrosis (*tof-i-per-id-ro'-sis*) [τόπος, place; ὑπέρ, in excess; ἱδρώς, sweat]. Local sweating in excess.

Topic (*top'-ik*). Synonym of *Topicum.*

Topic, Topical (*top'-ik, top'-ik-al*) [τόπος, place]. Local. **T. Remedy,** one applied locally.

Topicum (*top'-ik-um*) [τόπος, place: *pl.*, *Topica*]. Any remedy for local and external application.

Topinard, Angle of. See *Angle.* **T.'s Profile Line.** See *Lines, Table of.*

Topoalgia (*top-o-al'-je-ah*) [τόπος, place; ἄλγος, pain]. Localized pain, common in neurasthenia, often appearing suddenly after strong emotional disturbance, recurring with paroxysmal intensity, not in the distribution of a particular nerve and without appreciable central or local lesion.

Topographic (*top-o-graf'-ik*) [τόπος, place; γράφειν, to write]. Pertaining to the relief-features of a locality. **T. Anatomy,** the study of the comparative locality of the various organs and parts of the body as determined by external landmarks.

Topography (*top-og'-ra-fe*) [τόπος, place; γράφειν, to write]. A description of an area with reference to its relief-features. In anatomy, applied to a study of the regions of the body, or of the brain; regional or topographic anatomy. See *Localization* and *Center.*

Topology (*top-ol'-o-je*) [τόπος, place; λόγος, science]. 1. Topographic anatomy. 2. The relation of the presenting part of the fetus to the pelvic canal.

Toponarcosis (*top-o-nar-kō'-sis*) [τόπος, place; ναρκωσις, a benumbing]. Local insensibility, or anesthesia.

Toponeurosis (*top-o-nu-ro'-sis*) [τόπος, place; νευρον, nerve]. A local neurosis.

Toponomy (*top-on'-o-me*). See *Toponymy.*

Toponymy (*top-on'-im-e*) [τόπος, place; ὄνυμα, name]. Topical terminology; the system of anatomic terms that indicate the direction and position of parts. It is either *intrinsic*, having reference only to the organism, or *extrinsic*, based upon the relation of the organism toward the earth's surface.

Topophobia (*top-o-fo'-be-ah*) [τόπος, place; φόβος, fear]. Morbid dread of places.

Topothermesthesiometer (*top-o-therm-es-the-ze-om'-et-er*) [τόπος, place; θέρμη, heat; αἰσθησις, sensation; μέτρον, measure]. An instrument for estimating local sensitiveness to impressions of heat.

Torcular or Torcular Herophili (*tor'-kū-lar her-off'-i-li*) [the wine-press of Herophilus]. The expanded extremity of the superior longitudinal sinus, placed in a depression on the ental surface of the occipital bone. It receives the blood from the occipital sinus, and from it the lateral sinus of the side to which it is deflected is derived.

Tori (*to'-ri*). Genitive and plural of *Torus.*

Toric (*to'-rik*) [*torus*]. Having the properties of a torus. **T. Lens.** See *Torus.*

Tormentilla (*tor-men-til'-ah*) [L.]. The root of *Potentilla tormentilla*, a mild tonic and astringent. Dose of fld. ext. ɱx–xl. Unof.

Tormentum (*tor-men'-tum*) [L., a "rack"]. An old name for various obstructive disorders of the intestine. **T. intestinorum.** Synonym of *Dysentery.*

Tormina (*tor'-min-ah*) [*pl.* of *tormen*, a rack; pain]. Griping pains in the bowels. **T. alvi,** colic. **T. celsi,** dysentery. **T. intestinorum.** Synonym of *Dysentery.* **T., Post-partum,** the after-pains of parturition.

Torminal, Torminous (*tor'-min-al, tor'-min-us*). Affected with tormina.

Tormodont (*tor'-mo-dont*) [τόρμος, a hole or socket; ὀδούς, tooth]. In biology, having teeth set in sockets.

Tornaria (*tor-na'-re-ah*) [*tornus*, a lathe]. In biology, the name applied to the peculiar larva of the acor-

worm (*Balanoglossus*), which in many ways resembles a young *Bipinnaria*.

Tornwaldt's Disease. See *Thornwaldt's Disease*.

Torose (*to'-rōz*) [*torus*, a bulging, protuberance]. In biology, cylindric, with constrictions and enlargements at intervals.

Torpedinous (*tor-ped'-in-us*) [*torpere*, to be numb]. Benumbing, like a torpedo.

Torpedo (*tor-pe'-do*) [L., *torpedo*, *torpedinis*, a cramp-fish; *torpere*, to be numb]. Numbness; stupor; narcosis. [Rare.]

Torpent (*tor'-pent*) [*torpere*, to be numb]. 1. Incapable of the active performance of a function. 2. A medicine or agent that reduces or subdues any irritative action.

Torpid (*tor'-pid*) [*torpere*, to be numb]. Affected with torpor.

Torpidity (*tor-pid'-it-e*). Synonym of *Torpor*.

Torpor (*tor'-por*) [L., numbness]. A condition of sluggishness, abnormal inactivity, numbness, or deficient sensation. **T. retinæ**, dulled perceptive power of the retina.

Torporific (*tor-por-if'-ik*) [*torpor*, numbness; *facere*, to make]. Causing, or producing, torpor.

Torquate (*tor'-kwāt*) [*torques*, a neck-chain]. In biology, ringed about the neck.

Torques (*tor'-kwēz*) [*torques*, a neck-chain]. In biology, a collar-like marking of the skin, hair or feathers of the neck.

Torrefaction (*tor-e-fak'-shun*). Synonym of *Torrefication*.

Torrefication (*tor-e-fik-a'-shun*) [*torrefacere*, to dry by heat]. Roasting; drying by means of high artificial heat.

Torrefied Bread. Ordinary bread toasted in thin slices until it is almost blackened.

Torrid (*tor'-id*) [*torrere*, to parch]. Hot; burning. **T. Zone**, the climatic zone lying between the isotherms of 70° F., north and south.

Torsion (*tor'-shun*) [*torquere*, to twist]. A twisting; also, the rotation of the eye about the visual axis. **T. of an Artery**, twisting of the free end of an artery to check hemorrhage. **T. of Teeth**, the forcible turning of teeth in their cavities for the purpose of correcting irregularity in position. **T. of the Umbilical Cord**, the spontaneous twisting of the umbilical cord. From eight to ten twists are normal; great torsion usually occurs after the death of the fetus.

Torsoclusion (*tor-sok-lu'-zhun*) [*torquere*, to twist; *cludere*, to close]. A form of acupressure in which the point of the pin is pushed through a portion of tissue parallel with the course of the vessel to be secured, then carried over its anterior surface, and at the same time swept round until brought to a right angle with the artery, when the point is thrust into the soft parts beyond.

Torticollar (*tor-tik-ol'-ar*) [*tortus*, twisted; *collum*, neck]. Affected with wry-neck, or torticollis.

Torticollis (*tor-tik-ol'-is*) [*tortus*, twisted; *collum*, neck]. A congenital or acquired contraction of one or more of the cervical muscles, usually of one side, resulting in an abnormal position of the head—wry-neck. **T., Intermittent.** See *T., Spasmodic*. **T., Spasmodic**, spasmodic contraction of the sterno-cleido-mastoid muscle of one side, causing a drawing of the head toward the opposite side.

Tortulous (*tor'-tu-lus*) [*torta*, a twist]. In biology, twisted, or like a string of beads, moniliform.

Tortuose (*tor'-tu-ōz*) [*tortuosus* winding]. In biology, bent and twisted, as some stems.

Tortuosity (*tor-tu-os'-it-e*) [*tortus*, twisted]. A twisted or devious course, as of a blood-vessel.

Tortuous (*tor'-tu-us*) [*tortus*, twisted]. Twisted, sinuous.

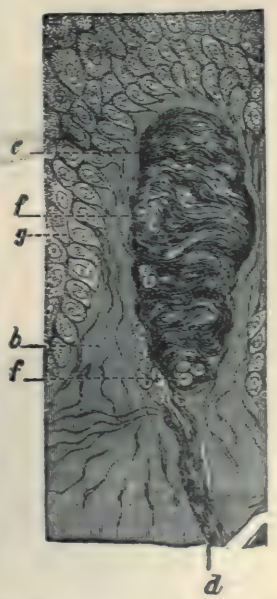
Torula (*tor'-u-lah*) [*torus*, a swelling, protuberance: *pl.*, *Torulæ*]. In biology, a genus of budding fungi (*Blastomycetes*). See *Saccharomyces cerevisiæ*, under *Bacteria*, *Synonymatic Table of*; also, *Yeast*.

Toruliform (*tor'-u-lif-orm*) [*torula*, torula; *forma*, form]. Resembling an organism of the genus *Torula*.

Toruloid (*tor'-u-loid*). Synonym of *Toruliform*.

Torulose (*tor'-u-lōz*) [*torula*, a little swelling, knob]. In biology, knobbed.

Torulous (*tor'-u-lus*). Same as *Torulose*.



Torulus (*tor'-u-lus*) [*torus*, a swelling, protuberance: *pl.*, *Torulī*]. In biology, a knob-like articulation for receiving a spine, antenna or other appendage.

Torus (*tor'-us*) [L.: *gen.* and *pl.*, *Tori*]. 1. A surface having a regular curvature, with two principal meridians of dissimilar curvature at right angles to each other. 2. An elevation or prominence, as of the belly of a muscle. *Torus*, used without qualifying adjective, sometimes designates the tuber cinereum of the brain. **T. frontalis**, a protuberance in the region of the frontal sinuses, at the root of the nose, in the median line and on the external surface of the skull. **T. palatinus**, a protuberance on the surface of the hard palate, marking the point of junction of the intermaxillary and palato-maxillary sutures.

Totem (*to'-tem*) [Algonkin, *otem*, with a prefixed poss. pron. *nt'otem*, my family token]. The word generally given by travelers and interpreters to the family crests of the Red Indians (Lang).

Totemism (*to'-tem-izm*) [Algonkin, *otem*]. The derivation of the family name and crest or badge from some natural object, plant or animal. "The names *totem* and *totemism* have been in use at least since 1792, among writers on the North American tribes; Prof. Max Müller says the word should be, not *totem*, but *ote* or *otem*. Long, an interpreter among Indians, introduced the word *totemism* in 1792." (And. Lang.)

Touch (*tuch*) [Fr., *toucher*]. 1. The tactile sense; the act of judging by the tactile sense; palpation. 2. In obstetrics, digital examination of the female genital organs and adjacent parts through the vagina. **T., Abdominal**, application of the hands to the abdomen for the diagnosis of intra-abdominal conditions. **T., After**, the sensation which persists for a short time after contact with an object has ceased. **T.-corpuscle**, a touch-body; a tactile corpuscle. See under *Tactile*. **T.-**

VERTICAL SECTION OF THE SKIN, PALM OF HAND.

b. Papilla of cutis. *d*. Nerve-fiber of touch-corpuscle. *e*, *f*. Nerve-fiber in touch-corpuscle. *g*. Cells of Malpighian layer. (*From Stirling*.)

Double, combined vaginal and abdominal or vaginal and rectal palpation. **T.-me-not.** See *Noli me tangere* and *Impatiens.* **T., Rectal,** examination made by the finger in the rectum. **T., Royal,** the laying on of the hands by a king, formerly believed to be efficacious in scrofula or kings' evil. **T., Vaginal.** See *Touch* (*2d def.*). **T., Vesical,** examination through the bladder, the urethra having been dilated to admit the finger. The latter can only be done in the female. **T.-wood.** See *Amadou.*

WAGNER'S TOUCH-CORPUSCLE, SKIN OF HAND.
n. Nerve. *a, a.* Terminations of *n.* (*From Stirling.*)

Touching (*tuch'-ing*) [Fr., *toucher,* to touch]. 1. The application of the hand or fingers. *Touching* was formerly practised by the kings of England for the cure of scrofula, hence called *Kings' Evil.* 2. See *Adenochirapsology.*

Tour de Maitre (*toor-de-mātr*) [Fr., "the master's turn"]. A maneuver in passing the catheter in a fat person. The surgeon stands on the right side of the patient and introduces the catheter, with its convexity upward, the shaft lying obliquely across the left thigh of the patient, and as the point enters the bulb, the handle is swept around toward the abdomen, when the beak enters the membranous urethra and is carried into the bladder by depressing the shaft between the patient's thighs. The sound may be introduced into the uterus in an analogous manner, entering the instrument with the convexity upward, and then sweeping the shaft around.

Tourette's (*Gilles de la*) **Disease.** Motor incoördination with echolalia and coprolalia; a convulsive form of *tic.*

Tourniquet (*toor'-nik-et*) [Fr., *tourner,* to turn]. An instrument for controlling the circulation by means of compression. It usually consists of two metallic plates united by a thumb-screw and a strap provided with a pad. The strap is fastened about the part, the pad being placed over the artery to be occluded. The screw is placed diametrically opposite the pad, and the strap is tightened by separating the metallic plates of the screw. **T., Dupuytren's,** one for compressing the abdominal aorta, consisting of a semicircle of metal with a pad at one extremity. **T., Esmarch's,** consists of a stout, elastic rubber band applied above the proximal turn of an elastic bandage passing around the part to be rendered exsanguine. **T., Field,** one consisting of a strap and buckle with a pad to pass over the artery. **T., Horse-shoe,** one shaped like a horse-shoe, to compress (by a screw) only two points, and thus permit venous return. **T., Lip,** one consisting of a U-shaped piece of steel, the arms being provided with plates which are approximated by a central screw. **T., Provisional,** one applied loosely, so that it may be tightened at once upon the recurrence of hemorrhage. **T., Signorini's.** See *T., Horse-shoe.* **T., Skey's,** also a modification of the horse-shoe or Signorini's. **T., Spanish Windlass,** a knotted bandage or handkerchief twisted by a stick and used as a tourniquet. **T., Torcular,** same as *T., Spanish Windlass.*

PETIT'S TOURNIQUET.

Tous-les-mois (*too-la-mwah*) [F., "every month"]. A variety of arrow-root starch prepared from *Canna edulis;* canna-starch.

Toussaint's Theory. A theory as to the cause of immunity conferred by inoculation. After one attack of a disease (*e. g.,* anthrax) the lymphatic glands undergo a hardening of their surrounding envelop, thus rendering them impervious to the after-entrance of infectious agents by this, the usual, portal.

Tow (*to*) [ME., *tow,* tow]. The refuse of flax or hemp; coarse flax; it has a limited use in surgery.

Towel-gourd. See *Luffa.*

Toxa (*toks'-ah*) [*pl.* of *Toxum,* from τοξικόν, poison]. Diseases due to poisons.

Toxæmia (*toks-e'-me-ah*). See *Toxemia.*

Toxalbumin (*toks-al'-bu-min*) [τοξικόν, poison; *albumin,* white of egg]. A proteid substance resembling a ferment rather than a poison. Any one of the poisonous albuminoids which are produced or separated from the albumin of the tissues by the agency of bacteria, and entering the circulation, constitute the cause of the general symptoms of infectious diseases. Toxalbumins have been obtained from cultures of a number of bacteria—among others from those of diphtheria, typhoid fever, cholera, tetanus, glanders, tuberculosis, anthrax, and pneumonia; likewise, also, from cultures of the *staphylococcus pyogenes aureus,* the swine-plague bacillus; from those of certain germs found by Booker in the stools of the summer diarrhea of infants, and from those of two toxicogenic germs isolated by Vaughan from drinking-water. It is possible that poisonous albuminous substances are also produced by animal parasitic organisms. Thus Viron has isolated a toxic proteid from the fluid of hydatid cysts.

Toxanemia (*toks-an-e'-me-ah*) [τοξικόν, poison; ἀ priv.; αἷμα, blood]. Anemia produced by poisons.

Toxemia (*toks-e'-me-ah*) [τοξικόν, poison; αἷμα, blood] A condition of the blood in which it contains poisonous products, either those produced by the body-cells and not properly eliminated, or those due to the growth of microörganisms.

Toxemic (*toks-em'-ik*) [τοξικόν, poison; αἷμα, blood] Pertaining to, affected with, or of the nature of toxemia.

Toxic (*toks'-ik*) [τοξικόν, poison]. Poisonous; due to or associated with, poisoning.

Toxicant (*toks'-ik-ant*) [τοξικόν, poison]. 1. Poisonous or toxic. 2. A poisonous agent.

Toxication (*toks-ik-a'-shun*). Synonym of *Poisoning*.

Toxicemia (*toks-is-e'-me-ah*). Synonym of *Toxemia*.

Toxichematosis (*toks-ik-em-at-o'-sis*) [τοξικόν, poison; αἷμα, blood]. Blood-poisoning.

Toxichemia (*toks-ik-e'-me-ah*). Synonym of *Toxemia*.

Toxicide (*toks'-is-id*) [τοξικόν, poison; *cædere*, to kill]. A remedy or principle that destroys toxic agents.

Toxicity (*toks-is'-it-e*) [τοξικόν, poisonous]. Toxic quality; poisonousness.

Toxicodendric Acid (*toks-ik-o-den'-drik*) [τοξικόν, poison; δένδρον, tree]. A volatile acid found in *Rhus toxicodendron*, and considered its active principle. Locally applied, it acts as a vesicant.

Toxicodendron (*toks-ik-o-den'-dron*). See *Rhus*.

Toxicoderma (*toks-ik-o-der'-mah*) [τοξικόν, poison; δέρμα, skin]. Disease of the skin due to poisonous substances.

Toxicodermatitis (*toks-ik-o-der-mat-i'-tis*). See *Toxicoderma*.

Toxicodermitis (*toks-ik-o-der-mi'-tis*). See *Toxicoderma*.

Toxicogenic (*toks-ik-o-jen'-ik*) [τοξικον, poison; γεννᾶν, to produce]. Giving rise to poisons; producing a toxic substance, as a toxicogenic microörganism.

Toxicohemia (*toks-ik-o-hem'-e-ah*). See *Toxemia*.

Toxicoid (*toks'-ik-oid*) [τοξικόν, poison; εἶδος, like]. Resembling a poison.

Toxicologist (*toks-ik-ol'-o-jist*) [τοξικόν, poison; λόγος, science]. One versed in toxicology.

Toxicology (*toks-ik-ol'-o-je*) [τοξικόν, poison; λόγος, science]. The science of the nature and effects of poisons, their detection, and the treatment of poisoning.

Toxicomania (*toks-ik-o-ma'-ne-ah*) [τοξικόν, poison; μανία, madness]. Morbid desire to take some poison.

Toxicosis (*toks-ik-o'-sis*) [τοξικόν, poison]. A toxic or poisoned state; the state of disease induced by a poisonous principle. Von Jaksch classifies toxicoses as follows: **T., Auto-**, one with clinical symptoms that are caused by the formation of toxic basic products from morbid matter, such as pathologic fluids lodged in certain parts of the system. **T., Exogenic**, one with clinical symptoms induced by the action of toxic bases taken into the system with the food, such as the poison of sausages and cheese. **T., Noso-**, one with clinical symptoms referable to the presence of basic products which are formed in the system (blood, etc.) in disease and eliminated with the urine. **T., Retention**, one with clinical symptoms depending upon the retention of the physiologic bases (*e. g.* uremia).

Toxiferous (*toks-if'-er-us*) [τοξικόν, poison; *ferre*, to bear]. Carrying or conveying poison.

Toxihemia (*toks-e-hem'-e-ah*). Synonym of *Toxemia*.

Toxin, Toxine (*toks'-in*) [τοξικόν, poison]. In biology, any diffusible alkaloidal substance analogous to the vegetable alkaloids. Cf. *Antitoxin*.

Toxinfection (*toks'-in-fek-shun*) [τοξικόν, poison; *inficere*, to infect]. Infection by means of a toxin.

Toxinicide (*toks-in'-is-id*) [τοξικόν, poison; *cædere*, to kill]. Any substance that destroys a toxin.

Toxiphobia (*toks-if-o'-be-ah*) [τοξικόν, poison; φόβος, fear]. Morbid dread of being poisoned.

Toxiphobiac (*toks-if-o'-be-ak*) [τοξικόν, poison; φόβος fear]. A person affected with toxiphobia.

Toxiresin (*toks-ir-ez'-in*) [τοξικόν, poison; *resina*, resin]. A poisonous decomposition-product of digitalis, resulting when the latter is treated with dilute acids or heated to 240° C. It has the characters of a resin.

Toxophylaxin (*tox-o-fi-laks'-in*) [τοξικόν, poison; φύλαξ, a guardian, protector]. In biology, "a defensive proteid produced in the body of an animal which has an acquired immunity for a given infectious disease, and which has the power of destroying the toxic products of the pathogenic bacteria to which the disease is due." (Sternberg.) Cf. *Toxosozin*. See *Phylaxin*.

Toxosozin (*toks-o-so'-zin*) [τοξικόν, poison; σώζειν, save, keep]. In biology, "a defensive proteid found in the body of a normal animal, which has the power of destroying the toxic products of bacterial growth." (Sternberg.) See under *Phylaxin*. Cf. *Toxophylaxin*.

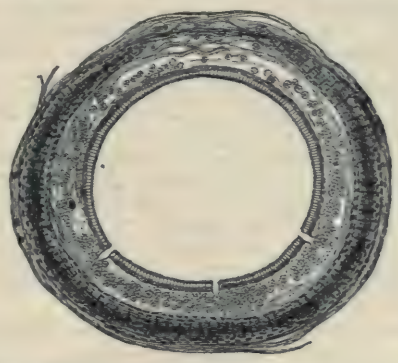
Toynbee's Experiment. The rarefaction of the air of the middle-ear by swallowing, with coincident closure of the mouth and nares. **T.'s Law.** See *Law*.

Trabal (*tra'-bal*) [*trabs*, beam]. Pertaining to the trabs; callosal.

Trabecula (*tra-bek'-u-lah*) [Lat., a small beam: *pl.*, *Trabeculæ*]. Any fibrous process, layer, or cord which goes to make up a framework in an organ or viscus; any medullary or commissural band of cerebral nerve-fibers. Also, the fleshy part of the cardiac columnæ carneæ.

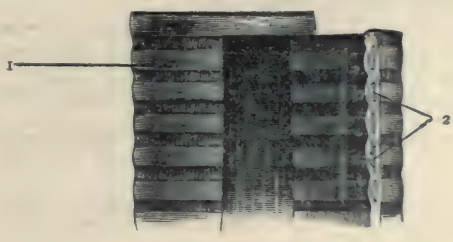
Trabecular (*tra-bek'-u-lar*) [*trabecula*, little beam]. Of the nature of a trabecula. **T. Duct**, a duct whose cavity or lumen is crossed by ligneous threads or bands.

Trabecularism (*tra-bek'-u-lar-izm*) [*trabecula*, little beam]. Arrangement like the beams of a framed building; support by a trabecular structure.



Trabeculate, Trabeculated (*tra-bek'-u-lāt, tra-bek'-u-la-ted*) [*trabecula*, little beam]. Having trabeculæ.

Trabs (*trabz*) [L., "a beam"]. The callosum or corpus callosum; called also *Trabs cerebri*.



Trace (*trās*) [ME., *tracen*, to trace]. 1. A track or mark. 2. A barely recognizable quantity, as a trace of albumin. **T., Primitive.** See *Primitive Trace*.

Tracer (*tra'-ser*) [ME., *tracen*, to follow]. An instrument used in dissection for isolating nerves and vessels by tearing the connective tissue.

Trachea (*tra-ke'-ah*, or *tra'-ke-ah*) [τραχεῖα, a windpipe]. The windpipe. A cartilaginous and mem-

TRANSVERSE SECTION OF TRACHEA OF KITTEN. × 15. (*From Stirling.*)

THE TRACHEA.
1. Trachea. 2. Section through cartilages.

branous cylindric tube extending from the lower part of the larynx to its division into the two bronchi. It is about four and a half inches in length. In biology: (*a*) One of the branched respiratory tubes of an arthropod; these tracheal tubes first appear in *Myriapoda;* (*b*) a plant, vessel, or duct formed by the confluence of serially arranged cells. **T., Book-leaf,** a respiratory organ found in the *Arachnoidea,* and consisting of a sac filled with air, into which there project from the anterior wall numerous leaves arranged like those of a book.

Tracheaectasy (*tra-ke-ah-ek'-tas-e*) [τραχεῖα, trachea; ἔκτασις, dilatation]. Dilatation of the trachea.

Tracheal (*tra'-ke-al*) [τραχεῖα, trachea]. Pertaining to the trachea or windpipe. **T. Catarrh.** See *Tracheitis.* **T. Tugging,** the feeling of a downward tugging movement of the larynx when the thyroid cartilage is pushed upward from without, sometimes observed in aneurysm of the aortic arch.

Trachealgia (*tra-ke-al'-je-ah*) [τραχεῖα, trachea; ἄλγος, pain]. 1. Pain in the trachea. 2. Croup.

Trachealis Muscle (*tra-ke-a'-lis*) [τραχεῖα, trachea]. The intrinsic muscle of the windpipe; it is represented in man by a set of circular or transverse fibers.

Tracheary (*tra'-ke-a-re*) [τραχεῖα, trachea]. Pertaining to the trachea. **T. Tissue,** in biology, a term which includes both tracheids and tracheæ, or ducts.

Tracheid (*tra-ke'-id*) [*trachea,* the windpipe]. In biology, an elongated tubular plant-cell. Applied mainly to one having bordered pits.

Tracheitis (*tra-ke-i'-tis*). See *Trachitis.*

Trachelagra (*tra-kel-a'-grah*) [τράχηλος, neck; ἄγρα, seizure]. Rheumatic pain in the neck.

Trachelalis (*trak-el-a'-lis*) [τράχηλος, neck]. The trachelomastoid muscle.

Trachelectomopexia (*tra-kel-ek-to-mo-peks'-e-ah*) [τράχηλος, neck; ἐκτομή, excision; πῆξις, a fixing]. Partial excision with fixation of the neck of the uterus.

Trachelectomy (*tra-kel-ek'-to-me*) [τράχηλος, neck; ἐκτομή, excision]. Excision of the uterine cervix.

Trachelian (*tra-ke'-le-an*) [τράχηλος, neck]. Pertaining to the neck, particularly its dorsal part.

Trachelismus (*tra-kel-iz'-mus*) [τράχηλος, neck]. Spasmodic contraction of the muscles of the neck.

Trachelitis (*tra-kel-i'-tis*) [τράχηλος, neck; ιτις, inflammation]. Inflammation of the neck of the uterus.

Trachelo- (*tra'-kel-o-*) [τράχηλος, neck]. A prefix to denote connection with or relation to the neck. **T.-mastoid,** pertaining conjointly to the neck and the mastoid process. See *Muscles, Table of.*

Trachelocele (*tra'-kel-o-sēl*). Same as *Tracheocele.*

Trachelocyllosis (*tra-kel-o-sil-lo'-sis*). Synonym of *Torticollis.*

Trachelocyrtosis (*tra-kel-o-sir-to'-sis*). Synonym of *Trachelokyphosis.*

Trachelocystitis (*tra-kel-o-sis-ti'-tis*) [τράχηλος, neck; κύστις, bladder; ιτις, inflammation]. Inflammation of the neck of the bladder.

Trachelo-diaphragmatic (*tra-kel-o-di-af-rag-mat'-ik*) [τράχηλος, neck; διάφραγμα, diaphragm]. Pertaining to the neck and the diaphragm.

Trachelodynia (*tra-kel-o-din'-e-ah*) [τράχηλος, neck; ὀδύνη, pain]. Pain in the neck.

Trachelokyphosis (*tra-kel-o-ki-fo'-sis*) [τράχηλος, neck; κύφωσις, kyphosis]. An anterior curvature of the cervical portion of the spinal column.

Trachelomyitis (*tra-kel-o-mi-i'-tis*) [τράχηλος, neck; μῦς, muscle; ιτις, inflammation]. Inflammation of the muscles of the neck.

Trachelopanus (*tra-kel-o-pan'-us*) [τράχηλος, neck; *panus,* swelling]. Tumefaction of the cervical lymphatic glands.

Trachelopexia (*tra-kel-o-peks'-e-ah*) [τράχηλος, neck; πῆξις, a fixing]. Fixation of the neck of the uterus.

Trachelophyma (*tra-kel-o-fi'-mah*) [τράχηλος, neck; φῦμα, growth]. Swelling of the neck.

Trachelоplasty (*tra'-kel-o-plas-te*) [τράχηλος, neck; πλάσσειν, to mold]. Plastic surgery of the neck of the uterus.

Trachelorrhaphy (*tra-kel-or'-af-e*) [τράχηλος, neck; ῥαφή, suture]. Suture of the edges of a laceration of the cervix.

Tracheloscapular (*tra-kel-o-skap'-u-lar*) [τράχηλος, neck; *scapula,* scapula]. Common to the neck and the scapular region.

Trachelostrophosis (*tra-kel-o-stro-fo'-sis*) [τράχηλος, neck; στρόφος, a twisting]. Torsion of the neck.

Trachelotomy (*tra-kel-ot'-o-me*) [τράχηλος, neck; τομή, a cutting]. 1. Incision into the cervix uteri. 2. Decapitation.

Trachenchyma (*tra-keng'-kim-ah*). Same as *Tracheary Tissue.*

Tracheo- (*tra'-ke-o*) [τραχεῖα, trachea]. A prefix to denote connection with or relation to the trachea or windpipe.

Tracheoaërocele (*tra-ke-o-a'-er-o-sēl*) [τραχεῖα, trachea; ἀήρ, air; κήλη, tumor]. A diverticulum of the trachea.

Tracheoblennorrhea (*tra-ke-o-blen-or-e'-ah*) [τραχεῖα, trachea; βλέννα, mucus; ῥοία, a flow]. A profuse discharge of mucus from the trachea.

Tracheobronchial (*tra-ke-o-brong'-ke-al*) [τραχεῖα, trachea; βρόγχος, bronchus]. Pertaining to the trachea and a bronchus, or the bronchi.

Tracheobronchitis (*tra-ke-o-brong-ki'-tis*) [τραχεῖα, trachea; βρόγχος, bronchus; ιτις, inflammation]. Inflammation of the trachea and bronchi.

Tracheocele (*tra'-ke-o-sēl*) [τραχεῖα, trachea; κήλη, tumor]. 1. Hernia of the lining membrane of the trachea. 2. Goiter.

Tracheocynanche (*tra-ke-o-sin-ang'-ke*). Synonym of *Tracheitis.*

Tracheo-laryngeal (*tra-ke-o-lar-in'-je-al*) [τραχεῖα, trachea; λάρυγξ, larynx]. Pertaining to the trachea and the larynx.

Tracheolaryngotomy (*tra-ke-o-lar-ing-got'-o-me*) [τραχεῖα, trachea; λάρυγξ, larynx; τομή, a cutting]. Incision into the larynx and trachea; combined tracheotomy and laryngotomy.

Tracheo-œsophageus (*tra'-ke-o-e-sof-aj'-e-us*) [τραχεῖα, the trachea; οἰσοφάγος, esophagus]. A band of muscular tissue sometimes uniting the esophagus and the trachea.

Tracheopathy (*tra-ke-op'-ath-e*) [τραχεῖα, trachea; πάθος, disease]. Any disease of the trachea.

Tracheo-pharyngeus (*tra'-ke-o-far-in'-je-us*) [τραχεῖα, the trachea; φάρυγξ, the pharynx]. An anomalous band sometimes uniting the inferior pharyngeal constrictor and the trachea.

Tracheophony (*tra-ke-off'-o-ne*) [τραχεῖα, trachea; φωνή, voice]. The sound heard over the trachea on auscultation.

Tracheophyma (*tra-ke-o-fi'-mah*). Synonym of *Goiter.*

Tracheopyosis (*tra-ke-o-pi-o'-sis*) [τραχεῖα, trachea; πύον, pus]. Purulent tracheitis.

Tracheorrhagia (*tra-ke-or-a'-je-ah*) [τραχεῖα, trachea; ῥηγνύναι, to burst forth]. Hemorrhage from the trachea.

Tracheoscopic (*tra-ke-o-skop'-ik*) [τραχεῖα, trachea; σκοπεῖν, to view]. Pertaining to tracheoscopy.

Tracheoscopist (*tra-ke-os'-ko-pist*) [τραχεῖα, trachea; σκοπεῖν, to view]. One versed in tracheoscopy.

Tracheoscopy (*tra-ke-os'-ko-pe*) [τραχεῖα, trachea;

σκοπεῖν, to inspect]. Inspection of the interior of the trachea, by means of a laryngoscopic mirror and reflected light.

Tracheostenosis (*tra-ke-o-ste-no'-sis*) [τραχεῖα, trachea; στενωσις, stenosis]. Abnormal constriction of the trachea.

Tracheotome (*tra'-ke-o-tōm*) [τραχεῖα, trachea; τομή, a cutting]. A cutting instrument used in tracheotomy.

Tracheotomy (*tra-ke-ot'-o-me*) [τραχεῖα, trachea; τομή, a cutting]. Surgical incision of the trachea. **T., Inferior,** one performed below the isthmus of the thyroid gland. **T., Plunge-.** See *Plunge-tracheotomy*. **T., Superior,** one performed above the isthmus of the thyroid gland. **T.-tube,** a tube to be worn in the opening made in tracheotomy, and through which breathing is carried on.

Trachitis (*tra-kit'-tis*) [τραχεῖα, trachea; ιτις, inflammation]. Inflammation of the trachea; it may be *acute* or *chronic*. It is marked by tenderness along the course of the trachea and pain on swallowing.

Trachoma (*tra-ko'-mah*) [τραχύς, rough: *pl.*, *Trachomata*]. Granular conjunctivitis, a contagious disease of the eyelids that may in severe cases extend to the globe of the eye. It is at first characterized by sago-like elevations of the palpebral conjunctiva, and later by fibrous and cicatricial tissue that by friction produces pannus. The disease is due to a specific diplococcus. **T. arlti,** the granular form. **T., Brawny,** a late stage of mixed trachoma in which the surface of the conjunctiva is rather smooth, although lymphoid infiltration persists. **T.-coccus.** See *Bacteria, Synonymatic Table of*. **T. diffusum,** a high degree of mixed trachoma in which large growths cover the tarsal conjunctiva. **T., Follicular, T., Mixed,** the usual form of trachoma. See *T. arlti*. **T.-gland.** See *Gland*. **T. verum.** See *T. arlti*. **Horny Epithelium, or Summer Granulations,** a form of tracho-

TRACHOMA.

KNAPP'S IMPROVED ROLLER TRACHOMA-FORCEPS.

matous conjunctivitis similar in appearance to follicular trachoma, but differing from it in the fact that the granules or excrescences are horny or teat-like elevations. The name *Hypertrophic Trachomatous Conjunctivitis* has been proposed for it. **Knapp's Roller-forceps Method** (*of treating trachoma*), the expression of the gelatinous matter in follicular trachoma by a roller-forceps.

Trachycarpous (*trak-ik-ar'-pus*) [τραχύς, rough; καρπός, fruit]. In biology, having the fruit roughened.

Trachyphonia (*trak-if-o'-ne-ah*) [τραχύς, rough; φωνή, voice]. Roughness, or hoarseness, of voice.

Trachysma (*trak-iz'-mah*). Synonym of *Trachoma*.

Trachyspermous (*trak-is-per'-mus*) [τραχύς, rough; σπέρμα, seed]. In biology, having the seed roughened.

Tract (*trakt*) [*tractus*]. 1. An extended area, usually much longer than it is broad. 2. Any one of the columns of white matter of the spinal cord. See *Column*. 3. A track or course. **T., Alimentary,** a musculomembranous canal, about 30 feet in length, extending from the mouth to the anus. Digestion is its chief function, and in this it is aided by certain accessory organs. **T., Anterior Cerebro-pontile,** a tract of fibers of the crus cerebri extending from the anterior portion of the frontal lobe to the pons. **T., Anterior Pyramidal.** See *T., Pyramidal*. **T., Antero-lateral Ascending.** Synonym of *T., Gowers'*. **T., Bechterew's.** See *T., Tegmental*. **T., Bulbar,** any of the tracts of fibers found in the bulb or oblongata. **T., Central Medullary,** the gray matter of the spinal cord immediately about the central canal. **T., Cerebellar.** See *T., Direct Cerebellar*. **T., Cerebro-pontile,** a tract of fibers passing from the cerebrum through the internal capsule and crus to the pons. **T., Commissural,** the cerebellar peduncle (*Owen*). **T., Crossed Thalamo-tegmental,** a tract of fibers passing through the tegmentum and connecting the thalamus with the spinal cord (*Spitzka*). **T., Digestive.** See *T., Alimentary*. **T., Direct Cerebellar,** an ascending tract of fibers placed at the periphery of the posterior portion of the lateral column of the cord. It passes upward through the lateral tract of the oblongata, the restiform body, and the inferior cerebellar peduncle to the vermiform process of the cerebellum and to the cerebellar lobes. **T., Fillet,** a tract of fibers passing from the fillet along the upper and outer side of the red nucleus through the internal capsule to the parietal lobe. **T., First Projection,** the corona radiata (*Meynert*). **T. of Flechsig.** See *T., Principal*. **T., Frontal Pontile.** Synonym of *T., Cerebro-pontile*. **T., Fronto-cerebellar,** the tract of fibers connecting the frontal lobe of the brain with the cerebellum. **T., Funicular.** See *Funiculus gracilis*. **T., Genito-urinary,** the genito-urinary organs in continuity. **T., Goll's.** See *Column, Goll's*. **T., Gowers',** a tract of fibers from the posterior roots which run cephalad in the lateral column. One portion of the fibers disappears in the cervical part of the spinal cord, the other terminates in the medulla. **T., Habenular,** a tract of fibers passing from the habenula to the mesal side of the red nucleus at the base of the brain. **T., Intellectual.** Synonym of *T., Fronto-cerebellar*. **T., Intermediary Lateral, T., Intermedio-lateral,** a tract of nerve-fibers in the lateral column of the spinal cord, placed midway between the anterior and posterior gray horns. **T., Internidal,** the fibers extending from the nuclei of origin of the third, fourth, and sixth cranial nerves. **T., Intestinal,** the large and small intestine. **T., Lateral.** See *Column, Lateral*. **T., Lemniscus,** a tract of fibers beginning in the upper region of the pons, below the formatio reticularis, and separating into three bundles, the superior, median, and inferior lemnisci. **T., Lissauer's,** a small tract of fibers in the spinal cord at the junction of the posterior horn and the lateral column. The fibers are derived from the posterior roots, and after a short upward course enter the posterior horn. **T., Motor,** the path for motor impulses from the brain to a muscle, consisting of a central and a peripheral portion. The former extends from the cerebral cortex to the gray matter in the anterior horns of the spinal cord; the latter includes the motor cells

in the cord, the fibers passing to the anterior root, the anterior root and the nerve-trunk to the muscle. **T., Myelo-cerebellar.** See *T., Direct Cerebellar.* **T., Olfactory,** the narrow portion of the olfactory lobe of the brain. **T., Ophthalmic, T., Optic,** this arises by two arms or brachia, one from the stratum opticum of the quadrigeminal bodies, the other from the optic thalamus. From the junction of the two arms it winds obliquely across the under surface of the crus cerebi, to which it is attached by its anterior margin, then passes forward, being connected with the tuber cinereum and the lamina cinerea. Finally, it unites with the tract of the opposite side to form the chiasm. **T., Peduncular,** any tract of fibers in the crus cerebri. **T., Posterior Cortical,** a tract of fibers passing from the cortex of the occipital and temporal lobes to the nerve-cells in the pons. **T., Postpyramidal,** the dorsal pyramid of the cord. **T., Prepyramidal,** the ventral pyramid of the cord. **T., Principal,** that portion of the ventral column of the cord not belonging to the direct pyramidal tract. **T., Pyramidal,** the continuation in the spinal cord of the ventral pyramids of the oblongata. At the decussation of the pyramids about three-quarters of the fibers usually cross to the opposite side. These pass down the cord in the lateral column and constitute the *lateral* (or *crossed*) *pyramidal tract.* Those that do not decussate pass down in the inner part of the ventral column at the side of the ventral median fissure and constitute the *ventral* (or *direct*) *pyramidal tract.* **T., Radicular,** the portion of the spinal cord dorsad of the principal tract. **T., Respiratory,** the respiratory organs in continuity. **T., Restiform,** the restiform bodies. **T., Semilunar,** a semilunar band of fibers in the outer portion of the cerebellar hemisphere. **T., Sensory,** any tract of fibers conducting sensation to the brain. **T., Speech,** a group of fibers passing from the cortex of the sub-frontal gyrus of the left side, usually to the nuclei of origin in the oblongata of the nerves connected with the apparatus of speech. **T., Spiral,** the spiral impression in the large fossa of the cribriform plate. It is pierced by foramina for transmiting filaments of the auditory nerve. **T., Tegmental,** a tract of fibers in the tegmentum, probably connecting the olivary body with the mid-brain. **T., Teretial.** Synonym of *Fasciculus teres.* **T., Tertiary Projection,** the peripheral nerves originating from the nuclei surrounding the aqueduct, and from the cells in the gray matter of the spinal cord. **T., Urogenital.** Synonym of *T., Genito-urinary.* **T., Uveal.** Synonym of *Uvea.* **T., Voluntary Motor,** that portion of the motor tract extending from the cortex of the brain to the ventral horns of the cord.

Tractellum (*trak-tel'-um*) [dim. of *tractus*, a tract: *pl.*, *Tractella*]. In biology, that flagellum of an infusorian which precedes in locomotion.

Traction (*trak'-shun*) [*trahere*, to draw]. The act of drawing or pulling. **T.-aneurysm,** an aneurysm most commonly seen in children, and if seen in adults to be referred to childhood, due to traction on the aorta by an incompletely atrophied ductus Botalli. **T., Axis,** traction in the axis or direction of a channel, as of the pelvis, through which a body is to be drawn. **T., Axis Forceps,** an obstetric forceps for performing axis-traction in the delivery of the fetus. **T.-diverticulum,** a circumscribed sacculation of the esophagus from the traction of circum-esophageal adhesions. **T., Elastic,** traction by an elastic force.

Tractor (*trak'-tor*) [*trahere*, to draw]. 1. An instrument for making traction. 2. See *Perkinism.*

Tractoration (*trak-tor-a'-shun*) [*trahere*, to draw]. Treatment by metallic tractors; Perkinism.

Tractus (*trak'-tus*). See *Tract.*

Tragacanth (*trag'-a-kanth*). See *Tragacantha.*

Tragacantha (*trag-a-kan'-thah*) [τραγάκανθά; τράγος, goat; ἄκανθα, thorn: *gen.*, *Tragacanthæ*]. The exudation of several species of *Astragalus* found in Asia Minor. A natural mixture of gum arabic and bassorin. A demulcent employed mainly as a vehicle for resins and insoluble powders. **T., Glycerinum** (B.P.), tragacanth, glycerin, and distilled water; a translucent jelly. **T., Mucilago,** tragacanth 6, glycerin 18, water to 100 parts. Dose ℥j, *ad libitum.* **T., Pulv., Comp.** (B.P.), tragacanth, gum acacia, starch, and refined sugar. Dose gr. xx–℥j.

Tragacanthin (*trag-a-kan'-thin*). See *Bassorin.*

Tragal (*tra'-gal*) [τράγος, goat]. Pertaining to the tragus.

Tragalism (*trag'-al-izm*) [τράγος, goat]. Salaciousness; sensuality.

Traganthin (*trag-an'-thin*). See *Bassorin.*

Tragicus (*traj-ik'-us*). See *Muscles, Table of.*

Tragophonia (*trag-off-o'-ne-ah*). Synonym of *Egophony.*

Tragopodia (*trag-op-o'-de-ah*) [τράγος, goat; πούς, foot]. Knock-knee.

Tragus (*tra'-gus*) [τράγος, goat]. The small prominence of cartilage projecting over the meatus of the external ear.

Trailing Arbutus (*tra'-ling ar'-bu-tus*). Ground Laurel, May Flower. The leaves of *Epigea repens.* Diuretic and astringent. It has been used to allay irritability of the urinary organs. Dose of fld. ext. ℥ss–j. Unof.

Train (*trān*) [ME., *trainen*, to draw]. A following; that which is drawn after. **T.-murmur.** See *Fisher's Murmur* in *Signs and Symptoms, Table of.* **T.-oil.** See *Whale-oil.*

Training (*trān'-ing*) [ME., *trainen*, to draw]. Systematic exercise for physical development or for some special attainment. **T.-school,** an institution where persons are instructed in nursing. The majority of the large hospitals have established such institutions.

Trait (*trāt*) [Fr., *trait*, a line]. Any natural characteristic or feature that is peculiar to an individual.

Tramosericeous (*tram-o-ser-ish'-us*) [*trama*, weft; *sericeus*, silken]. In biology, having a satin-like luster.

Trampling (*tram'-pling*) [ME., *trampelen*, to trample]. The killing and bruising of animals in conveyance by rail or sea by being thrown down and trampled upon by the feet of their companions.

Trance (*trans*) [*transitus*, a passing or passage]. 1. A form of catalepsy, characterized by a prolonged condition of abnormal sleep, in which the vital functions are reduced to a very low minimum, and from which the patients ordinarily cannot be aroused. The breathing is almost imperceptible, and sensation is abolished. The onset and awakening are both very sudden. 2. The state of syncope much protracted. **T.-doctor,** a mesmerist. **T., Hysteric,** the trance-like condition sometimes met with in hysteria.

Trans- [*trans*, across]. A Latin preposition used as a prefix to denote across.

Transcendental (*tran-sen-den'-tal*) [*trans*, across; *scandere*, to climb]. Beyond the bounds of experience. **T. Anatomy,** philosophic anatomy.

Transductor (*trans-duk'-tor*). Synonym of *Transversus pedis.*

Transect (*tran-sekt'*) [*trans*, across; *secare*, to cut]. To make a transection.

Transection (*tran-sek'-shun*) [*trans*, across; *secare*, to cut]. Any section made across the long axis of a part or of the whole body, in the latter case dividing it into

cephalic and caudal regions. See *Position and Direction, Table of Intrinsic Terms.*

ransfer (*trans'-fer*). See *Phenomena of Transfer.*

ransference (*trans-fer'-ens*) [*trans*, across; *ferre*, to bear]. Supposed transmission of thought from one individual to another through the agency of a hypothetic psychic force; mind-reading, or thought-reading; hypnotic suggestion. **T. of Sensibility.** See *Sensitivization.*

ransfix (*trans-fiks'*) [*trans*, across; *figere*, to fix]. To pierce.

ransfixion (*trans-fik'-shun*) [*trans*, across; *figere*, to fix]. In amputation, the passage of the knife directly through the soft parts, cutting being done from within outward.

ransforation (*trans-fo-ra'-shun*) [*trans*, across; *forare*, to pierce]. Applied especially to perforation of the fetal skull. Synonym of *Perforation.*

ransformation (*trans-for-ma'-shun*) [*trans*, across; *formare*, to form]. A change of form or constitution; degeneration. In biology, the series of changes or metamorphoses undergone by certain animals during the early stages of their individual life-history. Cf. *Pleomorphism.*

ransformism (*trans-for'-mizm*) [*trans*, over; *formare*, form, shape]. In biology, the doctrine of descent with modification; the transmutation of species.

ransfrontal (*trans-fron'-tal*) [*trans*, across; *frons*, forehead]. Crossing the frontal lobe of the brain.

ransfusion (*trans-fu'-zhun*) [*trans*, across; *fundere*, to pour]. The transfer of liquid from one vessel to another; applied especially to the introduction into a vessel of the body of blood from another body. **T., Arterial,** the transfusion of blood into an artery. **T., Auto-,** the driving of the blood from the periphery to the center—the heart and the brain—in order to maintain the circulation, as in bandaging of the limbs in post-partum hemorrhage. **T., Direct,** or **Immediate,** the transfusion of blood from one person to another without exposure to the air. **T., Indirect** or **Mediate,** the introduction of blood that has first been drawn into a vessel. **T., Nervous.** See *Organotherapy.* **T., Peritoneal,** transfusion into the peritoneal cavity. **T., Reciprocal,** the exchange of equal volumes of blood between a patient suffering from a febrile disease and one who is convalescent from that disease, the blood of the latter being supposed to contain an antitoxin. **T., Venous,** transfusion into a vein.

ransiliac (*trans-il'-e-ak*) [*trans*, across; *ilium*, ilium]. Passing across from one ilium to the other, as the transiliac diameter or axis.

ransilient (*trans-il'-e-ent*) [*trans*, over; *salire*, to leap]. Extending across. **T. Fiber,** a nerve-fiber passing from one convolution of the brain to another not immediately adjacent.

ransillumination (*trans-il-lu-min-a'-shun*) [*trans*, through; *illuminare*, to illuminate]. The throwing of an intense light through the substance of a hollow organ as a means of diagnosis.

ransinsular (*trans-in'-su-lar*) [*trans*, across; *insula*, island]. Traversing the insula of the brain, as *e.g.*, a fissure.

ransischiac (*trans-is'-ke-ak*) [*trans*, across; *ischium*]. Extending transversely from one ischium to the other. **T.-convolutions,** connecting gyri or isthmuses.

ransition (*trans-ish'-un*) [*transire*, to go over]. Change; passage from one state to another. **T.-resistance,** the resistance introduced into an electric current by the accumulation of decomposition-products upon the electrodes.

ransitory (*trans'-it-or-e*) [*transire*, to go over]. Temporary; not permanent; as *transitory* mania, or frenzy.

Translocate (*trans-lo'-kāt*). Same as *Dislocate.*

Translucent (*trans-lu'-sent*) [*trans*, across; *lucere*, to shine]. Permitting a partial transmission of light; semitransparent.

Translucid (*trans-lu'-sid*). Synonym of *Translucent.*

Translumination (*trans-lu-min-a'-shun*). Synonym of *Transillumination.*

Transmigration (*trans-mi-gra'-shun*) [*trans*, across; *migrare*, to wander]. The passage of cells or particles through a membranous septum, as, *e.g.*, the colorless corpuscles of the blood in inflammation, or the passage of cells across a space. **T., External,** the passage of an ovum from one ovary to the opposite oviduct without traversing the uterus, that is, by way of the peritoneal cavity. **T., Internal,** the passage of the ovum through its proper oviduct into the uterus and across to the oviduct of the opposite side.

Transmissibility (*trans-mis-ib-il'-it-e*) [*trans*, across; *mittere*, to send]. The capability of being transmitted or communicated from one person to another.

Transmission (*trans-mish'-un*) [*trans*, across; *mittere*, to send]. 1. The communication or transfer of anything, especially disease, from one person or place to another. 2. See *Heredity.* **T., Duplex,** the property of nerves of transmitting impulses in two directions.

Transmutation (*trans-mu-ta'-shun*) [*transmutare*, to change]. The process of changing; the conversion of one substance or one form into another substance or form.

Transocular (*trans-ok'-u-lar*) [*trans*, across; *oculus*, eye]. Extending across the eye.

Transpalatine (*trans-pal'-at-in*) [*trans*, across; *palatine*]. 1. Transverse, as a palatine bone, which extends on either side from the median line. 2. A bone of certain sauropsidan vertebrates.

Transpalmar (*trans-pal'-mar*) [*trans*, across; *palma*, palm]. Situated across the palm.

Transpalmaris (*trans-pal-ma'-ris*) [*trans*, across; *palma*, palm]. The palmaris brevis muscle. See *Muscles, Table of.*

Transparent (*trans-pa'-rent*) [*trans*, across; *parere*, to appear]. Having the property of permitting the passage of light-rays without material obstruction, so that objects beyond the transparent body can be seen. **T. Finger.** See *Finger.*

Transperinæus (*trans-per-in-e'-us*) [*trans*, across; *perinæum*, perineum]. The transversus perinæi muscle.

Transpinalis (*tran-spi-na'-lis*) [*trans*, across; *spinalis*, spinal]. Any intertransverse muscle of the spinal tract.

Transpiration (*tran-spi-ra'-shun*) [*trans*, across; *spirare*, to breathe]. 1. The act of passing fluid, vapor, or gas through a membrane, especially through the skin; perspiration. 2. The material passed off. 3. In biology, the evaporation of water or other vaporizable matter from the plant. **T., Pulmonary,** the exhalation of watery vapor from the lungs.

Transplantar (*trans-plan'-tar*) [*trans*, across; *planta*, sole]. Lying across the sole.

Transplantation (*trans-plan-ta'-shun*) [*trans*, across; *plantare*, to plant]. The operation of grafting. See *Graft.* **T. of Cornea.** See *Keratoplasty.*

Transpleural (*trans-plu'-ral*) [*trans*, across; πλευρά, side]. Crossing the pleural sac.

Transposition (*trans-po-zish'-un*) [*trans*, across; *ponere*, to place]. An interchange of position, as of the viscera; also termed *Situs inversus.*

Transprocess (*trans-pros'-es*) [*trans*, across; *processus*, process]. A transverse process.

Transsubstantiation (*trans-sub-stan-she-a'-shun*) [*trans*, through; *substantia*, substance]. The replacement of one tissue by another.

Transtemporal (*trans-tem'-po-ral*) [*trans*, across; *tempus*, temple]. Crossing the temporal lobe. (Wilder.)

Transudate (*trans'-u-dāt*) [*trans*, through; *sudare*, to perspire]. A liquid or other substance the result of transudation.

Transudation (*trans-u-da'-shun*) [*trans*, through; *sudare*, to perspire]. 1. The passing of any fluid through a membrane or tissue, especially the blood-serum through the vessel-walls. 2. Transudate.

Transudatory (*trans-u'-da-to-re*) [*trans*, through; *sudare*, to perspire]. Passing by or pertaining to transudation.

Transversal (*trans-ver'-sal*) [*trans*, across; *vertere*, to turn]. Transverse; running across.

Transversalis (*trans-ver-sa'-lis*) [*trans*, across; *vertere*, to turn]. See *Muscles, Table of.* **T. Fascia,** the fascia on the inner surface of the transversalis muscle, between the latter and the peritoneum.

Transverse (*trans-vers'*) [*trans*, across; *vertere*, to turn]. Cross-wise; at right angles to the longitudinal axis of the body. **T. Presentation,** a presentation of the fetus at right angles to the longitudinal axis of the uterus.

Transversus (*trans-ver'-sus*). See *Muscles, Table of.*

Trap (*trap*) [ME., *trappe*, trap]. A device intended to prevent the escape of foul vapors from sewers and waste-pipes into a house. It generally consists of one or more S-shaped pipes, filled with water; some are provided also with valves. **T.-door Flap,** a semicircular or horseshoe flap made in trephining the skull.

Trapezate (*trap'-ez-āt*). Same as *Trapeziform.*

Trapezial (*tra-pez'-e-al*) [τράπεζα, table]. Pertaining to the trapezium, or to the trapezius.

Trapeziform (*tra-pez'-if-orm*) [τράπεζα, table; *forma*, form]. Having the shape of a trapezium.

Trapezium (*tra-pez'-e-um*) [τράπεζα, table]. In anatomy: 1. The first bone of the second row of carpal bones. 2. A tract of the brain consisting of a transverse fiber-mass situated in the ventral part of the oblongata nearly coinciding with the level of entry of the cephalic acoustic root. Cephalad it extends into the lateral part of the lemniscus. It is probably a part of the centripetal auditory tract. Exposed in most animals, it is *in man* covered by the caudal extension of the pons.

Trapezius (*tra-pez'-e-us*). See *Muscles, Table of.*

Trapezoid (*trap'-ez-oid*) [τράπεζα, a table; εἶδος, like]. One of the bones of the wrist. See *Bone.* **T. Ligament.** See *Ligaments, Table of.*

Trapp's Formula or **Coëfficient.** A figure employed in the estimation of the quantity of solid matters in a sample of urine. In Trapp's formula the figure is 2, while in *Hæser's Coëfficient* it is 2.33. The approximation to the quantity of solid matters present may be obtained by multiplying the last two figures of the specific gravity by 2 in Trapp's formula, or 2.33 in Hæser's formula.

Traube's Plugs. The same as *Dittrich's Plugs.* **T.'s Semilunar Space,** a space on the left side of the chest where there normally is found a vesiculo-tympanitic sound, due to air in the stomach. **T.-Hering's Curves,** pulse-curves showing that the varying activity of the vasomotor center suffices to produce undulations in the blood-pressure tracing.

Trauber-Rosenstein Theory. A theory of the cause of puerperal eclampsia. It is claimed that the convulsions are due to an anemia brought about by an edema of the brain, the result of some poison circulating in the blood.

Traulism, or **Traulismus** (*traw'-lizm, traw-liz'-mus*) [τραυλισμός, a lisping]. A lisping; a stammer; drawling, or imperfect utterance.

Trauma (*traw'-mah*) [τραῦμα, a wound: *pl.*, *Traumata*]. A wound.

Traumatic (*traw-mat'-ik*) [τραυμάτικός]. Pertaining to or caused by a wound or injury. **T. Degeneration,** the degeneration of the ends of nerves at the point of section, extending to the nearest node of Ranvier, after which fatty degeneration begins. **T. Fever,** fever following within from eight to thirty-six hours of an operation or injury. It is due to absorption of poisonous material from the seat of injury. **T. Hysteria.** See *Fright-neuroses.* **T. Infective Diseases,** a class of diseases characterized by definite symptoms following wounds or abrasions. Koch has demonstrated that each of these diseases is caused by a distinct microbe that is capable of reproducing the disease if inoculated into other animals. **T. Suggestion.** See *Auto-suggestion.*

Traumaticin (*traw-mat'-is-in*) [τραῦμα, trauma]. A 10 per cent. solution of gutta percha in chloroform, used locally in superficial wounds and skin-affections; chrysophanic acid is sometimes added, or other appropriate medicament. Unof.

Traumatism (*traw'-mat-izm*) [τραῦμα, wound]. The condition of one suffering from injury. The systemic condition following trauma. **T. of Motion,** injury resulting to a diseased joint from improper fixation.

Traumatocace (*traw-mat-ok'-as-e*) [τραῦμα, a wound; κακός, bad]. Synonym of *Hospital Gangrene.*

Traumatology (*traw-mat-ol'-o-je*) [τραῦμα, a wound; λόγος, science]. A treatise on wounds.

Traumatonesis (*traw-mat-o-ne'-sis*) [τραῦμα, a wound; νῆσις, a suture]. Suture of a wound.

Traumatopnea (*traw-mat-op-ne'-ah*) [τραῦμα, wound; πνοή, breath]. The passage of air through a wound in the chest-wall during the respiratory movements.

Traumatopyra (*traw-mat-o-pi'-rah*) [τραῦμα, wound; πῦρ, fever]. Synonym of *Traumatic Fever.*

Traumatosepsis (*traw-mat-o-sep'-sis*) [τραῦμα, a wound; σῆψις, putrefaction]. Synonym of *Hospital Gangrene.*

Traumatosis (*traw-mat-o'-sis*) [τραῦμα, a wound]. Traumatism.

Traumatyphus (*traw-mat-i'-fus*) [τραῦμα, a wound; τῦφος, typhus]. A name for *Hospital Gangrene.*

Travail (*trav'-āl*). Labor in childbed.

Tray (*tra*) [ME., *treye*, tray]. A flat, shallow vessel of glass, hard rubber, or metal, for holding instruments during a surgical operation.

Treacle (*tre'-kl*). See *Theriaca* and *Molasses.*

Tread (*tred*). See *Cicatricula.*

Treadlers' Cramp. See *Cramp.*

Treat (*trēt*) [ME., *treten*, to treat]. To manage disease by the application of remedies.

Treatment (*trēt'-ment*) [*tractare*, to treat]. The means employed in effecting the cure of disease; therapeutic management or methods. **T., Method of,** a manner or way of managing a certain pathologic condition. Some of the various methods of treatment are appended: **T., Apostoli's,** the treatment of disease of the uterus by electricity; the positive pole being inserted in the uterus itself and the negative pole applied externally. **Arnott's Method,** the use of ice and salt to produce local anesthesia. **Bain's Method,** a method of artificial respiration; the operator, at the head of the subject, places the fingers of each hand in the axillæ in their front aspect, with the thumbs on the clavicles, and pulls the shoulders horizontally toward him with a certain degree of force. **T., Balfour's,** the method of treating aneurysm by

means of iodid of potassium. It lowers the blood-tension of the artery, and also brings about a thickening and contraction of the aneurysmal sac. **T., Banting**, a treatment of obesity; the withdrawal of carbohydrates from the food and the use of a diet of nitrogenous food. **Barnes's Method**: 1. For placenta prævia: (*a*) puncture the membranes; (*b*) apply a firm binder over the uterus; (*c*) tampon the cervix and vagina; (*d*) detach the placenta from its lower polar zone; (*e*) dilate the cervix; (*f*) deliver at once; (*g*) introduce the hand and remove the placenta. 2. Reduction of uterine inversion by first incising the cervix on each side, so as to divide the circular fibers. **Barrier's Method** of treating uterine inversion. The uterus is grasped in the whole hand, and, using the sacrum as a point of resistance, the cervix is forced up against it, at the same time depressing the fundus with the thumb. **Baudelocque's Method** of converting a face-presentation into a vertex-presentation. The hand is passed into the vagina and the thumb placed in the mouth or on the chin of the child, while the fingers are passed up over the occipital protuberance. Pressure is then made by the thumb in succession upon the chin, the fossæ caninæ, and the brow, the fingers at the same time making traction upon the occiput. The head is thus flexed. **Baunscheidt's Method**, acupuncture by means of numerous needles fixed in a framework, and which are forcibly projected by releasing a spring. **Bergeon's Method**; the treatment of pulmonary tuberculosis by rectal injections of hydrogen sulphid gas mixed with carbon dioxid. **T., Bettman's.** See *Subvolution*. **T., Bier's**, of strumous joints; it consists in causing congestion of the part by bandaging and elevating the unaffected extremities. **Bigelow's Method**; extension of the thigh in luxations of the hip, with the limb at a right angle with the body. **Bird's Method** of treating bed-sores consists in the application of a constant mild galvanic current. **Bouchard's Diet** for dilatation of the stomach. Twelve ounces only of fluid at breakfast and dinner, and this must be non-fermenting; red wines are prohibited, but mineral (table) waters, water containing one-third of beer, or a quarter pint of white wine, or a dessertspoonful of brandy, may be taken. No drink is to be taken between meals. **Bouchard's Method** of treating typhoid fever. The patient is bathed eight times each day, the bath in which he is placed being three degrees lower than the rectal temperature. The water is then gradually cooled down to 86° F. Every third day the patient receives half an ounce of sulphate of magnesium. During the first four days of treatment seven grains of calomel are given daily in divided doses. During the period of intestinal disorder a dram of naphthol and half a dram of salicylate of bismuth are given in divided doses, and every morning and evening the bowels are washed out with warm water containing naphthol. Quinin is administered as required. The diet consists of broths, gruels, and lemonade. Opiates are given to allay delirium. **T., Bouchardat's**, of diabetes consists in a dietary which allows meat and fresh vegetables, but prohibits milk, sugar, and all substances rich in carbohydrates. **T., Boynton's**, the application of adhesive straps to ulcers of the leg. **T., Braithwaite's**, for carcinoma of the uterus, consists in the continual application of chlorid of zinc to the affected part. **Brand Method** of treating fever consists in immersion in a bath at the temperature of 68° F., every 3 hours, when the bodily temperature reaches 102° F. Friction of the surface essential; cold should be applied to the head; stimulants may be administered after the bath, and the patient is put back to bed and dried between sheets. The duration of the bath is from 5 to 15 minutes. **Brandt's Method** of treating diseased Fallopian tubes. It consists in attempting to empty the distended tube into the uterus by massage, rolling it gently between the fingers of both hands. **Brémond's Method** of treating syphilis. The patient is placed in a box with his head out, and a spray of numerous jets of steam containing particles of corrosive sublimate or potassium iodid is directed upon the body. **Bronson's Method** of preventive treatment of syphilis. This has been worked out on a purely theoretic basis. Bronson believes that rapid disappearance of the initial lesion may be caused, together with the probable abortion or prevention of the secondary stage, by hypodermatic injections of mercurial solutions around and under the nodule on the penis and into the substance of the inguinal lymphatic glands. **T., Brown-Séquard**, the use of injections of testicular extract. See *Organotherapy*. **Bryant's Method** for treating fracture of the femur in children. It consists in vertical extension of the legs. Both limbs are flexed at a right angle with the trunk, and attached to a bar above the bed. **Buck's Method** of treating fractures by continuous extension by means of a weight and pulley. **T., Bülau's**, for empyema consists in the aspiration of the pleural cavity by means of a siphon. **Byrd's Method.** See *Artificial Respiration*. **Byrne's Method**; reduction of uterine inversion by applying pressure by means of a cup having a false bottom, which advances, while counter-pressure is made above by means of a bell-shaped cup, having a conical plug, which serves to dilate the inverted cervix. **Cameron's Method**, a method of treating foreign bodies in the alimentary canal. See *Cure*, *Potato*. **T., Cantani's**, of cholera: (*a*) The repeated introduction high up into the bowel, at a temperature of from 100.4° to 104° F., of from 3 to 4 pints of water or infusion of chamomile containing from 75 grs. to 5 drs. of tannic acid and from 30–50 drops of tincture of opium, at times with from an ounce to an ounce and a half of gum arabic (*enteroclysis*); (*b*) the introduction into the subcutaneous connective tissue of 2 pints of sterilized water, at a temperature of from 100.4° to 104° F., containing in solution a dram of sodium chlorid and 45 grs. of sodium carbonate (*hypodermatoclysis*, *subcutaneous infusion*). **Carr's Method** of treating placenta prævia. It consists in detaching and removing the placenta, and then removing the child as rapidly as possible. **Cohen's Method** of treating placenta prævia. It consists in detaching the smaller flap of the placenta which passes over the os internum to the side opposite from the main body, thus converting a central into a lateral implantation. **Cohen's Method** of inducing premature labor. It consists in passing an elastic catheter between the membranes and the uterine wall, and slowly injecting 7 or 8 ounces of warm water, so as to partially separate the membranes. **Cooper's Method** of extension in luxation of the thigh. The patient is in the recumbent position. Extension is made by means of a band passed around the thigh above the knee, and a counter-extending band is passed between the thighs close to the dislocated member, and fixed in a line with the body. **Copeman's Method** of treating pernicious vomiting of pregnancy. It consists in dilating the cervical canal with the forefinger or with special instruments devised for the purpose. The results are said to be good. **Corbin** (*Dr. Job Corbin*), of **Brooklyn** (*New York*), **Method** of treating diphtheria. It consists in the sublimation of calomel and compelling the patient covered by a temporary tent made of sheets, blankets, or

other available articles, to inhale the air impregnated with the sublimed material. **Corning's Method** of inducing local anesthesia. The production of local anesthesia by multiple cutaneous puncture and the introduction of cocain by the aid of a galvanic battery. **Courty's Method** of treating uterine inversion. Reduction is accomplished in the usual manner by effecting counter-pressure by two fingers passed into the rectum and hooked over the mass. **Crédé's Method** of removing an adherent placenta. It consists in manual expression. **Crédé's Prophylaxis of Ophthalmia neonatorum**; immediately after birth the eyes of the child are cleansed with clean water and cloth or cotton, and one drop of a 2 per cent. sol. of silver nitrate dropped into each eye. **Dancel's Method** of treating obesity. It was to prescribe as dry a diet as possible. The food taken should contain very little water, and very little drink should be taken at any time. Soups and fluid foods were forbidden. Not more than from six to twelve ounces of fluid were allowed at each meal. Abstinence from fatty and farinaceous foods was enforced, frequent purges were enjoined, and much exercise on foot. **Daremberg's Method** of feeding consists in the employment of peptonized enemata. **Davy's Method** of controlling hemorrhage in hip-joint amputation; by means of a lever introduced into the rectum. **Débove's Method**; the method of over-alimentation or forced feeding in the treatment of tuberculosis. The stomach is first washed out with cold water, and then, through the stomach-tube, a mixture is introduced containing a liter of milk, an egg, and 100 grams of very finely powdered meat. This is given three times a day. **Denneth's System** of reducing obesity. It has for its aim the exclusion as far as possible of alimentary hydrocarbons, while permitting a certain proportion of fat. It closely resembles Ebstein's method. **Detmold's Method**; the arrest of hemorrhage by the withdrawal of a considerable amount of blood from the circulation by means of ligatures placed around one or more limbs, just tightly enough to arrest the venous return without obstructing the arterial flow. **Deventer's Method of Extraction after Version**; the after-coming head and the extended arms are extracted together by simple traction on the feet and shoulders. When the shoulders appear at the vulva, the head is swung sharply backward, one hand grasps the feet, the other the shoulders, and both hands make traction simultaneously and directly toward the floor. **Dew's Method.** See *Artificial Respiration*. **Diday's Method**; the expectant plan of treatment of syphilis. **Dublin Method**; treatment of aneurysm by compression of the diseased vessel on the cardiac side of the tumor. **T., Durande's,** for biliary lithiasis: ether 3 parts, oil of turpentine 2 parts; of this 20–30 drops are given three times daily. **Duverger's Method,** or **Suture,** for wounds of the intestines. The trachea of a calf is inserted into the intestine and the wound closed over it with interrupted sutures. **T., Ebstein's,** for obesity; a modification of the Banting method, but with the inclusion of fatty substances. **Emmet's Method** of treating uterine inversion; the body of the womb is grasped in the hand firmly and the fingers immediately expanded so as to put the tissues around the cervix on the stretch, while the hand above aids in dilating the cervical ring. If only partial reduction can be secured, the lips of the os are stitched together over the fundus. **Fenwick's Method** of treating pyrexia consists in passing a constant current of cool air over the patient. This is accomplished by placing ice or ice-water near, but not in contact with, the patient. See *Ice-cradle*. **Fergusson's Method** of treating aneurysm; the tumor is manipulated so as to detach a fragment of fibrin or old clot, which will plug the efferent artery. **T., Filleaw's**; the method of treating pulmonary tuberculosis by subcutaneous injections of carbolic acid. **Finsen's Method**; a method of treating smallpox, by confining the patients in a room from which the ultra-violet rays of light are shut out by red window-panes or by covering the windows with red curtains. **Fleury's Method** of treating aneurysm; compression by flexion of the limb. **Forest's Method.** See *Artificial Respiration*. **Fournier's Method**; the interrupted treatment of syphilis. It consists in administering mercury for a period of two months, then stopping for a certain time, at least a month, during which the patient becomes unaccustomed to the remedy. This is followed by a course of treatment for six weeks or two months, and then a respite for three months, and so on. **Gerst's Method** of massage of the neck; the patient faces the masseur with the head thrown back, so as to expose the neck. The operator places his hands at the lobes of the ears and performs a stroking downward to the shoulder, the patient breathing freely and easily. **T., Goats Blood**; a method of treating pulmonary tuberculosis by the free administration of goats' blood. **Gould's Method** of Treating Monocular Amblyopia; by perfect correction of the ametropia and muscular imbalance, and monocular exercise of the amblyopic eye, the other being covered by a blinder. **G.'s Method** of Treating Exophoria; innervational gymnastics with prisms, bases toward the temples, of a higher degree than the patient can at first overcome at 20 feet, coupled with fusion-exercises, the object being gradually carried from the near-point to the distant point. **G.'s Method** of Treating Functional Lacrymal Stenosis; submergence of the puncta with an antiseptic and astringent solution and synchronous massage of the sac. **Gram's Method.** See *Actinomycosis*. **T. "Grape-cure,"** for cardiac hypertrophy consists in the daily consumption of large quantities of grapes. **Guérin's Method** of dressing an amputation; the encasing of the stump after amputation in a dense mass of cotton as a permanent dressing. **T., Guthrie's,** for hospital gangrene; the local use of the mineral acids. **Hall's Method.** See *Artificial Respiration*. **Hay's (Matthew) Method** of treating hydrothorax; by means of a concentrated solution of Epsom salt, together with dry diet. **Hegar-Kohr Method** of preventing ophthalmia neonatorum; as soon as the head is born the closed eyelids are carefully dried with two or three pledgets of antiseptic absorbent cotton moistened with Van Swieten's solution (corrosive sublimate 1 part, alcohol 100 parts, water 900 parts). As soon as the child is born the eyelids and all the surrounding tissues are cleansed with the same solution until an absolutely aseptic surface is obtained. **Hicks' Method**; a method of performing bimanual version; especially adapted to the treatment of placenta prævia. **Hilton's Method** of treating deep abscesses consists in a simple incision through the skin with a scalpel, and the separation of the deep parts by means of a blunt instrument, as the blades of a dressing forceps. **Hœffinger's Method** for massage of the neck; the patient sits with the head erect. The operator stands behind and places his hands beneath the patient's ears, and strokes downward toward the shoulder, the hand covering the principal part of the trapezius muscle. **Hœning's Method** of expression of retained fragments after abortion; one finger is placed in the vaginal vault while the fingers of the other hand grasp the uterus through the abdominal wall and gradually squeeze out

the contents of that organ. **Hoffmann's Method**; a method of treating chronic inflammation of the tonsils. It consists in breaking down the tonsils by means of a blunt hook introduced into the crypts. **Howard's Method.** See *Artificial Respiration.* **Huchard's Diet** for dilatation of the stomach; the strict limitation of liquids, a glass and a half only at each meal; all food-substances and fruits containing much water are to be rejected, and only very thick soups permitted; roast meat, eggs, and the drier kinds of vegetables are allowed. **T., Hutchinson's,** in hip-disease; the weight of the limb is utilized as the extending force, a patten being worn on the sound foot. **T., Hutchinson's,** of lupus erythematosus; it consists in rubbing the part with lint dipped in benzoline every night, and then applying a weak (4 grains to the ounce) yellow oxid of mercury ointment. **T., Indian,** of goiter, consists in the inunction of an ointment of biniodid of mercury. This is to be followed by exposure of the goiter to the direct rays of the sun until the smarting becomes unbearable. **T., Jürgenssen's,** of pneumonia, consists in the exhibition of large doses of quinin. **Kibbie's Method** of reducing temperature; the pouring of tepid water (95° to 80°) over the patient's body, covered from the axillæ to the thighs with a wet sheet, and laid upon a cot, through the open canvas of which the water passes, and is caught on a rubber cloth beneath the cot and conveyed into a bucket at the foot of the bed. **Kisch's Method** of reducing obesity. It is based upon the administration of a large quantity of albuminous food. Free and abundant use of water is permitted. **T., Koch's,** of tuberculosis; the subcutaneous injection of tuberculin. **T., Krause's,** for tuberculous laryngitis consists in the local application of concentrated solutions of lactic acid. **T., Krull's,** of cholangitis; from one to four pints of water at a temperature of 59° F. are slowly injected into the rectum once daily. The fluid must be retained as long as possible. On successive days the temperature of the water is gradually raised until it reaches 72° F. **Laborde's Method**; the treatment of asphyxiated patients by rhythmic tractions of the tongue. **Lannellongue's Method** of treating tuberculosis consists in the deep injection of dilute solutions of chlorid of zinc into or about the tuberculous deposits. **T., Le Peines.** Same as *Goats' Blood Treatment.* **Lewsaschew's Method** of treating pleuritic effusion consists in replacing a small portion of the fluid to be withdrawn by an equal amount of a sterilized salt-solution. A continuance of this ultimately leaves only pure salt-solution in the cavity. **T., Liebreich's,** for tuberculosis, consists in the hypodermatic injection of a solution of from $\frac{1}{648}$ to $\frac{1}{324}$ of a grain of cantharidate of potassium. **MacEwen's Method** of treating aneurysm consists in inducing consolidation of the sac by irritating its inner surfaces with a pin-point. **MacEwen's Method** of controlling the circulation in the lower extremities consists in manual compression of the abdominal aorta. **T., Martineau's,** for diabetes. It consists in drinking daily about a liter of carbonic-acid water. It is especially valuable in those cases having a close or remote connection with gout. **Mason's Method**; the method of keeping the fragments in proper position in fracture of the nasal bones by the insertion of needles, which are allowed to remain *in situ* for about a week. **Mauriceau's Method,** *Veit-Smellie Method,* a method of delivering the after-coming head. Proceed in the same manner as in the *Wiegand Method* until the disengaged hand is to be used. The middle finger of this hand, pronated, is passed along the back of the neck until it finds the occiput, when pressure is employed to further flex the head. The index and ring fingers are now flexed over the clavicles, and traction is made in the axis of the parturient canal (downward and outward), the trunk is carried toward the mother's abdomen, and at the same time the fingers in the mouth and on the occiput are securing complete flexion of the head. **Michel's Method,** the after-treatment of cataract-operations in a light room, and with light dressings to the eyes. **T., Weir Mitchell's,** of neurasthenia. This consists in rest in bed, isolation, fattening or plenteous nourishment, and the use of massage and electricity. See *Rest-cure.* **T., Mitchell's (S. Weir),** of obesity. He advocates rest, milk-diet, and massage. The milk is skimmed, and is given alone, with the usual precautions. All other foods and fluids are forbidden. When it is found what quantity of milk will sustain the weight, the amount is diminished by degrees until the patient is losing a half pound of weight each day, or less or more, as seems to be well borne. This is combined with rest and massage. **Moore's Method,** a method of dressing in Colles' fracture by a small roller and a strip of adhesive plaster. **Moore's Method** of treating aneurysm. The introduction of foreign bodies, such as metallic wire, watch-spring, horse-hair, catgut, silken or sea-tangle threads into the aneurysmal sac. **Morgan's Method** of treating dislocation of the hip. A foot is placed between the thighs and against the perineum to effect counter-extension; extension and rotation are made by assistants, by means of a band attached above the knee; the limb being adducted, the foot becomes a fulcrum and presses the bone off from the pelvis. **Morton's Method** of treating *spina bifida.* It consists in injecting into the sac a dram of a preparation of 10 grains of iodin and 30 of iodid of potassium in an ounce of glycerin. About a dram of the fluid of the sac is first withdrawn, so that the tension of the sac may not be increased by the injection. **T., Murray's,** of aneurysm. Favoring the rapid formation of a red clot in the aneurysmal sac by firmly applying an Esmarch bandage below the sac, carrying it lightly over the sac, and then making four turns above. **Nélaton's Method,** suspending the patient by the legs to counteract the hypothetic cerebral anemia of too profound anesthesia. **Nélaton's Method** of treating dislocation of the jaw; the operator stands in front of the patient, grasps the back of the head on each side with the outstretched fingers, and presses with the thumbs on the coronoid processes to bring the condyles in place. **T., Newman's,** of laryngeal strictures; by tupelo dilators after tracheotomy, with, finally, introduction of an artificial larynx. **Nœggerath's Method,** reduction of uterine inversion by commencing the operation by indenting the fundus at one or the other cornu. **Noyes' Method** of crushing trachoma-granulations; the lids are everted and the two ends of the tarsus are grasped by special forceps and opposing traction made. The granulations are thus squeezed and stripped out. **O'Dwyer's Method**; intubation for obstructions of the larynx. **Oertel's Method**; the treatment of the circulatory disturbances of heart-disease, obesity, emphysema, etc., by mechanical means. The objects aimed at are: (1) diminution in the quantity of fatty tissue deposited—achieved by regulation of diet, etc.; (2) a reduction in the quantity of fluids in the body—accomplished by diminished ingestion of fluids of all kinds; (3) strengthening of the heart-muscle and promotion of the development of compensatory hypertrophy—attained by methodic mountain-climbing and other systematic

exercise; (4) stimulation of the circulation by massage, passive movements, and sanitary gymnastics. **Pacini's Method.** See *Artificial Respiration.* **Parsons' Method,** treatment of carcinoma of the cervix uteri by the use of the interrupted galvanic current. **T., Pavy's,** for diabetes consists in a dietary the main points of which are avoidance of sugar, starches, milk, all kinds of pastry and puddings, and fruits, both fresh and preserved. **T., Payne's,** of *Lupus erythematosus;* it consists in the topical application daily of salicylic acid ½ dram, and collodion 1 ounce. **T., Pirogoff's Camphor,** a method of treating erysipelas; the patient takes every hour or two hours 3 grains of powdered camphor, and drinks large quantities of hot tea, to promote perspiration. **T., Pneumatic,** of asthma, consists in the inhalation of compressed air. **Politzer's Method,** a method of inflating the middle ear for middle-ear disease. The exit-tube of a rubber bulb is introduced into one naris, while the other is occluded, and the patient swallows a little water held in the mouth as the bulb is compressed. **T., Prochownik's,** of asphyxia neonatorum. The child is held inverted by the feet, and compression of the chest is practised. **Reid's Method:** 1. The reducing of dislocations of the hip by manipulation. 2. The use of the Esmarch bandage and tube in the treatment of aneurysm. **Richet's Method** of treating tuberculosis consists in the hypodermatic injection of the serum of dogs' blood. **Ricord's Method** of treating syphilis; a course of mercury for six months, followed by a three months' course of iodid of potassium. **T., Roberts',** for diabetes, consists in avoidance of all saccharine or farinaceous foods, the livers of all animals or shell-fish, all sweet fruits, and sweet wines. **T., Roussel's,** of tuberculosis; by hypodermatic medication only, with the desire to save the stomach for food-purposes. Various substances dissolved in sterilized olive-oil are injected, as follows: eucalyptol, 25 in 100; turpentine, 15 in 100; metallic iodin 2 to 5, eucalyptol 5 to 10, oil 100; iodoform 2, eucalyptol 5, oil 100; camphor 10, eucalyptol 10, oil 100; paraldehyd 5 to 10, oil 100; crystallized carbolic acid 5 to 20, eucalyptol 10, oil 100. The dose is always 15 minims. **T., Salisbury,** for obesity, consists in a diet of beefsteak and hot water. **Satterthwaite's Method.** See *Artificial Respiration.* **Sayre's Method** for treating lateral curvature of the spine; suspension of the patient for the purpose of extension during the application of a plaster-of-Paris jacket. **Scarenzio's Method** of treating syphilis; by subcutaneous injections of calomel suspended in glycerin and mucilage of acacia. The amount injected varies from ¾ to 2 grains once or twice a week, suspended in 10 or 12 drops of the vehicle used. The site of the injection may be the sides of the chest, the belly, or the depression in the buttocks, an inch behind the posterior border of the great trochanter. Abscesses may develop at the point of injection. **Schatz's Method** of converting a face-presentation into a vertex-presentation. It is done by external manipulation only. His manuever consists in restoring the normal attitude of the body by flexing the trunk, and leaving the head to spontaneously resume its proper position as it sinks into the pelvis. It is performed by seizing the shoulder and chest with the hand through the abdominal walls; then lifting the chest upward and pressing it backward, at the same time steadying or raising the breech with the other hand applied near the fundus, so as to make the long axis of the child conform to that of the uterus, and, finally, pressing the breech directly downward. As the child is raised, the occiput is allowed to descend, and then, as the body is bent forward, head-flexion is produced by the resistance of the lateral walls of the pelvis. This maneuver is only applicable before the rupture of the membranes. **Schede's Method,** a method of obtaining healing in cases of operations upon bones and other structures which leave cavities that cannot be obliterated. It aims at union under a moist blood-clot. Ordinary chemic antiseptics are used; wads of sublimate-cotton wrapped in mull and kept in sublimate-solution are used in place of sponges. During the operation the wound is washed out with sublimate-solution every five minutes. All bleeding vessels are tied, the wound, thoroughly irrigated, first with 5 per cent. carbolic solution, then with the bichlorid of mercury lotion, closed by relaxation sutures of silk or silver and a continuous catgut suture, and dressed with protective or gutta-percha tissue, 10 per cent. iodoform-gauze wrung out in 5 per cent. carbolic lotion, and a moss pillow. **T., Schott's,** of heart-disease; saline or carbonated baths at from 86 to 92° F. for 5 to 7 weeks; systematic exercise—flexion, extension, and rotation—resisted by another person. **Schrœder's Method.** See *Artificial Respiration.* **Schroth's Method** of treating obesity consists in the exclusion, as far as possible, of water or fluid in any form. **Schultz's Method.** See *Artificial Respiration.* **T., Schuster's,** of syphilis; it consists in inunction of the skin with a mercurial soap. A good lather is made with water, and this is allowed to dry on the skin, upon which it leaves a thin film of mercury. If applied too freely it may cause dermatitis. **Schwalbe's Method** of treating reducible herniæ; injection of alcohol with a Pravaz syringe. **Schweninger Cure** for obesity; the same as Oertel's method (*q. v.*), with the sole modification of the forbidding of any fluid at meals. **T., See's (Germain),** of obesity; he advises a *régime* of albuminoids and fats, together with a great quantity of drink, especially of warm, aromatic fluids. Hot tea is the beverage he especially favors. Alcoholic drinks are strictly interdicted. **T., Seegen's,** for diabetes, consists in the avoidance of farinaceous food of all kinds, sweet fruits, sugar, and all sweet wines and syrups. He allows shell-fish and berries. **T., Seibert's,** for diphtheria: the application of pulverized sodium chlorid to the membrane twice daily until it becomes, as it were, "corned." **T., Seiler's,** a method of treating pulmonary tuberculosis by inhalation of the fumes of hydrofluoric acid. **T., Shurly-Gibbes',** of tuberculosis. Hypodermatic injection of solutions in glycerin of either *iodin* or *gold and sodium chloric,* or both in alternation, in conjunction with chlorin-inhalations. The commencing dose of the iodin-solution should be about $\frac{1}{15}$ of a grain, gradually increased to ½ or 1 grain; that of the gold salt $\frac{1}{10}$ of a grain gradually increased to ½ or ¼ of a grain. **Simpson's Method** of treating placenta prævia; complete separation of the placenta. **Small's Method** of extension of the thigh; it consists in the application of a wicker-work sheath like the "Indian finger," from which the extension is made. **Smith's (Tyler) Method** of treating uterine inversion; by distending the vagina with an inflated rubber bag, after having applied massage to the uterus for 10 days. **"String" Method;** the method of dilating a strictured canal by passing a strand of braided silk through and drawing it back and forth. Abbe operated by this means in a case of stricture of the esophagus, by performing esophagotomy and gastrotomy and passing the thread through the stricture by means of a thin bougie. **Sylvester's Method.** See *Artificial Respiration.* **Thin's Method** of treating bromidrosis. It consists in shaking finely powdered boric acid into the socks and stockings, chang-

ing the latter once a day. **T., Thomas's Damming,** of fractures with delayed union. The circulation was obstructed by compression above the fracture and congestion maintained for a few minutes. **Thure-Brandt's Method.** Same as *Brandt's Method.* **T., Towers-Smith,** for obesity, is essentially the same as the Salisbury treatment. **Tranjen's Method** of treating tuberculosis consists first in injection into the gluteal muscles, every eight days, of a solution of hydrargyrum thymolo-aceticum. Secondly, the exhibition, by the mouth, of a solution of potassium iodid. **Trendelenburg's Method,** the method of operating by placing the patient in the Trendelenburg position to favor sagging upward of the intestines. **Tuffnell's Method,** the method of treatment of aortic aneurysm by means of a restricted diet, so that the solids taken during the day will amount to but ten ounces, and the liquids to eight. These are divided as follows: *Breakfast*—bread and butter, 2 ounces; cocoa or milk, 2 ounces. *Dinner*—boiled or broiled meat, 3 ounces; potatoes or bread, 3 ounces; light claret, 4 ounces. *Supper*—bread and butter, 2 ounces; milk or tea, 2 ounces. The presence of aortic regurgitation is a distinct contraindication to this method. **T., Unna's,** of acne consists in the application of an ointment containing resorcin, corrosive sublimate, and zinc oxid. **T., Valentine's,** of uterine inversion. The uterus is seized with the fingers and thumb of one hand, and counter-pressure is made in the hypogastrium with the other. **Valsalva's Method** of treating aortic aneurysm; it consisted in starving the patient, in the belief that by such a process the blood became more coagulable. **T., Van Buren's,** of prolapse of the rectum. The patient under ether, the smallest tip of the Paquelin cautery, heated only to a dull-red, is drawn over the length of the prolapsed tumor with just sufficient force to go through the mucous membrane. Five or six linear eschars should be made, very lightly at the upper portion, more heavily below. The tumor should then be replaced and the sphincter burned at two points on opposite sides with the same iron; these cuts should be made into the substance of the muscle, so that the resulting contraction will lessen the size of the anus. **Veit-Smellie Method.** See *Mauriceau's Method.* **T., Vogel's,** for obesity is a slight modification of the Banting method. **Vulliet's Method** of controlling severe hemorrhage after abortion. It consists in packing the whole uterine cavity with small balls of iodoformized cotton, tamponing the vagina as usual. **Weber's Method** for the arrest of hemorrhage; by turning the vessel inside out by means of the arterio-verter. See *Arterio-version.* **T., Welander's,** for abortion of buboes; the injection of mercuric benzoate into the affected glands. If fluctuation be present, a minute puncture is made to evacuate the pus, the cavity is washed with corrosive sublimate 1 : 1000 and closed. **"Whey-cure"** treatment of cardiac hypertrophy consists in the daily administration of large quantities of whey. **Wiegand's Method** of delivery of the after-coming head. Introduce the first three fingers of the supinated hand into the vagina (using that hand the palm of which corresponds to the abdomen of the child), at the same time resting the abdomen of the child upon the forearm with a leg hanging on either side. Insert the index finger in the child's mouth, and exert sufficient traction on the lower jaw to produce and maintain flexion of the head. The disengaged hand now locates the head through the abdominal wall above the pubes, and pressure is made in the axis of the parturient canal, the child's body being elevated toward the mother's abdomen. **Wing's Method** of treating uterine inversion; it is done by means of a wooden instrument, shaped something like an old-fashioned, wooden stethoscope, but with a very shallow depression for the fundus, to prevent the edges from cutting the tissues. Continuous pressure is obtained by means of two pieces of elastic tubing, passed between the thighs and fastened to the stem of the instrument, which projects beyond the vulva; the ends of the tubing are fastened to a waistband. **Witzel's Method** of removing an acute pneumothorax resulting from penetrating wounds of the thorax. It aims at the conversion of the pneumothorax into an artificial hydrothorax, the latter being finally emptied by aspiration. A solution of boric acid at blood-temperature is used for this purpose. **Yeo's Method** of treating obesity consists in a dietary which limits the amount of farinaceous food, prohibits sugar, limits the amount of food taken with the meals, but encourages the drinking of large amounts of hot or warm, aromatic beverages between meals. **Ziemssen's Method** of treating anemia; by subcutaneous injections of defibrinated human blood under strict antiseptic precautions. The injections vary in amount from 1.6 to 3.3 ounces at a sitting.

Trechoma (*tre-ko'-mah*). Synonym of *Trachoma.*

Tree (*tre*) [ME., *tree*, tree]. A perennial plant with a single, self-supporting, woody trunk, reaching usually the height of 25 or 30 feet. **T.-cotton.** See *Mocmain.* **T. of Heaven.** See *Ailanthus.* **T., Vascular,** the arbor-like appearance of the blood-vessels when removed from the body.

Trehala (*tre-hah'-lah*) [Turkish]. *Turkish manna;* a variety of manna derived from the cocoons of *Larinus maculatus*, an insect that feeds upon an Asiatic thistle, *Echinops persica.*

Trehalase (*tre'-hal-ās*) [*trehala*]. A soluble ferment first found by Bourquelot in *Aspergillus niger.* Its function is to convert trehalose into glucose.

Trehalose (*tre-hal'-ōs*) [*trehala*]. A complex carbohydrate or crystallizable sugar derived from ergot, and also from trehala. See *Mycose*, and *Carbohydrates, Table of.*

Trélat's Method. See *Anesthetic.*

Trema (*tre'-mah*) [τρῆμα, a hole]. 1. A synonym of *Foramen.* 2. A genus of the *Ulmaceæ.* **T. orientalis,** Indian nettle-tree. The bark, leaves, and root are used as a remedy for epilepsy.

Trematoda (*trem-at-o'-dah*) [τρηματώδης, porous]. An order of entozoa, including worms parasitic in the liver and intestinal tract; fluke-worms.

Trematode (*trem'-at-ōd*) [τρηματώδης, having many holes]. In biology, a member of the class *Trematoda;* parasitic, unsegmented platodes, without a covering of cilia, mostly with a forked intestine, mouth and pharynx at the anterior end of the body. See *Distoma* and *Fasciola*, under *Parasites* (*Animal*), *Table of.*

Trematoid (*trem'-at-oid*) [τρηματοειδής, having many holes]. Same as *Trematode.*

Tremble (*trem'-bl*) [ME., *tremblen*, to tremble; L., *tremere*, to tremble]. To be affected with slight, quick, and continued vibratory movements; to quiver.

Trembles (*trem'-blz*) [*tremere*, to tremble]. Synonym of *Milk-sickness.* Also used as a synonym of *Paralysis agitans.*

Trembling (*trem'-bling*) [*tremere*, so tremble]. A tremor; quivering; affected with involuntary muscular agitation. **T. Chair,** a chair used in the treatment of paralysis agitans for giving vibratory motion to the body of the patient seated in it. **T. Palsy.** Synonym of *Paralysis agitans.*

Tremellose (*trem'-el-ōz*) [*tremere*, to tremble]. In biology, jelly-like.

Tremens (*tre'-menz*). See *Delirium.*

Trementina (*tra-men-te'-nah*) [Sp.]. The resin of *Espelitia grandiflora*, used medicinally. **T. Común,**

[Mex. Ph.], a thick, granular turpentine used as a balsamic stimulant.

Tremogram (*trem′-o-gram*) [*tremare*, to tremble; γράμμα, a writing]. The tracing of tremor made by means of the tremograph.

Tremograph (*trem′-o-graph*) [*tremare*, to tremble; γράφειν, to write]. An instrument for making graphic records of tremor.

Tremor (*trem′-or*) [*tremere*, to shake]. An involuntary trembling or agitation of the body, or some part of it. **T., Arsenical,** a tremor the result of arsenical intoxication. **T. capitis,** tremor affecting the muscles of the neck and head. **T. coactus.** Synonym of *T., Forced.* **T., Continuous,** a form of tremor which resembles that of paralysis agitans; it is, however, likely to be remittent, and may be diminished or arrested by voluntary effort. **T., Convulsive.** See *Paramyoclonus.* **T., Epileptoid,** intermittent clonus with tremor. **T., Fibrillary,** tremor caused by consecutive contractions of separate muscle-fibrillæ. **T., Forced,** the convulsive movements persisting during repose after voluntary motion, due to an intermittent and rhythmic irritation of the nervous centers. **T., Hysteric,** the tremor observed in hysteria, and due to the uncertainty of nervous impulse. **T., Intention,** one appearing on voluntary movement **T., Intermittent,** the tremor commonly observed in hemiplegics on any attempt at voluntary motion. **T., Mercurial,** a peculiar form of tremor observed among smelters and others exposed to the fumes of mercury. It is sudden or gradual in onset, and is usually unaccompanied by salivation. The arms are first involved, and then the entire muscular system. If allowed to go on, paralysis, mania, and idiocy may result. **T., Muscular,** slight, oscillating, rhythmic muscular contractions. **T., Purring.** Synonym of *Purring Thrill.* **T. saturninus,** the tremor of lead-poisoning. **T. tendinum.** Synonym of *Subsultus tendinum.* **T., Vibratile.** Synonym of *Fremitus.* **T., Volitional,** a trembling of the entire body during voluntary effort, as observed in multiple sclerosis. See *T., Intentional.*

Tremorless (*trem′-or-less*) [*tremere*, to tremble]. Free from tremor.

Tremulation (*trem-u-la′-shun*) [*tremulare*, to tremble]. A tremulous condition.

Tremulous (*trem′-u-lus*) [*tremere*, to shake]. Trembling. **T. Iris.** See *Iris.*

Trendelenburg Posture. See *Postures, Table of.*

Trepan (*tre-pan′*) [τρυπᾶν, bore]. An old form of the word trephine. See *Trephine.*

Trepanatio (*trep-an-a′-she-o*) [L.]. See *Trephining.* **T. corneæ,** an operation for conical cornea, by means of the conical trephine. A small circular piece is removed from the center of the cornea. The membrane of Descemet only is penetrated. A hernia at once forms, which is daily punctured until the cicatricial process is complete.

Trepanation (*trep-an-a′-shun*) [τρύπανον, a borer]. The operation of trephining.

Trepang (*tre-pang′*) [Malay, *tripang*]. The sea-slug, or *bichodomar, Holothuria edulis;* a worm-like sea-animal highly prized in China as an ingredient of soups; regarded as analeptic. Unof.

Trepanize (*trep′-an-īz*) [τρυπᾶν, to bore]. To trepan.

Trepanning (*tre-pan′-ing*) [τρυπᾶνι, to bore]. Boring; using the trephine. **T.-elevator,** a lever used to raise the piece of bone detached by the trepan.

Trephine (*tre-fīn′*) [τρύπανον; τρυπᾶν, to bore]. An instrument for excising a circular piece of bone, usually from the skull. **T., Brace,** a trephine with an ordinary carpenters' brace. **T., Conical,** a trephine with a truncated cone-shaped crown and provided with oblique ridges on its outer surface to stop its progress as soon the bone is penetrated. **T., Corneal,** a small c ting trephine used to remove a circular section from t summit of a conical cornea. It is manipulated w the thumb and finger. **T. of Galt,** a form of conic trephine. **T., Nasal,** an instrument made of a ste shaft ending in a small, fenestrated tube, having a kn or saw edge. **T., Tympanic,** an instrument made a small steel shaft ending in a small, polished tub 2 mm. in diameter, with a cutting edge.

Trephining (*tre-fin′-ing*) [τρύπησις]. The operatio of trephining.

Trepidant Chair. See *Trembling Chair.*

Trepidatio (*trep-id-a′-she-o*) [*trepidare*, to be agitated The state of agitation. **T. cordis,** palpitation of t heart.

Trepidation (*trep-id-a′-shun*) [*trepidare*, to tremble A rhythmic movement of the foot in certain forms paraplegia and in epilepsy.

Treppe (*trep′-eh*) [Ger.]. See *Summation.*

Tresis (*tre′-sis*) [τετραίνειν, to pierce]. Wound. **causis.** See *Burn.* **T. punctura,** a puncture. **vulnus,** a wound.

Tri- [τρεῖς, or *tres*, three]. A numeral used as a pref to denote three, or triple.

Triacetamid (*tri-as-et′-am-id*) [*tres*, three; *acetamid* $(C_2H_3O)_3N$. A chemic substance obtained by trea ing acetonitril with acetic anhydrid.

Triacetin (*tri-as′-et-in*) [*tres*, three; *acetum*, vinegar $C_3H_5(C_2H_3O_2)_3$. An oily liquid found in cod-liver o in some of the fats, in the oil of *Euonymus europea* and in a mixture of glycerin and glacial acetic acid.

Triacetonamin (*tri-as-et-ōn′-am-in*) [*tres*, three; *a tone; amin*], $C_9H_{17}NO$. A substance produced by t action of ammonia on acetone. It crystallizes in anh drous crystals that melt at 39.6° C.

Triacetyl (*tri-as′-e-til*) [τρεῖς, three; ὕλη, matter]. T compound C_2N_3O.

Triacetylene (*tri-as-et′-il-ēn*). Synonym of *Benzene.*

Triacid (*tri-as′-id*) [*tres*, three; *acidum*, acid]. acid containing three atoms replaceable by H.

Triad (*tri′-ad*) [*tres*, three]. See *Quantivalence.* **of Hutchinson,** the combination (notched teeth, terstitial keratitis and otitis) found in subjects of here tary syphilis.

Triadelphous (*tri-ad-el′-fus*) [τρεῖς, three; ἀδελφός brother]. In biology, applied to stamens that united by their filaments into three sets.

Triakaidekaphobia (*tri-a-ki-dek-af-o′-be-ah*) [τρια δεκα, thirteen; φόβος, fear]. Insane dread of number thirteen.

Trial (*tri′-al*) [Fr., *trier*, to try]. The act of trying testing. **T.-case,** a box of lenses for testing and timating the refraction of the eye, containing bicon biconcave, cylindric, prismatic, and other lenses. **frame,** a spectacle-frame into which the trial-le may be slipped. **T.-glasses** or **T.-lenses,** a g uated set of concave, convex, cylindric, and prism lenses used in testing vision. See *Spectacle-len* **T.-jar,** a jar in which mixed liquids are allowe stand in order that they may separate by gravity.

Trialate (*tri-a′-lāt*) [*tres*, three; *alatus*, winged]. biology, having three wings.

Trialkylic (*tri-al-kil′-ik*) [*tres*, three; *alkali*]. taining three molecules of an alkyl.

Triallylamin (*tri-al-il′-am-in*). A chemic compou $(C_3H_5)_3N$.

Triallylin (*tri-al′-il-in*) [*tres*, three; *allyl*], $C_{12}H_$ An oxid of allyl and glyceryl.

Triamin (*tri-am′-in*). See *Amin.*

Triammonic (*tri-am-mon′-ik*) [*tres*, three; *ammon* Containing three molecules of ammonium.

iamylamin (*tri-am-il'-am-in*) [*tres*, three; *amyl*, *amin*], $N(C_5H_{11})_3$. Tertiary amin of amyl.

iamylin (*tri-am'-il-in*) [*tres*, three; *amyl*], $C_3H_5(C_5H_{11})_3(O)_3$. A compound produced by heating amyl-alcohol and acrolein with acetic acid.

iamylphosphin (*tri-am-il-fos'-fin*). A compound with the formula $(C_5H_{11})_3P$.

iandrous (*tri-an'-drus*) [τρεῖς, three; ἀνηρ, a male]. In biology, having three stamens.

iangle (*trī'-ang-gl*) [*tres*, three; *angulus*, angle]. A space bounded by three lines or sides and with three corners or angles. **T. of Assegat**, a triangle formed by lines uniting the projection of the nasion on the alveolo-condylar plane and the alveolar and nasal points and one uniting the two latter. **T. of Bryant.** See *T., Ilio-femoral.* **T., Carotid, Inferior** ("Triangle of necessity"), located in the neck; it is bounded entrad by the median line of the neck, dorsad by the ventral margin of the sterno-mastoid, and cephalad by the ventral belly of the omo-hyoid. Its floor is formed by the longus colli below and the scalenus anticus above. The common carotid artery, internal jugular vein, vagus nerve, superficialis colli nerve, a branch of the communicans noni, the inferior thyreoid artery, the recurrent laryngeal nerve, the sympathetic nerve, the trachea, thyreoid gland, and larynx are the important structures within it. **T., Carotid, Superior** ("Triangle of election"), located in the neck; it is bounded dorsad by the sterno-mastoid, ventrad by the ventral belly of the omo-hyoid, and cephalad by the dorsal belly of the digastric. Its floor is formed by the thyreo-hyoid, hyo-glossus, and inferior and middle constrictors of the pharynx. The important structures contained within it are the common carotid artery and its bifurcation into the external and internal carotids, the superior thyreoid artery, the lingual artery, the facial artery, the occipital and ascending laryngeal arteries, the internal jugular vein and the veins corresponding to the arteries mentioned, the descendens noni, hypoglossal, pneumogastric, sympathetic, spinal accessory, superior laryngeal, and external laryngeal nerves. **T., Cephalic,** a triangle on the antero-posterior plane of the skull bounded by lines joining the occiput with the forehead and with the chin and a line joining the latter two. **T., Digastric.** See *T., Submaxillary.* **T. of Elbow,** a triangle lying in front of the elbow with the base directed upward toward the humerus, bounded externally by the supinator longus and internally by the pronator radii teres. Its floor is formed by the brachialis anticus and supinator brevis. Its contents are the brachial artery and veins, the radial and ulnar arteries, the median and musculo-spiral nerves, and the tendon of the biceps. **T. of Election.** See *T., Carotid, Superior.* **T., Facial,** a triangle formed by lines uniting the glabella with the alveolar and nasal points and a line joining the latter two. **T., Frontal,** a triangle bounded by the maximum frontal diameter and lines joining its extremities and the glabella. **T. of Hesselbach,** a triangle at the lower part of the abdomen bounded laterad by the deep epigastric artery, caudad by Poupart's ligament, and mesad by the margin of the rectus muscle. It is of importance in direct inguinal hernia. **T., Ilio-femoral,** a triangle located at the hip. Its hypothenuse is formed by Nélaton's line, a second side by the continuation outward of a line drawn through the two superior iliac spines, and the third by a line drawn at right angles to this from the summit of the greater trochanter. It contains the external abdominal ring. **T., Inferior Occipital,** a triangle having the mastoid diameter for its base and the inion for its apex. **T., Infra-clavicular,** a triangle situated below the clavicle; it is bounded above by the clavicle, below and to the inner side by the upper border of the great pectoral muscle, and to the outer side by the anterior border of the deltoid. It contains the axillary artery. **T., Inguinal.** Same as *T., Scarpa's, q. v.* **T. of Lesser,** a triangle located in the neck. Its boundaries are as follows: at its upper border the hypoglossal nerve; the two sides are formed by the ventral and dorsal bellies of the digastric muscle. It is covered by the skin, superficial and deep fasciæ, and apex of the submaxillary gland. The floor is formed by the hyo-glossus muscle. It contains the ranine vein and hypoglossal nerve. **T., Lumbo-costo-abdominal,** a triangle which is bounded anteriorly by the external oblique, superiorly by the lower border of the serratus posticus inferior and the point of the 12th rib, posteriorly by the outer edge of the erector spinæ and inferiorly by the internal oblique. **T., Mandibulo-condylar,** a triangle having its apex at the symphysion and its base between the two condyles. **T., Mandibulo-coronal,** a triangle having its apex at the symphysion and its base between the two corona. **T., Mandibulo-gonial,** a triangle having its apex at the symphysion and its base between the two gonia. **T., Mento-condylar,** a triangle formed by lines joining the mental point to the condyles of the inferior maxilla and these with each other. **T., Mento-condylial,** the triangle of A. von Török having its base between the condyles of the inferior maxilla and its apex at the gnathion. **T., Mento-coronal,** a triangle formed by lines joining the mental point with each extremity of a line joining the two corona. **T., Mento-gonial,** a triangle of A. von Török having the bigoniac diameter as its base and the gnathion as its apex. **T., Mento-mastoid,** a triangle of A. von Török with the bi-mastoid diameter as a base and the gnathion as an apex. **T., Mylo-hyoid,** the three-cornered space bounded by the mylo-hyoid and the two bellies of the digastric. **T. of Necessity.** Same as *T., Carotid, Inferior.* **T. of the Neck, Anterior,** a triangle bounded ventrad by a line extending from the chin to the sternum, dorsad by the ventral margin of the sterno-mastoid, and the base is formed by the lower border of the body of the inferior maxilla and a continuation of this line to the mastoid process of the temporal bone. It is covered by the integument, the superficial and deep fasciæ, and the platysma myoides. It is subdivided into three smaller triangles by the digastric muscle above and the ventral belly of the omo-hyoid below. These are named from below upward the *inferior carotid*, the *superior carotid*, and the *submaxillary*, *q. v.* **T. of the Neck, Posterior,** a triangle bounded ventrad by the sterno-mastoid muscle, dorsad by the ventral margin of the trapezius; the base is formed by the upper border of the clavicle. The apex corresponds to the occiput. It is divided by the dorsal belly of the omo-hyoid muscle into two triangles, the *occipital* or *upper*, and the *subclavian* or *lower*, *q. v.* **T., Occipital,** a triangle with the following boundaries: ventrad, the sterno-mastoid muscle; dorsad, the trapezius, and caudad, the omo-hyoid muscle. Its floor is made up of the splenius, the levator anguli scapulæ, and the middle and posterior scaleni. Its important contents are the spinal accessory nerve, the ascending and descending branches of the cervical plexus, and the transversalis colli artery and vein. **T., Omo-clavicular.** Same as *T., Subclavian, q. v.* **T., Omo-hyoid.** Same as *T., Superior Carotid.* **T., Omo-tracheal.** See *T., Carotid Inferior.* **T., Palatal,** a triangle of A. von Török having the width of the palate as its base and the alveolar point as its apex. **T. of Petit,** an abdominal triangle bounded below by the crest of the ilium and laterally by the external oblique and latissimus dorsi. It is covered by the skin and fascia and its floor is formed by the internal oblique. **T., Pubo-**

urethral, a triangle situated in the perineum. Its boundaries are *externally* the ischio-cavernosus muscle, *internally* the bulbo-cavernosus muscle, and *posteriorly* the transversus perinæi. **T. of Scarpa,** a triangle located in the proximal third of the thigh. The boundaries are *externally* the sartorius muscle, *internally* the adductor longus muscle, and *above* Poupart's ligament. It is covered by skin and the superficial and deep fasciæ. Its floor is formed by the iliacus, psoas, pectineus, adductor longus, and part of the adductor brevis. Its important contents are the femoral artery and vein, the anterior crural nerve, and the crural branch of the genito-crural nerve. **Ts., Simon's,** the groin, the internal face of the thighs, and the hypogastric region form the *femoral triangle of Simon;* the surface of the axilla, the pectoral region, and the inner aspect of the arm, the *brachial triangle of Simon.* These regions are often the seat of variolous rashes, or *roseolæ variolosæ*, which appear on the second and third days of the invasion-stage of smallpox. **T., Subclavian,** a triangle of the neck bounded cephalad by the dorsal belly of the omo-hyoid muscle, caudad by the upper border of the clavicle. Its base, directed ventrad, is formed by the sterno-mastoid muscle. Its floor is made up of the first rib, with the first digitation of the serratus magnus. It contains the subclavian artery and occasionally the vein, the brachial plexus of nerves, the supra-scapular vessels, the transversalis colli artery and vein, and the external jugular vein. **T., Submaxillary,** a triangle of the neck formed cephalad by the lower border of the body of the inferior maxilla and a continuation of this line to the mastoid process of the temporal bone, caudad by the dorsal belly of the digastric and the stylo-hyoid muscle, and ventrad by the middle line of the neck. Its floor is made up of the ventral belly of the digastric, the mylo-hyoid and hyo-glossus muscles. It contains the submaxillary gland, the facial artery and vein, the submental artery, the mylo-hyoid artery and nerve, and the stylo-maxillary ligament, behind which is the external carotid artery. **T., Suboccipital,** a triangle in the dorsal part of the neck. It is formed by the rectus capitis posticus major, and superior and inferior oblique muscles. It is covered by the complexus muscle, and contains the vertebral artery. **T., Superior** (*of the neck*). Same as *T., Carotid, Superior.* **T., Surgical,** a triangular space containing important vessels and nerves which may require to be operated upon. **T., Upper Cervical.** See *T., Carotid, Superior.* **T., Vesical,** a triangle at the base of the bladder—the trigonum of the urinary bladder. The apex is at the beginning of the urethra, and the other two angles at the orifices of the ureters.

Triangular (*tri-ang'-gu-lar*) [*triangulus*, three-cornered]. Pertaining to figures with three sides, and applied to a number of such-shaped organs or parts of the body.

Triangulare (*tri-ang-gu-la'-re*) [*triangularis*, three-cornered]. A peculiar bone of the tarsus of some animals.

Triangularis (*tri-ang-gu-la'-ris*). See *Muscles, Table of.*

Trianthous (*tri-an'-thus*) [τρεῖς, three; ἄνθος, flower]. In biology, three-flowered.

Triarch (*tri'-ark*) [τρεῖς, three; ἀρχός, ruler]. In biology, a term descriptive of radial fibro-vascular bundles having three rays.

Triarsenate (*tri-ar'-sen-āt*). See *Arsenate.*

Triatomic (*tri-at-om'-ik*) [*tres*, three; *atomus*, an atom]. In chemistry, consisting of three atoms; applied to the molecules of elements when the atoms are of the same kind. Also, the same as *trivalent.* Also, having three hydroxyl groups by which other atoms or radicles may be attached without altering the structure of the rest of the molecule.

Triaxial, Triaxon (*tri-aks'-e-al, tri-aks'-on*) [τρεῖς, three; ἄξων, axis]. Having three axes, as some sponge-spicules.

Tribadism (*tri'-bad-izm*) [τρίβειν, to rub]. Unnatural sexual relations between women.

Tribaritic (*tri-bar-it'-ik*) [*tres*, three; *barium*]. Possessing three atoms of barium.

Tribas (*trib'-as*) [τρίβειν, to rub]. One who practises tribadism.

Tribasic (*tri-ba'-sik*) [*tres*, three; *basis*, a base]. In chemistry, an acid having three hydrogen atoms replaceable by basic atoms.

Tribracteate (*tri-brak'-te-āt*) [*tres*, three; *bractea*, thin plate]. In biology, having three bracts.

Tribromacetic Acid (*tri-brom-as-e'-tik*) [τρεῖς, three; βρῶμος, stench; *acetum*, vinegar], $C_2Br_3HO_2$. A monobasic acid derived from acetic acid and occurring in transparent, prismatic crystals.

Tribromid (*tri-brom'-id*) [τρεῖς, three; βρῶμος, stench]. A compound of bromin analogous to a trichlorid.

Tribromphenol (*tri-brōm-fe'-nol*) [τρεῖς, three; βρῶμος, stench; *phenol*], C_6H_2BrOH. A substance prepared by the reaction of carbolic acid with bromin. It is antiseptic, especially for the intestinal tract. Dose gr. j–iv. Unof. **T.-bismuth,** a remedy recommended as a specific against Asiatic cholera. It is a yellow, neutral, insoluble powder, destitute of odor and taste and scarcely poisonous. It contains 49.5 per cent. of bismuth oxid and 50 per cent. of tribromphenol. The dose is gr. vijss (gram ½). Unof.

Tribulus (*trib'-u-lus*) [τρίβολος, a caltrop]. A genus of polypetalous plants, several varieties of which are used medicinally in European countries and in Africa.

Tributum (*trib-u'-tum*) [*tribuere*, to render]. A tribute.

T. lunare. Synonym of *Menstruation.*

Tributyrin (*tri-bu'-tir-in*) [*tres*, three; *butyrum*, butter], $C_3H_5(O.C_4H_7O)_3$. A compound found in butter. It is liquid, and has a sharp, bitter taste.

Tricaprin (*tri-kap'-rin*) [*tres*, three; *caper*, a goat], $C_3H_5(O.C_{10}H_{19}O)_3$. A substance found in butter and milk.

Tricaproin (*tri-kap'-ro-in*) [*tres*, three; *caper*, a goat], $C_3H_5(O.C_6H_{11}O)_3$. A substance found in milk and butter.

Tricaprylin (*tri-kap'-ril-in*) [*tres*, three; *caper*, a goat], $C_3H_5(O.C_8H_{15}O)_3$. A substance found in milk and butter.

Tricapsular (*tri-kap'-su-lar*) [*tres*, three; *capsula*, a capsule]. In biology, having three capsules.

Tricarbon (*tri-kar'-bon*) [*tres*, three; *carbo*, carbon]. A radicle containing three atoms of carbon.

Tricarpellary (*tri-kar'-pel-a-re*) [*tres*, three; *carpellum*, carpel]. In biology, having three carpels.

Tricarpous (*tri-kar'-pus*) [τρεῖς, three; καρπός, fruit]. In biology, bearing three fruits or three carpels.

Tricaudalis (*tri-kaw-da'-lis*) [*tres*, three; *cauda*, tail]. The retrahens aurem muscle. So called because it is composed of three slips.

Tricellular (*tri-sel'-u-lar*) [*tres*, three; *cellula*, a cell]. Having three cells.

Tricephalous (*tri-sef'-al-us*) [τρεῖς, three; κεφαλή, head]. Having three heads.

Tricephalus (*tri-sef'-al-us*) [τρεῖς, three; κεφαλή, head]. A form of triple monstrosity in which there is the development of three heads on one body.

Triceps (*tri'-seps*) [*tres*, three; *caput*, head]. Applied to certain muscles that have three roots at origin. See *Muscles, Table of.*

Trichadenia (*trik-ad-e'-ne-ah*) [θρίξ, a hair; ἀδήν, gland]. A genus of the *Bixineæ.* **T. zeylan-**

a tree of Ceylon. An oil is made from the seeds and is used as an application in certain skin-diseases. Unof.

richamomillol (*tri-kam-o-mil'-ol*) [*tres*, three; *chamomile*], $C_{30}H_{48}O_3$. A deep-blue, viscid substance obtained from the oil of chamomile, ethereal oil of wormwood, and oil of galbanum.

richangeia (*trik-an-ji'-ah*) [θρίξ, a hair; ἀγγεῖον, a vessel]. The capillary blood-vessels.

richangeiectasia (*trik-an-ji-ek-ta'-ze-ah*) [θρίξ, a hair; ἀγγεῖον, a vessel; ἔκτασις, extension]. Dilatation of the capillaries.

richasmus (*trik-az'-mus*) [θρίξ, a hair]. Synonym of *Hypertrichosis*.

richatrophia (*trik-at-ro'-fe-ah*) [θρίξ, hair; ἀτροφία, atrophy]. A brittle state of the hair from atrophy of the hair-bulbs.

richauxis (*trik-awks'-is*). See *Hirsuties*.

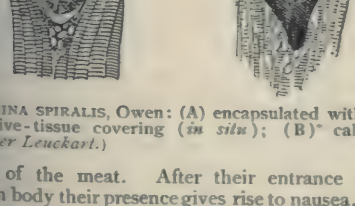
richia (*trik'-e-ah*) [θρίξ, a hair]. Synonym of *Entropion*.

richiasis (*trik-i'-as-is*) [θρίξ, a hair]. 1. Abnormal direction or position of the eyelashes, so that they produce irritation by friction upon the globe. See, also, *Distichiasis*. 2. A disease of the kidneys or bladder in which filamentous substances resembling hairs are passed in the urine. 3. A swelling of the breasts of puerperal women, the milk being excreted with difficulty.

richidium (*tri-kid'-e-um*) [θρίξ, hair: *pl.*, *Trichidia*]. In biology, a delicate, hair-like structure supporting the spores of certain fungi.

richilia (*tri-kil'-e-ah*) [τρίχειλος, three-lipped]. A genus of polypetalous plants occurring in tropical Africa and America. The bark and fruits of certain varieties have been used medicinally.

richina (*trik-i'-nah*, or *trik-e'-na*) [θρίξ, a hair: *pl.*, *Trichinæ*]. A genus of nematode worms. See *Parasites* (*Animal*), *Table of*.



richiniasis (*trik-in-i'-as-is*) [θρίξ, a hair]. The same as *Trichinosis*.

richiniferous (*trik-in-if'-er-us*) [θρίξ, hair; *ferre*, to bear]. Containing trichinæ.

richinization (*trik-in-iz-a'-shun*) [θρίξ, hair]. Infestation with trichinæ.

richinophobist (*trik-in-o-fo'-bist*) [θρίξ, hair; φοβεῖν, to fear]. One who has a morbid fear of trichiniasis.

richinosis (*trik-in-o'-sis*) [θρίξ, hair; νοσός, disease]. A disease produced by the ingestion of meat, pork, or sausage, containing the *Trichina spiralis*. The parasites lie coiled up in capsules between the muscular

TRICHINA SPIRALIS, Owen: (A) encapsulated with connective-tissue covering (*in situ*); (B)* calcified. (*After Leuckart.*)

bers of the meat. After their entrance into the human body their presence gives rise to nausea, vertigo, fever, diarrhea, prostration, stiffness and painful swelling of the muscles, edema of the face, and in some cases perspiration, insomnia, delirium, and death from exhaustion or some complication, as pneumonia.

Trichinotic (*trik-in-ot'-ik*) [θρίξ, hair; νοσός, disease]. Pertaining to or affected with trichinosis.

Trichinous (*trik'-in-us*) [θρίξ, hair]. Infested with or containing trichinæ.

Trichismus (*trik-iz'-mus*) [θρίξ, a hair]. In surgery, a scarcely perceptible fracture; also, a capillary fissure or crack.

Trichitis (*trik-i'-tis*) [θρίξ, a hair; ιτις, inflammation]. Inflammation of the hair-bulbs.

Trichloracetic Acid (*tri-klo-ras-e'-tik*). See *Acid*, *Trichloracetic*.

Trichlorphenol (*tri-klor-fe'-nol*) [τρεῖς, three; χλωρός, green; *phenol*]. A derivative of carbolic acid, used as a disinfectant, and said to be twenty-five times stronger than carbolic acid. A 2 per cent. solution has been used in purulent ophthalmia.

Trichoblast (*trik'-o-blast*) [θρίξ, hair; βλαστός, short]. In biology, an internal hair, like those which project into the intercellular spaces of the stems of some water-lilies. Also, a name proposed by Sachs for such idioblasts as are especially distinguished by size and branching.

Trichocardia (*tri-ko-kar'-de-ah*) [θρίξ, hair; καρδία, heart]. A peculiar condition of the inflamed pericardium roughened by pseudo-membranous elevations.

Trichocarpous (*trik-o-kar'-pus*) [θρίξ, a hair; καρπός, fruit]. In biology, having the fruit covered with hairs.

Trichocephaliasis (*trik-o-sef-al-i'-as-is*) [θρίξ, hair; κεφαλή, head]. The diseased condition produced by the presence of a parasite of the genus *Trichocephalus*.

Trichocephalus (*trik-o-sef'-al-us*) [θρίξ, hair; κεφαλή, head]. A worm popularly known as threadworm, parasitic in the intestinal tract. See *Parasites* (*Animal*), *Table of*.

Trichocirsus (*trik-o-sur'-sus*) [θρίξ, a hair; κιρσός, a varix]. A term applied to abnormal capillary dilatation.

Trichocladose (*tri-ko-kla'-dōz*) [τρεῖς, three; κλάδος, branch]. In biology, trifid or trichotomous.

Trichoclasia (*trik-o-kla'-ze-ah*) [θρίξ, a hair; κλάσις, a fracture]. Synonym of *Trichorrhexis nodosa*.

Trichocryptosis (*trik-o-krip-to'-sis*) [θρίξ, hair; κρυπτός, hidden]. Any disease of the hair-follicles.

Trichocyst (*trik'-o-sist*) [θρίξ, hair; κύστις, bladder]. In biology, a small vesicle containing a thread, which can be shot out rapidly, like the nematocyst of a cœlenterate, and found in the ectoplasm of the *Infusoria* and in some of the *Flagellata*.

Trichocystic (*trik-o-sis'-tik*) [θρίξ, hair; κύστις, bladder]. Pertaining to or of the nature of a hair-cell or trichocyst.

Trichodangeia (*trik-od-an'-je-ah*) [τριχώδης, hair-like; ἀγγεῖον, vessel; *pl.* of *Trichodangeium*]. A term synonymous with capillaries.

Trichodangeitis (*trik-od-an-je-i'-tis*) [τριχώδης, hair-like; ἀγγεῖον, vessel; ιτις, inflammation]. Capillary inflammation.

Trichodarteria (*trik-od-ar-te'-re-ah*) [τριχώδης, hair-like; ἀρτηρία, an artery]. An arteriole.

Trichodarteriitis (*trik-od-ar-ter-e-i'-tis*) [θρίξ, hair; ἀρτηρία, artery; ιτις, inflammation]. Inflammation of the arterioles.

Trichodo-phlebitis (*trik-od-o-fleb-i'-tis*) [τριχώδης, hair-like; φλέψ, a vein; ιτις, inflammation]. Inflammation of the venules.

Trichogen (*trik'-o-jen*) [θρίξ, hair; γεννᾶν, to produce]. A substance that stimulates the growth of the hair.

Trichogenous (*trik-oj'-en-us*) [θρίξ, hair; γεννᾶν, to produce]. Encouraging the growth of hair.

Trichoglossia (*trik-o-glos'-e-ah*) [θρίξ, hair; γλῶσσα, tongue]. The appearance of hair-like villi on the tongue. The filaments are formed by the thickening of the sheaths of the papillæ.

Trichogyne (*trik′-o-jin*) [θρίξ, hair; γυνή, a female]. In biology, the simplest form of female organ in certain *Algæ* (*Porphyraceæ* and *Nemalicæ*) before fertilization. It consists of a single cell with a lateral hair-like prolongation.

Trichogynic (*trik-o-jin′-ik*) [θρίξ, hair; γυνή, a female]. Pertaining to a trichogyne.

Trichoid (*trik′-oid*) [θρίξ, hair; εἶδος, resemblance]. Resembling hair.

Tricholeukosis (*trik-o-lu-ko′-sis*) [θρίξ, a hair; λεύκωσις, whiteness]. Synonym of *Canities*.

Tricholithus (*trik-ol′-ith-us*) [θρίξ, a hair; λίθος, a stone]. A hairy concretion.

Trichologia (*trik-o-lo′-je-ah*) [θρίξ, hair; λέγειν, to collect]. Carphologia; floccillation.

Trichology (*trik-ol′-o-je*) [θρίξ, hair; λόγος, science]. The sum of what is known regarding the hair, its nature and diseases.

Trichoma (*trik-o′-mah*) [τρίχωμα, a growth of hair]. 1. In biology, a general term for a plant-hair or hair-like structure; specifically applied to the string of cells or pseudocysts contained in the filament of algæ of the sub-class *Nostochineæ*. 2. See *Trichomatosis*.

Trichomaphyte (*trik-o′-maf-īt*) [τρίχωμα, a growth of hair; φυτόν, a plant]. A cryptogamic growth which was formerly thought to be the cause of trichomatosis.

Trichomatose (*trik-o′-mat-ōz*) [τριχοῦν, to cover with hair]. Matted together, as hair.

Trichomatosis (*trik-o-mat-o′-sis*) [θρίξ, hair]. An affection of the hair characterized by a matted condition and coherence, due to fungoid growths; plica polonica.

Trichome (*tri′-kōm*) [θρίξ, hair]. See *Trichoma*.

Trichomonas (*trik-om′-o-nas*) [θρίξ, hair; μονάς, a monad]. A genus of infusorians. See *Parasites* (*Animal*), *Table of*.

Trichomyces (*trik-om′-is-ēz*) [θρίξ, a hair; μύκης, a mushroom]. Synonym of *Trichophyton*.

Trichomycosis (*trik-o-mi-ko′-sis*) [θρίξ, hair; μύκης, a mushroom]. Any disease of the hair produced by a vegetable parasite. **T. barbæ**. Synonym of *Sycosis parasitaria*. **T. capillitii**. Synonym of *T. circinata*. **T. circinata**, ringworm of the scalp, produced by the *Trichophyton tonsurans*. **T. favosa**. See *Favus*. **T. nodosa**, a peculiar condition, generally nodose in character, affecting the hairs of the axilla and scrotum, and due to the growth and encapsulation in the cortical layers of the shaft of a small rod-shaped bacterium. **T. pustulosa**, a pustular, parasitic disease affecting hairy regions.

Trichonosis, Trichonosos (*trik-on′-o-sis, trik-on′-o-sos*) [θρίξ, hair; νόσος, disease]. Any disease of the hair. **T. cana**. See *Canities*. **T. discolor**. See *Canities*. **T. furfuracea**. Synonym of *Tinea tonsurans*. **T. versicolor**. See *Ringed Hair*.

Trichopathic (*tri-ko-path′-ik*) [θρίξ, hair; πάθος, disease]. Relating to disease of the hair.

Trichopathy (*trik-op′-ath-e*) [θρίξ, hair; πάθος, disease]. Any disease or morbid ailment of the hair.

Trichophore (*trik′-o-fōr*) [θρίξ, hair; φέρειν, to bear]. In biology: (*a*) the cell or cells immediately supporting a trichogyne; (*b*) a process of the integument inclosing the base of the bundle of setæ in certain annelids (*Polychæta*).

Trichophoric (*trik-o-for′-ik*) [θρίξ, hair; φέρειν, to bear]. Pertaining to the trichophore.

Trichophorous (*trik-off′-o-rus*) [θρίξ, hair; φέρειν, to bear]. In biology, bearing hairs or hair-like structures.

Trichophytinous (*trik-off-it-i′-nus*) [φρίξ, hair; φυτόν, a plant]. Pertaining to the presence of *Trichophyton tonsurans*.

Trichophyton (*tri-koff′-it-on*) [θρίξ, hair; φυτόν, a plant]. A genus of fungoid, vegetable organisms parasitic upon or affecting the hair. **T. tonsurans** is the cause of tinea tonsurans, or ringworm.

Trichophytosis (*tri-koff-it-o′-sis*) [θρίξ, hair; φυτόν, a plant]. A contagious disease of the skin and hair, occurring most often in children, due to the invasion of the epidermis by the trichophyton-fungus, and characterized by the formation of circular or annular, scaly patches and partial loss of hair. See *Tinea*. **T. barbæ**. Synonym of *Sycosis parasitaria*. **T. capitis**, trichophytosis of the scalp. **T. corporis**. Synonym of *Dermatomycosis maculo-vesiculosa*. **T. cruris**. Synonym of *Marginal Eczema*.

Trichopoliosis (*trik-o-pol-e-o′-sis*) [θρίξ, a hair; πολιοῦσθαι, to become gray]. Synonym of *Canities*.

Trichoptilosis (*trik-op-til-o′-sis*). Synonym of *Trichorrhexis nodosa*.

Trichoptylose (*trik-op′-til-ōz*). Synonym of *Trichorrhexis nodosa*.

Trichorrhea (*trik-or-e′-ah*) [θρίξ, hair; ῥοία, a flow]. Rapid loss of the hair.

Trichorrhexis (*trik-o-reks′-is*) [θρίξ, hair; ῥῆξις, a breaking]. Brittleness of the hair. **T. nodosa**, an atrophic condition of the hair affecting more often the male beard, wherein several irregular thickenings resembling nodes can be recognized on each shaft, the hairs often breaking with a "green-stick fracture" immediately through the node.

Trichosanthes (*trik-os-anth′-ēz*) [θρίξ, a hair; ἄνθος, a flower]. A genus of the *Cucurbitaceæ*. Certain varieties, chiefly East Indian, are used medicinally.

Trichoschisis (*trik-os′-kis-is*) [θρίξ, hair; σχίσις, a splitting]. The splitting of the hair.

Trichoscopy (*trik-os′-ko-pe*) [θρίξ, a hair; σκοπεῖν, to examine]. The examination of the hair.

Trichosis (*trik-o′-sis*) [θρίξ, hair; νόσος, disease]. Any morbid affection of the hair. **T. athrix**. Synonym of *Alopecia*. **T. decolor**, morbid discoloration of the hair. **T. deformis**, a morbid change in the quality of the hair. **T. distrix**. Synonym of *Trichoptilosis*. **T. hirsuties**. Same as *Hirsuties*. **T. plica**. See *Plica polonica* and *Trichomatosis*. **T. poliosis**. See *Canities*. **T. sensitiva**, a sensitive state of the scalp to any manipulation causing pain. **T. setosa**, a disease in which the hair grows thick, rigid, and bristly.

Trichosporangium (*trik-o-spo-ran′-je-um*) [θρίξ, hair; σπόρος, seed; ἀγγεῖον, vessel: *pl.*, *Trichosporangia*]. In biology, a sporangium having the function of a hair.

Trichospore (*trik′-o-spōr*) [θρίξ, hair; σπόρος, seed]. See *Conidium*.

Trichostema (*trik-o-ste′-mah*) [θρίξ, hair; στῆμα, stamen]. A genus of gamopetalous plants. **T. lanatum**, black sage. It is used as a hair-tonic and to make the hair dark.

Trichostereticus (*trik-o-ster-et′-ik-us*) [θρίξ, a hair; στερητικός, depriving]. Causing loss of hair.

Trichosyphilis (*trik-o-sif′-il-is*) [θρίξ, hair; syphilis]. Any syphilitic disease, or affection of the hair.

Trichosyphilosis (*trik-o-sif-il-o′-sis*). Synonym of *Trichosyphilis*.

Trichothallic (*trik-o-thal′-ik*) [θρίξ, hair; θαλλός, green shoot]. In biology, having a filamentous thallus.

Trichothecium (*trik-o-the′-se-um*) [θρίξ, a hair; θήκη, a chest]. A vegetable parasite of the hair. **T. roseum**. A fungous growth found in the ear.

Trichotomic (*trik-o-tom′-ik*) [τρίχα, in three; τομός, cut]. Pertaining to trichotomy.

Trichotomous (*tri-kot′-o-mus*) [τρίχα, in three; τομός, cut]. In biology, three-forked.

Trichotomy (*tri-kot′-o-me*) [τρίχα, in three; τομός, cut]. Division into three parts.

richroic (*tri-kro'-ik*) [τρεῖς, three; χρόα, color]. Possessing the property of trichroism.

richroism (*tri'-kro-izm*) [τρεῖς, three; χρόα, color]. The property possessed by some crystals of exhibiting different colors in three different directions when viewed by transmitted light.

richromate (*tri-kro'-māt*) [τρεῖς, three; χρῶμα, color]. A compound of a basic oxid with three molecules of chromium trioxid.

richromatic (*tri-kro-mat'-ik*) [τρεῖς, three; χρῶμα, color]. Having three colors.

richromic (*tri-kro'-mik*) [τρεῖς, three; χρῶμα, color]. Trichromatic.

icipital (*tri-sip'-it-al*) [*triceps*, three-headed]. Three-headed. Having three origins.

iclinate (*trik'-lin-āt*). Same as *Triclinic*.

iclinic (*tri-klin'-ik*) [τρεῖς three; κλίνειν, to incline]. Pertaining to the inclination of three intersecting axes with one another.

icoccous (*tri-kok'-us*) [τρεῖς, three; κόκκος, a berry]. In biology, having three cocci, or mericarps.

icocephalus (*trik-o-sef'-al-us*) [θρίξ, hair; κεφαλή, head]. See *Trichocephalus*, and *Parasites* (*Animal*), *Table of*.

icodein (*tri-kō'-de-in*) [*tres*, three; *codein*]. A compound formed by the action of sulphuric acid on codein. Given to animals in full doses it causes vomiting, ptyalism, and catharsis.

icolor (*tri'-kul-or*) [L.]. Three-colored.

icornate (*tri-korn'-āt*) [*tres*, three; *cornu*, horn]. Three-horned, or having three horn-like appendages.

icorni, Bacillus of. See *Bacteria*, *Synonymatic Table of*.

icornigerous (*tri-kor-nij'-er-us*). Same as *Tricornute*.

icornis (*tri-kor'-nis*) [*tres*, three; *cornu*, horn]. Having three processes or prominences. A descriptive name applied to the lateral ventricles of the brain.

icornute (*tri-kor'-nūt*) [*tres*, three; *cornutus*, horned]. In biology, having three horn-like appendages.

icostate (*tri-kos'-tāt*) [*tres*, three; *costatus*, ribbed]. In biology, having three ribs, or costæ.

icotyledonous (*tri-kot-il-e'-do-nus*) [τρεῖς, three; κοτυληδών, a hollow]. In biology, having three seed-leaves.

icrotic (*tri-krot'-ik*) [τρίκροτος, with three strokes]. Having three waves, as a *tricrotic* pulse; exhibiting tricrotism.

icrotism (*tri'-kro-tizm*) [τρίκροτος, having three strokes]. The presence of three elevations on the down-stroke of a pulse-tracing; the quality of being tricrotic.

icrotous (*tri'-kro-tus*) [τρεῖς, three; κρότος, stroke]. Same as *Tricrotic*.

crural (*tri-kru'-ral*) [*tres*, three; *crus*, leg]. In biology, having three branches from a common center.

cuspid (*tri-kus'-pid*) [*tres*, three; *cuspis*, point]. Having three cusps or leaflets. See *Valve*. **T. Incompetence.** See *Endocarditis*. **T. Stenosis.** See *Endocarditis*. **T. Valve.** See *Valve*.

cuspidal (*tri-kus'-pid-al*). Same as *Tricuspid*.

cuspidate (*tri-kus'-pid-āt*) [*tres*, three; *cuspis*, a point]. In biology, tipped with three cusps, or small, hard teeth.

cyanic Acid (*tri-si-an'-ik*). See *Acid*.

dactyl (*tri-dak'-til*) [τρεῖς, three; δάκτυλος, finger]. Having three digits.

dactylous (*tri-dak'-til-us*) [τρεῖς, three; δάκτυλος, finger]. Same as *Tridactyl*.

dentate (*tri-den'-tāt*) [*tres*, three; *dens*, tooth]. In biology, three-toothed.

deroatlodymus (*tri-der-o-at-lod'-im-us*) [*tres*, three; *deroatlodymus*]. A rare variety of triple monster, presenting features of the derodidymus and of the atlodymus.

Tridigitate (*tri-dij'-it-āt*) [*tres*, three; *digitus*, finger]. Having three fingers or digitations.

Tridymus (*trid'-im-us*) [τρίδυμος]. Synonym of *Triplet*.

Tridynamous (*tri-din'-am-us*) [τρεῖς, three; δύναμις, power]. In biology, having six stamens, three of them longer than the others.

Triecious, Triœcious (*tri-e'-shus*) [τρεῖς, three; οἶκος, house]. In biology, producing staminate, pistillate, and perfect flowers respectively on different plants.

Triencephalus (*tri-en-sef'-al-us*) [τρεῖς, three; ἐγκέφαλος, brain]. A fetal monster without smell, hearing, or sight.

Triethylamin (*tri-eth-il'-am-in*) [*tres*, three; *ethyl*; *amin*]. A ptomain obtained from haddock left to putrefy in an open vessel for five days in summer. As a free base, it has an oily character and an ammoniacal odor. It is but slightly soluble in water; boils at 89°–89.5° C; and is but slightly toxic. See *Ptomains*, *Table of*.

Trifacial (*tri-fa'-shal*). See *Trigeminus*.

Trifarious (*tri-fa'-re-us*) [*trifarius*, of three sorts, threefold]. In biology, arranged in three rows or series.

Trifasciated (*tri-fash'-e-a-ted*) [*tres*, three; *fascia*, band]. In biology, three-banded.

Trifid (*tri'-fid*) [*tres*, three; *findere*, to cleave]. Three-cleft.

Triflagellate (*tri-flaj'-el-āt*) [*tres*, three; *flagellum*, a whip]. Having three flagella; trimastigate.

Trifloral, Triflorous (*tri-flo'-ral, tri-flo'-rus*) [*tres*, three; *flos*, a flower]. In biology, three-flowered.

Trifluorid (*tri-flu'-or-id*) [*tres*, three; *fluorin*]. A fluorin compound analogous to a trichlorid.

Trifoliate (*tri-fo'-le-āt*) [*tres*, three; *folium*, a leaf]. In biology, three-leaved.

Trifolium (*tri-fo'-le-um*) [*tres*, three; *folium*, leaf]. A genus of leguminous herbs; the clover. **T. pratense** (common red clover) is vaunted in the treatment of whooping-cough, syphilis, and carcinoma. Unof. **T. Compound**, a syrup containing in each fluid-ounce the active principles of red clover gr. 32, stillingia, burdock, poke, berberis, aquefolium, and cascara amarga āā gr. 16, prickly-ash bark 4, potassium iodid gr. 8. It is recommended in syphilis. Dose ʒj–ij. Unof.

Trifoveolate (*tri-fo'-ve-o-lāt*) [*tres*, three; *foveola*, a little pit]. Having three foveæ.

Trifurcate (*tri-fur'-kāt*) [*tres*, three; *furca*, fork]. Three-forked.

Trigamous (*trig'-am-us*) [τρεῖς, three; γάμος, marriage]. In biology, having staminate, pistillate, and perfect flowers in the same head.

Trigastric (*tri-gas'-trik*) [τρεῖς, three; γαστήρ, belly]. Having three fleshy bellies (as certain muscles).

Trigeminal (*tri-jem'-in-al*) [*tres*, three; *geminus*, twin-born]. Triple; pertaining to the trigeminus. **T. Cough.** See *Cough*.

Trigeminous (*tri-jem'-in-us*) [*tres*, three; *gemini*, double]. 1. Born three at a time. 2. Same as *Trigeminal*.

Trigeminus (*tri-jem'-in-us*) [*tres*, three; *gemini*, double]. The descriptive name of the fifth pair of nerves, which divide each into three branches.

Trigger (*trig'-er*) [Ger., *Drücker*, a trigger]. A device by means of which a catch or spring is released. **T.-area**, a sensitive region of the body, irritation of which may give rise to certain peculiar phenomena, either physiologic or pathologic, in some part of the body. **T.-finger**, a condition in which flexion or ex-

tension of a finger is at first obstructed, but finally accomplished with a jerk or sweep. **T.-material,** an apheter; any theoretic catastatic substance whose sudden breaking up communicates an explosive decomposition to the protoplasm directly concerned in any function. The trigger-material itself must be acted upon by another trigger-material; and thus every nerve-impulse and every functional act must be accompanied by the destruction of a fuse-like train of protoplasm. See *Apheter.*

Triglans (*tri'-glanz*) [*tres*, three; *glans*, acorn, nut]. In biology, having three nuts within an involucre.

Trigonal (*trig'-o-nal*) [τρεῖς, three; γωνία, angle]. In biology, same as *Trigonous.*

Trigone (*tri'-gōn*). Synonym of *Trigonum.* **T., Olfactory.** Synonym of *Caruncula mammillaris.* **T. of Bladder.** See *Trigonum vesicæ.*

Trigonella (*tri-go-nel'-ah*) [τρίγωνος, three-cornered]. A genus of *Leguminosæ.* **T. elatior,** a variety, the seeds of which have been used in affections of the bladder and in poultices. **T. fœnum græcum,** a variety used in plasters and salves and in veterinary medicine. **T. monspeliaca,** a variety a decoction of the seeds of which is used by the Italians in various forms of diarrhea.

Trigoneutic (*tri-go-nu'-tik*) [τρεῖς, three; γονεύειν, to beget]. In biology, producing three sets of offspring in a season.

Trigonocephalic (*trig-o-no-sef-al'-ik*) [τρίγωνος, three-cornered; κεφαλή, head]. Pertaining to trigonocephaly.

Trigonocephalus (*trig-o-no-sef'-al-us*) [τρίγωνος, three-cornered; κεφαλή, head]. A triangular-shaped skull with the small end anterior, due to a premature union of the coronal suture.

Trigonocephaly (*trig-o-no-sef'-al-e*) [τρίγωνος, three-cornered; κεφαλή, head]. A deformity of the skull produced by a premature union of the medio-frontal or metopic suture. See *Trigonocephalus.*

Trigonocerous (*trig-o-nos'-er-us*) [τρίγωνος, three-cornered; κέρας, horn]. In biology, having three-edged horns.

Trigonous (*trig'-o-nus*) [τρίγωνος, three-cornered]. In biology, three-angled.

Trigonum (*tri-go'-num*) [τρίγωνος, three-cornered]. A triangle; also the interpeduncular space. **T. acustici,** a three-cornered space on the dorsal surface of the medulla. **T. cerebrale.** Synonym of *Fornix cerebri.* **T. cervicale,** the base of the dorsal gray cornu of the spinal cord. **T. clavipectorale,** a triangle of the chest. Its boundaries are the clavicle, the pectoralis minor muscle, and the thorax. **T. colli medianum,** relating to the space occupied by the two anterior triangles of the neck. **T. coraco-acromiale,** a triangular space whose boundaries are the coracoid process, the apex of the acromion, and the concave border of the clavicle. **T. dorsale** the space between the anterior pair of the corpora quadrigemina. **T. fluctuans,** the posterior cerebral commissure. **T. habenulæ,** the triangular space behind the upper surface of the optic thalamus, in front of the lamina quadrigemina, and between the sulcus habenulæ and the sulcus subpinealis. **T. hypoglossi,** a triangular space on the dorsal surface of the oblongata. Its boundaries are, above, the striæ medullares acusticæ, internally, the posterior longitudinal fissure, and, externally, the ala cinerea. **T. inferius commissuræ posterioris,** the lower triangular half of the posterior commissure of the brain. **T. pensile,** the posterior cerebral commissure. **T. vagi,** a small, triangular space on the medulla oblongata, marking the origin of the vagus nerve. **T. ventriculi lateralis,** a triangular projection located between the entrances to the posterior and descending horns of the lateral ventricle. **T. vesicæ** the triangular surface of the bladder immediately behind the urethral orifice.

Trigyn (*tri'-jin*) [τρεῖς, three; γυνή, female]. A plan having three styles.

Trigynous (*trij'-in-us*) [τρεῖς, three; γυνή, a female] In biology, having three pistils.

Trihaloid (*tri-hal'-oid*) [*tres*, three; *haloia*]. A compound of a radicle with three atoms of hydrogen.

Trihedral (*tri-he'-dral*) [τρεῖς, three; ἕδρα, a seat] Three-sided.

Trihilate (*tri-hil'-lāt*) [*tres*, three; *hilum*, a hilum] Having three hila or scars, as a seed.

Trihydric (*tri-hi'-drik*) [τρεῖς, three; ὕδωρ, water] Containing three atoms of hydrogen in the molecule.

Tri-iniodymus (*tri-in-e-od'-im-us*) [τρεῖς, three; ἰνίον, the nape of the neck; δίδυμος, double]. A monster having three heads united posteriorly and attached to a single body.

Tri-iodid (*tri-i'-o-did*) [τρεῖς, three; ἰωδής, like a violet]. A compound of iodin analogous to a trichloric

Trijugate, Trijugous (*tri-ju'-gāt, tri-ju'-gus*) [*tres*, three; *jugum*, a yoke]. In biology, having three pairs of leaflets.

Trilabe (*tri'-lāb*) [τρεῖς, three; λαμβάνειν, to grasp] An instrument with three prongs, for withdrawing small calculi through the urethral passage.

Trilabiate (*tri-la'-be-āt*) [*tres*, three; *labium*, lip] Three-lipped.

Trilaminar (*tri-lam'-in-ar*) [*tres*, three; *lamina*, plate]. In biology, three-layered.

Trilineate (*tri-lin'-e-āt*) [*tres*, three; *linea*, line]. In biology, marked with three longitudinal lines.

Trilisa (*tril'-is-ah*) [L.]. A genus of composite eupatoriaceous plants. **T. odoratissima.** See *Deer Tongue.*

Trilliin (*tril'-e-in*) [*tres*, three]. A precipitate from tincture of the root of *Trillium pendulum*, styptic, tonic, expectorant, antiseptic, and emmenagogue. Dose, 2 to 4 grains. Unof. See *Beth-root.*

Trilobate (*tri-lo'-bāt*, or *tri'-lo-bāt*) [*tres*, three; *lobus*, lobed]. In biology, three-lobed.

Trilobed (*tri'-lōbd*). Same as *Trilobate.*

Trilocular (*tri-lok'-u-lar*) [*tres*, three; *loculus*, cell] In biology, having three chambers.

Triloculate (*tri-lok'-u-lāt*) [*tres*, three; *loculus*, a cell] In biology, same as *Trilocular.*

Trimacular, Trimaculated (*tri-mak'-u-lar, tri-mak-u-la-ted*) [*tres*, three; *macula*, spot]. In biology, marked with three spots.

Trimargarin (*tri-mar'-gar-in*) [τρεῖς, three; *margarin*]. A mixture of tripalmitin and tristearin.

Trimastigate (*tri-mas'-tig-āt*) [τρεῖς, three; μάστιξ, whip, scourge]. In biology, having three flagella; tri-flagellate.

Trimembral (*tri-mem'-bral*) [*tres*, three; *membrum*, member]. Having three members.

Trimercuric (*tri-mer-ku'-rik*) [*tres*, three; *mercury*] Containing three atoms of bivalent mercury.

Trimerous (*trim'-er-us*) [τρεῖς, three; μέρος, a part] In biology, having three parts or segments; in three's

Trimesic Acid (*tri-mes'-ik*). See *Acid.*

Trimester (*tri-mes'-ter*) [*trimestris*, of three months]. A stage or period of three months.

Trimestral, Trimestrial (*tri-mes'-tral, tri-mes'-tre-al*) [*trimestris*, of three months]. Pertaining to a trimester.

Trimetallic (*tri-met-al'-ik*) [τρεῖς, three; *metal*]. Containing three atoms of a metal in each molecule.

Trimethyl (*tri-meth'-il*) [*tres*, three; *methyl*]. The chemic group $(CH_3)_3$.

Trimethylamin (*tri-meth-il'-am-in*) [*tres*, three;

methyl; amin]. *Secalin*, $(CH_3)_3N$. A thin, colorless, alkaline liquid obtained from herring-brine, formerly prepared by the action of caustic alkali on ergot, hence its name, *secalin*. Used in acute rheumatism internally, or as a liniment 1 to 3 of glycerin. The hydrochlorate is a soluble, crystalline salt. Dose of trimethylamin ♏v–℥j; of the hydrochlorate gr. ij–iij. Unof.

Trimethylene (*tri-meth'-il-ēn*) [*tres*, three; *methylene*], C_3H_6. A substance obtained by heating trimethylene bromid with metallic sodium. It is a gas. **T.-diamin**, a ptomain obtained, with other toxic bases, from cultures of the comma-bacillus on beef-broth. It causes violent convulsions and muscle-tremor. See *Ptomains, Table of*.

Trimethylic (*tri-meth-il'-ik*) [*tres*, three; *methyl*]. Containing three molecules of methyl.

Trimorphic (*tri-mor'-fik*). Same as *Trimorphous*.

Trimorphism (*tri-mor'-fizm*) [τρεῖς, three; μορφή, form]. 1. In biology, a term used to indicate the fact that hermaphrodite flowers of three different kinds, short-styled, mid-styled, and long-styled, are produced on the same species of plant. 2. Existing under three distinct forms, as certain insects.

Trimorphous (*tri-morf'-us*) [τρεῖς, three; μορφή, form]. Pertaining to trimorphism.

Trimyarian (*tri-mi-a'-re-an*) [τρεῖς, three; μῦς, a muscle]. In biology, applied to such bivalve mollusean shells as present three muscular impressions.

Trimyristin (*tri-mir-is'-tin*) [*tres*, three; *myristin*]. $C_3H_5(C_{14}H_{27}O_2)_3$. A crystalline substance obtained from butter.

Trinervate (*tri-nur'-vāt*) [*tres*, three; *nervus*, nerve]. In biology, three-nerved, or having three slender ribs.

Trinerved (*tri'-nurvd*). Same as *Trinervate*.

Trinitrate (*tri-ni'-trāt*) [*tres*, three; *nitrate*]. A nitrate containing three nitric-acid radicles. **T. of Glyceryl.** See *Nitroglycerin*.

Trinitrin (*tri-ni'-trin*). See *Nitroglycerin*.

Trinoctial (*tri-nok'-shal*) [*tres*, three; *nox*, night]. Comprising three nights.

Trinodal (*tri-no'-dal*) [*tres*, three; *nodus*, knot]. In biology, having three nodes or joints.

Triocephalus (*tri-o-sef'-al-us*) [τρεῖς, three; κεφαλή, head]. A variety of single autositic monsters of the species otocephalus, in which there is an entire absence of the ocular, nasal, and buccal apparatus. The head is merely a small, spheroidal mass, covered uniformly with skin.

Triœcious (*tri-e'-shus*). See *Triecious*.

Triolein (*tri-o'-le-in*) [*tres*, three; *oleum*, oil], $C_3H_5(O.C_{18}H_{33}O)_3$. A glycerol ester containing three oleic-acid radicles. It is a clear, colorless, oily liquid, and is the chief constituent of all fatty acids. See *Olein*.

Trional (*tri'-o-nal*) [τρεῖς, three], $C_3H_5CH_3—C—(SO_2-C_2H_5)_2$. Diethylsulphonemethylmethane. A disulphone belonging to the ethyl and methyl groups; in ordinary doses it is harmless and possesses marked hypnotic properties. It is a powder consisting of shining tablets with a melting-point of 76° C., and which dissolve in 320 parts of water at ordinary temperature, readily in alcohol and ether, and have a distinctly bitter taste. It is administered in a finely powdered state, dissolved in liberal quantities of soup, warm water, milk, or tea, or it may be administered by the rectum in the form of a watery solution. Dose gr. lx daily. Unof.

Trionym (*tri'-o-nim*) [τρεῖς, three; ὄνυμα, name]. A name consisting of three terms.

Triophthalmos (*tri-off-thal'-mos*) [τρεῖς, three; ὀφθαλμός, eye]. See *Diprosopus*.

Triopodymus (*tri-op-od'-im-us*) [τρεῖς, three; ὠψ, the face; δίδυμος, double]. A monster with three faces and but a single head.

Triorchid (*tri-or'-kid*) [τρεῖς, three; ὄρχις, a testicle]. Having three testicles.

Triorchis (*tri-or'-kis*) [τρεῖς, three; ὄρχις, testicle]. An individual that has three testicles.

Triose (*tri'-ōz*). See *Glycerose*.

Triosteum (*tri-os'-te-um*) [τρεῖς, three; ὀστέον, bone]. A genus of caprifoliaceous plants of Asia and America. **T. perfoliatum** (tinkers' weed) and **T. angustifolium**, of the U. S., are purgative and emetic. Unof.

Triotus (*tri-o'-tus*) [τρεῖς, three; οὖς, ear]. See *Diprosopus*.

Triovulate (*tri-ov'-u-lāt*) [*tres*, three; *ovulum*, an ovule]. Having three ovules.

Trioxid (*tri-oks'-id*) [τρεῖς, three; *oxid*]. An oxygen compound analogous to a trichlorid.

Tripaleolate (*tri-pa'-le-o-lāt*) [*tres*, three; *paleola*, a little straw]. In biology, provided with three paleæ, as the flower of a bamboo.

Tripalmitin (*tri-pal'-mit-in*) [τρεῖς, three; *palmitin*], $C_3H_5(O.C_{16}H_{31}O)_3$. One of the solid fats of the body.

Tripapillated (*tri-pap'-il-a-ted*) [*tres*, three; *papilla*, a nipple]. Having three papillæ.

Tripartite (*trip'-ar-tīt*, or *tri-par'-tīt*) [*tres*, three; *partiri*, to part, divide]. In biology, three-parted.

Tripe de Roche (*trēp-de-rōsh'*) [Fr.]. See *Gyrophora*.

Tripennate (*tri-pen'-āt*). Same as *Tripinnate*.

Tripes (*tri'-pēz*) [L.]. 1. Three-footed. 2. A monster having three feet.

Tripetaloid (*tri-pet'-al-oid*) [τρεῖς, three; πέταλον, leaf]. In biology, appearing as if furnished with three petals.

Tripetalous (*tri-pet'-al-us*) [τρεῖς, three; πέταλον, leaf]. In biology, three-petaled.

Tripharmacum (*tri-far'-mak-um*) [τρεῖς, three; φάρμακον, a drug]. A medicine made up of three ingredients.

Triphenyl (*tri-fen'-il*) [*tres*, three; *phenyl*]. The chemic group $(C_6H_5)_3$. **T.-amin**, $(C_6H_5)_3N$, a substance obtained on heating dipotassium anilin or sodium diphenylamin with brombenzene. It crystallizes from ether in large plates, melts at 127° C., and distils without decomposition. **T.-dihydro-glyoxalin.** See *Amarin*. **T.-methane**, $C_{19}H_{16}$, a product of the reaction between benzol chlorid and mercury diphenyl. It dissolves with difficulty in cold alcohol and glacial acetic acid, easily in ether, benzene, and hot alcohol, crystallizing from the latter in thin, shining leaflets, melting at 93° C. **T.-rosanilin.** See *Rosanilin-blue*.

Triphyllous (*tri-fil'-us*) [τρεῖς, three; φύλλον, a leaf]. In biology, three-leaved.

Tripier's Amputation. In surgery, horizontal section through the *os calcis*, leaving the upper part of this bone, together with the astragalus. See *Operations, Table of*.

Tripinnate (*tri-pin'-āt*) [*tres*, three; *pinnatus*, winged]. In biology, three times pinnately compounded.

Tripinnatifid (*tri-pin-at'-if-id*) [*tres*, three; *pinnatus*, winged; *findere*, to cleave]. Pinnatifid with the segments twice divided in a pinnatifid manner.

Tripinnatisect (*tri-pin-at'-is-ekt*) [*tres*, three; *pinnatus*, winged; *sectus*, cut]. Parted to the base in a tripinnate manner.

Triple (*trip'-l*) [τριπλόος, triple]. Consisting of three. **T. Phosphate**, ammonio-magnesic phosphate, a precipitate thrown down from urine when ammonia is set free by the decomposition of urea.

Triplet (*trip'-let*) [*tres*, three; *plica*, a fold]. A series of three. In the plural, three offspring at one birth. In optics, a system consisting of three lenses. **T., Achromatic.** See *Microscope*. **T. Monster**, a monster having its parts tripled.

Triplex (*trip'-lex*) [L.]. Threefold. **T. Pills,** the *Pilulæ triplices*, N. F.; so called from containing three principal ingredients.

Triplicostate (*trip-lik-os'-tāt*) [*triplus*, threefold; *costa*, rib]. In biology, triplinerved.

Triplinerved (*trip'-lin-ervd*) [*triplus*, threefold; *nervus*, nerve]. In biology, denoting a leaf in which two prominent nerves emerge from the middle nerve a little above its base.

Triploblastic (*trip-lo-blast'-tik*) [τριπλόος, threefold; βλαστός, germ]. Possessing three blastodermic membranes, consisting of epiblast, mesoblast, and hypoblast. Most animals are triploblastic.

Triplokoria (*trip-lo-ko'-re-ah*) [τριπλόος, threefold; κόρη, pupil]. An iris having three pupils.

Triplopia (*trip-lo'-pe-ah*) [τριπλόος, triple; ὤψ, eye]. A form of polyopia, in which an object is seen as three.

Triplopy (*trip'-lo-pe*). Same as *Triplopia*.

Tripod (*tri'-pod*) [τρίπους (τριποδ), three-footed]. An object having three legs or supports. **T. Magnifier.** See *Microscope*. **T., Vital,** the brain, heart, and lungs, viewed as the triple support of life.

Tripodic (*tri-pod'-ik*) [τρίπους (τριποδ-), three-footed]. In biology, three-footed. **T. Walk,** the term applied by Dixon to the locomotion of certain insects, earwigs, water-scorpions, aphides, and some beetles. The front and hind legs of one side are found to be moved almost simultaneously with the middle leg of the other.

Tripoli (*trip'-o-le*) [Τρίπολις, Tripoli, a district containing three cities]. A kind of rotten-stone used in polishing; also, a silicious diatomaceous earth, likewise used in polishing. **T. Senna.** See *Senna*.

Tripolite (*trip'-o-līt*) [Τρίπολις, Tripoli]. A substance composed of lime, silicon, and oxid of iron, sometimes used in dressings and bandages instead of plaster-of-Paris.

Tripper-fäden. "Gonorrheal threads." A whitish filamentous discharge occurring in the urine in chronic urethritis. It consists of mucus and pus and contains gonococci. **T.-kokken,** gonococci.

Triprosopus (*trip-ros'-o-pus*) [τρεῖς, three; προσοπόν, face]. A form of fetal monstrosity in which there is a fusion of three faces in one.

Tripsis (*trip'-sis*) [τρῖψις; τρίβειν, to rub]. Same as *Trituration*.

Tripterous (*trip'-ter-us*) [τρεῖς, three; πτερόν, a wing]. Having three wings or alæ.

Triptokoria (*tript-o-ko'-re-ah*) [τρεῖς, three; πίπτειν, to fall; κόρη, the pupil]. A condition of the iris in which there are three distinct pupils.

Tripudiatio- (*tri-pu-de-a'-she-o*) [*tripudiare*, to dance]. Synonym of *Chorea*. **T. spartica.** Synonym of *Chorea, Epidemic*.

Tripupillate (*tri-pu'-pil-āt*) [*tres*, three; *pupilla*, pupil]. In biology, having three central spots or pupils close together.

Tripus (*tri'-pus*) [τρεῖς, three; πούς, foot]. Same as *Tripod*. **T. cœliacus,** the three branches of the celiac artery.

Triquetral (*tri-kwet'-ral*) [*triquetrus*, triangular]. Same as *Triquetrous*.

Triquetrous (*tri-kwet'-rus*) [*triquetrus*, three-cornered]. In biology, three-angled or triangular-prismatic. Applied to certain stems and leaves.

Triquetrum (*tri-kwet'-rum*) [*triquetrus*, three-cornered: *pl.*, *Triquetra*]. Any Wormian bone; also, the cuneiform bone of the carpus. See *Bones, Table of*.

Triquinate (*tri-kwin'-āt*) [*tres*, three; *quini*, five each]. In biology, divided into three parts or lobes and then into five.

Triradial, Triradiate (*tri-ra'-de-al, tri-ra'-de-āt*) [*tres*, three; *radiatus*, rayed]. Radiating in three directions; trifurcate.

Trisalt (*tri'-sawlt*) [*tres*, three; ME., *salt*, salt]. A salt containing three atoms of base to one of acid.

Trisection (*tri-sek'-shun*) [*tres*, three; *secare*, to cut] Division into three parts.

Trisepalous (*tri-sep'-al-us*) [*tres*, three; *sepalum*, sepal]. Denoting calyxes which have three sepals.

Triseptate (*tri-sep'-tāt*) [*tres*, three; *septum*, a septum]. Having three septa.

Triserial, Triseriate (*tri-se'-re-al, tri-se'-re-āt*) [*tres*, three; *series*, series]. Disposed in three horizontal rows, one above the other.

Trisetose (*tri-se'-tōz*) [*tres*, three; *seta*, a bristle]. Having three bristles.

Trisetum (*tri-se'-tum*) [*tres*, three; *seta*, bristle]. A genus of plants belonging to the order *Graminaceæ*. They are closely related to *Avena*. **T. flavescens,** a grass having yellow flowers, found in North America, Europe, and Asia.

Trisinuate (*tri-sin'-u-āt*) [*tres*, three; *sinus*, a fold]. Having three sinuses.

Trismoid (*triz'-moid*) [τρισμός, a creaking]. A form of trismus neonatorum thought to be due to pressure on the occipital bone during labor.

Trismus (*triz'-mus*) [τρισμός; τρίζειν, to gnash]. Spasm of the muscles of mastication, the condition commonly called lockjaw, a tetanic condition of the muscles of mastication. **T. capistratus,** a condition in which the jaws cannot be separated because of adhesions between the cheeks and the gums, following ulceration of the parts. **T. catarrhalis maxillaris,** neuralgia of the jaw. **T. of Cerebral Origin,** persistent spasm of the muscles of the lower jaw, due to cerebral disease. **T. cynicus,** risus sardonicus. **T. dolorificus,** tic douloureux. **T. maxillaris.** See *T. catarrhalis maxillaris*. **T. nascentium.** See *Tetanus neonatorum*. **T. neonatorum,** a form of tetanus only met with in infants, almost invariably occurring in the first five days of life. It is a very fatal disease, and the more so the earlier it appears. It is marked by frequent convulsions occurring in paroxysms, with rigidity of the muscles and an involvement of the muscles of the mouth and throat, causing inability to swallow. It is possibly due to some form of infection at birth. **T. sardonicus.** See *T. cynicus*. **T., Traumatic,** trismus following a wound or injury. **T. uteri,** trismus occurring during and as a result of the puerperium.

Trispermous (*tri'-spur-mus*) [τρεῖς, three; σπέρμα, seed]. In biology, three-seeded.

Trisplanchnia (*tri-splangk'-ne-ah*). Synonym of *Asiatic Cholera*.

Trisplanchnic (*tri-splangk'-nik*) [τρεῖς, three; σπλάγχνον, viscus]. The descriptive name of the sympathetic nerve, from the fact that it is connected with the viscera of the three largest cavities of the body.

Trisporic, Trisporous (*tri-spor'-ik, tri-spor'-us*) [τρεῖς, three; σπορά, spore]. Having three spores.

Tristachyous (*tri-sta'-ke-us*) [τρεῖς, three; στάχυς, an ear of corn]. In biology, bearing three spikes.

Tristearin (*tri-ste'-ar-in*) [τρεῖς, three; στέαρ, fat] Stearin; tritenyl stearate, $C_3H_5(C_{18}H_{35}O_2)_3$; one of the solid fats of the body.

Tristichiasis (*tris-tik-i'-as-is*) [τριστιχία, a triple row] A form of congenital distichiasis in which there are three rows of cilia.

Tristichous (*tris'-tik-us*) [τρεῖς, three; στίχος, a line, row]. In biology, arranged in three perpendicular rows. Applied to phyllotaxy.

Tristigmatic (*tri-stig-mat'-ik*) [τρεῖς, three; στίγμα, a mark]. In biology, having three stigmata.

Tristigmatose (*tri-stig'-mat-oz*). Same as *Tristigmatic*.

Tristimania (*tris-tim-a'-ne-ah*) [*tristis*, sad; *μανία*, mania]. Melancholia.

Tristis (*tris'-tis*) [L.]. Sad; gloomy; having a dull color.

Tristitia (*tris-tish'-e-ah*) [L., "sadness"]. Melancholia.

Trisubstituted (*tri-sub'-stit-u-ted*) [*tres*, three; *substituere*, to substitute]. In chemistry, having three elements substituted by equivalent elements.

Tri-sulcate (*tri-sul'-kāt*) [*tres*, three; *sulca*, a furrow]. In biology, three-grooved.

Trisulfuretum (*tri-sul-fu-re'-tum*). See *Trisulphuretum*.

Trisulphid (*tri-sul'-fid*) [*tres*, three; *sulphur*]. A compound of sulphur analogous to a trichlorid.

Trisulphuretum (*tri-sul-fu-re'-tum*) [*tres*, three; *sulphur*, sulphur]. A trisulphid.

Tritæophya (*trit-e-off'-e-ah*) [*τριταίος*, tertian; *φύειν*, to augment]. A tertian fever. **T. americana**, the pernicious malarial fever to which immigrants to Spanish America are subject.

Tritæus (*trit-e'-us*) [*τριταίος*, tertian]. Tertian fever

Tritellurid (*tri-tel'-u-rid*) [*tres*, three; *tellurium*]. A compound of tellurium analogous to a trichlorid.

Tri-ternate (*tri-tur'-nāt*) [*tres*, three; *ternatus*, arranged in threes]. Applied to a leaf that is thrice compounded on the ternate plan.

Triticeo-glossus (*trit-is'-e-o-glos'-us*) [*triticum*, wheat-like; *γλῶσσα*, tongue]. An anomalous muscle having its origin from the arytenoid cartilage and its insertion in the side of the tongue.

Triticeous (*trit-ish'-us*) [*triticum*, wheat]. Having the appearance of a grain of wheat; pertaining to wheat. **T. Nodule** (*corpus triticeum*, "wheat-like body"), one of the small cartilaginous nodules of the larynx.

Triticeum (*trit-is'-e-um*) [*triticum*, wheat]. The triticeous nodule.

Triticin (*trit'-is-in*) [*triticum*, wheat], $C_{12}H_{22}O_{11}$. A gum-like substance found in *Triticum repens*.

Triticum (*trit'-ik-um*) [L.: *gen.*, *Tritici*]. 1. Wheat; a genus of graminaceous plants which produce the various kinds of wheat. 2. The rhizome of *T. repens* deprived of its rootlets. **T. acutum**, a species growing in Europe. **T. caninum**, dog's-tooth grass. It is thought to possess the same properties as *T. repens*. Dogs eat the blades to induce emesis. **T. durum**, hard-grained wheat, the seeds of which are richer in nitrogen than the soft wheats; it is cultivated in Southern Europe. **T. monococcum**, single-grained wheat; it grows wild in Greece and Mesopotamia, and is an inferior species in cultivation. **T. repens**, couch-grass; it grows in Europe, Northern Asia, North and South America. The rhizome is smooth, straw-colored, and has a sweetish taste. It contains malates, sugar, triticin, and a nitrogenous principle, and is emollient, diuretic, and antiphlogistic. It is best administered in a decoction made from 2 to 4 ounces of the plant in 2 pints of water, and reduced one-half by boiling. **T. sativum**, common wheat. The ground and sifted seeds constitute flour, official in the pharmacopeia as *farina tritici*. **T. spelta**, spelt-wheat, indigenous in the Persian mountains, and cultivated in Europe. It yields flour of fine quality. **T. vulgare**. See *T. sativum*. **Tritici, Amylum**, wheat-starch. **T., Extractum, Fluidum**, a preparation made by exhausting *T. repens* with boiling water, and then adding a certain quantity of alcohol. Dose ʒj. **T., Farina**, wheat-flour. **T., Farina, Tosta**, baked flour. **T., Saccharum**, a sugar obtained from the extract of *T. repens*, which dissolves readily in alcohol.

Triticumina Food (*trit-ik-u'-min-ah*) [*triticum*, wheat]. A malt food prepared in England by malting wheat so as to cause it to contain about twice as much soluble carbohydrates as ordinary wheaten flour.

Tritomesal (*tri-to-mes'-al*) [*τρίτος*, third; *μέσος*, middle]. Denoting the third longitudinal series of cells in the wing of hymenopters.

Tritopin (*tri'-to-pin*), $C_{42}H_{54}N_2O_7$. An alkaloid obtained from opium.

Tritovertebra (*tri-to-vur'-te-brah*) [*τρίτος*, third; *vertebra*, vertebra]. Carus's term for a limb-bone, or the bony framework of the limbs considered as vertebral elements developed in special relation with the muscular system.

Tritovertebral (*tri-to-vur'-te-bral*) [*τρίτος*, third; *vertebra*, vertebra]. Having the character of a tritovertebra.

Tritovum (*tri-to'-vum*) [*τρίτος*, third; *ovum*, egg]. The third stage of an ovum.

Tritoxid (*tri-toks'-id*) [*τρίτος*, third; *ὀξύς*, acid]. Same as *Trioxid*.

Tritozoöid (*trit-o-zo'-oid*) [*τρίτος*, third; *ζῷον*, an animal; *εἶδος*, form]. In biology, a zoöid of the third generation; the immediate offspring of a deutero-zoöid.

Tritubercular (*tri-tu-bur'-ku-lar*) [*tres*, three; *tuberculum*, tubercle]. Having three tubercles or cusps; tricuspid.

Trituberculate (*tri-tu-bur'-ku-lāt*). Same as *Tritubercular*.

Trituberculism (*tri-tu-bur'-ku-lizm*) [*tres*, three; *tuberculum*, a tubercle]. A peculiarity of molar teeth, indicating the possession of three cusps.

Triturate (*trit'-u-rāt*) [*triturare*, to rub together]. As a verb, to reduce to fine powder. As a noun, a finely divided powder. **T., Tablet**, a small disc of some soluble material, usually sugar of milk, charged with a certain dose of a medicinal substance. See *Tablet*.

Trituration (*trit-u-ra'-shun*) [*trituratio*; *tritus*, a rubbing]. The process of reducing a solid substance to a powdered state by grinding or rubbing. In pharmacy, a class of powders having sugar of milk as their diluent in the proportion of ten parts of the substance to 90 of the sugar. Trituration of elaterin is official.

Tritus (*trit'-tus*) [L.]. See *Trituration*.

Trityl (*trit'-il*) [*τρεῖς*, three; *ὕλη*, matter], C_3H_7. The third of the methyl series of hydrocarbon radicles. **T.-alcohol**, C_3H_7HO, propyl-alcohol.

Tritylene (*trit'-il-ēn*). Same as *Propylene*.

Triungulin (*tri-ung'-gu-lin*) [*tres*, three; *ungula*, a hoof, claw]. In biology, the first larval stage of certain beetles (*Meloïdæ*).

Trivalence (*tri'-va-lens*, or *triv'-al-ens*) [*tres*, three; *valere*, to be worth]. The quality of being trivalent.

Trivalent (*triv'-al-ent*) [*tres*, three; *valere*, to be worth]. In chemistry, equivalent in combining or displacing power to three monad atoms.

Trivalerin (*tri-val'-er-in*) [*tres*, three; *valere*, to be worth], $C_3H_5(C_5H_9O_2)_3$. A substance which exists in the oil of marine animals, like the seal.

Trivalve (*tri'-valv*) [*tres*, three; *valva*, door]. In biology, applied to a structure having three valves, as a shell.

Trivalvular (*tri-val'-vu-lar*) [*tres*, three; *valvula*, a small valve]. Having three valves.

Trivertebral (*tri-vur'-te-bral*) [*tres*, three; *vertebra*, vertebra]. Composed of three vertebræ.

Trivia (*triv'-e-ah*) [*trivius*, of three roads]. The point of intersection of the three semicircular canals of the cochlea.

Trivial (*triv'-e-al*) [*trivialis*, common]. Denoting the popular name of a plant or animal; the specific name.

Trivium (*triv'-e-um*) [*tres*, three; *via*, way: *pl.*, *Trivia*]. In biology, the three anterior ambulacra of an echinoderm.

Trixis (*triks'-is*) [L.]. A Mexican plant allied to rhubarb. The root is used as a laxative.

Trocar (*tro'-kar*) [Fr., *trois-quarts*, from its triangular point]. An instrument used in paracentesis, or tapping a cavity, as in hydrocele. It consists of a perforator and a metallic tube. **T., Lancet,** a trocar having a lancet-shaped perforator. **T., Piloting,** Durham's trocar, used for introducing the articulated tracheotomy-tube. **T., Rectal,** a curved trocar used in tapping the bladder through the rectum.

Trochal (*tro'-kal*) [τροχός, a wheel]. Having the form of a wheel. **T. Disc,** the wheel-organ of the *Rotifera*, the ciliated and usually retractile apparatus which projects at the anterior end of the body of the wheel-animalcule.

Trochanter (*tro-kan'-ter*) [τροχαντήρ; τροχός, a wheel or pulley]. The process on the upper extremity of the femur. The major and minor processes at the extremity of the femur which receive the extensor and flexor muscles of the thigh are respectively called the greater and the lesser trochanter. **T. tertius,** an anomalous process at the upper portion of the popliteal space of the femur.

Trochanteric (*tro-kan-ter'-ik*) [τροχαντήρ, a trochanter]. Pertaining to a trochanter.

Trochantin (*tro-kan'-tin*) [τροχαντήρ, a trochanter]. The lesser trochanter of the femur.

Trochantinian (*tro-kan-tin'-e-an*) [τροχαντήρ, trochanter]. Pertaining to the trochantin.

Trochate (*tro'-kāt*) [τροχός, a wheel]. 1. Same as *Trochal*. 2. Trochiferous.

Troche (*trōk*, *trōch*, or *tro'-ke*) [τροχός, wheel]. A trochischus. A round lozenge.

Trochia (*tro'-ke-ah*) [τροχός, a wheel]. A term formerly applied to the orbit.

Trochiferous (*tro-kif'-er-us*) [τροχός, wheel; *ferre*, to bear]. In biology, provided with a trochal organ.

Trochiform (*tro'-kif-orm*) [τροχός, wheel; *forma*, form]. In biology, having the form of a top-shell.

Trochilia (*tro-kil'-e-ah*). See *Trochlea*.

Trochin, Trochinus (*tro'-kin*, *trok'-in-us*) [τροχός, a wheel]. The lesser tuberosity of the head of the humerus.

Trochinian (*tro-kin'-e-an*) [τροχός, wheel]. Pertaining to the trochin.

Trochiscus (*tro-kis'-kus*) [τροχίσκος, a little wheel: *pl.*, *Trochisci*]. A troche, pastil, tablet, or lozenge. In pharmacy, a small, flattened cake prepared from a mass of sugar and mucilage as an excipient, with a prescribed medicinal substance. There are 15 official *trochisci*.

Trochiter (*trok'-it-er*) [τροχός, a wheel]. The greater tuberosity of the proximal end of the humerus.

Trochiterian (*trok-it-e'-re-an*) [τροχός, a wheel]. Pertaining to the trochiter.

Trochlea (*trok'-le-ah*) [τροχιλέα, a pulley]. A part or process having the nature of a pulley. **T. of the Astragalus,** the surface of the astragalus articulating with the tibia. **T. of the Femur,** the intercondyloid fossa of the femur. **T. of the Humerus,** an articulation at the extremity of the humerus, over which a band of cartilage passes. **T. labyrinthi.** See *Cochlea*. **T. of the Obliquus oculi superior, T. of the Orbit,** the ligamentous ring or pulley, attached to the upper margin of the orbit, which transmits the tendon of the superior oblique muscle of the eye.

Trochlear (*trok'-le-ar*) [τροχιλία, a pulley]. Pertaining to or of the nature of a trochlea.

Trochlearis (*trok-le-a'-ris*) [τροχιλία, a pulley]. Pertaining to the trochlea. Also, applied to the superior oblique muscle of the eye.

Trochleary (*trok'-le-a-re*). Same as *Trochlear*.

Trochleate (*trok'-le-āt*). Same as *Trochlear*.

Trochocephalus (*trok-o-sef'-al-us*) [τροχός, wheel; κεφαλή, head]. A rounded appearance of the head, due to partial synostosis of the frontal and parietal bones.

Trocho-ginglymus (*tro-ko-ging'-lim-us*) [τροχός, wheel; γίγγλυμος, ginglymus]. A combination of a hinge-joint and a pivot-joint, as in the humero-radial articulation.

Trochoid (*tro'-koid*) [τροχός, wheel]. Serving as a pulley or pivot; involving a pivotal action.

Trochoides (*tro-koi'-dēz*) [τροχός, wheel]. A term given to pivot-joints or pulley-joints, such as the atlanto-axial.

Trochophora (*trok-off'-or-ah*) [τροχός, a wheel; φέρειν, to bear]. In biology, a peculiar larval stage of certain *Vermes*, having a characteristic preoral ciliated ring.

Trochosphere (*trok'-o-sfēr*) [τροχός, a wheel; σφαῖρα, a sphere]. In biology, applied to various invertebrate larvæ bearing a circlet of cilia.

Trochospheric (*trok-o-sfēr'-ik*) [τροχός, wheel; σφαῖρα, sphere]. Pertaining to a trochosphere.

Troglodyte (*trog'-lo-dīt*) [τρώγλη, a cave; δύειν, to enter]. Inhabiting caverns.

Troisier's Ganglion. A large lymphatic gland sometimes found above the clavicle in cases of retrosternal tumor.

Trolard's Vein. The large anastomotic vein between the superior longitudinal and lateral sinuses. See *Vein*.

Tröltsch (von), Corpuscles of. See *Corpuscle*.

Troma (*tro'-mah*). Same as *Trauma*.

Trommer's Test. A test for the presence of grape-sugar, or glucose. The liquid to be tested is filtered, and to the filtrate a solution of ammonio-cupric tartrate is added. If glucose be present, the copper is precipitated in the form of a bright, orange-red, basic cuprous oxid. Boiling facilitates the precipitation, which is sometimes stubborn. See *Tests, Table of*.

Tromomania (*trom-o-ma'-ne-ah*) [τρόμος, tremor; μανία, madness]. Delirium tremens.

Tropacocain (*tro-pak-o'-ka-in*) [*atropin; cocain*]. A powerful anesthetic and mydriatic, derived "from a small-leaved coca of Java." It has the general qualities of cocain, but appears to be more active.

Tropæolin (*tro-pe'-o-lin*) [τροπαῖος, turning]. Certain azo-dyes, so named because their colors resemble those of the flower of *Tropæolum majus*. See *Orange Colors* in *Pigments, Conspectus of*.

Tropæolum (*tro-pe'-o-lum*) [τροπαῖος, turning]. A genus of the *Pelargonieæ* including the larkspur, garden nasturtium. **T. majus,** Indian cress; a Peruvian species. The buds and fruit are used as a condiment. It is said to be stomachic, diuretic and laxative. **T. minus** L., dwarf nasturtium. It is a native of Peru, and has the same properties as *T. majus*.

Trophe (*tro'-fe*) [τροφή, nourishment]. Aliment.

Trophesial (*tro-fe'-ze-al*) [τροφή, nourishment]. Pertaining to or of the nature of a trophesy.

Trophesy (*trof'-es-e*) [τροφή, aliment]. Defective nutrition of a part resulting from disorder of the nerve regulating nutrition; trophoneurosis.

Trophi (*tro'-fe*) [τροφός, a feeder]. In biology, a collective term for those mouth-parts of an invertebrate employed in feeding.

Trophic (*trōf'-ik*) [τροφή, nourishment]. Pertaining to the functions concerned in nutrition, digestion, and assimilation. **T. Centers,** centers regulating the nutrition of nerves, or through them, of organs.

Trophis (*trof'-fis*) [τρόφις, well-fed]. The ramoon-tree. **T. americana**, a shrub of the West Indies, used as an alterative and mild astringent. **T. aspera**, paper-tree of Siam and India. The berries possess astringent and antiseptic properties, and the juice of the leaves and young shoots is used in the treatment of ulcers and cutaneous eruptions. Unof.

Trophoblast (*trof'-o-blast*) [τροφή, nourishment; βλαστός, a germ]. In biology, the outer epiblastic layer of the extra-embryonic somatopleure.

Trophoblastic (*trof-o-blas'-tik*) [τροφή, nourishment; βλαστός, germ]. Pertaining to a trophoblast.

Trophocalyx (*trof'-o-ka-liks*) [τροφή, nourishment; κάλυξ, a calyx]. See *Trophosphere*.

Trophodisc (*trof'-o-disk*) [τροφή, nourishment; δίσκος, a disc]. See *Trophosphere*.

Tropholecithal (*trof-o-les'-ith-al*) [τροφή, nourishment; λεκιθος, the yolk of an egg]. Pertaining to a tropholecithus.

Tropholecithus (*trof-o-les'-ith-us*) [τροφή, nourishment; λεκιθος, the yolk of an egg]. In biology, the food-yolk of a meroblastic egg. Cf. *Morpholecithus*.

Trophology (*trof-ol'-o-je*) [τροφή, nutrition; λόγος, science]. The science which treats of or relates to nutrition.

Trophoneurosis (*trof-o-nu-ro'-sis*) [τροφή, nourishment; νεῦρον, nerve; νόσος, disease]. Any atrophic process due to injury or perverted action of the nerves or nerve-centers. **T., Disseminated.** Synonym of *Scleroderma*. **T., Facial**, progressive facial atrophy; facial hemiatrophy. **T., Musuclar**, trophic changes in the muscles in connection with disease of the nervous system. **T. of Romberg**, unilateral atrophy of the face; hemiatrophy.

Trophoneurotic (*trof-o-nu-rot'-ik*) [τροφή, nourishment; νεῦρον, nerve; νόσος, disease]. Pertaining to a trophoneurosis.

Trophonosus (*trof-on'-o-sus*). See *Trophopathy*.

Trophopathy (*trof-op'-ath-e*) [τροφή, nutrition; πάθος, disease]. Any nutritional disorder.

Trophophore (*trof'-o-for*) [τροφή, nourishment; φέρειν, to bear]. In biology, one of the ameboid cells of sponges, giving rise to gemmules.

Trophophorous (*trof-off'-or-us*) [τροφή, nourishment; φέρειν, to bear]. Pertaining to trophophores.

Trophoplasm (*trof'-o-plazm*) [τροφή, nourishment; πλάσσειν, to mold in clay]. In biology, Nægeli's term for the vital substance of the cell, the formative plasm, or morphoplasm, in contrast to the *idioplasm*.

Trophoplast (*trof'-o-plast*) [τροφή, nourishment; πλάσσειν, to mold or form in clay]. In biology, a plastid; a mass of formative plasm.

Trophosomal (*trof-o-so'-mal*) [τροφή, nourishment; σῶμα, body]. Nutritive. Pertaining to a trophosome.

Trophosome (*trof'-o-sōm*) [τροφή, nourishment; σῶμα, body]. In biology, the mass of nutritive zoöids of a hydrozoan. Cf. *Gonosome*.

Trophosperm (*trof'-o-spurm*) [τροφή, nourishment; σπέρμα, seed]. The portion of an ovary that bears the ovules.

Trophospermium (*trof-o-spur'-me-um*) [τροφή, nourishment; σπέρμα seed]. In biology, the placenta.

Trophosphere (*trof'-o-sfēr*) [τροφή, nourishment; σφαῖρα, a sphere]. In biology, the tissue between the decidual stroma and the blastocyst in *Erinaceus*. See *Trophodisc*, *Trophocalyx*, *Trophoblast*, *Trophospongia*.

Trophospongia (*tro-fo-spun'-je-ah*) [τροφή, nourishment; σπογγιά, a sponge]. In biology, the outer or maternal layer of the *trophoblast*, *trophodisc*, or *trophocalyx*.

Trophotropic (*trof-o-trop'-ik*) [τροφή, nourishment; τρέπειν, to turn]. In biology, exhibiting trophotropism.

Trophotropism (*trof-o-tro'-pizm*) [τροφή, nourishment; τρέπειν, to turn]. In biology, the term applied by Stahl (1884) to the attraction (*positive trophotropism*) and repulsion (*negative trophotropism*) exhibited by certain organic cells to various nutritive solutions. A phenomenon now included under *Chemotaxis*, *q. v.*

Trophozoöid (*trof-o-zo'-oid*) [τροφή, nourishment; ζῷον, an animal; εἶδος, form]. In biology, nutritive zoöid.

Tropic, Tropical (*trop'-ik*, *trop'-ik-al*) [τροπικός, tropic]. Pertaining to or found in the tropics. **T. Acid.** See *Acid*. **T. Big Leg.** See *Elephantiasis arabum*. **T. Boil.** See *Boil, Aleppo*. **T. Chlorosis.** See *Ankylostomiasis* and *Dochmiasis*. **T. Fruit Laxative.** See *Senna*. **T. Measles**, a name suggested by Cautlie for a disease that was prevalent among the foreign residents of Hong Kong, during September and October, in 1888. Mild cases were regarded as "German measles," severe cases as a form of dengue. He defines it as follows: "Rubeola tropica is a specific eruptive fever, the primary, rose-red rash appearing on the face and neck on the second day of the illness; the second rash, miliary and papular, on the body, face, and occasionally on the limbs on the fourth day. The third rash, of small, coalescent wheals, appears on the arms and legs, or legs only, on the sixth day, when the fever subsides. The severe form attacks adults chiefly. It is epidemic, contagious, but seldom associated with catarrh or desquamation, and characterized by the intensity of the pain in the back, head, and orbit on the third and fourth days of the illness." The duration of the disease was much shorter than that of dengue, the termination was invariably favorable, and the complications and sequelæ of measles were not observed in any case.

Tropidin (*trop'-id-in*) [*atropin*], $C_8H_{13}N$. A substance resulting from the decomposition of atropin in the presence of hydrochloric and glacial acetic acids; it is an oily fluid having an odor resembling that of coniin.

Tropidosternal (*trop-id-o-stur'-nal*) [τρόπις, keel; στέρνον, sternum]. Keeled, as a breast-bone.

Tropin (*tro'-pin*) [*atropin*], $C_8H_{15}NO$. A substance obtained by the decomposition of the alkaloid atropin; it crystallizes from ether in plates, melts at 63° C., and boils at 229° C.

Tropis (*tro'-pis*) [τρόπις, keel]. In biology, the keel or backward curve of a cymba, as in sponge-spicules.

Tropsin (*trop'-sin*). Same as *Tropacocain*.

Trousseau's Phenomenon or Sign. A diagnostic sign of post-operative tetany. The spasm of an extremity which may be produced by compression of its principal blood-supply or nerve-supply for a brief period of time, from a few seconds to a few minutes. The spasm will continue as long as the pressure is maintained. **T.'s Spots,** *Taches cérébrales;* red spots which may appear on the skin after it has been mechanically irritated; they were thought by Trousseau to be diagnostic of meningitis.

Trouts (*trut'-uts*) [Irish]. A form of chloasma occurring among the Irish peasantry in places where they have turf-fires.

Trouser-leg Culture. A bacterial growth, as that of *Vibrio proteus*, in which the liquified area of the nutritive gelatin corresponds to the form of an empty stocking-leg. (*Schenk.*)

True (*tru*) [ME., *true*, true]. The opposite of false. Applied to organs functionally active or perfect. **T. Corpus luteum,** the corpus luteum of pregnancy. **T. Pelvis,** that part of the pelvic cavity situated below the brim or ilio-pectineal line. **T. Resins.** See

Resins. **T. Ribs.** See *Ribs.* **T. Skin,** the corium. **T. Vocal Bands,** the inferior bands, or those concerned in the production of voice.

Trumpet (*trum'-pet*) [ME., *trumpet*, trumpet]. A musical wind-instrument; any instrument or apparatus shaped like a trumpet. **T., Ear,** an instrument having a flaring mouth-piece or a parabolic cup, from the focal point of which the sound-waves are collected by another receiver projecting into the cup and connected with the ear-piece. **T.-plant,** Venus fly-catcher; huntsman's cup, the rhizome of *Sarracenia flava*, common in Southern U. S. Of high repute in the cure of diarrhea. Dose of fld. ext. ♏v–xv. Unof. See also *Sarracenia* and *Tecoma.* **T.-weed.** See *Eupatorium purpureum.*

Truncal (*trung'-kal*) [*truncus*, a trunk]. Pertaining to the trunk, or to a trunk.

Truncate (*trung'-kāt*) [*truncare*, to cut off]. In biology, ending abruptly, as if cut off.

Truncated (*trung'-ka-ted*) [*truncus*, trunk]. Deprived of limbs or accessory parts.

Truncus (*trung'-kus*) [*truncare*, lop, maim: *pl.*, *Trunci*]. In biology, the trunk or main body, as of a tree, an animal, a nerve. See *Trunk.*

Trunk [ME., *trunke*, trunk; *truncus*, a trunk]. All of the body except the head and limbs. Also, the main stem or body of a nerve or vessel.

Trunkal (*trung'-kal*). See *Truncal.*

Truss (*trus*) [Fr., *trousse*]. An instrument for maintaining a part in proper position in hernia and other malpositions of organs. **T., Carotid,** a truss for compressing the carotid artery. **T., French,** a truss for inguinal hernia, in which pressure is exerted by an elastic, steel spring that supports the pad. **T., Hainsby's,** a truss for approximating the edges of a wound; it is used in the operation for harelip. **T., Suspensory,** a suspensory bandage.

Truxillic Acid (*truks-il'-ik*) [from *Truxillo*, the commercial source of coca], $C_9H_8O_2$. An acid obtained from cocain, and known in three isomeric forms, *α*-truxillic, *β*-truxillic, and *γ*-truxillic acid.

Truxillin (*truks-il'-in*). Synonym of *Cocamin.*

Tryma (*trī'-mah*) [τρύμη, a hole: *pl.*, *Trymata*]. In biology, a drupe-like fruit, which is commonly two-celled and has a bony nucleus and a thickish but fibrous epicarp. Example: a hickory-nut.

Trypanon (*trip'-an-on*) [τρυπᾶν, to bore]. A trephine.

Trypesis (*trip-e'-sis*) [τρυπᾶν, to bore]. The operation of trephining.

Trypsin (*trip'-sin*) [τρῖψις, a rubbing]. The proteolytic enzyme of pancreatic juice. Its powers are manifested in an alkaline medium, converting proteids into peptones. Traces of trypsin have been stated to be found in urine, but this is doubtful. It is recommended for spraying the throat in membranous or diphtheric croup. Thirty grains are dissolved in one ounce of water and 10 grains of sodium bicarbonate added, and the mixture applied by means of a brush or as a spray. Unof.

Trypsinogen (*trip-sin'-o-jen*) [τρίψις, a rubbing; γενᾶν, to produce]. A catastatic granular substance found in pancreatic cells; by a slight chemic change it becomes trypsin, and is cast out of the cell; the zymogen from which trypsin is formed.

Tryptic (*trip'-tik*) [τρίψις, a rubbing]. Pertaining to trypsin.

Tryptone (*trip'-tōn*) [τρίψις, a rubbing]. Any pancreatic peptone.

Tryptonemia (*trip-to-ne'-me-ah*). See *Peptonemia.*

Tryptophan (*trip'-to-fan*). See *Proteinchromogen.*

Tsetse (*tset'-se*) [S. African]. *Glossina morsitans;* a dipterous insect of South Africa, whose bite is highly dangerous to horses and cattle, though not to man. See *Parasites* (*Animal*), *Table of.*

Tsin (*tzin*). Synonym of *Arrack.*

Tuba (*tu'-bah*) [L., a tube]. A Eustachian or Fallopian tube.

Tubage (*tu'-bāj*) [*tuba*, a tube]. The introduction of a tube or catheter. **T. of the Glottis.** See *Intubation.*

Tubal (*tu'-bal*) [*tubus*, a pipe]. Pertaining to an oviduct. **T. Abortion,** of Bland-Sutton, internal rupture of the ovum in extra-uterine gestation, with a pouring out of blood through the fimbriated extremity of the tube into the abdominal cavity. **T. Mole,** a tubal ovum that has been destroyed by hemorrhage. It is at first spheric, but after attaining the dimensions of a walnut becomes ovoid. In the majority of cases the amniotic cavity occupies an excentric position, hence rupture easily occurs, and the embryo is lost. **T. Pregnancy,** pregnancy in one or the other Fallopian tube.

Tubarium (*tu-ba'-re-um*) [*tubus*, pipe, tube: *pl.*, *Tubaria*]. The tube formed and inhabited by a polyite.

Tubate (*tu'-bāt*) [*tuba*, tube]. Tubiform; provided with a tube.

Tube (*tūb*) [*tubus*, or *tuba*, a tube]. Any pipe-like structure in the body, especially the oviduct or Fallopian tube. Also, a hollow, cylindric, surgical appliance, made variously of rubber, glass, bone, silver, etc. **T., Absorption,** a glass tube used in Bunsen's method of volumetric analysis of gases; it is graduated and closed at one extremity, and collects gas and conducts it to the eudiometer. **T., Air,** a bronchial tube; *e.g.*, the larynx, trachea, bronchi, and bronchial tubes. **T., Auscultation,** a tube for testing the acuteness of hearing. It has three branches, two of which are placed in the patient's ears, the third in the ear of the auscultator; the sound of a vibrating tuning-fork placed in contact with the top of the patient's head will then be transmitted to the observer from the patient's ears. **T. of Bellini,** the large excretory ducts of the uriniferous tubules formed by the frequent union of canals of smaller size. **T., Bellocq's,** an instrument used for plugging the posterior nares in nasal hemorrhage. **T., Binocular,** the tube of a binocular microscope. **T.-breather,** an animal breathing through tubes. **T., Bronchial.** See *Bronchia.* **T., Calcigerous.** See *Dental Canals.* **T.-casts,** *urinary casts;* casts of the renal tubules, and indicative of kidney-disease. They vary in size, shape, and appearance. Their length ranges up to 200*μ* or more; their diameter from 4*μ* to 40*μ*. They are usually straight, but may be curved, twisted, convoluted, or branched. *T.-c., Blood*, those composed of coagulated blood with corpuscles embedded. They show that the hematuria originates in the secreting structure of the kidney. *T.-c., Epithelial*, those composed of plastic matter with cells embedded, and denoting desquamative inflammation. *T.-c., Fatty*, those containing free fat globules in the coagulated matter, indicating fatty degeneration in a chronic nephritis. *T.-c., Granular*, those containing finely divided, granular débris, either in scattered masses or completely filling the casts. They are usually found in cases of contracted kidney. *T.-c., Hyaline*, transparent, soft, delicate casts, also called *Mucous Casts.* *T.-c., Mucous.* See *T.-c., Hyaline.* *T.-c., Pus*, those that contain degenerated leukocytes; indicative of involvement of the interstitial kidney-substance. *T.-c., Seminal*, molds of the seminal tubules found in the urine, and recognized by the presence of spermatozoids. *T.-c., Waxy*, those that give the amyloid reaction; they are large and yellowish in appearance, and are indicative of serious nephritis. **T., Chaussier's** (*for insufflation*,

a metallic tube trumpet-shaped at one extremity and curved at the other to faciliate its introduction into the larynx, and provided with a perforated collar to which suitable material is attached for the purpose of closing the aperture of the larynx. **T., Collecting.** See *Tubule.* **T., Communicating.** See *Tubulus, Communicating.* **T.-culture.** See *Culture.* **T., Dentinal.** See *Canal, Dentinal.* **T., Depaul's** (*for insufflation*), an instrument similar to Chaussier's. **T., Drainage,** a hollow tube of glass, rubber, or other material to be inserted into a wound or cavity to allow of the escape of fluids. **T., Draw,** the tube which slides within the tube of a microscope. **Ts., Egg.** See *Ts., Ovarian.* **T., Emmett's Fistula,** a trumpet-shaped tube for draining a fistula. **T., Enterotomy,** an instrument used in establishing an artificial anus, to prevent protrusion of the gut. **T., Esbach's,** Esbach's albumimeter; a graduated glass cylinder for estimating the percentage of albumin in urine. **T., Esmarch's Elastic,** an elastic tube furnished with a hook and chain, and used to render a limb bloodless. **T., Esophageal,** a soft, flexible tube used for lavage and gavage. **T., Eustachian,** the canal extending obliquely from behind the soft palate to the tympanum. It is partly osseous and partly cartilaginous, lined by mucosa, about 36 mm. long and 2 mm. wide. **T., Fallopian.** See *Oviduct.* **Ts. of Ferrein,** a prolongation of the striæ of the Malpighian pyramids into the cortex of the kidney. They are also known as *Medullary rays.* **T., Geissler's,** an instrument for showing the striæ which are produced by an electric discharge in a highly rarefied medium. **T., Germ,** a tube formed in the germination of a spore by distention of the endospore. **T., Hearing,** a tube consisting of a spiral wire encased in leather and covered with close-textured silk or woollen tissue, with an oval ear-piece and a cup-shaped mouth-piece. It is for the use of persons whose hearing is impaired. **T., Henle's Looped.** See *Tubulus.* **T., Intestinal,** the intestinal canal. **T., Kobelt's,** in the paroöphoron, the remains of tubules in the Wolffian bodies. **Ts., Leiter's.** See *Leiter's Tubes.* **T.-length,** the length of the tube of the microscope at which corrections must be made for the formation of the image at a definite distance. This distance is set arbitrarily by most makers, hence the lack of uniformity. **Ts., Lieberkühn's.** See *Crypt.* **T., Lithotomy,** an instrument used in operations for calculi. **Ts., Lobular Bronchial,** the bronchioles. **T., Loop.** See *Tubulus.* **T., Medullary,** the neural canal in the embryo. **T., Microscopic,** the metallic cylinder that contains the draw-tube of a microscope. **Ts., Miescher's.** See *Sarcocystis miescheri* under *Parasites* (*Animal*), *Table of.* **T., Milk,** one of the lactiferous ducts. **T., Muscle.** See *Muscle-fiber.* **T., Nerve,** a primitive nerve-fibril. **T., Neural.** See *T., Medullary.* **T., O'Beirne's,** a tube of rubber for irrigating the colon. **T., Otopharyngeal.** See *T., Eustachian.* **Ts., Ovarian,** ova-chains; germinal epithelium in a developing ovary. **Ts., Peptic,** the gastric glands. **Ts., Perforating,** uncalcified perforating tubules, or Sharpey's fibers in bone. **T., Perineal.** See *T., Lithotomy.* **Ts., Pflüger's.** See *T., Ovarian.* **Ts., Pflüger's Salivary,** ducts of the acini of salivary glands. **T., Pituitary.** See *Hypophysis cerebri.* **Ts., Pulp,** tubular masses of the tissue proper of an organ, as of the spleen. **T., Receiving** (*of the kidney*). See *Tubulus, Straight Collecting.* **T., Rectal,** a flexible, rubber tube for introduction into the rectum. **Ts., Respiratory Bronchial.** See *Bronchioles.* **T., Ribemont's Laryngeal,** a tube used for insufflation in asphyxia neonatorum. **T., Safety,** a small extent of the ectal portion of the Eustachian tube which is slightly open and permits equalization of pressure in the tympanum from the pharynx, and also allows a recoil of air from the tympanum when the tympanic membrane is suddenly driven in, as in explosions. **Ts., Seminal,** the tubes constituting the lobules of the testis. See *Cells, Seminal.* **T., Speaking.** See *T., Hearing.* **T., Spray,** an apparatus consisting of two tubes so adjusted that a current of air or steam through one will cause a spray to issue from the other. **T., Stomach.** See *T., Esophageal.* **T., Straight.** See *Tubules, Straight Collecting.* **T., Toynbee's Conic Metal,** a tube used for washing out the mastoid cells and the tympanum. **T., Tracheal,** a tracheal cannula. **Ts., Uriniferous, Ts., Uriniparous.** See *Tubulus.* **T., Uterine,** a tube used for injecting the uterus. **T., Voltolini's,** a small tube used to keep open an incision in the tympanic membrane.

Tuber (*tu'-ber*) [*tuber*, a bump, swelling: *pl.*, *Tubera*]. In biology, a thickened portion of an underground stem. **T. anatomica,** a protuberance, tumor, or swelling. **T. annulare.** See *Pons varolii.* **T. anterius.** See *T. cinereum.* **T. brumale.** See *T. cibarium.* **T. calcanei,** the tuberosity of the calcaneum. **Tubera candicantia.** See *Corpora mammillaria.* **T. cinereum,** a tract of gray matter extending from the optic chiasma to the corpora mammillaria, and forming part of the floor of the third ventricle. **T. corporis callosi,** the splenium. **T. eustachii,** a slight protuberance below the fenestra ovalis on the inner wall of the tympanic cavity. **T. frontale,** the frontal eminence. **Tubera geniculata,** the internal and external geniculate bodies. **T. gutturosum.** See *Goiter.* **T. ischii,** the tuberosity of the ischium. **T. maxillæ,** the tuberosity of the superior maxilla. **T. omentale hepatis,** a prominence on the left lobe of the liver, corresponding to the lesser curvature of the stomach. **T. omentale pancreatis,** a prominence of the middle part of the pancreas, corresponding to the lesser omentum. **T. parietale,** the parietal eminence. **T. supracondyloideum,** an eminence opposite the distal end of the internal border of the linea aspera of the fibula. **T. supraorbitale,** the superciliary ridge. **T. syphiliticum.** See *Syphiloma.* **T. tympani.** See *T. eustachii.* **T. valvulæ** (*cerebelli*), a small prominence of the cerebellum on its inferior vermiform process at its anterior extremity in front of the uvula. **T. verrucosum,** a callosity often found on the great toe at the metatarso-phalangeal joint. **T. zygomaticum,** a prominence of the zygoma on its lower border near the union of the superior maxilla and the zygomatic process.

Tubercle (*tu'-bur-kl*) [*tuberculum*, a tubercle]. 1. In anatomy, a rounded prominence on a bone or other part; also, the rounded end of a bone. 2. In dermatology, a small protuberance in the corium or subcutaneous tissue, produced by a morbid deposit. 3. In pathology, a small, hard, granular body, $\frac{1}{10}$ mm. to 2 mm. in diameter, yellowish at the center and bounded by a reddish, vascular zone. 4. In biology, applied specifically to the enlargements found on the roots of leguminous plants; first described by Dalechamps in *Ornithopodium tuberosum* (1587) and since by Woronin, Beyerinck, Prazmowski, Frank, Schlösing Jr., Laurent, Sachmann, Körnicke, etc. **T., Adductor** (*of the femur*), a slight protuberance at the lower end of the internal supracondylar line of the femur, giving attachment to the tendon of the adductor magnus. **T., Amygdaloid,** a prominence on the roof of the descending cornu of the lateral ventricle. **T., Anatomic,** a wart-like tuberculous growth sometimes appearing

on the hands of dissectors. It is also called *necrogenic verruca*. **Ts., Anterior Pair of,** the anterior pair of the corpora quadrigemina. **T., Anterior** (*of a vertebra*), a tubercle at the anterior part of the extremity of the transverse process of certain vertebræ. **T., Anterior** (*of the atlas*), a protuberance upon the ventral arch of the atlas at the meson. **T., Anterior** (*of the calcaneum*), a prominence on the anterior inferior surface of the os calcis. **T., Anterior** (*of the optic thalamus*), a rounded prominence of the thalamus at its anterior extremity. **T., Anterior** (*of the vagina*), a rough eminence at the upper part of the vaginal orifice, behind the meatus urinarius. **T., Black,** a synonym of *Melanosis*. **T. of the Calcaneum,** a tubercle on the external surface of the os calcis. **T., Carotid,** a prominence of the sixth cervical vertebra on the anterior part of its transverse process. **T., Conoid,** a broad projection of the clavicle on its posterior border at the union of its middle and outer thirds, to which is attached the conoid ligament. **T. of the Cuboid,** a tubercle on the plantar surface of the cuboid bone, also called the tuberosity

Diagram of the Minute Structure of Tubercle.

of the cuboid. **T., Cuneate,** of Schwalbe, a prominence on the cuneate fasciculus. **T., Cuneiform.** See *T., Painful*. **T., Deltoid,** a projection on the anterior border of the clavicle, giving origin to a part of the deltoideus. **T., External,** the outermost of the three tubercles on the transverse process of some of the dorsal vertebræ. **T., External Supracondyloid,** the projection at the lower end of the femur on the outer portion of its posterior surface, giving rise to the plantaris muscle. **T. of the Femur,** a tubercle on the neck of the femur, on the anterior surface near its junction with the trochanter major. **T., Fibrous,** a tubercle which has been modified by the formation of connective tissue within its structure. **Ts., Genial,** double pairs of tubercles on each side of the middle line on the inner surface of the lower maxilla. **T., Genital,** the rudimentary penis or clitoris in the uro-genital region of the embryo in front of the cloaca. **T., Gray.** See *T., Miliary*. **T., Gray, of Rolando,** a prominence between the prolongation of Burdach's column and the postero-lateral groove. **T., Greater** (*of the humerus*), the greater tuberosity. **T., Hyaline,** a miliary tubercle the reticulum of which has undergone hyaline degeneration. **T., Inferior,** the lowest of the three tubercles at the extremity of some of the dorsal vertebræ. **T., Inferior Obturator,** a projection on the pubic margin of the obturator foramen. **T., Infraglenoid,** a prominence from which arises the long head of the triceps, below the glenoid cavity of the scapula. **T., Internal,** the innermost of the three tubercles at the extremity of some of the dorsal vertebræ. **T., Internal Supracondyloid,** a prominence from which arises the internal head of the gastrocnemius, on the posterior and inner surface of the lower end of the femur. **T., Intravascular,** a prominence on the intima of a blood-vessel. **T., Jugular,** a ridge near the outer wall of the anterior condyloid foramen on the inner surface of the occipital bone. **T., Lacrymal,** the small papillary prominence at the margin of the eyelid, and in the center of which is the punctum lacrymalia. **Ts., Leprous,** the tubercles found in tubercular leprosy. **T., Lesser** (*of the humerus*), the lesser tuberosity. **T. of Lower,** a small eminence on the wall of the right auricle, between the orifices of the pre-cava and inferior post-cava. **T., Lymphoid.** See under *Tuberculosis*. **T., Mammillary.** See *Corpora mammillaria*. **T., Miliary,** a small, globular tubercle in the stroma of an organ, showing microscopically giant-cells in the center, next smaller cells, and round cells like leukocytes at the periphery. **Ts. of Montgomery,** the prominences on the surface of the areola of the nipple; they are formed by the sebaceous glands. **T., Mucous.** See *Mucous Patch*. **T., Nuchal,** the spinous process of the seventh cervical vertebra. **T., Olfactory.** See *Bulb, Olfactory*. **T., Painful,** a painful tubercle in the subcutaneous tissue in the region of the joints; the nature of the affection is uncertain. **T., Papillary** (*of the liver*), a projection of the lobulus spigelii into the transverse fissure. **Ts., Pearly,** milium; small, whitish, non-inflammatory elevations situated in the upper part of the corium. **T., Pharyngeal,** the pharyngeal spine. **Ts., Pisiform,** the corpora mammillaria. **T., Plantar,** a tubercle on the first metatarsal bone; it gives attachment to the tendon of the peroneus longus. **Ts., Posterior Pair of,** the posterior tubercles of the corpora quadrigemina. **T., Posterior** (*of a vertebra*). a tubercle at the posterior end of the lumbar and several of the thoracic vertebræ. **T., Posterior** (*of the atlas*), a tubercle on the dorsal arch of the atlas; it is situated in the median line on the external surface. Sometimes it is replaced by a depression with an elevated rim. **T., Posterior** (*of the optic thalamus*), a tubercle on the ventricular surface of the thalamus, toward the posterior end. **T., Pterygoid,** a tubercle on the inner surface of the inferior maxilla; it gives attachment to the internal pterygoid muscle. **T., Quadrigeminal.** See *T., Posterior Pair of*. **T. of the Radius,** the bicipital tuberosity of the radius. **T., Retrograde,** a tubercle that has undergone calcification. **T. of a Rib,** a tubercle on a rib, articulating with the transverse process of a vertebra. **Ts. of Rolando,** rounded masses close under the surface of the lateral columns of the oblongata, formed by the enlarged dorsal horns of the gray matter. **T. of Santorini,** a small eminence on the mucous surface of the larynx, due to the cartilage of Santorini. **T., Scalene,** a tubercle on the first rib; it gives attachment to the anterior scalene muscle. **T. of the Scaphoid Bone,** a projection on the outer surface of the bone which gives attachment to the annular ligament. **T., Secondary,** a tubercle that sometimes follows the breaking down of a caseous mass, as in catarrhal pneumonia. **T., Superior Obturator,** a tubercle on the margin of the obturator foramen. **T., Supraglenoid,** a tubercle above the glenoid fossa of the scapula; it gives attachment to the long head of the biceps. **T. of the Thyroid Cartilage,** a tubercle on the outer surface of the ala of the thyroid cartilage, at the posterior end of the upper margin. **T. of the Tibia,** the tuberosity on the anterior surface of

the tibia. **T. of the Ulna,** a prominence at the base of the coronoid process which gives attachment to the brachialis anticus. **T. of the Zygoma,** a tubercle at the junction of the anterior root with the zygoma; it gives attachment to the external lateral ligament of the lower jaw.

tubercular (*tu-bur'-ku-lar*) [*tuberculum*, a tubercle]. Presenting the physical appearance of a tubercle.

tuberculate, Tubercled (*tu-bur-ku-lāt*, *tu'-bur-kld*) [*tuberculum*, a tubercle]. Warty; bearing tubercles.

tuberculated (*tu-bur'-ku-la-ted*) [*tuberculum*, a tubercle]. Furnished with tubercles; tuberculous.

tuberculation (*tu-bur-ku-la'-shun*) [*tuberculum*, a tubercle]. The formation, development, or arrangement of tubercles; the process of affecting a part with tubercles.

tubercule (*tū'-bur-kūl*) [*tuberculum*, a tubercle]. A tubercle.

tuberculiform (*tu-bur'-ku-lif-orm*) [*tuberculum*, tubercle; *forma*, form]. Shaped like a tubercle.

tuberculin (*tu-bur'-ku-lin*) [*tuberculum*, a tubercle]. *Koch's Lymph; Paratelord:* a glycerin-extract of cultures of the bacillus of tuberculosis. It is a brownish, neutral, albuminoid liquid, soluble in water, and consists probably of ptomains of the tubercle-bacilli. Dose hypodermatically m_{ij} $1\frac{1}{2}$ of a 1 per cent. solution. It is to be used therapeutically only with great care. It is extremely valuable in the diagnosis of tuberculosis in cattle. Unof. Klebs and Hunter have endeavored to eliminate from tuberculin its dangerous elements. Hunter has prepared certain modifications of which he has named the two principal, respectively **CB,** and **CB.** Trudeau has concluded that **Modification CB** contains much less of the remedial element than tuberculin, and is quite as dangerous, while **Modification B** is as efficacious as tuberculin, and free from some of its dangers. See also *Tuberculocidin.*

tuberculinized (*tu-bur'-ku-lin-izd*) [*tuberculum*, tubercle]. Submitted to the action of tuberculin.

tuberculinose (*tu-bur'-ku-lin-ōs*) [*tuberculum*, tubercle]. A term applied to some of the modifications of tuberculin. See also *Tuberculin.*

tuberculitis (*tu-bur-ku-li'-tis*) [*tuberculum*, tubercle; *-itis*, inflammation]. The inflammation in the tissues surrounding a tuberculous node.

tuberculization (*tu-bur-ku-liz-a'-shun*) [*tuberculum*, tubercle]. 1. The formation of tubercles, or the condition of being charged with tubercles. 2. Treatment with tuberculin.

tuberculocidin (*tu-bur-ku-lo'-sid-in*) [*tuberculum*, tubercle; *cædere*, to kill]. *Alexin;* a precipitate obtained by Klebs from Koch's tuberculin by precipitating the noxious substances with platinum chlorid, the albumoses remaining in solution. See also *Tuberculin.*

tuberculoid (*tu-bur'-ku-loid*) [*tuberculum*, tubercle; *εἶδος*, like]. Resembling tubercle.

tuberculose (*tu-bur'-ku-lōs*). See *Tuberculate.*

tuberculosis (*tu-bur-ku-lo'-sis*) [*tuberculum*, a tubercle]. An infectious disease due to the introduction into the system of the bacillus tuberculosis, discovered by Koch in 1882. It has a very wide-spread, almost universal, distribution, and it is estimated that fully one-seventh of all mankind die of it. The bacillus, the essential etiologic factor, gains entrance into the body with the inspired air, with the food, and by direct inoculation. The commonest mode of introduction is by inhalation; in consequence, the respiratory tract is the most frequent seat of tuberculosis. The bacilli become disseminated in the air chiefly through the agency of the sputum of persons afflicted with pulmonary tuberculosis. The sputum of such individuals contains countless bacilli, which are held in it as long as it is moist, but are scattered through the air when the sputum becomes dry and pulverulent. When tuberculosis is acquired through the food, an occurrence not rare in childhood, it localizes itself primarily in the intestinal tract. The food which most often conveys the disease is milk from tuberculous animals, more rarely tuberculous meat. Direct inoculation does not play an important rôle in the causation of the disease. The status of heredity as a factor in the propagation of tuberculosis is not yet fully settled. Isolated instances of apparently hereditary transmission, both in man and in animals, are recorded, and demonstrate that the disease *may be* inherited; but in the majority of cases the acquisition of tuberculosis is post-natal. There is, however, a manifest tendency of the disease to attack the offspring of tuberculous parents, which, as it is not the result of hereditary transmission, must indicate the existence of a predisposition or susceptibility which is transmitted from parent to child. The lesion produced by the growth of the bacillus of tuberculosis is known as the **tubercle** (miliary or gray tubercle or nodule). This is a small, grayish, translucent nodule, from $\frac{1}{16}$ to 2 mm. in diameter, firmly imbedded in the surrounding tissues. By the coalescence of neighboring tubercles larger masses, the so-called **tuberculous infiltrations,** are produced. Histologically a typical tubercle consists of three groups of cells, the epithelioid, the giant-cells, and the round or lymphoid cells. The first are oval in shape, have a vesicular nucleus, and are the result of the proliferation of the fixed connective tissue and endothelial cells; perhaps, also, of epithelial cells. The formation of the oval cells is the first effect produced by the tubercle-bacillus. The giant-cell is a large multinuclear mass, usually situated in the center of the tubercle. It may be the product of repeated nuclear multiplication in a single cell, without division of the cell-protoplasm, or the result of the coalescence of several adjacent cells. The round cells are leukocytes that have emigrated from the blood-vessels, and they may be so numerous as to conceal the other cells (**lymphoid tubercle**). The bacilli are found in the giant-cells, between and in the epithelioid cells, and, in later stages, in the round cells. New blood-vessels are not formed in the tubercle. The tendency of the tuberculous formation is to undergo a peculiar form of coagulation, known as **cheesy necrosis.** This gives rise to a structureless, yellowish-white mass, which microscopically shows an almost total absence of nuclei in the central area, while at the periphery nuclei, both normal and in various stages of degeneration, are found. The necrotic tissue does not as a rule take any stain. For this degeneration two factors are responsible: the absence of blood-vessels and the action of peculiar poisons elaborated by the bacillus. The breaking down of tuberculous areas in the interior of organs gives rise to *cavities,* which may be seen in muscles, bones, brain, lymphatic glands, and elsewhere, but are most pronounced in the lungs, where they may attain a very large size. On surfaces—skin and mucous membranes—tuberculosis often leads to the formation of *ulcers,* which are characterized by an irregular, eroded appearance and by the presence of tubercles. Tuberculous areas occasionally become secondarily infected with pyogenic or saprophytic organisms. The tubercle-bacillus itself is capable of producing pus, but the majority of the so-called tuberculous cold abscesses are merely collections of fatty and disintegrated cells and tissue-detritus. Tuberculosis is primarily a local disease—extension takes place by continuity and contiguity, along the lymph-channels, along the respiratory and intestinal

tracts, and through the blood. It is usually possible in secondary tuberculosis to demonstrate the original focus, but in the case of tuberculous lymphatic glands the source of infection is not always discoverable. This has been explained by assuming that infection may take place *in utero* and the bacilli lie dormant in the lymphatic glands for varying periods after birth (**latent tuberculosis**). The possibility has also been suggested that the bacilli may penetrate a mucous membrane, be carried to the nearest lymphatic gland, and unfold their activity there. In the human subject tuberculosis appears under various forms, presenting clinical differences, but identical from the pathologic standpoint. Since the discovery of the tubercle-bacillus such diseases as scrofula, lupus vulgaris, Pott's disease, many forms of chronic joint-disease, and the anatomic tubercle have been proved to be tuberculous in nature. The most frequent seats of tuberculosis are the lung, the intestinal tract, the lymphatic glands, the serous membranes, the bones, the skin, the testicle, the epididymis, the brain, the Fallopian tubes, the uterus, the spleen. Tuberculosis is very frequent in the lower animals, attacking especially the domestic herbivora and fowls and wild animals kept in captivity. In cattle the lesions take the form of nodes and conglomerates, which, on serous membranes, may be pedunculated (**pearl-disease**). Histologically there is in bovine tuberculosis a greater tendency to the formation of fibrous tissue than in the human form. The symptoms of tuberculosis vary with the localization of the disease. A few general phenomena are common to nearly all forms, viz.: emaciation, loss of strength, anemia, fever, and sweats. Amyloid degeneration may occur in various organs in cases of the disease associated with prolonged suppuration. In the diagnosis of tuberculosis the demonstration of the presence of the bacillus is of the highest importance. **T., Acute Miliary,** an acute, febrile disease, characterized by the formation of minute tubercles in great numbers in various parts of the body. It is due to the discharge into the circulatory stream of the constituent elements of some tuberculous focus, scattering the bacilli throughout the system. Three forms are usually described: 1. A general or typhoid form. 2. One with marked pulmonary symptoms. 3. One in which cerebral symptoms predominate. **T., Anatomic.** See *Tubercle, Anatomic.* **T., Avian,** tuberculosis affecting birds. **T., Bovine,** tuberculosis as it occurs in cattle; pearl-disease. See *Tuberculosis.* **T., Cerebral:** 1. Tuberculous meningitis. 2. Tuberculosis of the brain itself. **T. cutis,** tuberculosis of the skin; lupus vulgaris is the most common form. **T., General Miliary.** See *T., Acute Miliary.* **T., Hematogenous** (*of the lung*), this may be a miliary tuberculosis, affecting both lungs or a greater portion of one only, or it may be a localized tuberculosis, characterized by the appearance of tubercles in a limited area of the lung. **T., Inoculated,** tuberculosis caused by direct inoculation of tuberculous material. **T., Intestinal,** tuberculosis affecting the intestinal tract. **T., Laryngeal,** tuberculosis of the larynx. It is usually secondary to tuberculosis of the lungs, but in rare cases appears to be primary. **T., Latent.** See under *Tuberculosis.* **T., Meningeal,** tuberculosis of the cerebral or spinal meninges. The tubercles are scattered along the course of the blood-vessels. **T., Miliary,** tuberculosis characterized by the deposit of miliary tubercles in the viscera. **T., Parasitic,** tubercular growths produced by parasitic nematodes. **T., Pseudo,** a disease producing lesions similar to those of tuberculosis, but due to a pleomorphic organism, the *Cladothrix asteroides* (*Eppinger*). **T., Pulmonary,** tuberculosis of the lungs. **T., Rena** tuberculosis of the kidney. **T., Surgical,** tuberculos of parts amenable to surgical treatment. **T., Urogen tal,** tuberculosis, apparently primary, of the genit urinary tract. **T. verrucosa cutis.** See *Verruca nec genica.* **T. zoöglœica,** also known as pseudo-tube culosis. A disease of guinea-pigs, rabbits, lambs, a horses, which is characterized by cheesy nodules. Th cause is a pleomorphic bacillus forming zoöglea masse

Tuberculous (*tu-bur'-ku-lus*) [*tuberculum*, tubercle] Affected with, or pertaining to, a tubercle. Cause by the bacillus tuberculosis. **T. Disease of th Foot.** See *Foot, Fungus.*

Tuberculum (*tu-bur'-ku-lum*) [L.]. See *Tubercle.* **T sebaceum.** See *Milium.*

Tuberculus (*tu-bur'-ku-lus*) [*tuberculum*, tubercle] In entomology, a supplementary eye.

Tuberiferous (*tu-ber-if'-er-us*) [*tuber*, a tuber; *ferr* to bear]. Producing tubers.

Tuberiform (*tu'-ber-if-orm*) [*tuber*, tuber; *form* form]. Tuber-shaped.

Tuberoid (*tu'-ber-oid*) [*tuber*, a swelling; εἶδος, like Resembling a tuber.

Tuberose (*tu'-ber-ōz*). See *Tuberous.*

Tuberosity (*tu-ber-os'-it-e*) [*tuber*, a swelling]. anatomy, any protuberance of a bone or process. **T Greater** (*of the humerus*), a rough projection on t outer side of the head of the humerus. **T. of the Isch ium,** a thick, downward projection of the ischium, which the body rests when in a sitting posture. **T Lesser** (*of the humerus*), a small tuberosity in fro of the head and on the inner side of the bicipi groove of the humerus. **T., Maxillary,** a round eminence at the lower part of the zygomatic surface the superior maxillary bone, especially prominent af the growth of the wisdom-teeth. **Ts. of the C calcis,** two prominences, an external and an intern on the posterior inferior aspect of the os calcis. **T. the Palate Bone,** a pyramidal process at the lower p of the posterior border of the external surface of palate bone. **T. of the Radius,** a rough emine at the inner and anterior aspect of the bone just bene the neck.

Tuberous (*tu'-ber-us*) [*tuberosus*, like a tuber]. Ch acterized by the presence of tuberosities, as *e. g.* tuberous angioma.

Tubicolous (*tu-bik'-o-lus*) [*tuba*, tube; *colere*, to habit]. In biology, inhabiting a tube.

Tubifacient (*tu-be-fa'-shent*) [*tuba*, a tube; *fac* to make]. In biology, tube-forming, as certain pol and worms.

Tubiferous (*tu-bif'-er-us*) [*tuba*, a tube; *ferre*, bear]. Bearing or having tubes.

Tubiflorous (*tu-be-flo'-rus*) [*tuba*, tube; *flos*, flow In biology, having tubular flowers.

Tubiform (*tu'-be-form*) [*tuba*, a tube; *forma*, for Trumpet-shaped; also, *tubæform.*

Tubilingual (*tu-be-ling'-gwal*) [*tuba*, tube; *ling* tongue]. In biology, having a tubular tongue.

Tubinarial (*tu-be-na'-re-al*) [*tuba*, tube; *nares*, no Having tubular nares.

Tubiparous (*tu-bip'-ar-us*) [*tuba*, tube; *parere*, to duce]. Producing tubes or tubules.

Tubo-abdominal (*tu-bo-ab-dom'-in-al*) [*tuba*, a tu *abdomen*, abdomen]. Pertaining to an oviduct an the abdomen. **T. Pregnancy,** one that begins in tube, but that finally becomes abdominal.

Tubo-ovarian (*tu-bo-o-va'-re-an*) [*tuba*, a tu *ovarius*, an ovary]. Pertaining conjointly to the lopian tubes and the ovaries. **T. Pregnancy,** an e uterine pregnancy in which the ovum develops betw the fimbriæ of the oviduct and the ovary.

Tubo-uterine [*tuba*, tube; *uterus*, uterus]. Pertaining to the oviduct and the uterus. **T. Pregnancy,** a form of tubal pregnancy in which the ovule develops in the uterine wall, a portion of the sac often projecting into the uterus, and having on the outer side the round ligament and the greater portion of the tube. Also known as interstitial pregnancy.

Tubular (*tu'-bu-lar*) [*tubulus*, a small tube]. 1. Pertaining to or having the form of a tubulus. 2. Applied to a sound heard on auscultating the chest, and resembling a current of air passing through a tube. 3. Nearly cylindric and hollow, like a tube, as a tubular corolla or calyx. **T. Adenoma,** an adenoma after the type of tubular glands. **T. Breathing.** Synonym of *Breathing, Bronchial.* **T. Epithelioma,** a carcinoma found in the salivary glands composed of irregular cells, the cell-masses extending in tubes or cylindric plugs in various directions. Pearly bodies are also present. **T. Gland,** a secreting gland tube-like or cylindric in shape. There are three varieties —the simple, the compound, and the modified or coiled tubular gland. In a special sense the term tubular glands is used to designate the enteric glands or follicles of Lieberkühn. **T. Looseness.** Synonym of *Membranous Enteritis.* **T. Membrane.** See *Neurilemma.* **T. Pneumonia.** Synonym of *Pneumonia, Lobular.* **T. Râle,** one produced in a bronchial tube.

Tubulate (*tu'-bu-lāt*) [*tubulus*, a small tube]. Formed like a tube.

Tubule (*tu'-būl*) [*tubulus*, dim. of *tubus*, a tube]. A small tube. In anatomy, any minute, tube-shaped structure. See also *Tubulus.* **T., Communicating,** or **Junctional,** that part of a uriniferous tubule between the distal convoluted, and the straight collecting tubule. **T., Dentinal,** the tubular structure of the teeth. **T. of Ferrein.** See *Tube of Ferrein.*

Tubulicolous (*tu-bu-lik'-o-lus*) [*tubulus*, tubule; *colere*, to inhabit]. Inhabiting a tubule.

Tubuliferous (*tu-bu-lif'-er-us*) [*tubulus*, tubule; *ferre*, to bear]. Having tubules, or tube-like ovipositors.

Tubuliflorus (*tu-bu-lif'-lo-rus*) [*tubulus*, a little tube; *flos*, flower]. In biology, having the heads composed of tubular flowers.

Tubuliform (*tu'-bu-lif-orm*) [*tubulus*, tubule; *forma*, form]. Shaped like a tubule.

Tubulose (*tu'-bu-lōz*). Same as *Tubular.*

Tubulus (*tu'-bu-lus*) [*tubulus*, a small tube: *pl.*, *Tubuli*]. In biology: (*a*) a small, tube-like organ; a tubule; (*b*) the ovipositor of certain insects; (*c*) see *Cornu, Neck.* **T. lactiferi,** the excretory ducts of the mammæ, 15–20 in number. **T. seminiferi,** the tubular threads, arranged in fasciculi, which compose the substance of the testicle. They are lined with epithelium from which the spermatozoids develop and are about $\frac{1}{2\,0\,0}$ inch in diameter. **T. uriniferi,** the urinary tubes of the kidneys. Beginning at the Malpighian capsules, each forms—1st, a constricted neck; 2d, a wide canal, called the *proximal, or first convoluted tubule;* 3d, a spiral tube, called the *spiral tubule of Schachowa;* 4th, the narrow, straight tube, called the *descending limb of Henle's loop;* 5th, the *ascending limb of Henle's loop;* 6th, the *irregular tubule;* 7th, the *distal* or *second convoluted tubule;* 8th, the *curved tubule;* 9th, the *straight collecting tubule* opening at the apex of a pyramid.

Tubus (*tu'-bus*) [L.: *pl.*, *Tubi*]. A tube. In biology, the basal portion of the labium of the bee. **T. proximus convolutus.** See under *Tubulus.*

Tufnell's Bandage. An immovable bandage stiffened with a paste of white of egg and flour. It is also called *egg-and-flour bandage.* **T.'s Diet or Treatment.** See *Diet.*

Tuft [ME., *tuft*, a tuft]. 1. A rete; a glomerulus. 2. A fascicle of flowers or leaves. **T., Malpighian.** See *Malpighian Bodies.*

Tulbaghia (*tul-bag'-e-ah*) [L.]. A genus of liliaceous plants, with the smell of garlic. The thick, fibrous roots of *T. alliacea* and *T. cepacea* are used in S. Africa in pulmonary tuberculosis and as a cure for worms. Unof.

Tulip (*tu'-lip*) [*tulipa*, tulip]. A common European flowering-plant, *Tulipa gesneriana* L. It is a sialagogue and cardiac poison. See *Tulipin.* Unof. **T.-tree.** See *Liriodendron.*

Tulipin (*tu'-lip-in*) [*tulipa*, tulip]. An alkaloidal principle from the common tulip. It is strongly sialogogue, acts on the heart like veratrin, and on the spinal cord like scillitin or colchicin. Dose $\frac{1}{6\,4}$–$\frac{1}{2\,0}$ of a grain, in granules, or pills. Unof.

Tuliy's Powder. See *Morphina.*

Tulpius, Valve of. The ileo-cecal valve.

Tumefacient (*tu-me-fa'-shent*) [*tumefacere*, to swell]. Swelling; swollen.

Tumefaction (*tu-me-fak'-shun*) [*tumere*, to swell; *facere*, to make]. A swelling or enlargement of a part arising from any cause.

Tumenol (*tu'-men-ol*) [*bitumen; oleum*, oil]. A sulphonated preparation of certain hydrocarbons. It may be used in three forms: 1. *Tumenol* itself, a dark-brown or brownish-black liquid; 2. *Tumenol sulphone*, an aromatic, syrupy liquid; 3. *Tumenol sulphonic acid*, a black powder, soluble in water. A 10 per cent. tincture is used in the itching dermatoses. Unof.

Tumescence (*tu-mes'-ens*) [*tumescere*, to swell]. The state of growing tumid; a swelling.

Tumescent (*tu-mes'-ent*) [*tumescere*, to become swollen]. Swelling or enlargement due to absorption of moisture.

Tumid (*tu'-mid*) [*tumere*, to swell]. Swollen.

Tumidity (*tu-mid'-it-e*) [*tumidus*, swollen]. The state of being swollen.

Tumor (*tu'-mor*) [*tumere*, to swell]. 1. Any enlargement or swelling of a part. 2. A new growth not the result of inflammation or hyperplasia. (See *Tumors, Table of*, p. 1558, etc.) A tumor is an *atypical* growth when it differs from the tissue in which it develops. True tumors are variously classified. The following classification is based, at least as regards classes A and B, on the blastodermic origin of the dominant tissue of the tumor. Many combinations occur—these are not given in the table, but will be found under their proper headings elsewhere.

A. Mesodermic Tumors.

1. Sarcoma.
   - Round-cell.
     - Large.
     - Small.
     - Lympho-sarcoma.
   - Spindle-cell.
     - Large.
     - Small.
   - Giant-cell.
   - Melanotic.
   - Alveolar.
   - Endothelioma.
   - Angio-sarcoma.
   - Cylindroma.
   - Chloroma.
   - Psammoma.
2. Fibroma.
   - Hard.
   - Soft.
3. Myxoma.
4. Lipoma.
5. Chondroma.
   - Hyaline.
   - Fibrous.
6. Osteoma.
   - O. durum or O. eburneum.
   - O. spongiosum or O. medullare.
7. Hemangioma.
   - Telangiectatic.
   - Cavernous.
8. Lymphangioma.
   - Simple.
   - Cystic.
9. Myoma.
   - Leiomyoma.
   - Rhabdomyoma.

B. Ectodermic and Entodermic Tumors.

1. Glioma.
2. Neuroma.
   - N. myelinicum.
   - N. amyelinicum.
3. Epithelioma.
   - Adenoma.
     - Tubular.
     - Racemose.
   - Carcinoma.
     - Squamous.
     - Cylindric.
     - Glandular.
   - Epithelial cystoma.
     - C. simplex.
     - C. papilliferum.

C. Teratoid Tumors or Teratomata.

1. Dermoid cysts.
2. Cholesteatoma.

T. albus, white swelling; tuberculous arthritis. **T., Adenoid.** Synonym of *Adenoma*. **T., Adipose.** Synonym of *Lipoma*. **T., Aneurysmal.** Synonym of *Aneurysm*. **T., Anthracoid.** Synonym of *T., Melanotic*. **T., Benign**, one which does not give a metastasis or recur after removal. **T., Blood.** Synonym of *Hematoma*. **T., Connective-tissue**, any tumor made up of connective tissue. The tumors of the connective-tissue class are sometimes termed *Parablastomata*. **T., Cystic**, a tumor containing cysts or cavities filled with fluid. Also a cyst forming a tumor. **T., Dermoid**, a dermoid cyst. **T., Desmoid**, a hard fibroma. **T., Erectile**, a tumor composed of blood-vessels, the filling of which causes the tumor to become swollen. **T., Fatty**, lipoma. **T., Fibro-calcareous**, a fibroma, the seat of calcareous infiltration. **T., Fibro-cellular.** Synonym of *Fibroma, Soft*. **T., Fibro-cystic**, a fibrous tumor containing cysts. **T., Fibro-fatty**, a fibro-lipoma. **T., Fibro-muscular**, a fibro-myoma. **T., Fibro-nucleated.** Synonym of *Sarcoma, Spindle-cell*. **T., Fibro-plastic.** Synonym of *Sarcoma, Spindle-cell*. **T., Fibrous**, a fibroma. **T., Fibro-vascular**, a telangiectatic fibroma. **T., Floating**, a tumor that changes its place in a cavity of the body, as the abdomen. **T., Follicular**, an atheroma. **T., Fungating**, a tumor proliferating actively on its surface; usually applied to cysts, the lining wall of which is proliferating. **T. gallicus.** Synonym of *Bubo*. **T., Gaseous**, a tumor containing gas. **T., Glandular**, an adenoma. **T., Gubler's**, a prominence on the back of the wrist occasionally seen in lead-palsy. **T., Gummatous, T., Gummous, T., Gummy**, a syphilitic gumma. **T., Hair, T., Hairy**, a dermoid cyst containing hair. **T., Heteradenic**, a hyaline cylindroma. **T., Heterochronic**, a tumor made up of tissue which is not normally found in the individual at the period of life at which the tumor occurs. **T., Heteroplastic**, a tumor differing from the tissue in which it grows. **T., Heterotopic**, a tumor growing in tissue differing from that of which it is composed. **T., Homeomorphous.** Synonym of *T., Homeoplastic*. **T., Homeoplastic**, a tumor resembling the tissue from which it grows. **T., Homologous.** Synonym of *T., Homeoplastic*. **T., Horny**, cornu cutaneum. **T., Infectious Granulation-**, a nodule or node, due to infection with a specific microörganism. **T., Infiltrating**, a tumor growing into the surrounding tissues. **T., Innocent.** Synonym of *T., Benign*. **T., Irritable** (*of the breast*), this may be a painful adenoma or a painful subcutaneous tubercle. **T., Lacteal**, a galactocele. **T., Lymph**, a lymphangioma. **T., Lymphadenoid**, a lymphadenoma. **T., Malignant**, one which gives metastasis or recurs, or does both, and eventually destroys life. **T., Melanic, T., Melanotic**, a tumor the seat of pigmentation by melanin. **T., Mesoblastic, T., Mesodermic**, a tumor developed from mesodermic tissue. **T., Molluscous.** Synonym of *Molluscum contagiosum*. **T., Movable**, a tumor which can be moved about. **T., Mucoid, T., Mucous-tissue, T., Mucous.** Synonym of *Myxoma*. **T., Muscular.** Synonym of *Myoma*. **T., Myelogenic.** Synonym of *Sarcoma, Giant-cell*. **T., Myeloid**, one containing giant-cells. **T., Myoid.** Synonym of *Leiomyoma*. **T., Nerve.** Synonym of *Neuroma*. **T., Osseous.** Synonym of *Osteoma*. **T., Osteoid**, one in which bony tissue is developing. **T., Papillary.** Synonym of *Papilloma*. **T., Pearl, T., Pearly.** Synonym of *Cholesteatoma*. **T., Pearly** (*of the iris*), a small cystic tumor of the iris, containing a whitish, tallowy material. **T., Perineal**, the bulging of the perineum produced by the fetal head in childbirth. **T., Phantom**, an apparent abdominal tumor, due to flatus or contraction of a section of an abdominal muscle; seen in hysterical persons. **T., Pilocystic**, a dermoid cyst containing hair. **T., Recurrent**, one which returns after removal. **T., Recurrent Fibroid**, a spindle-cell sarcoma. **T., Scalp.** Synonym of *Caput succedaneum*. **T. of the Scalp, Cock's Peculiar**, a fungating growth of the sebaceous glands of the scalp. **T., Sebaceous**, a tumor of a sebaceous gland; an atheroma. **T., Serocystic**, a proliferation-cyst. **T., Splenic**, a term sometimes applied to an enlarged spleen. **T., Stercoral**, a tumor formed by impacted feces. **T., Teratoid.** Synonym of *Teratoma*. **T., Vascular.** Synonym of *Angioma*. **T., Villous.** Synonym of *Papilloma*. See *Tumors, Table of*, beginning on page 1558.

Tumultus (*tu-mul'-tus*) [L.]. Tumult. **T. sermonis.** See *Aphasia*.

Tungsten (*tung'-sten*) [Swed., "heavy stone"]. A metal, symbol W, at. wt. 183.5, having properties like those of uranium and molybdenum. Some of its compounds have been employed in medicine. They are now chiefly used as reagents. See *Elements, Table of*.

Tunica (*tu'-nik-ah*) [L., a cloak: *pl.*, *Tunicæ*]. An enveloping or covering membrane. **T. adventitia.** See *Artery*. **T. albuginea oculi**, a tendinous membrane of the sclerotic coat. **T. albuginea ovi**, a thin, compact, distinctly marked zone of connective tissue immediately under the epithelium of the cortex of the ovary. **T. albuginea testis**, the fibrous covering of the testis. **T. cellulosa.** See *T. submucosa*. **T. fibrosa**, the external layer of the connective-tissue envelop of the Graafian follicle. **T. fibrosa intestinalis.** See *T. submucosa*. **T. granulosa**, the layer of epithelial cells lining the follicle of the Graafian vesicle. **T. intima.** See *Artery*. **T. media.** See *Artery*, also *T. uvea*. **T. mucosa**, the mucous membrane of a part. **T. muscularis**, the muscular coat surrounding certain organs, as the intestine, the uterus, etc. **T. nervosa.** See *T. sub-mucosa*. **T. propria**, one of the layers of the Graafian follicle. **T. reflexa**, the parietal portion of the tunica vaginalis. **T. ruyschiana**, a name given to the internal layer of the choroid coat of the eye, consisting of a plexus of capillary vessels. **T. serosa**, the serous coat of the small intestines. **T. submucosa**, the submucous areolar tissue of the small intestines and some other organs. **T. uvea**, the uveal tract of the eye, composed of the iris, ciliary body, and choroid. **T. vaginalis**, a name given to the serous covering of the testis, and also to the membranous sac (*capsule of Tenon*) enveloping the eye. **T. vasculosa**, the vascular layer of the testis, called also the pia mater of the testis. See *T. uvea*.

Tunicate (*tu'-nik-āt*) [*tunica*, tunic]. In biology: Having coverings or coats. A bulb like that of the onion is tunicated. 2. An *Ascidian*.

Tunicin (*tu'-nis-in*) [*tunica*, a coat]. *Animal cellulose;* a carbohydrate constituting the chief part of the mantle of *Tunicata* (*Ascidians*). It is soluble in

Schweitzer's reagent, and is colored blue by the addition of iodin after preliminary treatment with sulphuric acid.

Tunicle (*tu'-nik-l*) [*tunicula*, a tunicle]. A little tunic.

Tuning-fork (*tu'-ning-fork*). A pronged, metallic instrument capable of vibrating so as to form a certain definite note.

Tunnel (*tun'-el*) [ME., *tonnell*, tunnel]. A long pipe-like passage. **T.-anemia.** See *Ankylostomiasis.* **T. of Corti.** See *Canal.* **T.-disease.** See *Caisson-disease.*

Tupelo (*tu'-pe-lo*). See *Nyssa* and *Tent.*

Turacin (*tu'-ras-in*) [African, *turakoo*]. A crimson coloring-matter obtained from the feathers of the turakoo. It is slowly soluble in water, but easily soluble in alkaline fluids, and contains about 6 per cent. of copper. See *Pigments, Conspectus of.*

Turacoverdin (*tu-rak-o-ver'-din*) [African, *turakoo*; *viridis*, green]. A green coloring-matter obtained from the feathers of certain birds.

Turbid Pneumonia (*tur'-bid nu-mo'-ne-ah*). A term applied to the indistinct pneumonic symptoms following injections of tuberculin; it is also called *Injection-pneumonia.*

Turbinal (*tur'-bin-al*) [*turbo*, top]. A turbinated bone.

Turbinate, Turbinated (*tur'-bin-āt, tur'-bin-a-ted*) [*turbo*, a top]. Top-shaped. Scroll-like. **T. Bones,** the common name given to the three, sometimes four, bony projections upon the outer wall of each nasal fossa. The lowest of these, alone, is a separate bone.

Türck, Column of. See *Column.* **T., Fasciculus of.** See *Fasciculus.*

Turf. See *Coal.*

Turgescence (*tur-jes'-ens*) [*turgescere*, to become swelled]. The swelling or enlargement of an organ or part, from any cause whatsoever.

Turgid (*tur'-jid*) [*turgidus*, swollen]. Swollen, congested.

Turgidity, Turgidness (*tur-jid'-it-e, tur'-jid-nes*). See *Turgescence.*

Turicatas (*tur-ik'-a-tas*) [Mex.]. The popular Mexican name for the parasitic mite, *Argas turicata*, Dugès. See under *Parasites* (*Animal*), *Table of.*

Turio (*tu'-re-o*) [*turio*, a shoot: *pl.*, *Turiones*]. A strong, young shoot, or sucker, springing out of the ground.

Turkey (*tur'-ke*) [F., *Turquie*, Turkey, because it was thought to have originally come from Turkey]. An American gallinaceous bird of the genus *Meleagris.* **T. Corn.** See *Corydalis.* **T.-red.** Same as *Madder.* **T.-red Oil,** two entirely distinct oils are known under this name. One is simply an inferior grade of olive-oil, known as "Gallipoli oil," prepared from somewhat unripe olives, and containing a large proportion of extractive matters, hence easily becoming rancid. It is used in the old process of Turkey-red dyeing, under the name *huile tournante.* The other, used for producing alizarin-reds by the quick process, is the ammonium salt of sulpho-ricinoleic acid ($C_{18}H_{33}(HSO_3)O_3$).

Turkish (*tur'-kish*). Pertaining to Turkey or the Turks. **T. Bath.** See *Bath.* **T. Saddle.** See *Sella turcica.*

Turmeric (*tur'-mer-ik*) [*turmerica*, turmeric]. The rhizome of *Curcuma longa*, an aromatic and stimulant. The coloring-matter is used as a test for soluble salts of boron. Dose of fld. ext. ♏xv–℥j. **T.-paper,** unsized white paper steeped in tincture of turmeric and dried by exposure to the air. A test for alkaline solutions, which give a reddish-brown coloration. See *Curcuma* and *Cucurmin.* **T., Tinct.** (B.P.), used to make turmeric paper.

Turn [ME., *turnen*, to turn]. To cause to revolve about an axis. **T. of Life.** See *Menopause.*

Turnbull's Blue. Same as *Berlin Blue.*

Turner's Cerate. The ceratum calaminæ or ointment of calamin (20 per cent.). **T.'s Yellow.** Same as *Cassel Yellow.*

Turnera (*tur'-ner-ah*). See *Damiana.*

Turnesol Rag. Same as *Bezette.*

Turning (*turn'-ing*) [ME., *turnen*, to turn]. 1. See *Torsion.*

Turnip (*tur'-nip*) [ME., *turn*, something round; *nepe*, a turnip]. The thick, fleshy root of the plant *Brassica rapa* (*Linnæus*). **T. Braxy.** See *Braxy.* **T., Indian.** See *Dragon-root.*

Turpentine (*tur'-pen-tīn*). See *Terebinthina.* **T.-tree.** See *Terebinth.*

Turpeth (*tur'-peth*) [ME., *turbyte*, a purgative root]. The root of *Ipomæa turpethum*, a purgative plant, much resembling jalap, found in Asia and Australia. Unof. **T. Mineral.** See *Hydrargyrum.*

Turps [ME., *turbentyne*, turpentine]. The trade-name for oil of turpentine.

Turtle (*tur'-tl*) [a corruption of *tortoise*]. A tortoise; a member of the *Testudinata.* **T.-back Nail.** See *Nail.* **T.-lung.** See *Bronchiectasis.*

Turunda, Turundula (*tu-run'-dah, tu-run'-du-lah*) [L.: *pl.*, *Turundæ*, *Turundulæ*]. A surgical tent.

Tussal (*tus'-al*) [*tussis*, cough]. Pertaining to or of the nature of a cough.

Tussilago (*tus-il-a'-go*) [*gen.*, *Tussilaginis*]. See *Coltsfoot.*

Tussis (*tus'-is*) [L.]. A cough. **T. convulsiva, T. ferina, T. quinta, T. stomachalis, T. strangulans.** Synonyms of *Whooping-cough.*

Tussive (*tus'-iv*) [*tussis*, cough]. Pertaining to or caused by cough. **T. Fremitus.** See *Fremitus.*

Tutamen (*tu-ta'-men*) [L., defense: *pl.*, *Tutamina*]. A defense or protection. **Tutamina cerebri,** the skull and meninges of the brain. **T. oculi,** the appendages of the eyes—the lids, brows, lashes, etc.

Tutsan (*tut'-san*) [*totus*, all; *sanus*, well]. See *St. John's Wort.*

Twang [ME., *twangue*]. A personal quality of the voice, usually nasal.

Tweenbrain (*twēn'-brān*). See *Diencephalon*, and *Interbrain.*

Tweezers (*twe'-zers*). See *Volsella.*

Twin (*twin*) [ME., *twin*, twins]. One of two persons born at the same birth. **T. Leaf,** the rhizome and rootlets of *Jeffersonia diphylla.* It is diuretic, alterative, and antispasmodic, and in large doses emetic. Dose of the fld. ext. ♏ xx–℥j. Unof. See, also, *Jeffersonia diphylla.*

Twist, Aberdeen. A variety of acupressure in which the pin is given a half or a quarter rotation before fixing it in the tissues on the side of the artery opposite to the point of insertion of the pin.

Twitch (*twich*) [ME., *twicchen*, to twitch]. To give a short, sudden pull or jerk. See, also, *Uvular Twitch.* **T.-grass,** Triticum repens. See *Triticum.*

Twitches (*twich'-es*). See *Palmus.*

Twitching (*twich'-ing*) [ME., *twicchen*, to twitch]. An irregular spasm of a minor extent.

Twixt-Brain (*twikst'-brān*). See *Interbrain.*

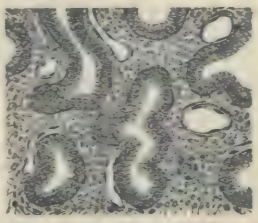
Tyloma (*ti-lo'-mah*) [τύλωμα, callus: *pl.*, *Tylomata*]. See *Callositas.*

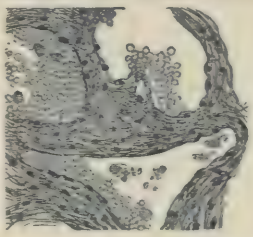
Tylophora (*ti-loff'-o-rah*) [τύλος, knob; φέρειν, to bear]. A genus of asclepiadaceous old-world plants. **T. asthmatica** is used as a substitute for ipecac. Unof.

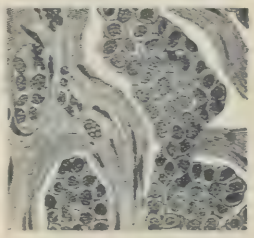
TABLE OF TUMORS.

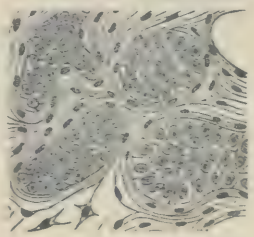
Name.	Histologic Constituents.	Physical Manifestations.	Appearance of Section.	Size.
Adenoma.				
1. *Acinous.*	Acini lined with spheroidal epithelium, with varying amount of connective tissue, as in a normal gland.	1. *Acinous.* Firm, rather hard consistence; inelastic; lobulated; light-gray or slightly yellow color; movable; encapsulated; generally single; rounded; when on mucous surfaces, flat and irregular.	Gray or yellowish-white; of variable density; often intermingled with cysts.	1. *Acinous.* Cherry or walnut; in the breast; large.
2. *Tubular.*	Tubules lined with cylindrical epithelium.	2. *Tubular.* Soft; frequently pedunculated; grayish-white or reddish color; translucent.		2. *Tubular.* Small.
Angioma.				
1. *Telangiectatic.*	1. *Telangiectatic.* Dilated blood-vessels.	1. *Telangiectatic.* Surface often covered with small, granular elevations, resembling a strawberry; often well circumscribed.	Red color; affecting in part the corium; in part the subcutaneous adipose tissue.	Patch on the skin the size of a millet-seed to several inches in extent.
2. *Cavernous.*	2. *Cavernous.* Spaces lined with endothelial cells and filled with blood, like corpora cavernosa of penis.	2. *Cavernous.* Soft, doughy; non-pulsating; leaden or blue color.		2. *Cavernous.* Usually small.
Carcinoma.				
1. *Scirrhous* (hard, spheroidal-celled).		1. *Scirrhous.* Hard, irregular, tuberous; adherent to surrounding tissues; ulcerated. Non-encapsulated. *Ulcer.*—Irregular in outline and depth; margins hard, nodular, everted.	1. *Scirrhous.* Firm; white; often traversed by fibrous septa; creaking under the knife; cupped. Scraping exposes a milky fluid, the so-called "*cancer-juice.*"	1. *Scirrhous.* Moderate.
2. *Encephaloid* (soft, spheroidal-celled).	Large epithelial cells containing one or more nuclei, without visible intercellular matrix, grouped into acini (*cancer-nests*). Vessels have walls of normal thickness and constitution, and ramify in the stroma, and not among the cells themselves.	2. *Encephaloid.* Soft, globular, or bossellated; elastic, compressible; fluctuating; non-encapsulated.	2. *Encephaloid.* Resembles brain-tissue.	2. *Encephaloid.* Considerable.
3. *Colloid* (probably a degeneration of one of the preceding varieties).	Three varieties are described histologically: (*a*) squamous, made up of squamous or flat epithelium; (*b*) cylindrical, containing columnar cells; (*c*) glandular, composed largely of polyhedral cells, like those of secreting glands.	3. *Colloid* (usually mucoid). Soft; jelly-like; contains mucoid material; semitranslucent; glistening; at places diffluent.	3. *Colloid.* Amorphous; jelly-like.	3. *Colloid.* Large or small.
Chloroma.	A form of round-celled sarcoma (*which see*).	Small nodules.	Greenish or dirty color on section.	Small.
Cholesteatoma.	Concentric layers formed of flat cells of an epithelial character, arranged in whorls enclosing cholesterin plates. Belongs probably to the *Teratomata* from the occurrence in it of sebaceous glands, hair-follicles, etc.	Solitary or multiple nodules or nodes.	Shining, glistening.	Small.

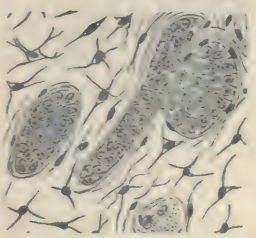
TABLE OF TUMORS.









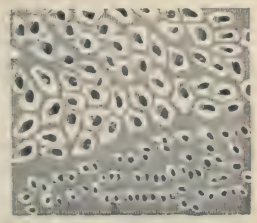


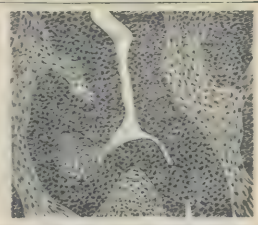
Seats of Predilection.	Degeneration to which Subject.	Age.	Growth.	Nature.	Frequency.	Illustrations. (*From Ziegler and Woodhead.*)
. *Acinous.* Mamma, lip, ovary, testis, prostate, thyreoid, parotid, lacrymal gland, sudoriferous and sebaceous glands. . *Tubular.* Rectum and other portions of intestines; uterus.	Mucous. Fatty. Colloid. Cystic.	Young adults.	Slow.	Benign; the flat adenoma may become malignant.	Rare.	
. *Telangiectatic.* Skin, mucous membrane, brain, bones, and mamma. . *Cavernous.* Liver, kidney, spleen, uterus, bones, muscle. (*Illustrated*).		Usually congenital.	Usually slow.	Benign.	Common.	
. *Scirrhous.* Mamma; alimentary tract (especially the pyloric end of stomach); glands of the skin (rare); rectum; uterus. *Encephaloid.* Testicle; ovary; mucous membranes. *Colloid.* Stomach; intestine; ovary; mamma; thyreoid. (*The illustration is of Myxomatous Carcinoma*).	Horny. Fatty. Cystic. Colloid. Mucoid. Hyaline. Caseous. Pigmentary. Ulcerative. Calcareous (rare).	Adults past 40 years of age.	Slow, but may be rapid.	Malignant. Metastasis takes place by means of the lymphatics, but carcinoma of the stomach and intestines invades the liver by the portal blood-paths.	Common.	  
Periosteum of skull.	Fatty.	Young adults.	Rapid.	Malignant.	Rare.	Same as *Round-celled Sarcoma.*
Brain and meninges.				Non-malignant.	Rare.	

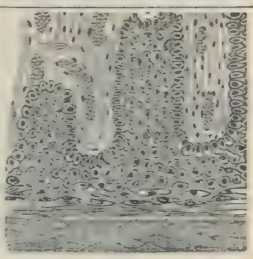
TABLE OF TUMORS—*Continued.*

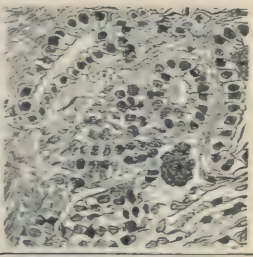
NAME.	HISTOLOGIC CONSTITUENTS.	PHYSICAL MANIFESTATIONS.	APPEARANCE OF SECTION.	SIZE.
Chondroma. (*Enchondroma.*)	Hyaline or fibro-cartilage, with few blood-vessels. The cells are arranged irregularly and have irregular shapes, many being stellate or spindle-shaped.	Hard; elastic; nodular or lobulated, sometimes smooth; round; encapsulated; usually single, but may be multiple and symmetric.	Homogeneous or coarsely granular; translucent; bluish-gray or pinkish-white; often marked by connective-tissue septa.	Small multiple large single.
Dermoid Cyst.	See *page 1564.*			
Endothelioma	Multiplication of endothelial cells lining lymph-passages. A variety of sarcoma. Large, round cells containing one or two nuclei. Resembles epithelial new-growths.	Circumscribed or extensive flat growths, spreading over the serous membranes; white in color.		Small nodules extensive infiltration
Epithelioma. 1. *Squamous.*	Composed of pegs or columns of cuboidal epithelial cells which first infiltrate the subjacent connective tissue, then every underlying structure, including bone, in their track. These ingrowths contain the *cell-nests*, *epidermal pearls*, or *pearly bodies*.	Dense; inelastic; non-encapsulated; ulcerated; edges of ulcer indurated.	1. *Squamous.* White; dense; homogeneous; poor in juice; when scraped a gruel-like material is obtained, which consists of plugs of cells and individual cells.	
2. *Cylindric-celled* or *columnar-celled.*	Originates either from the cylindric surface-epithelium of a mucous membrane, or from that of glands lined by columnar epithelium. Contains no "cell-nests." Consists of alveoli containing cylindric cells at the periphery, and irregular cells in the center. Presents the character of adeno-carcinoma.	Soft, infiltrating masses or nodes, or papillomatous growths.	2. *Cylindrical.* Soft, juicy; gelatinous if mucoid or colloid.	
Fibroma.	1. *Hard.* White, fibrous tissue, consisting of fibers and few connective-tissue corpuscles; blood-vessels few.	1. *Hard.* Ovoidal or spherical; lobulated; nodular or bossellated; pedunculated or sessile; firm, elastic; encapsulated; glistening white, yellowish, or slightly red color; unattached to overlying tissues; single or multiple.	1. *Hard.* Smooth, glistening, firm; grayish-white color.	From grain shot fetal head much larger.
	2. *Soft.* Few fibers, many cells.	2. *Soft.* Soft, compressible; sessile or pendulous; single or multiple; encapsulated.	2. *Soft.* Moist, not so glistening; more reddish.	
Glioma.	Round cells, with large nuclei, embedded in a scanty, granular, intercellular substance. After the type of the neuroglia of the brain.	Soft, gelatinous, glue-like tumor; not distinctly outlined; somewhat translucent. Usually single.	Like brain-tissue, but usually a little harder and more reddish in color.	Small rare large than fist.

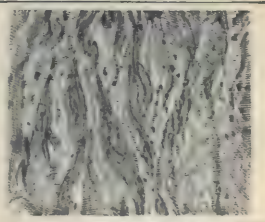
TABLE OF TUMORS—*Continued.*

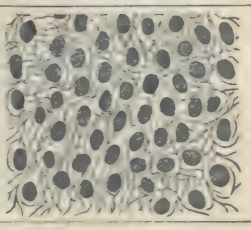










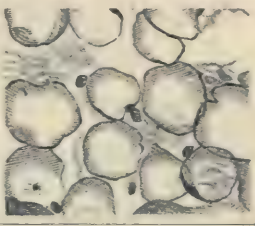


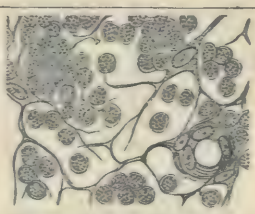
Seats of Predilection.	Degeneration to which Subject.	Age.	Growth.	Nature.	Frequency.	Illustrations. (*From Ziegler and Woodhead.*)
The bones, especially on or in the phalanges; scapula, ilium, upper jaw; subcutaneous tissue; salivary glands (parotid); testicle; bronchial cartilages.	Fatty. Mucoid. Calcareous. Cystic.	Usually in the young.	Slow or rapid.	Benign; may assume malignant characteristics.	Common.	
Pleura and peritoneum; membranes of brain.		Young adults.	Rapid.	Malignant.	Very rare.	
1. *Squamous.* Nose, lower lip, penis, scrotum, vulva, anus, tongue, gums, palate, tonsils, larynx, pharynx, esophagus, bladder, os uteri, hands and feet (rare).	Horny. Ulceration.	After 40.	Slow or rapid, according to situation.	Malignant. Late metastasis.	Common.	
2. *Cylindrical.* Stomach; intestinal tract; uterus; gall-bladder, biliary passages; respiratory tract.	Mucoid. Colloid.	In uterus before 40.	Varies in its rapidity.	Malignant. Late metastasis.	Quite common, especially in digestive tract.	
Uterus; periosteum; ovary; labium majus; mamma; testicle; tendons; aponeurosis; neurilemma of nerves; around articulations; subcutaneous tissue; rectum.	Ulceration. Calcification. Myxomatous. Fatty. Telangiectatic.	Chiefly in adults from 35 to 55 years of age.	Slow.	Benign.	Very common.	
Brain; retina; spinal cord; optic and auditory nerves; suprarenal capsules.	Mucoid. Fatty. Calcareous. Telangiectatic.	Particularly in children.	Slow.	Benign, except in the eye, where it is usually combined with sarcoma.	Rare.	

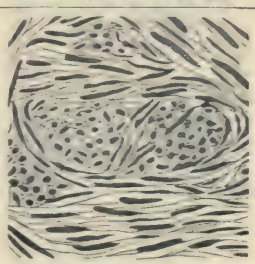
TABLE OF TUMORS—*Continued.*

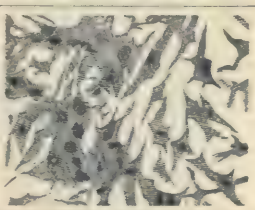
NAME.	HISTOLOGIC CONSTITUENTS.	PHYSICAL MANIFESTATIONS.	APPEARANCE OF SECTION.	SIZE.
Lipoma.	Adipose tissue (fat-vesicles larger than normal) bound together by delicate connective tissue.	Circumscribed; lobulated, soft, doughy, pseudo-fluctuating, inelastic; attached to the skin—hence dimpled; ovoidal, spherical, or flattened; occasionally pedunculated; usually surrounded by a thin capsule; usually single; when multiple, usually hereditary.	Like adipose tissue.	From size of hickory-nut to very large size.
Lymphangioma.	Aggregation of dilated lymphatic vessels and lymph-spaces supported by connective tissue.	Soft, doughy, transparent sacs or vesicles, filled with lymph; often feels like a series of tangled cords.		From a cherry to fetal head.
Lympho-sarcoma.	Hyperplasia of the lymphoid cells of the lymphatic glands.	Glands for a time preserve their shape, but soon extends to neighboring tissues.		Large.
Myoma.				
1. *Leiomyoma.*	Smooth, non-striated, muscular fibers, such as occur in the uterus, with varying quantities of fibrous tissue; few blood-vessels. The fibers are composed of spindle-shaped cells containing large, rod-shaped nuclei.	Rounded or pyriform, well-circumscribed; hard; firm; smooth or nodular; white or flesh-colored; encapsulated or non-encapsulated; often multiple.	A striated appearance as in the fibroma.	Often quite large.
2. *Rhabdomyoma.*	Striated muscular fibers, often undeveloped, being spindle-shaped, and associated with sarcomatous tissue.	Large roundish masses or small nodules.		Very large if in kidney; small in heart.
Myxoma.	Delicate network of stellate cells enclosing a mucoid intercellular substance. *Type*—Wharton's jelly; vitreous humor.	Round or lobular; soft, gelatinous; semi-translucent; encapsulated; elastic; may be fluctuating.	Pinkish or yellowish-gray, exuding a glairy fluid, or a trembling, gelatinous mass.	Usually small.
Neuroma.	Medullated or non-medullated nerve-fibers. Very rarely may contain ganglionic cells; usually combined with fibrous tissues.	Spheric, ovoid, oblong, or bulbous; sometimes plexiform; firm; painful on pressure; few or many (even hundreds).	Often resembles fibroma.	Small.
Osteoma.	Osseous tissue (cancellous or compact bone).	Hard; often lobulated; sometimes spheric; may be spinous or spiculated: pedunculated or sessile; usually single; may be multiple and symmetric.	Like bone-tissue.	Variable: grain of coffee to cocoanut.
Papilloma.	Hypertrophied papillæ of the skin; varying amount of connective tissue surrounding two or more central blood-vessels, and covered by several layers of epithelial cells.	Circumscribed; hard (on the skin); soft (on mucous membrane); surface smooth, brush-like, or cauliflower-like; single or multiple.		Usually small, may be large.

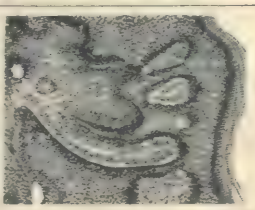
TABLE OF TUMORS—*Continued.*

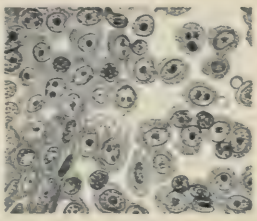


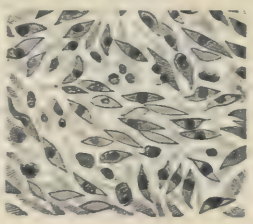


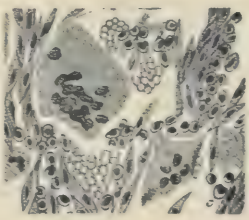


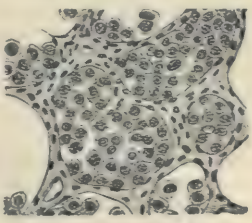


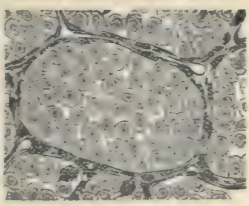












Seat of Predilection.	Degeneration to which Subject.	Age.	Growth.	Nature.	Frequency.	Illustrations. (*From Ziegler and Woodhead.*)
Back of neck; shoulders; back; nates; inside of arm and thigh; submucous and subserous connective-tissue.	Calcareous. Myxomatous. Cystic. Inflammation. Ulceration (rare).	Chiefly during adult life.	Slow.	Benign.	Very common.	
Posterior and inner surfaces of thigh; genitals; anterior abdominal wall, neck, nates, axillæ, groin, penis, tongue, cheeks, lip, liver, kidney.		Usually congenital.	Slow.	Benign.	Rare.	
Neck, groin, axilla, mediastinum, etc.		Young adults.	Rapid.	Very malignant.	Rare.	
Uterus, esophagus, intestine, prostate, stomach.	Calcareous. Fatty. Myxomatous. Cavernous.	Mature or advanced life.	Slow.	Benign.	Very common.	
Kidney, ovary, testicle; tongue, heart.		Congenital.	Rapid.	Malignant in the segmental organs and kidney, ovary, testicle when combined with sarcoma.	Rare.	
Nasal cavities; mamma; intermuscular spaces; submucous and sub-serous tissues; back; thighs; lip; cheek; labia; clitoris; prepuce; scrotum; axillæ; parotid; ear; more rarely periosteum, bone, heart, and nerve-sheaths.	Fatty. Ulceration. Telangiectatic.	Any age; may be congenital.	Slow.	Benign.	Common.	
At ends of nerves, as in stumps of amputation, on skin.			Slow.	Benign.	Somewhat rare.	
Cranial bones, maxilla, orbit; ends of phalanges; juxta-epiphyseal portions of long bones (tibia, femur, humerus, etc.); dura mater; muscle; aponeurosis; lungs.		Congenital or early life.	Slow.	Benign.	Not common.	
Skin of hands and genitalia; larynx; bladder; rectum; nose.		At all ages.	Slow or rapid.	Benign.	Common.	

TABLE OF TUMORS—*Continued.*

NAME.	HISTOLOGIC CONSTITUENTS.	PHYSICAL MANIFESTATIONS.	APPEARANCE OF SECTION.	SIZE.
Psammoma.	A form of sarcoma (*nest-celled*). Connective tissue composed of flat, elongated cells of great size and in which are embedded gritty concretions that are composed of calcium carbonate.	Hard, circumscribed; light color.	White; gritty on section.	Small.
Sarcoma.				
1. *Round-celled.*	Embryonic or immature connective tissue. Blood-vessels without walls, or thin walled, ramifying among the cells. Small or large round cells, embedded in a small amount of granular or homogeneous intercellular substance.	Soft; vascular; whitish; somewhat translucent; on pressure after some hours exudes a milky fluid; round or ovoid, or oblong.	Resembles brain-matter; of a yellow, gray, or brick-dust hue.	Often very large.
2. *Spindle-celled.*	Cells varying much in size, spindle-shaped, with long, fine, tapering extremities, separated by very little intercellular substance. Often have a fibrous appearance (Recurrent Fibroid).	Firm; reddish; does not exude milky fluid. Shape as foregoing.	Fibrous or flesh-like aspect; pinkish color.	May b large.
3. *Giant-celled* (*Myeloid.*)	Masses of protoplasm containing two or more nuclei—up to 20 or 50—with a varying amount of round and spindle cells.	Jelly-like consistence or firm, like muscle. Shape as foregoing.	Smooth, shining, succulent; no appearance of fibrillation; greenish or livid red or maroon color, varied by pink or darker red spots, due to extravasation of blood.	Large.
4. *Alveolar.*	Alveolar space filled with sarcoma cells; the trabeculæ composed of spindle-cells.	Very vascular; soft.		Small large.
5. *Melanotic.*	Sarcomata of various kinds in which brownish or black pigment becomes deposited as amorphous granules in the cells as well as the connective tissue and blood-vessel walls of the tumor.	Rounded, nodular, dark-colored tumors of varying size and consistency, usually hard.	Brownish or black.	May l large.
Dermoid Cyst.	Cyst wall contains hair-follicles and sebaceous glands. *Contents.*—Disintregating epithelial cells, hair, sebaceous matter, teeth, etc.	Globular; tense; smooth; freely movable.		May large.

TABLE OF TUMORS—*Continued.*

Seat of Predilection.	Degeneration to which Subject.	Age.	Growth.	Nature.	Frequency.	Illustrations. (*From Ziegler and Woodhead.*)
Membranes of brain, choroid plexus; pineal gland; spinal cord; nerves.	Calcareous.	Early life.	Rapid.	Malignant.	Rare.	
Periosteum; bone; lymphatic glands; subcutaneous tissue; testicle; eye; ovary; lungs; kidneys; intermuscular septa.	Mucoid. Fatty. Ulceration. Calcareous. Ossification. Telangiectatic. Cystic.	Youth, or before 35th year.	Very rapid.	Malignant. Early metastasis. Dissemination by the blood-vessels and not by the lymphatics.	Common.	
Subcutaneous tissue; fasciæ and intermuscular septa; periosteum; interior of bones; eye; antrum; breast; testicle.	As foregoing.	As foregoing.	Rapid.	Malignant by recurrence.	Common.	
Lower and upper jaw; lower end of femur; head of tibia.		Usually in adults over 40.	Slow.	Comparatively benign. Metastasis rare.	Rarer than the preceding forms.	
Skin: eye; bone; lymphatic glands, pia mater of brain. Often springs from warts.		In the young.	Rapid.	Malignant.	Rare.	
Where pigment occurs normally; the eye and the skin, the pia; secondarily, especially in the liver.	As other sarcomata.	As other sarcomata.	Usually rapid.	Very malignant.	Common.	
Inner angle of orbit; over root of nose; ovary; testicle.		Congenital.	Slow.	Benign.	Common.	

Tylosis (*ti-lo'-sis*) [τύλος, a callosity]. 1. A form of blepharitis in which the lid-edge is thickened and hardened. See, also, *Callositas*. 2. In biology, a protuberance of the wall of a plant-cell through the pit in the wall of an adjacent duct. **T. palmæ vel palmaris,** a synonym of callosity of the palm. **T. plantæ vel plantaris,** a callosity occurring on the foot.

Tylosteresis (*ti-lo-ster-e'-sis*) [τύλος, knot; στερεῖν, to deprive]. Extirpation or removal of a callosity.

Tylotic (*ti-lot'-ik*) [τύλος, a knot]. Pertaining to, affected with, or of the nature of tylosis.

Tylus (*ti'-lus*) [τύλος, a knob: *pl.*, *Tyli*]. In biology, a median projection of the upper surface of the head of certain insects.

Tympan (*tim'-pan*) [τύμπανον, a drum]. A tympanum.

Tympanal (*tim'-pan-al*). See *Ring, Tympanic.* **T. Organs,** peculiar sense-organs found in certain insects (*Saltatoria*). They have long been universally regarded as auditory organs, although the animals continue to hear after their removal. See *Chordotonal.*

Tympanic (*tim-pan'-ik*) [τύμπανον, a drum]. Pertaining to the tympanum. **T. Bone,** the thin roof or plate of bone separating the tympanic and cranial cavities. **T. Membrane.** See *Membrane.* **T. Orifice.** See *Orifice.* **T. Plate.** See *Plate.* **T. Resonance,** tympanitic resonance. **T. Ring.** See *Ring.* **T. Tegmen,** the bony plate forming the roof of the tympanum.

Tympanichord (*tim-pan'-ik-ord*) [τύμπανον, a drum; κορδή, a string]. The *chorda tympani,* a branch of the facial nerve.

Tympanichordal (*tim-pan-ik-or'-dal*) [τύμπανον, a drum; χορδή, a string]. Pertaining to the tympanichord.

Tympanicity (*tim-pan-is'-it-e*) [τύμπανον, drum]. The quality of being tympanic.

Tympaniform (*tim'-pan-if-orm*) [τύμπανον, drum; *forma*, form]. Shaped like a tympanum.

Tympanism (*tim'-pan-izm*) [τύμπανον, drum]. Distention with gas; tympanites.

Tympanites (*tim-pan-i'-tēz*) [τύμπανον, drum]. The symptom popularly known as "drum-belly," a distention of the abdominal walls caused by paralysis of the muscular coat of the intestines and their inflation with gas. **T., Acute,** that due to intestinal irritation. **T. hysterica,** enormous distention of the abdomen in hysteria. **T. universalis,** general emphysema.

Tympanitic (*tim-pan-it'-ik*) [τύμπανον, drum]. 1. Caused by, associated with, or exhibiting tympanites. 2. Applied to a percussion-note like that produced by percussing a tympanitic abdomen.

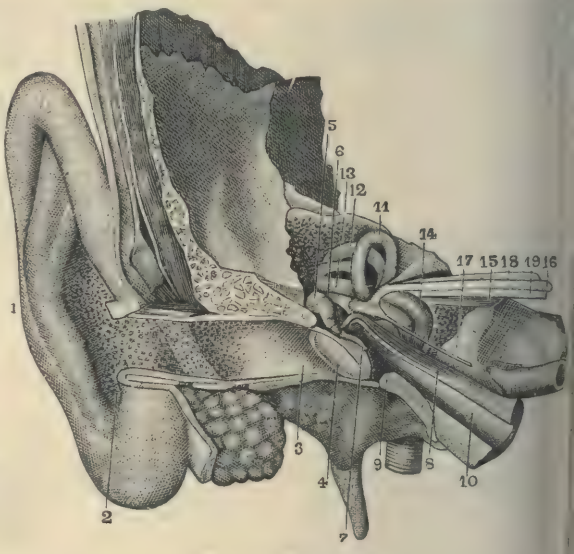
Tympanitis (*tim-pan-i'-tis*) [τύμπανον, drum; ιτις, inflammation]. Inflammation of the tympanum, or middle ear. See *Otitis media.*

Tympanodisc. The membrana tympani.

Tympano-Eustachian (*tim-pan-o-u sta'-ke-an*) [τύμπανον, drum; *Eustachius*, an anatomist]. Pertaining to the tympanum and the Eustachian tube.

Tympano-hyal (*tim-pan-o-hi'-al*) [τύμπανον, drum; ὑοειδής, hyoid]. A small cartilage of the human fetus subsequently fusing with its surroundings.

Tympano-malleal (*tim-pan-o-mal'-e-al*) [τύμπανον, drum; *malleus*, hammer]. Pertaining to the tympanic bone and the malleus.



Tympano-mandibular (*tim-pan-o-man-dib'-u-lar*) [τύμπανον, drum; *mandible*]. Pertaining to the tympanum and the mandible.

Tympano-occipital (*tim-pan-o-ok-sip'-it-al*) [τύμπανον, drum; *occiput*, occipital bone]. A small bone in relation with the exoccipital bone and the outer ear of a bird.

Tympano-periotic (*tim-pan-o-per-e-ot'-ik*) [τύμπανον, drum; περί, around; οὖς, ear]. Consisting of a tympanic bone united with the periotic bone proper.

Tympano-squamosal (*tim-pan-o-skwa-mo'-zal*) [τύμπανον, drum; *squama*, scale]. Common to the tympanic and the squamosal bone.

Tympanum (*tim'-pan-um*) [τύμπανον, drum]. The middle ear. The irregular cavity within the petrous

EAR AND TYMPANUM.

1. Pinna, or auricle. 2. Concha. 3. External auditory canal. 4. Membrana tympani. 5. Incus. 6. Malleus. 7. Manubrium mallei. 8. Tensor tympani. 9. Tympanic cavity. 10. Eustachian tube. 11. Superior semicircular canal. 12. Posterior semicircular canal. 13. External semicircular canal. 14. Cochlea. 15. Internal auditory canal. 16. Facial nerve. 17. Large petrosal nerve. 18. Vestibular branch of auditory nerve. 19. Cochlear branch.

portion of the temporal bone communicating with the pharynx through the Eustachian tube.

Tympany (*tim'-pan-e*). See *Tympanites.*

Type (*tīp*) [τύπος, a stamp]. Imprint; emblem; symbol; character. A normal average example. In pathology, the distinguishing features of a fever, disease, etc., whereby it is referred to its proper class.

Typembryo (*ti-pem'-bre-o*) [τύπος, type; ἔμβρυον, embryo]. That stage or period in the development of an embryo when the characteristics of the main type to which it belongs are first discoverable.

Typewriters' Backache. An occupation-neurosis; it is said to be best guarded against by the use of a high seat and a footstool.

Typhemia (*ti-fe'-me-ah*) [τῦφος, smoke; αἷμα, blood]. A depraved state of the blood following typhus.

Typhia (*ti'-fe-ah*). See *Fever, Typhoid.*

Typhinia (*ti-fin'-e-ah*). Synonym of *Relapsing Fever.*

Typhlitic (*tif-lit'-ik*) [τυφλός, the cecum; ιτις, inflammation]. Pertaining to, affected with, or of the nature of typhlitis.

Typhlitis (*tif-li'-tis*) [τυφλός, cecum; ιτις, inflammation]. Inflammation of the cecum. **T. stercoralis** typhlitis due to constipation.

Typhlo-enteritis (*tif-lo-en-ter-i'-tis*). See *Typhlitis.*

Typhlosolar (*tif-lo-so'-lar*) [τυφλός, cecum; σωλήν, a tube]. Pertaining to a typhlosole.

Typhlosole (*tif'-lo-sōl*) [τυφλός, cecum; σωλήν, tube, pipe]. In biology, a tube lying in the dorsal middle line of the intestine of certain worms (*Lumbricidæ*). It is open longitudinally toward the body-cavity, and is formed to increase the absorbing surface of the stomach-intestine by a longitudinal fold of its dorsal wall into the lumen of the gut.

Typhlotomy (*tif-lot'-o-me*) [τυφλός, cecum; τομή, a cutting]. Division or section of the cecum.

Typhogenic (*ti-fo-jen'-ik*) [τῦφος, stupor; γεννᾶν, to produce]. Producing typhus.

Typhoid (*ti'-foid*) [τῦφος, stupor; εἶδος, like]. Resembling typhus. **T. Fever.** See *Fever*. **T. Spine,** Gibney's term for a neurosis sometimes following typhoid fever, characterized by the production of acute pains in the vertebral column on the slightest movement, whether lateral or forward, and the absence of any marked febrile disturbance or neuralgia. Gibney regarded the condition as a perispondylitis. **T. State,** the condition of stupor and hebetude, with dry, brown tongue, sordes on the teeth, rapid, feeble pulse, incontinence of feces and urine, and rapid wasting, seen in fully developed typhoid fever and other adynamic diseases.

Typhoidal (*ti-foi'-dal*) [τῦφος, stupor; εἶδος, like]. Resembling typhoid.

Typhoidet, Typhoidette (*ti-foi-det'*) [Fr.]. A mild or benign type of typhoid fever.

Typho-malarial (*ti'-fo-mal-a'-re-al*) [τῦφος, stupor; *malaria*]. Applied to fevers exhibiting symptoms of both typhoid and malarial disorders.

Typhomania (*ti-fo-ma'-ne-ah*) [τῦφος, stupor; μανία, madness]. The lethargic state, with accompanying delirium, sometimes observed in typhus. See, also, *Periencephalitis*.

Typhonia (*ti-fo'-ne-ah*). Same as *Typhomania*.

Typhotoxin (*ti-fo-toks'-in*) [τῦφος, stupor; τοξικόν, poison]. A ptomain discovered by Brieger, and believed to be the special product of the Koch-Eberth typhoid-bacillus. It is isomeric with the base $C_7H_{17}NO_2$, obtained from putrefying horseflesh, but is very different in its properties, being strongly alkaline, while the latter base possesses a slightly acid reaction, and the physiologic effects of each are also different. Typhotoxin induces lethargy, paralysis, and death without convulsions, while the unnamed base produces strongly marked convulsive symptoms. After death from typhotoxin the heart is found to be contracted in systole. See *Ptomains, Table of*.

Typhous (*ti'-fus*) [τῦφος, stupor]. Pertaining to or having the nature of typhus.

Typhus (*ti'-fus*) [τῦφος, stupor]. Jail-fever; ship-fever. See *Fever*. **T. anthracicus, T. bubonicus, T. gravissimus, T. pestilentialis.** Synonyms of the *Plague, q. v.* **T. petechialis.** Synonym of *Fever, Cerebro-spinal*. **T. siderans,** a malignant form of typhus fever, ending fatally in two or three days. **T. syncopalis.** Synonym of *Fever, Cerebro-spinal*.

Typical (*tip'-ik-al*) [τυπικός; τύπος, a stamp]. Constituting a type or form for comparison; illustrative; complete.

Typus (*ti'-pus*). See *Type*.

Tyrannism (*tir'-an-izm*) [τύραννος, a tyrant]. Cruelty of morbid inception, of which sadism is an erotic variety.

Tyremesis (*ti-rem'-es-is*) [τυρός, cheese; ἔμεσις, a vomiting]. The vomiting of caseous matter; an ailment common among nursing infants.

Tyrian Purple. See *Pigments, Conspectus of*.

Tyrol White. Same as *Hamburg White*.

Tyroline (*tir'-o-lin*). Anilin Violet; a violet dye.

Tyroma (*ti-ro'-mah*) [τύρωμα; τυρός, cheese]. 1. Baldness; loss of hair. 2. A tumor caused by caseation of lymphatic glands.

Tyrosin (*ti'-ro-sin*) [τυρός, cheese], $C_9H_{11}NO_4$. An amido-acid occurring in pancreatic digestion; a decomposition-product of proteids, etc. It is found in the urine in acute yellow atrophy of the liver and in phosphorus-poisoning, and occurs in the liver, spleen, pancreas, in stale cheese, and is formed on boiling animal substances (albumin, horn, hair) with HCl or H_2SO_4. Tyrosin crystallizes in exceedingly fine needles, usually collected into colorless, feathery masses; snow-white in color, tasteless and odorless, sparingly soluble in cold water but much more so in boiling water; it dissolves with difficulty in alcohol, and is insoluble in ether. See *Hoffmann's Test* and *Piria's Test*.

Tyrosis (*ti-ro'-sis*) [τυρός, cheese]. Curdling. See *Caseation*.

Tyrothrix (*ti'-ro-thriks*) [τυρός, cheese; θρίξ, hair]. A genus of *Schizomycetes*. See *Bacteria, Synonymatic Table of*.

Tyrotoxicon (*ti-ro-toks'-ik-on*) [τυρός, cheese; τοξικόν, poison]. A ptomain obtained by Vaughan from poisonous cheese, poisonous milk, poisonous ice-cream, etc. Chemically it is very unstable; it may disappear altogether in twenty-four hours from milk rich with the poison. It induces vertigo, nausea, vomiting, chills, rigors, severe pains in the epigastric region, dilatation of the pupils, griping and purging, a sensation of numbness, or "pins and needles," especially in the limbs, and marked prostration, or death. The symptoms may vary somewhat in different individuals. The poison is thought to be the cause of the summer diarrhea of infants. See *Ptomains, Table of*.

Tyrrell's Hook. A hook used in certain operations upon the eye, as in iridectomy.

Tyson, Glands of. The sebaceous glands secreting the smegma of the prepuce and of the labia pudendi.

U

U., the symbol of *Uranium*.

Uaterium (*u-at-e'-re-um*) [οὖς, ear]. A medicament used in the treatment of diseases of the ear.

Uber (*u'-ber*) [L., udder; *pl.*, *Ubera*]. The mamma; also the nipple.

Uberous (*u'-ber-us*) [*uber*, fruitful]. Fruitful, prolific.

Udder (*ud'-er*) [ME., *udder*, udder]. The mammary apparatus, especially of the cow.

Uffelmann's Gelatin. See *Stains, Table of.* **U's. Solution,** to distinguish hydrochloric from lactic acid in suspected gastric contents: Add a few drops of neutral ferric-chlorid solution to a 4 per cent. solution of carbolic acid. This is turned yellow by lactic acid, but is not affected by hydrochloric acid when diluted to the strength of gastric juice, 0.2 per cent. See *Tests, Table of.*

Ukambin (*u-kam'-bin*) [African]. An African arrow-poison, presumably a combination of juices from various plants. Its physiologic effects are the same as those of strophanthin, but in a considerably augmented degree. Unof.

Ulaganactesis (*u-lag-an-ek'-te-sis*) [οὖλον, gum; ἀγανάκτησις, irritation]. Irritation or uneasy sensations in the gums.

Ulatrophia, Ulatrophy (*u-lat-ro'-fe-ah, u-lat'-ro-fe*) [οὖλον, gum; ἀτροφία, atrophy]. Atrophy of the gums.

Ulcer (*ul'-ser*) [*ulcus*, a sore]. A destructive loss of cutaneous substance, extending into the corium. The size is quite indefinite; the shape is variable, usually round, but may be reniform, irregular, or serpiginous. It may be deep or hollow, with steep or sloping sides, and a smooth or irregular base. Its edges may be sharp or rounded, everted or undermined; the surface bleeds readily, and is clean or sloughy, and covered with pus or serum. It always leaves a scar. **U., Aden.** See *Phagedæna tropica.* **U., Adherent,** an ulcer of the skin, the base of which becomes adherent to the underlying fascia. **U., Amputating,** an ulcerating process which encircles a member, destroying the tissues to the bone. **U., Anamite,** a phagedenic sore of hot countries; it is very unyielding to treatment. **U., Arterial,** a superficial ulcer due to arterial disease. **U., Atheromatous.** See *Endarteritis, Chronic.* **U., Atonic,** an ulcer having unhealthy granulations, with little or no tendency to cicatrization. **U., Autochthonous.** Synonym of *Chancre.* **U., Cancroid.** See *U., Rodent.* **U., Carcinomatous,** an ulcerating carcinoma. **U., Carious,** an ulcer producing gangrene. **U., Chancroidal.** Synonym of *Chancre.* **U., Cochin-China,** a chronic phagedenic ulcer affecting foreigners in Cochin-China. **U., Cock's-comb,** an ulcer having rough, irregular outgrowths. **U., Cold,** a small, inflammatory ulcer occurring spontaneously upon the ends of the fingers or toes. **U., Constitutional.** See *Syphilis.* **U., Contagious.** Synonym of *Chancre.* **U., Corrosive.** An old synonym of *Stomatitis gangrænosa.* **U., Crateriform,** a variety of malignant, epithelial ulcer, which affects the same regions on the upper part of the face as does ordinary rodent ulcer. It occurs in the same class of people, but runs a much more rapid course. Ulceration occurs at the conical summit, and assumes a crater-like form. There is no tendency to fungate or become warty. **U., Creeping** (*of the cornea*), a serpiginous corneal ulcer. **U., Curling's,** an ulceration of the duodenum observed after severe burns of the body and limbs. **U., Diphtheric,** the ulcer occurring in diphtheria; it is covered with false membrane. **U., Dyspeptic.** See *Herpes facialis.* **U., Endemic,** an ulcer more or less local as regards the countries in which it is found, as Aleppo boil, Penjdeh sore, etc. **U., Erethistic,** a name given to an extremely sensitive ulcer. These ulcers occur in regions that are liberally supplied with sensitive nerve-fibers, as about the anus or the matrix of the nail. **U., Fissurated,** laceration of the cervix uteri. **U., Fistulous,** an ulceration communicating with a fistula. **U., Follicular,** ulceration of a mucous membrane, having its origin in the lymph-follicles. **U., Fungiform.** A synonym of *Epithelioma.* **U., Gastric,** perforating ulcer of the lining membrane of the stomach. **U., Gummatous,** an ulcer due to the breaking down of a gumma. **U., Gwalior,** an endemic ulcer observed at Gwalior. **U., Hemorrhagic,** a bleeding ulcer. **U., Indolent,** one with an indurated, elevated edge, and a non-granulating floor, usually occurring on the leg. **U., Inflamed,** an ulcer surrounded by marked inflammation. **U., Initial** (*of syphilis*). Synonym of *Chancre.* **U., Intractable.** Synonym of *U., Indolent.* **U., Inveterate.** Synonym of *U., Indolent.* **U., Jacob's,** a rodent ulcer of the eyelid. **U., Lupoid,** an ulceration resembling lupus. **U., Lupous.** Synonym of *Lupus.* **U., Lymphatic,** an ulcer having an exudate which resembles lymph. **U., Malabar.** See *Phagedæna tropica.* **U., Malignant.** Synonym of *Carcinoma.* **U., Marjolin's,** an ulcer having for its seat an old cicatrix. **U., Menstrual,** an ulcer from which vicarious menstruation takes place. **U., Mercurial,** an ulcer due to chronic mercurial poisoning. **U., Mozambique,** a single, highly contagious ulceration, prevalent in Mozambique and in Reunion Island. **U., Perforating,** an ulcer that perforates the surrounding tissues. **U., Persian,** an ulcer prevalent in Persia. **U., Phagedenic,** a form of ulceration in which the process extends insidiously but obstinately. **U., Phlegmonous.** Synonym of *U., Inflamed.* **U., Putrid.** See *Gangrene, Hospital.* **U., Rodent,** a form of ulceration, probably epitheliomatous, which involves all tissues, bones and soft tissues alike. **U., Round,** (*of the stomach*). Perforating ulcer of the stomach. **U., Round** (*of the uterus*), a rapid ulceration of the uterus, probably epitheliomatous. **U., Sæmisch's,** an infectious ulcer of the cornea. **U., Scorbutic,** an indolent ulcer found in scurvy. **U., Serpiginous,** an irregularly burrowing ulceration. **U., Simple,** a mild form of ulceration, not due to a poison or to systemic disease. **U., Stercoral,** a small ulcer of the bowel, produced in cases of long-standing constipation, with fecal impaction, from the irritation of the hard masses of feces. Usually no symptoms are produced. **U., Sublingual,** an ulcer upon the frenum of the tongue, due, probably, to irritation by the lower incisor teeth. **U., Symptomatic,** an ulcer indicative of general disease. **U., Syphilitic,** ulceration due to syphilis. **U., Syriac,** malignant angina. **U., Toe-nail,** ulceration caused by an ingrowing toe-nail. **U., Tuberculous,** ulceration due to tuberculosis. **U., Turkestan,** a form of ulceration noticed among the Russian soldiers in Turkestan. It was attended with profuse suppuration and adenitis. **U., Varicose,** an ulcer due to varicose veins. **U., Venereal.** Synonym of *Chancre* or *Chancroid.* **U., Weak,** one with exuberant and flabby granulations. **U., Yemen.** Synonym of *U., Cochin-China.*

Ulcerate (*ul'-ser-āt*) [*ulcus*, ulcer]. To become ulcerated.

Ulcerated (*ul'-ser-a-ted*) [*ulcus*, ulcer]. Affected with ulceration.

lceration (*ul-ser-a'-shun*) [*ulcus*, a sore]. The process of the formation of an ulcer. **U. of the Cervix.** See *Erosion*. **U., Fissured.** See *Ulcer, Fissurated*. **U., Heryng's Pharyngeal**, a rather diffuse ulcer of the hard palate and fauces. **U., Malignant**, ulceration caused by carcinoma or sarcoma. **U., Puerperal**, ulceration of the genitals due to injury during labor. **U., Tuberculous** (*of the larynx*), an ulcer usually found on the dorsal wall of the larynx, and caused by tuberculosis.

cerative (*ul'-ser-a-tiv*) [*ulcus*, ulcer]. Pertaining or belonging to ulceration. **U. Scrofuloderma.** See *Mycosis*.

cerous (*ul'-ser-us*) [*ulcerosus*]. Exhibiting ulceration; having the character of an ulcer.

cus (*ul'-kus*) [L.]. See *Ulcer*. **U. excedens.** See *Rodent Ulcer*. **U., Grave.** See *Fungus Foot*. **U. rodens**, Mooren's term for a form of creeping ulcer which begins at the upper edge of the cornea as a superficial lesion, separated from the healthy portion by a gray, opaque rim which is undermined. The whole cornea is liable to be traversed and the sight destroyed.

cuscle, Ulcuscule, Ulcusculum (*ul-kus'-kl, ul-kus'-kūl, ul-kus'-ku-lum*) [*ulcusculum: pl., Ulcuscula*]. A small ulcer.

lemorrhagia (*u-lem-or-a'-je-ah*) [*οὐλον*, the gum; *-ια*, blood; *ῥηγνῦναι*, to burst forth]. Hemorrhage or bleeding at the gums.

lerythema (*u-ler-ith-e'-mah*) [*οὐλή*, scar; *ἐρύθημα*, erythema]. An erythematous disease marked by the formation of cicatrices. **U. sycosiforme.** See *Sycosis, Lupoid*.

letic (*u-let'-ik*) [*οὐλον*, gum]. Pertaining to the gums.

lex (*ul'-leks*) [L.]. A genus of leguminous shrubs of Europe and Africa. **U. europæus** is the common gorse, whin, or furze.

lexin (*u-leks'-in*) [*ulex*, a shrub], $C_{11}H_{14}N_2O$. An alkaloid found in the seed of *Ulex europæus*. It is a powerful diuretic, and causes local anesthesia. Dose gr. $\frac{1}{10}$ in pill; to be used with caution. Unof.

liginose, Uliginous (*u-lij'-in-ōz, u-lij'-in-us*) [*uligo*, moisture]. Pertaining to or growing in a marshy soil.

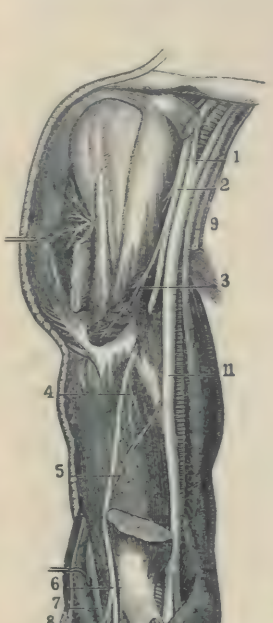
litis (*u-li'-tis*) [*οὐλον*, gum; *-ιτις*, inflammation]. Inflammation of the gums.

lem (*ul'-em*). A form of indigestion met with in Lapland, and probably due to the use of smoked meat.

lmic (*ul'-mik*) [*ulmus*, elm]. Denoting an acid found in earth-mold, a product of the decay of vegetable matter.

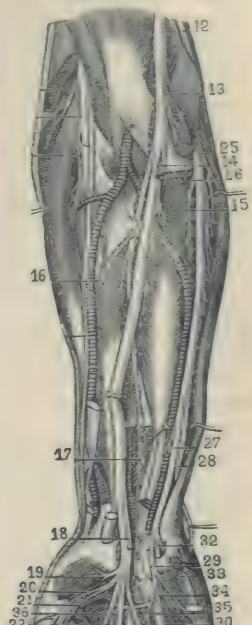
lmin (*ul'-min*) [*ulmus*, elm]. A brown substance produced by the action of strong acids or alkalies on various organic bodies, especially by heating treacle or alcohol with strong sulphuric acid.

lmous (*ul'-mus*) [*ulmus*, elm]. In chemistry, denoting a group of brown or black substances containing ulmin or ulmic acid.



lmus (*ul'-mus*) [L.: *gen., Ulmi*]. Elm, slippery elm. The inner bark of *U. fulva*. It contains a large percentage of mucilage, and is demulcent and slightly astringent. It is valuable in diarrhea, and as an emollient in acute inflammations. **U., Mucilago**, elm boiling water 100, macerated for two hours and strained. Dose *ad lib*. Cf. *Fremontia*.

Ula (*ul'-nah*) [L., a cubit]. The large bone of the forearm, articulating with the humerus and the head of the radius above and with the radius below. See plate 229.



Ulad (*ul'-nad*) [*ulna*, ulna]. Toward the ulnar aspect.

Ular (*ul'-nar*) [*ulnaris*, ulnar]. Pertaining to the ulna. **U. Nerve**, a nerve both of motion and sensation springing from the brachial plexus and supplying the ulnar region of the arm.

Ulnare, or Os ulnare (*ul-na'-re*) [*ulna*, ulna]. The cuneiform bone of the carpus. See *Bones, Table of*.

Brachial Portion of Musculo-cutaneous, Median and Ulnar Nerves.

Terminal Portion of Median Nerve and of Ulnar Nerve.

1. Musculo-cutaneous nerve. 2. Branch to coraco-brachialis. 3. Branch to biceps. 4. Branch to brachialis anticus. 5. Anastomotic branch from median. 6. Division of musculo-cutaneous. 7. Radial nerve. 8. Its external cutaneous branch. 9. Internal cutaneous. 10. Its anterior, or ulnar branch. 11. Upper portion of median and ulnar nerves. 12. Their middle portion. 13. Branch to pronator radii teres. 14. Trunk giving rise to anterior muscular branches. 15. Branches to flexor profundus digitorum. 16. Branch to flexor longus proprius pollicis. 17. Interosseous branches. 18. Palmar cutaneous branch. 19. Branch for muscles of thenar eminence. 20. External collateral branch to thumb. 21. Internal collateral branch. 22. External collateral branch to index finger. 23. Common trunk of internal collateral branch to index finger and external collateral branch to middle finger. 24. Trunk of internal collateral branch to middle finger and external collateral branch to ring finger. 25. Branch of ulnar nerve to flexor carpi ulnaris. 26. Branches to two inner fasciculi of flexor profundus digitorum. 27. Cutaneous and anastomotic filament. 28. Dorsal branch. 29. Superficial palmar branch. 30. Common trunk of internal collateral branch to ring finger and external collateral branch to little finger. 31. Internal collateral branch to little finger. 32. Deep palmar branch. 33. Branch of the latter to hypothenar muscles. 34. Branches to muscles of fourth interosseous and to fourth lumbricalis. 35. Branches to muscles of third interosseous space and to third lumbricalis. 36. Branches to the adductor of the thumb and to the muscles of the first two interosseous spaces.

Ulnaris (*ul-na'-ris*) [L.]. See *Muscles, Table of*.

Ulnen (*ul'-nen*) [*ulna*, ulna]. Belonging to the ulna in itself.

Ulno-carpal (*ul-no-kar'-pal*) [*ulna*, ulna; *καρπός*, carpus]. Pertaining to the ulna and the carpus.

Ulno-metacarpalis (*ul-no-met-ak-ar-pa'-lis*) [*ulna*, elbow; *metacarpus*, from *μετά*, beyond; *καρπός*, the wrist: *pl.*, *Ulnometacarpales*]. One of the wing-muscles of a bird; it arises from the ulna and is inserted into a metacarpal bone.

Ulno-radial (*ul-no-ra'-de-al*) [*ulna*, ulna; *radius*, radius]. Pertaining to the ulna and the radius.

Ulocace (*u-lok'-as-e*) [*οὖλον*, gum; *κακός*, evil]. Ulcerative ulitis.

Ulocarcinoma (*u-lo-kar-sin-o'-mah*) [*οὖλον*, gum; *carcinoma*]. Carcinoma of the gums.

Ulon (*u'-lon*) [*οὖλον*, gum]. The gums.

Uloncus (*u-long'-kus*) [*οὖλον*, gum; *ὄγκος*, a tumor]. A tumor or swelling of the gums.

Ulorrhagia (*ul-or-a'-je-ah*) [*οὖλον*, gum; *ῥηγνύναι*, to burst forth]. Same as *Ulorrhea*.

Ulorrhea (*ul-or-e'-ah*) [*οὖλον*, gum; *ῥοία*, a flow]. Bleeding from the gums.

Ulosis (*u-lo'-sis*). Synonym of *Cicatrization*.

Ulotic (*u-lot'-ik*) [*οὐλή*, scar]. Pertaining to or tending toward cicatrization.

Ulotrichous (*u-lot'-rik-us*) [*οὖλος*, woolly; *θρίξ*, hair]. Having woolly hair.

Ulterior (*ul-te'-re-or*) [L.]. Toward the periphery; applied to lesions of the spinal cord.

Ultimate (*ul'-tim-āt*) [*ultimus*, super. of *ultra*, beyond]. Farthest, or most remote. **U. Analysis.** See *Analysis*. **U. Principle.** See *Principle*.

Ultimisternal (*ul-tim-is-tur'-nal*) [*ultimus*, last; *στέρνον*, sternum]. Pertaining to the last or lowest segment of the sternum.

Ultimum (*ul'-tim-um*) [L.]. Last. **U. moriens** ("last dying"). The right auricle; so called from the belief that it is the last part of the heart to cease its contractions. **U., Stadium.** See *Stadium*.

Ultra-brachycephaly (*ul'-tra-brak-is-ef'-al-e*) [*ultra*, beyond; *brachycephaly*]. Brachycephaly in which the cephalic index exceeds 90°.

Ultracentenarian (*ul-trah-sen-ten-a'-re-an*) [*ultra*, beyond; *centenarius*, pertaining to a hundred]. A person who has lived more than 100 years.

Ultradolichocephaly (*ul-trah-do-lik-o-sef'-al-e*) [*ultra*, beyond; *dolichocephaly*]. Dolichocephaly in which the cephalic index is less than 64°.

Ultramarine (*ul'-tram-ar-ēn*). See *Pigments, Conspectus of*. **U. Green, U. Yellow.** See *Pigments, Conspectus of*.

Ultramicroscopic (*ul-trah-mi-kro-skop'-ik*) [*ultra*, beyond; *microscopic*]. Too small to be seen by the aid of the microscope.

Ultromotivity (*ul-tro-mo-tiv'-it-e*) [*ultro*, spontaneously; *motivity*]. Power or capability of moving spontaneously.

Ultzmann's Test. See *Tests, Table of*.

Ululation (*ul-u-la'-shun*) [*ululare*, to howl]. An hysteric howling.

-ulus (*u'-lus*). A Latin suffix denoting the diminutive degree.

Umbel (*um'-bel*) [*umbra*, shade]. In biology, that form of indeterminate inflorescence in which the axis is very short and the pedicels radiate from it like the rays of an umbella.

Umbellal (*um'-bel-al*) [*umbella*, an umbel]. Pertaining to an umbel.

Umbellar (*um'-bel-ar*). Same as *Umbellate*.

Umbellaria (*um-bel-la'-re-ah*). See *California Laurel*.

Umbellate (*um'-bel-āt*) [*umbella*, an umbel, dim. of *umbra*, shade]. In biology, bearing umbels.

Umbellet (*um'-bel-et*) [*umbella*, umbel]. In biology, a little umbel.

Umbellic Acid (*um-bel'-ik*). See *Acid*.

Umbelliferon (*um-bel-if'-er-on*) [*umbella*, umbel *ferre*, to bear], $C_9H_6O_3$. *Oxycoumarin*, found in t bark of *Daphne mezereum*; it is obtained by distillir different resins, such as galbanum and asafetida. consists of fine needles, sparingly soluble in hot wat and ether; it melts at 224° C.

Umbelliferous (*um-bel-if'-er-us*) [*umbella*, umbe *ferre*, to bear]. Bearing umbels.

Umbelliform (*um-bel'-if-orm*) [*umbella*, umbel; *form* form]. Having the form of an umbel.

Umbellulate (*um-bel'-u-lāt*) [*umbellula*, an umbellule Provided with umbellules.

Umbellule (*um'-bel-ūl*) [*umbellula*, a little umbel]. partial umbel; an umbellet.

Umber (*um'-ber*) [*umbra*, shade]. A dark-brow pigment somewhat resembling ocher. See *Pigment Conspectus of*.

Umbilical (*um-bil'-ik-al*) [*umbilicus*, the navel]. Pe taining to the umbilicus. **U. Cord.** See *Cord*. **Fistula**, a fistulous opening communicating with t umbilicus. **U. Hernia.** See *Hernia*. **U. Regio** the central of the regions into which the abdomen is co veniently divided. **U. Ring**, the aperture, closed the adult, through which the umbilical vessels pass fetal life. **U. Souffle**, the peculiar sound heard occ sionally over the umbilical cord of the fetus. **Vesicle**, in embryology, a spheroid sac appeari early in the ovum and disappearing about the seven week after fecundation. The navel-sac. In low animals it is called the vitelline sac or yolk-sac.

Umbilicate, Umbilicated (*um-bil'-ik-āt, um-bil'-ik ted*) [*umbilicus*, navel]. Having a depression li that of the navel.

Umbilication (*um-bil-ik-a'-shun*) [*umbilicus*, nave A navel-like depression; the quality of being umb cated.

Umbilicular (*um-bil-ik'-u-lar*) [*umbilicaris*, pertaini to the navel]. Pertaining to the navel.

Umbilicus (*um-bil-i'-kus*) [L.]. The navel. T round, depressed cicatrix in the median line of the domen, marking the site of the aperture which, in f life, gave passage to the umbilical vessels. **U., Pc terior**, a depression in the spinal region due to perfect closure of the vertebral groove.

Umbiliferous (*um-bil-if'-er-us*) [*umbilicus*, nav *ferre*, to bear]. Having an umbilicus.

Umbiliform (*um-bil'-if-orm*) [*umbilicus*, navel; *for* form]. Having the form of an umbilicus.

Umbo (*um'-bo*) [L.: *pl.*, *Umbones*]. 1. A boss bosselation; any central convex eminence; less rectly, a central concave depression. 2. Specifica the depressed spot in the center of the membrana t pani. In biology, the apex of the valve of a biva shell.

Umbonal (*um'-bo-nal*) [*umbo*, a boss]. Protuber like a knob.

Umbonate (*um'-bo-nāt*) [*umbo*, the boss of a shie Bossed; furnished with a low, rounded project like a boss (umbo).

Umbonic (*um-bon'-ik*) [*umbo*, boss]. Pertaining t umbo.

Umbonulate (*um-bon'-u-lāt*) [*umbo*, boss]. Pertai to an umbo.

Umbraculate (*um-brak'-u-lāt*) [*umbraculum*, brella]. In biology, applied to the heads of cer insects when furnished with an awning-like fr process.

Umbraculiferous (*um-brak-u-lif'-er-us*) [*umbracu* umbrella; *ferre*, to bear]. In biology, bearin organ resembling an umbrella.

Umbraculiform (*um-brak'-u-lif-orm*) [*umbracu*

umbrella; *forma*, form]. Having the form of an umbrella.

mbraculum (*um-brak'-u-lum*) [*umbraculum*, shade, shady place, umbrella: *pl.*, *Umbracula*]. In biology, an umbrella-shaped appendage.

mbrascopy (*um-bras'-ko-pe*). Synonym of *Retinoscopy*.

mbrel (*um'-brel*). Same as *Umbrella*.

mbrella (*um-brel'-ah*) [*umbra*, shade]. In biology, the swimming-bell of a jelly-fish, or *Medusa*. **U. Clasp.** See *Peronium*.

mbrose (*um'-brōz*) [*umbra*, shade]. Shady.

armed Tape-worm. See *Tænia saginata* under *Parasites* (*Animal*), *Table of*.

ncaria (*ung-ka'-re-ah*). See *Gambir*.

ncate (*ung'-kāt*) [*uncus*, a hook]. In biology, bent into the form of a hook.

ncia (*un'-se-ah*) [L.]. An ounce. See *Weights and Measures*.

ncial (*un'-se-al*) [*uncia*, inch]. An inch in length.

nciform Bone (*un'-sif-orm*) [*os unciforme*; *uncus*, a hook; *forma*, form]. The hook-shaped bone in the lower row of the bones of the carpus. See *Bones*, *Table of*. **U. Eminence**, the hippocampus minor, or calcar. **U. Process.** See *Process*.

ncinal (*un'-sin-al*). Same as *Uncinate*.

ncinate (*un'-sin-āt*) [*uncus*, hook]. Hooked. **U. Convolution**, or **Gyrus**, the continuation of the hippocampal convolution or gyrus fornicatus, ending in a hook-like process near the end of the temporal lobe.

ncinatum (*un-sin-a'-tum*) [*uncinatus*, hooked]. In anatomy, the unciform bone of the carpus.

Uncinus (*un-si'-nus*) [*uncinus*, a hook, barb: *pl.*, *Uncini*]. In biology, a hook, or hook-like structure or appendage.

Uncipression, Uncipressure (*un-sip-resh'-un*, *un'-sip-resh-ūr*) [*uncus*, hook]. A method of arresting hemorrhage by the use of two hooks dug into the sides of the wound so as to compress the vessel.

Uncirostrate (*un-se-ros'-trāt*) [*uncus*, hook; *rostratus*, beaked]. In biology, having a hooked beak.

Unconscious (*un-kon'-shus*) [*un*, not; *consciens*, knowing]. Not conscious. **U. Cerebration.** See *Cerebration*.

Unconsciousness (*un-kon'-shus-nes*) [*un*, not; *conscius*, knowing]. The state of being without sensibility and having abolished reflexes: a symptom of apoplexy, insolation, asphyxia, etc.

Unction (*unk'-shun*) [*unctio*, an anointing]. The act of anointing. Also, an ointment.

Unctuous (*unk'-tu-us*) [*unctus*, a smearing]. Greasy, oily.

Unguis (*ung'-kus*) [L.]. 1. The hook-like anterior extremity of the uncinate gyrus of the brain. 2. A hook.

Undate (*un'-dāt*). See *Undulate*.

Undecolic Acid (*un-dek-ol'-ik*). See *Acid*.

Under (*un'-der*) [ME., *under*, under]. Below; beneath. **U.-shrub**, partially shrubby, or a very low shrub. **U.-toe**, a variety of *Hallux varus* in which the great toe underlies its neighbors.

Undulate, Undate (*un'-du-lāt*, *un'-dāt*) [*unda*, a wave]. In biology, wavy; having a margin that flows gently in and out. Applied to leaves and other flattened organs.

Undulated (*un'-du-la-ted*) [dim. of *unda*, a wave]. Marked by or propagated in waves; wave-like.

Undulation (*un-du-la'-shun*) [*undulatus*, waved]. Fluctuation, as of pus, or any liquid effusion; also, a subjective sensation as of a wave-like motion about the heart. **U., Jugular**, the venous pulse. **U., Respiratory**, the variations in the blood-pressure due to respiration.

Undulatory (*un'-du-lat-or-e*) [*undulare*, to undulate]. Vibratory. Moving like waves. In physics, the undulatory theory of light presupposes the existence of an imponderable, tenuous medium called the ether, the undulations of which give rise to the phenomena of light, heat, and electricity. See *Wave-length*.

Unequal (*un-e'-kwal*) [*un*, not; *æquus*, equal]. Having different proportions, dimensions, or qualities.

Unfruitfulness (*un-frūt'-ful-nes*) [*un*, not; *fructus*, fruit]. Barrenness. Sterility.

Ungual (*ung'-gwal*) [*unguis*, a claw]. Pertaining to a nail of the hand or foot. Applied to nail-like structures, as the **U. Bones.** See *Lacrymal Bones*.

Ungueal (*ung'-gwe-al*). Same as *Ungual*.

Unguen (*ung'-gwen*). Synonym of *Unguentum*.

Unguent (*un'-gwent*) [*unguentum*, ointment]. See *Unguentum*.

Unguentary (*ung'-gwen-ta-re*) [*unguentarius*]. Pertaining to an unguent, or ointment.

Unguentine (*ung-gwen'-tin*) [*unguentum*, an ointment]. A popular local application for use in cutaneous diseases and as a dressing for burns and scalds.

Unguentous (*ung-gwen'-tus*) [*unguentum*, ointment]. Resembling an unguent.

Unguentum (*ung-gwen'-tum*) [L.: *gen.*, *Unguenti*: *pl.*, *Unguenta*]. An ointment. In pharmacy, a soft, fatty mixture, usually of lard or of vaselin as an excipient, with a prescribed medical substance, intended for application, by inunction, to the skin. The melting-temperature of the ointment should be below that of the body. *Unguentum simplex* consists of lard 80 and wax 20 parts. There are 23 unguenta described in the U. S. P., besides as many more in the B. P., and 5 others in the N. F.

Unguicorn (*ung'-gwik-orn*) [*unguis*, nail, claw; *cornu*, horn]. In biology, the horny integument of the tip of the upper mandible of certain birds—ducks, geese, petrels, albatross, etc. Cf. *Dertrotheca*, *Myxotheca*.

Unguicular (*ung-gwik'-u-lar*) [*unguis*, nail]. Having or pertaining to a claw or nail. Having a length of half an inch.

Unguiculate (*ung-gwik'-u-lāt*) [*unguis*, nail]. Clawed. Applied to petals that have stalks or claws.

Unguiferous (*ung-gwif'-er-us*) [*unguis*, nail; *ferre*, to bear]. Provided with an unguis.

Unguiform (*ung'-gwif-orm*) [*unguis*, nail; *forma*, form]. Shaped like a claw.

Unguinal (*ung'-gwin-al*) [*unguis*, nail]. Pertaining to a nail, or to the nails.

Unguirostral (*ung-gwe-ros'-tral*) [*unguis*, nail; *rostrum*, beak]. In biology, having a nail at the end of the bill, as a duck.

Unguis (*ung'-gwis*) [L.: *pl.*, *Ungues*]. A claw; the nail of the finger or toe. Also, the lacrymal bone, which is shaped like a finger-nail; also the calcar or hippocampus minor. **Ungues adunci.** See *Onychogryposis*.

Ungula (*ung'-gu-lah*) [L.]. 1. A hoof; a claw. 2. In surgery, an instrument for extracting a dead fetus from the womb. 3. In botany, same as *Unguis*.

Ungular (*ung'-gu-lar*) [*ungula*, a claw]. Of the character of an ungula.

Ungulate (*ung'-gu-lāt*) [*ungula*, a hoof]. Having hoofs; applied to certain orders of mammalia.

Unguligrade (*ung'-gu-lig-rād*) [*ungula*, hoof; *gradi*, to walk]. Walking upon hoofs.

Ungulous (*ung'-gu-lus*) [*ungula*, hoof]. Pertaining to a hoof.

Uni- (*u'-ne-*) [*unus*, one]. A Latin prefix denoting one.

Uniarticulate (*u-ne-ar-tik'-u-lāt*) [*unus*, one; *articulus*, joint]. Having but one joint.

Uniauriculate (*u-ne-aw-rik'-u-lāt*) [*unus*, one; *auricula*, ear]. Having one ear-like process.

Uniaxal, Uniaxial (*u-ne-aks'-al, u-ne-aks'-e-al*) [*unus*, one; *axis*, axis]. Having but one axis. Synonym of *Monaxial.*

Unibasal (*u-nib-a'-zal*) [*unus*, one; *basis*, base]. Having but one base.

Unibranchiate (*u-nib-rang'-ke-āt*) [*unus*, one; *branchiæ*, gills]. Having but one gill.

Unicapsular (*u-nik-ap'-su-lar*) [*unus*, one; *capsula*, capsule]. Composed of a single capsule.

Unicella (*u-nis-el'-ah*) [*unus*, one; *cella*, cell]. Having one cell. **U. of Nägeli**, in biology, the particles theoretically supposed to compose the *plastidule*, or *gemmule*, *q.v.*

Unicellate (*u-nis-el'-āt*) [*unus*, one; *cella*, cell]. One-pronged.

Unicelled (*u'-nis-eld*). Same as *Unicellular.*

Unicellular (*u-nis-el'-u-lar*) [*unus*, one; *cellula*, dim. of *cella*, a cell]. Composed of or having but one cell.

Unicentral (*u-nis-en'-tral*) [*unus*, one; *centrum*, center]. Having a single center of growth.

Uniciliate (*u-nis-il'-e-āt*) [*unus*, one; *cilium*, cilium]. Having one cilium; uniflagellate.

Unicism (*u'-nis-izm*) [*unicus*, single]. The belief or opinion that there is but a single venereal virus.

Unicist (*u'-nis-ist*) [*unicus*, single]. A believer in unicism.

Unicorn (*u'-nik-orn*) [*unus*, one; *cornu*, horn]. Having a single horn. **U. Root.** See *Aletris.* **U. Uterus**, a uterus with but a single cornu.

Unicostate (*u-nik-os'-tāt*) [*unus*, one; *costa*, rib]. Having a single rib.

Unicotyledonous (*u-nik-ot-il-e'-do-nus*) [*unus*, one; *cotyledonous*]. In biology, having one cotyledon.

Unicuspid (*u-nik-us'-pid*) [*unus*, one; *cuspis*, point]. 1. Having but a single cusp (as a tooth). 2. A tooth with but a single cusp or point.

Unicuspidate (*u-nik-us'-pid-āt*) [*unus*, one; *cuspis*, point]. Having but a single point, or cusp; unicuspid.

Unidactyl (*u-nid-ak'-til*) [*unus*, one; δάκτυλος, finger]. Having a single digit.

Unifacial (*u-nif-a'-shal*) [*unus*, one; *facies*, a face]. Having only one face.

Uniflagellate (*u-nif-laj'-el-āt*) [*unus*, one; *flagellum*, a tail]. In biology, having a single flagellum. See *Monoflagellate.*

Uniflorous (*u-nif-lo'-rus*) [*unus*, one; *flos*, flower]. Producing a single flower.

Unifoliate (*u-nif-o'-le-āt*) [*unus*, one; *folium*, leaf]. Bearing a single leaf.

Unifoliolate (*u-nif-o'-le-o-lāt*) [*unus*, one; *folium*, a leaf]. In biology, applied to a compound leaf that has but one leaflet, as the leaves of the orange and lemon.

Unijugate (*u-ne-ju'-gāt*) [*unus*, one; *jugum*, yoke]. In biology, consisting of one pair.

Unijugous (*u-ne-ju'-gus*). Same as *Unijugate.*

Unilabiate (*u-nil'-a-be-āt*) [*unus*, one; *labium*, lip]. Having a single lip.

Unilateral (*u-nil-at'-er-al*) [*unus*, one; *latus*, a side]. Pertaining to or affecting but one side. **U. Chorea.** See *Hemichorea.*

Unilocular (*u-nil-ok'-u-lar*) [*unus*, one; *loculus*, dim. of *locus*, a place]. Having but one cell or cavity.

Uninervate (*u-nin-ur'-vāt*) [*unus*, one; *nervus*, nerve]. Having a single rib or midrib.

Uninterrupted (*un-in-ter-up'-ted*) [*un*, not; *interrupted*]. Continuous; not broken.

Uninuclear (*u-nin-u'-kle-ar*) [*unus*, one; *nucleus*, nucleus]. Having a single nucleus.

Uniocular (*u-ne-ok'-u-lar*) [*unus*, one; *oculus*, eye]. With but a single or cyclopean eye.

Union (*ūn'-yun*) [*unio*, oneness]. The process of joining or uniting two or more parts or things, and the state of being united. See *Healing.* **U., Dissolved** the condition, in a fracture, in which the callous is finally dissolved and absorbed. **U. by Granulation,** healing by third intention. **U., Primary** healing by first intention. **U., Secondary,** healing by second intention. **U., Vicious,** union with deformity.

Unioval (*u-ne-o'-val*) [*unus*, one; *ovum*, egg]. Having but one egg.

Uniovular (*u-ne-ov'-u-lar*) [*unus*, one; *ovulum*, ovule]. Having a single ovule.

Unipara (*u-nip'-ar-ah*) [*unus*, one; *parere*, to bear]. A woman who has borne but one child.

Uniparous (*u-nip'-ar-us*) [*unus*, one; *parere*, to produce]. Having borne but one child.

Unipetalous (*u-nip-et'-al-us*) [*unus*, one; πέταλον, leaf]. Possessing a single petal.

Unipolar (*u-nip-o'-lar*) [*unus*, one; *polus*, a pole]. Applied to nerve-cells each having but one process.

Uniramose, Uniramous (*u-ne-ra'-mōz, u-ne-ra'-mus*) [*unus*, one; *ramus*, branch]. Having but one ramus.

Unisexual (*u-nis-eks'-u-al*) [*unus*, one; *sexus*, sex]. Provided with the sexual organs of but one sex.

Unit (*u'-nit*) [*unus*, one]. A single thing or value. The lowest integral value. **Ampère.** See *Ampère.* **Calory:** the quantity of heat necessary to raise the temperature of 1 kilogram of water 1° C. is sometimes called the *Great Calory* (when used alone, *calory* is the same as the *great calory*), while that required to raise the temperature of 1 gram 1° C. is called the *Little Calory.* **Coulomb.** See *Coulomb.* **U. of Current,** a conductor 1 cm. long which, if bent into an arc of 1 cm. radius, will act with a force of 1 degree on a unit magnet pole at the center. **Erg.** See *Unit of Work.* **Ergten,** 10,000,000,000 ergs. **Farad.** See *Farad.* **Foot-pound,** the work expended in raising 1 pound 1 foot, = 13,562,691 ergs. **Horse-power,** 1,980,000 foot-pounds per hour, or 550 foot-pounds per second. **Joule,** 10,000,000 ergs. **U. Magnet Pole** a magnet having a strength of pole sufficient to repel a similar pole at a distance with a force of 1 degr. **Megalerg,** 1,000,000 ergs. **Ohm.** See *Ohm.* **Photometric,** the light emitted by 1 sq. cm. of melting platinum at its solidification-temperature. **U. Quantity of Light,** the quantity of light that falls on a surface of 1 square foot placed at a distance of 1 foot from a standard candle, and so that a normal drawn to the surface at any point passes through the source of light. This unit quantity of light is termed a *candle-foot.* **Us., Herbert Spencer's Physiological.** See under *Physiologic.* **U. of Time,** 1 second. **Watt,** 10 megalergs per second. **U. of Work,** the Erg, or work done in raising 1.981 gram, = 1 Dyne, the height of 1 centimeter. **Volt.** See *Volt.* See also, *Metric System*, and *Weights and Measures.*

Unitary (*u'-nit-a-re*) [*unus*, one]. Pertaining to having the qualities of a unit. Also, pertaining to monsters having the organs of a single individual.

Univalence (*u-niv'-al-ens*) [*unus*, one; *valere*, to be worth]. The state of being univalent.

Univalent (*u-niv'-al-ent*) [*unus*, one; *valere*, to be worth]. In *chemistry*, having a valence of one; capable of replacing a single hydrogen atom in combination.

Univalve (*u'-niv-alv*) [*unus*, one; *valva*, valve]. Provided with a single valve.

Universal (*u-niv-ur'-sal*) [*universalis*]. General. **Joint,** a ball-and-socket joint, movable in any direction

University (*u-niv-ur'-sit-e*) [*universitas*, the whole]. A collection of colleges, each having a special curriculum of studies, under one academic government.

Unna's Paste. A paste for extensive eczematous patches. It consists of oxid of zinc, 1 ounce; mucilage of acacia and glycerin, each 2 ounces. It is applied with a brush several times a day. **Unna, Seborrhea of.** See *Seborrhea.*

unnatural (*un-nat'-u-ral*) [*un*, not; *natura*, nature]. Not according to nature. **U. Offences**, the gratifying of the sexual appetite by methods other than the usual. See *Sodomy*, *Bestiality*, *Tribadism*, *Sexual Perversion*, *Homosexuality*, *Necrophilism*, *Masochism*, *Sadism.*

unoculus (*u-nok'-u-lus*). Synonym of *Uniocular.*

unorganized (*un-or'-gan-izd*) [*un*, not; ὄργανον, organ]. Without organs, but not necessarily lifeless.

unsaturated (*un-sat'-u-ra-ted*) [*un*, not; *saturare*, to saturate]. A qualification applied to carbon compounds that are capable of saturating two valence units.

unsound (*un-sownd'*) [ME., *unsownd*, unsound]. Not healthy; diseased.

unsoundness (*un-sownd'-nes*) [ME., *unsownd*, unsound]. The state of being unsound. **U. of Mind**, incapacity to govern one's affairs.

unstratified (*un-strat'-if-id*) [*un*, not; *stratum*, stratum]. Not arranged in strata or layers.

unsymmetric (*un-sim-et'-rik*) [*un*, not; *symmetric*]. Lacking in symmetry; having unequal arrangement. **U. Kidney.** See *Kidney.*

unwell (*un-wel'*) [*un*, not; *well*]. 1. Ill; sick. 2. Menstruating.

unwhole (*un-hōl'*) [ME., *unhol*, not whole]. Not sound; infirm.

unwholesome (*un-hōl'-sum*) [ME., *unholsum*, unwholesome]. Insalubrious; unhealthful.

upas (*u'-pas*) [Malay, *upas*, poison]. A name applied to several trees found in the East Indies and containing a poisonous principle probably identical with strychnin. It is used as an arrow-poison. **U. antiar**, Javanese arrow-poison; it acts directly on the vasomotor centers.

urachal (*u'-ra-kal*) [οὐραχός, urachus]. Pertaining to the urachus.

urachus (*u'-ra-kus*) [οὐραχός, the urinary canal of a fetus: *pl.*, *Urachi*]. The prolongation of the fusiform vesicle formed by the dilatation of the embryonic portion of the allantois: the allantoic stalk.

uracratia (*u-ra-kra'-she-ah*). See *Enuresis.*

uracyl (*u'-ra-sil*) [οὖρον, urine], $C_4H_4N_2O_2$. The ureid of β-oxyacrylic acid; only known in the form of its derivatives.

uræmatin (*u-rem'-at-in*). See *Urohematin.*

uræmia (*u-re'-me-ah*). See *Uremia.*

uræmic (*u-re'-mik*). See *Uremic.*

ural (*u'-ral*). 1. See *Uralium.* 2. See *Caudal.*

urali (*u-ra'-le*). Synonym of *Curare.*

uralium (*u-ra'-le-um*) [οὖρον, urine: *gen.*, *Uralii*]. Ural. Chloral-urethane, $CCl_3CH : OH.NHCO_2C_2H_5$. A combination of chloral hydrate and urethane, discovered in 1889. An excellent hypnotic, but very bitter. Dose gr. x–xx. Unof.

uramil (*u'-ram-il*), $C_4H_5N_3O_3$. Amido-barbituric acid, obtained by boiling alloxanthin with an ammonium-chlorid solution. It occurs in colorless, shining needles, which redden on exposure, and are but slightly soluble in water.

uranalysis (*u-ran-al'-is-is*) [οὖρον, urine; ἀνάλυσις, analysis]. Urine-analysis.

uraniscochasma (*u-ran-is-ko-kas'-mah*) [οὐρανίσκος, the roof of the mouth; χασμά, chasm]. Cleft palate.

Uranisconitis (*u-ran-is-ko-ni'-tis*) [οὐρανίσκος, the roof of the mouth; ιτις, inflammation]. Inflammation of the uraniscus, or palate.

Uraniscoplasty (*u-ran-is'-ko-plas-te*) [οὐρανίσκος, palate; πλάσσειν, to form]. Plastic operation for the repair of cleft palate.

Uraniscorrhaphy (*u-ran-is-kor'-af-e*) [οὐρανίσκος, palate; ῥαφή, suture]. Suture of a palatal cleft.

Uraniscus (*u-ran-is'-kus*) [οὐρανισκος]. The roof of the mouth.

Uranium (*u-ra'-ne-um*) [*Uranus*, Uranus]. U = 120; quantivalence II. A metal occurring in pitchblende and other minerals. The nitrate, a freely soluble, astringent salt, and an irritant poison, is used in diabetes and as a throat-spray. Dose gr. ss–v. Unof. The oxid is employed to give a fluorescent yellow to glass.

Uranocoloboma (*u-ran-o-kol-o-bo'-mah*) [οὐρανός, the roof of the mouth; *coloboma*]. Cleft palate.

Uranomania (*u-ran-o-ma'-ne-ah*) [οὐρανός, heaven; μανία, madness]. Religious mania with exaltation.

Uranoplastic (*u-ran-o-plas'-tik*) [οὐρανός, palate; πλάσσειν, to form]. Belonging or pertaining to uranoplasty.

Uranoplasty (*u'-ran-o-plas-te*). Same as *Uraniscoplasty.* See *Avery's*, *Beaufils'*, *Blasius'*, *Davies-Colley's*, *Krimer's*, *Langenbeck's*, *Rotter's*, *Smith's*, *Thiersch's*, and *Warren's Operations*, in *Operations*, *Table of.*

Uranorrhaphy (*u-ran-or'-af-e*). See *Uraniscorrhaphy.*

Uranoschisis (*u-ran-os'-kis-is*) [οὐρανός, vault; σχισις, a cleft]. Cleft palate.

Urano-staphylorrhaphy (*u'-ran-o-staf-il-or'-af-e*) [οὐρανός, vault; *staphylorrhaphy*]. Same as *Uraniscorrhaphy.*

Uranostomatoscopy (*u-ran-o-sto-mat-os'-ko-pe*) [οὐρανός, vault; στόμα, mouth; σκοπεῖν, to inspect]. Diagnostic, or professional, inspection of the roof of the mouth.

Urao (*u-ra'-o*). See *Trona.*

Urapostema (*u-rap-os'-tem-ah*) [οὖρον, urine; *apostema*]. An abscess containing urine.

Urare, Urari (*u-rah'-re*). See *Curare.*

Urarin (*u-rah'-rin*). Same as *Curarine.*

Urarthritis (*u-rar-thri'-tis*). See *Arthritis uritica.*

Urate (*u'-rāt*) [οὖρον, urine]. Combination of uric or lithic acid with a base. It is present in normal urine. **U.-cells.** In biology, the cells containing doubly refractive granules and uric acid; they are found in the photogenic plate of *Lampyris.* (Schulze.) **U.-test**, heat the upper part of a column of turbid urine; if the turbidity be due to urates it will clear up; or, add potassium hydrate, and the sediment of urates will dissolve.

Uratic (*u-rat'-ik*) [οὖρον, urine]. Pertaining to or characterized by urates. **U. Diathesis**, a condition in which there is a tendency to the deposition of urates in the joints and elsewhere; a tendency to gout.

Uratoma (*u-rat-o'-mah*) [οὖρον, urine; ὄμα, tumor: *pl.*, *Uratomata*]. A tophus, or uratic calculus, formed in any tissue.

Uratosis (*u-rat-o'-sis*) [οὖρον, urine]. A diseased condition, characterized by the deposition of urates.

Uraturia (*u-rat-u'-re-ah*) [οὖρον, urine]. A condition in which there is an increase of urates in the urine.

Urbanization (*ur-ban-iz-a'-shun*) [*urbs*, a city]. A term devised to express the tendency of modern society to develop into cities at the expense of the country population, with a consequent influence upon disease, the death-rate, etc.

Urbantschitsch's Method. A method for the introduction of the Eustachian catheter.

Urceolate (*ur'-se-o-lāt*) [*urceolus*, a little pitcher or urn]. In biology, pitcher-shaped, urn-shaped.

Urceolus (*ur-se'-o-lus*) [*urceolus*, a little pitcher: *pl.*, *Urceoli*]. In biology, an urn-shaped structure, as the zoöthecium of a rotifer.

Urea (*u-re'-ah*) [οὖρον, urine], $CO(NH_2)_2$. The chief solid constituent of urine, and principal nitrogenous end-product of tissue-metamorphosis; a carbamid, derived mainly from the decomposition of uric acid. It was first obtained artificially in 1832 by Wöhler. **U.-ferment**, an enzyme existing in mucous urine passed in inflammatory conditions of the bladder. **U., Test for**, concentrate urine to syrupy consistence by evaporation, and add nitric acid. The nitrate of urea will form a crystalline precipitate of rhombic plates. The quantity may be accurately estimated by Fowler's method, by that of Russell and West, by Liebig's volumetric method, or by Lyon's apparatus. See *Hypobromite Method*.

Ureal (*u're-al*) [οὖρον, urine]. Pertaining to or containing urea.

Urechites suberecta (*u-rek-i'-tēz sub-e-rek'-tah*). See *Savanna Flower*.

Urechitin (*u-rek'-it-in*), $C_{28}H_{42}O_8$. A poisonous glucosid from *Urechites suberecta*. Unof.

Urechitoxin (*u-rek-it-oks'-in*) [*urechites*; τόξικον, poison], $C_{13}H_{20}O_5$. A highly poisonous principle from the leaves of *Urechites suberecta*. Unof.

Urechysis (*u-rek'-is-is*) [οὖρον, urine; ἔκχυσις, an effusion]. An effusion of urine into areolar tissue.

Uredema (*u-re-de'-mah*) [οὖρον, urine; οἴδημα, a swelling]. A tumefaction arising from the distention of a tissue or cavity by the escape of urine.

Uredinous (*u-red'-in-us*) [L., a blight]. Affected with uredo.

Uredo (*u-re'-do*) [*uredo*, a blight]. 1. A form, genus, or stage in the life-cycle of certain fungi (*Uredineæ*). 2. See *Urticaria*. **U.-gonidium**. Same as *Uredospore*.

Uredoform (*u-re'-do-form*) [*uredo*, blight; *forma*, form]. The form assumed by a fungus of the class *Uredineæ* at the stage in which uredospores are produced.

Uredospore (*u-re'-do-spōr*) [*uredo*, blight; σπορά, seed]. A peculiar spore, borne on erect basids, springing from cushion-like masses of mycelial hyphæ situated beneath the epiderm of the host-plant by parasitic uredinous fungi.

Uredosporic (*u-re-do-spōr'-ik*) [*uredo*, blight; σπορά, spore]. Pertaining to a uredospore.

Ureid (*u're-id*) [οὖρον, urine]. A compound of urea and an acid radicle.

Urelcosis (*u-rel-ko'-sis*) [οὖρον, urine; ἕλκωσις, ulceration]. Ulceration of the urethra or urinary organs.

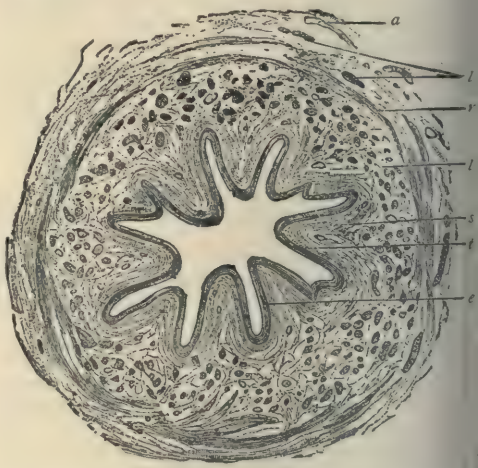
Uremia (*u-re'-me-ah*) [οὖρον, urine; αἷμα, blood]. The combination of symptoms due to the retention in the blood of excrementitious substances normally excreted by the kidneys.

Uremic (*u-rem'-ik*) [οὖρον, urine; αἷμα, blood]. Due to or characterized by uremia.

Ureometer (*u-re-om'-et-er*) [οὖρον, urine; μέτρον, measure]. An instrument for measuring the quantity of urea in urine.

Ureometry (*u-re-om'-et-re*) [οὖρον, urine; μέτρον, measure]. The quantitive determination of urea.

Ureorrhea (*u-re-or-e'-ah*) [οὖρον, urine; ῥοία, a flow]. Polyuria; an increased flow of urine.



Uresiesthesis (*u-res-e-es'-the-sis*) [οὖρησις, urination; αἴσθησις, sensation]. Constant desire to urinate.

Uresis (*u-re'-sis*) [οὖρησις]. Same as *Urination*.

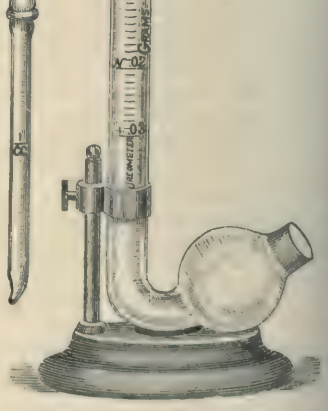
-uret (*-u'-ret*). In chemistry, a suffix formerly used to denote a binary compound of carbon, sulphur, etc., with another element. In modern chemistry the suffix *id* is used.

Uretal (*u-re'-tal*). Same as *Ureteric*.

Ureter (*u-re'-ter*) [οὐρητήρ; οὐρέειν, to urinate]. The canal or tube conveying the urine from the pelvis of the kidney to the bladder.

TRANSVERSE SECTION OF LOWER PART OF HUMAN URETER.

e. Transitional epithelium. *s*. Submucosa. *l* and *r*. Longitudinal and circular smooth muscular fibers. *t*. Tunica propria. *a*. Adventitia. × 15. (*From Stirling*)



Ureteral (*u-re'-ter-al*) [οὐρητήρ, ureter]. Pertaining to the ureter.

Ureteralgia (*u-re-ter-al'-je-ah*) [οὐρητήρ, ureter; ἄλγος, pain]. Any pain in the ureters.

Ureterectomy (*u-re-ter-ek'-to-me*) [οὐρητήρ, ureter; ἐκτομή, excision]. Excision of the ureter.

Ureteric (*u-re-ter'-ik*) [οὐρητήρ, ureter]. Pertaining to the ureters or to a ureter.

Ureteritis (*u-re-ter-i'-tis*) [οὐρητήρ, ureter; ιτις, inflammation]. Inflammation of a ureter.

UREOMETER OF DOREMUS.

Uretero-cystostomy, Uretero-cystoneostomy (*u-re-ter-o-sis-tos'-to-me, u-re'-ter-o-sis-to-ne-os'-to-me*) [

τήρ, ureter; *κύστις*, bladder; *στόμα*, mouth]. The establishment of an artificial communication between a ureter and the bladder.

reterodialysis (*u-re-ter-o-di-al'-is-is*) [*οὐρητήρ*, ureter; *διάλυσις*, dialysis]. Rupture of the ureter.

reterolith (*u-re'-ter-o-lith*) [*οὐρητήρ*, ureter; *λίθος*, stone]. Calculus in the ureter.

reterolithiasis (*u-re-ter-o-lith-i'-as-is*) [*οὐρητήρ*, ureter; *λιθίασις*, lithiasis]. The presence of a calculus in the ureter.

eterolysis (*u-re-ter-ol'-is-is*) [*οὐρητήρ*, ureter; *λύσις*, a loosening]. Same as *Utero-dialysis*.

reterophlegma (*u-re-ter-o-fleg'-mah*) [*οὐρητήρ*, ureter; *φλέγμα*, phlegm]. Accumulation of mucus in the ureter.

eterophlegmasia (*u-re-ter-o-fleg-ma'-ze-ah*). Synonym of *Ureteritis*.

eteropyosis (*u-re-ter-o-pi-o'-sis*) [*οὐρητήρ*, ureter; *πύον*, pus]. Purulent inflammation of the ureter.

eterorrhagia (*u-re-ter-or-a'-je-ah*) [*οὐρητήρ*, ureter; *ῥηγνύναι*, to burst forth]. Hemorrhage from the ureter.

eterorrhaphy (*u-re-ter-or'-af-e*) [*οὐρητήρ*, ureter; *ῥαφή*, seam]. Suture of the ureter.

eterostegnosis (*u-re-ter-o-steg-no'-sis*) [*οὐρητήρ*, ureter; *στεγνωσις*, stenosis]. Stenosis or constriction of the ureter.

eterostenoma (*u-re-ter-o-ste-no'-mah*) [*οὐρητήρ*, ureter; *στένωμα*, a contraction]. Narrowing of the ureter.

eterostoma (*u-re-ter-os'-to-mah*) [*οὐρητήρ*, ureter; *στόμα*, mouth]. The renal or the cystic opening or mouth of the ureter.

eterostomy (*u-re-ter-os'-to-me*) [*οὐρητήρ*, ureter; *στόμα*, mouth]. The formation of a ureteral fistula.

eterotomy (*u-re-ter-ot'-o-me*) [*οὐρητήρ*, ureter; *τομή*, cutting]. Incision of the ureter.

etero-ureterostomy (*u-re'-ter-o-u-re-ter-os'-to-me*) [*οὐρητήρ*, ureter; *στομα*, mouth]. The establishment of an artificial communication between one ureter and another, or between different parts of the same ureter.

etero-uterine (*u-re-ter-o-u'-ter-in*) [*οὐρητήρ*, ureter; *uterus*, uterus]. Belonging to both ureter and uterus.

etero-vaginal (*u-re-ter-o-vaj'-in-al*) [*οὐρητήρ*, ureter; *vagina*, vagina]. Belonging to both ureter and vagina.

ethane (*u'-re-than*) [*οὖρον*, urine; *ether*], $NH_2CO_2C_2H_5$. Ethyl Carbamate. A hypnotic and antipyretic. A decided antagonist to strychnin and other tetanizers. It has yielded excellent results in convulsions and in tetanus. In very large doses it is toxic. Dose gr. x-lx. Unof. In a wider sense, any ester of carbamic acid may be called a urethane. Urethanes are crystalline, volatile bodies, soluble in alcohol, in ether, and in water.

ethra (*u-re'-thrah*) [*οὐρήθρα*, urethra]. The excretory canal of the bladder, extending from the neck of the bladder to the meatus urinarius. It is divided in the male into a prostatic portion, a membranous portion, and a spongy portion, and is from 8 to 9 inches long. In the female it is about 1½ inches in length.

ethral (*u-re'-thral*) [*οὐρήθρα*, urethra]. Pertaining to the urethra. **U. Crest.** See *Verumontanum*. **U. Fever.** A series of febrile reactions that may follow the introduction of a catheter or bougie into the bladder. When not due to actual traumatism, it is a neurotic condition apparently produced by a kind of shock following an unwonted local stimulus.

ethralgia (*u-re-thral'-je-ah*) [*οὐρήθρα*, urethra; *ἄλγος*, pain]. Pain in the urethra.

ethratresia (*u-re-thrat-re'-ze-ah*) [*οὐρήθρα*, urethra; *ἀτρησία*]. Imperforate urethra.

Urethremorrhagia (*u-re-threm-or-a'-je-ah*) [*οὐρήθρα*, urethra; *αἷμα*, blood; *ῥηγνύναι*, to burst forth]. Hemorrhage from the urethra.

Urethrism, Urethrismus (*u'-re-thrizm, u-re-thriz'-mus*) [*οὐρήθρα*, urethra]. Urethral irritability.

Urethritic (*u-re-thrit'-ik*) [*οὐρήθρα*, urethra; *ιτις*, inflammation]. Pertaining to or of the nature of urethritis.

Urethritis (*u-re-thri'-tis*) [*οὐρήθρα*, urethra; *ιτις*, inflammation]. Inflammation of the urethra. **U., Anterior,** that affecting the penile portion of the urethra. **U. catarrhalis,** simple non-specific urethritis. **U. granulosa,** chronic urethritis with urethral granulations. **U. membranacea,** chronic urethritis with the formation of membranes in the urethra. **U., Posterior,** inflammation of the prostatic and membranous portions of the urethra. **U., Specific.** See *Gonorrhea*. **U. venerea.** See *Gonorrhea*.

Urethrito-syphilis (*u-re-thri-to-sif'-il-is*) [*οὐρήθρα*, urethra; *ιτις*, inflammation; *syphilis*, syphilis]. Gonorrhea accompanied by syphilis.

Urethrocele (*u-re'-thro-sēl*) [*οὐρήθρα*, urethra; *κήλη*, a tumor]. A pouch-like thickening of the wall of the urethra in females.

Urethrocystitis (*u-re'-thro-sis-ti'-tis*) [*οὐρήθρα*, urethra; *κύστις*, bladder; *ιτις*, inflammation]. Urethritis associated with cystitis.

Urethrograph (*u-re'-thro-graf*) [*οὐρήθρα*, urethra; *γράφειν*, to record]. A recording urethrometer.

Urethrometer (*u-re-throm'-et-er*) [*οὐρήθρα*, urethra; *μέτρον*, measure]. An instrument for determining the caliber of the urethra or for measuring the lumen of a stricture.

Urethrophraxis (*u-re-thro-fraks'-is*) [*οὐρήθρα*, urethra; *φράξις*, a blocking]. Urethral obstruction.

Urethroplastic (*u-re-thro-plas'-tik*) [*οὐρήθρα*, urethra; *πλάσσειν*, to form]. Pertaining to or of the nature of urethroplasty.

Urethroplasty (*u-re'-thro-plas-te*) [*οὐρήθρα*, urethra; *πλάσσειν*, to form]. Plastic operation upon the urethra.

Urethrorrhagia (*u-re-thror-a'-je-ah*) [*οὐρήθρα*, urethra; *ῥηγνύναι*, to burst forth]. 1. Hemorrhage from the urethra. 2. A gonorrheal or gleety discharge from the urethra.

Urethrorrhaphy (*u-re-thror'-af-e*) [*οὐρήθρα*, urethra; *ῥαφή*, seam]. The closure with sutures of an abnormal opening into the urethra.

Urethrorrhea (*u-re-thror-e'-ah*) [*οὐρήθρα*, urethra; *ῥοία*, a flow]. Any morbid discharge from the urethra.

Urethroscope (*u-re'-thro-skōp*) [*οὐρήθρα*, urethra; *σκοπεῖν*, to examine]. An instrument to dilate the urethra and to allow inspection of its lining membrane.

Urethroscopy (*u-re-thros'-ko-pe*) [*οὐρήθρα*, urethra; *σκοπεῖν*, to view]. Inspection of the mucous membrane of the urethra.

Urethrospasm (*u-re'-thro-spazm*) [*οὐρήθρα*, urethra; *σπασμός*, spasm]. A spasmodic stricture of the urethra.

Urethrostenosis (*u-re'-thro-ste-no'-sis*) [*οὐρήθρα*, urethra; *στένωσις*, a constriction]. Stricture of the urethra.

Urethrostomy (*u-re-thros'-to-me*) [*οὐρήθρα*, urethra; *στόμα*, mouth]. Perineal section with permanent fixation of the membranous urethra in the perineum.

Urethrotome (*u-re'-thro-tōm*) [*οὐρήθρα*, urethra; *τομή*, a cutting]. A cutting instrument used in urethrotomy. **U., Dilating,** a combined urethrotome and dilator.

Urethrotomic (*u-re-thro-tom'-ik*) [*οὐρήθρα*, urethra; *τομή*, a cutting]. Pertaining to urethrotomy.

Urethrotomy (*u-re-throt'-o-me*) [*οὐρήθρα*, urethra; *τέμνειν*, to cut]. Incision of the urethra for stricture by a urethrotome or other instrument. **U., Cock's External**, laying open the perineum without a guide, for an impervious stricture of the urethra. **U., External**, incision of the urethra through its external wall. **U., Internal**, incision of urethral stricture by a blade introduced into its lumen. **U., Syme's External**, an operation in which an incision is made through the perineum upon a grooved director passed through the stricture. **U., Wheelhouse's External**, an operation in which an opening is made into the urethra anterior to the stricture and a grooved director is passed through it into the bladder and the stricture divided. See, also, *Operations, Table of.*

Urethro-vaginal (*u-re'-thro-vaj'-in-al*) [*οὐρήθρα*, urethra; *vagina*, vagina]. Pertaining to the urethra and the vagina.

Urethro-vesical (*u-re-thro-ves'-ik-al*) [*οὐρήθρα*, urethra; *vesica*, bladder]. Pertaining to the urethra and the bladder.

Uretic (*u-ret'-ik*) [*οὐρητικός*]. 1. Pertaining to urine; stimulating the flow of urine. 2. An agent or medicine that stimulates the flow of urine.

Urginea (*ur-jin'-e-ah*) [*urgere*, to press]. A genus of liliaceous plants. **U. scilla**, the plant that produces the official squill. See *Scilla*.

Uric (*u'-rik*) [*urina*, urine]. Derived from or belonging to the urine. **U. Acid**, one of a series of three substances ($C_5H_4N_4O$ = *hypoxanthin*; $C_5H_4N_4O_2$ = *xanthin*; $C_5H_4N_4O_3$ = *uric acid*), each differing from the preceding by an atom of oxygen. Horbaczewski has indicated the possibility of the formation of uric acid from the nuclein of cells.

Uricacidemia (*u-rik-as-id-e'-me-ah*) [*urina*, urine; *acidus*, acid; *αἷμα*, blood]. The presence of a demonstrable amount of uric acid in the blood. It is said to produce various nervous symptoms, such as headache; according to Haig, it is reponsible for many and varied phenomena.

Uricedin (*u-re-se'-din*) [*urina*, urine]. A new proprietary remedy suggested for the treatment of gout. It is said to dissolve uric acid. It is a white, granular substance readily soluble in water. After its administration the urine is capable of dissolving, *in vitro* or on a uric-acid filter, large quantities of uric acid.

Uricemia, Uricæmia (*u-ris-e'-me-ah*) [*urina*, urine; *αἷμα*, blood]. The presence of uric acid in the blood on account of the failure of the red blood-corpuscles to oxidize the acid; lithemia. See *Uricacidemia.*

Uridrosis (*u-rid-ro'-sis*) [*urina*, urine; *ἱδρως*, sweat]. *Sudor urinosus*, a pathologic condition characterized by the presence of urea in the sweat. It is noticeable in cholera, uremia, atrophy of the kidneys, and in some cases of artificially induced diaphoresis. **U. crystallina**, a condition in which the salines of the sweat, together with elements of the urine, crystallize upon the skin in reddish-white granules.

Urinaccelerator (*u-rin-ak-sel'-er-a-tor*) [*urina*, urine; *accelerare*, to accelerate]. The accelerator urinæ. See *Muscles, Table of.*

Urinal (*u'-rin-al*) [*urina*, urine]. A vessel for receiving urine.

Urinalysis (*u-rin-al'-is-is*) [*urina*, urine; *λύσις*, loosing]. The analysis of the urine.

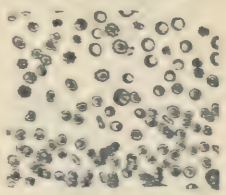
Urinary (*u'-rin-a-re*) [*urina*, urine]. Pertaining to the urine. **U. Bladder.** See *Bladder.* **U. Calculus**, a stony concretion found in the urinary passages. A table of the different varieties of urinary calculi is appended:—

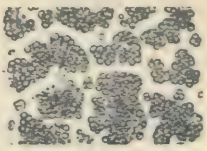
ANALYSIS OF URINARY CALCULI.

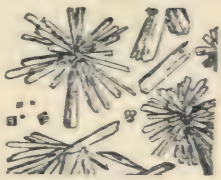
Incineration.	Murexid Test.	Final Test.	Nature of Calculus.
Melts and leaves a fixed residue.	Purple color.	Yellow flame when burned.	Sodium urate.
Melts and leaves a fixed residue.	Purple color.	Violet flame when burned.	Potassium urate
Melts and leaves a fixed residue.	No purple color.	Dissolve residue in acetic acid; add ammonia in excess—white, crystalline precipitate.	Ammonio-magnesium phosphat
Melts and leaves a fixed residue.	No purple color.	Residue insoluble in acetic acid. Dissolve in HCl; add ammonia—white precipitate.	Calcium phosphate.
Does not melt, but leaves a fixed residue.	Purple color.	Dissolve residue in dilute HCl; add ammonia until alkaline, then ammonium-carbonate solution. (*a*) White precipitate. (*b*) No precipitate, but hydric soldic phosphate causes white, crystalline precipitate.	Calcium urate. Magnesium ura
Does not melt, but leaves a fixed residue.	No purple color.	Residue dissolved in water is not alkaline. Dissolves in HCl without effervescence. Ammonia in excess causes a white precipitate.	Calcium phosphate.
Does not melt, but leaves a fixed residue.	No purple color.	The calculus is insoluble in acetic acid, but the residue dissolves with effervescence. The calculus dissolves with effervescence in acetic acid	Calcium oxalat Calcium carbon
No fixed residue.	Purple color.	Mix powder with lime and moisten. (*a*) Ammonia is evolved and red litmus paper becomes blue in the vapor. (*b*) No ammonia.	Ammonium ur Uric acid.
No fixed residue.	No purple color.	Nitric-acid solution grows yellow with evaporation. Residue insoluble in potassium carbonate.	Xanthin.
No fixed residue.	No purple color.	Nitric-acid solution turns dark-brown. Residue soluble in ammonia.	Cystin.
No fixed residue.	No purple color.	The soft calculus grows brown when dry and soft again with heat. Soluble in ether and residue grows violet on heating. Soluble in nitric acid, with slight bubbling; no change of color.	Urostealith.

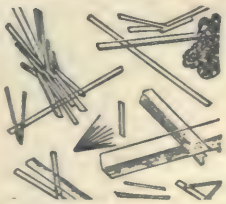
U. Canal, a primitive urinary passage. **U. Cast,** a tube-cast. **U. Organs,** the organs concerned in the secretion and excretion of the urine. They include the kidneys, bladder, ureters, and urethra. **U. Sediment,** the deposit of sabulous and other material left after urine has been allowed to stand for some hours in a vessel. A table of the principal materials that may be found in urinary sediment is appended:—

TABLE OF URINARY SEDIMENTS.



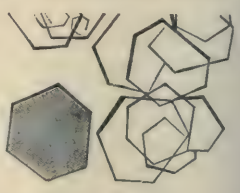


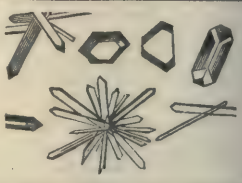


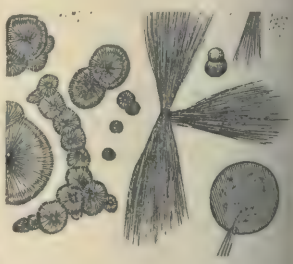


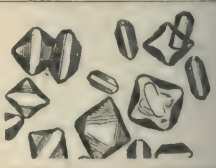
Variety.	Gross Appearances and Characters.	Microscopic Features.	Tests.	Significance.	Illustrations. (*After Tyson, Casselman, Landois, Beale, and von Jaksch.*)
Blood.	A flocculent, red deposit.	Blood-corpuscles.	Equal parts of tincture guaiac and mature oil turpentine or ozonic ether cause green line at junction with urine.	Disease of kidney, bladder, or urethra.	
Calcium carbonate.	Whitish sediment (rare); urine alkaline.	Amorphous granules; small spheric or dumb-bell crystals.	Soluble in acids, with effervescence.	No special significance.	
Calcium oxalate.	Cloudy, whitish, often highly refracting sediment.	Transparent, refracting octahedra. Sometimes "dumb-bell" shaped.	Soluble in mineral acids, not in acetic.	Vegetable diet, especially rhubarb; oxaluria; often with uric acid in lithemia.	
Calcium phosphate.	Whitish or yellowish sediment; urine feebly acid or alkaline.	Amorphous granules, or wedge-shaped crystals, separate or in roset-like clusters.	Insoluble by heat; soluble in acetic or mineral acids.	Phosphaturia; dyspepsia; alkaline fermentation.	
Calcium sulphate.	Not distinctive; rare; urine acid.	Elongated, transparent needles or tablets.	Insoluble in ammonia or acids.	No special significance.	
Cholesterin.	Not distinctive; very rare; urine alkaline.	Large, transparent plates, often superimposed; one corner frequently defective.	The microscopic appearances.	Pyelitis, cystitis, etc.	

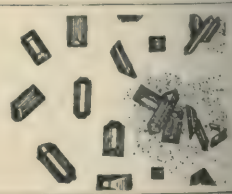
TABLE OF URINARY SEDIMENTS.—*Continued.*

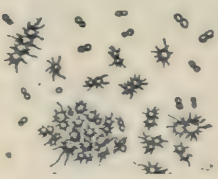


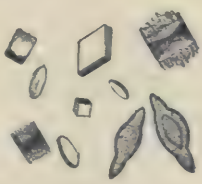












VARIETY.	GROSS APPEARANCES AND CHARACTERS.	MICROSCOPIC FEATURES.	TESTS.	SIGNIFICANCE.	ILLUSTRATIONS. (*After Tyson, Casselman, Landois, Beale, and von Jaksch.*)
Cystin.	White or yellowish-gray deposit; rare; acid, neutral, or alkaline urine.	Six-sided plates, often superimposed.	Crystals burn on platinum with a bluish-green flame without melting; if heated with caustic potash on silver plate leave a permanent, dark stain.	Cystinuria may be an hereditary and insignificant condition; or it may indicate the presence of a cystin-stone in the kidney.	
Hippuric acid.	Not distinctive; whitish deposit; urine acid.	Four-sided prisms with two or four beveled edges at the ends.	Dissolved in ammonia, but not in hydrochloric acid.	Diet of cranberries and other vegetables; administration of benzoic acid; in diabetes.	
Indigo.	Amorphous fragments or concretions of blue color; urine alkaline or acid.	Amorphous granules, fine needles, and crystals of a blue color.	The color is distinctive.	In decomposing urine.	
Leucin and tyrosin.	Usually a bile-stained deposit; often scanty; rare; urine acid.	*Leucin:* Yellowish, highly refracting spheres, containing radiating lines. *Tyrosin:* "Needles" arranged in "sheafs."	*Leucin:* Heating with protonitrate of mercury in solution deposits metallic mercury. *Tyrosin:* Crystals dissolved in hot water, and treated with mercuric nitrate and nitrate of potassium, giving a red solution and red precipitate.	Destruction of liver; especially acute yellow atrophy, and phosphorus-poisoning.	
Magnesium phosphate.	Not distinctive; rare; urine concentrated, but feebly acid or alkaline.	Large, strongly refracting plates, in the shape of elongated rhombic tablets.	Soluble in acetic acid, re-precipitated by carbonate of sodium.	No special significance.	
Mucin.	Cloudy turbidity or a viscid, gelatinous sediment.	Epithelium and leukocytes, held in a stringy, transparent mass.	Acetic acid causes cloudiness or precipitate.	Genito-urinary catarrh, especially cystitis.	
Phosphates, Triple—Ammonio-magnesium phosphate.	Heavy, white deposit; urine feebly acid or alkaline.	Triangular prisms with beveled edges—"coffin lids." Also feathery, star shapes, and other forms.	Insoluble by heat. Soluble in acetic or mineral acids.	Dyspepsia; alkaline fermentation of urine; cystitis.	

TABLE OF URINARY SEDIMENTS.—*Continued.*

Variety.	Gross Appearances and Characters.	Microscopic Features.	Tests.	Significance.	Illustrations. (*After Tyson, Casselman, Landois, Beale, and von Jaksch.*)
Pus.	Compact, thick, viscid sediment; urine acid or alkaline.	Degenerated leukocytes.	The dark-red color of pus corpuscles on adding iodo-potassic-iodid solution.	In acid urine, with uric acid and no mucus: pyelitis; or alkaline urine with triple phosphates: cystitis.	
Tyrosin.	See *Leucin*.				
Urates of sodium, ammonium, and potassium. (*The illustration is of ammonium urate.*)	"Brick-dust" deposit, the color due to the color of the urine. Dissolved and cleared by heating. Urine acid; sometimes alkaline.	Amorphous granules. Ammonium urate appears as spheric crystals surrounded by spicules—"hedgehog crystals."	Dissolved by heat or on adding acids.	Lithemic and rheumatic diathesis. Fever. Ammonium urate occurs when an acid urine is undergoing alkaline fermentation.	
Uric acid.	Small grains, resembling red pepper; urine acid.	Crystals of various shapes colored brownish-red by the urinary pigments. The commonest form resembles a whetstone.	The crystals dissolve in caustic potash. The murexid-test produces a purple color.	Lithemic or rheumatic diathesis.	
Xanthin.	Not distinctive; urine acid; very rare.	"Whetstone" crystals.	Insoluble in acetic acid; soluble in ammonia.	Xanthin-stone in the kidney.	*H. Bence Jones once found this substance in the urine of a lad who had three years previously exhibited the symptoms of renal colic. It was seen in the sediment in the form of whetstone crystals, which were insoluble in acetic acid and soluble in ammonia (thus distinguished from uric acid).—Von Jaksch.*

Urinate (*u'-rin-āt*) [*urina*, urine]. To evacuate urine from the bladder.

Urination (*u-rin-a'-shun*) [*urina*, urine; *urinare*, to urinate]. The act of voiding urine.

Urine (*u'-rin*) [*urina*, urine]. The excretion of the kidneys. The urine in health has an amber color, a slightly acid reaction, a faint odor, a saline taste, and a specific gravity of about 1018. The average quantity excreted in 24 hours, in health, is about three pints. The constitution and the amount of the urine are modified considerably by the food and drink taken, also by drugs, temperature, occupation, etc. **U., Anemic**, the urine in anemia. **U., Black**, urine containing melanin. **U., Chylous**, a milky urine due to the presence of fat or chyle. **U., Diabetic**, urine passed in diabetes, containing glucose. **U., Dyspeptic**, the urine of a dyspeptic patient. It often contains crystals of calcium oxalate. **U., Gouty**, urine scanty in amount, highly colored, and containing an excess of uric acid. **U., Incontinence of**, inability to retain the urine. See *Enuresis*. **U., Mucilaginous**, urine containing a large amount of mucus. **U., Nebulous**, urine cloudy from earthy phosphates. **U., Residual**, urine that remains in the bladder after urination in prostatic hypertrophy and in cystic disease. **U., Retention of.** Inability to pass the urine. See *Ischuria*. **U., Suppression of.** See *Ischuria*. **U., Tests for Serum-albumin in.** From a series of experiments with mucoid nucleo-albumin (so-called mucin), Dr. D. D. Stewart concludes that the old-fashioned heat-test is the only reliable one for the recognition of serum-albumin in the urine, but that no dependence can be placed on a reaction occurring while the urine is cooling if an acid has been added to assist in the precipitation of serum-albumin or to maintain phosphates in solution. This author also asserts that metaphosphoric acid is untrustworthy as a serum-albumin test, on account of reacting to traces of so-called mucin in a manner indistinguishable from the serum-albumin reaction. Trichloracetic acid is also so delicate a reagent for the detection of albumin, that, by it, a normal, constant trace of albumin is proved. With careful technique, an albumin-reaction occurs with all cold urines, either instantly or within a few moments after contact, and this reaction may be made to appear almost instantly in any normal, unfiltered, clear urine, if the test tube is placed for a short time in water at the boiling point. So extraordinarily sensitive is this reagent that it gives an albumin-ring with distilled water which has been passed through

filtering paper of the finest grades, including the best Swedish paper, which is supposed to contain the least amount of vegetable albumin. See *Tests, Table of.* A table of the *Colors of the Urine* is appended.

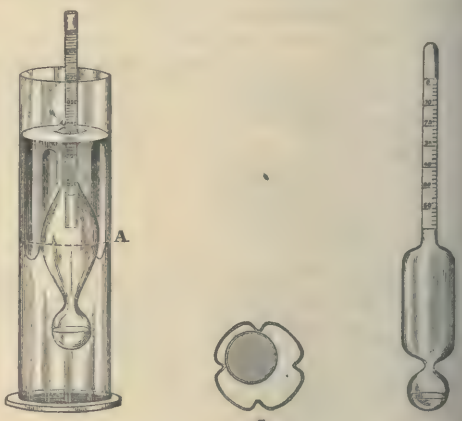
COLORS OF THE URINE.

Color.	Cause of the Color.	Pathologic Condition or Cause.
Nearly colorless.	Dilution or diminished pigments.	Various nervous conditions, hydruria, diabetes mellitus, diabetes insipidus, contracted kidney.
Normal color, becoming black on standing.	Unknown; glycosuric acid.	Sometimes in pulmonary tuberculosis. Pathology unknown.
Milky.	Fat-globules; pus-corpuscles.	Chyluria; fatty kidney; purulent disease in the urinary tract.
Dark-amber to reddish-brown.	Increase of normal or occurrence of pathologic pigments; concentration of the urine.	Fever; pernicious anemia; excessive sweating.
Yellow.	Excreted drugs,	*e. g.*, picric acid.
Orange.	Excreted drugs,	*e. g.*, santonin. chrysophanic acid.
Brown to black.	Hematin, methemoglobin, melanin, hydrochinon, and catechol.	Small hemorrhages; methemoglobinuria; antipyrin; chlorate of potash; melanotic sarcoma; carbolic acid; creasote.
Brownish-yellow to red, becoming blood-red on adding alkalies.	Substances introduced with senna, rhubarb, and chelidonium.	
Red or reddish.	Hemoglobin or free blood. Pigments in food,	Hemoglobinuria or hematuria. *e. g.*, logwood madder, bilberries, fuchsin.
Greenish to brown or black.	Bile-pigments.	Jaundice.
Dirty-green or blue.	Dark serum on surface, and blue deposit due to indigo-forming substances.	Cholera, typhus, hepatic, and intestinal affections. Especially marked in stale urine.

Urinemia (*u-rin-e′-me-ah*) [*urina*, urine; *αἷμα*, blood]. The existence of urinary constituents in the blood.

Uriniferous (*u-rin-if′-er-us*) [*urina*, urine; *ferre*, to bear]. Carrying or conveying urine. **U. Tubules.** See under *Tubulus.*

Urinific (*u-rin-if′-ik*) [*urina*, urine; *facere*, to make]. Excreting or producing urine.



Uriniparous (*u-rin-ip′-ar-us*) [*urina*, urine; *parere*, to produce]. Preparing or excreting urine.

Urinogenital (*u-rin-o-jen′-it-al*) [*urina*, urine; *γεννᾶν*, to produce]. Pertaining to urination and the genital function; urogenital.

Urinogenitary (*u-rin-o-jen′-it-a-re*). Same as *Urinogenital.*

Urinology (*u-rin-ol′-o-je*) [*urina*, urine; *λόγος*, science]. The science of the analysis and diagnostic significance of urine.

Urinometer (*u-rin-om′-et-er*) [*urina*, urine; *μέτρον*, measure]. A hydrometer for ascertaining the specific gravity of urine.

A. Squibb's Urinometer and Jar. *b.* Section of Same.

Urinometric (*u-rin-o-met′-rik*) [*urina*, urine; *μέτρον*, measure]. Pertaining to urinometry.

Urinometry (*u-rin-om′-et-re*) [*urina*, urine; *μέτρον*, measure]. The determination of the specific gravity of the urine by the urinometer.

Urinoscopic (*u-rin-o-skop′-ik*) [*urina*, urine; *σκοπεῖν*, to view]. Pertaining to the inspection of the urine.

Urinoscopy (*u-rin-os′-ko-pe*). See *Uroscopy.*

Urinose (*u′-rin-ōz*). Same as *Urinous.*

Urinous (*u′-rin-us*) [*urina*, urine]. Having the nature of urine.

Urite (*u′-rit*) [*οὐρά*, tail]. In biology, the ventral section of an arthropodan uromere.

Uritis (*u-ri′-tis*) [*urere*, to burn; *ιτις*, inflammation] Inflammation following a burn.

Urning (*urn′-ing*) [*Οὐρανός*, the Greek personification of heaven]. A homo-sexual individual; a pervert in whom the desire is only for individuals of the same sex.

Uro- (*u′-ro-*) [*οὖρον*, urine]. As a prefix, denotes connection with or relation to the urine, uric acid, or a urate.

Uro-acidimeter (*u-ro-as-id-im′-et-er*) [*οὖρον*, urine; *acidum*, acid; *μέτρον*, measure]. An instrument for measuring the acidity of urine.

Urobacillus (*u-ro-bas-il′-us*) [*οὖρον*, urine; *bacillum*, a rod]. A bacillus derived from decomposed urine. There are several varieties. See *Bacteria, Table of.*

Urobenzoic Acid (*u-ro-ben-zo′-ik*). Synonymous with *Hippuric Acid, q. v.*

Urobilin (*u-ro-bil′-in*) [*οὖρον*, urine; *bilis*, bile], $C_{32}H_{40}N_4O_7$. A derivative of bilirubin. It is a yellowish-brown, amorphous pigment, almost insoluble in water. It is the principal pigment of the urine, and is increased in the deeply colored urine of febrile and other conditions. **U., Pathologic,** the excessive coloring-matter of certain dark urines occurring in various diseases, as pernicious anemia, febrile diseases, etc. See *Urine, Colors of.*

Urobilinoidin (*u-ro-bil-in-oid′-in*) [*οὖρον*, urine; *bilis*, bile; *οὖρον*, urine]. A form of urinary pigment derived from hematin and resembling urobilin, though not identical with it. It occurs in certain pathologic conditions.

Urobilinuria (*u-ro-bil-in-u′-re-ah*) [*οὖρον*, urine; *bilis*, bile; *οὖρον*, urine]. The presence of an abnormally large proportion of urobilin in the urine.

Urobutylchloralic Acid (*u-ro-bu-til-klo-ral'-ik*) [*οὖρον*, urine, *butyl*; *χλωρός*, green]. A body obtained from the urine after the ingestion of butyl-chloral.

Urocanic Acid (*u-ro-kan'-ik*) [*οὖρον*, urine; *canis*, dog], $C_6H_6N_2O_2+2H_2O$. An acid found in the urine of dogs when there is a diminution in the amount of urea. By heating to 212° C. it is decomposed into carbonic acid, water, and a base, *Urocanin*, $C_{11}H_{10}N_4O$.

Urocanin (*u-ro-kan'-in*). See *Urocanic Acid*.

Urocardiac (*u-ro-kar'-de-ak*) [*οὐρά*, tail; *καρδία*, the heart]. Of or pertaining to the caudal part of the cardiac division of the stomach of certain crustaceans.

Urocele (*u'-ro-sēl*) [*οὖρον*, urine; *κήλη*, a tumor]. A tumefaction of the scrotum, arising from an effusion of urine into its cavity or into the areolar tissue.

Urocelia, Urocœlia (*u-ro-se'-le-ah*) [*οὖρον*, urine; *κοιλία*, belly]. Swelling of the abdomen from infiltration of urine.

Urocheras (*u-rok'-er-as*) [*οὖρον*, urine; *χεράς*, sand]. The sabulous matter deposited from standing urine.

Urochesia (*u-ro-ke'-ze-ah*) [*οὖρον*, urine; *χέζειν*, to defecate]. The discharge of urine per anum.

Urochord (*u'-ro-kord*) [*οὖρον*, urine; *χορδή*, chord]. The caudal notochord of an ascidian or tunicate.

Urochrome (*u'-ro-krōm*) [*οὖρον*, urine; *χρῶμα*, color]. One of the coloring-matters of the urine. Exposed to the air, the watery solution oxidizes, forming *Uroerythrin*.

Uroclepsia (*u-ro-klep'-se-ah*) [*οὖρον*, urine; *κλεψία*, theft]. Micturition of which one is unconscious.

Urocrisis (*u-rok'-ris-is*) [*οὖρον*, urine; *κρίσις*, a separating]. A crisis of disease attended with excessive urination. Also, diagnosis by examination of the urine.

Urocyanosis (*u-ro-si-an-o'-sis*) [*οὖρον*, urine; *κύανος*, blue]. Blue discoloration of the urine, due to the presence of indican.

Urocyst, Urocystis (*u'-ro-sist, u-ro-sist'-is*) [*οὖρον*, urine; *κύστις*, bladder]. The urinary bladder.

Urocystic (*u-ro-sis'-tik*) [*οὖρον*, urine; *κύστις*, bladder]. Pertaining to the urocyst; vesical.

Urocystitis (*u-ro-sis-ti'-tis*) [*οὖρον*, urine; *κύστις*, bladder]. Inflammation of the urinary bladder; cystitis.

Urodela (*u-rod'-el-ah*). A term applied to the tailed amphibia, salamanders, etc.

Urodialysis (*u-ro-di-al'-is-is*) [*οὖρον*, urine; *διάλυσις*, a cessation]. The partial and temporary cessation of the secretion of urine by the kidneys concomitant with many acute diseases. **U. neonatorum**, retarded secretion of urine in the newborn.

Urodochium (*u-ro-do-ki'-um*) [*οὖρον*, urine; *δοχεῖον*, receptacle]. A urinal.

Urodynia (*u-ro-din'-e-ah*) [*οὖρον*, urine; *ὀδύνη*, pain]. Painful micturition.

Uroedema (*u-re-de'-mah*). See *Uredema*.

Uroerythrin (*u-ro-er'-ith-rin*) [*οὖρον*, urine; *ἐρυθρός*, red]. A urinary pigment of which but little is known. It is the coloring-matter of certain pink urinary deposits, and is probably present in highly colored urine of rheumatic diseases. It is an amorphous, reddish substance, with an acid reaction, slowly soluble in water, alcohol, and ether. See *Purpurin*.

Urofuscohematin (*u-ro-fus-ko-hem'-at-in*) [*οὖρον*, urine; *fuscus*, dark; *αἷμα*, blood]. A red pigment of the urine, derived from hematin.

Urogaster (*u'-ro-gas-ter*) [*οὖρον*, urine; *γαστήρ*, stomach]. The urinary intestine, or urinary passages collectively, which are developed from the original cavity of the allantois in connection with the primitive intestinal tract.

Urogastric (*u-ro-gas'-trik*) [*οὖρον*, urine; *γαστήρ*, stomach]. Pertaining to the urogaster.

Urogenital (*u-ro-jen'-it-al*) [*οὖρον*, urine; *γεννᾶν*, to produce]. Pertaining conjointly to the urinary and genital organs. **U. Sinus**, the anterior part of the cloaca, into which the Müllerian ducts open.

Urogenous (*u-roj'-en-us*) [*οὖρον*, urine; *γεννᾶν*, to produce]. Producing urine.

Uroglaucin (*u-ro-glaw'-sin*) [*οὖρον*, urine; *γλαυκός*, green]. A decomposition-product of indican; it is called also cyanurin, urocyanin, and indigotin.

Urogravimeter (*u-ro-grav-im'-et-er*). See *Urinometer*.

Urohematin (*u-ro-hem'-at-in*). Altered hematin in the urine.

Urohematoporphyrin (*u-ro-hem-at-o-por'-fir-in*) [*οὖρον*, urine; *αἷμα*, blood; *πόρφυρος*, purple]. Same as *Urohematin*. It is a urinary pigment occasionally occurring in certain pathologic urines, as of acute rheumatism, Addison's disease, etc. It is soluble in alcohol, ether, and chloroform.

Urohyal (*u-ro-hi'-al*) [*οὖρον*, urine; *ὑοειδής*, hyoid]. In biology, the tail-piece of the composite hyoid bone.

Uroleucic Acid (*u-ro-lu'-sik*). See *Acid*.

Uroleucinic Acid (*u-ro-lu-sin'-ik*) [*οὖρον*, urine; *λευκός*, white]. A substance found by Kirk in a specimen of urine. It is trioxyphenylpropionic acid.

Urolith (*u'-ro-lith*) [*οὖρον*, urine; *λίθος*, a stone]. A urinary calculus.

Urolithiasis (*u-ro-lith-i'-as-is*) [*οὖρον*, urine; *λιθίασις*, lithiasis]. That condition of the body which favors, or is characterized by, the formation of urinary calculi.

Urolithic (*u-ro-lith'-ik*) [*οὖρον*, urine; *λίθος*, stone]. Pertaining to or having the nature of urinary calculus.

Urolithotomy (*u-ro-lith-ot'-o-me*). See *Lithotomy*.

Urologic (*u-ro-loj'-ik*) [*οὖρον*, urine; *λόγος*, science]. Pertaining to urology.

Urologist (*u-rol'-o-jist*) [*οὖρον*, urine; *λόγος*, science]. One versed in urology.

Urology (*u-rol'-o-je*) [*οὖρον*, urine; *λόγος*, science]. The scientific study of the urine.

Uromancy (*u'-ro-man-se*) [*οὖρον*, urine; *μαντεία*, divination]. Diagnosis or prognosis by observation of the urine.

Uromelanin (*u-ro-mel'-an-in*) [*οὖρον*, urine; *melanin*]. A black pigment found in the urine. It is probably derived from the decomposition of urochrome.

Uromelus (*u-rom'-e-lus*) [*οὐρά*, tail; *μέλος*, limb]. A single autositic monster of the species symelus, in which there is more or less complete fusion of the limbs, with but a single foot.

Uromere (*u'-ro-mēr*) [*οὐρά*, tail; *μέρος*, part]. In biology, one of the abdominal segments of an arthropod.

Uromeric (*u-ro-mer'-ik*) [*οὐρά*, tail; *μέρος*, part]. Pertaining to a uromere.

Urometer (*u-rom'-et-er*). See *Urinometer*.

Uroncus (*u-rong'-kus*) [*οὖρον*, urine; *ὄγκος*, tumor]. A tumor containing urine.

Uronephrosis (*u-ro-nef-ro'-sis*). See *Hydronephrosis*.

Urophæin (*u-ro-fe'-in*) [*οὖρον*, urine; *φαιός*, gray]. A pigment-body to which the characteristic odor of the urine has been ascribed.

Urophthisis (*u-roff'-this-is*) [*οὖρον*, urine; *φθίσις*, wasting]. Synonym of *Diabetes mellitus*.

Uropittin (*u-ro-pit'-in*) [*οὖρον*, urine], $C_9H_{10}N_2O_3$. A derivative of urochrome.

Uroplania (*u-ro-pla'-ne-ah*) [*οὖρον*, urine; *πλάνη*, wandering]. The abnormal appearance of urine in other than the urinary organs.

Uropod (*u'-ro-pod*) [*οὐρά*, tail; *πούς*, foot]. In biology, one of the abdominal limbs of an arthropod.

Uropodal (*u-rop'-o-dal*) [*οὐρά*, tail; *πούς*, foot]. Pertaining to uropods.

Uropoiesis (*u-ro-poi-e'-sis*) [οὖρον, urine; ποιέειν, to make]. The secretion of the urine by the kidneys.

Uropoietic (*u-ro-poi-et'-ik*) [οὖρον, urine; ποιέειν, to make]. Concerned in uropoiesis; uriniparous.

Uropsammus (*u-rop-sam'-us*) [οὖρον, urine; ψάμμος, sand]. Urinary sand, or gravel.

Uropygial (*u-ro-pij'-e-al*) [οὐροπύγιον, rump]. Pertaining to the *Uropygium*.

Uropygii, Glandula. The uropygial gland of a bird. See *Gland*.

Uropygium (*u-ro-pij'-e-um*) [οὐρά, tail; πυγή, rump: *pl.*, *Uropygia*]. In biology, the rump.

Uropyloric (*u-ro-pi-lor'-ik*) [οὐρα, tail; πυλωρός, a gatekeeper]. In biology, of or pertaining to the posterior portion of the pyloric division of the stomach of certain Crustaceans.

Urorhodin (*u-ro-ro'-din*) [οὖρον, urine; ῥόδον, rose]. A red pigmentary deposit found in urine and derived by alteration from uroxanthin.

Urorosein (*u-ro-ro'-ze-in*) [οὖρον, urine; *rosein*]. A rose-colored pigment found in the urine in various diseases.

Urorrhagia (*u-ror-a'-je-ah*) [οὖρον, urine; ῥηγνύναι, to burst forth]. Excessive secretion and discharge of urine.

Urorrhea (*u-ror-e'-ah*) [οὖρον, urine; ῥοία, a flow]. 1. The ordinary, normal flow of the urine. 2. The involuntary passage of urine.

Urorubin (*u-ro-ru'-bin*) [οὖρον, urine; *rubus*, red]. A red urinary pigment.

Urorubrohematin (*u-ro-ru-bro-hem'-at-in*) [οὖρον, urine; *rubrum*, red; αἷμα, blood]. A urinary pigment obtained from the urine of leprous patients.

Urosacral (*u-ro-sa'-kral*) [οὐρά, the tail; *sacrum*, sacrum]. Pertaining to the tail and the sacrum.

Uroscheocele (*u-ros'-ke-o-sēl*). See *Urocele*.

Uroschesis (*u-ros'-kes-is*) [οὖρον, urine; σχέσις, retention]. Suppression of urine.

Uroscopic (*u-ro-skop'-ik*). Same as *Urinoscopic*.

Uroscopist (*u-ros'-ko-pist*) [οὖρον, urine; σκοπεῖν, to view]. One who makes a specialty of urinary examinations.

Uroscopy (*u-ros'-ko-pe*) [οὖρον, urine; σκοπεῖν, to examine]. Examination and analysis of the urine.

Urosepsis (*u-ro-sep'-sis*) [οὖρον, urine; σῆψις, sepsis]. The condition of intoxication due to the extravasation of urine.

Uroseptic (*u-ro-sep'-tik*) [οὖρον, urine; σῆψις, sepsis]. Relating to or characterized by urosepsis.

Urosis (*u-ro'-sis*) [οὖρον, urine; νόσος, disease: *pl.*, *Uroses*]. In pathology, any disease of the urinary organs.

Urosomatic (*u-ro-so-mat'-ik*) [οὐρά, tail; σῶμα, body]. Pertaining to the urosome.

Urosome (*u'-ro-sōm*) [οὐρά, tail; σῶμα, body]. In biology: (*a*) The last segment of the tail of a vertebrate; (*b*) the abdomen or post-abdomen of an arthropod.

Urosomite (*u-ro-so'-mīt*). Same as *Uromere*.

Urosomitic (*u-ro-so-mit'-ik*) [οὐρά, tail; σῶμα, body]. Pertaining to a urosomite.

Urospasm (*u'-ro-spazm*) [οὖρον, urine; σπασμός, spasm]. Spasm of some part of the urinary tract.

Urostealith (*u-ro-ste'-al-ith*) [οὖρον, urine; στέαρ, fat; λίθος, stone]. A fatty or saponaceous matter occurring in some urinary calculi.

Urostegal (*u'-ro-ste-gal*) [οὐρά, tail; στέγη, a roof]. Pertaining to the urosteges.

Urostege (*u'-ro-stēj*) [οὐρά, tail; στέγη, a roof]. In biology, one of the large scales on the ventral side of the tail of a snake. Cf. *Gastrostege*.

Urostegite (*u'-ro-ste-jīt*) [οὐρά, tail; στέγη, roof]. One of the urosteges, or urostegal scales.

Urosteon (*u-ros'-te-on*) [οὐρά, tail; ὀστέον, bone]. In biology, the caudal portion of the sternum of certain birds, having a separate center of ossification.

Urosternite (*u-ro-ster'-nīt*) [οὐρά, tail; στέρηον, sternum]. The sternite, or ventral median sclerite, of any somite of the urosome of an arthropod.

Urosthene (*u'-ros-thēn*) [οὐρά, tail; σθένος, strength]. In biology, an animal possessing an unusual development of the tail.

Urosthenic (*u-ro-sthen'-ik*) [οὐρά, tail; σθένος, strength]. Strong in the tail.

Urostylar (*u-ro-sti'-lar*) [οὐρά, tail; στῦλος, column]. Pertaining to a urostyle.

Urostyle (*u'-ros-tīl*) [οὐρά, tail; στῦλος, column]. In biology, the elongated terminal vertebra of the spinal column of certain animals, as the *os coccygis* of the frog.

Urotheobromin (*u-ro-the-o-bro'-min*). See *Paraxanthin*.

Urotoxic (*u-ro-toks'-ik*) [οὖρον, urine; τοξικόν, poison]. Pertaining to poisonous substances eliminated in the urine.

Urotoxy (*u'-ro-toks-e*) [οὖρον, urine; τοξικόν, poison]. A term invented by Bouchard to denote the standard of toxicity of urine necessary to kill a kilogram of living substance.

Urous (*u'-rus*) [οὖρον, urine]. Having the nature of urine.

Uroxanthin (*u-ro-zan'-thin*) [οὖρον, urine; ξανθός, yellow]. Indigogen. A pigmentary substance occurring normally in human urine. Its secretion is enormously increased in the first stage of cholera and in certain affections of the liver and of the myelon.

Uroxin (*u-roks'-in*) [οὖρον, urine; ὀξύς, sharp]. Same as *Alloxantin*.

Urrhodin (*ur-rod'-in*) [οὖρον, urine; ῥόδινος, rosy]. A red, purple, or violet urinary pigment, derived from uroxanthin.

Urrhosacin (*ur-o'-sas-in*). See *Urrhodin*.

Ursone (*ur'-sōn*). See *Ericolin*.

Urtica (*ur'-tik-ah*) [L.: *gen.*, *Urticæ*]. A genus of apetalous plants including the nettles. See *Nettle* and *Pomphus*.

Urtical (*ur'-tik-al*) [*urtica*, nettle]. Belonging to the nettles.

Urticaria (*ur-tik-a'-re-ah*) [*urtica*, a nettle]. *Nettle-rash; Cnidosis; Hives;* an inflammatory disorder of the skin characterized by the development of wheals, which give rise to subjective sensations of burning and itching. These appear suddenly in large or small numbers, remain for from a few minutes to several hours, and disappear as suddenly as they came, leaving no trace behind. The disease may be acute or chronic, and due to various agencies acting upon the vaso-motor system, such as gastro-intestinal disorders, intestinal worms, the ingestion of shell-fish, etc. **U. acuta**, an acute form often associated with fever of 101–2° F. (*U. febrilis*). The pulse is quick, and there are marked signs of gastric irritation, with headache and prostration. The eruption may not appear for a day or two, and then comes out copiously all over. It disappears rapidly after removal of the cause of gastric irritation. **U. bullosa**, an exaggerated form of *U. vesicans*. **U. chronica**, a term referring to the duration of the disease as a whole, and not to that of the successive crops of wheals individually. The disease may last for an indefinite period. **U. conferta**, a form in which the lesions occur in groups. **U. endemica**, an irritative cutaneous eruption occurring in some districts, notably the Kahlberger Schweiz, and caused by the procession caterpillars, particularly the species *Cnethocampa*. The eruption is papular and wheal-like in

character, and is accompanied by intolerable itching. It is usually seen on the flexor surfaces of the extremities, but may appear on any part of the body, also on the mucous membranes. Domestic animals are also subject to the affection. The poisonous agent secreted by these insects is formic acid. Their influence is said to be either mechanical or chemical, and it is even said that contact is not necessary to its production. **U. evanida,** a variety in which there is a rapid disappearance of the symptoms. **U. factitia,** *Dermographia, Autographism, Dermographism,* the form produced in individuals with an irritable skin by any slight external irritation. **U. febrilis.** See *U. acuta.* **U. gigans.** See *U. tuberosa.* **U. hæmorrhagica,** *Purpura urticans;* hemorrhage into the urticarial wheals from rupture of the extremely congested capillaries. **U. medicamentosa,** that variety resulting from the use of certain drugs. **U., Nervous.** Synonym of *U. factitia.* **U. œdematosa,** *Giant Urticaria,* a variety characterized by the sudden appearance of large, soft, edematous swellings of the skin and subcutaneous tissue, which may measure several inches in diameter. These are especially prone to develop about the eyelids, but may also attack the trunk and limbs in the neighborhood of the joints. A sense of tension is all that is complained of. If the mucous membrane of the throat and larynx is involved the symptoms are alarming but not dangerous. A variety of this is the so-called *Quincke's Disease,* or *acute circumscribed edema,* in which the orbital tissue or the tissue of other parts of the face may swell up into a large tumor, or there may be a large, ill-defined swelling of a considerable portion of the limb or other part of the body from subcutaneous edema (*U. subcutanea*). It is generally limited to the loins and thighs. **U. papulosa,** *Lichen urticatus,* a form occurring in children, in which, as a result of the inflammatory effusion, a small, solid papule remains after the subsidence of the wheal. It is most abundant about the loins and buttocks, but may appear on any other part of the body. It is often associated with irregular, flat, scabbed pustular lesions. **U. pigmentosa,** *xanthelasmoidea,* a rare type of urticaria, which begins within the first few months of life. It consists of large, reddish, wheal-like tubercles that eventually change to a brownish-red or yellowish color. Itching may or may not be present. The disease runs a protracted course, but tends to spontaneous recovery at puberty. It is most abundant on the neck and trunk, next upon the limbs, face, and head, and is only occasionally present on the palms and soles. Boys are commonly affected. **U., Provoked.** Synonym of *U. factitia.* **U. subcutanea.** See *U. œdematosa.* **U. toxica,** that due to certain articles of food. **U. tuberosa,** *U. gigans,* a form in which the wheals assume a tuberous form and become very large, as big as a walnut, hen's egg, or even larger. The lesions are few in number, and the disease occurs mainly in persons with broken-down constitutions, beyond middle age. See *Angio-neurotic edema.* **U. vesicans,** excessive serous effusion into the center of the wheals, producing vesicles. **U. vesiculosa.** Same as *U. papulosa.*

rticarial, Urticarious (*ur-tik-a'-re-al, ur-tik-a'-re-us*) [*urticaria,* nettle-rash]. Pertaining to urticaria.

rticate (*ur'-tik-āt*) [*urticare,* to sting]. To sting like a nettle.

rtication (*ur-tik-a'-shun*) [*urticatio; urtica,* nettle]. Flagellation with nettles, a method of treatment formerly employed in paralysis, and also to produce irritation; also, a sensation as if one has been stung with nettles.

Usage (*u'-sāj*) [*usus,* use]. Any common habit, custom, or manner.

Uschinsky's Solutions. Non-albuminous culture-media for the cultivation of pathogenic bacteria, especially. Uschinsky suggests the following two mixtures: (*a*) Water 1000, glycerin 40–50, sodium chlorid 5–7, calcium chlorid 0.1, magnesium sulphate 0.2, dipotassic phosphate 1.0, ammonium lactate 10.0. (*b*) Water 1000, glycerin 30–40, calcium chlorid 0.1, sodium chlorid 5–7, magnesium sulphate 0.2–0.4, dipotassic phosphate 2–2.5, ammonium lactate 6–7, sodium asparaginate 3.4.

Usquebaugh (*us'-kwe-baw*) [Irish]. A strong cordial made in Ireland. It furnishes the name from which the word whiskey is derived.

Ustilaginous (*us-til-aj'-in-us*) [*ustilago,* ustilago]. Affected with ustilago; smutty.

Ustilago (*us-til-a'-go*) [L.: *gen., Ustilaginis*]. A genus of parasitic fungi; the smuts. **U. maydis,** *Corn-smut,* a fungus parasitic upon maize or Indian corn, *Zea Mays.* In medicinal properties, it resembles nux vomica and ergot of rye combined, but it is rarely employed. **U., Ext., Fld.,** unof. Dose ♏xv–℥j.

Ustion (*us'-chun*) [*ustio; urere,* to burn]. A burning. In chemistry, incineration. In surgery, cauterization.

Ustulation (*us-tu-la'-shun*) [*ustulatio*]. The roasting, drying, or parching of a drug as a step in preparing it for use.

Ustus (*us'-tus*) [*urere,* to burn]. Calcined. Dehydrated by intense heat.

Uterectomy. Same as *Hysterectomy.*

Uteri, Adscensus (*u'-ter-i-ad-sen'-sus*). Synonym for *Hysteria.*

Uterine (*u'-ter-in*) [*uterinus*]. Pertaining to the uterus. **U. Anteflexion,** and **Anteversion.** See *Uterus.* **U. Appendages,** the ovaries and oviducts. **U. Gestation,** the period of time between conception and delivery; the development of the product of conception within the cavity of the uterus. **U. Inertia.** See *Uterus.* **U. Inversion.** See *Uterus.* **U. Involution.** See *Uterus.* **U. Milk:** 1. A fluid between the villi of the placenta in the cow. 2. The small quantity of albuminous fluid contained in the small spaces between the epithelial covering of the villi of the chorion and the crypts or depressions in the decidua. **U. Pregnancy,** normal pregnancy. **U. Segments.** See *Contraction-ring.* **U. Souffle,** a vascular sound heard on auscultation through the abdominal wall between the fifth and sixth months of pregnancy. See *Placental Murmur.*

Uteritis (*u-ter-i'-tis*) [*uterus,* uterus; τις, inflammation]. Inflammation of the womb. See *Metritis.*

Utero- (*u'-ter-o-*) [*uterus,* uterus]. A prefix to denote connection with or relation to the womb.

Utero-abdominal (*u-ter-o-ab-dom'-in-al*). Pertaining conjointly to the uterus and the abdomen.

Uterocopulatory (*u-ter-o-kop'-u-la-tor-e*) [*uterus,* uterus; *copulate*]. Vaginal or copulatory, as certain sexual passages of hermaphrodite gasteropods.

Uterodeferent (*u-ter-o-def'-er-ent*) [*uterus,* uterus; *deferent*]. Oviducal or deferent, as certain sexual passages of hermaphrodite gasteropods.

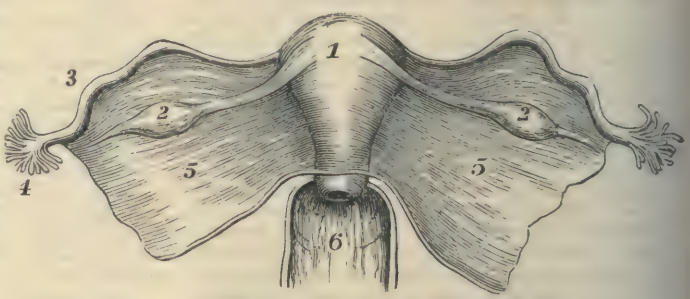
Utero-fixation (*u-ter-o-fiks-a'-shun*). Hysteropexia, or abdominal fixation of the uterus by surgical operation.

Utero-gestation (*u-ter-o-jes-ta'-shun*) [*uterus,* uterus; *gestatio,* gestation]. The uterine period of gestation; pregnancy; gestation within the cavity of the uterus.

Uteromania (*u-ter-o-ma'-ne-ah*). See *Nymphomania.*

Uterometer (*u-ter-om'-et-er*) [*uterus*, uterus; *μέτρον*, measure]. An instrument used to accurately determine the depth and position of the uterus and to locate and estimate the dimensions of structures therein contained.

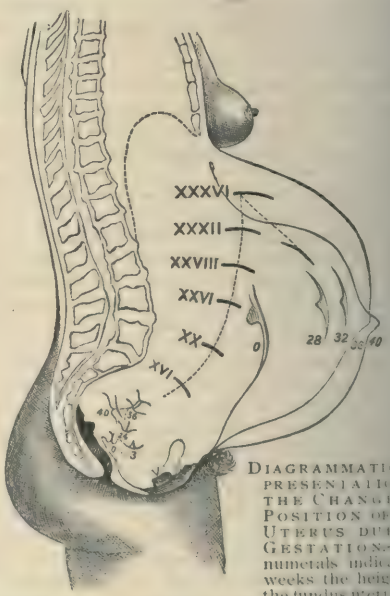
Utero-ovarian (*u-ter-o-o-va'-re-an*) [*uterus*, uterus; *ovarium*, ovary]. Pertaining conjointly to the uterus and the ovaries.



Uteropexia, Uteropexy (*u-ter-o-peks'-e-ah, u'-ter-o-peks-e*). See *Hysteropexia*.

Uteroscope (*u'-ter-o-skōp*) [*uterus*, uterus; *σκοπεῖν*, to inspect]. A uterine speculum.

Uterotome (*u'-ter-o-tōm*) [*uterus*, uterus; *τομή*, a cutting]. A cutting instrument used in uterotomy. See *Hysterotome*.



Uterotomy (*u-ter-ot'-o-me*) [*uterus*, uterus; *τέμνειν*, to cut]. Incision into the uterus. See *Hysterotomy*.

Uterus (*u'-ter-us*) [L.: *gen.*, *Uteri*]. The womb; the organ of gestation; it receives the fecundated ovum in its cavity, retaining and supporting it during the development of the fetus, and becoming the principal agent in its expulsion during parturition. The uterus in the non-gravid state in the human subject is a hollow, pear-shaped, muscular organ, three inches long, two inches wide, and one inch thick, and is divided into three portions, the *fundus*, the *body*, and the *cervix*. The fundus is the upper and broad portion; the body gradually narrows to the neck, which is the contracted portion. The mesal orifice, *os uteri*, communicates with the vagina. The ental surface is covered with mucosa continuous with that of the vagina. The ectal surface of the fundus and body is covered with peritoneum. The whole organ is suspended in the pelvis by means of the broad ligament. Its cavity measures two and a half inches in length. The Fallopian tubes enter one on either side of the fundus at the cornua of the organ. **U., Anteflexion of.** See *Anteflexion*. **U., Anteversion of.** See *Anteversion*. **U., Arbor vitæ of,** branch-like elevation of the mucous membrane of the cervix. **U. bicornis,** when, from arrested development, the uterus is divided into two horns or compartments. **U., Body of,** that part above the isthmus. **U., Cervix of,** that part below the isthmus. **U., Columns of,** the ridges or elevations of the mucous membrane of the cervix from which extend the branches that with three columnar central axes are called the arbor vitæ. **U., Contraction of,** the intermittent contractile action of the uterus whereby the fetus is expelled. **U. cordiformis,** an arrest of development, as a result of which the uterus is heart-shaped, or with a depression in the fundus. **U., Corpus of.** See *U., Body of*. **U. duplex,** a double uterus from an arrest of development. **U., Fundus of,** the portion above a line drawn from one oviduct to the other. **U., Gravid,** a uterus containing a fecundated ovum. **U., Hour-glass Contraction of,** the formation of two distinct cavities of the body and neck, the narrowed internal os marking the boundary between them. **U., Impregnated.** See *U., Gravid*. **U., Incarceration of,** strangulation by pressure or constriction. **U., Inertia of,** deficiency of uterine contractions in labor. **U., Infantile,** a uterus normally formed, but arrested in development. **U., Inversion of,** the organ is "upside-down, and wrong-side out." **U., Involution of,** the process whereby the uterus is reduced to its normal size and weight after labor. **U., Isthmus of,** a slight depression or constriction upon the ectal surface of the uterus separating the body from the cervix. **U. masculinus,** the little passage formed by the sinus pocularis in the substance of the prostate. It is so called from its resemblance in structure to the female uterus. See *Prostatic Vesicle*. **U., Neck of,** same as *U., Cervix of*. **U., One-horned,** an arrest of development resulting in a uterus composed of a single lateral half, usually with but one oviduct. **Uteri, Os Externum,** the external mouth or opening of the uterus into the vagina. **U., Os Internum,** the internal anatomic limit between the body and the cervix of the uterus. **Plicæ palmatæ,** the radiate branchings of the arbor vitæ from the central axis. **U., Procidentia of,** protrusion of the uterus from the vulvar orifice.

DORSAL ASPECT OF FEMALE INTERNAL GENITALIA.

1. Body of uterus. 2, 2. Ovaries. 3. Left oviduct. 4. Fimbriated extremity of oviduct. 5, 5. Broad ligaments. 6. Ventral vaginal cul-de-sac.

DIAGRAMMATIC REPRESENTATION OF THE CHANGES IN POSITION OF THE UTERUS DURING GESTATION.—The numerals indicate in weeks the height of the fundus uteri. The italic figures indicate respectively, also in weeks, the abdominal enlargement and position of cervix uteri. (After *Schultze*.)

U., Prolapse of, falling of the uterus, but without protruding from the vulvar orifice. **U., Puerperal Atrophy of,** the rare condition of super-involution of the uterus produced when puerperal involution goes further than to restore the uterus to the size that it had before delivery. The organ may become infantile in

size. **U., Retraction of,** the constant property of the uterus that tends to keep the uterine walls in apposition. **U., Retroflexion of,** a bending of the posterior uterine surface upon itself. **U., Retroversion of,** when the fundus is so posteriorly displaced that the axis of the body forms an obtuse angle with the axis of the pelvic inlet. **U., Souffle of.** See *Uterine.* **U. unicornis.** See *U., One-horned.*

tpadel, Bacillus of. See *Bacteria, Synonymatic Table of.*

tricle (*u'-trik-l*) [*utriculus*, dim. of *uter*, a small bag]. Any minute cell or vesicle; a membranous sac. Also, a depression, the *sinus pocularis*, between the ejaculatory ducts. Also, a cavity communicating with the semicircular canals of the ear. See *Prostatic Vesicle.*

tricular (*u-trik'-u-lar*) [*utricularis*]. Relating to the utricle. Resembling a small bag or bottle.

tricularia (*u-trik-u-la'-re-ah*) [*utriculus*, a bag]. A genus of aquatic plants of some 160 species, of wide distribution; the bladderworts. They are classed as insectivorous plants; their bladder-like leaves imprison insects, crustaceans, and worms. The fresh plants are said to make a good application for burns and wounds. Some species have diuretic properties. Unof.

triculate (*u-trik'-u-lāt*) [*utriculus*, a little bag]. Having a utricle.

tricule (*u'-trik-ūl*) [*utriculus: pl., Utricules*]. A utricle.

tricules of Miescher. See *Sarcocystis miescheri*, Lankester, under *Parasites* (*Animal*), *Table of.*

triculiferous (*u-trik-u-lif'-er-us*) [*utriculus*, a utricle; *ferre*, to bear]. In biology, bearing or producing utricles or bladders.

triculiform (*u-trik'-u-lif-orm*) [*utriculus*, a little bag; *forma*, form]. Like a utricle; utricular.

triculoid (*u-trik'-u-loid*) [*utriculus*, a little bag; *εἶδος*, like]. Same as *Utriculiform.*

triculose (*u-trik'-u-lōz*) [*utriculus*, a utricle]. Same as *Utricular.*

triculus (*u-trik'-u-lus*) [L.]. 1. A utricle, *q. v.* 2. Same as *Vesicula prostatica.* **U. hominis, U. masculinus, U. prostaticus, U. urethræ.** Same as *Sinus pocularis.*

va (*u'-vah*) [*uva*, a grape, a cluster of grapes]. In botany, a succulent indehiscent fruit having a central placenta. **U. ursi,** bearberry. The leaves of *Arctostaphylos uva ursi.* It contains gallic and tannic acids, arbutin (resolvable into hydroquinone) and other extractives; it is astringent, tonic, and diuretic. It was formerly much employed in calculous disorders of the bladder. Dose gr. x–ʒj. **U., Ext., Fld.** Dose ♏x–ʒj. **U., Infusio** (B. P.), ʒj–Oj. Dose ʒj–ij. **Arbutin,** the glucosid. Unof. Dose gr. iij–v.

Uvæ (*u'-ve*) [*uva*, a grape]. Raisins. The ripe fruit of *Vitis vinifera*, imported from Spain; official in the B. P. They are contained in *Tinctura cardamomi composita* and *Tinctura sennæ.* **U. passæ majores,** ordinary raisins. **U. passæ minores,** Corinth raisins, or true currants.

Uvea (*u'-ve-ah*) [L., a grape, from the resemblance to its color]. Also called the *Uveal tract.* The choroid membrane or vascular tunic as a whole, especially the iris and ciliary body. See *Entiris.*

Uveal (*u'-ve-al*) [*uvea*, a grape]. Pertaining to the uvea.

Uveitis (*u-ve-i'-tis*). See *Iritis.*

Uveous (*u'-ve-us*). Same as *Uveal.*

Uvitic Acid (*u-vit'-ik*). See *Acid.*

Uvula (*u'-vu-lah*) [L.]. The conic membranous appendix hanging from the free edge of the palate. **U. cerebelli,** a small lobule of the postvermis of the cerebellum. **U. of Lieutaud.** See *Lieutaud.* **U.-twitch,** an expedient for keeping the uvula forward in posterior rhinoscopy. **U., Vesical,** a prominence at the internal or external orifice of the urethra.

Uvulaptosis (*u-vu-lap-to'-sis*) [*uvula*, uvula; *πτῶσις*, falling]. A relaxed and pendulous condition of the uvula.

Uvular (*u'-vu-lar*) [*uvularis*]. Pertaining to the uvula.

Uvularia (*u-vu-la'-re-ah*) [*uvula*, the soft palate]. A genus of liliaceous plants. **U. perfoliata,** of N. America, is demulcent, tonic, and nervine; useful in the treatment of sore mouth. **U. latifolia** and **U. flava** have similar uses. Unof.

Uvularis (*u-vu-la'-ris*) [*uvula*, uvula]. The azygos uvulæ muscle. See *Muscles, Table of.*

Uvulatome (*u'-vu-lat-ōm*) [*uvula*, uvula; *τομή*, cutting]. A cutting instrument used in performing uvulatomy.

Uvulatomy (*u-vu-lat'-o-me*) [*uvula*, uvula; *τομή*, section]. Excision of the uvula. See *Staphylotomy.*

Uvulitis (*u-vu-li'-tis*) [*uvula*, uvula; *ῖτις*, inflammation]. Inflammation of the uvula.

Uvuloptosis (*u-vu-lo-to'-sis*). Same as *Uvulaptosis.*

Uvulotomy (*u-vu-lot'-o-me*). See *Uvulatomy.*

V

V. Abbreviation of *Vision*, or *Acuity of Vision*. Also, the symbol of *Vanadium*.

Vaccigenous (*vak-sij'-en-us*) [*vaccinus*, of a cow; γεννᾶν, to produce]. Producing or cultivating vaccine-virus.

Vaccin (*vak'-sin*) [*vacca*, a cow]. See *Vaccine*.

Vaccina (*vak-si'-nah*). Same as *Vaccinia*.

Vaccinable (*vak'-sin-a-bl*) [*vaccinus*, of a cow]. Susceptible of successful vaccination.

Vaccinal (*vak'-sin-al*) [*vacca*, a cow]. Pertaining to vaccination or to vaccine.

Vaccinate (*vak'-sin-āt*) [*vaccinare*, to vaccinate]. To inoculate with vaccine-virus in such a way as to produce cowpox.

Vaccination (*vak-sin-a'-shun*) [*vacca*, a cow]. Inoculation of the body with the virus of a pustular disease of bovidæ, called cowpox, in order to protect from or modify the virulence of smallpox. **V., Animal.** See *V., Bovine.* **V., Arm-to-arm,** that method of vaccination in which the virus is carried from the arm of one patient to that of another. **V., Bovine,** that practised by the aid of vaccine-lymph cultivated in bovine animals. **V., Compulsory,** the law compelling the vaccination of infants within a certain period after birth. **V.-rash,** a rash sometimes following vaccination; it is usually transitory but sometimes assumes an eczematous or erythematous form. It may also be syphilitic. **V.-syphilis.** See *Vaccino-syphilis.*

Vaccinationist (*vak-sin-a'-shun-ist*) [*vaccinare*, to vaccinate]. One who depends upon or believes in the efficacy of vaccination as a preventive of smallpox.

Vaccinator (*vak'-sin-a-tor*) [*vaccinare*, to vaccinate]. One who vaccinates; an instrument used in vaccinating.

Vaccine (*vak'-sēn*) [*vacca*, cow]. The lymph occurring within the eruptive vesicle of cowpox. **V., Bovine,** that derived from the vesicles of heifers. **V.-farm,** a farm upon which vaccine-virus is systematically produced and collected. **V., Humanized,** that from vaccinal vesicles of man. **V., Lichen,** the most common eruption consequent upon vaccination. It may be either papular, papulo-vesicular, or pustular, and very rarely bullous. It appears between the fourth and the eighteenth day, most frequently on the eighth; begins on the arms usually, though it may commence on the face, neck, or trunk, and appears in successive crops covering the greater portion of the body. The papules are acuminate, pin's-point sized, and bright-red; usually discrete, but they may coalesce into patches. The rash lasts from a few days to a week or two. **V.-lymph.** See *Vaccine.* **V.-point,** a slip of quill or bone coated at one end with vaccine-lymph. **V.-virus,** the same prepared for use in vaccination.

Vaccinella (*vak-sin-el'-ah*) [*vacca*, cow]. The secondary eruption sometimes following cowpox; spurious vaccinia; a sore that sometimes follows vaccination, but is not genuine cowpox.

Vaccinia (*vak-sin'-e-ah*) [*vacca*, cow]. Cowpox. If the human subject be inoculated with cowpox, a small papule appears at the site of inoculation in from one to three days, which becomes a vesicle about the fifth day, and at the end of the first week is pustular, umbilicated, and surrounded by a red areola. Desiccation begins in the second week and a scab forms, which soon falls off, leaving a pitted cicatrix.

Vaccinic (*vak-sin'-ik*) [*vacca*, cow]. Pertaining to vaccine, or to vaccinia.

Vaccinifer (*vak-sin'-if-er*) [*vaccinus*, of a cow; *ferre*, to bear]. A person or animal from whom vaccine-virus is taken; a vaccine-point.

Vacciniform (*vak-sin'-if-orm*) [*vaccinus*, of a cow; *forma*, form]. Resembling vaccinia.

Vacciniola (*vak-sin-i'-o-lah*) [dim. of *vaccinia*]. A secondary eruption, resembling, and sometimes following, vaccinia. It may closely resemble the eruption of smallpox.

Vaccinist (*vak'-sin-ist*) [*vaccinus*, of a cow]. A practiser, or defender, of vaccination; one who believes in the efficacy of vaccination.

Vaccinium (*vak-sin'-e-um*) [*vaccinus*, of a cow]. A genus of ericaceous plants to which belong the cranberry, blueberry, bilberry, etc., of many species. See *Cranberry* and *Brousnika.* **V. crassifolium,** a plant having therapeutic properties resembling those of uva ursi. It is useful in catarrhal inflammations of the urinary tract. Dose of the fld. ext. ℥xxx–℥j. Unof.

Vaccinization (*vak-sin-iz-a'-shun*) [*vaccinare*, to vaccinate]. Thorough vaccination by inoculations, repeated frequently, with the view of establishing complete immunity to smallpox.

Vaccinogen (*vak-sin'-o-jen*) [*vaccinus*, of a cow; γεννᾶν, to produce]. The person or animal from which, or from whom, vaccine-virus is taken.

Vaccinogenous (*vak-sin-oj'-en-us*). See *Vaccigenous.*

Vaccinoid (*vak'-sin-oid*) [*vaccinus*, of a cow; εἶδος, like]. Resembling vaccinia.

Vaccinophobia (*vak-sin-o-fo'-be-ah*) [*vaccinus*, of a cow; φόβος, fear]. Morbid dread of vaccination.

Vaccino-syphilis (*vak-sin-o-sif'-il-is*) [*vaccinus*, of a cow; *syphilis*, syphilis]. Syphilis conveyed by vaccination.

Vacuolar (*vak'-u-o-lar*) [*vacuolum*, *vacuum*, vacuum]. Pertaining to or of the nature of a vacuole.

Vacuolation (*vak-u-o-la'-shun*) [*vacuolum*, a vacuole]. The first stage in the process of vascularization of a clot, in which cracks and fissures appear in it. According to W. Hunter, vacuolation appears in small clots as early as the tenth day.

Vacuole (*vak'-u-ōl*) [*vacuum*, an empty space]. In biology: (*a*) a vesicle in the protoplasm of a protozoön, either *permanent* or *contractile* (*pulsating*). It is sometimes spoken of as *gastric*, from having in some way a direct connection with the function of digestion; (*b*) the cavity in a plant-cell containing cell-sap.

Vacuolization (*vak-u-o-liz-a'-shun*) [*vacuolum*, vacuole]. The formation of vacuoles, such as sometimes takes place in diseased tissues.

Vacuum (*vak'-u-um*) [L.]. A space from which the air has been exhausted. **V.-plate,** in dentistry, a term applied to a plate on which artificial teeth are mounted having an air-chamber to assist in its retention in the mouth.

Vadum (*va'-dum*) [L., a shallow]. A shallow in the depths of any fissure of the brain, commonly in the central nearer the dorsal end. It represents a possible isthmus or complete interruption.

Vagabonds' Disease, or **Discoloration.** *Paramelanoderma;* a pathologic condition of the skin in which it takes on a deep-brown tint, resembling that of Addison's disease. It results from chronic irritation from pediculi.

Vagal (*va'-gal*) [*vagare*, to wander]. Pertaining to the vagus nerve.

Vagina (*va-ji'-nah*) [L., a sheath]. The muscular membranous canal extending from the vulval opening to the cervix uteri, the organ of copulation in the female, the excretory canal for uterine secretions, and part of the birth-canal. In biology, the term is

plied to various sheath-like structures, as the basal portion of certain leaves, or a portion of the mouth-apparatus of sucking insects, etc. **V., Bulbs of,** two erectile organs upon the lateral and anterior parts of the vagina. **V., Columns of,** two longitudinal elevations of the mucous membrane, on the ventral and dorsal wall. **V. cordis.** See *Pericardium.* **V., Cul-de-sacs of,** four arches (*anterior, posterior, right* and *left lateral*) made by the junction of the vaginal walls with the uterus. **V., Double,** an anomaly of development consisting in a duplication of the vaginal canal. **V. femoris.** See *Fascia lata.* **V., Fornix of,** the combined cul-de-sacs of the vagina. **V., Rugae of,** transverse elevations of the mucous membrane branching from the columns.

aginal (*vaj'-in-al*) [*vaginalis*]. Pertaining to the vagina. **V. Process.** See *Process.* **V. Pulse.** See *Pulse.* **V. Respiration,** the breathing of a child while its head is still in the vagina, a rare event. **V. Tunic.** See *Tunica.* **V. Vault,** the roof of the vagina surrounding the cervix uteri. It is divided into an anterior and a posterior portion.

aginalitis (*vaj-in-al-i'-tis*) [*vaginalis,* of a sheath; τις, inflammation]. Inflammation of the tunica vaginalis of the testicle; hydrocele.

aginant (*vaj'-in-ant*) [*vaginare,* to sheathe]. Sheathing; vaginal.

aginate (*vaj'-in-āt*) [*vagina,* sheath]. Sheathed.

aginervose (*vaj-in-ur'-vōz*) [*vagus,* wandering; *nervus,* nerve]. In biology, irregularly nerved.

aginicoline (*vaj-in-ik'-o-lin*) [*vagina,* vagina; *colere,* to inhabit]. Living in a vagina, as an animalcule.

aginiferous (*vaj-in-if'-er-us*) [*vagina,* vagina; *ferre,* to bear]. Producing or bearing a vagina.

Vaginigluteal (*vaj-in-e-glu'-te-al*) [*vagina,* vagina; *gluteus*]. Pertaining to the vaginigluteus.

Vaginigluteus, Vaginiglutæus (*vaj-in-e-glu-te'-us*) [*vagina,* sheath; *glutæus*]. The tensor vaginæ femoris. See *Muscles, Table of.*

Vaginipennate (*vaj-in-ip-en'-āt*) [*vagina,* a sheath; *pennatus,* winged]. In biology, having wing-covers or elytra, *e. g.,* beetles.

Vaginismus (*vaj-in-iz'-mus*) [*vagina,* sheath]. Pain, spasm, and hyperesthesia of the vagina and surrounding parts. **V., Perineal,** that due to spasm of the perineal muscles. **V., Posterior,** that due to spasm of the levator ani muscle. **V., Vulvar,** that due to spasm of the constrictor cunni.

Vaginitis (*vaj-in-i'-tis*) [*vagina,* sheath; τις, inflammation]. Inflammation of the walls of the vagina. **V. adhæsiva,** vaginitis with partial or complete atresia of the vagina. **V., Diphtheric,** diphtheria of the vagina. **V., Granular,** a granular inflammation of the vagina.

Vagino- (*vaj'-in-o-*) [*vagina,* vagina]. A prefix to denote relation to the vagina.

Vaginodynia (*vaj-in-o-din'-e-ah*) [*vagina,* vagina; ὀδύνη, pain]. Pain in the vagina. In vaginodynia there is muscular contraction along the whole vaginal canal, whereas in vaginismus the contraction is merely at the introitus.

Vaginofixation (*vaj-in-o-fiks-a'-shun*) [*vagina,* sheath; *fixation*]. An operation whereby the vagina is rendered immovable.

Vaginopennous (*vaj-in-o-pen'-us*) [*vagina,* vagina; *penna,* feather]. Same as *Vaginipennate.*

Vaginotomy (*vaj-in-ot'-o-me*) [*vagina,* vagina; τομή, section]. Incision of the vagina.

Vaginovesical (*vaj-in-o-ves'-ik-al*). See *Vesicovaginal.*

Vaginula (*vaj-in'-u-lah*) [L., dim. of *vagina,* sheath]. In biology, a diminutive sheath.

Vaginulate (*vaj-in'-u-lāt*) [*vaginula,* a small sheath]. Having a vaginula.

Vaginule (*vaj'-in-ūl*) [*vaginula,* vaginule]. Same as *Vaginula.*

Vagitus (*va-ji'-tus*) [*vagire,* to cry]. The cry of an infant. **V. uterinus,** the cry of a child *in utero.* **V. vaginalis.** See *Vaginal Respiration.*

Vagotomy (*va-got'-o-me*) [*vagus,* vagus; τομή, section]. Section of the vagus.

Vagous (*va'-gus*) [*vagare,* to wander]. Wandering, as the vagus nerve.

Vagrant (*va'-grant*) [*vagare,* to wander]. Wandering, as a vagrant cell. **V.s' Disease,** a discoloration of the skin occurring especially in elderly persons, who are of uncleanly habits and infested with vermin. This discoloration is often deepest on the chest, abdomen, and back, is superficial in nature, and the dark cuticle is harsh and raised, not soft and smooth. The condition may be mistaken for Addison's disease.

Vagus (*va'-gus*) [*vagare,* to wander]. See *Nerves, Table of.*

Valdivin (*val'-div-in*). An emetic principle derived from the fruit of *Simaba valdivia.* (See *Simaba.*) Unof.

Valence (*va'-lens*) [*valere,* to be worth]. In chemistry, the relative saturating or combining capacity of an atom compared with the standard hydrogen atom; the quality or force which determines the number of atoms with which any single atom will chemically unite. See *Quantivalence.* In biology, taxonomic or morphologic value.

Valency (*va'-len-se*) [*valere,* to be worth]. Same as *Valence, q. v.* Also, a single unit of combining capacity. Thus, carbon has four *valencies.*

Valentin's Corpuscles. See *Corpuscle.* **V.'s Ganglion.** See *Ganglia, Table of.* **V.'s Pseudo-ganglion.** See *Pseudo-ganglion.*

Valerate (*val'-er-āt*) [*valere,* to be strong]. Any salt of valeric acid. **V. of Cerium,** a salt useful in the vomiting of pregnancy. Dose gr. jss. **V. of Zinc.** See *Zinc.*

Valerene (*val'-er-ēn*). See *Amylene.*

Valerian (*va-le'-re-an*) [*valere,* to be strong]. A plant of the genus *Valeriana.* **V., American.** See *Cypripedium.*

Valeriana (*va-le-re-an'-ah*) [*valere,* to be worth: *gen., Valerianæ*]. A genus of gamopetalous plants; valerian. The rhizome and rootlets of *V. officinalis.* Its properties are due to a volatile oil, which yields several derivatives. It is antispasmodic and gently stimulant to the nervous system and organs of circulation. In full doses it increases heart-action, producing exhilaration; in toxic doses, diarrhea, vomiting, reduced sensibility, and mental disturbance. It is excellent in hysteria, convulsions due to worms, the coma of typhus fever, and in whooping-cough. **V., Abstr.** Dose gr. v–xx. Unof. **V., Ext., Fld.** Dose ♏x–xxx. **V., Infus.** (B.P.) Dose ℥j–ij. **V., Tinct.,** 20 per cent. Dose ℥ss–ij. **V., Tinct., Ammoniat.,** valerian 20, arom. spt. ammonia to 100 parts. Dose ℥ss–ij. **V., Ol.,** the volatile oil. Dose ♏ij–v. To the same genus belong some 150 species, many of which have properties somewhat similar to those of the official plant. See, also, *Ammonium, Zinc, Iron,* and *Quinin.*

Valerianate (*va-le'-re-an-āt*) [*valere,* to be strong]. Same as *Valerate.* **V. of Amyl.** See *Apple-oil.*

Valerianic Acid (*va-le-re-an'-ik*). See *Acid, Valeric.*

Valeric Acid (*va-le'-rik*). See *Acid.*

Valerin (*val'-er-in*) [*valere,* to be strong]. A terpene obtained from *Valerian.* See *Amylene.*

Valerolactone (*va-ler-o-lak'-tōn*) [*valere,* to be strong; *lac,* milk], $C_5H_8O_2$. A substance prepared by heating bromvaleric acid with water above 100° C. It is a colorless liquid that does not solidify at 18° C., and that boils at 206° or 207° C.; it is miscible with water.

Valetudinarian (*val-et-u-din-a'-re-an*)[*valetudinarius; valetudo*, health]. An invalid.

Valetudinarium (*val-et-u-din-a'-re-um*) [L.]. An infirmary or hospital. [Old.]

Valeur globulaire, of Lepine. The proportion of hemoglobin to the number of red corpuscles, expressed in terms of the amount of hemoglobin in an individual corpuscle.

Valgus (*val'-gus*) [L.] 1. A bow-legged man. 2. See *Talipes*. **V., Nervous,** valgus of neurotic origin. **V., Paralytic,** valgus caused by paralysis of the tibialis anticus. **V., Spurious.** Same as *Splay-foot*.

Validirostral (*val-id-ir-os'-tral*) [*validus*, strong; *rostrum*, beak]. In biology, furnished with a stout beak.

Vallate (*val'-āt*) [*vallum*, rampart]. In anatomy, surrounded with a walled depression; cupped.

Vallecula (*val-ek'-u-lah*) [*valles*, vale: *pl.*, *Valleculæ*]. In biology, a groove, depression, or furrow. A name applied to several slight furrows or pits of the body. Specifically, a deep mesal crevice of the cerebellum. **V. cerebelli.** See *Valley of the Cerebellum*.

Vallecular (*val-ek'-u-lar*) [*vallecula*, a little furrow]. Pertaining to or resembling a vallecula. **V. Canal,** an intercellular canal in the stem of certain *Equisetaceæ*, opposite a groove on the surface.

Valleculate (*val-ek'-u-lāt*) [*vallecula*, a little furrow]. Marked with valleculæ.

Valleix, Tender Points of. Certain painful points observed in intercostal neuralgia: (1) at the exit of the nerve from the spinal canal; (2) in the axillary region; (3) close to the sternum or in the epigastrium. See *Points douloureux*.

Vallet's Mass. See *Ferrum*.

Valley of the Cerebellum. The depression dividing the lateral hemispheres of the cerebellum.

Valli-Ritter's Law. See *Law*.

Vallicula (*val-ik'-u-lah*). See *Vallecula*.

Vallum (*val'-um*) [L.]. In anatomy, the supercilium or eyebrow.

Valonia (*va-lo'-ne-ah*) [Gr., *βάλανος*, an acorn]. The commercial name for the acorn-cups of several species of oak (*Quercus ægilops* and *Q. macrolepis*) coming from Asia Minor, Roumelia, and Greece. They are of a bright-drab color and contain 25 to 35 per cent. of a tannin somewhat resembling that of oak-bark, but giving a browner color and a heavier bloom. They are generally used in admixture with oak-bark, myrobalans, or mimosa-bark, because of themselves, they produce too brittle a leather.

Valsalva's Experiment, V.'s Method. In the normal subject if the patient be directed to hold the nose tightly, shut his mouth, and forcibly expire, the air passes up the Eustachian tubes and distends the cavity of the tympanum. **V., Sinus of.** See *Sinus*.

Valva (*val'-vah*) [*valva*, the leaf of a door: *pl.*, *Valvæ*]. In biology, a valve. The maxilla of a bee.

Valval (*val'-val*) [*valva*, valve]. Pertaining to a valve.

Valvar (*val'-var*) [*valva*, valve]. Pertaining to or of the nature of a valve.

Valvate (*val'-vāt*) [*valva*, the leaf of a door]. In biology, resembling or functioning as a valve. Applied in botany to a form of dehiscence of some anthers and to a form of estivation in which the pieces of the whorl touch each other by their edges, but do not overlap.

Valve (*valv*) [*valvæ*, folding doors]. A membrane or lid so affixed to a tube or canal that it opens to permit free passage one way, but closes to intercept passage in the opposite direction. **V., Aortic,** the semilunar valve of three segments situated at the junction of th aorta with the heart. **V. of Bauhin,** the ileo-cec valve. See *Ileo-cecal* valve. **V., Bicuspid.** Sam as *V., Mitral*. **V., Connivent.** See *Duodenum* **V., Coronary,** the valve that protects the orific of the coronary sinus and prevents regurgitation o blood during the contraction of the auricle. **V., Eusta chian,** that between the post-cava and the right auricle **V. of Hasner,** an imperfect valve at the inferior mea tus of the nose. **V., Heister's,** folds of mucous mem brane of the neck of the gall-bladder. **V., Houston's** three oblique folds in the mucous membrane of th rectum at about the level of the prostate. **V., Ileo colic,** the valve that guards the communication of th ileum with the colon. **V. of Kerkring.** See *Du denum*. **Vs. of the Lymphatics,** semilunar folds o the inner coat opposite each other. **V., Mitral,** th valve that controls the opening from the left auricle t the left ventricle; it is constituted of two leaflets. **V. Pulmonary,** the three semilunar leaflets at the junctio of the pulmonary artery and the right ventricle. **V. Pyloric,** a thick fold of mucosa covering the pylori sphincter. **Vs., Semilunar,** the three valves guard ing the orifice of the pulmonary artery; also th three valves at the orifice of the aorta. **V.-tes** (*Azoulay's*), auscultation of the heart while the patien is lying with the arms raised perpendicularly and th legs lifted obliquely. **V. of Thebesius,** the coronar valve or fold of the endocardium of the right auricl which protects the coronary sinus. **V., Tricuspid,** th which controls the opening from the right auricle t the right ventricle; it is constituted of three se ments. **V. of Tulpius,** the ileo-cecal valve. **V. c Varolius,** the ileo-cecal valve. **Vs. of a Vein** semilunar folds of the ental coat of veins. **V. c Vieussens,** a thin leaf of medullary substance b tween the prepeduncles of the cerebellum; the valvul

Valviferous (*val-vif'-er-us*) [*valva*, valve; *ferre*, bear]. Bearing a valve.

Valviform (*val'-vif-orm*) [*valva*, valve; *forma*, form] Valvular.

Valvula (*val'-vu-lah*) [dim. of *valva*, a valve]. small valve; a valvule. Specifically, a transpar lamina between the gemina and the lingula; constitutin the caudal portion of the mesocelian roof. **Valvul conniventes** (or valves of Kerkring). See *Du num*.

Valvular (*val'-vu-lar*) [*valvula*, a small valve]. P taining to a valvula or to a valve.

Valvule (*val'-vūl*) [*valva*, the leaf of a door]. biology, a little valve.

Valvulitis (*val-vu-li'-tis*) [*valvula*, a small valve; inflammation]. Inflammation of a valve, especia of a cardiac valve.

Valylene (*val'-il-ēn*), C_5H_8. A hydrocarbon with alliaceous odor; it boils at 50° C. and is a homol of vinyl acetylene.

Vampirism (*vam'-pīr-izm*)[Russ., *vampirŭ*, a vampi The (imaginary) practice of sucking the blood of li persons; the insane belief that some person su one's blood by night. This belief is endemic in s countries, and is not uncommon among lunatics.

Vanadium (*van-a'-de-um*) [*Vanadis*, a goddess Scandinavian mythology]. A metal of the antim group; symbol V; at. wt. 51.2. Its oxids are *vanadic* and *vanadous* acids. See *Elements, Tabl* **V. Bronze.** See *Pigments, Conspectus of*.

Van Bemmelen, Papilliform Bodies of. *Megalesthete*.

Van Deen's Test. See *Tests, Table of*.

Vandellia (*van-del'-e-ah*) [after *Vandelli*, an Ita botanist]. A genus of scrophulariaceous plants

diffusa, of S. America, is emetic and purgative, and said to be useful in hepatic and intestinal diseases. Dose of ext. gr. xv–xxiv. Unof.

an der Kolk's Law. See *Law.*

andyke Brown. See *Pigments, Conspectus of.*

an Gehuchten's Fixing Solution. See under *Stains, Table of.*

an Harlingen's Formula. A formula for the treatment of acne rosacea. It consists of 1 dram of precipitated sulphur, with five grains of powdered camphor, 10 of powdered gum tragacanth, and one ounce each of rose-water and lime-water.

anilla (*van-il'-ah*) [L.]. The fruit of *V. planifolia*, an orchid found in tropical America, and of other species of the genus. Its odor is due to a methyl-ether, *vanillin*, $C_8H_8O_3$. It is an aromatic stimulant, sometimes employed in hysteria and low fevers, but it is used chiefly as a flavor. **V., Tinct.,** 10 per cent. Dose as desired.

anillin (*van-il'-in*) [*vanilla*, vanilla], $C_8H_8O_3$. The active and odorous constituent of the vanilla-bean pods. It crystallizes in stellate groups of colorless needles, is soluble in hot water, alcohol and ether, and melts at 80–81° C. It has a warm, aromatic taste. Commercial vanillin is in part prepared from the inner bark of white pine and from eugenol. Dose gr. ½. See *Vanilla.*

anillism (*van-il'-izm*) [*vanilla*, vanilla]. The symptoms among the workmen in vanilla-factories, due to the action of the volatile principles of vanilla.

an Swieten's Liquid, or Solution. A solution of use as a local application to the secondary and tertiary lesions of syphilis about the head, face, and neck, and may also be taken internally. It is composed of the following: Corrosive chlorid of mercury 2 grains, alcohol 3 drams, distilled water sufficient to make 4 ounces. Of this one teaspoonful contains $\frac{1}{16}$ of a grain of corrosive sublimate. It has been used by d'Arsonval in preparing glands (thyreoid, etc.) for administration in organotherapy.

avo (*vah'-o*) [S. Am.]. A South American arrow-poison.

apo-cresolin (*va-po-kres'-o-lin*) [*vapor*, vapor; *cresolin*]. A popular remedy in the treatment of laryngeal diphtheria.

apor (*va'-por*) [L.: *gen.*, *Vaporis*; *pl.*, *Vapores*]. The gaseous form of a substance which at ordinary temperatures is a liquid. In the B. P., certain *vapores*, or medicinal vapors, to be exhibited by inhalation, are officially recognized. **V.-bath,** the application for therapeutic purposes of steam (medicated or otherwise), or of some other vapor, to the surface of the body, in a suitable apartment or apparatus. **V.-douche,** a jet of vapor impinging upon the surface of the body or some part thereof; used therapeutically.

Vapores uterini. Synonym of *Hysteria.*

Vaporarium (*va-por-a'-re-um*) [L.]. A Russian bath, or a vapor-bath; or an establishment or apparatus for such baths.

Vaporizable (*va-por-i'-za-bl*) [*vapor*, vapor]. Capable of being vaporized.

Vaporization (*va-por-iz-a'-shun*) [*vapor*, vapor]. The process by which volatile matters are separated from fixed substances by means of heat. The conversion of a solid or liquid into a vapor.

Vaporize (*va'-por-iz*) [*vapor*, vapor]. To reduce to vapor.

Vaporizer (*va'-por-i-zer*) [*vapor*, vapor]. An atomizer, or nebulizer.

Vaporole (*va'-por-ōl*) [*vapor*, vapor]. A friable, glass capsule containing a drug for inhalation.

Vaporous (*va'-por-us*) [*vapor*, vapor]. 1. Pertaining to or consisting of vapor. 2. Arterial.

Vapors (*va'-porz*) [*vapor*, vapor]. Hypochondriasis; lowness of spirits; hysteria.

Variability (*va-re-a-bil'-it-e*) [*variare*, to change]. In biology, morphologic and physiologic plasticity, or the ability of the organism or race to adapt itself to its environment.

Variation (*va-re-a'-shun*) [*variare*, to change]. In biology, morphologic or physiologic deviation from a given type as the result of environment, natural selection, or cultivation and domestication. Cornevin establishes the following list of the modes of variation among animals:—

I. Morphologic Variations.

Variations through disappearance.	Absence of horns, ears, hair, pigment, etc.
Variations through arrested development.	Total: Dwarfing, discoloration. Partial: Niatism, partial discoloration, reduction in the number of limbs, etc.
Variations through juxtaposition.	Is seen in some hybrids when the characters of both progenitors co-exist side by side.
Variations through fusion.	Diminished number of ribs, teeth, digits, vertebræ, etc.
Variations through transformation.	Wool replaced by hair, scales replaced by feathers, etc.
Variations through hypertrophy.	Total: Giants, melanism, extreme hairiness. Partial: Drooping ears, very long horns, hairs or feathers of unusual length.
Variations through division or repetition.	Supplementary vertebræ, ribs, teeth, horns, digits, etc.

II. Physiologic Variations.

Variations through diminished activity.	Lateness of development: enfeeblement of sexual tendencies; sluggishness.
Variations through earlier activity.	Precocity.
Variations through exaggerated activity.	Increase in fertility, etc.
Variations through stronger activity.	Vigor, immunity from diseases, etc.

To this list De Varigny adds Chemic Variation.

V., Double, the double current produced in a muscle by the passage of a single induction-shock. **V., Negative** (*of a muscle-current*), the diminution of the muscle-current caused by stimulation of the motor nerve.

Varicated (*var'-ik-a-ted*) [*varix*, varix]. Having varices.

Varication (*var-ik-a'-shun*) [*varix*, varix]. The formation of a varix; a system of varices.

Varicella (*var-is-el'-ah*) [dim. of *variola*, smallpox]. An acute, specific, infectious disease of children, popularly known as *chicken-pox.* It has an incubation-period of from eight to fourteen days, and is rarely preceded by a premonitory stage of slight fever and roseolous rash. This latter appears first on the back or chest, as scattered, slightly elevated, round, rose-colored spots; these are quickly followed by an eruption of glabrous, transparent vesicles, which appear in successive crops on different parts of the body—there may be four or five of these crops—bursting the third to the fifth day from their appearance, finally leaving small, punctured scabs. There are generally but slight febrile symptoms. **V. coniformis,** *swine-pox;* varicella in which the vesicles are conic. **V., Conoidal.** Same as *V. coniformis.* **V. gangrænosa.**

See *Dermatitis gangrænosa infantum.* **V. globata,** *swine-pox;* hives; varicella in which the vesicles are hemispheric. **V. Prurigo,** Hutchinson's term for the occurrence in the mildest cases of varicelli of fresh crops of papules and pustules, the process lasting for weeks, and being accompanied by a good deal of itching, but by very little if any ulceration. **V., Pustular.** Same as *Varioloid.* **V. syphilitica,** a syphiloderm having the form of a varicellar eruption.

Varicellar (*var-is-el'-ar*) [*varicella*, dim. of *variola*, smallpox]. Pertaining to varicella.

Varicellate (*var-is-el'-āt*) [*varicella*, varicella]. Having small varices.

Varicelloid (*var-is-el'-oid*) [*varicella*, varicella; *εἶδος*, like]. Resembling varicella.

Varices (*var'-is-ēz*) [L.]. Plural of *Varix*, *q.v.* **V. gelatinosæ.** Gelatinous accumulations in the umbilical cord.

Variciform (*var'-is-if-orm*) [*varix*, a swollen vein; *forma*, a form]. Having the form of a varix or swelled vein.

Varicoblepharon (*var-ik-o-blef'-ar-on*) [*varix*, varix; *βλέφαρον*, eyelid]. A varicosity of the eyelid.

Varicocele (*var'-ik-o-sēl*) [*varix*, varix; *κήλη*, a tumor]. Dilatation of the veins of the scrotum or of the spermatic cord. **V., Ovarian,** varicosity of the veins of the broad ligament. **V., Utero-ovarian,** varicocele in the female.

Varicocelectomy (*var-ik-o-se-lek'-to-me*) [*varix*, varix; *κήλη*, tumor; *ἐκτομή*, excision]. Excision of a varicocele.

Varicoid (*var'-ik-oid*) [*varix*, varix: *εἶδος*, like]. Resembling a varix.

Varicomphalus (*var-ik-om'-fal-us*) [*varix*, varix; *ὀμφαλός*, navel]. A varicosity at the navel.

Varicose (*var'-ik-ōz*) [*varix*, varix]. Swollen, knotted, and tortuous. **V. Aneurysm.** See *Aneurysm.* **V. Fibers,** medullated axis-cylinders provided with Ranvier's nodes and with incisures; they are destitute of neurilemma, and show, after death, swellings due to the accumulation of fluid between the myelin and the axis-cylinder; they form the white matter of the spinal cord and brain.

Varicose Veins.

Varicosis (*var-ik-o'-sis*) [*varix*, varix]. An abnormal dilatation of the veins.

Varicosity (*var-ik-os'-it-e*) [*varix*, varix]. The condition of being varicose; a varicose portion of a vein.

Varicotomy (*var-ik-ot'-o-me*). Same as *Cirsotomy.*

Varicula (*var-ik'-u-lah*) [dim. of *varix*, varix]. A varix of the conjunctiva. Same as *Cirsophthalmia.*

Variety (*va-ri'-et-e*) [*varieta*, difference: *pl.*, *Varieties*]. In biologic taxonomy, a subdivision of a species; a stock, strain, breed.

Variola (*va-ri'-o-lah*) [*varius*, variegated, spotted]. Smallpox. A specific infectious disease ushered in with severe febrile symptoms, which, in the course of two or three days, are followed by a papular eruption spreading over all parts of the body. During the succeeding two weeks the eruption passes through periods of vesiculation, pustulation, and incrustation. The falling off of the crusts leaves the well-known pockmarks or pitted appearance on the skin. The period of incubation is about thirteen days. A secondary fever usually sets in during the pustular stage. **V. confluens.** Same as *V., Confluent.* **V., Confluent,** a severe form, in which the pustules spread and run together. **V., Congenital,** variola of the newborn, due to intra-uterine infection. **V. cornea,** hornpox, a variety of variola in which papular growths take the place of pustules. **V., Discrete,** a form in which the pustules preserve their distinct individuality. **V. dysenterica,** smallpox complicated with a form of persistent diarrhea. **V., Emphysematous,** a form of variola in which the pustules contain gas. **V. equina,** horse-pox. **V., Hemorrhagic,** variola in which hemorrhages into the vesicles occur, which gives them a blackish appearance. **V. maligna,** black smallpox; a severe and very fatal form of variola, of the hemorrhagic type. **V., Malignant,** often called *black smallpox* and *hemorrhagic smallpox.* Its distinguishing feature is hemorrhage into the skin. It is invariably fatal. **V., Mitigated,** or **Modified.** See *Varioloid.* **V. notha.** Synonym of *Varicella.* **Variolæ ovinæ.** Same as *Sheep-pox.* **V. spuria.** Synonym of *Varicella.* **V., Tubercular,** variola in which the pustules assume a tubercular form. **V. vaccin. atrophica,** stonepox; an abortive form of variola in which the vesicle dries before reaching the pustular stage. **V. vaccina bullosa,** a form of vaccinia in which large single bullæ take the place of the ordinary vesicles. **V. vaccina erysipelatosa,** the association of vaccinia and erysipelas at the point of inoculation. **V. vaccina ulcerosa,** vaccinia attended with ulceration at the point of inoculation. **V. vera,** true smallpox, as distinguished from varioloid. **V. verrucosa:** wartpox; a mild, abortive form of variola.

Variolad (*va-ri'-o-lad*) [*variola*, variola]. An infectious germ of the smallpox virus.

Variolar (*va-ri'-o-lar*) [*variola*, smallpox]. Pertaining to smallpox.

Variolate (*var'-e-o-lāt*) [*variola*, variola]. 1. Having small pustules like those of variola. 2. To inoculate with smallpox.

Variolated (*var'-e-o-la-ted*) [*variola*, smallpox]. Having or having had variola.

Variolation, Variolization (*var-e-o-la'-shun*, *va-ri-o-liz'-a-shun*) [*variola*, variola]. The inoculation of smallpox.

Variolator (*var'-e-o-la-tor*) [*variola*, variola]. One who inoculates with smallpox.

Variolic (*var-e-ol'-ik*) [*variola*, variola]. Pocky, variolous.

Varioliform (*var-i'-o-lif-orm*) [*variola*, variola; *forma*, form]. Resembling variola.

Variolin (*var-i'-o-lin*) [*variola*, variola]. The specific virus of smallpox.

Varioloid (*var'-e-o-loid*) [*variola*, variola; *εἶδος*, resemblance]. The slight form of the disease variola or smallpox as modified by vaccination or inoculation. It is chiefly important from the possibility that the patient may become a source of infection to others.

Variolous (*var-i'-o-lus*) [*variola*, variola]. Pertaining to or having the nature of variola.

Variolo-vaccine (*var-i'-o-lo-vak'-sin*) [*variola*, variola; *vacca*, cow]. A vaccine-lymph or crust obtained from a heifer which has been inoculated with smallpox virus.

Variolo-vaccinia (*var-i'-o-lo-vak-sin'-e-ah*) [*variola*, *vacca*, cow]. A form of vaccinia or cowpox induced in the heifer by inoculating her with smallpox virus.

Varix (*var'-iks*) [*varus*, crooked: *pl.*, *Varices*]. A nous dilatation. **V., Aneurysmal.** See *Aneu* **V. lymphaticus.** See *Lymph-scrotum.*

Varnish (*var'-nish*) [ME., *vernysh*, varnish] quickly-drying solution of some resin. Varnishes

popularly used to exclude the air from wounds, and in suitable cases they often act happily.

Varoli's Bridge. See *Pons varolii.*

Varolii, Pons. See *Pons.*

Varolius, Bridge of. See *Bridge.*

Varrentrapp and Will, Method of. A method for the determination of nitrogen in organic compounds. The substance to be analyzed is reduced to the finest powder, dried, and weighed; then mixed with soda-lime. It is then placed in a combustion-tube, loosely plugged with asbestos, and heated. The nitrogen is converted into ammonia, which is absorbed by hydrochloric acid contained in a bulb connected with the tube. This is then treated with platinic chlorid, which precipitates ammonium-platinum chlorid, and the nitrogen is estimated.

Varus (*va'-rus*) [L., bent]. See *Acne* and *Talipes.* **V., Arterial,** a cirsoid aneurysm. **V. comedo.** Same as *Acne punctata.* **V., Equino-.** See *Talipes.* **V. gutta rosea.** Same as *Rosacea.* **V. punctatus.** Same as *Acne punctata.* **V. sebaceus.** Same as *Seborrhea.*

Vas (*vas*) [L., a vessel: *pl.*, *Vasa*]. A vessel. A generic term for the tubules or canal-like structures for the conduction of liquids, secretions, etc., through the body or from one organ to another; used particularly to designate vessels carrying blood. **V. aberrans.** See *Vasculum aberrans.* **V. deferens,** the excretory duct of the testis, the continuation of the epididymis.

Vasa (*va'-zah*) [L.]. Plural of *Vas*, *q. v.* **V. aberrantia:** 1. Vessels that sometimes connect the brachial or axillary artery with one of the arteries of the forearm. 2. Isolated bile-ducts on the surface of the liver, which have no relation to any system of hepatic lobules, as if the lobules to which they originally belonged had atrophied and disappeared. **V. afferentia,** the branches of a lymphatic or lacteal vessel previous to entering a gland. **V. brevia,** gastric branches of the splenic artery. **V. efferentia,** the terminal ducts of the rete testis; applied also to the efferent vessels of lymphatic glands. **V. intestini tenuis,** small vessels arising from the superior mesenteric artery and distributed to the jejunum and ileum. See *Intestinal Artery* in *Arteries, Table of.* **V. recta,** the tubules of the rete testis. **V. vasorum,** the vessels supplying the arteries and veins with blood,—*i. e.*, the vessels supplying the vessels themselves. **V. vorticosa.** See *Vena.*

Vasal (*va'-zal*) [*vas*, a vessel]. Pertaining to a vessel or to vessels. Vascular.

Vasalium (*vaz-a'-le-um*) [*vas*, a vessel: *pl.*, *Vasalia*]. In biology, tissues peculiar to vascular or closed cavities; *Endothelium, Cœlarium.*

Vascoa (*vas-ko'-ah*) [L.]. A genus of leguminous plants. The roots of the S. African **V. amplexicaulis** are used as a substitute for liquorice. **V. perfoliata,** an African plant, is a strong diuretic. Unof.

Vascula (*vas'-ku-lah*) [L.]. Plural of *Vasculum*, *q. v.*

Vascular (*vas'-ku-lar*) [*vasculum*, a small vessel]. Consisting of, pertaining to, or provided with vessels. **V. Fibers,** centrifugal nerve-fibers exciting contraction of blood-vessels. Vasomotor fibers. **V. Lamellæ.** See *Plate, Cathammal.* **V. System,** the venous and arterial system.

Vascularity (*vas-ku-lar'-it-e*) [*vasculum*, a little vessel]. The quality of being vascular.

Vascularization (*vas-ku-lar-iz-a'-shun*) [*vasculum*, a little vessel]. The formation and extension of vascular capillaries. The process of becoming vascular.

Vasculiform (*vas'-ku-lif-orm*) [*vasculum*, a small vessel; *forma*, form]. In biology, having the form of a vessel; like a flower-pot.

Vasculin (*vas'-ku-lin*) [*vasculum*, a little vessel]. Extract of vascular tissue.

Vasculomotor (*vas-ku-lo-mo'-tor*) [*vasculum*, a little vessel; *motor*, a mover]. Acting as a vasomotor upon the capillaries.

Vasculose (*vas'-ku-lōz*) [*vasculum*, a vessel]. 1. Same as *Vascular.* 2. The substance forming the vascular tissue of plants.

Vasculum (*vas'-ku-lum*) [L.: *pl.*, *Vascula*]. A small vessel. In biology, a botanist's collecting-case. **V. aberrans,** a tube extending from the lower part of the epididymis into the cord.

Vaselin (*vaz'-el-in*) [irregular; Ger., *wasser*, water; ἔλαιον, oil]. Same as *Petrolatum.* The vaselins are paraffins that liquefy readily and fuse between 30° and 40° C.; they are employed as bases for ointments. **V., Liquid,** a liquid paraffin used as a vehicle for active medicines.

Vasifactive (*vaz-if-ak'-tiv*) [*vas*, vessel; *facere*, make]. Giving rise to new blood-vessels. See *Angioplastic.*

Vasiform (*vaz'-if-orm*) [*vas*, vessel; *forma*, form]. In biology, resembling a vessel or duct.

Vaso- (*va'-zo-*) [*vas*, a vessel]. A prefix employed to denote connection with the vessels.

Vaso-constrictive (*va'-zo-kon-strik'-tiv*) [*vas*, vessel; *constringere*, to constrict]. Promoting or stimulating the constriction of blood-vessels.

Vaso-constrictor (*va'-zo-kon-strik'-tor*) [*vas*, vessel; *constrictor*, constrictor]. 1. Causing a constriction of the blood-vessels. 2. A nerve or a drug that causes constriction of blood-vessels.

Vaso-corona (*va'-zo-ko-ro'-nah*) [*vas*, vessel; *corona*, crown]. The system of arterioles that supply the periphery of the spinal cord.

Vaso-dentinal (*va'-zo-den'-tin-al*) [*vas*, vessel; *dens*, a tooth]. Pertaining to or of the nature of vaso-dentine.

Vaso-dentine (*va'-zo-den'-tin*) [*vas*, vessel; *dens*, tooth]. Dentine having capillaries large enough for the passage of red blood-corpuscles.

Vaso-dilator (*va'-zo-di-la'-tor*) [*vas*, vessel; *dilator*, a dilator]. 1. Pertaining to the positive dilating motility of the non-striped muscles of the vascular system. A nervous mechanism, with a center and efferent nerves, probably exists. 2. A nerve-element or a drug that causes dilatation of blood-vessels.

Vaso-formative (*va'-zo-for'-mat-iv*) [*vas*, vessel; *formare*, to form]. Forming or producing vessels. See *Vasofactive.* **V. Cells,** those engaged in the production of vascular tissue.

VASO-FORMATIVE CELLS.

r, r. Red blood-corpuscles. *k, k.* Nuclei of vaso-formative cells. *a, a.* Processes that ultimately unite to form capillaries.

Vaso-ganglion (*va'-zo-gang'-gle-on*) [*vas*, vessel; γάγγλιον, ganglion]. A knot, or rete, of blood-vessels.

Vasogen (*va'-zo-jen*) [*vaselin*; γεννᾶν, to produce]. Oxygenated vaselin.

Vaso-hypertonic (*va'-zo-hi-per-ton'-ik*). See *Vaso-motor.*

Vaso-inhibitory (*va'-zo-in-hib'-it-or-e*) [*vas*, vessel; *inhibere*, to inhibit]. Pertaining to the function of inhibition of vasomotor action or of vascular contraction.

Vasomotion (*va'-zo-mo'-shun*) [*vas*, vessel; *motio*, motion]. Increase or decrease of the caliber of a blood-vessel.

Vasomotor (*va'-zo-mo'-tor*) [*vas*, vessel; *motor*, motor]. Pertaining to the motility of the non-striped muscles of the arterial system; regulating the tension of a blood-vessel; vaso-constrictor. **V. Ataxia**, a condition of instability of the circulatory mechanism, described by S. Solis-Cohen and characterized by abnormal readiness of disturbance of the equilibrium of the cardio-vascular apparatus, with tardiness of restoration. In some cases the phenomena are of paretic, in others of spasmodic character. Usually the two kinds of phenomena are displayed in varying degree in the same patient. Dermographism is an essential feature and in most cases factitious urticaria can be induced; mottlings of the skin, peculiar markings of the nails, telangiectases and stigmata are common. There is usually a hemorrhagic tendency. In some cases the thyreoid gland has been altered. The action of the heart is usually rapid, irregular, and easily disturbed; palpitation is common, and intermittent tachycardia has been noticed; uemic and functional murmurs are not uncommon. **V. Bronchitis.** See *Asthma.* **V. Center.** See *Center.* Subordinate centers are distributed throughout the spinal axis. **V. Nerves**, the nerves passing to the blood-vessels; stimulation causing contraction, narrowing of the lumen, and consequent increase of blood-pressure. Paralysis of the center produces the opposite effects. **V. Rhinitis.** See *Hay-fever.*

Vasomotorial, Vasomotory (*va'-zo-mo-to'-re-al, va'-zo-mo'-tor-e*) [*vas*, vessel; *motor*, motor]. Relating to the vasomotor function.

Vasomotricity (*va'-zo-mo-tris'-it-e*) [*vas*, vessel; *motor*, motor]. The quality of having a vasomotor action.

Vaso-peritoneal (*va'-zo-per-it-on-e'-al*) [*vas*, vessel; *peritoneal*]. In biology, pertaining to the closed sac which results from the cutting off from the archenteron of a cecal diverticulum to which the anterior part of that cavity gives rise.

Vaso-sensory (*va'-zo-sen'-so-re*) [*vas*, vessel; *sensory*]. Serving as a sensory apparatus for the vessels.

Vastus (*vas'-tus*). See *Muscles, Table of.*

Vat-blue (*vat'-blu*). Same as *Indigo-blue.*

Vater's Ampulla. See *Ampulla.* **V.'s Corpuscles.** See *Pacinian Bodies* or *Corpuscles.* **V.'s Diverticulum.** Same as *V.'s Ampulla.* **V.'s Fold.** See *Fold.*

Vatrax (*va'-traks*) [L.]. See *Vatricose.*

Vatricose (*vat'-rik-ōz*) [*vatricosus*]. Club-footed.

Vault (*vawlt*) [ME., *vawte*, vault]. The dome or arch of the skull; the hollow of the roof of the mouth. **V. of Cranium.** See *Calvaria.*

Vecordia (*ve-kor'-de-ah*) [*vecors*, destitute of reason]. Insanity; especially dementia or idiocy.

Vectis (*vek'-tis*) [*vehere*, to carry]. An instrument similar to the single blade of a forceps, used in expediting the delivery of the head in labor.

Vegetable (*vej'-et-a-bl*) [F., *végétable*, vegetable]. (*a*) A plant, especially a kitchen herb. (*b*) See *Vegetal.* **V. Æthiops**, a kind of charcoal produced by the incineration of *Fucus vesiculosus* in closed vessels. It has been employed in glandular and scrofulous affections, and contains a small quantity of iodin. **V. Albumin.** See *Phytalbumose.* **V. Bezoar.** See *Calapitte.* **V. Coloring-matters.** See *Conspectus of Pigments*, under *Pigment.* **V. Economy**, the systematic arrangement of the parts and organs of plants. **V. Gum.** See *Bassorin.* **V. Mercury.** See *Manaca* and *Anchieta salutaris.* **V. Proteids.** See *Proteid.* **V. Sponge.** See *Luffa.* **V. Sulphur.** See *Lycopodium.*
